identities between god and mortal that was the theme earlier in the hymn. The pāda *could* simply modify the subject of pāda b, namely Agni, yielding an alternate tr. “Whomever you, as his own Hotar-priest, safeguard in his house, (you) the truthful one, possessed of reddish horses [=flames] and much livestock, for him ...” But the *sá* in c would nag at the audience (I hope), since *sá* with 2nd ps. ref. only occurs with imperatives. So the listener would ultimately have to conclude that the referent is the worshiper, but now endowed with many of Agni’s qualities. With the reading of c with the mortal as subj., in the publ. tr. I supplied the impv. *astu* from d. However, it could be simply mean “whomever you safeguard, that truthful one is/becomes possessed of ...,” without requiring a modal verb to be supplied.

The instr. phrase in d, *dyúbhiḥ ... áhabhiḥ*, also confounds expectations. The standard temporal opposition is of course “days and nights,” with various lexical realizations, but here we have two different words for day. On *áhar-* versus *div-* for ‘day’ see comm. ad IX.86.19.

X.7.5: *prayógam* in pāda a is a much discussed hapax (see esp. Old); *pace* Gr it surely belongs to *pra √ yuj* ‘hitch up, harness’, referring to the initiation of the sacrifice. I’m taking it quite loosely as an adverbial acc. of purpose.

Although the Pp. reads augmented *ajananta* in c, the form could easily be the injunc. *jananta*, despite the parallel augmented *asādayanta* at the end of the next pāda. Both verbs are -*anta* replacements in otherwise act. paradigms.

The somewhat odd expression “gave birth to him with their arms” of course refers to the Āyus’ priestly activity in producing the fire.

X.7.6: This vs. urges a reflexive loop on Agni: to sacrifice to himself by himself. This is almost iconically represented by the hermetic circular repetitions and doublings: the extremely alliterative and etymological figure *diví deva devān* in pāda a repeated by *deva devān* in c; the three 2nd ps. verb forms to *√ yaj*, two identical: *yajasva* (a), *áyajah* (c), *yajasva* (d); and the semantically similar pair *svayám* ‘(by) oneself’ (a), *tanvām* ‘self, (own) body’.

X.8–9

These two hymns are attributed to Triśiras Tvāṣṭra (the second with the alternative attribution Sindhuvīpa Āmbarīṣa). The poet’s name is a transparent adoption from the mythological material in X.8.7–9, and this hymn, and by default the next, belong with the Trita Āptya hymns X.1–7. See Old (Proleg. 233–34) and publ. intro. to X.8.

X.8 Agni

As was just noted, this hymn belongs with the Trita Āptya Agni cycle, X.1–7. The Agni portion of the hymn ends with vs. 6, so it would fit the sequence by showing a smaller number of vss. than the first seven hymns, all with seven vss., as Old points out. There are also lexical reminiscences between this hymn and the previous seven: *ketú-* (1a, also X.1.5, 2.6); *vibhāvan-* (4b, also X.6.1-2 and a number of *ví √ bhā* forms in X.3); *veṣi* (5b), *veti* (7d)—cf. forms of *√ vī* in X.2.2, 4.5, 5.4, 6.2, 3; *sácase* (6b), *sacasyāmānaḥ* (7c)—cf. X.3.3, 5.1, 4, 7.1.

X.8.1: Although the act. pf. *vavárdha* (etc.) is usually transitive, there are undoubted intrans. occurrences (see Kü 470), and it is hard to interpr. this pāda in any other way.

For the buffalo, Agni, and the lap of the waters see also X.45.3 and VI.8.1, neither of which is much help.

X.8.2: The single form of the pf. to \sqrt{mud} in the RV, *mumóda*, is taken, convincingly, by Kü (384) as presential and stative.

On the various forms of the root \sqrt{srev} ‘abort’ see EWA s.v. and comm. ad III.29.13.

The stem *śīmī-* and the adj. deriv. *śīmīvant-* (sometimes to be read **śīmivant-* as here) is generally taken as an irregular derivative of $\sqrt{śam}$ ‘labor’. EWA (s.v. *śīmī-*) suggests a process of “laryngeal umlaut.” I wonder if instead it comes from the semantically similar root $\sqrt{śram}$ ‘labor, become weary’, via a Middle Indic form built to a zero-grade **śrm*, with development of syllabic **r* to *i* (though we might expect *u* because of the labial).

In c I supply ‘oblations’ with *údyatāni* (so more or less Ge and Re), but rather than interpr. *kṛṇvān* as describing an action separate from *úd* \sqrt{yam} (e.g., Re “préparant ... (les mets) offerts”) I see *údyatāni* $\sqrt{kṛ}$ as the equivalent of a periphrastic causative ‘make (to be) raised/lifted’; the morphological caus. to \sqrt{yam} , *yāmayati*, is rare and specialized in its usage (see my *-āya-*, 164–65). For a very close parallel to our passage, see VIII.74.3 ... *devātāti údyatā / havyāni aīrayat divī* “who raised to heaven the oblations lifted up among the conclave of the gods,” with the oblations overt.

X.8.3: The sense and the referents in this vs. are much disputed; see Ge’s extensive and somewhat dogmatic notes, Re’s comments, and Lü (594–96) discussion, in part a refutation of some of Ge’s views. I think it is useful to consider the vs. in the context of nearby X.5, which depicts the birth and growth of Agni, esp. in vss. 1, 3–5.

In the 1st pāda in the expression “the head of his two parents” (*mūrdhānam pitróḥ*), the two parents are generally agreed (esp. Ge, Re) to be Heaven and Earth. But see disc. of X.5, where not only cosmic parents (H+E, Night and Day) were considered, but also the two kindling sticks. Sāy. suggest these last as possible referents here, in addition to H+E – a suggestion dismissed by Ge (n. 3a), but one that I think is well worth considering. The fire “seizes” their head, which can be a metaphor for the fire “catching” (note the similar English metaphor). At the same time it can refer to H+E, and his seizing their head can refer to the fire’s ascent up towards the sky.

The main cl. in b (note the unaccented verb *dadhire*) has no coreferential pronoun to pick up the rel. *yāḥ* of pāda a; we must simply supply *tām*. As the gramm. number (pl.) of the verb makes clear, the subject is not the two parents, but must be unidentified priests. No plural beings have been previously mentioned in the hymn. The phrase *sūro árṇaḥ* (“the sun’s undulating flood”) both asserts the identification of Agni with the sun, a cosmic connection that pervades the hymn, and depicts the fire on the ground as both bright like the sun and in constant wave-like motion.

In c there is a lively debate among the aforementioned commentators about the referent of the fem. pl. *áruṣīḥ* ‘ruddy ones’—dawns, flames, or flames standing for the cows of the Dakṣiṇā (for the last, see Ge’s n. 3cd). Given that the same *áruṣīḥ* are found in X.5.5, where they are generally agreed to refer to flames, this same identification seems likely here. As in X.5, the flames rise higher as the fire goes stronger. The lively debate continues with regard to the bahuvr. *ásva-budhna-* ‘having horses as ground’, a hapax but in clear relationship with *ásva-budhya-* (3x). Since the latter always qualifies some kind of wealth (see comm. ad I.92.7–8), Ge believes that the adj. here must refer metaphorically to the Dakṣiṇā, but making this work requires mental contortions that do not seem worthwhile. Here I think the ‘horse’ is actually

Agni: the flames have the fire as their base or foundation, even as they and the rest of the fire rises. Agni is regularly compared to a horse (e.g., IV.2.8, VI.3.4, VII.3.2).

In d these flames “find pleasure in their own bodies” (*tanvò juṣanta*), a description of the seemingly rapturous movements of flames.

X.8.4: The two hemistichs of this vs. seem thematically disjunct. The first has to do with Agni’s timebound daily appearance, the second with his role as a creator of alliances. I do not see any connection between them. These distinct themes are reunited in vs. 6; see comm. there.

The āmreḍita *uṣā-uṣaḥ* of course preserves the archaic gen. sg. of *uṣás-*, representing **uṣ-ṣ-as*.

Both the referents and the grammatical identity of the dual gen.-loc. *yamáyoḥ* are disputed. Among the suggestions are Day and Night, the Áśvins, and even Yama and Yamī, whose famous dialogue is found two hymns later (X.10). It is also unclear whether the form is a gen. dependent on *vibhāṇā* (Ge), gen. dependent on a supplied noun (Re: le maître), or loc. and dependent on nothing. As for the first, favored by Ge, *vibhāvan-* doesn’t take the gen. (I.69.9, cited in his n. 4b, is not an ex.); since supplying a headnoun (with Re) is arbitrary, a loc. reading seems the best choice. I opt for that, with the loc. as a temporal marker: by day and by night.

The apparent causal relationship between pādas a and b, signaled by the *hí* in pāda a, is rather difficult to interpr., and I would now somewhat change my tr. and the interpr. that lies behind it. In b the publ. tr. renders *abhavaḥ* as “have become,” but (per IH) augmented imperfects should not have this “perfect”-type sense, but rather mean “you became.” I now think this pāda means that (in the primordial past) Agni assumed the role of (/became) the far-radiant one at the two twilights, namely dawn and the onset of night (“at [the time of] the twins”), a role he continues to have. He did so *on the grounds* (*hí*) that he always—every dawn—goes at the forefront of the dawn. The contrast between the pres. *éṣi* in the *hí*cl. and the augmented imperf. *abhavaḥ* in the main cl. is not problematic: the *hí* clause describes a regular recurring action, still happening in present time but repeated from time immemorial, whereas the main cl. asserts the result of this recurrent action, a distinct event in the past (“you became”), though Agni maintains this role in the pres.

The *hí*cl. says nothing about night, just dawn, whereas I claim that Agni is *vibhāvan-* at night as well as at dawn. The two twilights are regularly assimilated to each other in Vedic, including in ritual time: the daily Agnihotra is to be performed at the rising and setting of the sun. And of course the illumination of the fire is even more evident at night than in daylight.

As was said above, the 2nd hemistich of this vs. embarks on an entirely new theme. It also strikingly introduces the ritual enactment of the formation of an alliance (*mitrá-*), a ritual that persists to the present day in Hindu wedding ceremonies: the seven steps taken by the parties to the alliance towards the northeast from beside the ritual fire. (See reff. in publ. intro.) This general description of the formation of alliances seems to introduce the next vss. (5–6), in which Agni becomes, or becomes identified with, other divinities or divine roles. If this is the intent, I find it somewhat puzzling, because the insistent *bhuvah* ‘you become’ of 6–7 implies a transformation of Agni into the various entities, not an alliance with them. But perhaps the point is that Agni keeps his own identity even when fulfilling the various roles, which is more like an alliance than straight transformation, but still doesn’t seem to me to be the same thing at all.

X.8.5–6: As just noted, these last two vss. in the Agni portion of the hymn introduce a series of roles that Agni fulfills. All four pādas of vs. 5 and the first one of 6 begin with the injunc.

bhúvah ‘you become’. Listing a set of roles Agni performs and/or a set of divinities with which he is identified is fairly common practice; see, e.g., the lengthy list in II.1; what is novel is that these might be considered alliances—see comm. immed. above. Note that the repeated *bhúvah* has an entirely different function from *abhavaḥ* in vs. 4. Here *bhúvah* refers to the regular assumption of a role in the present; *abhavaḥ* referred to a single event in the past. In this interpr. of *bhúvah* I part ways with Hoffmann (214–15), who takes such usages of the (secondary) injunctives *bhuvās*, -at as expressing “resultative Konstatierung”: as a result of an action in the past, the situation holds now and in the future (that is, “became and now is,” with emphasis on the “is”). Here, therefore, he tr. *bhuvah* as “bist,” not “wirst”: “Du (Agni) bist das Auge ...” In our passage, at any rate, I think the point is not that Agni became each of these entities and remains so, but that he takes up these roles from time to time and then moves on.

X.8.5: Verbal forms of the root $\sqrt{vī}$ are not construed directly with the dative, but have a direct obj. in the acc. In pāda b I have supplied “your tasks” as a generic object, though I do not have particular parallels in mind. A common object of $\sqrt{vī}$ is ‘gods’, enshrined also in the cmpds *deva-vī-* and *devā-vīti-*, and supplying “gods” as object would also be possible here.

X.8.6: This vs. reunites the separate strains of the Agni portion of the hymn: the birth and growth of Agni up through the cosmos (vss. 1–4ab) and the various roles he assumes (vss. 4cd–5). This may account for some ill-assorted phraseology. In particular the two terms in the overtly conjoined phrase *yajñāsya rájasaś ca* “of the sacrifice and of airy space” do not form a natural class, to say the least, and the fact that the gen. depends on *netā* ‘leader’ makes it somewhat worse. “Leader of the sacrifice” makes perfect sense and is in fact found elsewhere (I.196.2, III.15.4, both of Agni, as well as fem. *yajñāsya netrī* IV.56.2). But what does it mean to be “the leader of *rájas-*”? Several different solutions have been proposed, none particularly satisfactory. Sāy. interpr. *rájas-* as a reference to waters, which would improve the sense but has no support and doesn’t fit the context. Ge takes the 2nd term as if expressing extent of space (“der Führer des Opfers und durch das Dunkel”), whose awkwardness speaks for itself (less awk. but no better supported in KH’s [215 n. 204] “der Führer des Opfers und der Führer durch die Finsternis”). Re in his n., calling the phrase a sort of zeugma, supplies “mesureur” as the headnoun with *rájasaḥ* (without argument); similarly Klein (DGRV I.68), also calling it a zeugma, supplies instead “pervader.” Tichy (-tar-stems 352) decouples the two terms, taking *ca* as ‘auch’: “Du wirst zum Führer des Opfers, auch im Luftraum.”

My own, very tentative, suggestion rests on the return of the theme of the birth and growth of Agni. In the first vss. of the hymn (esp. vs. 1; see also nearby X.5 and comm. there) Agni is kindled and goes forth and up (1a), with his first location on leaving the earth being the space between the two world halves (1b), until he reaches heaven (1c). Here again, I would say, the sacrifice of our pāda a locates his origin on the earth, but the *rájas-*, the realm between earth and heaven, is also found in pāda a and the whole of the *yátrā* clause of b, which qualifies *rájasaḥ*. Pāda b makes it quite clear that Agni has reached that location. He then arrives at heaven in pāda c. The twist in my interpr. is to take *rájasaḥ* not as genitive, but as ablative: “he is leader of the sacrifice and from the airy realm.” I realize that this is a trick, possibly a cheap one: *rájasaḥ* looks as if it’s entirely parallel to *yajñāsya* and in the same case, but my reading gives it an alternative case interpr., which is morphologically entirely legitimate but pushes the syntactic envelope. The point would be that the *rájas-* is only a waystation on Agni’s journey towards heaven and he leads the sacrifice from the *rájas-* to heaven.

My interpr. of c is also different from most, though not as radically. I take *sácse* as intrans./pass. ‘you are accompanied’, while most take it as an underlying transitive in absolute usage (e.g., Ge “du ... das Geleit gibst”; sim. KH, Tichy). It is certainly true that *sácate* regularly takes an acc. (“accompany X”), and here we might even (re-)supply *yajñám* (“accompany [the sacrifice]”) from pāda a. However, in nearby X.7.1 *sacemahi* is used in the same pass./intrans. I suggest here. I would also point to the *nīyúts* that accompany him or help him accompany others: *nīyút-* is used especially of Vāyu’s teams; they are literally wind-horses, and I see these breezes wafting Agni upwards towards heaven.

X.8.7–9: On this appended account of the Trita-Viśvarūpa myth and possible reasons for its attachment to the end of the preceding Agni hymn, see publ. intro.

X.8.7: As noted in the publ. intro., this vs. may be subject to two simultaneous readings, as an account of the beginning of the Trita-Viśvarūpa conflict and as a description of the establishment of the third (=Āhavanīya) ritual fire on the ritual ground. To assemble the evidence for the latter reading first, note first the appropriateness of *tritá-* as a designation for this fire; on *tritá-* for the third fire, see X.46.6. This entity is located *vavré antár* “within a/his covering.” Although this phrase can be used for the Vala cave in that myth (see below), it could also refer to the kindling wood or the plants within which Agni is concealed. Note that the related stem *vavrí-* is found in this sequence of Agni hymns in similar usage (X.4.4 of the wood, X.5.5 of his smoke; cf. also, e.g., V.19.1). “Seeking a visionary thought” (*ichán dhītím*) can refer to the ritual fire’s response to the hymns chanted at its kindling, and under this reading the father can be Heaven. In pāda c the real tipoff to the Agni reading is *pitrór upásthe* “in the lap of his parents”; not only does this phrase recall *mūrdhānam pitróḥ* in 3a, but, more importantly, *pitrór upásthe* (also *upásthe mātúḥ*) is regularly used of the ritual Agni’s location (cf., e.g., I.31.9, 146.1, III.5.8, 26.9, VI.7.5, etc.). The audience would be primed to perceive an Agni reference here. As for the hapax *sacasyámāna-*, although Ge and Re both take it to mean ‘seeking help’, surely its derivation from the root √*sac* ‘accompany’, via a putative **sácas-* ‘accompaniment, companionship’, suggests rather a sense ‘seeking companionship’, and it echoes *sácse* ‘you are accompanied’ in the immediately preceding vs. 6b (see disc. there). The verb *veti* in d also echoes *véṣi* in 5b. All of this suggests that a reading that continues the Agni focus of the first 6 vss. is eminently possible.

However, equally possible and supported by the vss. that follow is a reading that feeds into the Viśvarūpa myth. As I noted in the publ. intro., the Indo-Iranian myth of the slaying of the three-headed serpent-dragon has been assimilated into the Vala myth, and we see the telltale Vala signs beginning in the first pāda with the phrase *vavré antár*: in 2 of its 3 other occurrences (IV.1.13, V.31.3; not VII.104.3) this refers to the confinement of the cows within the Vala cave. The b and d pādas specify the means with which Trita (in this vs. the hero of the myth) effects the cows’ release. In the standard versions of the Vala myth, Indra-Bṛhaspati opens the cave not by brute force but by verbal means, singing or reciting an open-sesame. In b Trita seeks the visionary thought (*dhīti-*) derived from his poetic ancestry that will provide this open-sesame; in d he “speaks his own familial weapons” (*jāmi bruvāṇā āyudhāni*). In other words the weapon he uses to release the cows is speech—poetry—which he has inherited from his forefathers, a point made more explicit by *pítryāny āyudhāni* in the next pāda (8a). The same phrase, in the sg., is found in VIII.6.3, again describing the deployment of words as weapons. Pāda c is a bit harder to interpr. in a Vala context: perhaps Trita is seeking the companionship of the cows, or the association (=herd) of cows; “in the lap of the two parents” could in this context mean “in the

space between heaven and earth.” Ge (n. 7c) suggests, rather loosely, that it refers to the whole world. (In general, the reconstructions of the story behind these vss. by both Ge and Old are fanciful and not very helpful.)

One loose end is the referent of *asyá* opening the vs. I take it as inherently reflexive and explicitly contrastive with *pitúḥ ... párasya* at the end of the hemistich. Trita—whether referring to Agni or to the slayer of Viśvarūpa—employs his own resolve while also seeking to conform to the ancestral ways.

X.8.8: The transition from the Agni hymn to the Viśvarūpa saga is complete here, and without the double Agni/Trita reading that complicated the transition verse, 7, this vs. presents straightforward narrative. However, another conceptual disjunction is introduced: as the Indo-Iranian myth requires, the monster is actually attacked, struck, and slain, using the quintessential verb of violence, \sqrt{han} (*jaghanvān* [c]). But the plot of the Vedic Vala myth unfolds differently, and the Vala myth, with the release of the cows, is what we encounter in d.

As noted above, the “familial weapons” (*jāmí ... āyudhāni*) of 7d are reprised here with the semantically almost identical *pítryāny āyudhāni* (pāda a), reinforced by (*abhy*) *āyudhat* in b. Indra is also introduced as the setter-in-motion of Trita Āptya’s action, preparatory to making him the agent himself in the next vs. The replacement of the old Indo-Iranian hero by the new Power God of Vedic is deftly managed in this set of three vss.: Indra absent in vs. 7, Indra obliquely responsible for the action in vs. 8; Indra himself the actor in vs. 9.

On the phrase “three-headed, seven-reined” used of Agni in I.146.1 and on the lexical substitution of *-śíras-* for *-mūrdhán-* in the “three-headed” compound, see publ. intro.

X.8.9: The desid. stem *ínakṣa-* to $\sqrt{naś}$ ‘reach, attain’ is a secondary replacement of the old desid. to the root, *íyakṣa-* (on which see comm. ad VI.21.3), presumably because the older form lacked transparency and was being attracted into the orbit of \sqrt{yaj} ‘sacrifice’. See Heenen (Desid., 78–79) on the late distribution of *ínakṣa-* and on its formation. As he points out, the lack of initial *n-* in the redupl. (not **nínakṣa-*) shows that it is a secondary adjustment of *íyakṣa-* via the introduction of the initial consonant of the full-grade root.

The publ. tr. has a complex interpr. of *āvābhinat* with a double acc. “split (the heads [acc.]) off the victim (acc.),” with “the heads” to be supplied. I now think this is unnecessary: *áva* \sqrt{bhid} simply takes an acc. of the victim (I.54.4, II.11.2, 18, etc.). Although I would prefer to sneak the sense ‘split’ into the rendering, I’m afraid ‘cut down’ has to suffice, and I would emend the tr. to “... cut down the one ...” Ge does “decapitate” (enthauptete), while Re’s interpr. is truly baroque: “l’abattit-en-le-transperçant.” Here the *áva* ‘down’ contrasts with the *úd* in *udínakṣantam* ‘trying to reach up’, of the vaunting ambition of Viśvarūpa.

The mid. part. *mānyamāna-* ‘thinking himself’ is used in a pregnant sense. This participle is generally used with a complement that indicates a false view the subject holds about himself, e.g., VI.25.5 *yodhó mānyamānaḥ* “thinking himself a fighter.” Here I think the false view is that he has the qualities of his opponent, Indra.

Gen. pl. *gónām* must be a partitive-type gen. with *ācakrānāḥ* (so Ge and Old, *pace* Re), but, as often, without partitive sense: surely the point is that Indra got *all* the cows.

X.9 Waters

This hymn is an Anhang on the Agni collection that opens the maṇḍala. Along with X.8 it is attributed to Trisíras Tvāṣṭra (with an alternative poet Sindhudvīpa Āmbarīṣa also named for

this one), but as discussed above, X.8 clearly belongs with the earlier Agni hymns X.1–7. This hymn, however, has no clear points of contact with the ones that precede, and it has a different divine dedicand and a different meter: Gāyatrī (1–7) and Anuṣṭubh (8–9) rather than Triṣṭubh. (The Anukr. analyses vs. 5 as Vardhamāna [6 7 / 8] and 7 as Pratiṣṭhā [8 7 / 6], but both are resolvable into perfectly fine Gāyatrīs.) Ge’s textual presentation assumes that it is in ṛcas; Old dithers. That vss. 6–9 are identical to I.23.20–23 but the ṛca boundary should fall between vss. 6 and 7 makes a strict ṛca division unlikely, but vss. 1–3 do seem to stand apart from the rest. See publ. intro.

X.9.3: As noted in the publ. intro., this vs. is very compressed for what it seems to be expressing. It opens with a lexeme that is found a number of times elsewhere: *āram* √ *gam* DAT. Cf. I.187.7, VI.63.2, VII.68.2, VIII.92.27, as well as the cmpd. *aram-gamā-* (2x). The idiom seems to mean “go/come (to a place), ready/fit for DAT., with the dative expressing one of several functions: “fit to benefit someone, serve as something, or derive benefit from something” (sim. Re). The shifting relationship of benefit expressed by *āram* in general is discussed in the comm. ad VIII.92.24–27. For the first sense of this particular idiom, “fit to benefit someone,” see VIII.92.27 *āram gamāma te vayām* “let us go (to be) fit for you.” The second, “serve as something, lit. be fit to be something,” is found in I.187.7 *āram bhakṣāya gamyāh* “you should come, fit (to be) (our) portion,” in a vs. and a hymn addressed to Food. For an example of the opposite relationship, with the dative providing the benefit to the subject rather than receiving it, see VI.63.2 *āram me gantam hāvayāyāsmāi* “Come fit for this summons of mine,” where the Aśvins benefit from the singer’s call by arriving in order to drink the soma promised in the next pāda. A similar situation is depicted in VII.68.2, also addressed to the Aśvins: *āram gantam haviṣo vītāye me*. Here I would alter JPB’s tr. to “Come fit for the pursuit of my oblation.” Because the cmpd. *aramgamā-* lacks the full syntagm, it is not possible to be certain which of the senses it has. Both occurrences modify Indra, both times in the collocation *aramgamāya jāgmaye*, which I tr. “who comes fittingly, who comes regularly.” But Indra could be coming to benefit us (by giving, e.g.) or to be benefited by us (by soma or praises, e.g.) – or, indeed, both. As for the sense expressed in the full syntagm in our passage, *tāsmā āram gamāma*, it must be the first, “fit to benefit someone.”

The next problem in the vs. is what to do with *vah*. Re pronounces it “explétif” and does not tr. it; Ge’s rendering seems to reflect a view like Re’s: “Dem möchten wir euch recht kommen ...,” in which tr. I don’t really understand the use of *euch*. As noted in the publ. intro., on the basis of the motherly image in vs. 2, I assume that the poet is claiming “you,” that is, the waters, as our mothers, and as their sons (or under their auspices) we wish to be beneficial to the person referred to by *tāsmāi*. The further twist is that it is for the house of that very person that the waters (re)vivify “us.” As noted in the publ. intro., the general view that this is the house of the sacrificer seems reasonable, but it is hard to extract from the abbreviated phrasing. What the waters are doing when they “animate and beget us” is not clear.

X.9.6–9: As indicated in the publ. intro. and also in the above intro. to the hymn, these vss. are identical to I.23.20–23, verses to the waters appended to a hymn otherwise following the sequence of the Praūgaśastra. The only departure is the omission of I.23.20d *āpaś ca viśvābhesajīh* “and the waters are healing for all” (lit. “possess all healing remedies”) in its equivalent vs. X.9.6 (which has only 3 pādas), but this is somewhat made up for by the last pāda

of our vs. 5, *apó yacāmi bheṣajām* “I beseech the waters for a healing remedy.” For comm. on the individual vss. see the comm. to the equivalent vss. in I.23.20ff.

X.10–19

On these hymns loosely organized into a Yama cycle, see publ. intro. Although the Anukr. assigns them to a number of different poets, they all touch on some aspect of Yama, the realm of the dead over which he presides, or the funeral that precedes mortals’ entry into that realm. See esp. Old (Prol. 232–33) on the close phraseological connections among X.10–13 and in favor of their further connection to X.14–18 [19].

X.10 Yama and Yamī

This remarkable dialogue is one of the most famous hymns in the RV (in the rather limited circles in which *any* hymn in the RV might gain fame), and it has been tr. and discussed by numerous scholars. Recent treatments include that of Susanne Schnaus in her *Die Dialoglieder im altindischen Rigveda* (2008: 163–201) and Bodewitz’s generally negative response to it (IJ 52 [2009]), as well as parts of W. Knobl’s 2009 Leiden diss., notably parts of the chapter “Mind-reading the Poet,” reprinted from StII 24 (2007). The comm. here will make no attempt to discuss / refute / concur with the various points of view found in the many treatments, but primarily set forth my own, esp. when it differs from the standard versions of Ge and the like. (Schnaus cites previous views quite fully, so her disc. can be usefully consulted, and Bodewitz adds additional reff.) Although Re’s treatment in EVP (XVI.122–23 [1967]) is scanty, he gives a complete tr. with nn. in *Hymnes spéculatifs* (1956: 55–57 + 238). The hymn is also found in the AV, at the beginning of the collection of funeral vss. in XVIII (AVŚ XVIII.1.1–16) and so is available in Whitney’s rather antiquated tr.

The hymn, esp. Yamī’s speech, contains a large proportion of perfect optatives (*vavṛtyām* 1a, *dadhīta* 1c [probably; see Ged. Elizarenkova p. 160 and n. 12], *viviśyāḥ* 3d, *riricyām* 7c, *mimīyāt* 9b [probably]; cf. also *bibhryāt* 9d [to a redupl. pres., but similar in Gestalt]; Yama’s speech: *papṛcyām* 12a). On the pf. opt. as characteristic of women’s speech, see my 2008 Ged. Elizarenkova article “Women’s Language in the Rig Veda?” On the usage of the pf. opt., see my 2009 “Where Are All the Optatives?” There are attempts to interpret the pf. opt. with a special nuance added by the pf.—e.g., Knobl’s claim (n. 10 p. 110 of “Mind-Reading” = p. 50 of diss.) that it refers to “unreal possibility,” though he tr. more as a past potential “I would have liked to make the companion turn” for *vavṛtyām* 1a, “I would have yielded ...” for *riricyām* 7a—but as I demonstrated in my 2009 article, these attempts are misguided. Given the distribution of optatives across paradigms, the perfect optative is ordinarily the only optative attested to its root and simply expresses general optative value.

It is also remarkable how many kinship and quasi-kinship terms are deployed in this hymn (3 in the first vs. alone), but “sister” and “brother,” the two terms that name the relationship between the protagonists, are postponed until vs. 11. As noted in the publ. intro., it is also eminently worth paying attention to the grammatical categories of voice and number, esp. the almost studied avoidance of the 1st du (“we two”), which, again, is the operative paradigmatic slot that describes the two participants in the dialogue.

There is a considerable amount of concatenation between vss., esp. where one of the speakers twists the words of the other.

X.10.1: The vs. is Yamī's, and she speaks of herself in the 1st ps. (*ā ... vavṛtyām*), but the rest of the vs., including the apparent references to Yama, are in the 3rd ps.

The grammatical identity of *sakhyā* is debated. Ge pronounces it a dative, which would work well contextually but is morphologically excluded. Old (and most others) take it as an acc. pl. neut., an interpr. reflected in the publ. tr. But I now am more inclined to see it as an instr. sg., also an old view (so already Wh's tr. of the AV vs., flg. Lanman *Noun Infl.* 336), recently upheld by Schnaus. It would be an instr. of cause, and I now emend the tr. to "on the grounds of partnership."

The 2nd pāda poses a number of separate problems. The first is that the nom. sg. pf. part. *jaganvān* is masc., though the speaker of vs. 1 must be Yamī. The part. can therefore not modify the subject of pāda a, but must have the same referent as acc. *sākhāyam* in the first pāda, namely Yama. Technically speaking it could modify the likely masc. subj. of c (masc. reference confirmed by *dīdhyānaḥ* in d), but it seems best to take b as a separate clause with a predicated pf. participle (so most interpr.; see esp. Old) and *cīd* marking a concessive clause(tte).

The adj. *purū* and the noun *aṇavām* disagree in number. With most, I supply a neut. pl. noun with *purū*, viz. *rājāṃsi* 'realms'; cf. III.58.5 *tirāḥ purū cīd ... rājāṃsi*, and the reasonably numerous passages in which *tirāḥ* is construed with *rājas-*.

The larger question that this pāda raises is where did Yama go, and is he now separated from Yamī or did she come along? On the one hand, *ā √ vṛt* 'turn here' in pāda a implies that he is somewhere else and she wants to bring him back; on the other, it is hard to believe that the dialogue that follows in the rest of the hymn was conducted at long distance; it has too intimate and claustrophobic a feel. So he must have made a quick return. Some have suggested that he crossed from immortality to mortality, but there is no other evidence for that. Perhaps it's simply a matter of a mental journey: many a wife has said to many a husband, "are you even listening to me? you seem like you're a million miles away."

In the 2nd hemistich Yamī presents her strongest juridical argument for their incest, though it is a bit anachronistic. Her phrasing is also remarkable for its distancing effects. The argument is the one familiar from later Hindu dharma and religious practice, that a son should beget a son, so that his own father will receive ancestral offerings from his grandson: the three-generational paternal lineage. (It is anachronistic here because, in the absence of other humans, no such religious expectations and societal structures can yet exist.) In her formulation only the grandfather (*pitūh*, that is, the father of the unidentified subject) and his grandson (*nāpātām*) appear overtly; the central actor, the male of the middle generation, who is by implication Yama, is merely the understood subject of the 3rd sg. verb *ā dadhīta*. The only identity he is given is the archaic ritual title *vedhāḥ*, which adds to the solemnity of the quasi-legal prescription she is asserting. It is also worth noting that though the verb here seems to have the primary sense 'provide, establish', *ā √ dhā* in the active can also mean 'impregnate' and in the middle (of a female) 'conceive', so the procreative sense of the lexeme is lurking.

In d *pratarām* is generally rendered as 'future' or the like (Ge: Zukunft), but I think it's a little more pointed: it's not merely a temporal designation but refers to the extension of Yama's own line.

X.10.2: On Yama's first appearance, he picks up—and rejects—the overture Yamī made in her first pāda, by echoing her etymological figure *sākhāyam sakhyā* with *sākhā sakhyām*, while emphatically expressing the rejection (*nā ... vaṣṭi*). Although he speaks of himself in the 3rd ps.,

sākhā ... vaṣṭi, he does implicitly accept Yamī's designation of him as 'partner, companion', by using the same noun stem. He also introduces the first overt 2nd person, in the enclitic *te*.

The second pāda of this vs. is difficult and disputed—as well as being crucial, since it gives Yama's first and strongest argument against the proposed incest and the one that depends not on fear of detection by the gods (cd) but on some sort of apparently universal principle. The argument is structured (in part) by the opposition between *sá-* 'like' and *vīṣu-* 'different'. The standard interpr. is that *sālakṣmā* refers to someone of the same kinship lineage (in this case a sister) and *vīṣurūpā* to a woman of a different lineage, so that she is available for marriage. The idea is that though Yamī belongs to the former class, she will behave like one of the latter. See Old's clear paraphrase "dass ... die Schwester ... werde wie eine Frau aus anderm Geschlecht." This interpr. is favored by the subj. *bhāvāti* 'will become', which implies a transformation or pseudo-transformation. However, I am bothered by the other part of the opposition between the two bahuvrīhis, *sālakṣmā ... vīṣurūpā*. Yama is contrasting not only 'like' and 'different' but also 'mark(s)' and 'form', but the standard interpr. assumes that the 2nd part is held constant: same family / different family. The stem *vīṣurūpa-* is used several times in the fem. dual of Night and Dawn (I.123.7, I.186.4, VI.58.1), who are in fact sisters but have different bodies, different physical form. I therefore suggest that here the contrast is not between kin / non-kin, but rather between someone who is kin to him, but has a different—viz., female—shape. Yama is rejecting a *sakhyām* 'partnership' that involves such a pairing because its outcome in sex is inevitable. The subjunctive *bhāvāti* fits my interpr. less well than the standard one, I admit; it must be a sort of deliberative subjunctive rather than depicting a transformation, But it recognizes that both parts of the two crucial cmpds contrast, not just the first members.

There are two factors that complicate things. The first is that, though on the surface *sālakṣmā* looks like a straightforward fem. like *vīṣurūpā*, its stem must be *sālakṣman-*, and our form can't be simply taken as fem. without question. Ge makes much of this (n. 2b) and suggest that it's a neut. pl. with a singular verb. His insistence on this point is connected with the fact that similar expressions in neut. and masc. are used in the animal sacrifice, already in the early YV mantra collections (see details in the n.), and he wishes to see the adjectives here used of Yamī as applications of the words in technical usage in animal husbandry. Bodewitz also makes an enthusiastic detour through the animal sacrifice to produce yet a different interpr. of this pāda. However, Old sensibly argues that the phraseology was borrowed *into* the animal sacrifice ritual from the RV and not vice versa, and since he is content to take *sālakṣmā* as a fem., so am I.

In c the two genitives, *mahāḥ* and *ásurasya* can be construed together ("the sons of the great Lord, the heroes"), as Ge and Re take them. It doesn't seem to me to make a good deal of difference. The Lord (or great Lord) may well be Dyaus. As to the group identity of his sons, I agree with Old in choosing not to try to narrow it down. Ge's (n. 2c) assertion that they must be the Aṅgirasas seems unduly restrictive; surely the point is that *all* the gods potentially perform surveillance.

X.10.3: As is generally noted, Yamī picks up Yama's words, specifically his verb *vaṣṭi*, which he used in his rejection of her proposal in 2a. She begins her vs. with emphatically fronted *uśānti ghā*, which we might render in idiomatic Engl. as "They *do too* want it." She not only takes his verb, but she provides it with a more powerful subject: the immortals (a generalizing of the group he referred to in 2cd). She keeps his *etád* at the end of the pāda. We might also note that because of the fronting of the verb the subj. (*té amṛtāsaḥ*), incl. the demonstrative *té*, is displaced to the middle of the pāda, with the *té* taking somewhat unusual non-initial position. Here it

teasingly echoes the enclitic *te* in 2a, which, as was just noted, is the first overt 2nd ps. in the hymn.

In b *tyajās-* is a hapax, though clearly (*pace* Bodewitz, who takes it as a thematized adj.) a possessive secondary derivation of the well-established *s*-stem neut. *tyajas-* to \sqrt{tyaj} ‘leave (behind), abandon’. Ge thinks *tyajās-* is the personified fault, that is, the living result of the blameworthy act of incest. But surely Yamī is not going to pitch it in that negative way. Re’s suggestion (EVP XVI.122) that it is analogous to *rēknas-* ‘legacy’ to \sqrt{ric} ‘leave behind’ is more illuminating. (In the earlier Hymnes spéc, he instead tr. as ‘un survivant’.) I take *tyajās-* as the personified ‘legacy’, who embodies what the father left behind. This personification finds a bizarre analogue in modern-day American English academic terminology: in the (controversial) practice of elite colleges and universities offering preferential admission to children of alumni, a practice called “legacy admissions,” the students so admitted are known as “legacies.”

The gen. *ékasya cit ... mártasya* is the clearest indication we have that Yama is, or will become, mortal. It of course contrasts with *amṛtāsaḥ* in pāda a.

Pāda c is the first time in the hymn in which the 2nd ps. and the 1st ps. appear together. The 2nd sg. enclitic *te* returns from 2a (with shifted reference: in vs. 2 it refers to Yamī, here to Yama), in a similar phonological context: 2a *ná te*, 3c *ní te*. But the 1st ps., used of herself by Yamī, is—oddly—plural: *asmé*. She is still practicing the distancing characteristic of the speech of both of them in the opening of the hymn, but creeping closer to intimacy, at least pronominal intimacy.

The injunc. *ní ... dhāyī* is almost universally taken as modal; e.g., Ge: “Dein Sinn soll sich unserem Sinne fügen,” but this is far from necessary. (KH doesn’t treat this vs.) I think rather that Yamī is asserting that Yama’s mind is *already* fixed on—or indeed in—her, whether he acknowledges it or not; two vss. later (5a) she claims that their sexual relationship was determined long ago, and here she seems to say that he is mentally prepared for, perhaps already eager for it, and now he should take the next step to the bodily relationship. If the sense is “your mind is fixed *in* me,” the entering of the body she demands in the next pāda has already been accomplished mentally.

The last pāda is the most direct expression of what she’s been hinting at so far encountered. It also contains the first 2nd sg. verb (probably; see below), the pf. opt. \tilde{a} *viviśyāḥ* ‘you should enter’. But until we come to the verb at the end of the pāda, her statement seems entirely parallel to her first juridical argument for incest given in 1c. Like that one, this contains two (quasi-) kinship terms, *jāni-* ‘wife’ and *pāti-* ‘husband’, and the optative should give it the same legally prescriptive force as 3rd ps. \tilde{a} *dadhīta* in 1c. We expect 3rd ps. “a husband should enter the body of his wife,” and so the “as husband, *you* should enter ...” comes as a shock. She may also be splitting the difference, as it were: I wonder if *viviśyāḥ* can also be read as a nonce perfect *precativē*, in the 3rd sg. Precatives are of course only built to aorist stems, but the athematic *-yāḥ* in the aor. entirely substitutes for the ordinary opt. 3rd sg., expected **-yāt* (see my “Where Are All the Optatives?”), and so I think this 3rd sg. prescriptive force could carry over to the pf. here. In this way Yamī can both maintain her tone of legalistic authority and make a direct personal appeal. Her statement here is reminiscent of Lopāmudrā’s (less explicit) ones in I.179.1–2: 1d *ápy ū nú pātnīr vṛṣaṇo jagamyuḥ* “Bullish (men) should now come to their wives”; 2d *sám ū nú pātnīr vṛṣabhir jagamyuḥ* “Wives should now unite with their bullish (husbands).”

On the gen. ending *-ur* in *jányuḥ* (found only here) borrowed from the kinship terms, see Old inter alia.

X.10.4: Yama simply ignores Yamī’s arguments in the previous vs. and changes the subject. This change is signaled by the lack of concatenation: for the first time in the hymn no words from the previous vs. are carried over into the next. He also shows himself to be as adept at distancing as his sister, until the very end of the vs. In the 1st hemistich, as he poses rhetorical questions about what they should or should not do, he uses the 1st person, but the 1st person *plural*: *cakṛmā* “should we (pl.) do?”; *rapema* “should we (pl.) murmur?” So for the first time they are both subjects of the same verbs, but the expression is grammatically skewed.

His first argument, in pāda a, is the “no precedent” one. Interestingly he doesn’t actually make the argument, leaving the main cl. verb-less and in the air. We expect “*(should we do it) now?” – and this verb is supplied by almost all tr. and comm. (The exception is Bodewitz, who think the *kād* clause includes b, but his tr. is so contorted that it demonstrates by itself that that is a bad idea.) The verb we would expect, corresponding to the pf. *cakṛmā* in the dependent clause and parallel to the opt. *rapema* in b, would be the pf. opt. **cakriyāma*. I would suggest that since at this point in the hymn Yamī “owns” the pf. opt., he would avoid using that form; it’s only towards the end, when he’s essentially won the argument, that he uses a pf. opt. (12a).

His second argument has to do with public versus hidden. Just as their behavior should stand up to the public visual scrutiny of the gods (2cd, also 8ab), so should their words be truths not only when spoken out loud (*vādantaḥ*), but also in the quiet intimate register (*√rap*) that (he seems to imply) the gods might not overhear. Like most, I think that b is a rhetorical question like the incomplete one in b introduced by *kād*.

His clinching argument is found in cd, though in a sense it’s just a restatement of what they both know—that they are siblings by virtue of their parents, the Gandharva and the Apsaras (“watery maiden” *āpyā ... yósā*).

In d *sā no nābhiḥ* is a fine ex. of the “attraction” of a demonstrative in an equational clause to the gender and number of the predicate, a phenomenon quite familiar in Vedic prose (on which see, e.g., Brereton “*tat tvam asi* in Context”). Here the referent of *sā* is the gender-mixed dual pair of Gandharva and maiden; we might expect **tā no nābhiḥ* if this syntactic rule hadn’t been applied. For another ex. see X.11.8 and comm.; for an equational rel. cl. that does not show this attraction see VI.41.3 and comm.

The standard tr. take *sā no nābhiḥ* and *paramām jāmi tām nau* as parallel phrases, expressing essentially the same thing; e.g. Ge: “die sind unser Ursprung, das ist unsere höchste Blutsverwandtschaft.” By contrast, in the publ. tr. I adopt a clever suggestion of Bodewitz’s (p. 265), that *tād* in the second phrase means ‘therefore’, and the second phrase thus draws conclusions based on the first. This conclusion is that their kinship is of the highest, that is, in this case the closest (full siblings), and that precludes any other relationship they might have, esp. a sexual one.

The final word of the vs. is *nau*, the 1st dual enclitic. This is the first time in the hymn that we meet a 1st dual, perhaps not accidentally in unaccented, hence syntactically recessive form. But its appearance here is striking; even in this same pāda the 1st ps. was first represented by the pl. enclitic *naḥ*. Yama has finally acknowledged, however indirectly, that this is between the two of them alone.

X.10.5: Yamī immediately counters Yama’s triumphant assertion that their highest relationship is blood kinship, by substituting what is (for her) implicitly an even higher relationship. Since they shared a womb (thus acknowledging their full siblinghood), they were created from the first as a married couple, a household pair (*dāmpatī*), lit. ‘two lords [/lord and lady] of the house’. As

in 1d with her deployment of the inherited ritual title *vedhāḥ*, she utilizes an archaic, inherited, and resonant word for the married pair, which gives dignity and prestige to her claim. (On the use of *dāmpatī* and its lexical replacements, see my 2019 “The Term *grhastha* and the (Pre)history of the Householder,” in *Grhastha: The Householder in Ancient Indian Religious Culture*, ed. Patrick Olivelle. Pp. 3–19.)

She is also quick to pick up his newly introduced *nau*, placing it in pādas a and b.

The sequence of nom. sgs., *janitā ... tvāṣṭā savitā viśvárūpaḥ*, raises the question of how many agents were involved, and, in particular, is the god Savitar separately named here beside Tvaṣṭar or is the stem *savitār-* used here as a descriptor (‘the impeller’)? With most interpr. I opt for the latter. Among other things *asyā* in c presupposes a singular referent. Tvaṣṭar is, of course, most closely associated with the procreation and the shaping of embryos; see, e.g., X.184.1 *tvāṣṭā rūpāṇi pīmśatu* “let Tvaṣṭar carve the forms,” in a pregnancy charm. In nearby X.2.6–7 there is an implicit riddle that posits the generic “begetter” as the one who “begot you” (X.2.6b *jānitā tvā jajāna*), immediately solved in the next vs. by Tvaṣṭar (X.2.7b *tvāṣṭā ... tvā ... jajāna*) in the same words. See comm. ad X.2.7.

Note that *viśvárūpaḥ* in b echoes *viśurūpā* in 2b, though there doesn’t seem to be a close thematic relationship. In light of nearby X.8.7–9 (q.v.), the brief treatment of the Trita-Viśvarūpa myth, it is striking that Tvaṣṭar is credited here with ‘possessing all forms’. In that myth Tvaṣṭar is the father of the three-headed monster Viśvarūpa; cf. X.8.9 *tvāṣṭrāsya ... viśvárūpasya*, with the patronymic. See also comm. ad V.42.13.

As Re (Hymnes spéc., 237) points out, Yamī’s invocation of Heaven and Earth as witnesses is a clever ploy, since they are a famously incestuous pair and thus provide a divine charter for the action she wants to take (see further 9c). Her phraseology, *vēda nāv asyā prthivī utā dyaūḥ*, is strongly reminiscent of the refrain in the famous hymn I.105, *vittām me asyā rodasī* “Take heed of this (speech) of mine, you two world halves” (see comm. ad I.105.1). Both her adaptation of that refrain (or some formula that lies behind both) and her statement in c, *nākir asya prā minanti vratāni* “no one transgresses his commands,” which echoes similar expressions in, e.g., I.69.7, II.38.7, set a verbal imprimatur of formulaic authority on her speech, which is of course all the more important because, as a woman, she does not have that authority by nature.

Note that in our phrase even an explicitly conjoined subject (with *utā*) consisting of two (non-neuter) singular nouns can take a singular verb.

X.10.6: Yama’s answer is somewhat confusing, I think because he pretends to respond to her claim in 5a but really does not. What does he mean by “this first day” (*asyā ... prathamāsyāḥnaḥ*)? He *seems* to be asking about their time in the womb, about which she spoke in 5a; so Ge (n. 6a): “Der erste Tag ist der ihrer Zeugung.” But the implication of his question “who knows about this first day?” is that no one does: it belongs to the time before time, at the first creation (as presented, e.g., in X.129). He has substituted one (unknowable) time for a knowable one. This twisting of temporal reference makes it seem as if her claim about their birth is unsubstantiated, in fact unsubstantiatable—whereas, in fact, Tvaṣṭar their creator at least should know, along with the other gods. Surely the birth of Yama and Yamī does not go back to the primordial past.

I would change the rendering of the verbs in b to “who saw it; who proclaims it here.” The first again calls into question the possibility of a witness of primal events; the second raises suspicions about anyone who claims to know or have seen the first day—in this case, Yamī by implication, since she made apparently authoritative statements about the action of the god

Tvaṣṭar in 5a.

To her invocation of the *vrata-* of Tvaṣṭar in 5c he counters with the *dhāman-* of Mitra and Varuṇa and thereby mobilizes the ethical rigor of those two gods at the center of the RVic moral universe and the ceaseless scrutiny they are known to exercise over humans. He will return to this in 8ab.

Pāda d presents some difficulties. On the one hand, the analysis of *vīcyā* is disputed; on the other, *√brū* can take the acc. of the addressee or the acc. of the subject spoken about: which semantic role does *nīn* fill and who does the acc. pl. refer to? To answer the second set of questions first, I take *nīn* as the topic of discourse (“speak about superior men”), and I take its referent not to be mortal men (of which, remember, there are none at the time), but rather, as so very often with this stem, of gods. Here Yama raises the very issue discussed above ad vs. 5: how does she, a woman, have the right to speak about superior males, in fact the most superior of all: gods? And she is not just a woman, but one characterized as *āhanās-*. Whatever the exact meaning and etymology of this word (on which see comm. ad V.42.13), it is associated with rampant sexuality. In this context that characteristic would make Yamī even less qualified to engage in discourse about the gods, esp. the divine upholders of ethical principles. Yama’s insulting address to her—this is the first voc. of the hymn—is meant to delegitimize her participation in the dialogue. He further emphasizes this with the instr. *vīcyā*. Here I follow the old interpr. (see Ge n. 6d) as a fem. instr. to an otherwise unattested *-āñc* stem, **vyāñc-* ‘going apart, aside’; supplying the instr. **vācā* we get “with (speech) going aside, with deviant (speech).”

It is worth noting that *āhanās-* is found in V.42.13, modifying Tvaṣṭar, in a snippet of text that implies incest between Tvaṣṭar and his daughter – the same Tvaṣṭar who was responsible for making Yama and Yamī a married couple, according to her (5ab).

X.10.7: If I am correct that Yama’s intent in vs. 6 was to disqualify Yamī from participation in the dialogue on the grounds of her gender and sexual avidity, he was successful. Her measured unemotional legalistic arguments for their coupling give way in this vs. to an expression of naked desire. For the first time in the hymn their names appear, and they are nearly juxtaposed (*yamāsya mā yamyām*). And she speaks of ‘desire, lust’ (*kāma-*), not duty, divine preference, or personal history. As W. Knobl points out (p. 119 n. 42), the first pāda consists of a wonderful repetitive phonetic figure, which, I would add, seems iconic of the wave of desire that overcomes her: *yamasya mā yamīya(m) kāma* ... (My presentation of the figure is somewhat different from Knobl’s: he omits the final vowels and also doesn’t include the 2nd syllable of *kāma*.)

Pāda b contains a nice play: Yamī expresses her desire “to lie together in the same *yóni*,” here a ‘place’ or ‘nest’, but of course, since *yóni-* can refer to the womb (see esp. in the miscarriage and birth charms X.162.1, 2, 4, 184.1), they did lie in a *yóni* before their birth. In vs. 5 she refers to the same place with *gárbha-*, but the latter word more often means ‘embryo’ than ‘womb’.

Pāda c reprises the wife/husband pairing found in her vs. 3d, though with a different word for ‘wife’ (*jāyā-* rather than *jāni-*), along with the contested place, the wife’s body (*tanvām*) as object in both. But the agency has switched: in 3d the husband was urged to enter the body of his wife, while here the wife is the subject, yielding her own body to her husband (*jāyā ... pátye*). I do not know why she expresses it as a simile here.

The word for ‘yield’, another pf. opt. *riricyām*, belongs to the root *√ric* ‘leave (behind)’ and may be meant to evoke *tyajásam*, the personified ‘legacy’ built to *√tyaj* ‘abandon, leave’. See my

invocation of *réknas*- ‘legacy, heritance’ ad vs. 3 above.

The problematic pāda is d (with its near repetition 8d). There are almost as many interpr. as there have been readers of this hymn, and I cannot rehearse them here. Most interpr. start from the assumption (voiced or taken for granted), which I share, that this is a piece of erotic slang. Unfortunately of course such expressions are almost impossible to interpret in the absence of a sufficient body of texts containing such material – which the RV does not provide us. My interpr. starts with the observation that *ví√vr̥h* is a violent verb, with the literal sense ‘tear off, tear apart’. The lexeme is reasonably well attested in the RV; cf., e.g., VI.45.9 *ví dṛ̥ḥh̥ṇi cid ... vr̥há* “Tear apart even the strongholds.” But in this context a purely violent interpr. is unlikely, esp. since it’s an activity that Yamī herself suggests that she and Yama could do together: this is the first, and indeed the only, 1st dual verb in the hymn, *ví vr̥heva*. But of course as a general rule the erotic incorporates much of the violent, and so the most sensible way to approach this expression is to assume that the violence of *ví√vr̥h* has been repurposed for an erotic charge. Riffing around in modern English provides us with several useful parallels. On the one hand there’s a specifically erotic expression “tear up the sheets,” referring to energetic or violent sex. There’s also the expression used in the publ. tr., “let ’er rip,” with the dummy object ’er (for her, but without gender implications). Like “tear up the sheets,” the verb in this expression has the same literal meaning (‘tear, rip’) found in *√vr̥h*, but it also has a wider sense, which may allow us to understand the curious simile in our pāda concerning chariot wheels. One of the reasons that there are so many, and so many implausible, interpr. of this pāda is that it’s hard to figure out what chariot wheels have to do with sex—with many fanciful notions concocted to connect them. I would actually suggest that they don’t; what the simile is capitalizing on is a secondary meaning that seems to be shared by verbs of this nature (at least Engl. ‘rip’, ‘tear’; Skt. *√vr̥h*), namely reference to extreme speed. In English in addition to “let ’er rip” we have “tearing hurry,” “tear off to,” “on a tear.” These verbs seem to inhabit the intersection between violence and speed, here mediated by sex. So, while Yamī’s *ví vr̥heva* is proposing, on the one hand, that the two of them engage in passionate vigorous sex (type “tear up the sheets”), her simile compares this sex act to the speed of a rushing tearing chariot. The Free Online Dictionary defines “let her/something rip” in part as “to do something without inhibition or restraint, typically with great enthusiasm or force” and specifically as “allow an engine to go as fast as possible. An American colloquialism dating from the first half of the nineteenth century, this term presumably was first applied to locomotive or steamship engines.” Note the connection with the speediest vehicles of their respective days. So Yamī’s verb is already a metaphor and her simile adds another level of figurative distance.

The pāda is not only conceptually challenging, but also grammatically. The noun *cakrá-* is of course neut.; its dual should be, and several times is (X.85.11, 12, 16), *cakré*, and so our form *cakrá* should be neut. pl. In the first part of the simile, *ráthyeva*, the sandhi should be dissolved into *ráthyā iva*, again a neut. pl., rather than expected du. **ráthye*. A neut. pl. reading is not impossible here, but it seems pretty clunky. The human pair was surely envisioned in the simile as a matched set of wheels belonging to this light two-wheeled vehicle (on the construction of the chariot, see Sparreboom pp. 10–11), turning rapidly in perfect synch as the chariot tore (/dashed) along the way. Assuming more than two wheels gives us a very different and more plodding picture. Fortunately VIII.5.29 contains the phrase *ubhā cakrá* “both wheels,” which is emphatically dual in sense, and I think we must reckon with the same pseudo-masc. form here. As for *ráthyeva* it is possible that it should be resolved into *ráthye ’va*, with the truncated simile particle to be read occasionally in the RV and generally in MIA. For *va* for *iva*, see Gr’s list p.

221 and for a similar du interpr. of *-eva* as *-e 'va* see Macd., VG p. 259.

There is some difference of opinion about whether the wheels are in the nom. or the acc. Without reproducing the terms of the debate, I will simply opt for the nom.: the speeding, whirling wheels are compared to the two energetic lovers.

X.10.8: Yama does not respond directly to Yamī's erotic break, but simply repeats, more strongly, his warning from 2cd about the ever-vigilant divine witnesses.

His pāda a shows a nice syncopation in *ná tiṣṭhanti ná ní miṣanti*, where *ná Cī* is answered by *ná Cī*, but the rhyming *miṣanti* is postponed a syllable.

The fronted *anyá-* in c and later in the hymn (10d, 12c, 13c, 14a) provides prime evidence for the indefinite value ('another', not definite 'the other') of this stem in initial position. On which see my "Vedic anyá- 'another, the other': syntactic disambiguation," Fs. Beekes (ed. A. Lubotsky), 1997, pp. 111–18. It is a particularly cruel usage because there *are* no other males available for Yamī to pick from.

In c Yama picks up the 2nd level of metaphor in her 8d—the chariot wheels—by urging her to “drive off straightaway” (*yāhi tūyam*). He rejects her 1st dual opt. *vṛheva* in favor of a 2nd sg. impv. *vṛha* + instr., with the instr. referring to her hypothetical other partner, removing himself from the situation entirely. He also repeats his insulting voc. *āhanah*.

X.10.9: With her approach to intimacy (reaching its high point in the 1st du verb of 7d) so decisively rebuffed, Yamī abruptly returns to distanced discourse: this vs. is entirely couched in the 3rd ps., though both their names appear, juxtaposed, in d. She is the 3rd ps. subject of all three verbs, all optatives: a *daśasyet*, b *ún mimīyāt*, d *bibhryāt*. The optatives in this case are not prescriptive, as in some of her earlier uses (1c, 3d) but, like her 1st ps. opt. in 1a and 7c, express desire or potentiality.

The redupl. form *mimīyāt* in b could technically belong to the redupl. pres. of $\sqrt{mā}$ or the pf. of $\sqrt{mī}$, but most (incl. Kü 369) assign it to the latter, as do I. For one thing it fits into Yamī's pattern of perfect optatives. Unfortunately the lexeme *úd $\sqrt{mī}$* is not otherwise attested, which has opened the possibility of all manner of contextual translations, which abound in the lit. I think it should be interpr. in light of the conventional formula Yamī pronounced in 5c, using the same root: *nákir asya prá minanti vratāni* “No one transgresses his commandments.” Old adduces a striking parallel containing *prá minanti* and the eye of the sun that illuminates the sense of our passage: V.59.5 *sūryasya cákṣuḥ prá minanti vṛṣṭibhiḥ* “They [=Maruts] confound the eye of the sun with their rains,” depicting the sun's loss of vision behind a veil of rain. Here Yamī is asserting that at least for a moment (*mūhur*) she too could transgress / confound one of the iron laws of nature, the inescapable sight of the sun, which misses nothing as it transits the sky. Here she is implicitly countering Yama's statement *ná ní miṣanti eté* “they never blink” (8a) about the “spies of the gods” (*devānām spásah* 8b): the sun is the quintessential spy (cf. X.35.8 *spáḥ úd eti sūryah*). I tr. “trip up” to capture the *úd* and also register the fact that this idiom is out of the ordinary.

In c she makes clear why she invoked Heaven and Earth as witnesses in 5d. The “couple” (*mithunā*) is a 3rd ps. reference to themselves, Yama and Yamī, and she asserts that they have the same kinship relationship (*sābandhū*) as H+E—the point being that H+E are both siblings and an incestuous couple.

In d *bibhryāt* is not a pf. opt., but it is the next best thing, a redupl. athem. opt. that matches *mimiyāt* in b (and perhaps, as JL suggests, to avoid the anomalous redupl. of the pf. *jabhṛ-*). The

pāda has very rich semantics with a number of overlapping readings available to the VP *bibhṛyād ājāmi*. First, note that she has reached back to 4d, where Yama used their *jāmi* ‘kinship’ as an argument against her. (In our vs. I tr. *ājāmi* as ‘unbrotherly’, not ‘non-kindred’ vel sim., because the latter lacks punch in English.) I see at least three readings for her statement here: 1) she would happily bear (=endure physically) the “unbrotherly” sexual act; 2) she would happily bear (=assume the burden, mentally) the guilt associated with this act; 3) she would happily bear (=give birth to) the living result of this act (though ironically any child from this union would be super-related to both parties!).

X.10.10: Once again Yama fails to answer her, but goes off on a tangent of his own; in fact it’s not entirely clear to me what he’s trying to say, esp. in b. His speech begins portentously: the first 6 syllables of pāda a are heavy, and the repeated long *ā*’s, punctuated by *g(h)*’s, draws attention to the ponderous pace: *ā ghā tā gachān út(ā)ā (yu)gā(ni) ...* He prophesies that latter generations (*yugā-*, another word sketching a kinship connection) will come when kin will do the unkindred/unbrotherly act (*jāmāyaḥ kṛṇāvann ājāmi*), using both his *jāmi-* (4d) and her *ājāmi* from the previous vs. But what is his point here? It almost sounds as if he’s predicting the debased behavior of the Kali Yuga (and *yugā-* might support this view), behavior that he refuses to have anything to do with. But the notions of cyclical time and the four ages of progressively worse actions and circumstances are foreign to the RVic conceptual universe, as far as I know. Perhaps they, or something like them (minus the cycle), were circulating in some form at the time – after all, a sequence of ages showing progressive decline is also found in Greek mythology as early as Hesiod and, more to the point, the Avestan Yima, Yama’s counterpart, presided over an age of peace and prosperity (see Videvdāt 2), which was also followed by decline (see Skjaervo’s art. on the myth of Jamšid, Encycl. Iran. <http://www.iranicaonline.org/articles/jamsid-i>, inter alia).

His suggestion to Yamī in c, to make her arm a pillow for her lover, may strike us as bizarre, but it has a parallel in V.61.5 *dór vīṛāyopabārbrhat* with a different word for ‘arm’ (*dós-* rather than *bāhú-*) and a different word for the male, but the same very rare intensive stem (*úpa bārbrh-* (on which see Schaef. 157–59). Note the phonetic play with labials and *h* in the pāda: *upa bārbrhi vṛṣabhāya bāhúm*. I would also suggest that Yama is twisting Yamī’s *bibhṛyāt* from the previous vs. (9d); Re, flg. Pisani, in fact assigns the form to $\sqrt{bhṛ}$, an idea that has little to recommend it. As for the shape of the impv. *bārbrhi*, a properly formed impv. to this stem should be **bārbr̥dhi*; Old suggests reading **bārbr̥hi* in part for metrical reasons. Whether we want to follow Old’s suggestion, the somewhat simplified form shows how derivationally shallow the intensive is.

X.10.11: As noted in the publ. intro., this is the first time in the hymn that the words “brother” and “sister” appear, tellingly in a context that questions the meaning and worth of the very terms. We can interpret the first pāda in two ways simultaneously. On the one hand, a brother is supposed to provide a refuge for his sister; if he does not, he’s not a proper brother. On the other hand, she seems to be saying, “why get hung up on our sibling relationship, when I have a more important relationship to worry about?– I need a husband!” In this connection it’s worth remembering that in later Sanskrit *nātha-* can mean simply ‘husband’. So she’s saying both “you’re not behaving like a good brother” and “who cares about ‘brother’? It’s not the most important relationship we have to each other.” The 2nd pāda continues this line of thought. Acdg. to most interpr. (with which I concur), “if Dissolution will come down” (*yán nīrtir*

nigāchāt) refers to the non-continuance of the human race after the twins if they don't do something about it. In the face of this potential catastrophe why is he worrying about the word and relationship “sister”?

Her brief return to logical argument in the first hemistich is followed by an emotional pitch resembling her first erotic break in 7a, picking up *kāma*- from there and reusing his \sqrt{rap} from 4b. Her final appeal to him is made in the impv., *pipṛgdhi*, rather than the opt. she has previously favored, and an impv. to a redupl. pres. stem. Note also that for the first time both bodies (*tanū*-) are in question, whereas in 3d and 7c it was only the body of the wife.

The destabilization of the dialogue is also signaled by the switch of grammatical categories: for the first time in the hymn Yamī uses the subjunctive (a: *asat ... bhāvāti*, b: *nigāchāt*) and the imperative (d: *pipṛgdhi*) – categories that had been exclusively Yama's (subj.: 2a *bhāvāti*, 6d *bravaḥ*, 10a *gachān*, 10b *kṛṇāvan*; impv. 8c *yāhi*, 8d *ví vṛha*, 10c *úpa barbhī*, 10d *ichasva*). Her legalistic logical optatives give way to longings and demands.

X.10.12: And Yama in return steals *her* grammatical category! He answers her pres. impv. with a *perfect optative* built to the same root $\sqrt{pṛc}$, *papṛcyām*, his first use of this category (though see below). Moreover, as has often been remarked, the first pāda of his reply is hypermetric by three syllables (assuming, as we should, distraction of the two forms of *tanū*-, on which see Knobl n. 80 p. 131 [Mind-Reading] = p. 71 diss.). Although various scholars have suggested emendations to render the vs. an ordinary Triṣṭubh, we should surely resist that urge, as argued persuasively and at length by Knobl (Mind-Reading, pp. 130–35 = diss. 70–75) and already by Old. To begin with, the pāda almost exactly repeats her 11d; the crucial deviations are emphasized by the awkwardness of the meter, which signals the climactic emotional force of his response. What Yamī wants is a simple repetition of her appeal, with person shift. That is, responding to her words

tanū vā me tanūvaṁ sām pipṛgdhi
“Mingle your body with my body.”

she wants

**tanū vā te tanūvaṁ sām papṛcyām*
“I would mingle my body with your body.”

This desired echo would follow her wording and her metrical form exactly, but of course he refuses. His negation would necessarily add another syllable, the *nā*, but I suggest that just one additional syllable would not sufficiently demonstrate how far his reply fails to mirror her appeal—hence the addition of three, *nā vā u*, to introduce the echo (note also that the enclitic *te* flips its position to modified 2nd). The rare (in the RV) and solemn particle *vai* (‘verily’ or the like) also draws attention to his deliberate, rather pompous style and the finality of his rejection. And the too-many-syllables here is in keeping with the too-heavy-syllables in 10a discussed above. Moreover, the additional syllables at the beginning of the pāda have a complex relationship with what follows: *nā vā u te* is a scrambling of *tanūvā*, which opens 11d: the *t* from *te*, *na* flipped to *an*, *vā u* likewise flipped – the result is *t-an-u-vā*. This point is made also by Knobl, pp. 133–34 = 73–74. He also suggests that *nā vā u* could also stand for **nā vā u*, with the nom. sg. of *nī*- ‘man’: “As a man [and not as your brother] could I have commingled with you” (pp. 134–35 = 74–75), though the absence of the indep. nom. sg. *nā* in the RV (and indeed until quite late) makes this suggestion less compelling. Moreover, it seems psychologically out of character: throughout their dialogue Yama has shown no desire for, or even human/brotherly sympathy towards, Yamī.

A brief word on the redupl. pres. versus perfect to $\sqrt{pṛc}$. I wonder if these two supposedly

different tense/aspect stems don't belong to the same paradigm, distributed phonologically, with forms with root-final velars taking *i*-redupl. and those with root-final palatals *a*-redupl. The former include only *pipṛgdhi* (1x, here) and *pipṛkta* (1x), the latter *papṛcāsi*, *papṛcyām* (here), *papṛcyāt*, each with one occurrence, plus two occurrences of the mid. part. *papṛcānā-*. The system would be reminiscent of *sīṣakti*, *sāścati* and would belong to a redupl. pres. If *pipṛgdhi* / *papṛcyām* do belong to one paradigm, Yama's repetition and deviation from repetition would be more pointed, but if *papṛcyām* belongs to a redupl. pres., he then would not have appropriated her grammatical category – though it's the moral equivalent thereof.

In b Yama takes her verb *nigāchāt* from 11b and puts a nasty spin on it. Although the VP here, *svāsāraṃ nigāchāt*, is usually rendered rather staidly (e.g., Ge "... der zur Schwester geht"), it is hard not to see this idiom as a sexual one, as Re comments (in EVP, despite his restrained "qui a commerce avec sa soeur" in Hymnes spéc.) – even if a specific sex act, as in the same English idiom 'go down on', is not meant.

In c Yama urges her for the third time (8c, 10d) to find some other undefined sexual partner.

And in d he brings the discussion to a firm end. His *nā te (bhrātā subhage) vaṣṭi etāt* almost exactly repeats his first words, in 2a *nā te (sākhā sakhyām) vaṣṭi etāt*. The repetition is ring compositional, but a striking use of this device. It not only defines the compositional unit by the poet for the audience (us), but Yama uses this boundary-setting repetition to close off the dialogue, to shut down the communication between him and his conversation partner. In other words, ring composition is deployed by a fictional character to limit a fictional debate, as well as by the poet to delimit a self-contained poetic unit—it functions both within the fictional space and outside of it, at the same time.

X.10.13: After he has so decisively shut her off with his defining ring, it is no wonder she produces the sputtering outburst in 13a. Her first pāda is also considerably too short, 7 syllables rather than 11, so with 4 syllables lacking, almost balancing the 3 he added in 12a. In this case as well, Knobl (110–15 = 50–55) argues strenuously and persuasively for letting this pāda stand in its truncated form, rather than pursuing various emendation strategies proposed by previous scholars to fill the pāda out, and once again he is following the lead of Old (Noten, though in the Proleg. Old had himself considered emendation). Her initial reaction is all the more powerful for its brevity, a pure eruption of frustration, exasperation, and anger.

It also contains the striking doublet *bató bata*, found only here in the RV. The latter word *bata* is found as an interjection later (Br+, also Pāli *vata*), the accented stem *batá-* nowhere else but here. There are two exactly opposite schools of thought on these words: 1) *bata* is the voc. of *batá-* and later pressed into service as an interjection; 2) *batá-* represents the nonce substantivization of that interjection. Despite the eminence of the scholars who hold the latter view (incl. Wackernagel, Old, Knobl, and Bodewitz [p. 279]; see the reff. in Knobl pp. 111–12 = 51–52 + nn), I am strongly inclined towards the former. I find it hard to believe that Yamī gave violent vent to her emotions by saying "INTERJECTION, you are (an) INTERJECTION." Knobl's artificially constructed and barely parsable "*A LAS, alas*, you are, Yama!" (111=51) demonstrates the difficulty better than I could, but consider also some hypothetical exx. "Argh! you are an argh, Yama!" or "Yikes, you are a yike, Yama!" I think instead that we're dealing with a pejorative slangy designation, and I see no reason why the voc. of such a designation couldn't get turned into a swear word or an emphatic particle. Most exclamations are downgraded content words, often verbs (damn! blast!), but not limited to verbs (hell! shit!), in a

process akin to the well-known and widespread process of grammaticalization of content words and morphemes. I find it hard to imagine the opposite process, as the argh and yikes examples show. For noun as exclamation one of the best parallels I can think of in contemporary English is the exclamation of frustrated disappointment “rats!” popularized by Charlie Brown in the comic strip Peanuts; synchronically this is surely perceived (via folk etymology) as derived from the rodent, though its history complicates the picture: it is probably from “drat” or its predecessor “(G)od rot.” Consider also how “God” or “Christ” gets used in modern-day English as mere interjection without any blasphemous intent or the use of “the devil” “to make a statement stronger” (funkyenglish.com: <https://funkyenglish.com/idiom-speak-devil>); see also <https://idioms.thefreedictionary.com/What+the+devil%3F> and <https://dictionary.cambridge.org/us/dictionary/english/what-where-how-why-the-devil> . Some website examples: “what the devil are you talking about” “where the devil have you been?” Cf. also expressions like “the devil he did,” an example of which from Jane Eyre I unearthed on the internet. In any case the initial *b-* of *bata* marks it as belonging to a different stratum of discourse from that usual in the RV. We have no way to know what the word actually meant, but English “jerk” inhabits the right register.

Note that, flg. a suggestion of Georges Pinault, Carmen Spiers in her 2020 EPHE diss. (“Magie et poésie dans l’Inde ancienne: Édition, traduction et commentaire de la Paippalādasamhitā de l’Atharvaveda, livre 3”), pp. 571-72, apropos AVP III.39.1 (a hymn “après une fausse couche”) suggests that *patam* in that vs. is a *p*-form of *batá-*. She translates the line *dhruveṇāśvinā patam bharāmi* “[Même] avec un cavalier solide, je porte un raté” / “[Even] with a solid rider, I bear a runt.” The vs. is confined to the Paippalāda and is beset with problems; given the uncertainties of the text, this can only be a suggestion.

Yamī’s 2nd pāda is, by contrast, hypermetric, though only by one syllable: it has a good Triṣṭubh cadence, but 12 syllables. It would have been easy for her to make a standard Triṣṭubh, just as it would be easy for us to fix it now: either *evá* or *te* could be eliminated with no detriment to the sense. But once again metrical disturbance calls attention to the message; I suggest that her *naívá te* ... is meant to match his 12a opening *ná vaí u te* ... [note that *ná vaí* and *naívá* are anagrams], though on a slightly lower discourse level—*evá* being a much much more ordinary RV particle than the elevated *vaí*. After her disordered outburst in pāda a, she demonstrates that she can speak as formally and collectedly as he can. This is also conveyed by the 1st pl. *avidāma*. Knobl (116=56) thinks that this plural contains “a multitude of divine peers” along with herself, but I think rather that she is speaking for herself alone but deploying the plural majestatis, as it were – giving herself a detached and authoritative persona, which coolly passes judgment on Yama’s failings. (Queen Victoria’s supposed statement “we are not amused” captures the right note.)

Her last move in her effort to reposition herself in the dialogue is to appropriate one of his ploys: the indefinite *anyá-*, here in the feminine of *his* as-yet-unidentified new lover. She has washed her hands of him. The creeper / tree pairing for a delicate and clinging woman and a sturdy man is of course a trope that persists through the rest of Sanskrit high literature; this is the first example of it, to my knowledge.

X.10.14: Yama gets the last word, at least technically, but it seems anticlimactic, not the clincher he may have envisioned. In the first hemistich he simply repeats and elaborates her 13cd with gender switch, and in c he seems to promise that there’s another man out there who has the *mānas* that he, Yama, does not. I’m again not sure what he’s trying to say: is he condescendingly

recommending something outside of her power (find another man) and then reassuring the little lady by saying it'll all be fine? Is he not the least embarrassed to admit that he lacks *mānas*?

In any case, I find his rhetorical form more appealing than his message: his a and c pādas contain parallel reciprocal structures:

anyām ... tvām / anyāḥ ... tvām

tāsya ... tvām / sā ... tāva

In both structures the case forms are arranged chiasmically, ACC ... NOM / NOM ... ACC // GEN ... NOM / NOM ... GEN, while the stems have A ... B / A ... B order. Each of these structures has paired particles, *ū/u* in pāda a, *vā* in pāda b. Pāda c is once again metrically disturbed, with 12 syllables and this time the Jagatī cadence appropriate to that number of syllables. Arnold suggests emending the final *tāva* to *te*, which would give a Triṣṭubh. Once again Old resists – properly. The accented disyllabic *tāva* is needed to balance its disyllabic partner *tāsya* at the beginning of the line; moreover, the final *sā vā tāva* makes a nice little figure. Note also that *tvām* is not to be read distracted in either pāda – this unusual scansion is perhaps deployed in the first pāda to make it more equivalent to acc. *tvām* and in the second to match *sā*.

Both of his neatly packaged structures have conceptual problems, however. Pāda b, which he repeats verbatim from Yamī's 13d, is appropriate only for the first part of pāda a, *anyām ū sū tvām*, with the female “you” (Yamī) compared to the creeper; in Sanskrit art poetry the man (the masc. nom. *anyāḥ* of the 2nd part of a) would never be compared to a creeper wrapping himself around a stalwart female.

In c, rather like his 4a, Yama starts a thought that should require a 2nd verb, which he omits, leaving the thought incomplete. Once again this may be because the required verb is problematic. Here he addresses Yamī with the impv. “seek” (*ichā*); the paired clause beginning *sā vā* “or he ...” should have a 3rd sg. impv. (*ichatu* vel sim.: “or let him seek ...”), but since the subject, the *sā*, has only a hypothetical and at best future existence, it is hard for Yama to give him orders. Hence his final pāda (“it will all be fine”) is undercut by his inability to construct credible reassurances. The hymn ends at an impasse.

I have always been puzzled by the anodyne *ādha kṛṇṣva saṁvīdam sūbhadrām* “Then make yourself a very happy compact” that ends the hymn and Yama's speech—which I took as his condescending advice to find a new lover and arrange things with him. But I now see that it should be read in conjunction with Yama's own *sām √ vid* in X.14.4, where he comes to an agreement / makes a compact with two distinct groups of beings, the Aṅgirasas and the Pitars, with whom he will share the new realm of the ancestors. In our passage Yama seems to be foreseeing a time when Yamī will have to negotiate such an agreement with someone quite distinct from herself (as Yama is not) and indeed quite possibly someone belonging to an entirely alien breed, namely a mortal. The root noun *saṁvīd-* is also found in a Vākh. fragment, VIII.58.1 (q.v.), where a sacrificial *saṁvīd-* is made between the Sacrificer and the officiating priests.

X.11 Agni

As noted in the publ. intro., it's long been recognized that this hymn shares some phraseology with X.10, even though they have nothing in common thematically. See esp. vs. 2c *rāpad gandharvīr āpyā ca yōṣaṇā* with X.10.4c *gandharvó apsv āpyā ca yōṣā*, and for *rāpat*, X.10.4b *rapema*, 11c *rapāmi*. The hymn is also characterized by alliteration and etymological and morphological figures.

X.11.1: All 4 pādas of this vs. show alliteration, some mixed with etymological figures or use of identical stems in different case forms:

- a: *vṛṣā vṛsne duduhe dōhasā diváh*
- b: *... áditer ádābhyah*
- c: *vṛṣvaṃ sá veda váruṇo ...*
- d: *... yajñíyo yajatu yajñíyān ...*

With Ge and Re, I take the subject of the first hemistich to be Soma, of the second Agni. Old instead sees Agni as subj. of the whole. The focus on milking in ab makes Soma more likely than Agni; as Ge points out, the pressing of soma is elsewhere likened to milking. The paradox of a bull, a male, giving milk is of the type much loved by RVic poets.

There is a certain amount of disagreement about where to assign the genitives *diváh* and *áditeh*. Ge takes *diváh* with *páyāmsi*, Re with *vṛṣā*, with Old I attach it to *dōhasā*, on the basis of word order and pāda boundary, though Ge's solution is also possible (and not terribly different in sense). Old takes *áditeh* with *páyāmsi*, while I follow Ge and Re in supplying 'son' for the gen. to depend on. Again word order favors this interpr. Cf. also VII.60.5 ... *putrá áditer ádabdhāh* (sim. II.28.3). The problem is that neither Soma nor Agni is generally classified as an Āditya (though for Agni see Brereton, Ādityas, 221–31); Ge's n. 1b attempts to argue that Soma is the youngest son of Aditi, but his arguments aren't particularly strong. But perhaps being "undeceivable" (*ádābhya-*) is sufficient to make a divinity an honorary Āditya.

In d most interpr. take *yajñíyān ṛtūn* as the obj. of *yajatu* ("let him sacrifice to the sacrificial ṛtu's"); I take it as an acc. of extent of time (a possibility Ge mentions in n. 1d). In favor of the former interpr., Re argues that *yajñíya-* is almost always used of divinities. Acknowledging this, I might suggest an alternative tr., taking the two acc. pls. separately: "Let the one worthy of the sacrifice sacrifice to those worthy of sacrifice [=gods] throughout the ritual sequences." On the sequential offerings see comm. ad I.15 and the publ. intros. to I.15 and II.36.

X.11.2: Note the sequence of paired alliterative words in b: *nadásya nādé pári pātu me mánah*, the first pair also being an etym. figure.

As in vs. 1, the first hemistich seems to concern Soma, the 2nd Agni.

As noted above, pāda a *rāpad gandharvīr ápyā ca yóṣaṇā* is a variant of X.10.4c *gandharvó apsv ápyā ca yóṣā* "the Gandharva in the waters and the watery maiden" and must be interpr. in that context. The version in X.10 is surely the original—it provides one of Yama's most important arguments against incest—with ours a playful adaptation. The most crucial deviation is the substitution of fem. *gandharvī-*, found only here in Vedic, for masc. *gandharvá-*. (The replacement of *yóṣā* by *yóṣaṇā* is a more or less automatic adjustment from a Triṣṭubh to a Jagatī cadence.) So the question is whether the two feminine designations refer to one female or two; another way to phrase this is what is the function of the *ca*?s In X.10.4, of course, it conjoins the "watery maiden" with the Gandharva and is properly positioned to do so. If the Gandharvī and the watery maiden here are two separate individuals, *ca* can be doing the same thing. This is Old's view. The presence of a singular verb (*pātu*) in b, to which they should be the subject, is not actually an obstacle: see the conjoined subject in X.10.5 with singular verb (see comm. ad loc.). However, it's trouble enough to figure out what to do with *one* female here; there's no obvious role for two. Ge and Re both take the two feminines as referring to one individual, but deal with the *ca* in different ways. Ge takes *ca* as subordinating, with domain over the whole pāda despite its position, and tr. "Wenn die Gandharvin, die Wasserfrau, flüstert." This is rightly rejected by Klein (DGRV I.262), in favor of Re's solution, that when the original pāda

was adapted here, the *ca* came along for the ride, losing its function (“*ca* irrationnel”). While also taking the two feminines as referring to one individual, I suggest a slightly different solution. In borrowing the pāda, the poet has repurposed the *ca*, no longer needed to conjoin the two nouns, into a sentential coordinator, introducing the 2nd clause.

The sense of this opaque hemistich is cleverly illuminated by Ge (n. 2ab). The Gandharvī watery maiden is a designation of an Apsaras; in IX.78.3 the waters mixed with the just-pressed soma are called Apsarases. In b the “bellow of the bellowing (bull)” is the sound of the pressed soma; noise is often a prominent part of the description of the soma pressing. The idea here is that the gentle murmuring of the (female) waters moderates the clamor of the (male) bullish soma and insulates the mind of the poet against it.

Aditi returns in pāda c (from 1b), but it is not clear what her relevance is in either vs. (Brereton [Ādityas, 224] considers *āditi-* here to be personified Innocence used as a designation for Agni himself; I am not convinced, esp. as Aditi in 1b was in relation to Soma.) For further spec. on the reason for Aditi’s presence here, see below.

In this pāda *naḥ* is universally taken as the obj. of *nī dhātu* “let her set us down” and *iṣṭāsya* as the ppl. to *√iṣ* ‘desire’: Aditi is to establish us in the midst of everything we want. This interpr. is reflected in the publ. tr., and it may well be correct at least in part. But it seems a trivial and frivolous use of Aditi, and I wonder if there’s not another possible, perhaps dominant reading. The lexeme *nī√dhā* is regularly used of the establishing of Agni as Hotar (e.g., I.45.7, V.4.3), and *agnīm hótāram* is the catchphrase of the omphalos in this hymn, in the next two vss., 3d and 4d. Moreover, the referent of “eldest brother” (*bhrātā ... jyeṣṭhāḥ*) in the next pāda (2d) is taken by most to be Agni. Therefore I suggest that Agni could be supplied as the obj. of *nī dhātu* with *naḥ* a dative of benefit: “Let Aditi set (Agni) down [/install (Agni)] for us.” In this case *iṣṭā-* could belong to *√yaj*, and the phrase would mean “in the midst of what has been / is sacrificed,” that is, in the middle of the ritual ground. For somewhat similar passages of Agni, see I.69.4 *mādhye nīṣattaḥ ... duroṇé* “set down in the middle in the dwelling,” VI.12.1 *mādhye hótā duroṇé* “in the middle in the dwelling,” as well as nearby in the mystical X.5.1 *útsasya mādhye nīhitam padām veḥ* “the track of the bird has been set down in the middle of the wellspring,” also, despite superficial appearances, of Agni. If this suggestion is correct, then the point may be that Aditi is involved in the establishment of both primal ritual divinities, Soma (1b) and Agni (2c).

Ge (n. 2d) convincingly explains the use of *bhrātā* for Agni in d: “Der älteste (Amts)bruder des Priesters, insbes. des Hotar, ist Agni.” But I wonder if there’s a more pointed reason for the word ‘brother’ here. When our poet borrowed X.10.4c for his pāda a in this vs., he erased the male Gandharva, father of the twins, by making him into a female Gandharvī; he may be indirectly restoring the brother here.

But what is Agni doing to or for us? Ge (n. 2d) thinks that he is deciding what reward we should receive, Re that he is stating our desire (from c) explicitly. I think it is both more general and more pointed. The lexeme *ví√vac*, in verbal forms entirely limited to the aor. stem *vóca-*, almost always has the sense ‘provide a decisive answer to a question’; see I.105.4, IV.5.12, VI.18.3, 22.4, X.28.5, 88.17. Sometimes it’s a question with two alternative answers.; e.g., VI.18.3 *ásti svin nú vīryam tát ta indra, ná svid asti tát ṛtuthā ví vocaḥ* “Does that heroic power now exist for you, Indra, or does it not? You will declare [=decisively answer] that at the proper season”; sometimes the questions are about impenetrable enigmas, on which a mortal seeks enlightenment, as in I.105.4 *yajñām pṛchāmi avamām, sá tát dūtó ví vocati / kvārtām pūrvyām gatām, kás tát bibharti nūtanah* “I ask the nearest one [=Agni] about my sacrifice. Will the

messenger [=Agni] declare [=decisively answer] this: ‘Where has my earlier “truth” gone? Who bears it now?’” Although in our passage no questions are explicitly posed, this is the last pāda before the omphalos vss., the ordinary locus of enigmas, and I would suggest that now that Agni has been installed (2c; see above), he will provide us with decisive instruction about the mysteries that concern us—esp. because “He knows everything, as Varuṇa does, through his insight” (1c *vísvaṃ sá veda váruṇo yáthā dhiyā*). Perhaps Aditi is the installer in c in order to connect Agni with her most eminent son, Varuṇa, distinguished by both knowledge and ethical stature. I would therefore emend my tr. of d to “Our eldest brother (Agni) will be the first to instruct us.”

X.11.3–4: As indicated in the publ. intro., these two vss. form the omphalos of the six-vs. Jagatī portion of this composite hymn. Their 2nd hemistichs match each other: #*yád ī(m) ... , agnīm hótāram ...*, and both vss. end with a form of *jan* (3d *jījanan*, 4d *ajāyata*). Both also play the ritual present against the mythic past: in vs. 3 the *cīd nú* points to the ritual present, but Manu belongs to the mythic past; in vs. 4 the fetching of the drop by the falcon in ab is mythic past, but the verb in c (*ṽṛṇāte*) is present. As noted in the publ. intro., the 1st hemistichs of the vss. treat the introduction of the ritual substances fire (3ab) and soma (4ab) respectively. This toggling between present and past leads to a strange collection of verbal stems and tenses.

X.11.3: The first of the omphalos vss. It also contains the alliterative and etymological figures *uṣā uvāsa* (b) and its echo *uśántam uśatām* in c (though of course the phrases belong to two different roots, \sqrt{vas} and $\sqrt{vaś}$ respectively).

The publ. tr. omitted *bhadrá* in pāda: correct to “... auspicious Dawn ...”

X.11.4: Some alliteration that crosses the pāda boundary in ab: *vibhvām vicakṣaṇām, vír*.

Based on the parallelism with 3c and on the sense, *yádī* in 4c should be read *yád ī*, not as a lengthened form of *yádi* ‘if’. The *īm* in 3c precedes a vowel, *ī* in 4c a consonant.

The verb *ābharat* in b is read by the Pp. as augmented *ā abharat*, but in fact it could just as well be an injunctive. An injunc. would give more flexibility in putting together the temporal relations of the rest of the vs. I am now tempted to read it with presential value “does the bird ... bring,” to conform with the pres. in c. The injunctive would also allow both the mythic past and the ritual present meanings simultaneously. On taking c with ab, rather than d, see immed. flg. remark.

In the publ. tr., contrary to the standard interpr. I take the *yád* clause of cd with ab and take *ádha dhīr ajāyata* as a new independent sentence. This disposition of clauses was made in great part in response to the awkwardness of having a pres. *ṽṛṇāte* in the subordinate cl. and an augmented impf. in the main cl.—which, strictly speaking, should yield the unharmonious “when the Aryan clans choose ..., a thought was born.” Most interpr. take c with d and tr. *ajāyata* as an aoristic-type recent past: e.g., Klein, DGRV II.105 “When the Aryan clans choose the wondrous Agni as Hotar, then a (poetic) thought has been born.” But (per IH) augmented impfs. should not express such a value. I therefore stick to the publ. tr. (save for substituting a presential reading for *ā bharat*). Note that the *yád īm* clause in 3cd is also subordinate to a main cl. in ab, so that my interpr. here reinforces the parallelism of the two vss.

The *dhī-* that was born in d harks back to 1c, where Agni knows everything “with his insight” (*dhiyā*). Thus the very end of the omphalos sees the creation of the quality that allows Agni to instruct us authoritatively.

X.11.5: The opening of b, *hótrābhir agne*, is a scrambling of the repeated phrase of the omphalos vss., *agním hótāram*, which likewise opens the even pāda. Another partial repetition from the omphalos vss. is *mānuṣaḥ*, echoing *mānave* of 3b and connecting the current ritual to Manu's first establishment of it.

It is not immediately clear what *vā* in c is conjoining, but I am persuaded by Klein's suggestion (DGRV II.184–85) that the nominal expression in b, *hótrābhiḥ ... mānuṣaḥ svadhvarāḥ* is equivalent to a temporal cl., with the bahuvr. *svadhvarāḥ*, lit. 'having good ceremonies', functioning as the predicate "(when) you have/conduct ..."

X.11.6: Pāda b has chiasmic alliteration: *īyakṣati haryatō hṛttā iṣyati*. The 2nd two terms (*hṛttāḥ* and *iṣyati*) appear to be abbreviated versions of the 1st two (*haryatāḥ* and *īyakṣati*).

As noted in the publ. intro., this last vs. of the Jagatī hymn is esp. crammed with matter and subject to simultaneous and overlapping readings. As Re points out, the vs. contains 7 finite verbs, of which 6 are pres. indic. (only the first is exceptional, the impv. *īraya*). For none of them is the subject identified (save for epithets or descriptors). Suggestions for the identities of the subjects vary widely; I will not list them all, but give what I consider the primary referents in each case – but as indicated in the publ. intro., the studied vagueness as to identity is surely meant to invite the audience to interpr. each statement as applicable to both Agni and Soma (or vice versa).

I take the/a priest as the subj. of the impv. in pāda, prompting a fellow officiant. I also favor the kindling sticks as the referents of *pítārā* among the usual pairs (Heaven and Earth, Day and Night) suggested. The vs. seems to be the climax of the ritual activity prepared for in the earlier parts of the hymn, and kindling the ritual fire would be the first critical event.

Ge follows Yāska in interpr. *ā* as a simile particle; I am quite skeptical, even though I think *jārā ā bhāgam* is an implicit comparison. The most helpful parallel is I.134.3 *prā bodhayā pūraṁdhiṁ, jārā ā sasaṭīm iva* "Awaken Plenitude as a lover (awakens) her who sleeps," with the same sequence *jārā ā* followed by an object referring to the female of the pair. (Cf. also X.39.2 *ūt pūraṁdhīr īrayatam*, which contains our verb and *pūraṁdhi-* as in I.134.3.) Although *bhāgam* is obviously not feminine, I wonder if it's not erotic slang, something like "piece of luck" for a girl he "got lucky" with.

In b I take the subj. to be Soma, primarily because, although *haryatā-* can be used of Agni, it more often modifies Soma. The desid. *īyakṣa-* has Soma as subject a number of times. As complement to *īyakṣati* I perhaps over-hastily supplied 'cows', on the basis of a passage like IX.78.1 *apā vāsāno abhī gā īyakṣati*, of Soma. I now would be inclined to leave it in absolute usage ("the gladdening one is yearning ..."). As for *iṣyati*, this verb regularly takes 'speech' as obj. with Soma regularly as subj. (IX.12.6, 30.1, 64.9, 25, 95.5), and this seems a fairly safe obj. to supply, esp. since it is followed immediately by *vīvakti*.

In c *vāhni-* 'draught-horse' is used of both Agni and Soma; here I would favor Agni as the primary referent on the basis of *vīvakti*. Although this verb obviously belongs to the redupl. pres. and therefore does not contain the preverb *vī*, it cannot help but recall to the audience *vī vocatī* (2d), the verb that introduced the omphalos verses and means something like "provide decisive instruction." Agni was the subject of that verb, and I think his role as instructor is reprised here.

On *makhā-* see comm. ad I.18.9. The stem is not particularly associated with either Agni or Soma, and the verb doesn't help. I tentatively assign the phrase to Agni partly because the

identities seem to switch pāda-by-pāda rather than clause-by-clause, and partly because Agni does more actual labor at the sacrifice.

As to d, the denomn. *taviṣyá-* occurs 3x in the RV; the other two occurrences have Soma as subj. The cl. *vépate matī* is used of Soma in IX.71.3. So Soma seems the likely primary referent of this pāda.

X.11.7: Although the isolated form *ákṣat* is identified an aor. subjunctive to $\sqrt{(n)as}$ by Gr, see Narten's disc. (sig-aor. 160). She interpr. it as a nonce present injunctive analogically created beside the (likewise isolated) *-is*-aor. Whether her model is correct (I am dubious because the *-is*-aor. is a hapax), I concur with her grammatical analysis: a subjunctive in the generalizing *yáḥ* cl. does not fit well with pres. *śṛṇve* in the main cl. I would now emend the tr. to "whatever mortal attains ..." Note that *ákṣat* echoes *íyaksati* in 6b and they belong to the same root; although they belong to two different hymnlets, I think it's possible that well-attested *íyaksati* influenced the form of nonce *ákṣat*.

In b I supply "all" on the basis of VIII.2.34 *vísṣvā yó 'ti śṛṇve* "who is famed beyond all things."

In d the lexeme *ā ... bhūṣati* has elicited a range of contextual translations all assuming that *dyūn* is the object: Gr "eine Zeit hinbringen, verleben" [spend time], Ge "sieht er den (kommenden) Tagen entgegen" [look forward to, await], Re "il fortifie ses jours"—none of which resembles the usual employment of $\sqrt{bhūṣ}$. This idiom normally takes a loc. and means 'attend upon / to'. Cf., e.g., VIII.99.2 *tvé ā bhūṣanti vedhāsaḥ* "The ritual adepts attend to you." I take *dyūn* as an acc. of extent of time, as often, and supply 'you' with *ā ... bhūṣanti*, like the explicit *tvé* in just-quoted VIII.99.2 or the implicit one in I.43.9; alternatively we might supply loc. **sumataú*, picking up the *sumatīm* in pāda a, similar to X.160.5 *ābhūṣantas te sumataú nāvāyām*—yielding for our passage "he tends to (your favor) through the days."

X.11.8: Much of the 1st hemistich resembles I.95.8 *sā devātātā sāmitir babhūva*: see our ... *eśā sāmitir bhāvāti devī devéṣu* ... In I.95.8 I take *sāmiti-* as a reference to Agni: "he has become the meeting point with the assemblage of gods" (so also, e.g., Ge), an allusion to Agni's role as ritual intermediary between gods and men. I now think our passage has the same sense and reference and would emend the tr. to "When (you)/he will become the divine meeting point among the gods, the one worthy of the sacrifice." There is a problem with this interpr. that does not confront I.95.8, namely that Agni, supposedly the referent of *sāmitiḥ*, is addressed in the voc. in the 1st hemistich (*agne ... yajatra*) and is the 2nd ps. subj. of the parallel *yád* cl. in c (*yád vibhājāsi*). I suggest that this is an extreme example of the well-known "attraction" of grammatical categories in nominal sentences with pronominal subject; see disc. above at X.10.4. In that ex., *sā no nābhiḥ* "that is our umbilical tie," the referent of fem. sg. *sā* is actually the mixed gender dual pair of the Gandharva and the watery maiden," so a dual masc. (representing a masc.+fem. pair) has been "attracted" into the fem. sg. to match the gender and number of the predicate *nābhiḥ*. In I.95.8 just quoted, the fem. sg. *sā* matches *sāmitiḥ* in gender, though the referent is Agni. In our passage we would have not only that gender attraction but also, I suggest, "person attraction," from 2nd to 3rd. On the other hand, a less radical revision of the publ. tr. might follow the Ge/Re path to something like "when this divine assembly [=the sacrifice probably] will take place / take its place [*bhavāti*] among the gods ...," but this loses the parallelism with I.95.8 and also removes the focus from Agni. In addition *yajatā-* ordinarily modifies gods, not inanimate entities.

X.11.9: The use of *mākiḥ* with a 2nd sg. subj. with clear referent (you=Agni) would be unusual. In fact, Re takes the first clause as 3rd ps., only the second as 2nd: “Que nul des dieux ne soit à l’écart, sois (toi-même) ici!” Although the publ. tr. reflects the 2nd ... 2nd interpr. of Ge, I am now inclined towards Re’s 3rd ... 2nd, at least as an alternative: “Let no one of the gods be absent; you should be here!” The reason is that I now think that *mākis* only has 3rd ps. ref. (for possible counterexx., which I explain otherwise, see I.147.5 and X.100.7). In this behavior it is like *nākis*, which likewise has only 3rd ps. reference (for potential counterex., see VI.67.10 and comm. thereon). The gen. pl. *devānām* here also is easier to construe with “no one” than as an independent constituent. The big stumbling block is, of course, *bhūḥ*, which looks like an undeniable 2nd sg. Re suggests it might have been attracted by the flg. *syāḥ*, which is possible. I think it might be a nonce (pseudo-)precativ, like *dhāyīḥ* in I.147.5.

X.12 Agni

On the structure of this curious hymn, see publ. intro.

X.12.1: The first hemistich cannot be interpr. without ref. to I.185.10, which contains the other occurrence of them. *abhiśrāvā-*, there in the dat.: *ṛtām divé tād avocam pṛthivyā, abhiśrāvāya prathamām sumedhāḥ* “I of good wisdom have spoken this truth to Heaven and to Earth to hear first.” Like our passage that one contains a form of *prathamā-* and one of *ṛtā-*. In I.185.10 the dative is (quasi-)infinitival; I agree with Ge (n. 1ab) that our *abhiśrāvē bhavataḥ* is a periphrastic construction, even though, as Re points out, the loc. *abhiśrāvē* is not technically an infinitive.

Note the polarized and contrastive vocabulary: H+E both “speak” and “hear” and the two resonant and contrasting words *ṛtā-* and *satyā-* both appear in the hemistich. I think the point here is that H+E are the major physical cosmic entities; as such, they both embody and oversee the natural laws that control observable reality (*satyā-*); hence they “speak what is real” (*satya-vāc-*). This quality of theirs gives them title to be the first to hear *ṛténa*, that is, to hear what is in accordance with the deeper conceptual truths that govern the relations among things, beyond this observable reality. This *ṛtā-* is conveyed at the sacrifice, which is initiated in the 2nd hemistich.

In c *mārtān yajāthāya kṛṇvān* “setting / causing mortals to sacrifice” can be considered a periphrastic causative (see Zehnder, Periphras. Kaus. 18 and passim; Keydana, Inf. 262–63). The morphological caus. to √*yaj*, *yājayati*, is not attested until Vedic prose and should not exist in the RVic period because it would be a double transitive, a type that is blocked for *-āya-* transitive/causatives at this time (see my *-āya-*, esp. 186–89).

In d the standard tr. construe *pratyāñ* with *svām āsum*; in fact, Ge and Re seem to take it as part of a phrase with the part. *yāñ* in the meaning ‘returning’ (e.g., Ge “wieder in sein Leben zurückkehrend”). Ge (n. 1d) claims, without giving evidence, that *pratyāñ* is “verstärktes *prāti-*.” But *pratyāñc-* means ‘facing towards’, ‘face-to-face’; I see no passages with a semantic component ‘again’. In the publ. tr. I re-supply *mārtān* from c; cf. the passages in which Agni is *pratyāñ víśvā bhūvanāni* “facing towards all beings” (II.3.1, X.88.16). Alternatively Agni is regularly described as *viśvātaḥ pratyāñc-* “facing in all directions” (I.144.7, II.10.5, VII.12.1, X.79.5), and that might be the expression underlying this one.

This leaves *svām āsum yāñ* as the phrase to be interpr. The stem *āsu-* is fairly common in this set of hymns: *āsum* 14.12, 15.1, *asutīp-* 14.12, *āsunīti-* 12.4 (this hymn), 15.14, 16.2. Interestingly, at least in usage, in these funeral hymn passages the word implicitly refers to a new/other life, at least to a change of state, as in X.14.12 ... *asmābhyam ... pūnar dātām āsum adyēhā bhadram* “Let these two here today grant a fortunate life again to us”; X.15.1 *āsum yā*

īyūḥ “(the forefathers) who went to (their next) life ...” In our passage, with Agni as subject, “going to his own (next/other) life” must surely refer to the rekindling of the ritual fire at every dawn sacrifice (this is also Ge’s view, n. 1d), with this kindling referred to in the next vs., 2c.

X.12.2: Agni having initiated the mortals’ sacrifice in 1cd now turns to his sacrificial role with regard to the gods. The opening of the two segments, 1c *devó yán mártān* and 2a *devó devān*, emphasize the parallelism. Our pāda a lacks a syllable; Arnold and HvN supply a rest at syllable 5. I suggest that omitting a syllable in the opening draws attention to the parallelism, since the subord. conj. *yád* isn’t nec. in 2a.

For *devān paribhūḥ* see V.13.6 *ágne nemír arāṁ iva, devāṁs tvám paribhūr asi*.

Ge takes *prathamāḥ* in b with *cikitvān* (“als erster Kundiger”), but *cikitvān* is ordinarily a syntactically inert final qualifier like *vidvān*. I take *prathamāḥ* instead as part of the verbal complex (“(as) first convey”), parallel to *prathamé* in 1a, also of ritual activity (so also Re).

For *hótā nityaḥ* see *nitya-hotā* in nearby X.7.4.

X.12.3: A difficult vs. Note also that three of the four pādas (a, c, d) end in monosyllables, *gór*, *gur*, and *vāḥ* [underlying *vār*] respectively, a striking stylistic effect.

The difficulties begin at the beginning, with *svāvṛj-*. The old interpr. (Gr, AiG II.1.220, Wh AV XVIII.1.32, etc.) is that it is a cmpd of *su-ā-vṛj-*, but Old gives good arguments against this (first *v* is consonantal, unexpected accent). Old’s candidate for first member, *sva-*, is now the standard (e.g., Ge n. 3a, Scar 502); he takes it as a bahuv. “wobei bz. wovon eigene (d.h. eignen Besitz schaffende) Aneignung stattfindet.” This interpr. was adopted in AiG II.2.29 and is one of the alternatives given by Scar in his analysis, which begins with *sva* + fem. rt. noun cmpd **āvṛj-* (so accented). The problem is that though such a bahuvr. might account for the accent we have, in the interpr. of the passage, even by those who offer a bahuvr. interpr. of the form, it generally comes out as a determ. cmpd (Old “angeeigneter Besitz,” Scar “eigener Besitz”), which, as far as I can tell, should be accented **svāvṛj-* (and cf. *svavṛj-*). If it is interpr. as a bahuvr., a neut. modifying *amṛtam*, it seems as if the meaning should be opposite to what we expect: “the immortal drink having the own possession of the god” rather than what the sense should be: “... being the own possession of the god.” In other words, as far as I can see, grammatically speaking the drink should *possess* the god, not be his possession. Ge, Re, and Scar (2nd alt.) all produce a bahuvrīhi-type interpr., but in all cases with the backwards interpr. I just constructed (e.g., Ge “... in der eigenen Gewalt des Gottes steht”). The phrase could, I suppose, be twisted to make *devāsya* a subjective gen., but getting to this interpr. involves too many steps, to my mind. There is also the problem that root noun cmpds. generally only have two members, and even in PREVERB + ROOT idioms often gap the preverb if cmpded with a further 1st member. (See my 2020 “Vedic *iṣudhyá-* and Old Avestan *išud-*, *išūdiia-*; Fs. Lamberterie.) I wonder if, rather than a cmpd, we originally had a syntagm **svā āvṛk* “own possession/acquisition,” with fem. root noun cmpd., which underwent expected vowel contraction to **svāvṛk*, with the double accent then simplified to *svāvṛk* when it became interpr. as a cmpd. This does not in fact change the interpr. or tr. of the clause.

We are not yet finished with the problems of this pāda. All standard interpr. take the *yádī* towards the end of the pāda as subordinating the whole pāda to the main cl. in b. This clause lacks a verb, but *svāvṛk* can serve as the predicate: so, more or less, “If/when the immortal (drink) from the cow becomes the possession of the god, ...” This is, in fact, syntactically (barely) possible. However, there is an alternative, which I think works better in the passage: to

take *yādī* (or rather *yād ī*) as an izafe-like marker qualifying *amṛtam*: “the immortal (drink) which is from the cow.” As often, I read *ī* as the enclitic prn., variant of *īm*, though I’m not exactly sure what it is doing here, perhaps doubling *amṛtam*. I would point out, however, that it fills a rhetorical role: pāda a ends *yād ī gōr* #, pāda c ends *yájur gur* #; without the *ī* the match would be less exact.

What substance are we dealing with? *amṛtam* suggests soma, but the addition of the cow as source makes this unlikely. I think it is ghee, the ordinary ritual offering to Agni. Ge thinks it is the rain and therefore identical to the *divyām ghṛtām vā* “the heavenly ghee, the water” in pāda d, but this seems rather reductive to me: it is more interesting to have two substances, earthly and heavenly, assimilated to each other rather than simply being the same. (See publ. intro.) And it’s also hard for me to understand how Agni would possess the rain.

In any case the beings born from this substance (*áto jātāsaḥ*) uphold the two worlds. Who these beings are is debated. I think it is likely the gods, who make their appearance at the beginning of c. They are “born” from the ghee because the ritual oblations feed and sustain the gods. Med. pres. *dhārayante* is based on the *-anta* replacement *dhārāyanta* and need not be credited with a medial sense. The identical form (with accent) appears in vs. 7.

In the publ. tr. pāda b is set in quotation marks, to indicate that I thought that it constituted the *yájus*, the sacrificial formula, that is mentioned in pāda c. This interpr. was inspired by Re’s idea that d is the actual *yájus*. I am now not at all sure that this interpr. works, though I would like to identify an internal formula here.

On my interpr. of d as an early ex. of the water cycle, see the publ. intro. Unlike Ge, who identifies the *gauś* ‘cow’ of pāda a with the *énī* ‘speckled cow’ of d, I think they are quite distinct and the sources of earthly and heavenly ghee respectively. Since heavenly ghee is water (*vā*), namely rain, the speckled cow may be a raincloud.

X.12.4: As noted in the publ. intro., Heaven and Earth, called to witness in vs. 1, receive the same call in this vs., which ends the 1st portion of this hymn: *dyāvābhūmī śṛṇutam* in b responds to 1ab *dyāvā ... kṣāmā ... abhiśrāvé bhavataḥ*.

In pāda a the standard interpr. of the sequence *várdhāyāpaḥ* is as *várdhāya + āpaḥ*, with the latter belonging to the *s*-stem neut. *āpas-* ‘work’, and this is undoubtedly correct. However, I see a potential pun here, with *āpaḥ* ‘waters’ also to be read in *várdhāyāpaḥ*. This *āpaḥ* would be nom. for acc. *apāḥ*, as sometimes elsewhere. For exactly the same pun see nearby X.4.5 and comm. thereon. By my interpr. both ‘work’ and ‘waters’ are the obj. of the infinitival *várdhāya*. The “work” of H+E is the creation of rain (see Ge’s n. 4a), that is, “waters.” This was made quite clear in the immed. preceding pāda, 3d, which ends with *vāḥ* ‘water’, and is probably also represented by the ‘honey’ (*mādhvā*) in 4d (so also Ge).

Pāda c seems to be an elaborate way of describing the passage of time (so Ge), appropriate to the use of the cmpd in the funeral hymns to come (X.15.4, 16.2). Re’s more convoluted interpr., which seems to conceive of the days as a sort of psychopomp, seems unnec. On *āsu-* see comm. on vs. 1. On the conjunction of *āhar-* and *dív-/dyú-*, both in the meaning ‘day(time)’, see nearby X.7.4 *dyúbhiḥ... áhabhiḥ*.

X.12.5–8: On the possible thematic connection of these apparently disordered vss., see publ. intro.

X.12.5: The pf. *jagr̥he* is quite likely a pun. The form is ordinarily assigned to $\sqrt{gra(b)h}$ ‘grasp’, for good reason. Grasping is a standard action of Varuṇa’s and fits the worried atmosphere of this vs. However, it could also belong to $\sqrt{gr̥h}$ ‘complain’ (Aves. *garəz*) and is so taken by Re and Insler (1968: 223).

My interpr. of the 2nd hemistich is completely different from the standard tr. See, in addition to Ge and Re, Old’s extensive disc. and Schmidt (*Vrata*, p. 88). I will not detail my divergences from these interpr. As noted in the publ. intro., I suggest that Varuṇa’s enigmatic and inexplicable hostility to us (ab) is contrasted with Mitra’s more reliable support for us: even when angry, or being shift, he still presents himself loud and clear (like a signal call) and provides good things (like a prize). The contrast between Mitra, our helper and advocate, and the easily annoyed Varuṇa is found more clearly in 8cd.

My disagreements with other tr. begin with the standard interpr. of *juhurānāḥ*, which is generally taken as transitive with *devān* as obj. (e.g., Ge “indem er die Götter verführt”). Because the other three exx. of this med. part. are intrans./pass., I find this interpr. unlikely on syntactic grounds, and it also then requires the construction of a complex and not very plausible backstory as to how and why Mitra would lead the gods astray (see Old, Ge’s n. 5, HPS’s n. 88). I take the form as intrans. and as a pun involving $\sqrt{h̥r}$ ‘be angry’ (on *juhur-* forms to this root see Insler 1968, EWA s.v. \sqrt{HAR}) and \sqrt{hvar} ‘go crookedly’. The point is that even when Mitra is angry (like Varuṇa) and/or following a not entirely straight course, unlike Varuṇa he can be understood and he remains favorable to us.

What then to do with *devān* if it’s not the obj. of *juhurānāḥ*? I construe it loosely with *ślōkaḥ* just across the pāda boundary. Such enjambment is found in this same vs. between pādas a and b: ... *kād asya, āti vratām cakṛma* ... A *ślōka-* is a signal call that goes up and/or out: cf., in the next hymn, X.13.1 *vī ślōka etu pathyā*. For its place among the gods see III.54.11, for its journey to heaven I.190.4. Although the verb of motion is lacking here, it is easily supplied and could perhaps be extracted from the gen. pl. *yātām*.

The function of *āpi* in this pāda is disputed. I take it as ‘also’, introducing a 2nd simile, that of Mitra as *vāja-* ‘victory prize’.

X.12.6: On the sense and placement of this vs., see again publ. intro. Again my interpr. of the vs. is quite different from the standard. As I say in the publ. intro., I think that Yama’s name was “difficult to contemplate” (*durmāntu*) while he was still an immortal, because of the taint of incest, spelled out in pāda b. But after Yama chose offspring over immortality (see X.13.4 in the next hymn), which choice involved committing incest (never directly mentioned in the text), instituted the sacrificial compact between men and gods, and established the kingdom of the dead, his name became *sumāntu*. In other words, Yama’s history is a sort of Felix Culpa: his offense was indeed a sin and cost him his immortality, but the results, esp. for us humans, were happy.

Pāda b is a direct quote from X.10.2, where Yama describes what the offense, the “partnership” that Yamī is urging on him, would consist of. See comm. ad loc. for my interpr., very different from the standard. It is quoted here to indicate what offense is associated with his name, such that the name should not be thought of.

In c the name “Yama” is overtly mentioned, since that name can now be brought to mind without ill effect because of the good consequences of Yama’s actions, here esp. tied to the sacrifice. The name is absent from pāda a.

X.12.7–8: These two vss. belong together, but their connection is somewhat obscured by an accumulation of clauses. Both begin with a *yásmín* rel. cl. (each with a different loc. referent); in vs. 7 this rel. cl. extends over the whole hemistich, as the accent on *dhāráyante* in b shows. The main cl. to which both rel. cl.s correspond is postponed till 8b, where the correlative of the two *yásmín*s is the unemphatic *asya*. In the meantime, the 2nd hemistich of vs. 7 interposes two parenthetical clauses. The point of the larger structure (7ab / 8ab) is that where the gods do what they do and what they want is completely unknown to us. Ge's nn. are esp. illuminating on the structure and what it conveys.

X.12.7: Though formally a med. present, *dhāráyante* is clearly based on the *-anta* replacement *dhāráyanta*, like the identical form in 3b, and need have no middle semantic nuance. Unlike the form in 3b, there is no expressed obj. here, however, and Gr, for ex., takes it as reflex./intrans. (See also Wh, AV XVIII.1.35 “maintain themselves.”) Since, however, all other forms of *dhāráya-* have an object, expressed or unexpressed, this seems unlikely. In the publ. tr. I supply *urvī* on the basis of 3b; similar objects with *dhāráya-* are found elsewhere (e.g., *pṛthivīm utá dyām* V.62.3, *ródasī* VI.17.7). However, *√dhṛ* takes a wide variety of objects, and in this sacrificial context it might instead be something more tied to the ritual. But, since the parenthetical insertion in c has to do with the gods' arrangements for the sun and moon, a cosmic object seems likely.

As noted above, cd is a parenthetical interjection; c presents the gods' primal act of establishing the qualities of sun and moon, while d describes the current behavior of sun and moon after that original act. The verb in c, *ádadhuh*, is accented because it's positioned between its two contrastive predicates: *sūrye jyótiḥ ... māsy áktūn*.

In d I interpr. *dyotanīm* as a reference to Agni, in accordance with Sāy's comm. ad AV XVIII.1.35 (see Ge's n. 7d). The point is that the ritual fire remains at the center of the alternating brightness and darkness as the sun and moon, day and night, perform their regular daily round, a comment appropriate to the ritual context of the first hemistich.

X.12.8: Another ex. of enjambment in this hymn: *apīcyè*, which begins pāda b, belongs with pāda a, modifying *mánmani*. The poet is playing games with us: *ná* immediately follows this first word of b and is thus in standard simile-marking position, but here it opens its clause and must be the negative.

On the thematic ring that cd forms with vs. 5, see publ. intro.

X.12.9: This vs. repeats X.11.9, likewise the final vs. See comm. there.

X.13 Soma Carts

On the structure and contents of this hymn, see publ. intro.

X.13.1: In the publ. tr. I take *pathyā* as a nom. sg., with most (see Old explicitly), but I now think the instr. (rejected by Old) is an alternative possibility: “as if along a path.”

X.13.3: On my interpr. of this vs., see publ. tr. As noted there it contains the obscure root noun *rūp-* also found in an impenetrable context in IV.5.7; see comm. there. In both passages it is associated with a form of the root *√ruh*.

X.13.4: This is the vs. that I take as the charter for Yama's choice, his Felix Culpa. See publ. intro. The puzzling part is pāda c. Assuming that the gods are the subj. of c, as most do, their action of making Bṛhaspati into their sacrifice must be meant to contrast with Yama's own actions with regard to the sacrifice, but figuring out how takes some reflection. Pāda c seems to depict a closed loop: the gods make one of their own the sacrifice, a phrase somewhat reminiscent of the famous statement in the Puruṣasūkta X.90.16 *yajñéna yajñám ayajanta devāḥ* and even more reminiscent of the less famous statement in X.124.6 *havíṣ tvā sántam havísā yajāma*. Thinking about those passages may help us with this one. In both X.124.6 and X.90.16 I take the VP ACC *√yaj* as meaning "sacrifice to ACC": "with an oblation let us sacrifice to you [=Soma], though you yourself are an oblation" and "the gods sacrificed to the sacrifice with a sacrifice." (For X.90.16 the standard interpr. is probably "the gods sacrificed the sacrifice ...," i.e., "... performed the sacrifice" – but X.124.6 supports the former reading.) I wonder now if the same blurring of identity between the recipient of the sacrifice and the sacrificial substance is not found in our passage, with Bṛhaspati filling both roles: "They made sacrifice to the seer Bṛhaspati as the sacrifice." My discussion of the other two passages in my 2016 "The Divine Revolution of R̥gveda X.124" (Gs. Staal) sees them as depicting the original establishment of the sacrifice. As I said there (p. 297):

These two statements express a kind of endless loop, an inescapable reflexivity: the object of worship and the means of worship are identical (sacrifice and sacrifice, soma and soma). This tight internal and grammatical circularity is situated within a larger, though not explicitly expressed, circularity: in X.90 it is the gods—the ordinary object of worship—who are performing the sacrifice. In X.124 ... in vs. 6, when Indra tells Soma "we will sacrifice to you," clearly Indra and unspecified others, again presumably gods, are performing the sacrifice, but Soma is a god and Indra is thus promising that the gods will sacrifice to one of themselves. What I am groping towards saying here is that X.124 is "about" the primal instituting of the sacrifice, which in its first instantiation was a closed circle—created by the gods to worship themselves.

The relevance of these passage to our vs. is, in my view, that Yama *breaks the circle*. By choosing death he ceases to be one of the immortals who sacrifice to themselves. The agent and object of sacrifice are no longer identical, nor are the object of worship and the means of worship. The stasis of the reflexive loop gives way to the dynamic interchange between two separate entities, gods and men, with reciprocal roles and complementary duties – the ideal model for R̥gvedic people.

Pāda c thus expresses the previous situation, when the gods sacrificed (to) one of their own. The next question is – why Bṛhaspati? I don't have an entirely satisfactory answer, but since Bṛhaspati is associated with the sacred formulation (*bráhman-*) and is in fact called the formulator (cf. X.141.3 *brahmāṇam ca bṛhaspátim*), he represents the crucial verbal portion of the sacrifice, which was especially the topic of vs. 3. Note that in the next hymn he is associated with the *īkvans*, lit. those 'possessing the *īc-*, the versifiers'.

Pāda d needs to be read in the context of X.10, the Yama/Yamī dialogue. In that hymn much is made of bodies (*tanū-*): Yamī urges Yama to enter her body (X.10.3d *tanvām ā vivíśyāḥ*); she wishes to yield (*√ric*) her body to him (X.10.7c *tanvām riricyām*); and finally she orders him to mingle his body with hers (X.10.11d *tanvā me tanvām sám pipṛgdhi*), a command he refuses (X.10.12a *ná vā u te tanvā tanvām sám papṛcyām*). Yamī also asserts that the gods

want what he will leave behind as the one and only mortal, his (personified) legacy (X.10.3b *ékasya cit tyajásam mártasya*). Thus in our passage it is telling that once Yama has chosen death and unchosen immortality (that is, has become a mortal), he leaves behind his own body, using the same word *tanū-*, in the form of offspring. This VP also telling uses the same root *√ric* (and the same stem, the perfect) as Yamī did in her expressed desire to yield her body to Yama, in the phrase in our pāda d, *tanvām prāīrecīt*. The semantic nuances of the two occurrences of the *√ric* differ, but the echo must be deliberate.

X.13.5: On this vs., too, see the publ. intro.

X.14 Yama

The hymn has been much tr.: Macdonell, VRS and Hymns from the RV; Re, Hymnes spec; Doniger; Maurer; it is also excerpted in Lanman's Reader and much of it, scrambled, is found in the funeral vss. of AVŚ XVIII.

X.14.1: Note the phonetic figure in cd ... *-am saṃgámanam jānānām, yamām rājānam ...*

X.14.3: The first hemistich consists of three (apparently) parallel NPs, with a nom. sg. PN associated with an instr. pl. The 2nd two names are of course familiar, Yama and Bṛhaspati, implicitly paired also in X.13.4, but *mātalī* occurs only here in the RV. This word is also formally anomalous: a presumable masc. in *-ī* (devī, not vṛkī, type; though Sāy. takes it to an *-in-* stem, the accent is wrong). The name is found twice more in the AV (VIII.9.5, XI.6.23, in addition to the vs. parallel to this one, XVIII.1.47). The AV passages provide no help in determining who Mātālī is or what group of beings he belongs to. The more interesting of the AV passages, XI.6.23, simply adds to the mystery: there he “knows a chariot-bought immortal remedy” (*yān mātalī rathakrītām amṛtam véda bheṣajām*), which Indra causes to enter the waters. In the Mahābhārata Mātali, with short *i*, is the name of Indra's charioteer, but this semi-agreement from a much later text is also unhelpful. Charpentier suggested that *mātalī* is a short form of *mātariśvan-* (endorsed in KEWA [s.v. *Mātariśvā*], viewed more skeptically in EWA [s.v. *mātalī*]). Although Mātariśvan is associated with Bṛhaspati (see HPS, B+I 72–77), identifying Mātālī here with Mātariśvan does not seem to get us anywhere.

It is more useful to approach the problem by way of the associated instr. pls. Here we first confront two issues: 1) are they instr. of accompaniment or agents with the pf. part. *vāvṛdhānāḥ* ‘having been strengthened’, or indeed a mixture of the two; 2) are the instr. proper names or descriptors. As for 1), both Ge and Re (Hymnes spec.) tr. as a mixture: the first two as accompaniment, the last as agent (e.g., Re “Mātālī avec les Kavya, Yama avec les Angiras, Bṛhaspati que les chantres ont invigoré”). They must assume that since *vāvṛdhānāḥ* is sg., it can only modify one of the nominatives, but this is of course not the case: a series of singulars can take a singular verb. Most of the rest of the numerous tr. of this hymn take all three in only one way or only the other: Macd (VRS), HPS (B+I 56), Maurer (249) as accompaniment, Doniger (43) as agent. The publ. tr. takes all as accompaniment, but I now think this is incorrect: the mutual strengthening (using the same root *√vṛdh*) that is depicted in pāda c supports an agentive reading. Moreover, the Aṅgirasas are famous for their use in the Vala myth of their verbal power to effect change, and both *kavyá-* and *ḥkvan-* suggest similar deployment of words. I might therefore consider emending the tr. to “Mātālī having been strengthened by the poets ...,” etc. I

am only given (slight) pause by the fact that the next two vss. (4–5) contain instr. pls. of accompaniment.

As for the question of proper names versus modifiers, although *āṅgīras-* is without doubt a PN, I see no advantage in interpr. the other two in that way (*pace* the standard inter.: Ge and Re [only for *kavyāñ*], Macd, HPS, Doniger, Maurer), since both are transparently associated with words for poetry and appear elsewhere in non-naming function (*īkvan-* is esp. well attested). Because the role of the Aṅgīrases in verbal activity was well known, they can take their place in this company of wordsmiths without further specification.

None of this gets us closer to identifying Mātālī, and this task is initially made more difficult by the three-into-two problem. As noted in the publ. intro., this hymn in part concerns the *pitryāṇa-* ‘way of the forefathers’, which leads to the realm of the dead; this way is contrasted with the *devayāna-* ‘way of the gods’. The gods and a group of others, presumably mortals or perhaps specifically the forefathers, are contrasted in pāda c, and this two-way contrast is continued by the *anyé ... anyé* “the ones ... the others” construction in d. But the first half of the vs. presents us with a division into *threes*. How are we to reconcile this discrepancy? I don’t entirely know, but I suggest that we focus now on the middle of the trio: Yama and the Aṅgīrases. Bṛhaspati is of course a god, but Yama is a boundary-crossing figure: he started as an immortal, but chose death and became a mortal, as we were explicitly told in the preceding hymn X.13.4. The Aṅgīrases also have a somewhat equivocal status: Gr describes them (s.v. *āṅgīras*) as “Wesen zwischen Göttern und Menschen, die also Vermittler zwischen beiden ... erscheinen”; cf. also Macd (Vedic Myth. 143) “it seems probable that the Aṅgīrases were originally conceived of as a race of higher beings intermediate between gods and men.” If both Yama and the Aṅgīrases inhabit an in-between realm, with one pole, Bṛhaspati, being a god, this defines the other pole, Mātālī, as a mortal and representative of the Pitars, the forefathers. This structural argument is the best way I can see to try to get at the identity of Mātālī; the conclusion may be supported by the fact that the *kavyās* are associated (/identified) with the Pitars in the next hymn, X.15.9. As for the *īkvan*s who strengthen (or accompany) Bṛhaspati, this stem is sometimes (though by no means always) used of the Maruts (e.g., I.87.5, V.52.1, 60.8), who are of course gods. Acdg. to this distribution, each pair of nom. + instr. would consist of a different set of beings: mortals/Pitars at one end and gods at the other, with the pair in the middle starting from the divine but transitioning to the human. This intermediate set will then “caucus” with the mortals, and the three-into-two problem is solved. But, as the next vss. show, Yama is tasked with integrating this diverse population.

My observation (if it is correct) that the antithesis of the gods is a heterogeneous group consisting of mortals/Pitars and former (/semi-) gods may account for the fact that only the gods are named in the following pāda; the others are represented only by the rel. prn. *yān ... yé*. There are two moieties, but only one is a unity with a single designation.

I follow Re (Hymnes spec. and EVP) in taking *svadhā* in the funeral hymns as the ritual exclamation preferred by the Pitars, a minor phonological modification of the gods’ *svāhā*. Although it is homonymous with the rt. noun cmpd. *svadhā-* ‘autonomous power’ and must be derived from it, it is synchronically distinct (though, e.g., Scar, 264–65, does not separate them). I do not see the necessity for a 2nd lemma *svadhā* “Opfertrank,” as given by Gr.

X.14.4: The non-god group, defined in the last vs., is assembled here: Yama with the Aṅgīrases, the Pitars, and, indirectly, the *kavyās*. Although the publ. tr. identifies the Aṅgīrases with the Pitars—most other tr. leave it unclear—I now think two different groups are meant, both

appearing in vs. 3, with *pitṛbhiḥ* designating the *kavyaīḥ* of 3a, which is then reprised in the cmpd. *kaviśastāḥ* ‘pronounced by kavis’ in c. I also think that *saṃvidānāḥ* has the technical meaning ‘come to/make an agreement’, here depicting the fusion of the two groups of non-gods. See the use of *saṃvid-* in the final pāda of the Yama/Yamī dialogue, X.10.14 and comm. there. I would therefore emend the tr. to “coming to an agreement with the Aṅgirasas and the forefathers.”

I did not know how to handle the *hī* in pāda a (and so I essentially ignored it, in tacit agreement with most every other interpr.). Ordinarily when *hī* appears in an imperative clause, it provides the grounds for a following imperative, but here the action of the immediately following impv. clause logically preceeds the action of the first: “sit here; let the mantras bring you here.” However, I now see that the next impv., addressed to Yama as is the first, can fit the pattern: “sit here ... and (then) become exhilarated,” with the middle impv., in the 3rd ps., a parenthetical intrusion.

X.14.5: The standard tr., incl. the publ. tr., take *vairūpā-*, the only occurrence of this stem in the RV, as the name of another group of beings. I now think this is wrong; rather I think it’s a vṛddhi deriv. of the poss. cmpd. *vīrūpa-* ‘having different form(s)’ and it continues the theme of the heterogeneous composition of the denizens of Yama’s realm. Here it may refer to the Pitars, who are, as I argue above, originally distinct from the Aṅgirasas, or perhaps to the whole group, containing both Aṅgirasas and Pitars. I would emend the tr. to “become exhilarated here along with those of different form [or better perhaps, to capture the vṛddhi: with the descendants of those of different form].” Although Gr (and others; see Mayr PN s.v. *vīrūpa*) identifies several occurrences of *vīrūpa-* as names of singers related to the Aṅgirasas, only in the deriv. *vīrūpavāt* in a list of seers in the uninspired and seemingly late hymn I.45.3 do we need to interpr. it as a PN. In that passage it is adjacent to *aṅgirasvāt* and may result from misinterpr. of earlier passages. The *vairūpā-* here should be considered in conjunction with Yama’s use of *vīśurūpa-* in X.10.2 to describe Yamī in arguing against their having incestuous sex. See comm. there.

In the Avesta, *vīuuant-* is also the father of *yima-*; in Y.9.4 he is identified as a mortal. Where on the human-divine spectrum Vedic Vivasvant lies isn’t entirely clear. Ge, on the basis of X.17.2 (q.v. with Ge’s n. 2a) claims that he is a mortal, though that vs. is quite opaque; Mayr (PN s.v. *vīvasvant-*) suggests rather that he is, like Yama, “dem Mittelbereich göttlicher und sterblicher Wesen zugehörig,” which seems more plausible. See also Gr’s “Name eines Gottes oder Halbgottes.” As for the accent fluctuation between *vīvasvant-* (here and elsewhere) and the more common *vīvasvant-*, the preverb-accented form is found three times in this group of hymns (here, X.17.1–2) as well as twice elsewhere, while the root-accented form is much better attested and more widely distributed; nonetheless, the two accentual forms do not seem to require semantic separation. Thieme (MSS 44 [1985 Fs. Hoffmann] 243; see EWA s.v. *vīvasvant-*) attributes the *vīvasvant-* forms to spread from vocative accentuation.

With Ge (explicitly, n. 5c), Re (Hymnes spec.), Gonda (Ved. Lit. 238), as well as Whit (AV XVIII.1.59), I take pāda c as a parenthesis, with Yama as the subj. of the gerund *niśādya* in d, because the structure of vs. 5 is a mirror-image of vs. 4. In 4 Yama is first urged to sit on the grass strew (a: ... *yama prastarām ā ... sīda*) and then to become exhilarated (d: *mādayasva*); in 5 he is urged to become exhilarated (b: *mādayasva*) after having sat down on the barhis (d: *barhīṣy ā niśādya*). This pattern would be disturbed by making Vivasvant subj. of the gerund in d, as Macd (VRS), Doniger, and Maurer do. Old considers both possible and the uncertainty perhaps

intended. The position of the rel. expression *yáḥ pitā te* would not tell against an interpr. with Vivasvant as subj. of d, since it is of the izafe type.

X.14.6: This last vs. of the first portion of the hymn opens out to further populations with equivocal status on the human-divine spectrum; in addition to the already familiar Aṅgiras and Pitars, there are the Navagvas, the Atharvans, and the Bhṛgus. In this it resembles the final vss. of hymns that mention a wider range of divinities than the rest of the hymn treated.

The publ. tr. has the erroneous Atharvaṇas, which should be corrected to Atharvans.

X.14.4–6: As noted in the publ. intro. it is well worth remarking that Yama and his companions can come *back* to our sacrifice; they are not permanently confined to the realm of the dead. Moreover, beyond the difference in the ritual call for gods and forefathers, the crucial parts of the sacrifice seem identical or at least parallel: it is called a *yajñá-* (5d) and the recipients are called *yajñíya-* (5a, 6c); there is a grass strew, identified as *barhís*, for the visitors to sit on (4a, 5d); it has both mantras (4c) and oblations (*havís-* 4d); the appropriate response of the consumer of the oblation is exhilaration (*√mad*, 4d, 5b) as in the soma sacrifice, and this oblation indeed appears to be soma, since its recipients are *somyá-* (6b). The tight association of Yama with the sacrifice is also emphasized in vss. 13–15.

X.14.7: The remarkable alliteration of *p* and *r* in the first hemistich has been noted, inter alia, by Macd (VRS ad loc.), Watkins (Dragon, 291): *préhi préhi pathíbhiḥ pūrvyébhir ... pūrve pitāraḥ pareyúḥ*.

It is of course striking that Varuṇa the god is mentioned in connection with Yama and the rites of the dead.

X.14.9: The vs. opens with repeated 2nd ps. impv. of *√i* with different preverbs, followed by a 3rd impv. to a different verb but with repeated preverb: *ápeta vīta ví ca sarpata*. This pattern plays off *préhi préhi*, which opens vs. 7, likewise with a 2nd ps. impv. to *√i* (sg. instead of pl.) and repeated preverb *prá*. The difference in pattern is iconic: the sequence in vs. 9 uses divergence to depict diverse directions of movement, while that in 7 is focused on a single forward movement.

The rest of the verse is framed by the dat. demon. *asmaí* (opening b) ... *asmaí* (closing d), referring to the dead man.

My interpr. of the instr. in c differs from all the standard renderings, which take the three as parallel; cf., e.g., Macd “distinguished by days and waters and nights.” But, using the more lit. sense of the ppl. *vyākta-*, I not understand what it would mean for a place to be “anointed/decorated with days and nights,” whereas “anointed with waters” is straightforward and makes the place sound quite appealing. I take *áhobhiḥ ... áktúbhiḥ* as the usual instr. of extent of time “though the days and nights”; cf. nearby *rātrībhiḥ ... áhabhiḥ* (X.10.9) with different lexical realization of ‘night’. The two temporal terms flank the instr. that is actually construed with *vyāktam*, namely *adbhiḥ* ‘with waters’. This positioning is likely to allow *áktúbhiḥ* to adjoin (*vy*)*áktam* because of their (folk-)etymological connection.

X.14.10: The publ. tr. should probably be changed to “run beyond,” since the dogs seem to be guarding the entrance, not attacking.

On *suvidátra-* see comm. ad II.9.6, as well as comm. on *durvidátra-* ad X.35.4.

X.14.11: The first hemistich displays tricky and ever-changing phonetic play, which partly crosses and partly conforms to morphological boundaries: *rakṣitārau, catur(-)akṣau pathi-rākṣi nṛ-(c)ākṣasau*.

X.14.12: *udumbalā-* occurs only here in the RV (and later only in dependent passages); Ge, Re (Hymnes spec., but see n. in EVP), and Macd refuse to tr., but the view that it is a color term derived from the udumbara tree (*udumbāra-*, already Saṃhitā prose), already given by Gr, seems a solid hypothesis.

X.14.13–15: See comm. ad vss. 4–6.

X.14.14: The standard tr. take *prá tiṣṭhata* as an intrans. verb of motion, “go forth”; however, although this stem is indeed usually intrans., *prá √sthā* in the ppl. *prásthitaṃ* refers to an oblation that has been ‘set forth’. Cf., e.g., II.36.24, 37 *prásthitaṃ somyám mādhu*, and this is simply the transitivized version of that idiom. Cf. also I.15.9.

The subj. *yamat* (*√yam*) of course echoes the name of its subject Yama, as Old, Ge, Macd, etc. point out.

X.14.16: On this vs. see the publ. intro. As noted there, it is only loosely connected to the rest of the hymn (by the name Yama), and its meaning and referents are completely obscure, though the syntax is not. Various interpr. have been advanced by the various tr. Ge (nn. 16a, 16b) thinks the *trikadrukebhiḥ* refers to three days in the Soma sacrifice and here is used to indicate extent of time; the six broad ones are the regions through which the dead man’s soul flies and the lofty one is his goal. In the absence of anything else compelling, this interpr. is thinkable – though once we get to the meters, all bets are off.

The “six broad (fem.)” are found elsewhere, without providing illumination for our passage. VI.47.3 *ayám śal urvîr amimîta dhîro, ná yābhyo bhúvanam kác canāre* “This wise one [=Soma] measured out the six broad (realms), from which no world is at a distance.” There ‘worlds, realms’ seems a reasonable guess for the referent, though what feminine underlies it is unclear (perhaps pluralized *pṛthivî-*? for further spec. see comm. ad X.128.5). In that passage the six feminine entities are followed by a single neut. (*bhúvanam*) as here (*ékam ... bṛhát*), but there’s no evidence that the world in VI.47.3 is lofty. X.128.5 contains a voc. phrase *dévîḥ śal urvîḥ*, with the six broad goddesses asked to provide broad(ness) for us; there is no hint of who these six goddesses are. However, in all these cases I now bow to the majority opinion (already Gr, def. 14 s.v. *urî-*) that the six broad females are the three heavens and the three earths (or some other sixfold division of the cosmos) and would alter the tr. to “the six (world-spaces) are broad ...”

X.15 Pitars

A repetitive and somewhat tedious hymn, which, however, makes it perfectly clear that the Pitars receive the same type of ritual treatment as the gods. See also comm. ad X.14.4–6. Despite (/because of?) its monotony, it is found in Macdonell, VRS, and is tr. by Maurer.

X.15.3: Note the etymological figure of *suvidátrām avitsi* “I have found those good/easy to find,” assuming that *suvidátra-* is derived from *√vid* ‘find’ as I do.

On *nāpāt-* and the various speculations on its referent, see publ. intro. I find plausible Old's suggestion that it refers, at least in part, to the grandson of each of the Pitars, whose duty would be to perform ritual for his grandfather, a duty found throughout the history of Hinduism but already well embedded in the RV. Re (EVP 16.125) cites Yamī's words in X.10.1, where she argues that Yama should have sex with her because his duty was to provide a grandson for his father: *pitúr nāpātam ā dadhīta*; the juxtaposition of the two kinship terms there is strikingly reminiscent of the situation in our passage.

X.15.4: Ge, fld. by Macd and Maur, supplies a verb in pāda, the impv. "come." I don't see the need for it, since the pāda can be interpr. easily as a nom. sentence.

X.15.6: *viśve* in b has 2nd ps. ref., to the subject of the impv. *abhi grṇīta*; we might expect it to be a voc. and therefore unaccented. However, as it turns out there are no unaccented forms of *viśva-*; even in the rare voc. phrase "o All Gods," *viśve* is positioned at the beginning of the pāda and therefore accented. Cf. I.3.7=II.41.13, VI.52.7 *viśve devāsaḥ*; also in I.23.8=II.41.15 *viśve māma śrutā hāvam* "all of you, hear my call" (preceded by pāda-init. voc. *dévāsaḥ*). I therefore think that *viśve* is a functional voc. here, despite its position, which would invite a deaccented **viśve*. This saves us from an awk. "As all, greet this ..."

X.15.7: The referent of the fem. gen. pl. *aruṇīnām* is disputed; see, e.g., Ge's n. 7a. Most opt sensibly for 'dawns' (Old+), though Ge chooses 'wool' (! – and he has the nerve to call 'dawns' "forced" [gezwungen]).

The 2nd pl. act. impv. to $\sqrt{dhā}$ is represented here by both *dhatta* and *dadhāta*. Both probably belong to the redupl. pres., though *dadhāta* could also perhaps belong to the pf. (It has an anomalous strong stem, whichever it belongs to.) See also *dadhāta* in 4d and *dadhātana* in 11d. Although the distribution is far from perfectly complementary, the two forms seem to have positional preferences: *dadhāta(na)* is mostly pāda-final, while *dhatta(na)* is mostly medial, a distribution displayed in this hymn – but there are a number of counterexamples.

X.15.8: On the med. pf. to \sqrt{vah} see Kü (485), who considers it generally "affektive oder possessiv," but here "inattinent und subjektsresultativ," tr. "die nachgefahren sind ihrem Somatrunk."

The med. part. *saṃrarāṇāḥ* is universally assigned to $\sqrt{rā}$ 'give', either with the sense 'sharing' (Macd, Maur) or bleached to 'together with'. For the latter see Kü (421), who considers the orig. sense of *sām* $\sqrt{rā}$ to be 'gegenseitig spendierfreudig', but developed to 'vereint, gemeinsam (mit)', and in practice a synonym for *saṃvidānā-*. As noted in the comm. ad X.14.4, I think *saṃvidānā-* there has richer semantics than 'vereint', maintaining the sense of 'coming to an agreement', so it is hardly a model for such bleaching. For the part. here I have a different interpr. entirely: I consider it a haplology of a putative **saṃrarāṇānā-* to \sqrt{ran} 'enjoy', hence 'jointly enjoying with'. There are several possible objections to this interpr.: 1) the perfect to \sqrt{ran} is rare and does not have medial forms; in answer to this, I would point out that *sām* triggers medial inflection in numerous roots; 2) \sqrt{ran} is not otherwise found with *sām*, but again such nonce lexemes with *sām* are easily formed; 3) there are several med. participles *saṃrarāṇā-* (VI.70.6, VIII.32.8) that undoubtedly belong to $\sqrt{rā}$ and mean 'jointly bestowing' vel sim. However, in the latter ex. (VIII.32.8) there is verbal play with a redupl. form of \sqrt{ran} that opens the trīca (*rārāṇaḥ* VIII.32.6); see comm. ad loc. Although I recognize the cumulative strength of

these objections, our passage seems to call for the “joint enjoyment” sense I give it; cf. the parallel semantics and syntax of the type *sajūṣ-*, *sajóṣas-* + INSTR similarly formed to a verb of enjoyment. Moreover, as just noted $\sqrt{rā}$ and \sqrt{ran} can be played off each other.

X.15.9: I take *hotrāvíd-* (also V.8.3) as ‘knowing the priestly functions’, rather than Macd’s ‘knowing oblations’ (and sim. for other interpr.). Though either would fit the context reasonably well, I prefer the former: the Pitars, who in life were surely ritualists, knew their jobs and have returned to the ritual to see them carried out. For a similar use of *hótrā-* see nearby X.17.11 in this same set of hymns.

The cmpd. *stóma-taṣṭa-* is found 3x in the RV, twice modifying *matí-* in nearby passages, III.39.1, 43.2. In form it is of course of the common type *devá-kṛta-* ‘made/done by the gods’, with a passive ppl. and, generally, the agent or instr. of the action as 1st member (see two exx later in the hymn: 11a voc. *ágniṣvāttāḥ*, 14a *agnidagdhá-/ánagnidagdha-*)—though alternative functions of the 1st member are also possible. In the two passages in III, modifying ‘thought’, an agentive/instrumental ‘fashioned by praise’ is contextually odd, and so I render it with a datival 1st member, ‘fashioned for praise’ (so already Gr). Here, since the cmpd modifies the Pitars, interpr. the cmpd is tricky. The standard view (see, hesitatingly, Old; more confidently Ge n. 9b, Re, Macd) is that it is an inversion of **taṣṭa-stoma-*, a bahuv. that would mean ‘having praises fashioned (for them)’, with the instr. *arkaīḥ* an instrument/agent ‘by songs’ (Macd, Maur) or a kind of secondary predicate to *stoma-* (Ge “die ihre Loblieder zu Preisgesängen formten”). But this type of inverted cmpd, of the type *putra-hata* = *hata-putra*, does not exist at this period, as Old and Macd admit. I think we must interpr. the cmpd here within the formal parameters of this well-established type in the RV, esp. since, as Re says, “le même composé sous 3.39.1; 43.2 a sa valeur normale.” I suggest that the Pitars are “fashioned by praise” because they would not keep existing (in the next world) if they weren’t continually remembered on earth. This is simply a variant on the standard notion that the paternal line must be continued, in order for male descendants, embodied in the grandson, to perform rituals in honor of their forefathers (see disc. ad vs. 3 above, inter alia), rituals later including the Pitryajña and the various Śrāddha rites, inter alia. Here we can envision the Pitars’ bodies literally being fashioned by praise, in a way reminiscent of the famous story in the MBh (I.41ff.) in which the ascetic Jaratkāru comes across his ancestors (*pitarāḥ*) hanging upside down in a cave, emaciated and with the single blade of grass from which they are suspended about to be gnawed through by a rat. When he tries to save them by offering him a portion of his austerities, they berate him for his celibacy and their consequent lack of descendants and order him to find a wife and beget children. The thirsting and panting of the Pitars in our pāda reminds us of the emaciation and deep hunger of Jaratkāru’s unfortunate ancestors in the MBh story. The continued existence of the Pitars in Yama’s realm depends on continual praise and oblations offered to them in this world. (I might add here that, as often, interpretational attempts to ignore clear morphological or syntactic evidence because it doesn’t fit easily into the context may yield a superficially “easier” interpr., but can conceal more interesting conceptual connections.)

I interpr. *satyāḥ* in d in this same general conceptual sphere: the Pitars are ‘real’ – really here (on the ritual ground) or really (still) existent because of our ritual activity.

On *kavyā-* as a designation of the Pitars, see disc. ad X.14.3, 4.

X.15.10: On *satyāśaḥ* see disc. of *satyā-* in the previous vs. By my interpr. their “eating and drinking the oblations” is what keeps them *satyā-*.

X.15.11: Since *āgni-ṣvāttāḥ* is a voc. (by accent), the publ. tr. should rather read “O forefathers, sweetened by Agni.”

X.15.14: In d the meter would be improved by reading *suvarāḍ* (so, tentatively, Old) or even *suva(r)ṛāḍ*. But Old rejects a proposed *suvārāḍ* for **suvar-rāḍ*, and “Sun-king” does not fit the context very well, unlike the same transmitted form in VIII.46.28. See Scar 450.

X.16 Agni

Re treats this Agni hymn out of order in EVP XIV (pp. 37ff.). It is found in Lanman’s Reader and tr. by Doniger and by Maurer.

X.16.1: On *cikṣipah* as the redupl. aor. to √*kṣā* ‘burn’, see Ge (n. 1b) and my -*āya*- (140 n. 71).

X.16.1–2: The pādas 1c and 2a are as close as they can be, save for the contrastive subjunctives, pres. *kṛṇavāḥ* in 1c and aor. *kārasī* in 2a. Their main clauses (1d and 2b) are likewise strictly parallel and both contain a “future” impv. in -*tāt*, both built to the pres. stem:

1c *yadā śṛtām kṛṇavó jātavedo, áthem enam prá hiṇutāt pitṛbhyaḥ*

2a *śṛtām yadā kārasī jātavedo, áthem enam pári dattāt pitṛbhyaḥ*

Although the publ. tr. makes a distinction between the pres. and aor. subjunctives here (“when you will make him” versus “when you will have made him”), I am not at all sure this is correct, as modal forms to tense-aspect forms generally don’t reflect the putative functions of the indicative of the same T/A stem, as I have discussed at length in various publications. The composer may simply have been aiming to vary the expression; note that in the opening of the two pādas the two words are flipped, with no metrical or syntactic effects. As for the metrical difference between the pres. and aor. subjunctives, the L L H break produced by *kṛṇavó* is more common than the three L’s of *kārasī*, but the latter is certainly not unusual.

Note the doubling of enclitic acc. *īm enam* in 1d and 2b, on which see my 2002 “Rigvedic *sīm* and *īm*” (Fs. Cardona), p. 302 and n. 18.

X.16.2: The hapax rt. noun cmpd *vaśa-nī-* is another ex. of conflict between form and context. Rt. nouns in such cmpds generally have active/transitive value, and in particular -*nī*-cmpds all mean ‘leading X’ (e.g., *senā-nī-* ‘leading an/the army’). However, such an interpr. here of the phrase *devānām vaśanīḥ* would produce “leading the will of the gods,” which most interpr. obviously judge unacceptable and therefore for this -*nī*- cmpd alone give it passive value – e.g., Old “in der Götter Willen gegeben” (sim. Ge, Re, Maur). Scar (290) at first hesitates between act. and pass., but reaches an acceptable active sense “den Willen (der Götter) ausführend” (carry out, execute). My interpr. also maintains the active sense of the root noun, taking *vaśa*-adverbially, as I do in the same syntagm in X.84.3 *vaśī vāsam nayase* “Exerting your will, you lead at will.”

X.16.5: With the standard interpr. I take *svadhābhiḥ* in the usual RVic meaning of *svadhā*-‘own / independent power’, rather than the specialized usage of this stem in the funeral hymns for the ritual cry appropriate to the Pitars, corresponding to *svāha* for the gods; see comm. ad X.14.3. But I do wonder if there is a low-level word play here: the dead man proceeds motivated by the *svadhā* cry.

There is much discussion about the sense of pāda c, esp. what *śeṣaḥ* is referring to. (For disc. see, e.g., Ge's n. 5c, Maur's n., Ober I.501.) This *s*-stem neut. means literally 'what is left (behind)' but in all its other RVic occurrences it refers specifically to one's posterity, that is, descendants. So, e.g., Re "Que ... il accède à (sa) descendance." Although the preoccupation with continuing one's lineage is of course ubiquitous and quite prominent in this Yama cycle (cf., e.g., X.10.1, 3; 15.3, 9) in particular, I do not see that meaning here. Rather pāda c seems to depict the preliminaries to the action in d: the dead man (re-)uniting with his own body in the realm of the Pitars. In c he acquires his new life ("clothing himself in (new) life"; *āyur vāsānaḥ*), which I take to be a new spiritual/non-material life, and this incorporeal being sets out, presumably on the Pitṛyāṇa, the *āsunīti*- "(the way) leading to (the other) life" (cf. vs. 2), to follow his *śeṣaḥ*, his 'remains', which (somewhat like this Engl. word) refers to the physical remains after the cremation, which have already gone to the realm of the Pitars. Once he finds them, he can reunite with them. In somewhat similar fashion, Ober (I.501), flg. Sāy (see Ge's n. 5c), takes *śeṣaḥ* as a reference to the bones, but he also takes it as the subj. of *ūpa vetu*, so that what's left of the physical body follows the dead man to the afterlife (rather than vice versa): "Im Lebenskraft sich kleidend soll das Übriggebliebene (= die Gebeine) sich hinwenden [zu dem, was ins Jenseits gegangen ist]." But this is grammatically impossible: *śeṣaḥ* is neut., but the nom. part. *vāsānaḥ* is masc., so *śeṣaḥ* must be acc. and the object / goal of *ūpa vetu*.

X.16.6: *agadā*- here may mean 'free of disease, healed', as per most interpr. and as in the other RVic occurrence of the stem (X.97.2). However, it may preserve the "speech" aspect of the root \sqrt{gad} . See disc. ad X.97.2; also *vigadā*- X.116.5.

X.16.7: On the various potential meanings ('anger', 'flame', 'grasp') and associated etyma of *hāras*-, see EWA s.v. Here I prefer 'flame' (so also Ge) because of Agni's actions, but 'anger', or indeed 'grasp, grip' would also work in context; see Mau "in his grip," or Re's more elaborate "(dans son élan) d'emportement." There is obviously also a phonological and folk-etymological association with the immed. flg. intens. part. *jārhr̥ṣāṇa*- 'bristling'. Most of the other occurrences of *hāras*- are found in X.87, a hymn to Agni Rakṣohan: vss. 5, 10=14, 16, 25, in all of which 'flame, blaze' is appropriate. In VIII.48.2 'anger' seems more likely; in IX.10.6 opinion is divided, but I opt for 'rage; in X.158.2 opinion is also divided, but I take it as 'flare, flame'. In II.23.6 JPB tr. *hārasvant*- as 'grasping' (sim. HPS B+I 106 'packend'), which is plausible, though Ge produces the portmanteau 'wutentbrannt'.

X.16.12: In addition to the four forms of *uśánt*-, this vs. contains a nice rhyming figure: a ... (n)i *dhīmahi* #, b ... *idhīmahi*, as Re points out.

X.16.14: The verb of c, *sám gama* (Saṃhitā), is somewhat peculiar; restoring *sám gamah* with Pp. we get an active rt. aor. subjunctive, even though *sám* \sqrt{gam} is ordinarily middle (though not entirely: cf., e.g., X.6.2 *sám ... jagmúḥ*, though there the subjects are joining together in something else). The subjunctive is also unexpected, esp. as it's correlated with impv. *harṣaya* in d. The standard tr. (incl. mine) simply tr. *sám gama(h)* as an impv., but properly speaking it should be tr. "you will join together" vel sim.

X.17 Various divinities

On the ragtag structure of this hymn, see publ. intro., which also needs a slight correction: the Pūṣan vss. are 3–6. The first 6 vss. are found in Lanman's Reader

X.17.1–2: On the obscure mythology sketched in these two vss. see publ. intro. I will not further speculate here on what lies behind them. The Sanskrit itself is relatively straightforward.

X.17.2: Since *mithuná-* often refers to a complementary gender pairing, *mithunā* here may provide more, if slight, evidence for Yama and Yamī as the referents.

X.17.3: The preverb *prá-* in tmesis with *cyāvayatu* (the lexeme *prá√cyu* is quite well established), follows its verb, somewhat unusually. I suggest that this is to allow it a secondary perceptual connection with the immediately following pf. part. *vidvān*: *prá√vid* is also a well-established lexeme, and although the part. is most often found without preverb, it does occasionally occur with *prá-*; cf., e.g., X.2.7 *pánthām ánu pravidvān pitṛyāṇam* “knowing the way along the path leading to the forefathers,” concerning exactly this journey to the other world. The configuration *prá* + PART with the same sense and the same subject and in the same pāda-final position is found in both 5d and 6d *prajānán*. The presence of this same structure, with lexical replacement (*√jñā* for *√vid*), in the first (3c) and last (5d, 6d) pādas of the Pūṣan section creates a defining ring.

The adj. *suvidātra-* ‘easy/good to find’ is used of the Pitaras three times nearby in this cycle, X.14.10, X.15.3, 9, but here it seems used exclusively of the gods.

X.17.4: There is a technical gender clash in pāda a: *āyus-* is a neut. *s*-stem (distinct from the stem *āyú-*, with masc. nom. sg. *āyúḥ*), but *viśvāyuh* is a masc. nom. sg. to the stem *viśvāyu-*. We should properly expect *āyur *viśvāyu* with neut. adj., but either *āyuh* reflects a nonce masculinization, or a surface matching of *-uḥ* endings led to the phrase we have.

Note the alliteration in *pāri pāsati ... pūṣā ... pātu prāpathe purástāt*, also pointed out by Re.

X.17.5–6: The *p* and *r* alliteration noted in 4ab continues here: 5d *āprayuchan purā ... prajānán*, 6ab *prāpathe pathām ... pūṣā, prāpathe ... prāpathe pṛthivyāḥ*, 6cd *...priyātame ... párá ... prajānán*.

On *prajānán* of 5d, 6d forming a ring with *prá vidvān* see comm. ad vs. 3.

X.17.7–9: As noted in the publ. intro., these vss. to Sarasvatī show a connection to the Pitaras in vss. 8–9. I wonder if the insertion of this sequence of vss. into this ill-assorted hymn was also facilitated by the concatenation of *sukṛtaḥ* ‘those of good ritual action’ in 7c with the same word in 4c and also perhaps because the insistently repeated pāda-init. *sārasvati-* (7a, b, c, d, 8a, 9a) echoes *s^uvastidā-* beginning 5c.

X.17.7: The injunc. *dāt* at the end of d is multiply ambiguous. I take it as a functional subjunctive, but it could also be presential ‘gives’ or past ‘gave, has given’. I do not see a way to decide, esp. since the other two verbs in the vs. are pres. (a: *havante*) and augmented impf. (c: *ahvayanta*).

X.17.11–13: Expiation for spilled soma; see Ge n. 11–13.

X.17.11: The phrase *ānu saptá hōtrāḥ* is rendered in the publ. tr. “according to the seven priestly functions,” in agreement with Ge and Ober (II.73), though Kü (572) has instead “nach den sieben Opfergüssen,” flg. Gr. The phrase “seven priestly functions/offices” is also found in III.4.5 *saptá hotrāṇi*; the problem of course is that the stem there is the neut. *hotrá-*, while here we have the fem. acc. pl. to *hōtrā-*, which ordinarily means either ‘oblation’ or ‘invocation’ (see comm. ad IV.48.1). However, *hōtrā-* does display the sense ‘priestly function’ in later Vedic.

X.18 Funeral hymn

On the structure of this hymn, see publ. intro. It has been much translated: Re, Hymnes spec.; Macdonell, Hymns from the Rigveda; Doniger; and it is found in Lanman’s Reader.

X.18.2: Assuming that this vs. is addressed to the living relatives of the dead (as described in vs. 3, which repeats 2b as 3d), the voc. *yajñīyāsaḥ* at the end is somewhat surprising, since this stem is used almost exclusively of gods in the RV. However, in the AV the word is used of humans after they have “wiped off” defilement onto something else or otherwise physically removed it, thus becoming *yajñīyāḥ śuddhāḥ* (e.g., AVŚ XII.2.13, 20, in the same hymn that contains many of our vss. [XII.2.21–25 ≅ X.18.1, 3–4, 6, 5]). Wh tr. ‘fit for sacrifice’, that is, presumably cleansed of taint and pure enough to take part in sacrifice to the gods. The phrase *śuddhāḥ pūtāḥ ... yajñīyāḥ* is also found several times in the AV, as Old points out: in AV VI.1.27 = XI.1.27 of waters; also of waters in XI.1.17 and, in an expanded phrase, of soma shoots in XI.1.18; the waters would be used to effect the purification.

X.18.3: The successful “invocation of the gods” *devāhūtiḥ* also signals their turn towards the *yajñā-*.

X.18.6: Old makes a good case for construing *āyuh* with *ā rohata*, esp. as in the later funeral rites a hide is spread out to step on (see Ge n. 6 as well as Old). Others (Re, Wh AV XII.2.24) take *āyuh* with *vṛṇānāḥ*.

Contra all the standard interpr., I supply an instr. (“with the wives of the gods”) on the basis of II.31.4 *tvāṣṭā gnābhiḥ sajōṣāḥ*, VI.50.13 *tvāṣṭā ... jānibhiḥ sajōṣāḥ*. In our context, which depicts Tvaṣṭar as providing good birth(s) (*sujānimā*), the presence of females would make good sense; see also the auspicious women in the next vs. It is also the case that there are almost no exx. of sg. *sajōṣas-* without an instr. (in the pl. the subjects are “in concert” with each other), so the “absolute” reading of most tr. is unlikely.

X.18.7: What the referent of *yóni-* lit. ‘womb’ is is not clear: the renderings range from “place of mourning” (Macd) to “marriage bed” (Doniger; cf. Re’s “la couche (conjugale)”). Given the auspicious character and appearance of these women, the latter might seem more likely. Recall also Yamī’s expressed desire *samāné yónau sahaséyyāya* “to lie together in the same womb” with Yama, for incestuous sex, in the dialogue that opens this Yama cycle (X.10.7). However, since this vs. immediately precedes the one in which the widow is recalled to life, it seems quite possible that these auspicious wives have come to adorn her for her second marriage. They may serve the same function as the non-widowed women (sometimes further specified as possessing living sons) who play various parts in the marriage ceremony as outlined in the Gṛhya Sūtras (e.g., ŚāṅkhGS I.11.5, 12.1; ĀśvGS I.7.21; GGS II.4.6, JGS I.22).

X.18.8: This is of course the famous vs. that hints at a momentary, pseudo-suttee, with the widow lying briefly beside her dead husband, before being called back to life and a new marriage. It has, not surprisingly, been much discussed; see esp. Thieme, “Jungfrauengatte” (1963, in the section on “Wiederheirat der Frau,” esp. 187–92 = KISch 452–57), who sees the ceremony as a symbolic rebirth of the widow, thus rendered ritually free to marry again. The vs. is addressed to the widow and presumably spoken by a priest or other religious functionary – or perhaps by the new husband-to-be, who would most likely be the dead man’s brother. The first hemistich is dramatically phrased, esp. with the abrupt impvs. that begin and end it: *úd īṣva nārī* “Arise, woman!” and *éhi* “come here!” But the second half, esp. the last pāda, sounds like stilted legalese: *pātyur janitvām abhī sām babhūtha*, lit. “you have come into being towards the wifehood of a husband ...,” while pāda c seems to contain technical terms from marriage ritual: *hāstam* √ *gra(b)h* ‘grasp(ing of) the hand’ and *didhiṣú-*, the desid. (pseudo-)participle sometimes meaning ‘wooer’. I think we should take this stilted phrasing serious and perhaps see here an actual citation of legal language from this early period. For further on *didhiṣú-* see my forthcoming “What Would a Vedic Law Code Look Like? “Overslaughting” in Vedic and Dharma Literature: Ritual, Mythological, and Legal Continuities and Disjunctions” (Bühler lecture, Univ. of Vienna, May 2022).

MLW suggests that *janitvām* could also be a pun: **jánī tvām* “you are a wife,” a clever idea that might help account for the awkwardness of the phrasing.

As Thieme points out (188–89=453–54 and 188/453 n. 3), tr. (including the publ. tr.) that render *hasta-grābhā-* as if it were a participial bahuvrīhi (the equivalent of **grbhītā-hasta-*) ‘having grasped (your) hand’ < ‘possessing your grasped hand’ cannot be correct, on the grounds of both accent and order of elements. It must be a tatpuruṣa: ‘grasper of the hand’ / ‘grasping the hand’ –Thieme’s “Handergreifer” –as a technical designation of a legitimate bridegroom (cf. later *pāṇi-grāha-*, etc.; also, e.g., AV V.17.8 for the connection of *hastam* √ *gra(b)h* with the legitimate *pāti-*). I would therefore now alter my tr. to “... as wife of one who grasps your hand [=bridegroom], who intends to have you, of a/your (new) husband.” On the technical meaning of *didhiṣú-* see Thieme, 189–90=454–55 as well as my forthcoming art. cit.

X.18.9: There is some dissent about who the subject of *ādadānāḥ* is in pāda a, who the referent of *tvām* is in pāda c, and whether they are the same. See esp. Old’s disc.: Caland thinks that the two are the same and the referent is the dead man’s son (or some lineal descendant). The son seems the likely subj. of the participle, but I am convinced by Old’s arg. that the *ātra* locating “you” (*tvām*) “there,” as opposed to “we here” (*ihā vayām*), is powerful evidence for a disjunction between the dead man and the living, and “you” must therefore be the dead man. (See *ātra* in 12 and esp. 13d, where it is associated with Yama.) The second hemistich is thus probably direct speech uttered by the son as he takes the bow, reassuring his father that, even though dead, he will share in the victories of the living, achieved by his bow. This would be better signaled in the publ. tr. by emending to “Taking the bow from the hand of the dead man, (his son says), ‘you there and we here—may we win ...’”

X.18.10: Two words for ‘earth’ occur here, *bhūmi-* and *prthivī-*; likewise in the next vs., *bhūman-* and *prthivī-*.

The earth to which the dead man (or more likely his bones) is consigned is depicted as two benevolent female figures, mother and young girl (though probably already of marriageable

age). In this gentle and enfolding context it's a bit of a surprise to encounter the priestly pitch: the soothing embrace of the earth is only for the man who gave sufficient Dakṣiṇās (priestly gifts) (*dákṣiṇāvant-*) during his ritual lifetime.

X.18.11: Note the phonetic play between the initial and final words of the first hemistich: #*ucchvāñcasva ... sūpavañcanā*# —noted already by Re. The 2nd word of course also echoes the one that begins its pāda, *sūpāyanā*.

X.18.12: *ucchvāñcamānā ... tiṣṭhatu* appears to be a periphrasis: “stay/keep arching up.”

As has been noted frequently in this comm., an imperative clause with *hí* followed by another impv. clause gives the grounds on which the 2nd impv. cl. can take place. Here the clauses are reversed: pāda a logically follows b, which contains *hí*: once the houseposts are erected, the earth can stay arched up.

Even in the pl., *grhá-* can refer to a single house(hold), presumably because it can consist of a number of individual structures.

Note the phonetic figure *grháso grṛtaścúto*.

X.18.13: I do not understand the function of *te* in pāda a. It could be a (vague) beneficial dative: “For you I prop up the earth from you.” Or perhaps it's an anticipatory doubling of the full 2nd ps. prn., abl. *tvát*. In that case we would need to allow occasional ablatival value for the enclitic, and though that's not out of the question since enclitic pronouns don't always seem to be tied to strict case functions, I prefer the former. The tr. should then be slightly emended to that given above.

On the ring created by *mā ... riṣam* with 1d *mā ... rīriṣaḥ*, see publ. intro.

X.18.14: On the status of this vs. in the architecture of the hymn and on its disputed meaning, see publ. intro. As noted there, my interpr. of the vs. is quite different from the standard (see esp. Old's disc. of various previous suggestions). Unlike most, I do not see this as the poet predicting his own death and burial and therefore restraining his speech in anticipation of that event. For one thing, this attitude doesn't ring true for a Rigvedic poet. Moreover, as noted in the publ. intro., the vs. is defined as extra-hymnic by the ring created between vss. 1 and 13 as well as by its different meter and its absence from the commentarial tradition. It also can easily be interpr. within the genre of hymn-final meta-reflections on the hymn that precedes. So rather than seeing it as the poet's elegiac and sombre reflection on his own eventual death, I interpr. it as the usual proud, indeed boastful assertion of the poet about his own verbal skill.

The principal syntactic shift that enables my interpr. is a different construal of *mām*: this acc. is well nigh universally taken as the obj. of *ā dadhuḥ*, but I see it rather as bound to *pratīcīne* ‘facing’. The stem *pratyāñc-* (with its derivatives) frequently takes an acc., ‘facing X’, and *mām* is well positioned, in the middle of the NP *pratīcīne ... āhani*, to fulfill this role (though it could be interpr. as occupying Wackernagel's Position, but with tonic *mām* rather than enclitic *mā* because it precedes a vowel-initial word). As for the obj. of *ā dadhuḥ*, I supply the remains of the dead man who is the subject of the rest of the hymn; what's likely to be as light as a feather but the ashes and leftover bones of someone cremated? I would also add here a note on the sense of *pratyāñc-*, etc.: the standard tr. must take it as qualifying a day in the vague, but hopefully distant, future, but in fact *pratyāñc-* (& co.) is very much “in your face”—generally referring to

something in the immediate vicinity, locationally or temporally (see, e.g., the exx. in X.28.4, 9). So by the usual interpr. the poet would be anticipating his death in the very near future.

In the 2nd hemistich by my interpr. the poet asserts his mastery over the speech appropriate to the occasion, the speech that occurred to him (/ faced him) when confronted with a commission for funeral vss. Although the standard interpr. take *vācam* √ *grabh* to mean ‘restrain speech’ (that is, go silent), in fact on what little evidence we have for similar idioms it is more likely to mean ‘speak, pronounce’ – the French idiom “prendre parole” might be cited here. Cf., e.g., X.145.4 *nahy āsyā nāma gr̥bhnāmi* (in a co-wife hymn) “I do not grasp [=mention] her name”; sim. I.191.13 *sārvāsām agrabhaṃ nāma* “I have grasped [=spoken] the names of all.” In VIII.6.10 *ahām íd dhí pitúṣ pári, medhām ṛtasya jagrabha* “Because it is just I who have acquired the wisdom of truth from my father,” the poet grasps and uses the “wisdom of truth” acquired from his father—he certainly doesn’t restrain it. In our passage the poet seems to see speech as a spirited horse that needs to be grasped and controlled by his own power, as a horse needs to be controlled by its halter. Of the various interpr. out there, mine is closest to that of Lanman (Skt. Reader, p. 386) flg. Whitney. Lanman remarks, “The stanza seems to express the poet’s satisfaction at having made a good hymn at the right time and place and with as good skill as a skilful horseman has” and cites Whitney’s tr. “I’ve caught and used the fitting word, / As one a steed tames with the rein” (I cite only the tr. of cd).

X.19 Cows

As discussed in the publ. intro., it is not clear why this hymn is attached to the end of the Yama cycle, but Old convincingly demonstrates (Prol. 231ff.) that it cannot belong to the following group of Vimada hymns (X.20–26), which is clearly demarcated. On p. 238 with n. 1 he considers the possibility that X.19 is an interpolation, but such an assumption is too uncertain to pursue. See also his remarks in the Noten.

MLW suggests an intriguing reason for attaching this hymn at the end of the funeral hymns: “I wonder if the return of the cow is connected with the end of the day and so metaphorically with death. It reminds me of Thomas Grey, Elegy written in a country churchyard

The curfew tolls the knell of parting day,
The lowing herd wind slowly o’er the lea,
The plowman homeward plods his weary way,
And leaves the world to darkness and to me.”

The “meaning” of the hymn is carried by its phonology—the jingle-like repetition of forms of *ní* √ *vṛt* ‘turn back’ and riffs based on this lexeme and the series of rhyming words built with the same suffix that dominate the middle vss. It gives us a glimpse of a different type of deployment of verbal means: intensive patterned repetition as spell.

X.19.1: Ge renders *revatīḥ* as “die ihr unseren Reichtum bildet.” This is surely the right implication: the cows aren’t so much rich in themselves as the foundations of our wealth. But such a tr. is awfully heavy for a single-word voc.

X.19.2: Note the impv. *kuru*, one of three forms of this 8th class pres. in the RV; see disc. ad X.51.7.

X.19.4: The accumulation of *-ana*-nominals in pādas a–c is impressive. Besides the incantatory repetition of *-anam*, there are further phonological echoes in pādas a *yán niyānaṃ nīyāyanam* and c *āvārtanam nivārtanam*.

X.19.5: The *-ana-* pile up continues (with c = 4c), but in pādas a and b the near rhyme form (*ud*)*ānaḍ* is in fact a verb.

X.20–26

As was noted just above ad X.19, Old (Prol. 231–32) demonstrated quite clearly on internal grounds that these hymns belong together, thus supporting the single authorship assigned to them by the Anukramaṇī. The hymns are characterized by unusual meters and puns on the poet's name Vimada; the poet is identified as Vimada in X.20.10, 23.7 and the family of Vimadas in X.23.6. Moreover, three of these hymns (X.21, 24, 25) show the signature lines *vī vo mādē* and *vivakṣase*. The seven hymns are dedicated to five different divinities, starting, as usual, with Agni followed by Indra.

X.20 Agni

On the opening vss. of this hymn, see publ. intro. The hymn is in a variety of meters, and these meters are metrically ragged. For details, see, e.g., the metrical comm. of HvN.

X.20.1: As noted in the publ. intro., this vs., consisting of a single pāda, is adapted from X.25.1 to provide an auspicious beginning to the Vimada series. The sequence from which it's adapted contains two 8-syl. pādas *bhadrām no āpi vātaya, māno dākṣam utā krātum*; the 2nd and 3rd terms of the tripartite NP in b have simply been lopped off here, producing an awkward 10-syllable line that reads as prose.

X.20.2: As also noted in the publ. intro., the first two words of this vs. are identical to the opening of RV I.1. Although *agnīm īle* is found elsewhere as a pāda-opener (I.44.4d, III.27.12c, VIII.43.24c=44.6c), nowhere else does it open a hymn (or even a vs.) except here (leaving aside the mangled auspicious motto of our vs. 1) and I.1.1. It is therefore hard not to see this as a conscious echo of I.1, which in turn might suggest that a RV collection already existed in some form when Vimada composed this hymn and that I.1 inaugurated it. The metrical disturbance—pāda a has 9 syllables—may call attention to *agnīm īle* as a quotation.

Ge and Re (also Sāy., Gr.) take gen. pl. *bhujām* as referring to the gods as 'enjoyers' of the sacrifice and construe it with *yāviṣṭham* (e.g., Ge "den Jüngsten der (Opfer)geniesser"). But of the fairly numerous occurrences of the root noun *bhúj-* (incl. the infinitival dat. *bhujé*) this would be the only agentive one, as opposed to the standard sense in the non-infinitival occurrences 'enjoyment, delight'. I therefore follow Schindler (Rt. nouns s.v.) in seeing the same sense here, construing the gen. as a secondary complement to *īle*. Gr allows acc., gen., or dat. with *√īḍ*, and although the gen. is quite rare, we must reckon with it at least in VII.24.5 (q.v.). Moreover, note that acc. pl. *bhújah* is found in nearby X.22.13 with the undoubted sense 'benefits, delights'.

In b the question is whose *śās-* is at issue. I take it as Agni's: he is difficult to restrain because he holds the command, but at least by implication Ge and Re take it as belonging to those who would try (and fail) to restrain the fire (e.g., Re "difficile à tenir sous un

commandement”). This is certainly possible, though I favor my interpr. because it would associate the *śās-* with the authority of Mitra.

Ge points out the etymological figure *durdhārītum* (b) / *dhárman* (c), which is difficult to render in Engl.

As usual, *dhárman-* is problematically ambiguous. I take it as referring to the physical foundation, the fireplace, where the flames are found; see my interpr. of *dharmāṇaḥ* in the next hymn, X.21.3. By contrast both Ge and Re take it as immaterial: “Befehl” and “l’ordre-corrélatif” (whatever that means) respectively. Such senses cannot be excluded, but I don’t see what they would contribute here.

The fem. pl. *énīḥ* is much discussed: see Old for various older interpr., as well as Lü (391). I follow Ge and Re as seeing it as a description of the mottled or dappled flames. They “honor the sun” by reaching towards heaven, where the sun is the heavenly counterpart of Agni. As for “the udder of their mother” (*mātúr ūdhaḥ*), I take it to refer to the fireplace itself, or perhaps, with Ge (n. 2cd), the kindling sticks.

X.20.3 As with the rhyming *śāsā* in 2b, there is some dispute about whose mouth is referred to by *āsā* in pāda a. Re takes it as Agni’s, and it is of course true that Agni is considered the mouth of the gods. But in conjunction with *vardháyanti* ‘they make increase’, it makes more sense, with Ge (n. 3a), to think of the priests, who increase Agni by blowing on him and/or by reciting praise hymns to him.

The identity of the 1st member of the bahuvr. *kṛpānīla-* is also disputed. EWA (s.v.) throws up its hands. Ge renders it “Nestbereiter,” suggesting (n. 3a) that it is a *trasá-dasyu*-type cmpd, but this assumes the existence of a root $\sqrt{kṛp}$ ‘prepare, arrange’, an *r*-form parallel to $\sqrt{kṛp}$. But as I have shown (-*āya*-form. 124–25; see also my 2009 “Indo-Iranian Priestly Title” [Fs. Salomon] 112–13), $\sqrt{kṛp}$ is a secondary root, backformed from the *p*-causative to an *l*-form of $\sqrt{kṛ}$ ‘do, make’ and barely exists in the RV outside of the causative system. Better is the prevailing assoc. of the 1st member with *kṛp-* ‘body’; the apparently thematic *kṛpá-* can be accounted for as Re does, by pointing out that the athematic form would produce the “impossible” $\sqrt{kṛbnīla-}$ (actually surely the even worse $\sqrt{kṛmnīla-}$). But most who identify the first member as *kṛp-* bleach the meaning to ‘beauty’—so, Gr “in Schönheit oder Glanz wohnend,” Re “le nid de la beauté-formelle.” I take *kṛp(a)-* in its standard sense of ‘body’, in agreement with its Iranian cognates; no RVic passages require or even invite ‘beauty’, and all but one are used of Agni. Here I think the sense of the cmpd is ‘whose nest is his body’: that is, in my view, the physical concentration of the fire is the lower part at and around the firewood, which can be considered the nest out of which the leaping flames and beams of light fly upward, as expressed by *bhāsāketu-*, the parallel cmpd in the next pāda.

The teeth in a row would be the regularly spaced flames. Note the figure *-nīlam* (*l* - *nīdam*) (a) / (*śre*)*ṇi-dan* (c), with the flipping of retroflexes.

X.20.4: The phrase *gātúr eti* recurs in 6b. I take it as a non-literal idiom somewhat similar to French “ça marche”—that is, because of Agni, things “go well” for both the *arí-* and the *vís-*, specifically because “Agni has reached the ends of heaven,” that is, his light and his smoke have opened the way for the oblations and praises offered by both *arí* and *vís-* to reach the gods and set in motion favorable reciprocal action. In this context it is tempting to interpr. *arí-* as Ge’s “hohen Herr” or Re’s “l’homme privilégié” rather than Thieme’s Fremdling; Thieme (Fremdling

37–38) sees the pairing as a contrast between the wandering stranger and the settled peoples, but it might rather be meant to include the leader and the common people alike.

By my interpr. pāda c further spells out the benefits Agni’s arrival in heaven will provide for the people of pāda a: as “bright-shining poet” (*kavīḥ ... dīdyānaḥ*), Agni, in the form of flame and light, conveys the praise-hymns suggested by ‘poet’); as cloud (*abhrām*), Agni, in the form of smoke, conveys the oblations. I take neut. *ābhram* as nom., though Ge/Re take it as acc. – Ė as goal parallel to *divó ántān* in b, Re as obj. of *dīdyānaḥ*, though he admits that this part. is ordinarily intrans. I see no obstacle to taking it as nom.

X.20.5: This vs. seems in a way to explain or comment on vs. 4.

The injunc. *juṣat* seems to be one of the sporadic act. forms built to this predominately mid. stem. I do not see a need to take it, with Lub. (Conc. 569), as a *t*-less medial **juṣa* remarked with secondary *t* (of the *aduhat* type).

X.20.6: I consider pāda b a reprise of vs. 4, prompted by the same idiom *gātúr eti*. Because (in my opinion) Agni is identified with peace, oblation, and sacrifice, men should obey his injunctions and sacrifice accordingly, for things to go well for them.

In d I would now tr. “the gods (come) to Agni,” depicting the reciprocal journey to the sacrifice. So Ge.

X.20.7: As Ge remarks (n. 7), “Dunkle Str.” Its sense turns on the interpr. of the verb *iṣe*. Opinion is split on the root affiliation and morphology of this form. Ge (n. 7a) discusses possibilities but ultimately opts for a *-se* form to \sqrt{i} ‘go’; Re’s “j’aborde” seems to reflect the same analysis, though in his n. he cites Old’s ‘send’ with some approval. Old and Scar (607) assign it to $\sqrt{iṣ}$ ‘send’. The form must be considered in conjunction with the two other forms of the same shape in IV.23.6 and VI.22.5; see comm. ad locc. In all three passages a long-vowel form **iṣe* fits the meter better; in all three cases I analyze it as a 3rd sg. pf. to $\sqrt{iṣ}$ ‘seek’ (Sāy. also interprets it as ‘seek’). The verb then takes two parallel objects, *agnīm* and *dúvaḥ*. For the latter, cf. III.2.6 *agne dúva ichámānāsaḥ*. The tricky part is that Agni is represented in the object phrase twice, first as an object himself and second as the gen. dependent on *dúvaḥ*, namely *pūrvasya sévasya* “of the kindly ancient,” with both acc. objects discontinuous, spread over two pādas, and interwoven (*yajñāsāham ... agnīm* and *dúvaḥ ... pūrvasya sévasya*). This may reflect the twisty sensibilities of the poet Vimada; see comm. ad X.21.1 in the next hymn.

The hapax rt noun cmpd *yajñā-sāh-* is taken by Old, Ge, and Scar (607) as having an obj. relationship—e.g., Scar “der über das Opfer herrscht.” But the long final vowel of the first member is puzzling; Scar suggests it’s due to metrical lengthening, but in a cmpd whose 1st and 3rd syllables are already heavy and whose fourth syllable is also heavy in context (*yajñāsāham dúvaḥ*), metrical lengthening hardly seems necessary. Scar also toys with the possibility that *yajñā* is an instr. and even cites a semantic parallel: V.3.5 *sá yajñéna vanavad deva mártān* “he [=client of Agni’s] will vanquish mortals by sacrifice, o god (Agni).” This seems the better interpr. (though not the one Scar chooses) and is also represented by Re’s “qui domine par le sacrifice.”

On Agni as stone-born, see I.70.4 and the parallels adduced by Ge ad loc. (n. 4a).

X.20.8: *vísvét* in b (*vísvét té vāmá ā syuh*) is troublesome, since it shouldn’t properly represent the masc. nom. pl. *vísve* that seems to be called for here. Taking the sandhi seriously, as *vísṣvā* +

íd with a neut. pl., complicates the interpr., leading to Re’s implausible “Les seigneurs quels qu’ils soient ... (et) toutes choses (leur appartenant) ...” Roth (see Old and Ge n. 8b) simply interpr. it as irregular sandhi of the nom. pl., and I agree; I think it may have been influenced by I.40.6 *vísvéd vāmā vo aśnavat* and VI.1.9 *vísvét sá vāmā dadhate tvótaḥ* (passages also adduced by Old, who notes the frequent association of *vísṣvā* with *vāmā(ni)*). In both the just-cited passages *vísṣvā* is a neut. pl. modifying likewise neut. pl. *vāmā*. Here the form of *vāmā* (Saṃhitā; *vāmé* Pp.) is of course not neut. pl., but the association may have led to the irregularity.

The phrase *vāmā ā√as* has the ring of a fixed, slightly slangy expression; it contains the only loc. of the stem *vāmā-*, which may signal that it doesn’t belong to the high discourse register of the RV. Ge’s “im Glück sein” strikes the right note; my “be in the money” is meant to capture the register difference—I didn’t quite have the courage for “be in clover.”

Note that *vārdhantaḥ* echoes *vardháyanti* in 3a, also with ritualists as subj.

X.20.10: The vs. is presented as a typical meta-summary final vs., opening with *evā*, with the poet, naming himself, as subject. However, the verb in this summary is *ā vakṣat*, which clearly belongs to the *s*-aor. subjunctive of *√ vah*, though we ordinarily expect an aor. in this context. Both Ge and Re in fact tr. it as preterite: “hat ... dargebracht” and “il a convoyé” respectively. Without directly addressing this issue, Old suggests that *vimadāḥ ... ā vakṣat* may be an echo of the characteristic refrain *ví vo máde ... vívakṣase* found in X.21, 24, and 25, though of course *vakṣat* and *vívakṣase* are etymologically and semantically entirely distinct.

The Pp. analyses *ābhāḥ* as containing an augmented *abhāḥ*, but it could just as easily be *ā bhāḥ* with an injunctive

X.21 Agni

On the meter and the metrically defined split refrain, see publ. intro. and immed. below.

X.21.1–8 (etc.): The first pāda of the refrain, *ví vo máde*, is of course the poet’s name *vimadā-* split by a Wackernagel’s enclitic (*vaḥ*) into preverb *ví* and loc. *máde*, with the preverb to be construed with the verb that forms the 2nd pāda of the refrain, *vívakṣase*.

This verb, *vívakṣase*, has been variously interpr., with root affiliations suggested to *√ vah*, *√ vakṣ*, and *√ vac* and various morphological analyses; see, e.g., Old, Ge (n. 1cd), and recently Heenen (Desid. 219). Most likely is the interpr. as desid. to *√ vac* with the *-se* 1st sg. ending generally specialized for verbs of praising (*stuṣé*, etc.).

In the publ. tr. I take *vaḥ* as the object of praise; I now realize that *vaḥ* should be dat., with the gapped object of praise being Agni. I would alter the tr. to “I wish to proclaim (him) to you (all)” or, since Agni is addressed in the 2nd ps. through most of the hymn, the awkward “I wish to proclaim (you=Agni) to you (all).” The referent of *vaḥ* may also be the priests rather than an audience of gods.

X.21.1: The hapax *svāvṛktibhiḥ* has elicited elaborate, and to me not terribly convincing, rather legalistic interpretations; cf., e.g., Ge’s “aus eigner Berechtigung.” I do not think the word can be interpr. without considering its near twin, *suṣṛktibhiḥ*, which instr. pl. occurs 18x (in addition to other case and no. forms), almost always pāda-final as here. *suṣṛktī-* means ‘well-twisted (hymn)’ and refers to particularly fine products of poetic skill deployed at the sacrifice. See comm. ad I.61.2. Here I think ‘hymns’ must be the underlying referent as well, but here the hymns “have their own twists.” I do not think it is fanciful to interpr. this as a reference to the

twisted construction of all the vss. of this hymn, with the split refrain twining around a pāda (=e) isolated from the rest of the content of the vs. For the phrase “choose ($\sqrt{vṛ}$) Agni X-*vṛktibhiḥ*” here, cf. V.25.3 *suṇvṛktibhiḥ vareṇya* “you [=Agni] worthy to be chosen with well-twisted (hymns).”

The simile particle *nā* seems, at first, both misplaced and functionless, since it seems to target *agnīm* as the simile—and we are not choosing (someone/something) *like* Agni, but choosing Agni himself. However, the real target of *nā* is *svāvṛktibhiḥ*, and the order of the two words has been flipped because, as far as I can tell, simile-marking *nā* is blocked from pāda-final position (though *iva* is not; see, e.g., 3b). See disc. ad VIII.76.1 and X.111.7 and for other exx., III.10.5, IV.1.19, and X.127.8; the only counterexamples I have found (in the vast numbers of simile-marking *nā*) is *apó nā* in VII.68.8 and the syntactically complex ex. in X.95.3, spoken by the manic Purūravas. This phenomenon was already noted by Ge; see his n. 4a to IV.27.4. Even construed with *svāvṛktibhiḥ*, *nā* doesn’t mark a conventional simile, but rather, in my opinion, draws attention to the implicit word play with *suṇvṛktibhiḥ* and the joke about the way this twisty hymn is constructed.

X.21.2: Because *svābhū-* is used of patrons (*sūrī-*) in VII.30.4, this referent seems to be assumed here (e.g., by Ge), leading to the further interpr. of *ásva-rādhās-* as ‘bestowing horses’ (e.g., Ge “die Rosseschenker”). But *śumbhānti* ‘they beautify’ invites an officiant, an active participant in the ritual, as subj.; I therefore tr. “who receive bounty in horses.”

X.21.3: I take the suffix-accented *dharmāṇaḥ*, lit. ‘possessing *dhárman-*’, as I did its root-accented base *dhárman* in the last hymn (X.20.2), namely as referring to something physical and material, viz. the foundation out of which the flames leap up. Both Ge and Re give *dharmān-* here an immaterial and conceptual sense: “den Satzungen getreu” and “(... représentant) la loi (incarnée)” respectively. They then both assume that the referents are the priests, sitting beside the ritual fire. This is certainly possible and would follow from *śumbhānti* in the previous vs. However, as in X.20.2 I prefer to see the subjects here as the flames, which have the fireplace and the lower part of the fire as their foundation and sit upon it.

My interpr. simplifies the interpr. of the simile in b. Since by the Ge/Re interpr. the subjects are masc., the fem. part. *siñcatīḥ* requires them to conjure up water-pouring women who have no other function but to justify the fem. pl.; moreover the instr. pl. *juhūbhiḥ* is underutilized. By my analysis the flames are fem.: see *éñīḥ* in X.20.2, which both Ge and Re also take as a reference to flames, and therefore the fem. *siñcatīḥ* is fully justified. (Note that the adj. *dharmāṇaḥ* in pāda a can be fem. as well as masc.; see, e.g., Macd VGS p. 67 n. 5; AiG III.263.) And the simile is also semantically richer: as elsewhere, *juhū-* can be ‘tongue’ as well as ‘ladle’, and “tongues of flame” is a RVic metaphor as well as an English one; further the flames dipping and rising can look as if they themselves are pouring, like women pouring with ladles. Although like Ge and Re, I do invoke a group of women with ladles, they are suggested by the inherent feminine of the frame.

As Ge (n. 3c) points out, pādas c, e recall vs. 9ab of the previous hymn, X.20.

X.21.4: The preverb *ā* is doubled, appearing in both c and e, perhaps because of the disruption created by the interspersed refrain in d.

X.21.5: Ge takes instr. *átharvanā* as the agent with *jātāḥ* (“von Atharvan erzeugt”). This saves him from trying to construe the instr. independently (as Re and I do), and passages like VI.16.13 *tvām ... átharvā nír amanthata* “You, Agni, did the Atharvan churn forth ...” support this interpr. However, *jātá-* is an extremely common ppl. and I know of no other passages with an agent. Moreover, the Atharvan is associated with poetic vision at least in I.80.16 (*dhī-* in that case).

KH (215) takes *bhúvat* here as “resultative Konstatierung,” tr. as a pres. “(Agni) ist der Bote Vivasvants,” but the mention of Vivasvant and Yama seems to put the action in the mythic past.

X.21.7: Both Ge and Re take *mānuṣaḥ* as nom. pl. and subj. of *ní sedire*. I now see that the publ. tr. “blazing for Manu” is unlikely and would now agree with Ge/Re and change my tr. to “They—the sons of Manu—installed you ... ghee-faced, blazing, most observant with your eyes.”

X.21.8: On the plants as Agni’s wives, see reff. in Ge’s n. 89d.

X.22 Indra

On the meter of this hymn, which is unique to it, see publ. intro. and Old, Prol. 117. For the structure and contents see publ. intro.

X.22.1–2: As noted in the publ. intro., these two vss. are responsive—the first posing a question and the second replying to it. Note the point-by-point responsion esp. in the first pāda of each:

kúha śrutá índraḥ kásmin adyá
ihá śrutá índro asmé adyá

Note that the pāda break (after *adyá*) does not coincide with the syntactic break (which should come after *índraḥ*) but does coincide with the end of word-for-word responsion.

X.22.1: In b I read *jáne* twice; on the one hand it belongs with the interrog. loc. *kásmin*, “among what people?” further specifying the first interrog. *kúha* “where?” But it also belongs with the following simile *mitró ná*, because “an ally among the people” *mitrá- jáne* is a fixed phrase, found also in the next vs., 2c, as well as II.4.1, VIII.23.8, X.27.12, 68.2; see my 2001 disc. in “The Rigvedic Svayamvara” (Fs. Parpola), 311–13. The phrase often is a reference to Agni, and though in n. 16 in the op. cit. I assert that there is no reference to Agni in our two vss., I now think it’s possible that Agni is covertly present here. Among other things, Agni is both likely to be in a dwelling place of seers (1c) and famously goes into hiding (1d). In addition to this possible ref. to Agni via formula, an identification with Mitra is also overtly suggested.

The intens. form *cárkṛṣe* to the root $\sqrt{kṛ}$ ‘celebrate’ belongs to the reasonably well established intens. stem (*carkar-* / *carkir-*), which is ordinarily act. and tr. (with gen. obj.) and which serves as the only pres. stem to the root. Medial *cárkṛṣe* is found 3x, once as a 1st sg. with the same sense as the act. (X.74.1), twice as a 3rd sg. in passive value (here and X.105.4). The 1st sg. clearly belongs with the 1st sg. *-se* forms to verbs of praising and the like, such as *stuṣé*, as well as the verb of the Vimada refrain *vívakṣase* disc. above ad X.21.1. But the 3rd sg. passives are harder to account for. Note however that *stuṣé*, which is overwhelmingly 1st sg. and transitive “I praise,” is used as a 3rd sg. pass. in I.122.7, 8. It is possible that, since accented *-sé* forms can be interpr. as dative infinitives, the functional voice neutralization in infinitives (“to praise / to be praised”) allowed a reinterpret. of the form, which subsequently could be used as a 3rd sg. mid. with a value more appropriate to the middle. On *cárkṛṣe* see Schaeffer 108–9,

though I would not endorse the Rasmussen source for the forms or the Oettinger stative that are both presented as explanations there. The 3rd sg. passive interpr. is reinforced by the responsive verb in 2b, *stáve*, a *t*-less 3rd sg. in passive sense. See also disc. of *stoṣi* in vs. 4 below.

X.22.2: In addition to the exact match of 2a with 1a (see above), there are other signs of responson: c repeats the “ally among the people” phrase, slightly rearranged, from 1b; the verb of b, *stáve* ‘is praised’, is semantically a match with both *śrūyate* of 1b and *cárkṛṣe* of 1d; while the verb of d, *cakré*, echoes *cárkṛṣe* phonologically.

As Ge points out (n. 2cd with reff.), *yáśas- jáne(ṣu)* is another fixed expression, and I therefore read *jáneṣu* here twice, with *mitró ná* and *yáśas cakre*.

On *īcīsama-* see comm. ad I.61.1.

X.22.3: A vs. without a finite verb (or even a predicated part.). It most likely consists of a single rel. cl., introduced by *yáḥ* in pāda a, with four separate NPs as predicates, but in the absence of a finite verb, the structure cannot be determined for certain: it could, for ex., have an unsignaled rel. cl. (ab) / main cl. (cd) structure, “who (is) the lord ..., (he is) the bearer ...”

The fluidity of structure is also on display in the first hemistich: are the two genitive expressions #*maháḥ ... śávasaḥ* (a) and #*mahó nṛmṇásya* both dependent on *pátih*, as I take them (so also Tichy), or does the latter depend on *tūtujih*, as Ge has it? (Not much depends on this.)

In pāda a *śávaso ásāmi* reminds us of the hapax bahuvr. *ásāmi-śavas-* (V.52.5). *ásāmy āḥ* also concatenates with the same phrase ending the previous pāda, 2d.

The 2nd hemistich is a classic case of case disharmony between frame and simile: the agent noun *bhartā* takes gen. *vájrasya* in the frame (c), but acc. *putráṃ* in the simile (d). See Ge’s n. 3cd and Tichy (-*tar*-stems, 366, 369–70). Of course, because of its suffix accent, the gen. is the “correct” case complement for *bhartár-*, but as is well known, the distribution of gen. and acc. compliments with agent nouns (suffix-accented versus root-accented) is far from perfect.

X.22.4: A difficult vs. that begins the transition to the Kutsa / Śuṣṇa myth, starting with the two horses of the Wind, which figure in that story (cf., e.g., I.174.5-7, I.175.4, VIII.1.11). Ge considers it the speech of Uśanā, though I do not. For most of the vs. the action is carried nominally, by the aor. part. *yujānāḥ* (a), agent noun *syántā* (c), and aor. part. *srjāmāḥ* (d), all referring to Indra, to whom the voc. *vajrivaḥ* in b is also addressed. As it unfolds, it therefore resembles vs. 3, though with some participles to provide dynamic action and a 2nd ps. reference.

But pāda d also has a finite verb, *stoṣi*, which considerably gums up the works. Wh (Roots) and Macd (VGS) assign this form to the root pres. of \sqrt{stu} , so presumably consider it a 2nd sg. indic. pres., but neither of course tr. it. The current consensus (Ge, Tichy [*tar*-stems, 116–17], Baum [Impv. 58]) seems to be that it is a 2nd sg. imperative with the horses of pāda a as obj.: e.g., Ge “so lobe (die Rosse).” Baum further identifies it as a -*si* impv., and it is certainly the case that \sqrt{stu} has an *s*-aor. that builds the characteristic subjunctive (*stoṣat*, etc.) that regularly patterns with -*si* imperatives. The problem is the meaning this analysis requires: is it likely that the poet is urging the great god Indra to *praise* some other god’s *horses*?! much less the roads (*ádhvanaḥ* immed. flg. *stoṣi*) that would provide a nearer acc. object (see Old). As Old, who surveys the various previous suggestions, sensibly says, “Das Natürlichste ist doch, dass I. gepriesen wird.” This is the insistent theme of the first two vss., with *cárkṛṣe* ‘is celebrated’ and *stáve* ‘is praised’ in addition to the three forms of $\sqrt{śru}$ ‘be famed’, and vs. 3 contains a good sample of what this praise would consist of. And of course this hymn is dedicated to Indra. With

Old (“Liegt vielleicht *-i* als Endung der 3. Sg. med. vor ...?”), I consider this yet another morphological manipulation of the root \sqrt{stu} , in this case a pseudo-passive aor. built to a sigmatic stem, a variant on *stáve* in 2b and confected much like *cárkṛṣe* in 1d. Recall that that form is 3rd sg. and passive (“is celebrated”) but was created beside the identical 1st sg. *-se* form with transitive value (“I celebrate”). The root \sqrt{stu} has a well-attested 1st sg. *s*-aor. *ástosi* with transitive value “I have praised”; the identical (save for augment) *stosi* here could show the same switch to 3rd sg. and passive value.

There is, however, a further complication: as noted above, Indra is addressed in the voc. in pāda b, so he should be in the 2nd ps., not 3rd. Given the serious semantic problems created by taking *stosi* as 2nd sg. act. impv., as outlined above, I do not consider this a serious objection, for several reasons. First, switching between persons is quite common in the RV, even in a single vs. Moreover, since four vss. in this hymn contain the same pāda-final voc. *vajrivaḥ* (10b, 11b, 12d, 13d), it is quite possible that *vajrivaḥ* here is a redactional replacement for something else (nom. **vájrivān*? though the fact that this stem is only attested in the voc. makes this less likely). In any case, apart from this voc., the rest of the vs. is perfectly compatible with 3rd ps. ref., just like the previous vs.

The voc. *vajrivaḥ* brings up another issue: what is this formation? We should of course expect a *-vant*-stem to be **vájra-vant-*. AiG II.2.892 considers it analogical to *adrivant-* ‘possessor of the stone’, another epithet of Indra, very common (49x) and likewise attested only in the voc. *adrivaḥ*, almost always at the end of 8/12-syllable pādas. And certainly some influence from this stem is quite likely (though it’s worth noting that there are no exx. of *adrivaḥ* in Maṇḍala X). However, I think that the very common possessive stem *vájrīn-*, meaning the same thing as *vajrivaḥ*, must have been the driving factor. Adding a pleonastic *-vant-* (or rather the voc. *-vaḥ*) would convert the voc. *vájrīn* (41x) into a form friendly to the cadence of 8/12-syllable pādas, where the trisyllabic case forms of this stem (*vájrīnam*, etc.) are regularly found (though here I have to admit that *vájrīn* is fairly rare in Triṣṭubh cadences). Note that nom. *vájrī* is found in 2b.

Since acc. pl. *ádhvanaḥ* is unlikely to be the obj. of a putative transitive “praise” (see above) and since *srjāná-* is overwhelmingly passive, it must express an acc. of extent of space (so also Ge “die Wege entlang”).

X.22.5: On the possible metrical restorations in pāda a see Old.

I’d now be inclined to tr. “you came,” not “you have come,” given the mythological content of the vs. However, if Ge is right (I’m dubious) that this is the speech of Vāta, “you have come” would be better.

The phrase *devó ná mártyaḥ* “(neither) god nor mortal” seems to lack one of its negatives; however, *nákiḥ* has simply been postponed till the next pāda. See IV.17.19 *nákir devāḥ ... ná mártāḥ* with the expected underlying order.

X.22.6: On the unusual morphology of the name Uśanā, see my 2007 “Vedic Uśanā Kāvya and Avestan Kauui Usan” (Fs. Jasanoff).

The unexpected initial *g-* of abl.-gen. *gmāḥ* to the ‘earth’ word is plausibly explained by Wack (AiG III.243) as dissimilation from *jmāḥ* because of the surrounding *ca*’s in the repeated phrase to which it is confined: *divás ca gmás ca*.

On the isolated *prkṣase*, whose root affiliation and grammatical identity have been disputed, see esp. Narten’s extensive disc. (SigAor. 175–76), where she affirms Ge’s assignment

to \sqrt{pras} ‘ask’ and identifies it as an *s*-aor. subjunctive, whose root vocalism she interprets with ref. to that of similarly non-conforming *ḍṛkṣase* (Sig.Aor. 146), on which see comm. ad I.6.7.

X.22.8: The privative cmpds. applied to Śuṣṇa are all presumably culture terms: *akarmán-* meaning that he doesn’t perform rituals, *amantū-* that he follows the wrong counsels, *anyá-vrata-* that he follows the commandments of other gods than ours, *ámānuṣa-* that he doesn’t belong to the descendants of Manu. In other words, he is non-Ārya. But the stark renderings in the publ. tr. are, I think, rhetorically more effective.

X.22.9: The 2nd hemistich contains the standard theme of competing sacrifices, vying to attract Indra to them—a theme established by vss. 1–2. The usual lexeme $\sqrt{hvā}$ ‘invoke in competition’ is replaced by the more vivid $\sqrt{nū}$ ‘bellow in competition’. For the former idiom, with *purutrā* as here, see, e.g., II.18.7 *purutrā hí vihávyo babhūtha* “for you have become the one to be competitively summoned in many places.” Note the figure #*purutrā ... pūrtáyah*.

X.22.10: I dealt with this vs. in detail in my 2009 “An Indo-Iranian Priestly Title Lurking in the Rig Veda? An Indic Equivalent to Avestan *karapan*” (Fs. Salomon). I will not reproduce the disc. here. The gist involves the reinterpr. of the hapax *kārpāṇé* here (and X.99.9 *kṛpāṇé*) as a garbled reflex of the priestly title found in Avestan *karapan-* (always to be read as a disyllable). In the Avesta the *karapans* are associated with *kauuīs* and with *xšaθra-* ‘lordly power’, and these same associations are found here and in X.99.9—here *kavīnām* in c, which I take as a proto gen. absol., and *kṣatrā-* in the cmpd **kṣatrā-śavas-* (accepting Ludwig’s emendation of *nákṣatraśavasām* to **ná kṣatrā...*), as Old and Ge (n. 10d) do.

My interpr. also involves taking *kārpāṇé* as the dat. to an athem. stem, rather than as a thematic loc. to a word referring to a sword or sword fight (as most take it), and in reading *yád ī* rather than *yádī*, with *ī* referring to the enemy Śuṣṇa.

The vs. depicts (however darkly) Indra’s pursuit and discovery of Śuṣṇa along with his entourage of warriors whom he urges on in the battle, in company with the priestly figures who benefit from Śuṣṇa’s killing.

Although my interpr. is hardly secure, the others available make even less sense. For the details of my interpr. and args. against previous one, esp. *kārpāṇé* as ‘sword fight’, consult the art. cit.

X.22.11: This vs., or the first hemistich, is scarcely less obscure than the immediately preceding one, because of the hapaxes *dānāpnas-* and *ākṣāṇé*.

Before tackling these words, we should get some handle on the syntax; fortunately there is a model near at hand: 13a *asmé tã ta indra santu satyã* “for us let these of yours be(come) real, o Indra” is very similar to our pāda a *makṣū tã ta indra ...*, hence my tr. “right away these things (became) yours,” though it diverges from 13a in some particulars. See below.

As for the problematic words, let us begin with the 2nd. Old gives a rather despairing survey of possibilities, displaying enthusiasm for none of them; AiG II.2.272 calls it “ganz dunkel,” though (p. 119) Ge’s interpr. (see below) is noted. Gr assigns it to a dubious root $\sqrt{akṣ}$ ‘erreichen’ as a pf. part.; sim. Wh Rts. (with “?”). But the currently prevailing view, if we can qualify it as such since it’s basically the only one around, is that of Ge, set forth in ZDMG 71 (1917) 25 and reprised in his n. 11b—that it is a thematic vṛddhi deriv. of a dvandva of *ákṣa-* ‘axle’ and *anī-* ‘axle pin’, meaning “im Kampf um Achse und Achsnagel”; see also Spareboom

(Chariots, p. 19) and the measured recognition given in AiG II.2.119 and EWA p. 41. Although I have to admit that an axle pin figures as a point of contention in a Śuṣṇa context in I.63.3, I am not convinced by this interpr., which loses a good deal of its cogency if the near-rhyme *kārpāṇé* in vs. 10 does not mean “im Schwertkampf” but refers to a priestly officiant. My own rendering “on gaining control” is based on deriving it from the root $\sqrt{kṣā}$ ‘rule over, possess’, which underlies the secondary IIr. root $\sqrt{*kṣāi}$ (extracted from the pres. **kṣH-āiati*; see, e.g., EWA s.v. *KṢAY¹*), found in Vedic $\sqrt{kṣi}$, pres. *kṣáyati*. Relics of the root $\sqrt{kṣā}$ are found in cmpds like *ṛbhukṣā-* ‘master of the Ṛbhus’ (an occurrence of which is found in the next hymn, X.23.2), possibly *divákṣā(s)-* ‘heaven-ruling’ (*pace* MM op. cit.). I suggest that we also find it here in what I analyze as an *-ana-* nominal *kṣā-ana-*, cmpded with the preverb *ā*. Although *ā* doesn’t otherwise appear with $\sqrt{kṣi}$ (just $\sqrt{kṣi}^2$), here it may perform something of the same function it does with $\sqrt{kṛ}$ ‘attract here’ and $\sqrt{pū}$ ‘attract here by purification’, locating the action in the immediate place and time—hence, with the context fleshed out, *ākṣāṇá-* “on bringing (his possessions) under your immediate control.” The accent is also not what we might expect: most *-ana-* nominals have root accent; however, there are a certain no. of exx. with final accent, and we might also invoke the accentuation of *kārpāṇé* in the previous vs. (explaining *obscurum per obscurius*, I realize). The presence of etymologically related *kṣatrá-* in **kṣatrá-śavas-* in the previous vs. might lend some support to my analysis here, which, I recognize, hangs by a thread.

As for *dānāpnas-*, I have slightly changed my analysis from the one reflected in the publ. tr. There the implicit analysis is that it’s a genitive of a tatpuruṣa (‘property for giving’) dependent on *ākṣāṇé*: “on gaining control (?) over his property for giving.” I now think it must be a bahuvr., as both Gr and Ge take it – but both of their renderings are vague and gloss over what the literal meaning and the intent of the cmpd must be (Gr “Fülle [*āpnas*] von Gaben [*dānā*] habend,” Ge “der du freigebig lohnest”). I now reject my tatp. analysis for three reasons: 1) tatp.s with ordinary noun as 2nd member are quite rare at this period, and in particular I have been unable to find any certain tatp.s in the RV with an *-as-* stem as 2nd member; though compds with *-as-* stems abound, they are overwhelmingly bv.s. 2) acdg. to the standard rules of tatp. accent, we should expect final-syllable accent (**dānāpnás-*) whatever the underlying accent of the 2nd member (see, e.g., Wh Gr. §1267, Macd VG §91). I therefore now take the form as gen. *dānāpnasaḥ* modifying *te* (or, contra Pp, as dat. *danāpnase*, likewise modifying *te*: either constr. can express possession). As for the literal sense of the cmpd., I have no idea how Ge analyzed the cmpd, since his tr. bears only a hazy relation to either of the members. But Gr’s assumption that the first member is *dānā-* and means ‘gift(s)’ needs to be challenged: *dānā-*, so accented, means ‘giving’, not ‘gift’, which is *dāna-*. I therefore interpr. the cmpd. *dānāpnas-* as ‘possessing (Śuṣṇa’s) property for giving’; in other words, Indra takes possession of Śuṣṇa’s belongings in order to redistribute them to us. I would now alter the tr. to “Right away, on gaining control (of it), these things [that is, Śuṣṇa’s possessions] (became) yours, Indra, who had (/acquired) his property for giving (to us).” The *tā* is a neut. collective referring to the *āpnas-* of Śuṣṇa. The same sense is echoed in 13a.

In c *dambháyaḥ* echoes *dambhaya* in 8d.

X.22.12: Note that the voc. phrase *śūra vajrivah* (of 10b, 11b) has been broken apart and redistributed to 12a / 12d.

The hapax *akudhryāk* is plausibly explained by Old as a cross between *akútra* and *sadhryāk*. KH (56 with n. 43, further disc. 54 n. 32) reads *mā kudhryāk* (also *mā kútra*, not *mākútra* in I.120.8), flg. Pischel, but contra Old, who argues against Pischel, Ge, etc. I do not

understand the Pischel/Hoffmann objection to the privative, and *akudhryāk* fits the striking privative pattern in vs. 8: *akarmā ... amantūḥ ... āmānuṣaḥ ... amitrahan* (and 13 *apādī ... ahastāḥ*). Certainly the expressed wish “let them not go nowhere (/to a non-place)” (i.e., end in futility) seems to me stronger than “let them not go somewhere else” (KH’s “Nicht sollen ... die guten für uns (bestimmten) Hilfen irgendwohin geraten”). On the other hand, I also don’t see any reason to follow Ge’s separation of a and b into two clauses (fld. by Scar 23); *asmé* as dat. of benefit (/non-benefit) can easily be construed with the *mā* cl. of pāda a.

X.22.13: As noted ad vs. 11, 11a and 13a follow the same pattern. Both have an unidentified neut. pl. *tā*, which is attributed to or of Indra (*te indra*); in 13a the attribution is overt, with 3rd pl. impv. *santu* and neut. pl. *satyā*, in the expression “be real(ized) / come true.” The question is what is the referent of *tā*; it can’t be anything in the immed. neighborhood because both *abhīṣṭayaḥ* in 12b and the *upaspīśaḥ* of 13b are fem. Ge takes it as a dummy “that,” referring to the wishes about to be expressed (“... soll sich das von dir ... bewahrheiten: ...”), conveniently ignoring the plural; Scar (667) follows suit but nods to the pl. with “Bei uns soll dies [alles] sich bewahrheiten.” Both ignore the strong parallelism between 11 and 13; taking it into account, I think the *tā* here, as in 11a, refers to the belongings of Śuṣṇa that Indra will distribute to us. Indra’s welcome affectionate gestures (*upaspīś-* ‘caress’) that bring benefits / enjoyments (*bhūjaḥ*) are part of the package.

X.22.14: This vs. provides a tricky end to the Śuṣṇa saga in this hymn. The vs. opens with two adj. *ahastā ... apādī* “handless (and) footless.” Both adj. are characteristically used of Vṛtra, most notably in the famous Indra-Vṛtra hymn I.32.7 *apād ahastāḥ*, also III.30.8, just *apād-* in V.32.8. In this monster-killing story we are primed to apply these adj. to the enemy, but neither of them is exclusively used of monsters and, more to the point, they are fem. here. The fem. referent quickly appears: it is the earth (*kṣāḥ* [on this form, see, e.g., AiG III.242]), who grows strong (*vārdhata*) when Indra is dispatching Śuṣṇa. The switch is easily made, since *apād-* is not confined to demonic referents: indeed Heaven and Earth are *apādī* in I.185.2 (also Dawn [I.152.3, VI.59.6]). Nonetheless, as Ge (n. 14) points out, the plotline is something of a reversal: it is usually Indra who stretches out the earth after having killed various demons. I don’t have any explanation for this little act of independence on the part of the earth.

The adv. *pradakṣiṇī* can elsewhere be used in the context of the animal sacrifice (see IV.6.3) and here seems to invest Indra’s killing of Śuṣṇa with ritual overtones. On the formation of the word, see comm. ad V.36.4.

Note the phonetic echo #śúṣṇam ... śísṇathaḥ#

X.22.15: On *vasavāna-* see comm. ad V.33.6.

The pres. part. *sán* is definitely non-concessive here, unlike its usual usage.

X.23 Indra

The publ. intro. states that Indra’s beard is mentioned in vss. 1 and 3, which latter should be corrected to 4.

X.23.1: *vájradakṣiṇam* ‘having the mace in his right (hand)’ recalls the adv. *pradakṣiṇīd* referring to Indra’s circumambulation of Śuṣṇa before killing him at the end of the last hymn (X.22.14).

The preverb *prá* is in tmesis with (/from?) the part. *dódhuvat*, not the finite injunc. *bhūt*, cf. nearby X.26.7 (same poet) *prá śmáśru ... dūdhot* and II.11.17 *pradódhuvac chmáśruṣu*.

In d the part. *ví ... dáyamānaḥ* (likewise in tmesis) appears without obj., but since *váṣu* is frequently the obj. of this verb (e.g., I.10.6, VIII.103.5) and it is found in the next pāda (2a), it seems reasonable to supply it here (or, otherwise, tr. the part. as absolute). The two instr. *sénābhiḥ* and *rādhasā* I take as expressing the qualities that allow and encourage Indra to distribute largesse: on the one hand, his weapons (*sénābhiḥ*), the martial prowess that allows him to capture goods, and, on the other, his generosity (*rādhasā*), the cultural practice and habit of mind that cause warrior chieftans to redistribute the goods thus won to their underlings.

X.23.2: Old pronounces the first pāda “sehr dunkel,” and I am certainly in agreement. See his typically incisive presentation of the difficulties. My publ. tr. essentially follows Ge’s, analyzing it as an “X and which Y” construction without the “and.” Both the X (*hárī*) and the Y are asserted to be Indra’s (*asya*). By this analysis, the nominal rel. cl. expressing Y consists of a neut. pl. rel. *yā* modifying *váṣu*, which, though ambig. as to number, would be pl. here. The verbal element is a predicated dat. inf. *vidé* ‘to be found’, and the loc. *vāne* refers, as often at least in Maṇḍala IX, to the wooden cup that contains soma. Hence Y, “the goods to be found in the wooden (cup),” is a complex and oblique way of referring to soma. All of these interpr. can be questioned, and in fact on returning to the pāda, I now find myself tempted by a suggestion of Old’s, that we should read **yāvane* for *yā vāne*, a datival -*van*-stem to *√yā* ‘drive’. Old’s rendering of this possibility is “seine *hárī* (sind dazu da) zu fahren, Güter zu erlangen.” My Engl. tr.: “Now are his two fallow bays to drive (/be driven), to find/acquire goods.” The advantages of this interpr. are 1) the anomalous “X and which Y” without overt conjunction is eliminated; 2) so is the very indirect way of referring to soma; in particular, I know of no other instance in which *váṣu* is used of soma. The disadvantages are pretty serious, however: in addition to requiring emendation (though only the zapping of a single accent; see the emendation in the previous hymn, X.22.10d, involving the addition of a single accent), *yāvan-* is not found in the RV as a deriv. of *√yā*, whose ordinary datival infin. is *yātave*. Nonetheless, since the proposed interpr. produces a more satisfactory account of the pāda in context, I would now change the tr. to the one suggested above.

KH (215) interpr. *bhuvat* as an injunc. expressing “resultative Konstatierung.” But surely the poet meant it to contrast with the undoubted injunc. *bhūt* in the previous vs., also pāda final (1c). I therefore take it as subjunctive, which will harmonize nicely with the new interpr. of pāda a above: Indra’s horses are to be driven to find or acquire goods; once the goods are acquired, Indra will distribute them. Pāda b expresses the same complementary characteristics as 1d: Indra is martial (here *vṛtrahā*), and he is, consequently, generous (*maghaír maghāvā*) (see also Ober II.169).

In c Indra is identified with the three Ṛbhus; these craftsmen and demi-gods-come-lately seem to have little in common with the martial Indra on display in the rest of the hymn so far (and to come), but Ge (n. 2d) plausibly suggests that the deed Indra boasts of in d (in what is taken, rightly in my opinion, as Indra’s own words), “I whet down” (*áva kṣṇaumi*) is an action typical of the Ṛbhus “als Werkleuten.” This pāda is compared by Ge (n. 2d) with V.33.4, but see comm. ad loc., where I assert that the two passages have less in common than is generally thought.

X.23.3: An oddly disjointed vs., despite its apparently straightforward content, which, as in vs. 1, associates Indra with his *vájra*-, his fallow bays, his chariot, and his generosity. The problems are the following, in order of appearance (not magnitude): 1) the acc. *vájram* is governed by nothing, though we expect a verb like ‘took’ (e.g., V.29.2 *ādatta vájram*); 2) *híraṇya*- is generally a noun ‘gold’, not the adj. ‘golden’, which is *híraṇyāya*-, elsewhere used of *vájra*- (e.g., I.85.9); 3) the *íd* seems functionless; 4) the main clause begins with *áthā rátham* at the end of pāda a, with the main cl. verb coming at the beg. of c, *ā tiṣṭhati*, but most of b is a rel. cl. qualifying *rátham*, which is, therefore, clearly embedded in the main cl., although this type of embedding is almost entirely absent from the RV; 5) *ví sūribhiḥ* at the end of b has no obvious connection either with the preceding rel. cl. nor the main cl., and in fact the two words have no obvious connection with each other. Fortunately the 2nd hemistich, after the main verb, is troublefree.

The one that troubles me most is 4), but I see no way around the embedding. I do not have solutions for the other problems either. For 1) and also 3), with a bit of creative fiddling, we could find a verb concealed or hinted at in pāda a to govern *vájram*: interpr *yadā* as *yadā* + *ā* and in *íd áthā* see a gesture towards **dattá* or **ādatta* or **ādatthā(s)* (which would fit the phonological traces best, but a 2nd sg. would be out of place in the 3rd ps. context) – but a pres. or at best an injunc. is called for, not an impf., and in any case the phonological overlap is too slight. So I abandon attempts to pull a verb out of a hat, so to speak. As for 2) I’m afraid we just have to accept *híraṇya*- as a nonce adjective or as a separate specifier of the mace; perhaps the *íd* is signaling this: “the mace, that very piece of gold”?

As for *ví sūribhiḥ*, Ge supplies ppl. *hūtāḥ* with *ví*, hence “competitively invoked by the patrons,” as an adjunct to the rel. cl. He is followed by Klein (DGRV II.78–79). However, Ge’s parallels (n. 3b) are not strong; moreover *sūri*-s in the pl. seem always to be a happily harmonious group attached to our side, not rivals nor patronizing rival ritualists. Hence I think Ge’s “von den Opferherren um die Wette (gerufen)” is pure invention (and his interpr. of *ví√hū* different from standard). Instead I suggest, quite tentatively, that *ví* is in tmesis with (/from) the verb of the rel. cl. *váhataḥ*, which it immediately follows, and ends the rel. cl. As for the semantics, remember that Indra’s fallow bays are *vívrata*- in 1b; moreover, due to the echo of the poet’s name Vimada, *ví* is a Lieblingswort in this hymn: cf., in addition to the ex. here, 1b *vívratānām*, 1d *ví ... dāyamāno ví*, 5a *vívācaḥ* and the *vi*-sequences in 2a *vidé*, 6c, 7c *vidmā*, and the poet’s name in 6a and 7b. Although *ví√vah* is (later) specialized for marriage, I don’t think we should try to find that sense here: the *ví* is simply there to echo the poet’s name. If *ví* ends the rel. cl. of 3b, then *sūribhiḥ* belongs to the main cl.: Indra mounts his chariot along with them. The position of this instr. is somewhat anomalous, but so is everything else in this vs.

X.23.4: Another disjointed and puzzling vs., with the problems concentrated in pāda a and its relations (or lack of relations) with b. The major questions are what case and number *yūthyā* is and whether pāda a is an independent cl. or parallel to b. Ge takes *yūthyā* as fem. nom. sg., modifying *vr̥ṣṭiḥ*, and the pāda as an independent nominal cl.: “Auch dieser Regen ist als sein unzertrennlicher Genosse dabei.” My publ. tr. instead begins with a neut. acc. pl. *yūthyā*, favored by Old (who, however, doesn’t tr. or discuss further), and takes pāda a as a shadow version of b, with *vr̥ṣṭiḥ* equivalent to *índraḥ* and *yūthyā svā* to *śmāśrūṇi*, as obj. of *pruṣṇute*: “as rain he (sprinkles) all things belonging to his herd.” Both Ge and I have to explain what the apparently intrusive “rain” is doing here. Ge (n. 4a) suggests that it’s not really rain, but soma (often called rain in IX), which drops or is sprinkled on Indra’s beard. Under my interpr. it’s Indra who’s identified with rain, via his association with *vṛṣan*- ‘bull’ (as [semen-]sprinkler). Since *yūthá*-

‘herd’ seems generally specified for the female members of the herd, pāda a would be an oblique way of referring to Indra’s powers of insemination (cf. for the insemination of the *yūthā*- III.55.17 ... *vr̥ṣabhāḥ* ... *yūthé ní dadhāti rétaḥ*). In favor of this interpr. is the strong association of *yūthā*- / *yūthyā*- with the various hyper-male animals derived from √ *vr̥ṣ*: *vr̥ṣṇí*- ‘ram’, a rhyme with *vr̥ṣṭí*- (I.10.2 *yūthéna vr̥ṣṇíḥ*), *vr̥ṣan*- (e.g., IX.15.4 *yūthyò vr̥ṣā*; cf. I.7.8, IX.76.5, 77.5, 96.20), and *vr̥ṣabhā*- (III.55.17, IX.110.9). In other words, the “rain” here is, by etymological and phonological association, homologized to semen and to Indra as semen. Nonetheless, I am not entirely convinced by my own arguments, primarily because I don’t know what to do with *sácā*. This adv. can be a pleonastic marker of a loc. absol. (esp. *suté sácā* / *sácā suté*; see comm. ad IV.31.5, VI.26.4), but there’s no loc. absol. to be pleonastic to in this pāda; Ge’s tr. seems to do a somewhat better job of accounting for the *sácā*, and I would therefore consider an alt. tr. of the type “The rain [=soma] is, in association, his [=Indra’s] own flock-mate” (with apologies for “flock-mate”). Then in the next pāda he sprinkles this “rain” on his beard.

There is another possible way of accounting for *sácā*. As I just said *sácā* is very common with *suté* when the latter is a loc. absol.: “when (the soma) is pressed.” Pāda c contains an occurrence of *suté*, which is generally (incl. by the publ. tr.) construed with *sukṣáyam*, as “having a lovely dwelling in the pressed (soma).” But this phrase modifies *mádhu* ‘honey’, which in such contexts is ordinarily *identified* with soma, not situated within soma (though cf. *sómam* ... *mádhumantam* ... *sutám* in the next hymn, X.24.1). So it is possible that *suté* is a loc. absol., and the pāda means “he pursues his track down to the well-situated honey when (the soma) is pressed.” And in this case, given the somewhat lax constraints on word order elsewhere in the hymn, *sácā* in pāda a might anticipate the loc. absol. in c. (Note that *suté* can be taken as a loc. absol. whether or not we take this further riskier interpretational step with *sácā*.)

The preverbs that open c and d and the actions thus defined are complementary: *áva* ‘down’ and *úd* ‘up’. As far as I can tell, this is the only instance of *áva* √ *vī* in the RV (or indeed elsewhere), and it seems to have been contextually created. Gr’s elaborate gloss “Speise [A.] in sich aufnehmen, verzehren” is thus unnec. and misleadingly specific.

X.23.5: It is possible that the bad meter of pāda a is iconic of the enemies with bad speech.

Note the *vī* in *vívāc*-.

śávaḥ returns from 2c.

X.23.6: As disc. in the publ. intro., *vidmā* (also in 7c) is a near-anagram of *vimadā*-.

As Old points out, in the 2nd hemistich *yád* belongs at the end of the c pāda.

X.24 Indra (1–3) and the Aśvins (4–6)

As noted in the publ. intro., this “hymn” actually consists of two separate, three-vs. hymns, with different dedicands and different meters. The first three vss., to Indra, are in Āstārapaṅkti, like X.21 and X.25, and like them contains the Vimada split refrain (on which see comm. ad X.21.1–8). Vss. 4–6, to the Aśvins, are in Anuṣṭubh. Renou (minimally) treats this hymn in EVP XVI.76.

X.24.1: On the loc. *camū* see AiG III.188.

X.24.2: The etym. figure *śácīpate śacīnām* should be tr. “o power-lord of powers,” with a pl.

X.24.4–5: On the obscure myth alluded to in these vss., see publ. intro., Old, and Ge’s n. 4–5. I have nothing to add. The fem. dual *samīcī* to the stem *samyāñc-* is found reasonably commonly elsewhere in the RV, of Night and Dawn (I.96.5, II.3.6, III.55.12) and of Heaven and Earth / the two world-halves (I.69.1, II.27.15, III.30.11, 55.20, VIII.6.17, X.88.16). Neither of these pairs makes sense as a referent in this context. The dual *samīcī* may refer to the fire-churning sticks in III.1.7, though not to magical ones. As Ge points out, the Aśvins churn out golden fire-churning sticks as embryo (or churn the embryo out of them) in a birth charm, X.184.3 *hiranyāyī arāṇī, yām nirmānthato aśvīnā / tāṃ te gárgham havāmahe, daśamé māśi sūtave* “The one that the Aśvins churned out of the two golden kindling sticks, that embryo of yours we call, to be born in the tenth month.” Although this passage makes it likely that *samīcī* refers to *arāṇī* here as well, it doesn’t help as much as it might, particularly because the double acc. in X.184.3ab is hard to interpr.

X.24.4: Although this vs. begins the new hymn(let), the du. voc. *śakrā* encountered at the beginning may be a link to the preceding one, since *śakrá-* is overwhelming sg. and an epithet of Indra, the dedicand of the 1st 3 vss.; it is used of the Aśvins only once elsewhere (II.39.3), once of the Maruts, and once in the fem. modifying *várūtrī*. In the 1st part of this hymn, Indra is called *śacīpate śacīnām* with a different deriv. of the root *√śak*.

The possessive stem *māyāvīn-* occurs only 3x in the RV, beside very well-attested *māyīn-*. I wonder if it is used here in order to evoke the name *aśvīn-*, which is not found in this hymn, where the dedicands are only called Nāsatyā (4c, 5c).

The exact repetition of the verb in main cl. (*nír amanthatam*) and dep. cl. (*nirāmanthatam*) seems clumsy—a view shared by Re (“phraséologie faible”).

X.24.5: Since *√krap* usually (insofar as there is a “usual” for this rarely attested root) takes the acc., *samīcyór niṣpātantyoh* may be a loc. absol.: “All the gods mourned when the two joined (churning sticks) flew forth.”

The preverb *nīs* is found with *√pat* only here in the RV (though it does appear marginally in the AV), and it seems likely that it’s used here to match the two occurrences of *nīs* *√math* in the previous vs. It may therefore refer to the same action—the churning out / birth of the two *samīcī*—though they must have gone somewhere, since the gods ask the Aśvins to bring them back.

X.24.6: The obscure myth of the last two vss. is abruptly dropped here, though the Aśvins remain the addressees. The theme of going away and coming back again is the semantic connection to what precedes; note esp. *púnar* in 5d and 6b.

X.25 Soma

The Āstārāpankti meter and the Vimada refrain go together, as in X.21 and 24.1–3.

X.25.1–3: The c pādas of these three vss. begin with *ádhā*.

X.25.2: There is a difference of opinion as to whether *hṛdispśaḥ* is gen. sg. modifying *te* [=Soma] (Gr) or, more likely, nom. pl. qualifying the unexpressed subj. (Sāy., Ge, Scar [669, uncertainly]; Old likewise waffles). The next question is the referent of the subj.: Sāy., endorsed by Ge (n. 2a), thinks priests; Old suggests several possibilities, but seems to favor *kāmāḥ* of pāda

c, as I do. As Old points out, it makes sense for the desires first to “sit” on the ritual ground and then “spread out” in search of goods.

Finally, there is the referent of *dhāmasu*: Ge: Soma’s forms, Re: Soma’s structures, Scar: his seats. The last seems the most likely – or, to be more precise, the various places where soma is purified, including heaven; cf. IX.86.22, 66.3, etc., as well as IX.28.2 cited by Ge.

X.25.3: The sense of the two clauses in this vs. (ab and c, e) cries out for the first to be a conditional clause to the second: “if I transgress ..., be merciful.” Re yields to this temptation, if only with a parenthetical “(si).” For a parallel passage with such subordination, cf. VIII.48.9 (likewise to Soma), containing the same VPs in both subord. and main cl. as here: *yát te vayám pramināma vratāni, sá no mṛṇa* “If we will confound your commandments, be merciful to us.” In our passage it seems uncharacteristically bald for the poet to trumpet forth his transgression, rather than wrapping it into a conditional. At best we might reconfigure it as a question: “Do I ...?” though there is no overt sign of a question. I suggest we’re dealing with a different phenomenon. As is well known, in a subset of passages the coordinate conjunction *ca* actually marks a subordinate, conditional (“if”) clause (see, e.g., Gr *ca* IV., coll. 428–29; Klein DGRV I.238–56); this usage is also found in a few instances of RVic *céd*, continued into the later language. In these *ca* / *céd* clauses the verb is accented. Now *utá* ‘and’ is similar to *ca* in many of its usages (see, e.g., Klein DGRV I.293). I think we have here a nonce use of *utá*, which opens the first clause, in the function of subordinating *ca*, though without inducing accent on the verb. I would therefore change the tr. to “And if I transgress ...”

On *pākyā* see comm. ad vs. 5 below.

In pāda e *abhí cid vadhāt* seems untethered to the rest of its pāda. Gr registers a special usage of $\sqrt{mṛḍ}$: “**abhí** jemand [A.] gnädig wovor [Ab.] bewahren.” But this would be the only occurrence of $\sqrt{mṛḍ}$ with *abhí* in the RV, and in fact $\sqrt{mṛḍ}$ never otherwise appears with a preverb or with an abl. Ge also construes the phrase with *mṛṇā*, though not in the exact same sense as Gr: “doch verzeih uns wie ein Vater seinem Sohne auch ohne Strafe.” I think it better to supply a separate verb, with appropriate semantics, that can be construed both with *abhí* and with an abl. Verbs meaning ‘protect’ come immediately to mind: both $\sqrt{pā}$ and $\sqrt{rakṣ}$ fulfill both conditions, and forms of both appear in this hymn: *pāhi* with abl. in 8e, *rakṣasi* in 6a. Re obviously responded to the situation as I do, supplying a parenthetical ‘protect’ with the phrase: “(nous gardant) même de la mort-violente,” though he makes no comment.

X.25.4: The *dhītí*- ‘insights’ and *krātu*- ‘resolve’ here may reprise the *mānas*- ‘thought’ and *krātu*- of vs. 1b, though there is no equivalent to the *dākṣa*- ‘skill’ of the trio in 1b—unless *śákti*- ‘powers’ in 5a counts.

The simile in c, e is a little off kilter, but presumably the idea is that one has to hold beakers steady to keep the liquid inside from spilling—esp. important if it’s precious soma.

X.25.5: If *śákti*- is the third member of the trio of vs. 1, as just suggested ad vs. 4, it might be best, with Re, to ascribe those powers to the insightful humans, rather than to Soma: “Grâce à leurs capacités ... les-célèbres (hommes) ... ont ouvert ...” This interpr. requires finding another way to construe the gen. phrase referring to Soma (*táva ... gṛtsasya ... távasaḥ*). Re seems to take it with *níkāmāsaḥ*: “dévoués (à toi) ...” This is tempting, but no other forms of *níkāma*- are construed with a gen. (or any other case). So, although I’d entertain an alt. tr. “Through their

powers these insightful ones, devoted to you who are clever and strong, open ...,” I think it runs into syntactic difficulties.

The rare word *gṛtsa*- opening pāda c may participate in two different verbal plays. On the one hand, *gṛtsa*- is elsewhere the opposite of *pāka*- ‘naïve, simple’; cf. IV.5.2 *pākāya gṛtsaḥ* and in particular nearby X.28.5 *gṛtsasya pākas tavāsaḥ* ..., almost identical to our pāda c *gṛtsasya dhīrās tavāsaḥ*. Although *pāka*- is not found in our vs., see *pākyā* in 3a. In addition *Gr̥tsamada* (*gr̥tsamadā*-) is the name of poetic family of Maṇḍala II; note here in cd the polarized #*gṛtsa(sya)* ... *māde*#. Since the poet expressly associates himself with the great poet Kakṣivānt in vs. 10, a concealed mention of another bardic family would not be surprising.

Ge (n. 5) suggests that the vs. is a description of the dakṣiṇā, playing off the Vala myth.

X.25.6: The two forms of *sām* (*samākṛṇoṣi*, *sampāśyan*), neither of which is strictly necessary, may be meant to contrast with the persistent *vī* of the Vimada refrain.

X.25.7: On *īśata* see comm. ad I.23.9.

X.25.8–9: These two vss. both begin *ī vām*; vs. 8 contains a comparative to a root noun cmpd (*kṣetra-vīttara*-) and 9 a superlative to a root noun cmpd (*vṛtra-hantama*-).

X.25.8: The ‘resolve’ (*krātu*-) of vss. 1 and 4 returns here, but belonging to Soma, not us.

Ge and Re construe *mānuṣaḥ* quite differently. Ge takes it as an abl. with the comparative *-vīttara*- (“Ortskundiger als der Mensch”), and Scar (482–83) and the publ. tr. follow; Re. as a gen. with the first member *kṣetra*- (“Toi qui connais le territoire de l’homme mieux (que tout autre)”). Since Re ends up having to supply an abl. with the comparative, Ge’s interpr. seems more economical.

X.25.9: The “us” of pāda a are identical to the referents of the 3rd pls in c, e, or rather the 3rd pls are a subset of us (namely, the warriors).

X.25.10–11: The last two vss. of the hymn each contain two annunciatory *ayām*-s, opening the a and c pādas. This repetition is not well signaled in the publ. tr., which should probably have made use of “this one” or “this one here” despite the heaviness of that effect.

X.25.10: Note the complementary injunctives, med. intrans. *vardhata* ... act. trans. *vardhayat*.

On the presence of Kakṣivānt here see publ. intro. and also comm. on vs. 5 above.

X.25.11: In the publ. tr. I take *saptābhyah* as a dat. of benefit with the VP of pāda e, more or less parallel to *vīprāya dāsūṣe* in pāda a, with *ā vāram* an independent adverbial. This interpr. is quite different from those of Ge, Old, and Re, all of whom construe the phrase of c together, with *saptābhyah* an abl. with *vāram*, as in I.4.4=IX.45.2 ... *sākhibhya ā vāram* “the choice from among the companions” (on IX.45.2 see comm. ad loc., which rescinds the publ. tr.). Pāda e is then a separate cl. I now see that they are right and I am not: besides the striking parallels adduced there is also the fact that e begins with the preverb *prā*, which suggests (though it doesn’t require) that a new cl. begins there. I would now emend the tr. (starting with pāda c) to “this one is the choice of the seven; he will advance ...” I still don’t know who or what “the seven” are.

X.26 Pūṣan

Tr. and comm. by Re in EVP XV.152–54. As Old points out, the meter is very ragged.

X.26.1: The first hemistich of this vs. plays on the frequent ambiguity of the stem *niyút-*, which can refer both to Vāyu’s teams, with which he drives to the sacrifice, and to our “teams” of poetic thoughts, which drive to Vāyu and the other gods. See disc. in comm. ad VII.90.1. In this passage I think both senses are found simultaneously, with *mānīṣāḥ* both nom. and acc., in the first case coreferential with *niyútaḥ* and in the second expressing the goal. Ge opts for the first, Re the second.

The du. *dasrā* refers to Vāyu, under the epithet *niyúdratha-*, and Pūṣan. Pace Gr (and Old’s qualified endorsement), there seems no reason to emend to sg. *dasró*. The impv. *aviṣṭu* is sg. because a series of sg. subjects can take a singular verb. For Vāyu and Pūṣan together and with similar phraseology, cf. VII.39.2 *vāyúḥ pūṣā svastāye niyútvān*, where *niyútvān* modifies Vāyu.

The bahuvr. *niyúdratha-* ‘having a chariot with teams’ is a hapax, and despite the additional semantics was probably formed beside the standard *niyútvant-* ‘having teams’ to provide an iambic cadence; the *-vant-* stem in the nom. *niyútvān* is fairly common in the cadence of Triṣṭubh lines (III.49.4, VI.40.5, 60.2, VII.39.2, IX.89.6). For the syntagm underlying the compd see I.135.4 *rātho niyútvān* (cf. III.49.4).

X.26.2: Both Ge and Re manage to wring a good deal of sense out of this puzzling vs.; unfortunately they do so by construing the unaccented verb in c (*ā vamsat*) in the rel. cl. that begins with *yāsya*; cf., e.g., “Dessen Grösse ... unsereins, der Sänger, durch seine Gedichte gewinnen möchte ...” (Re sim.). Even Old, who usually holds the line on such things, speculates that *vamsat* might be a Nebensatzverb despite its lack of accent, citing his disc. (ZDMG 60 [1906]: 737–38) of a handful of cases (not incl. this one) that he so analyzes. It is a tempting solution to a sticky little problem, but when we ignore such a dominant syntactic practice for interpretational convenience, I fear we risk returning to the early emendation-happy days of Western RVic exegesis. And in almost all of Oldenberg’s cases that I’ve checked, another solution is possible; cf., e.g., disc. in the comm. ad I.141.5, IV.17.19, though also cf. VI.17.10. As often in the RV, I think the poets deliberately push us to go beyond an obvious, but grammatically problematic interpr. to another, more complex one that conforms to the rules. In this case, too, a different interpr. is possible, though I have to admit that it is somewhat inelegant: the relative cl. occupies only the first hemistich and is an expression of possession. Pūṣan has greatness, the friendship of the wind (here Vāta, but reflecting the partnership with Vāyu in vs. 1), and this people here – presumably the Ārya or the subset engaged in the ritual, but possibly referring to the speaker himself, as Re suggests (“cet homme que voici [moi-même]”). By this interpr. pāda c is the corresponding main cl., and we can supply “him” as obj. of *ā vamsat*, the antecedent of *yāsya* in ab.

On the interpr. and metrical shape of *vātāpya-* and their interaction see detailed disc. ad IX.93.5. In origin it appears to be a bahuvr., and in its other three occurrences (I.121.8, IX.93.5, X.105.1) I take it as adjectival. But here in the publ. tr. I take it as nominal: “the friendship with the wind [/sought-after friendship].” So also Re (“l’amitié digne d’être gagnée”), with expressed reluctance similar to mine. It might be an adj. modifying *mahitvām*, as Ge takes it (“Dessen Grösse, die mit dem Vāta befreundet(?) ist”), but the tr. is hard enough to parse as it is.

In d I would change the tr. of *cīketa* to presential “takes cognizance.” On the anomalous accent on the redupl., see Kü (174).

X.26.3: The interpr. of this vs. is hampered by the hapax *psúraḥ* in c. As Schindler succinctly and despairingly notes (Rt Nouns s.v.), its stem, meaning, and etymology are all unknown. To begin with the first, it can either be an acc. pl. (or abl./gen sg., though this is unlikely syntactically) to a root noun *psúr-* or acc. sg. to an *s*-stem *psúras-*. It hardly matters, but since its root syllable doesn’t really fit the profile of an *s*-stem, I opt (as most do) for the root noun. As for the meaning, its syntax helps narrow that down: assuming it is an acc., it’s the obj. or goal of *pruṣāyati*, which also appears in the next pāda, with an acc. goal *vrajām* ‘enclosure’. Therefore *psúraḥ* should either be something that gets sprinkled on (as in d), or a liquid that gets sprinkled: $\sqrt{pruṣ}$ and *pruṣāyá-* admit both types of acc., though the goal is more common (however, consider the rt. noun cmpd. *ghṛta-prúṣ-* 6x ‘ghee-sprinkling’). Re suggests the meaning ‘nourriture(s)’ on not very strong grounds, but the semantic field of object or goal of sprinkling remains fairly wide open. As for etym., a connection has been suggested with *psáras-* ‘delight’, which is itself not entirely clear (see Old, Ge n. 3c, AiG II.2.58) and therefore helps little. But save for an offhand remark by Old (“das Wort vielleicht gewählt wegen Anklang an *pruṣāyati*”), the most obvious explanatory factor has been ignored: the phonological context. I suggest that *psúraḥ* was not “chosen” because of its “Anklang an *pruṣāyati*”; rather it was *generated* from *pruṣāyati* as a deliberate phonological deformation, a distant metathesis: *pruṣ-* → *psur-*. And this phonological manipulation was inspired by the subject of the vs. and the hymn, namely Pūṣan. That the fairly rare verb *pruṣ(āyá)-* is found twice in this vs., prominently repeated at the end of pādas c and d, is probably owing to its near rhyme with the god’s name: *pruṣ* : *pūṣ*. The metathesized *psur(aḥ)* shows a different phonological relationship with the name, with Pūṣan’s first two consonants adjacent in the initial cluster *ps-* with the vowel (*ū*) between them flipped. In other words, we need not seek an independent etymology for *prúṣ-*; its etymology is contained in its context and is skin-deep.

X.26.4: For ease of parsing I tr. cd as a new cl.: “(you are) the means to ...,” but since *sādhana-*, at least, is masc., they are more properly rendered as acc. predicates to *tvā* in pāda a (as Ge/Re do it). Best to tr. “We would contemplate you, o Pūṣan, / as both the means to realize our thoughts ...” The construction is resumed by the nom.s in vs. 5.

X.26.5: On *prátyardhir yajñānām* see VI.50.5 *abhyardha-yájvan-*, also of Pūṣan, and comm. ad loc.

The gen. *ráthānām* may limit the first member (*aśva-*) of the preceding cmpd. *aśvahayá-*, so, less literally, “driving the horses of chariots / driving the chariot horses,” as in Ge’s “der die Wagenrosse antreibt.” Alternatively – and perhaps better – the independent gen. *ráthānām* may independently limit the 2nd member of the cmpd. *-hayá-* (cf., e.g., VI.45.14 *hinuhi rátham*), and be functionally parallel to the 1st cmpd member *aśva-*, another way of avoiding a three-member cmpd. I would now propose an alternative tr. “driver of horses and chariots,” though this unfortunately does not capture the syntactic mismatch. On Pūṣan as charioteer, see VI.55.1, 2 and, if I’m right (see comm. ad loc.), VI.56.2–3.

Both of these phrases show the RVic avoidance of over-complex compounds, with what would in later times be the 1st member instead a genitive in a syntagm. In the first, even the presence of the preverb *práti* seems to have interfered with cmpding, as in the root-noun cmpds

with direct object first members. See comm. ad I.124.7, as well as the immed. following remarks on pāda d.

The cmpd *yāvayat-sakhá-* differs by accent and therefore by sense from the fairly common adjectival X-*ayát*-Y type with 2nd member object—particularly relevant exx. here being, on the one hand, *yāvayád-dveṣas-* (2x) ‘keeping away hatred’ and, on the other, *drāvayát-sakha-* ‘setting its comrades to running’ (X.39.10) and *mandayát-sakha-* ‘exhilarating its companion’ (I.4.7). As a karmadhāraya, our form should mean ‘the warding-off companion, the companion who wards [smtg] off’, and the gen. *víprasya* expresses who he is companion to, hence literally “the warding-off companion of the inspired poet” (Ge “der abwehrende Freund des Beredsamen”). But the other cmpd with this caus. stem as first member, namely *yāvayád-dveṣas-*, probably gives the hint as to what Pūṣan wards off: “hatred” (*dvēṣas-*). On Pūṣan’s partnership with mortals see I.138.2, 3, 4, VI.48.18, 57.1.

X.26.6: As indicated in the publ. intro., this vs. is extremely obscure, beginning with the hapax *ādhīṣamāṇā-* that opens it. My current interpr. differs considerably from the publ. tr. and attempts to find a coherent theme in the four disparate pādas.

Before tackling the sense of this 1st hemistich, it will be useful to pay attention to its structure. The first hemistich of the next vs., 7ab, consists of two nom.+gen. phrases, with the first ending GEN *pátih#* and the 2nd GEN *sákhā#*; the last pāda of the preceding vs., 5d, ends GEN ...-*sakháh*. On the basis of this parallelism I supply *sákhā* as the head noun of pāda b.

As for *ādhīṣamāṇāyāḥ*, its morphological analysis is, at least in part, quite clear: it’s the fem. gen. sg. of a them. middle participle, implying a verb **ādhīṣate* (or *-ta*), which, however, is not attested elsewhere. It is also generally (and at least superficially plausibly) assigned to the root $\sqrt{dhī}$ ‘think’ with preverb *ā*. Wh (Rts) tentatively classifies it as a desid. to $\sqrt{dhī}$, but in the Gr (§897) as a participle to “an a-form of an s-aor. of $\sqrt{dhī}$ ”; the latter is also the analysis of Macd (VG §527) and of Gr (“zu Aor. *dhīṣa-*,” which does not exist). See also Scar (274), who tr. “sich sehnen” but does not venture a morphological analysis beyond associating it with the lexeme *ā* $\sqrt{dhī}$. Re invokes the rt noun cmpd *ādhī-* ‘care, worry’ (see Scar 274–75) and tr. (in good Re baroque fashion) “qui songe-avec-nostalgie.” I can’t get any further than this, at least by conventional means.

But in a perhaps pardonable indulgence of fancy, perhaps also in keeping with the imaginative phraseology of the hymn, I can confect an alternative. The desiderative stems to $\sqrt{dhā}$ ‘place (etc. etc.)’ are *dīdhiṣa-* and *dhīṣa-*, the former confined to the RV (except for adj. deriv.), the latter late RV+. I suggest that our *dhīṣa-* is a third, if nonce, desid. to $\sqrt{dhā}$, perhaps built on the model of $\sqrt{āp}$: *īpsa-* (AV+) :: $\sqrt{dhā}$: \rightarrow *dhīṣa-*, which is a good match both phonologically (roots with *ā*) and semantically (both [sometimes] meaning ‘acquire’). In particular, the lexeme *ā* $\sqrt{dhā}$ in the middle can mean ‘acquire’, hence here ‘desiring to acquire’. There’s a very telling specialization of the desid. of $\sqrt{dhā}$, found in the *u*-adj. participial substitute *dīdhiṣú-* to the first desid. stem listed above. Besides the literal ‘desiring to acquire’ sense, it can be specialized in a marriage context to mean ‘desiring to acquire (a wife)’ = ‘suitor, wooer’. This is famously found in the funeral hymn X.18.8, where the man ready to remarry the widow is so designated. It is also used of our own dedicand, Pūṣan, in the striking (and somewhat mysterious) statement VI.55.5 *mātúr dīdhiṣúm abravam* “The wooer of his mother [=Pūṣan] I have spoken to.” Despite Old’s dismissal of the relevance of that passage: “... hilft nicht weiter,” I think it brings us closer to a solution. Recall that at least once Sūryā, daughter of the Sun, has Pūṣan given to her, presumably in marriage: VI.58.4 *yām devāso ādaduḥ sūryāyai*,

kāmena kṛtām “whom [=Pūṣan] the gods gave to Sūryā, (him) prompted by desire.” Note the astonishing reversal of the usual marriage procedure: ordinarily the maiden is given to her new husband (the institution known as *kanyādāna*- in later Skt. legal texts), but here the *husband* is given to the *wife*. This is presumably because of Sūryā’s participation in Self-choice marriage. She is the protagonist of a widespread if fragmentary myth of Svayaṃvara marriage in the RV; see esp. my 2001 “The Rigvedic Svayaṃvara? Formulaic Evidence” (Fs. Asko Parpola). ”

Putting all this together, I suggest that in our passage Pūṣan is presented as the husband (*pātiḥ*) of Sūryā, as in VI.58.4, and she is described as “... her seeking to acquire [a husband],” that is, as a female wooer, complementary to the masc. *didhiṣū*- just discussed, in allusion to her active role in the Svayaṃvara. I would now change the tr. of the first pāda of this vs. to “the husband of her who wooed (him).”

So much for the first pāda of this maddening vs. Let us move to the second. Here the issue is the meaning and reference(s) of the them. nominal *śucā*-, found only here in Vedic. Though Gr glosses the stem as ‘rein, hell’, both Ge and Re interpr. the two forms in light of the well-known later use of forms of the root $\sqrt{\text{śuc}}$ in the semantic realm of pain or grief: Ge: “(der Tröster [consoler]) der Trauernden und des Trauernden (?)”, with the explanation (n. 6ab) that Pūṣan is the benefactor of widow and widower; Re: “Epoux ... de celle qui souffre et (ami) de celui qui souffre.” But this sense is unknown to the RV (except possibly in I.125.7, q.v.), as Re admits, further conceding “La traduction proposée est donc fort douteuse.” The role of consoler of the emotionally bereft also doesn’t seem to me to lie in Pūṣan’s ambit as presented elsewhere in the RV. We should therefore try to interpr. *śucāyās ca śucāsya ca* in terms of the RVic meanings of $\sqrt{\text{śuc}}$, namely ‘blaze, gleam, etc.’, and with regard to Pūṣan’s usual activities and associations.

In order to do this, first recall that structural considerations lead me to supply *sākhā* in pāda b (see above): Pūṣan is then the comrade / companion of the male and female here referred to. Let us also remember Pūṣan’s standing epithet *āghṛṇi*- ‘glowing, fiery’, on which see comm. ad VI.53.3, putting him in the realm of the bright and blazing. Pūṣan’s marriage to Sūryā obviously associates him with the sun, and in VI.58.3 he has “golden ships” (*nāvaḥ ... hiraṇyāyīḥ*) that wander in the midspace and “with which you travel on a mission of the Sun” (*tābhīr yāsi dūtyāṃ sūryasya*). (The next vs. concerns his marriage to Sūryā.) But perhaps most telling is the 1st vs. of that hymn, VI.58.1, which ascribes possession of the two day-halves (*āhanī*) to Pūṣan, “one of which is gleaming, the other belongs to the sacrifice” (*śukrām te anyād yajatām te anyād*). Although this passage is difficult and its meaning disputed (see comm. ad loc.), it is clear that Pūṣan is associated with something *śukrá*- (to the same root as our problematic words), with the daily round of time, and with the sacrifice. I therefore think that the *śucā*- forms here should be interpr. in that context. For the fem. *śucāyāḥ* I suggest that the most likely referent is Dawn, who is regularly described by forms of $\sqrt{\text{śuc}}$ elsewhere: e.g., *śukrá*- I.123.9, IV.51.9; *śucí*- I.134.4, IV.51.2, 9, and various cmpds like *śukrá-vāsa*-. As for the masc. *śucāsya*-, although Pūṣan’s association with the sun (see above) might suggest Sūrya as the referent, the overwhelming connection between both verbal and nominal forms of $\sqrt{\text{śuc}}$ and Agni is, in my opinion, the deciding factor—a mere glance at the various stems in Gr, with his identifications of the referents, should suffice to show this. Our pāda b then depicts Pūṣan in association with two glowing, blazing entities connected to the early morning sacrifice: Dawn and Agni, the ritual fire. Or such is my more sober assessment of the meaning and reference of pāda b.

However, I will suggest an alternative, which is far less grounded but which may allow us to interpr. the vs. as a unity. As will be set out immed. below, I now wonder if the garments in pāda c and d are the wedding garments of Sūryā the bride in pāda a. In the wedding hymn (X.85), where Pūṣan figures in several roles, a number of vss. are devoted to the wedding journey of Sūryā, mustering a variety of cosmic and ritual elements to correspond to parts of the vehicle and its equipage. Twice, derivatives of √*śuc* are found in the dual in this role: X.85.10 *śukrāv anaḍvāhāv āstām, yád áyāt sūryā gṛhām* “The two gleaming/blazing ones were the two draft-oxen when Sūryā went to her home” and X.85.12 *śúcī te cakré yātyāḥ* “The two gleaming/blazing ones were your two wheels as you [=Sūryā] drove.” Who these two are and whether they are the same pair in both vss. is unclear; they owe their genders (masc. and neut. respectively) to the gender of the entities they’re identified with (m. ox and n. wheel respectively). I now suggest that in our passage the phrase *śucāyāś ca śucāśya ca* refer to the same paired entities that we meet in the wedding hymn. As for their identities, they could still be Dawn and Agni, or Heaven and Earth, or some other gendered pair. The point is that they fill the role of attendants on Sūryā’s wedding procession, a procession that Pūṣan leads (X.85.26).

Penetrating the sense of the second hemistich is even more challenging than the first, if that is possible. Old, Ge, and Re have essentially nothing to say about it, and I’m afraid I have nothing to add, at least in my levelheaded mode. I don’t know why garments suddenly intrude here, both being woven (c *vāsovāyāḥ*) and being washed (d: *ā vāsāṃsi mārṃjāt*). Are the sheep in the gen. pl. in c the beneficiaries / recipients of the garments, as Ge and Re seem to think (e.g., “tissant le vêtement pour les brebis”) or, as I think, the material (wool) from which the garments are made. Among other things, why would sheep be wearing clothes? or, rather, what flights of metaphor are required to produce the image of “sheep” wearing “clothes”? Given that elsewhere in the hymn a gen. can depend on a first cmpd member (5b *aśvahayó ráthānām*; see above), limiting *vāso-* by *āvīnām* here seems perfectly possible, hence my “... garments of sheeps’ (wool).” But if the garments aren’t for the sheep, who are they for (if anyone/-thing)? Here is where my level head loses its equilibrium again. If, as I’ve argued for pāda a (fairly convincingly) and for b (rather less so), this vs. concerns the marriage of Sūryā, then the *vāsas-* can be her wedding garments. Her auspicious *vāsas-* comes up early in the wedding hymn: X.85.6 *sūryāyā bhadrām íd vāso, gāthayaiti páriṣṛtam* “Sūryā’s auspicious garment goes adorned with a song.” I suggest that in our pāda c Pūṣan is the weaver of this lovely bridal dress (*vāsovāyāḥ*). Much later in the wedding hymn there a few stark vss. (28–30) again devoted to the wedding garment, now stained with blood from the deflowering of the bride. This is both a cause for rejoicing and a menacing transformation, and it needs to be purified and set right. I suggest that this is what happens in our pāda d, where Pūṣan keeps rubbing the garments to clean them. In X.85.35 the purification is expressed by a different verb, *śudh* (and covers not only the garment but also the wedding feast with its slaughtered cow; see comm. ad loc.): *sūryāyāḥ paśya rūpāṇi, tāni brahmā tú śundhati* “Behold the forms of Sūryā! But the brahman makes them clean.” But I suggest the same purification is expressed here in d by *ā mārṃjāt*.

This is the only occurrence of the preverb *ā* with the very well-attested root √*mṛj*, but this is hardly the worst of our problems.

X.26.7: As Ge (n. 7c) points out, the shaking-the-beard motif is found in the same poet’s hymn X.23.1, 4 of Indra, whom it better befits. Perhaps the repeated *ināḥ* (a, b) evoked the Indra trope.

X.26.9: Pāda b is identical to 1d, a not very inspired form of ring composition.

X.27–29

These three hymns are attributed to Vasukra Aindra and contain some of the most challenging poetry in the RV. All three hymns are dedicated to Indra.

X.27 Indra

On the structure and the challenges of this hymn, see publ. intro. See also Ge's extensive intro. In the publ. intro. (2nd para. p. 1413) the statement "Here verse 10 contrasts the suitor of a blind girl ..." should be corrected to "verse 11."

X.27.1–2: On the functional equivalence of subjunctive and 1st sg. injunctive in these two passages (esp. *pacāni ... nī śiñcam*), see KH 247, 249.

X.27.1: The hymn begins with a form of \sqrt{as} (subj. *ásat*), and \sqrt{as} is rather overrepresented in the early parts of the hymn: *asmī* in c, *satya-* in d, plus *āsam*, *āsan*, *satáh*, and *sántam* in 4. In particular, *ahám asmī* in c is a strong, basically unnecessary statement (i.e., either *ahám* or *asmī* would have done), so it may be asserting the epiphany of Indra, or in addition the real existence of Indra (which, as we know, can be doubted), or be a strong form of *aham-kāra*.

The lexeme *abhí* \sqrt{vij} is found only here (in the noun *abhivegá-*) and in the med. aor. *abhí vikta* in I.162.15, a verse often repeated in the mantras of the Áśvamedha. The root \sqrt{vij} expresses various forms of physical agitation; I.162.15 expresses the hope that a blazing hot cauldron not *abhí vikta*. I tr. 'topple over' there, but I am now more sympathetic to Ge's 'boil over'. Here the noun *abhivegá-* seems to express a tremendous burst of physical and mental energy on Indra's part, for which Ge's "Bestreben" seems a too pallid rendering—hence my figurative "boil over" in quotes (as in the Engl. phrase "boil over with rage"). Its expression is oddly oblique, however, with Indra relegated to an enclitic *me*, in what is literally "There will be boiling over of me," which I have adjusted to a more direct phrasing. I don't know why Indra's agency is displaced.

The lexeme *prá* \sqrt{han} barely exists in the RV; besides this agent noun it is found only in the negated *áprahan-* (VI.44.4) and *praghnánt* (IX.69.2), as well as *abhipraghnánti* (VI.46.10). *prá* is fairly common with verbs of violence; see *prá ... kṣiñām* in 4d.

X.27.2: In this vs. the singer promises Indra a lavish sacrifice in the 2nd hemistich, to follow his great victory in the first. But curiously, though we expect the great victory to be achieved by the help of Indra, there is no mention of Indra's involvement; the battle is presented as the act of the singer alone.

The opening verbal complex should be read *yád+ṛ+íd* rather than *yádṛ+íd*. Note that 3c begins *yadā* and 4a with *yád*.

The supposed root $\sqrt{śuj}$ appears only here and in nearby X.34.6, both times in the pāda-final phrase *tanvā śūśujāna-*. Given its isolation, it seems best to consider it a nonce confection, quite possibly a deformation of *śūsuvāna-* 'puffing (oneself) up' to $\sqrt{śvā}$ / *śū* 'swell' (so Insler, p. c.). A form of this part. is found in the next hymn, also by Vasukra, in the same metrical position in X.28.9 (and the other two nom. sg.s of this part. are also pāda-final: IV.27.2, VII.20.2). Accounting for the *-j* is difficult; perhaps there's some contribution from *tūtujāna-* (\sqrt{tuj} 'thrust'), whose part. is reasonably well attested, but there is no clear textual connection between them. As for the phrase, there is a template of pāda-final *tanvā* MED. INTENS./PF PART, all with heavy

redupl., which could have contributed to its creation; cf. *tanvā śāśadāna-* I.123.10, 124.6, *tanvā jārbhurāṇa* II.10.5, *tanvā vāvṛdhānā* X.54.2. Also, in opposite order, #*śuśruṣamāṇas tanvā* IV.38.7=VII.19.2.

X.27.3: This vs. seems to be the Vedic version of “there are no atheists in foxholes.”

As Old and Ge both point out, pāda c is very similar to IV.24.8a *yadā samaryām vyāced ṛghāvā* “When the ballsy one [=Indra] surveyed the clash,” but with masc. nom. *ṛghāvā* rather than neut. acc. *ṛghāvat*. Indeed both scholars suggest emending the occurrence in IV.24.8 to *ṛghāvat* to match this one (see comm. ad loc., where I reject the emendation). I think rather that this is a nice ex. of the conscious manipulation of formulaic language.

There is mismatch between the singulars of abc and the plural of d, but I think this simply reflects a universal tendency to neutralize number in phrases with indefinite reference, of the English type “anyone ... they.”

X.27.4: As noted ad vs. 1, this vs. is heavily laden with forms of \sqrt{as} : 1st sg. impf. *āsam* (a), gen. sg. part. *satāḥ* (by my interpr.; see below) and 3rd pl. impf. *āsan* (b), acc. sg. part. (*ā*) *sāntam* (c). This emphasis on \sqrt{as} may indirectly reflect the common anxiety about the actual existence of Indra and about the likelihood of his showing up at our sacrifice (epiphany). All but *satāḥ* have heavy first syllables in *ā* (if we count the preverb in c); I suggest that this is meant to contrast with *ābhūm* ‘nullity’ in c (also 1d), built to the other verb of existence ($\sqrt{bhū}$), with its anomalously lengthened privative.

As in vss. 1 and 3, in this speech of Indra’s half the vs. describes people’s proper positive reactions to him (ab), while the other (cd) depicts the punishments he inflicts in the reverse situation—though each half is somewhat complicated.

In the first hemistich the question is the relationship between the peoples in pāda a and those in b. In pāda a Indra talks about his sojourn in foreign parts among unknown peoples; in b some people are said to have been bounteous to Indra under these circumstances. Are the generous folk in b the same as the unknown ones in a, or different? Ge suggests that they are different; it is only when Indra is away (“wenn er fern sei”) that people (by implication us) recognize his value and sacrifice to him (“seien die Menschen mit Opfer freigebig”) – the “absence makes the heart grow fonder” argument. This seems perfectly possible – or would be, save for the participle *satāḥ*, at least acdg. to my analysis. Ge obviously takes it as the adverb *satāḥ*, found as the first member of the hapax cmpds *sató-mahant-* (‘entirely great’ VIII.30.1) and *sató-vīra-* (‘entirely heroic’ VI.75.9) and supposedly sometimes independently; here he renders it as “gleich” (sim. Klein, DGRV II.202 “equally”). However, with Gr and Lub I take it as a gen. sg. of the pres. part. and in general doubt the existence of an independent adverb *satāḥ*; see comm. ad VII.104.21, IX.21.7. Here, by my analysis, it modifies *me* and means ‘really present’, as often; that is, Indra was recognized by the people in the distant communities as really being there, and *they* were generous to him, in comparison with the folks around here – so the communities in pāda a and the subjects of *āsan* in b are the same. For the gen. with *maghāvan-* see nearby X.33.8 *maghāvā máma*. It is rather a nice twist that *maghāvan-*, a standing epithet of Indra, is here used of people who play the role of *maghāvan-* towards Indra.

It should be noted that Old suggests an entirely different interpr. of b, though taking *satāḥ* as Ge does: “Sagt Indra: damals waren alle “*maghāvan*” mir gleich, d.h. sie waren mir alle nichts wert, und ich vernichtete sie alle (cd)?” This requires us to assume that Indra would put

“bounteous” in scare quotes and mean the reverse, which type of antiphrastic irony seems foreign to Indra’s straightforward personality.

If I am correct about who the liberal benefactors are in b, Indra is comparing us, the people here, unfavorably with unnamed and unknown strangers who know Indra’s true worth. I think that this is conveyed in part by the preverb *ā* next to *sántam* in c, referring to the unsatisfactory *ābhú-* who is here. The pres. part. *sántam* is doing several jobs in this pāda by my interpr.: as just noted, when combined with *ā* locates the *ābhú-* as “being here” (not in distant parts), but like many forms of *sánt-* (though not *satāḥ* in b) it is also concessive and in that function is construed with *kṣéme* ‘at peace’ (“although being at peace”). This is in some sense a pregnant expression: the other 4 occurrences of loc. *kṣéme* are found in the phrase *kṣéme (...)* *yóge* “at peace and at war” (V.37.5, VII.54.3, 86.8, X.89.10; *yóge* lit. ‘at the hitching up [for war]’). The point here is that Indra ambushes the *ābhú-* not only when he is at war, as we’d expect, but even when he is not.

The publ. tr. renders *vét* as ‘truly’ because I was at the time persuaded by Klein’s (DGRV II.201–2) view that *vā* here is the equivalent of *vaí* (see *vā u*) in the next vs., 5a. I am now less persuaded. As Klein points out (see also Ge n. 4c), the pāda begins like V.34.5 *jināti véd amuyā hānti vā dhūniḥ*, with a real *vā ... vā* construction, and Klein does suggest that ours is “partially borrowed” from there. I now think a “partial borrowing” of a *vā* passage precludes a *vaí* interpr., and I also suggest that the contrast between the happy outcome of ab and the dire fate meted out in cd is worth an “or” or its equivalent – here “but.” I would therefore now omit “truly” in the tr.

Note the phonological echo of the two verbs *jināmi ... kṣiṇām*.

The contents of pāda d are unclear, though the grammar and lexicon are unproblematic. Ge implies that the victim in d is the same as the one in c, but this ignores the potential mythological resonances the phrasing of d evokes. The only other occurrence of the striking gerund *pādagīhya* in the RV is in IV.18.12, which also contains the same main verb: *yāt prākṣināḥ pitāram pādagīhya* “... when you destroyed your father, having grasped him by the foot.” IV.18 is the famous account of Indra’s fraught birth, ending with his sudden killing of his unnamed father. It is hard to believe that our poet did not have this passage (or a similar account) in mind. The location “on the mountain” (*pārvate*) also connects with another, more famous piece of Indra mythology, the killing of Vṛtra, who was confining the waters inside the mountain; cf. I.32.2 *āhann āhim pārvate śisriyāṇām* “He smashed the serpent resting on the mountain.” Although I am not claiming here that pāda d refers to the slaying of Vṛtra (who, after all, didn’t have a foot to be grasped: cf. I.32.7 *apād ahastāḥ ...* “footless, handless”) or of Indra’s father, I do think that Indra is reaching into his own lore to suggest, formulaically, what happens to those he targets.

X.27.5: Both *vṛjāna-* and *pārvata-* return from the previous vs., but in somewhat different usage. I do not agree with Ge (/Sāy.) that *vṛjāna-* here refers to battle. Rather, Indra is asserting that he is not geographically or socially limited: he will go where he wants to (*yād ahām manasyē*), and one single community can’t own him no matter how good their sacrifices are (see 4ab).

The bahuvr. *kṛdhu-kārṇa-* ‘of stunted ear’ is found only here in the RV, but twice as fem. *kṛdhu-karṇī-* in the AV (XI.9.7, 10.7). On the accent see AiG II.1.297, 300. It is tempting to compare the mysterious Old Avestan hapax *kərədušā* (Y 29.3 in the famous Lament of the Soul of the Cow), which has received almost as many interpretations as there have been interpreters (which I will not canvass here). That (the first part of) the word may be the equivalent of Vedic *kṛdhú-* was suggested by Narten (*Die Aməša Spəntas* 88 n. 8) and adopted by Kellens-Pirart

(though Narten and K-P differ on the morphological analysis); Insler has a different explanation of *kərəd-* but suggests that *-uṣ-* is the (daevis) word for ‘ear’, which is well attested in YA (though since the stem is *uṣ-*, it would have to be a byform). As far as I know, it was Martin West who, putting these two interpr. together, suggested that it is actually a compound of *kərədu-* + *uṣ-* ‘small-eared’ (which he reconfigures into an *n*-stem with the suffix *-an-*) [acdg. to my notes this is found in his “The Querulous Cow” in *Iran* 45 (2007), but I don’t currently have access to that article]. I find the compound interpr. appealing – that it is not represented as a compd in the text is not surprising, since it would have lost its transparency quite early – though I don’t think the *n*-stem addition is necessary: it can be simply an instr. sg. to the root noun byform “with stunted ear.”

As for the dust stirring in d, both Old and Ge appositely adduce I.63.1, where just after Indra was born the turbulence he created made everything, even the mountains (*giráyaś cid*), stir in fear like dust-motes (*bhiyā ... kirānā naíjan*). Here Indra boasts first that his roar will strike fear even in the nearly deaf, and then that his actions will make everything as unstable as dust-motes.

X.27.6: The person changes from 1st to 3rd but the boasting about Indra’s ability to punish non-sacrificers (as in 1cd) continues, at least by my interpr. The speaker may be Indra himself, affecting the 3rd ps., or the singer depicting Indra. The time remains the here-and-now, as indicated by *nv átra* of pāda a and *ū nú* of d. The meaning and construction of the vs. are much disputed, beginning with the first word, the subjunctive *dárśan*, so read by the Pp (hence a 3rd pl.), a reading followed by Ge, Klein (DGRV II.185), and Kü (290), while Gr takes it as 3rd sg. *dárśat* out of sandhi, as does Scar (89, 314) with an indef. subj. (“man”) and as do I, though with Indra as implicit subj. (Old hesitates.)

The next question is the relationship between the various acc. pl. phrases in ab, *śṛtapāṁ anindrān bāhuṣādaḥ śárave pátyamānān*, and the relationship of those to the ... *vā yé* clause of c. In my opinion *śṛtapāṁ anindrān bāhuṣādaḥ* go together, despite the pāda break after *anindrān*, so that *anindrān* modifies both the other acc. pls. The phrase describes people who eat and drink without offering a portion of the comestibles to Indra; all the other cited interpr. take *anindrān* only with *śṛtapān*, which leaves *bāhuṣādaḥ* hard to account for.

The next two words, *śárave pátyamānān*, clearly belong together because the same expression is found also in VI.27.6. The question is what does it mean, and in particular what does the participle mean and what root does it belong to? The standard view (Ge, Klein, Scar) is that it belongs to \sqrt{pat} ‘fly’, though in the meaning ‘fall’ (e.g., Ge “die ... meinem Geschoss verfallen sind”), but there are two problems with this: 1) that root does not have a stem *pátya-*, which instead is the well-attested semi-denom. pres. stem to *páti-* ‘lord’; 2) in the RV \sqrt{pat} ‘fly’ has not yet developed the ‘fall’ sense, which is still limited to \sqrt{pad} . So the form must belong to *pátyate* ‘is lord’, where Gr puts it. Kü clearly accepts this analysis and tr. the phrase “die dem Geschoss gehören,” but this must rest on a passive interpr. of the stem ‘be ‘belorded’ to, belong to’, which is not otherwise found. An indirect clue to its sense is provided by the preceding context when compared to a parallel passage: VII.18.16 contains *śṛtapām anindrām* (as in our pāda a), followed by *śárdhantam* ‘vaunting himself’—so the man who defiantly consumes without offering to Indra is also boastful (and he is duly defeated in that vs.). I think *śárave pátyamāna-* expresses something similar to *śárdhant-*: the men “act (like) the lord, play the lord” – that is, they pretend to power—but they do so “for an arrow,” which is, perhaps, a paltry weapon to boast about.

As for the rel. cl. in c, I consider it part of an “X and which Y” construction, except, of course, that it is “X *or* which Y” and, because of the fronting of *ghīṣum*, the *vā* precedes the rel. prn. In any case, the clause describes yet another set of unsatisfactory people engaged in insulting behavior. With Ge (n. 6c) and Kü, I take the “ardent comrade” to be Indra.

All of these groups are to be run down by the wheel rims in d, with the pf. opt. *vavṛtyuḥ*. As I demonstrated at length (“Where Are All the Optatives? Modal Patterns in Vedic,” Kyoto conf. 2007, publ. 2009), the pf. optative does not have a specifically “perfect” nuance. And this passage, with its *nú*, is a good demonstration of this, since a perfect-type interpr. “should *have* now rolled over them” doesn’t work very well.

X.27.7: The singer now addresses Indra directly, with the first pāda containing three 2nd sg. verbs (*ābhūḥ*, *aúkṣīḥ*, *ānaṭ*), but the glorification of Indra and the celebration of his destruction of his enemies continues.

The 2nd sg. root aor. *ābhūḥ* plays off *ābhúm* ‘nullity’ in 1d and 4c; *ābhūr u* is also picked up by mirror-image *u āyur* later in the pāda. Likewise, the polarized verbs in pāda b #*dárśan nú ... nú darṣat*# echo 6a *dárśan nú* to a distinct root. (Note that only the final form makes it clear that the verbs are 3rd sgs. not pls.) The pāda is completely symmetrical: *dárśan nú pūrvo áparo nú darṣat*.

The phonetic and grammatical figures and resonances with forms in earlier vss. may mark this vs. as a finale; the topic changes in the next vs. by my interpr. (see publ. intro.).

As is universally pointed out (Old, Ge n. 7b, KH 164 with n. 112, Kü [by implication] 502, 230), pāda b is reminiscent of VI.27.4–5, esp. 5cd *vṛcīvato yád dhariyūpiyāyām, hán pūrve árdhe bhiyásāparo dārt* “when he [=Indra] smashed the Vṛcīvants in the front division, and the rear division shattered from fear,” which anchors *pūrva*- and *ápara*- in our passage as spatial, not temporal, designations. (Note that the next vs. [6] in VI.27 contains the other occurrence of *śárove pátyamāna*- [found in our vs. 6], where it is the doomed Vṛcīvants who “play the lord for an arrow”; the two passages obviously have a close connection.)

The du. *pavāste*, found also in AVŚ IV.7.6 (=AVP II.1.5), in context clearly means something like cover (Gr Zeltdecke, EWA s.v. Decke, Hülle, Wh AV covers; see Ge’s n. 7c). EWA compares OP *pavastā*- ‘the thin clay envelope used to protect unbacked clay tablets’, as well as MP and NP *pōst* ‘Haut, Fell’. Obviously if the OP comparison is correct, the OP form had to have undergone semantic development after the introduction of writing (which is certainly possible). I wonder, though, if an etymon closer to home might be more likely—such as a lexeme *pra* √ *vas*, to √ *vas* ‘clothe’, which has been through MIA sound laws (**pavattha*) and then incompletely re-Sanskritized. Unfortunately √ *vas* is not found with *prá* elsewhere in Sanskrit or, as far as I can tell, in MIA, but the combination would not be hard to create, with the sense of stretching fabric “forth” over something.

I assume that Indra is the subj. of d, though the verb is not 2nd ps.

X.27.8–10: On the theme of these vss., see publ. intro.

X.27.8: Several different scenarios provide possible models for interpr. this vs.; see the various ones sketched by Old, as well as the one presented in detail by Thieme (Fremd. 12–14). (Ge makes no real attempt at interpr.) Mine differs from all of these and turns on a potentially controversial interpr. of *sahágopāḥ* in b. As I say in the publ. intro., the cows (here standing, in my view, for the erstwhile followers of Indra) are grazing in the pasture of the stranger (pāda a),

“roaming with their cowherd” (b *sahágopāś cárantīh*). This tr. might better be “with their cowherds”: I think the point is that the cows have found other leaders to follow, leaders summed up in the word *arí-* ‘stranger’. The appeal – or appeals – of these alternative leaders are found in pāda c, where (in my view) their inviting messages come at the cows from all sides, trying to attract the cows to a new herd. (Thieme thinks these are the cries of the owner of the grain of pāda a, trying to shoo away the trespassing cows; Ge, who construes *aryáh* in pāda a with the cows, not the grain, probably thinks the *arí-* is calling them back, but he doesn’t discuss.) In d their *real* own lord (*svápati-*), that is, Indra, is, in my opinion, losing patience with his wayward herd; the pāda is a veiled threat: if the cows continue to follow others and “eat their grain,” Indra will stop finding pleasure in them and treat them as he has the other apostates and non-sacrificers who figured earlier in the hymn (1cd, 6, 7b).

On the *svá-* as referring to the cows, not the lord, in the cmpd *svápati-* see disc. ad X.44.1.

X.27.9: No doubt the speech of Indra, his patience exhausted. (Old suggests that it is all “zornige Ironie.”) He announces his plans (ab) to “round up” (*sám ... váyam*) the straggling herds in one broad pasture, all those who had been eating the grass and grain of (other) people. The phrase *yavasādo jánānām ... yavādaḥ* responds thematically to 8a *yávam ... aryó akṣan*, and in my opinion the *jána-* here are the equivalent of the *arí-* in 8a. Ge (n. 9a) suggests that the grass-eaters are livestock and the grain-eaters are men, corresponding to the four-footed and two-footed in 10b, but admits that it’s the cattle that eat grain in 8a.

Note the mirror-image figure *váyam yava-*.

The 1st sg. *váyam* in the subord. clause corresponds to subjunctives in the main cl. (*ichāt ... yunajat*). Although it ought technically to be an injunctive, it seems to belong to a small class of 1st sgs. ending in *-am* that function as subjunctives (see KH, Injunkt. 247–48; Lub also identifies it as a subj.). See also the clear 3rd sg. subj. *váyat* to the same stem in the next hymn, X.28.9.

It is difficult to see how cd fits with the rest of the vs. (and the sequence in general). Ge (n. 9cd) sees it in terms of a division into the defeated and the victorious in war: in the former case, a yoked horse, having lost its charioteer in the battle, seeks to be released from its yoke, while the victorious forces have their pick of the captured horses of the other side, which they can then yoke for their own use. This seems too elaborate and fanciful a scenario, esp. since (in my view) there’s no hint of a battle scene in these vss. until 10cd. This scenario is favored, however, by an interpr. of the pf. part. *vavanvān* in d as ‘victor’, belonging to \sqrt{van} ‘win’ (so Gr, Ge, Klein DGRV II.88, Tichy 1995: 10, Kü 450), but I take it rather to $\sqrt{vaní}$ ‘desire, love’. This root forms a pf., mostly with long redupl. (*vāvān-*), but to sequester the forms with short redupl. (as here) and assign them all to \sqrt{van} ‘win’, as Kü does (447–51), seems unjustified, since variation in the quantity of the redupl. vowel is found in unified stems (type *vāvṛdh-* / *vavárdh-*, etc.). I interpr. it as a participle used absolutely (“the one who desires to”). In this sense it nicely balances *ichāt* in c: the subject of each clause desires the opposite of his current state. But what is this all about? I tentatively suggest that the big round-up of the scattered and confused animals that Indra performs in ab is physically and mentally chaotic. The herd animals (standing, as I suggested above, for Indra’s straying erstwhile followers) want what they don’t have: those who have followed a false doctrine now wish to be released from it; those who became detached from all doctrine need to be brought back (“yoked”) to proper belief.

X.27.10: As noted in the intro., the elaborate phraseology of pāda a, *átréd u me mamsase satyám uktám* “And just then you will consider this truly spoken by me,” sounds like a truth formulation – or perhaps Indra is simply saying, “now you’ll finally believe me!” But I am again not entirely sure what the content, presumably found in pāda b, is telling us and why it should be esp. important. So far the talk has only been of cows, though as I’ve argued “cows” standing for humans. But I do not see what Indra’s vow to bring together, to mingle, humans and animals is about.

We should first consider the lexeme *sám √srj*. Pace Klein (DGRV I.171) it certainly doesn’t mean ‘release’, and also *pace* Ge I doubt if it here means “durcheinander bringen” (muddle, confuse). The lexeme is fairly common, and generally means ‘bring smtg [ACC] together with smtg [INSTR]’: wife with husband (X.85.22), me with splendour, offspring, etc. (I.23.23, 24), a mother cow with her calf (I.110.8), etc. The process is orderly and seems designed to match entities that belong together. The only places where there is a nuance of muddle and confusion is in the nominals *sámsraṣṭar-* and *samṣṛṣṭa-jít-*, both found in the same vs., X.103.3, where Indra sends forces pell-mell into battle and then conquers them. It is possible here that we have traces of both senses, the orderly matching and the chaotic collision. On the one hand, the last hemistich of the previous vs. (9cd) depicts a set of complementary matches: the yoked animal finds its unyoker; the man who wishes to finds an unyoked animal to yoke. In this way Indra brings together (*sám √srj*) in orderly fashion the human agents and the animal objects to effect the desired pairing. The statement may also be a more general claim about Indra’s ability to mete out just deserts, as it were, to match reward / punishment to behavior – his favorable treatment of people who sacrifice to him and his vengeance on those who don’t.

And there may be a faint nod to the other, sending-into-battle sense of *sám √srj*, since the 2nd hemistich of the vs. threatens a chaotic battle scene with bad matches. The man who “does battle with women (as weapons/comrades)” (*strībhīh ... pṛtanyāt*), and against a bull (*vṛṣaṇam*) at that, is not producing appropriate pairings; he is disastrously over-matched and he will be defeated and his possessions distributed to those on the winning side. Women as weapons are found in V.30.9 (and less clearly in I.104.3); whether in either passage the women are actual women or “girly men” (or something else entirely, quite possibly rivers in V.30.9 and I.104.3), the outcome is clear. The “women” are inappropriate in a battle context, and anyone who employs them will fail. V.30.9 is very clear: *strīyo hí dāsā āyudhāni cakré, kīm mā karann abalā asya sēnāḥ* “Because the Dāsa made women his weapons, what can they do to me? His armies lack strength.”

X.27.11–12: The last two vss. of the first half of the hymn change topic once again, to a stark contrast between an improperly, indeed fraudulently, arranged marriage, and one where the marital arrangements conform to social and legal norms and lead to a happy outcome. I have discussed these vss. at some length in my 1996 “Vedic *mení*, Avestan *maēni*, and the Power of Thwarted Exchange,” *Studien zur Indologie und Iranistik* 20 [Fs. P. Thieme]: 187–203, esp. 197–200; for vs. 12 see also my 2001 article on the RVic svayaṃvara cited below.

X.27.11: As I discuss in the first art. cited just above, I think this vs. describes a legal situation treated in some detail in the later dharma texts (see, e.g., MDŚ IX.72–73, VIII.205, 224)—namely, the “flawed girl given in marriage.” Acdg. to the dharmic materials, if a man contracts marriage with a girl who is flawed in some way, physically or morally, and the girl’s father, who arranged the marriage, knew about the flaws but did not inform the potential bridegroom, he (the

groom) can annul the agreement and abandon the girl. But if the father made the flaws known before the marriage was arranged, the groom has no recourse. I see this legal provision reflected here—uncannily similar (if obscured by the obscurity of RVic style)—one of the pieces of evidence that some of what we find in later dharma materials already existed, as formulated law, in the Vedic period, in striking detail, and such legal anticipations often concern marriage and family law.

By my interpr., the first hemistich concerns the second situation, the “full disclosure” scenario, whereby the girl’s flaw, in this case blindness, has been declared to the bridegroom in advance. In b we have a rhetorical question concerning the groom: if he knows her to be blind (*tām vidvān ... andhām*), will he still want her and/or does he have any right to be angry at the father? This double question is enabled by the fact that *abhí√man* has two, almost opposite, senses: ‘desire’ and ‘be hostile’ (both from ‘set one’s mind on X’, which action can have several different purposes). For the first see X.86.9, the Vṛṣākapi hymn, where Indrāṇī says about the monkey’s sexual advances *avīram iva mām ayām, śarārur abhí manyate* “This noxious creature has designs on me, as if I lacked a man.” (There’s probably an admixture of the second sense here as well: the monkey is disrespecting her.) Cf. also IV.20.5 *máryo ná yóṣām abhí manyamānaḥ* “setting my mind on him [=Indra] like a dashing youth on a maiden,” which is less equivocal. Verbal forms of *abhí√man* in the meaning ‘despise, be hostile’ are first found in the AV—e.g., AVŚ VI.6.1 *yó ‘smān bráhmanaspaté, ‘devo abhimānyate / sárvaṃ tām randhayāsi me, yájamānāya sunvaté* “which(ever) godless one is hostile to us, every one (of them) shall you make subject to me, the sacrificer and presser.” But the noun *abhímāti-* ‘hostility’ and derivatives are already well embedded in the RV. (On the unetymological length of the root syllable in *abhímāti-* [versus *matí-*], see AiG II.2.630 [with lit.] and EWA s.v. *matí-*.) The implicit answers to these rhetorical questions are 1) the suitor will probably no longer be interested once he knows she’s blind, but 2) because the father was upfront about the problem, the suitor has no cause to be angry at him.

The second hemistich, by contrast (and in my interpr.), concerns the opposite situation, when the father has not been candid about his daughter’s defects. I supply a notional **ávidvān* ‘not knowing’, referring to the person indicated by *katarāḥ*. I also take the *katarāḥ* ‘which (of two)’ seriously. The “two” are identified in pāda d *yá īm vāhāte yá īm vā vareyāt*: “(the man) who will marry (lit. ‘convey’) her or (the man) who will woo her.” Here “woo” refers to a technical stage in the arrangement of a marriage, when a friend or relative of the groom comes to the maiden’s house to formally ask her father (or appropriate male relative) for her to be given in marriage, on which see, e.g., my 1996 *Sacrificed Wife*, pp. 221–22.

I discussed the problematic word *mení-* in the first article cited above. As the title already suggests, I derive it from the root *√mi* ‘exchange’ and consider it the embodiment of thwarted exchange, which can be mobilized to punish those who don’t abide by the rules of this most Indo-European and Indo-Aryan institution, reciprocal exchange. Here the girl’s father has flouted the conventions governing marriage exchange, and the injured party has the right to employ *mení-* against him. The only question is whether the wielder of *mení-* should be the bridegroom himself or his proxy, who, in coming to the household for the wooing, would have become aware of the problem first. In the cited 1996 article and in the publ. tr. I tr. the verb governing *mením, prāti ... mucāte*, as ‘unleash’ (*√muc* ‘release’). A recent art. by Maté Itzész, “The Interpretation of *prāti ... mucāte* in Ṛgveda X.27.11c” (IJ 58 [2015]: 203–15), takes up this very question. He convincingly shows that this lexeme in early Vedic means “put on, take on, assume”; although he essentially accepts my general interpr. of the vs. and of the sense of *mení-*, he suggests that the

verb in pāda c means not ‘unleash’, but ‘take on’—that is, assume the responsibility for punishing the violator of exchange relations, namely the girl’s father. I think this must be correct, given the strength of his case for the meaning of the lexeme elsewhere, and am happy to alter the translation to “which of the two will assume the (responsibility for punishing) violated exchange”; I am glad that this improved understanding of the verb does not materially affect the meaning of the passage. While altering that tr. significantly, I’d also change “who marries” to “who would marry” and “who woos” to “who would woo.”

X.27.12: A sunny contrast to the previous vs. The bride has no flaws, hidden or disclosed; she was obviously much besought (*maryatāḥ* ‘from among the young bloods’) and has made a good marriage; the wedding is celebrated publicly in front of the people (*jāne cit*), and she is surrounded by the gifts and adornments that in later texts constitute much of *strīdhana*- (‘women’s property’: e.g., “what is given at the [wedding] fire [and] on the wedding [journey]” MDŚ IX.194 *adhyagnyadhyāvāhanikaṃ dattaṃ*, describing two of the six types of *strīdhana*). Flg. Ge (n. 12cd) I have argued elsewhere (“The Rigvedic Svayaṃvara: Formulative Evidence,” Fs. Parpola [2001]: 303–15; relevant pp. 309–13) that this vs. depicts a self-choice or Svayaṃvara marriage, with the phraseology in d *svayām sã ... vanute* (standing for *vṛñīte*) the major piece of evidence, though there are other lexical clues. See the art. cit. for details.

Ge (n. 12cd) takes *vanute* as the verb of the subord. cl. beginning *yád* “... wenn sie schön geschmückt ... ihre Gefährten ... gewinnt.” He attributes the lack of accent on *vanute* to the fact that the verb is in a different pāda from the subordinator. But in my view *yát supésāḥ* is a brief nominal cl., and pāda d is an independent main cl.

X.27.13–24: As discussed in the publ. intro., the second half of this hymn is essentially independent of the first, though the two halves are thematically connected by the notion of the proper reciprocal relations between man and god and man and man. The focus in the second half is on the sacrifice. As was also noted in the publ. intro., this part of the hymn, esp. the last 6 vss., can be close to impenetrable. The first 6 vss. are essentially riddles, esp. the first 2 (13–14). This half of X.27 is lexically and formulaically similar in many respects to the following hymn, X.28, also a Vasukra product.

X.27.13: As Ge states (n. 13), this vs. almost certainly describes the fire and the wood that feeds him/it, esp. the kindling stick. Each pāda sets out a different image, each of which is compatible with the behavior of physical fire. That pāda d is nearly identical to X.142.5d (with *ānv eti* in our passage corresponding to *anvēṣi* in the latter) in an Agni hymn provides clinching evidence for the referent as fire.

In b I take *śīṛṣṇā śīraḥ* as a sort of false *āmreḍita* ‘head upon head’, rather than construing them separately as Ge does: “mit seinem Kopf hat er (ihm) einen Kopf angesetzt.” The *āmreḍita*-type reading would be facilitated by the existence of a plethora of real *āmreḍitas* to this stem: *śīṛṣṇā-śīṛṣṇā*, *śīṛṣṇé-śīṛṣne*, *śīṛṣṇāḥ-śīṛṣṇaḥ*, all pāda-initial as our phrase is. The image is that of multiple flames, each looking like a head, one on top of the other, which collectively look and act like a shield. As Old points out, *śīṛṣṇā śīraḥ* is found in AVŚ VI.49.2 immed. fld. by another such figure *āpsasāpsaḥ* “breast with/upon breast,” also of fire. Both phrases are construed with the participle *ardāyan* ‘causing to shake (violently)’ (on this stem, see my *-āya-* book, p. 107). Here also the reference is probably to flames and an interpr. “violently shaking head upon head,

breast upon breast” works at last as well as Whitney’s “exciting head with head, breast with breast,” with real instr.

Note the body-part polarization of *pattāḥ* ‘from the foot’ with the ‘head’ phrase, as well as the repetition *pratyāñcam ... prāti*.

The fem. entity that the seated fire destroys when it is “erect in his lap” (*ūrdhvām upāsi*) is most likely a piece of kindling wood; *samīdh-* is feminine. The image is sexualized, as is the one in pāda d, where the fem. element is represented by the earth instead.

X.27.14: This vs. also concerns the ritual fire, but it is somewhat more challenging than the previous one; see the publ. tr. Part of the difficulty is that the two hemistichs seem to apply to two different phases and aspects of the ritual fire: ab to its creation, cd to the offering of an oblation into it. The second hemistich is identical to III.55.13ab, which gives some help in interpr. it.

The first hemistich contains separate descriptions of the two crucial pieces of paraphernalia used to kindle the fire. Both the shapes of the pieces of wood and the process of kindling are sexualized. The lower *araṇi*, the “mother” of pāda b, lies flat and motionless on the ground; it has a hole in it called, tellingly, the *yoni*. The upper *araṇi* is not directly in contact with the lower one: rather they are connected by an upright rod known as the *mantha* or *cāt(t)ra*, which serves as a spindle. The bottom end is inserted into the *yoni* and the rod is rapidly turned back and forth (by hands or by cords) to create the friction that produces the fire. See Re’s *Vocabulaire du rituel védique* and Sen’s (derivative) *A Dictionary of the Vedic Rituals*, s.v. *araṇi* and *araṇī* respectively, esp. Re’s description of the *cātra*: “tige à forme de pénis dont une extrémité ... vient s’assujettir sur la yoni ...” Various YouTube videos are also quite instructive.

In our passage pāda a is devoted to the *cātra* (not a RVic term), the rod or churning stick, which is homologized to a tree, but a peculiar one: it is lofty (*bṛhān*) but does not provide shade (*achāyāḥ*), the rendering I now prefer over “without a shadow,” and lacks foliage (*apalāśāḥ*). In other words, it is wooden like a tree, and upright like a tree, but otherwise lacks tree-like characteristics. It is also, in a different image, called a ‘steed’ (*ārvā*); this might be because of its rapid movements, but I think it more likely reflects the cords bound around it by which the turning is effected. This is clear from I.28.4 in the playful hymn comparing Soma preparation to domestic cookery; that vs. contains the only form of the noun *mānthā-* in the RV, clearly naming the churning stick: *yātra mānthām vibadhnāte, raśmīn yāmitavā iva* “When they bind the churning stick on both sides like reins to control it,” with a slight slippage between the one bound (the stick) and the bindings (the reins) in frame and simile (see comm. ad I.28.4). Like a horse by reins, the churning stick is directed and controlled by the cords bound around it.

As for the lower *araṇi-*, this is clearly the mother who stays still in b (*tasthaú mātā*), while the embryo that eats when set loose (*viśito atti gārbhaḥ*, also in b) is obviously the nascent fire already consuming firewood.

As was noted above, the 2nd hemistich is identical to III.55.13ab; see comm. there for additional remarks. The subj. of both verbs (*mimāya* in c, *ní dadhe* in d) must be the *dhenú-* in d. It is she who “licks the calf of another” (*anyāsyā vatsām rihatī*), which indefinite (note initial position) “other” is surely the mother of pāda b, namely the lower *araṇi-*. It is a rather nice reversal that the ritual fire, which is often identified with tongue(s) and which sometimes is the agent of the verb *√rih*, is here the one being licked. The *dhenú-* is in turn the oblation being poured into the just kindled fire or rather the producer of that oblation, most likely the *īḍā* on the basis of III.55.13c. While her “udder” (*ūdhah*) refers to the contents of her udder, the oblation

itself. On the phrase *káyā bhuvā* see comm. ad III.55.13, where I reject Ge's interpr. "in which world?" in favor of "with which form?" referring, in my view, to the precise form that the oblation takes: in III.55.14c *Idā* "swelled with the milk of truth" (*ṛtāsya ... páyasāpinvata*), and milk (of truth, or just milk) may be what is meant here as well.

X.27.15: As often in the RV, numerology sows confusion. However, by focusing on the place of this vs. in the hymn and also on the action depicted within it, I think we can achieve a certain level of understanding, without necessarily being able to identify the groups presented in order as consisting of seven (a), eight (b), nine (c), and ten (d). If, as I argue in the publ. intro., this part of the hymn concerns the mystery of the sacrifice and the creation of its central focus, the ritual fire, this vs. seems to depict the coming together of four distinct groups from the four cardinal directions for cooperation; I suggest this cooperative enterprise was the primal institution of the sacrifice. Just as the classical śrauta sacrifice requires the mutual but complementary endeavors of different groups of priests drawn from the three ritual Vedas and thus belonging to different śākhās, here we seem to have the joining of distinct groups of beings, each perhaps with its own function. That they come from south, north, west, and east marks the action as universal or at least as involving the entire Ārya community. *Pace* Ge (intro. to hymn) I do not think this depicts "den Aufstieg der Götter und Erzväter zum Himmel."

Various identifications have been suggested for the four groups. Although I think their identities are less important than the regularly increasing sequence of numbers and their representation of all points of the compass, it is of course tempting to try to name them. The hardest to identify is the eight. Old's suggestions are perhaps the least risky: the seven seers, the Navagvas, and the Daśagvas, with the parenthetical question "(wer die acht?)." It is more interesting to try to match the groups with their directional sources. The "seven heroes" (*saptā vīrāsaḥ*) come from the south; if these are indeed the Saptarṣi and if the Saptarṣi were originally human seers who got divinized (both big if-s), this might make sense ritually, since the Southern Fire (*dakṣināgnī-* [not yet so called in the RV, but already AV]) is used for offerings to the Pitars (see, e.g., Keith, *Relig. & Philos.* 288–89). The problematic eight might be the Ādityas; although the number of these gods fluctuates (see Macd. *Ved. Myth* 43–44), it is once clearly stated in the RV that Aditi had eight sons (X.72.8 *aṣṭau putrāso āditeḥ*). The eight come from the north, which is the quarter of the gods, which would be appropriate for the Ādityas.

The identification of the nine and their function is complicated by the fact that the identity of their only attribute (*sthivimānt-* 'possessing *sthivī*') is unclear. Nonetheless, Ge's "sacks," or some object that can contain grain, seems pretty safe. In the only occurrence of the independent noun (X.68.3) Brhaspati strews cows from the Vala cave "like grain from *sthivī*" (*yāvam iva sthivibhyaḥ*), which seems diagnostic. The nine come from the west, which is the place of the Gārhapatya fire (also not yet named in the RV, but clearly already part of RVic ritual) and the place where the offerings are prepared. Hence the grain sacks make sense. As for the ten in the east, traversing, or perhaps better "coming through," the back of the rock (*sānu vī tiranti āśnaḥ*) sounds like a depiction of the Vala myth. Note that the same lexeme *vī√tṛ* is found in the Vala passage just cited, X.68.3 (a point made by Ge n. 15c). Since, inter alia, the Vala myth involves the release of the *dawn* cows, the east is the appropriate direction.

X.27.16: This vs. returns to the creation of the ritual fire and seems to follow directly from 14b, after the interruption of vs. 15 (and 14cd). The placement of 16 may result from a trivial concatenation: the group of ten in 15d is picked up the first word of 16, *daśānām* 'of the ten',

though the ten here must be the fingers of the ritual officiant, which is not a possible referent for *dāśa* in 15d in my opinion. Ge (n. 16a and hymn intro.), by contrast, considers the ten to be the same in 15d and 16a and identifies *kapilā-* as the name of the Ur-Ṛṣi, whose birth is depicted here. This seems to take us too far afield, away from the focus on the primal sacrifice. The word *kapilā-* appears only here in the RV; although in the Śvet. Up. (etc.) it is likely the name of a seer (see, e.g., Macd/Keith Vedic Index s.v.), there is no reason not to see our occurrence as a color term (supposedly ‘ape-colored’ ← *kapí-*; see EWA s.v.). It also appears as a color term later. Here I assume it’s a reference to the just-kindled fire, or perhaps better, to the kindling stick being manipulated by the fingers of the priest to produce fire (see vs. 13 above).

Both the mother and the embryo in 16c (*gārbham mātā*) are identical to the same figures in 14b, in my opinion, though the scene in 16cd is logically prior to that in 14b: the embryo has not yet been released to eat, that is, the fire has not yet been kindled. It is still held in the belly of the mother (the lower *aráñi-*). The two participles in b, *ávenantam tuṣáyantī*, depict this stasis: the fire seeks after nothing, while the mother is still and content (very like *tasthaú* ‘she stayed still’ in 14b). The ten fingers are just starting the process of kindling (16ab).

Ge renders *vakṣāṇāsu* as “an ihren Brüsten,” which implies that the *gārbha-* has already been born. But III.29.2 (which he adduces), with strikingly similar phraseology, strongly suggests that the babe is still in the womb: *aráñyor níhito jātávedā, gārbha iva súdhito garbhínīṣu* “Jātavedas, placed within the two fire-churning sticks, like an embryo well placed within a pregnant (belly).” Despite the pl. *garbhínīṣu* in that passage (and the publ. tr. [JPB] “within women with child”) I now think *garbhínīṣu* there presupposes a gapped *vakṣāṇāsu*, like here, and since pl. *vakṣāṇā-* can be a pl. tantum, it refers here to a single belly. Some plural forms of *vakṣāṇā-* do refer to multiple bellies (see, e.g., I.162.5, X.49.10), but most do not (e.g., V.42.13).

The standard interpr. of *tuṣáyantī* is transitive (e.g., Ge ‘es stillend’; see also Old), but the zero-grade vocalism favors an intransitive interpr., which is just as possible in context and in fact, as was just noted, echoes *tasthaú mātā* in 14b. See my *-áya-*formations, pp. 50–51.

X.27.17: This vs. follows from 16 (note the *vīrās(aḥ)* in both) and probably depicts the primal sacrifice (sim. Ge., intro. “das Tier- und Somaopfer”). The very similar I.164.43, adduced by both Old and Ge, supports this view: *ukṣāṇam pīśnim apacanta vīrās, tāni dhārmāṇi prathamāny āsan* “Heroes cooked a dappled bullock. These were the first foundations (of the rite).”

The dice of pāda b must serve a ritual purpose. Although the more famous instance of dicing in śrauta ritual is in the Rājasūya, where the newly installed king plays dice with representatives of the four varṇas (see, e.g., MŚS IX.1.4.21–25), there is also dicing in the Agnyādheya, the initial installation of the ritual fire for a new Ahitāgni (=śrauta sacrificer), where the sacrificer dices (with his sons in some versions) with a cow for the stakes. See, e.g., Keith, *Relig.&Philos.* 317; Hillebrandt, *Rit. Lit.* 108; and in detail Falk, *Würfelspiel* 136–63; from the śrauta sūtras, e.g., MŚS I.5.5.6–16. Such a ritual context makes sense here, at the first establishment of the institution of sacrifice and the creation of the sacred fire, and the players would, most likely, be the representatives of the four quarters who assembled in vs. 15. Just as the four varṇas in the Rājasūya dicing match represent the totality of Ārya society, here involving the groups coming from the four cardinal directions would create the same type of universality. In the Agnyādheya the cow, once won, is killed and divided among the brahmins after offering portions to the Pitars. It is possible that the “fat ram” (*pīvānam meṣām*) serves the same purpose here.

The second hemistich must depict the establishment of the soma sacrifice in particular, given the telltale terms *pavítravantā* ... *punántā* “provided with filters ... purifying.” But the passage is difficult to interpret because the identity of “the two” (*dvā*) who are the referents of these words is entirely unclear. Ge does not hazard a guess (and in fact does not raise the question). None of the usual dual suspects—Heaven and Earth, Night and Dawn, Sun and Moon, the Ásvins, Mitra and Varuṇa—makes any sense here, or at least any sense I can grasp. Since these two must be parties to the creation of the sacrifice, they should be part of the groups we first encountered in vs. 15. Since in the next vs. (18) the harmonious cooperation of this amalgamated assemblage breaks down and they split into two halves, I wonder if 17cd anticipates the break-up, even though the two halves are still working together here: they agree on soma but will split on cooking.

Ge (flg. Gr) takes *dhánum brhatīm* as the obj. of *punántā* (“... den hohen Quell ... zu läutern”), which he further qualifies (n. 17c) as “Den Quell des Soma, d. h. die Somapflanze oder den Somasaft.” But *dhánu-* does not, in my opinion, ever mean ‘source’ or the like, but refers to a type of place, a plain or steppe, and is related to *dhánvan-* ‘wasteland’; see EWA s.v. *dhánu-*, despite his hesitations. In particular the stem is found in I.33.4 in the “schism” passage that we will discuss below at our vs. 18, where it most likely refers to a similar location. I construe *dhánum* with *carataḥ* “the two roam the steppe” (thereby interpr. the latter as a full lexical verb, not an aux. with the part. *punántā*). The “lofty steppe” may refer to the high elevations where the soma plant grows. Although my interpr. leaves the participle without an overt object, it is child’s play to supply “soma.”

X.27.18: By my reading, in this vs. the groups that had come together so harmoniously in order to establish a common sacrifice clash disastrously over the way the sacrifice should be performed. Note the polarized verbs *sám jagmíran té* “they came together” (15b) and *ví āyan* “they went apart” (18a). This vs., esp. the first hemistich, is strongly reminiscent of the “schism” passage I.33.4–10, which depicts a split, quite possibly in the Ārya community, dividing into sacrificers and non-sacrificers, with the sides going off in different directions and Indra intervening on the side of the sacrificially orthopractic. In our vs. they “went apart in opposite directions” (*ví ... víṣvañca āyan*); in I.33.4 in almost the same words *viṣuṇák te vy āyan*. Moreover, in I.33.4 they depart *dhánor ádhi* “from the (high) steppe,” the place where our people were roaming in 17c. In addition, our people depart “shrieking” (*krośanāsaḥ*), while in I.33.7 the two groups are polarized as (acc.) *etān rudató jákṣataś ca* “those wailing and those laughing”; though the two roots for the negative sound effect, $\sqrt{kruś}$ and \sqrt{rud} , are different, they seem to amount to the same thing. In I.33 the divisive issue seems more serious than here: it pits the *āyajvan-* ‘non-sacrificer’ (4d, 5b) against the *yājvan-* ‘sacrificer’ (5b), who is also a presser and a praiser (7d). Here the doctrinal issue is cooking versus non-cooking (shades of Lévi-Strauss!) – in ritual terms, perhaps the cooking of a sacrificed animal (as in 17a *meśám apacanta*) and therefore the question of whether to perform animal sacrifice itself (so Ge, intro.), or perhaps simply the issue of offering any type of oblation into the ritual fire, which “cooks” it. The latter is perhaps supported by the second hemistich, where Savitar pronounces the sole victor to be the fire, which consumes wood and ghee (*drvānnah ... sarpíranah*), the latter of course as an oblation.

The doctrinal dispute is expressed by two subjunctives to the same root but different stems, them. pres. versus *s*-aor.: *pácāti ... nahí pákṣat*. Narten (Sig.Aor. 167) ingeniously attributes this difference to aspect: those who will cook (*pácāti*) will occupy themselves with it

over time (imperfective), while those who will not cook (*nahí pákṣat*) won't even begin to do so and therefore reject the activity envisioned as a whole (perfective). As an account of this passage alone, the analysis would be convincing, but since, in general, modal forms to tense/aspect stems fail to display whatever aspectual value such stems have (as I have discussed in a number of publications), I am dubious. And it can be noted that a pres. subj. *pácāt(i)* would not easily fit any metrical slots in the second part of this pāda, whereas *pákṣat* allows a neat cadence. The publ. tr. should be emended to reflect the 2nd subjunctive, however: “for the other half will not cook.”

I do not understand why Savitar is the bearer of the message, but the content of the message is clear: only Agni will win, and Agni will win only if we make regular correct offerings into him. This section of the hymn (vss. 13-18) concerned with the establishment of the original ritual fire and the sacrifices associated with it thus concludes with a strong and satisfying assertion of the centrality of the sacrifice.

X.27.19–24: On the difficulties of this last section of the hymn and possible interpr. thereof, see publ. intro.

X.27.19: Ge (intro.) convincingly identifies the vision depicted here as the year, or possibly old age. The image of the wheel-less cycle favors the former. In the famous riddle hymn (I.164) the year is configured as a wheel (generally the wheel of the sun), with the various temporal divisions marked on that wheel; see, e.g., vss. 2cd, 11–13, 48. Here the wheel-less (*acakráyā*) self-powered (*svadháyā*) turning seems a further, deliberately innovative development of the year=wheel trope. The phrase *acakráyā ... svadháyā* is also found in IV.26.4 (see Ge's n. 19b), used of the flight of the falcon that stole the soma from heaven, but that passage seems to have nothing to do with this one.

The horde (*grāma-*) here may be the constituents of the year, i.e., the seasons, months, and days. W. Rau (“Earliest Literary Evidence for Permanent Vedic Settlements,” *Inside the Texts*, ed. M. Witzel, 1997, 203–6 [proceedings of 1989 conf.]) argued that *grāma-* means in the first instance “a train of herdsmen roaming about with cattle” and secondly “a temporary camp of such a train,” and that the later standard sense ‘village’ is not found in Vedic. Certainly here the first meaning, a roving band, fits the context well (as also, e.g., in I.100.10, II.12.7, III.33.11), but I would dispute the strong form of his claim, or rather assert that the word (and its deriv. *grāmyá-* RV 1x) can contrast the domestic with the wild—e.g., the beasts *āraṇyān grāmyāś ca yé* in the Puruṣasūkta X.90.11; the safety and security of the settlement as opposed to the wilderness in the Araṇyānī hymn (X.146). Whether these settlements were “temporary” or not, they project all the associations of “village” in context. (Interestingly only one of the many passages Rau cites is from the RV [III.33.11 just cited].)

In c *yugā* (lit. ‘yokes’) surely refers, as often, to generations; the question is how to construe the gen. pl. *jānānām* and the likely gen. sg. *aryāḥ*. Ge and Th (1941: 109 = KISch. 34) take them as parallel and implicitly conjoined (though in slightly different senses), e.g., Ge “die Geschlechter des hohen Herrn (und) der anderen Leute.” However, I think it likely that *yugā jānānām* is a variant of the common expression *mānuṣā(ni)* [*/manuṣyā*] *yugā(ni)* “human generations [/lifespans],” and I take *aryāḥ* as dependent on that whole phrase. The “peoples of the stranger (*arī-*)” I would take here to refer to the Ārya as a whole.

The lexeme *prá √ sac* seems to occur only here in the RV (since *sákṣvā ... prá* in I.42.1 belongs to *√ sah*; see comm. ad loc.). Th takes it in hostile sense (“sucht heim” [afflicts]), but

(with Gr and Ge) I think it has a neutral and essentially additive value, with the negative sense confined to *praminānāḥ* in d.

That participle (*praminānāḥ*) by my interpr. participates in a complex set of relationships with the rest of the hemistich. To begin with, although the *yugā* phrase of c is properly construed with *sīśakti ... prā*, it should not be forgotten that a similar phrase serves as obj. to *prā √ mī* in what seems to be a fixed formula, used of Dawn: I.92.11 [=I.124.2] *praminatī manuṣyā yugāni* “diminishing the generations of men.” If that is a formula (or something close to it), it would come to the audience’s mind here, even if the actual syntax separates the verb and its usual object.

But there is plenty more for *praminānāḥ* to do in its own pāda, where I think it is used in two different senses in two different constructions, one with *sīśnā*, one with *nāvīyān*. (Note that the participle is strategically located between them, adjacent to each.) This view seems to be essentially Ge’s: though he makes no comment on the construction, he tr. pāda d with two different participial phrases (“die männlichen Glieder alsbald schwächend, (selbst) sich verjüngend”). Let us now note that our *praminānāḥ* is one of the few middle forms to this root; that voice is confined to a few forms of the participle, including one in the vs. (10) immediately prior to just-cited I.92.11 in a similar context concerning the effect of time on human lifetimes. One of the senses of the middle part. is to ‘exchange’ or ‘transform’ forms; see esp. V.42.13 *rūpā minānāḥ* of Tvaṣṭar’s transformations in the belly of his daughter and Th op.cit. 108–9=33–34. Th interpr. our form here in that way: “... sich verwandelnd in einen neuen.” I think this is fundamentally correct, though I do not follow Th’s view that the referent is the sun—rather it is the year that constantly renews itself. I also think that it is correct only for part of the passage: there is a third use of *praminānāḥ* packed into this tiny verbal space. By Th’s interpr. *sīśnā* is an instr. sg.: “mit Hilfe des Schwanzes,” a curious expression he makes no effort to explain. For others, however, it is the neut. acc. pl. (see Ge’s tr. above), and so I take it, as the obj. of *praminānāḥ* in its other usage. Here *√ mī* ‘diminish’, rather than *√ mī* ‘exchange’, is again at issue. The question is what sense of *sīśnā-* is found here: ‘tail’ (as in I.105.8, where mice chew on their own tails) or (slang for) ‘penis’, as Ge takes it, found also presumably in *sīśnā-deva-* ‘having the phallus as divinity, phallus-worshiper’ (2x). Ge (n. 19d) thinks the sense is “die Zeugungskraft vermindernd,” and this is certainly possible. But I wonder if real, though metaphorical, tails are involved: diminishing—docking—their tails is an image of shortening their lives. The history of the English word ‘curtail’ is instructive here since ‘tail’ figures twice in its formation: first as a loan word from French for an animal with a docked tail (curtal), then folk-etymologically adjusted to align it with ‘tail’. And from the physical docking of tails the word expanded to cover all sorts of shortenings and restrictions.

I take *sadyāḥ* usually ‘in a single day, immediately’ to mean ‘at the same time’, referring to the two different actions expressed by *praminānāḥ*. Although I do not know of other occurrences of this word in this sense, it seems a reasonable semantic extension.

X.27.20: This vs. is essentially impenetrable, though the grammar is straightforward. It seems to continue the gloomy reflections in the previous vs., but beyond that it is difficult to say. (Though as will be clear from what follows, I say a great deal about it.)

Interpreted in the context of vs. 19, the two yoked oxen (*etaú ... gāvau ... yuktauú*) ready to drive off could be a reference to a different temporal phenomenon inflicting its unavoidable harm on the vulnerable human. In great part the interpr. depends on the interpr. of *pramarā-*, the being to whom the oxen belong. The word occurs only here; Gr, Ge, Debrunner (AiG II.2.65, 88,

though in latter loc. with ?), and Kü (365: “Fortsterben”) take it to mean ‘death’, but I am skeptical. *prá√mṛ* is not found in the RV; indeed the root ‘die’ does not occur with any preverb there. There are some nominal forms later, but the closest in time, *pramārá-* in AVŚ XI.8.33, is in such an obscure context that ‘death’ is not only not assured, but doesn’t make sense there. I suggest instead a connection with *√mṛ* ‘crush’, which is characteristically construed with *prá*; for the conspectus of passages see Scar (390–91). Assigning it to a *seṭ* root might account for the *guṇa* rather than *vrddhi* in the root syllable if to an old **o*-grade, inter alia. Although interpr. the form as “the Pulverizer” or “the Crusher” doesn’t get us any closer to a referent, some constraints on the meaning of the passage are removed if the referent is *not* Death. It could be another way of referring to the year, which was the subject of the previous vs., or an anticipation of “old age” in the next one (21d). The two oxen belonging to it could be day and night, the regular recurrent time periods that draw us through the year and that the poet wishes to delay for a moment. I favor this general interpr., though see below for more detail.

On *prá sedhīh* see Narten (Sig. Aor. 267).

With most I assign *mamandhi* to *√man*² ‘stay, wait’, distinct from *√man*¹ ‘think’, pace Kü’s efforts to revive the notion that it’s a specialized form of the latter (364–66; abandoned in LIV²) and his tr. “bedenke.” See also Old’s comments on this vs.

The second hemistich is considerably harder than the first. For Ge (intro.) the point is that the waters and the sun also stay by the poet in his race with old age. But it is hard for me to see that in the actual wording, and there is no evidence that I can see for a race (Wettlauf). Ge (n. 20b) bases himself on passages in the JB (III.183) and PB (XIV.3.13) where a wager is made between Viśvāmitra and some others about driving a pair of oxen pulling a laden cart up a steep bank (not a race either, as far as I can see), and he suggests that Old Age and Death are here running a race with the living human. Acdg. to him (n. 20c), in pāda c Death and the waters have the same goal, but the waters win. I see no connection between the JB/PB passage and this one, save for the presence of two oxen (though *anaḍvāhau* in JB; no word for oxen in PB)—hardly a major piece of evidence, since draught-oxen come in pairs. Old Age and Death do not make an appearance in the Brāhmaṇa passages, and we have no wager, no laden cart, and no steep bank here. Much less any race.

Although I don’t have a solution to the meaning of the hemistich, I can point to certain structural considerations that weigh against the usual construction of the two pādas and may open the way to a more satisfactory interpr. To begin with, most tr. (Ge, Klein [DGRV I.227–28], Kü [365]) take the two pādas as two separate clauses; e.g., Ge “Auch die Gewässer erreichen sein Ziel, auch hinter der Sonne ist die Vernichtung zurückgeblieben.” But the two supposed clauses would be conjoined by *ca*, which is usually a subclausal conjunction (Klein [327] describes it here as showing a “looser degree of nexus”), and the verb in the 2nd clause would be a predicated pf. part. *babhūvān* parallel to a finite form in c. Neither of these is impossible, but the combination of the two factors suggests we might take a second look at structure. In fact, the *ca* can be read in its usual subclausal value if it is conjoining an NP in pāda d with one in c – most likely a nom. connected with *āpaḥ*. We have two choices for this nom. phrase: either *sūras ca markāḥ* “and the harmer of the sun” (with gen. *sūraḥ* to *svār-*) or just *sūras ca* “and the sun” (with nom. *sūraḥ* to *sūra-*). I opt for the latter (note that the same poet uses nom. sg. *sūraḥ* in X.29.5), with *markā ūparaḥ* then a pred. nom. with *babhūvān*. By this interpr. this pf. part. is not the predicate of a clause, but an adjunct descriptor of one of the conjoined subjects (*sūraḥ*) of the main clause, whose verb is *vī naśanti*.

This reinterpr. of the syntax provides a more satisfying structure than the standard interpr., but it doesn't get us considerably further towards sense. We must now turn to the referent of *asya* in c, the meaning of the VP *ví√naśanty ártham*, and the sense of the hapax *marká-*, of the multivalent *úpara-*, and of the two together. The first question is perhaps the easiest: for unaccented *asya* we need a referent already in the discourse, and the most likely is *pramaráśya* in pāda a. This is in fact the apparent view of all the interpr. However, I suggest that the 1st ps. speaker might be an additional referent.

Now the VP. The lexeme *ví√naś* takes a variety of object types with slightly different meanings of the verb: 'penetrate', 'reach through to', 'reach', 'achieve'. Here of course "reach his goal" works perfectly fine. But before trying to decide what his (= *pramara*'s) goal is, let us consider another very common idiom involving *ví√naś*, which regularly takes *āyus-* 'lifetime' as its object – including an instance in this very hymn, X.27.7 *vy ù āyur ānaṭ* "you have traversed your lifetime." Normally this is a positive idiom: someone who has done this has achieved a full lifespan and escaped having his life cut short. But considered in the context of old age there is a definite downside: if you have achieved your full lifespan, then it's over; you're dead (or about to be). I suggest that this idiom is implicated in the phrase *ví√naśanty ártham*. A full lifespan is a goal, one of many. The speaker of ab may have achieved this goal; this is why the Pulverizer's oxen are yoked and ready to convey him. He begs for just a moment of delay.

Now what would be the Pulverizer's goal? If he is the Year, then presumably the year's end – and its beginning – the moment when cyclic time resets. If he is Old Age, then presumably just the end, i.e., the end of life.

The next question (and a harder one): why is it that the waters and the sun reach this goal? I find the waters difficult to fit into this context, the sun less so. Like the other signals of recurrent time that I see in this passage—the year, day and night—the sun marks the passage of the days. In X.37.2, adduced by Ge (though not for quite the same reason), the daily unstoppable activity of the sun is described: *viśvāhód eti sūryaḥ* "always the sun rises." In fact, our own poet Vasukra describes the sun as sending everyone to their *ártha-* (X.29.5). And in its own journey between the solstices it too reaches the turn of the year. The waters, though – they are not usually temporal markers. It may simply be because they, like the sun, are in constant motion; the full pāda from X.37.2 just quoted reads *viśvāhāpo viśvāhód eti sūryaḥ* "Always the waters (are in motion); always the sun rises," with the same association of waters and sun as here, as Ge (n. 20cd) points out. But perhaps this is a reference to a regular yearly cycle of water: the monsoon rains or the spring snow melt from the high mountains. The *cid* 'even' may indicate that the waters are a somewhat surprising addition to the statement, which fits the sun better.

Before leaving pāda c, we should consider the form of the verb *naśanti*. Though it used to be classified as a 1st class. them. pres., *náśa-* is now universally analyzed as a root aor. subjunctive, and I think our act. 3rd pl. should also be taken as a subj., even though the standard view of the grammars (Wh, VGS) is that the 3rd pl. act. subj. ending is only secondary *-an*.

The last issue we need to take up is the phrase *marká úparaḥ*. *marká-* is a hapax, found nowhere in Skt. but here, but the differently accented *márka-* is reasonably well represented after the RV, as a purohita of the Asuras (see, e.g., Macd&Keith, Ved. Index s.v. 2. Marka). For him and his co-purohita Śaṇḍa offerings are drawn at the First Pressing of the soma sacrifice, and then the two are immediately driven away; see, e.g., TS VI.4.10, ŚB IV.2.1, and mantras in VS VII.16–17 (with extensive parallels in other texts; cf. Vedic Concordance). Although I am certain that our *marká-* does not represent the mythico-ritual figure of later Vedic, as Old remarks, "*marká* trennt man ungern von *márka*, der später als Purohita des Asuras begegnet." And both

must be derived from the root \sqrt{mrc} ‘harm’. (For the corresponding Old Avestan *marəka-* and YA *mahrəka* see EWA s.v. *MARC*.) As Ge points out (n. 20d), the sun is sometimes associated with the root \sqrt{mrc} (see AB IV.10, AVŚ XIII.1.40 [Rohita hymn]), though I would not say the association is strong.

The adj. *úpara-* has several values: temporal (‘later’ versus *pū́rva-* ‘earlier’), locational, both horizontal (‘behind’ versus *puráh* [*sánt-*] / *pū́rva-* ‘in front’) and vertical (‘lower, hence nearer=earthly’ versus *pára-* ‘further’). Here the temporal value seems excluded since ‘later/future’ is incompatible with *babhūvān* ‘having become’. The horizontal dimension doesn’t make sense either, but, given the sun’s heavenly locus, the vertical dimension does. Some light is shed on this by a snatch of V.44.2 describing Agni’s flames as *úparasya yāḥ svāḥ* “which are the suns of the lower (realm).” I suggest that here too we have the common identification of (heavenly) sun with (earthly) fire, and here the fire as destructive force. Though it is also possible that the sun itself is seen as destructive to humans in its role as marker of time.

After nearly 2000 words of discussion of this vs., containing barely 20 words, I feel I have a somewhat better handle on its meaning and its place in the hymn, but hardly a solution. I would emend the translation of cd to “Even the waters will reach this one’s goal – and the sun, having become the Harmer below.”

X.27.21: This vs. is not appreciably more intelligible than the last, but it does seem to mark some kind of turning point, with the introduction of “fame” (*śrávaḥ*) at the beginning of the 2nd hemistich beginning to dispel the gloom.

In order to identify the referent of the *vájra-* in pāda a it is important to determine what happened to it—that is, what action *vívṛtta-* depicts. Ge thinks it means ‘divided, split into pieces’, tr. the phrase as “der vielmals zersplittet wird,” and compares a RVic passage with a different verb and plural *vájra-* and a Brāhmaṇa story about Indra’s *vájra* splitting into three pieces. But the lexeme *ví√vṛt*, which is quite common in the RV, never means ‘split, divide’. It either means ‘turn aside’ (e.g., V.53.7) or simply ‘roll along, roll through’ (e.g., VI.9.1), often of wheels or entities so configured (e.g., I.185.1). When transitive, it means ‘unroll’ in opposition to *sām√vṛt* ‘roll up’ (e.g., V.48.2). It is surely a mistake to ascribe a unique meaning to a lexeme in a passage where one of the only clues we might have is the use of that lexeme elsewhere. Whatever the *vájra-* refers to, it has been rolled out or turned aside, not split. The adv. *purudhā* does not have to mean ‘in many pieces’ or the like, but ‘in many ways, in many places’.

The opening of the vs. with its annunciatory *ayám só vājraḥ* “Here/this is the mace that ...” is striking and should give us some clue about the referent. Either the *ayám* is pointing to something in the immediate vicinity, in place and time, of the poet, or it is making a particularly strong connection between the *vájra-* and something else in the discourse. I think the former, the hic-et-nunc usage we often find in a ritual situation, is unlikely, because there is no other indication of immediacy in the context. I therefore think it refers to something in the preceding vs. – quite possibly the Pulverizer in 20a. Indeed *vájra-* is the subject of a form of *pra√mṛ* in III.30.6 *prá te vājraḥ pramṛṇānn etu śátrūn* “let your mace come forth, pulverizing the rivals,” which seems to me as close to clinching evidence as we’re likely to get in this maddening passage.

Thus the mace, the Pulverizer, has been deployed (rolled out, *vívṛtta-*) in many ways or places; where this deployment has taken place is indicated in the next pāda, which seems to me a variant on and expansion of 20d “the sun, which has become the Harmer below.” Here the action unfolds “below [the X] of the lofty sun,” in which the sun maintains its usual heavenly position,

but the theatre of action is underneath it, again the realm of human activity. To get any further in interpr., we must identify the “X.” The fairly rare word *pūriṣa-* (7x, plus *pūriṣín-* 5x and *pūriṣyā-* 1x) is found twice in this hymn, close together: the 2nd occurrence is *pūriṣam* two vss. later (X.27.23d), also pāda final. And it is worth noting that the intervening vs. contains a phonologically similar form in the same location, *pūruṣādaḥ* (22b), seemingly to tie the three vss. together. On the general semantics of *pūriṣa-* see comm. ad I.163.1. Unfortunately the presence of two forms of the word in proximity here doesn’t help in the interpr. of either. The acc. in 23d must be either the object or the goal of a form of *√ vah* ‘convey’, probably a goal, since *pūriṣa-* appears sometimes to be a place. See, e.g., the other two passages with abl. *pūriṣāt*, where it is conjoined with *samudrāt* (I.163.1, IV.21.3). The usage of the occurrence in vs. 23 does not appear to be closely connected with the one here, as discouraging (and counterintuitive) as that may be. Here the association is with the sun in heaven. Now in the riddle hymn in I.164.12 the possessive deriv. *pūriṣín-* is used of a heavenly body (vel sim.) “in the further half of heaven” (*divāḥ ... páre árdhe*), which is *pūriṣín-* ‘possessing overflowing fullness’. Most interpr. take this as a ref. to the sun (or to the year)(see, e.g., Ge ad loc.), though the publ. tr. (JPB) identifies it as the moon. If it is the sun, our phrase would be the syntagm underlying *pūriṣín-*, with gen. *sūryasya* dependent on the noun *pūriṣa-*: “the overflowing fullness of the sun.” I suggest that this “overflowing fullness” is a reference to its rays, the overwhelming torrent of heat and light coming from the sun, which in some situations, like this one, can be dangerous and harmful.

Meanwhile the pulverizing *vájra-* is inflicting its destruction.

As for the second hemistich, we should first note two things: 1) pāda c *śráva íd enā paró anyád asti* is very similar to nearby (though attributed to a different poet) X.31.8 *naítāvad enā paró anyád asti* “There does not exist another of such kind beyond that”; 2) *ávaḥ* ‘below’ (as in pāda b) and *parāḥ* ‘beyond, above’ are paired elsewhere: I.164.17, VI.9.3, X.17.13, 67.4; cf. also *avástāt ... parástāt* X.88.14, 129.5 and pairings of *ávava-* ‘lower’ and *páraḥ* I.164.17–18, 43, VI.9.2. Our passage seems to be contrasting the mayhem and devastation happening below the sun (b) and something else that is found beyond or above it (c). And that something else is fame (*śrávaḥ*). I now think that we have here a little whiff of the inherited Indo-European trope of inevitable death and “imperishable fame.” In the sublunary (or in Vedic terms sub-solar) world, the Pulverizer – Time as a *vájra* – keeps pulverizing, but beyond it we can look forward to *śrávaḥ*. I would now significantly emend my tr. of c to “But there exists something else beyond this – just fame.”

The last pāda develops this thought, but it presents difficulties of its own. The principal curiosity is that it contains the only *plural* of the abstract noun *jarimán-* ‘old age’, namely nom. pl. *jarimāṇaḥ*. It is difficult to imagine what a plural of such an abstract would imply, and both Ge and the publ. tr. don’t try: we render it as a singular, “das Alter,” “old age.” But I now think it should be taken seriously, and not by transforming it into a covert possessive adj., “aged (ones),” however tempting. But I am stumped – does it refer to the old age(s) belonging to generation after generation / cohort after cohort of humans? I think this the most likely of several not very good possibilities. From time immemorial the old age characterizing the current population has crossed to the other world, where fame awaits, but there is always more old age in this world because there are always more people growing old. I am not entirely convinced by this interpr., but I don’t now see a better one. And I do not see how to render it into English effectively, so I reluctantly stick to the singular of the publ. tr. One curiosity: if pādas c and d are closely connected, as seems likely and if imperishable fame is at issue, there is a significant departure

from the standard IE ideology, which generally connects *early* death and eternal fame, not old age.

With Gr I interpr. *avyathī* as an instr. sg., here used as an adverb – in the publ. tr. “unwaveringly.” In keeping with my new interpr. of the pl. *jarimāṇaḥ* I wonder if it is meant *not* to express a resolute unhesitating progress (as implied in the publ. tr.), but rather to indicate that there is no gap between the various old ages as they cross.

X.27.22: As indicated in the publ. intro., I think that this vs. concerns the fire, esp. the ritual fire. As I say there, the unpredictability of fire’s appearance from the places where it lies latent seems to negate the inexorable progress of time as depicted in vss. 20–21, and though fire can be frightening and destructive, it also makes possible the sacrifice, which is the bridge between the human and the divine and between this sub-solar realm and the desirable one beyond. In this way it makes the sacrifice the implicit solution to the despair induced by the destruction wrecked by time. This is, of course, only one possible interpr. of the vs., and not all of the vs. fits it well. Ge (intro.) has an entirely different take: that the singer needs Indra’s protection, because the arrows of death are threatening everywhere. I find this hard to detect. In his n. 22 he suggests the following associations: the tree is the bow, the cow the bowstring, and the birds the arrows. This is not impossible, I suppose, but I’d expect at least some clue that archery was the suppressed theme and that there are two levels of extreme metaphors. For me, “held in check in every tree” (*vrkṣé-vrkṣe nīyātā*) refers to fire’s immanence in all wood; “the cow will bellow” (*mīmayad gaúḥ*) to the roar of a kindled fire, and the “man-eating birds” (*váyah ... pūruṣādaḥ*) to the flames, which are capable of destruction. On the role of the cmpd *pūruṣādaḥ* in knitting together vss. 21–23 phonologically, see comm. ad vs. 21.

The second hemistich expresses the common contrast between the fear that destructive fire (forest fire and the like) inspires and the ritual activity that takes focuses on it, esp. the soma sacrifice to Indra. I would be inclined to replace my “though” with “while.”

X.27.23: Old limits his comment on this vs. to noting its “absolute Dunkelheit,” a disheartening description for anyone who takes it up. However, on the whole it seems somewhat more penetrable than the vss. that precede it. Ge (intro.) suggests that it picks up from vs. 15, which I think is essentially correct. Since in my view vs. 15 concerns the primal institution of the sacrifice, I take that to be the topic here as well, with, as in vs. 15, cooperation between groups depicted as essential to establishing this institution. Ge by contrast takes it as depicting the creation of the world. He gives extensive notes on this vs., but I do not find them persuasive and will not for the most part engage with them.

By my interpr. *māna-* and *kṛntātra-* are two successive stages of the laying out of the ritual ground. First the ground must be measured ($\sqrt{mā}$: *māne*), and then the boundaries of the ground must be defined. I consider this to be expressed by *kṛntātra-*. Now this fairly rare stem, presumably derived from $\sqrt{kṛt}$ ‘cut’, is found once elsewhere in the RV, describing a landscape feature, in the Vṛṣākapi hymn, X.86.20, where it is conjoined with *dhānva* ‘wasteland’ and I tr. ‘chasm’ (perhaps better ‘cleft’). But the word has an abstract sense in AB V.16 *yad ratham̐taram̐ syāt kṛntatram̐ syāt* “if it were to be the Ratham̐tara, there would be cleavage (of the Stomas)” (tr. Keith), with regard to the choice of sāmāns in a particular ritual sequence. I see such an abstract sense here: the “cleaving” involves the tracing of the boundaries. Recall that in classical śrauta ritual this is done with a *sphya*, a wooden sword (see, e.g., Re, Vocab. du rit. véd., s.v.), presumably making a shallow trench. Why the subjects “come up” (*úd āyan*) from this activity is

unclear to me, unless it is a sort of pun: since the *kṛntātra*- can also be a cleft or chasm in the earth, the shallow trench can be conceived of as a deep space from which its makers must climb out.

Pāda c presents a paradox: three entities ‘along the water / adjacent to water’ (vel sim.; *anūpā*) heat the earth (*trāyas tapanti pṛthivīm anūpāḥ*), with the heating and the water apparently incompatible. Ge renders *anūpāḥ* as “Büffel,” commenting (n. 23c) that the certain attested meanings of *anūpā*- are “am Wasser wohnend, Marschland, Küstenland; Büffel.” But he gives no reff. for the last (or indeed for the others), and I can find no Vedic exx. for Büffel. Instead the only other ex. in the RV, *anūpé* at IX.107.9, must be a place, not an animal (I tr. “at water’s edge”), and the deriv. *anūpyā*- in the AV (I.6.4 ≅ XIX.2.2) is found in a list of waters from different sources, including “waters from marshy places.” See also ŚBK III.1.1.7 ... *yó vā asyāḥ pṛthivyā āpy anūpè ‘nyātrānyatra khānen naivāpò ‘bhivindét* “... who, even though he would dig in place after place in marshy (land) of this earth, should not find water.” (Cf. EWA s.v., esp. with ref. to the Pkt. *anūva*- ‘marshy place’.) On this basis I think we can assume that the three *anūpāḥ* in our passages are locales, not animals, and that they are places that can be configured as marshy or damp in some way. Leaving this last qualification aside for the moment, the best candidates within the context of my interpr. are the three fires or fire places on the ritual ground, which certainly “heat the earth.” But why “marshy” or “damp” or “adjacent to water”? This is harder: all I can suggest is that they are so called because liquid oblations are poured into them or perhaps (though I think less likely) that the hearths are adjacent to where these oblations are kept before they are poured.

The final pāda contains not only the difficult *pūrīṣa*- (see comm. ad vs. 21) but also a hapax with non-IA phonology, *bṛbūka*-. Several clues—and several questions—emerge from the pāda: the subject / verb structure is clear: *dvā vahataḥ* “two convey,” though the identity of the “two” is not. The rest of the pāda consists of two apparently acc. sg. masc or neuts: *bṛbūkam* and *pūrīṣam*. Are the two to be construed together, in which case *bṛbūkam* is an adj. (so Gr’s tentative ‘dicht, dick’)? are they parallel but separate objects of *vahataḥ* (so Ge: “zwei führen das Wasser(?), den Wasserquell her”)? or is one the object and one the goal of *vahataḥ*. I tentatively opt for the last.

As for *bṛbūka*-, although it is a hapax, it patterns phonologically with a few other words: 1) a PN in a dānastuti (VI.45.31, 33), the sacrificial patron named *bṛbū*-, presumably from a non-Ārya family but assimilated into Ārya society; 2) *bṛbād-uktha*-, a bahuvr. modifying Indra in VIII.32.10, q.v. I adopt in my tr. there a suggestion of Weber’s that it means ‘of stammering speech’, which might be a little joke at Indra’s expense (strong but tongue-tied). I suggest that Indra is also the referent here, and that he is being conveyed to the sacrifice—the default expectation, since this is an Indra hymn and Indra hymns hope for and anticipate the epiphany of Indra at the sacrifice (see next vs.). The “two” that convey him would then be his usual pair of fallow bays, who are regularly the subj. of dual forms of √ *vah* (see, e.g., nearby X.23.3, as well as I.84.2, 165.4, X.96.6).

The other acc., *pūrīṣam*, is then the goal to which Indra is being conveyed. For the basic semantics of this word see comm. ad I.163.1, where I tr. ‘fertile ground’ to reflect the range of “fruitful, loose rich earth, bottom land, as well as overflowing fullness.” I take it here to refer to the sacrifice and would now alter the translation to “to the fertile ground (of the sacrifice).” It thus continues the metaphorical semantics of *anūpāḥ* ‘marshy places’ as a designation of the ritual fires. Both *anūpāḥ* and *pūrīṣam* express the luxuriant richness and overflowing fertility of well-watered places—esp. piquant since the ritual ground is dominated by fires.

X.27.24: As the hymn limps to the end, there comes no blinding moment of clarity – even though, as pointed out in the publ. intro., this final vs. appears to be propounding an instructive truth. The first half of the vs. addresses someone in the 2nd sg., and so the first question to arise is – who? Ge clearly thinks it is Indra, the nominal dedicand of the hymn, and I am inclined to agree, though I think it is possible (no more than that) that it is the singer or another mortal. If Ge is correct (intro.), the poet is urging Indra to come out of hiding, as the sun does. This would follow appropriately on the last pāda of vs. 23, where, by my interpr., Indra is being conveyed to the sacrifice, and would express the usual hope for an epiphany of that god on the ritual ground.

My current interpr. of the vs. differs in certain respects from the publ. tr., beginning with the first phrase: *sā te jīvātuh*, which I would now render “This is living for you.” By this I think the singer means not only that Indra’s epiphany on the ritual ground is the way he conducts his life (/ is his job), but also that in some sense it provides him with life and refutes the doubts about Indra’s existence that are expressed from time to time in the RV and the wavering devotion to him complained about in vss. 1–4 of this hymn.

The gender of *jīvātu-* is somewhat at issue. Here it seems to agree with fem. *sā*, but in X.60.7 we find *ayám jīvātuh* “here/this is life,” as if masc. However, AiG II.2.668 points out that the same vs. contains the phrase *ayám mātā* “here/this is the mother,” so in that context *ayám* is not diagnostic of a masculine. Gr and Old also explicitly identify *jīvātu-* as fem.

This means that the following *tāsyā* cannot be coreferential with *jīvātuh*. With Old I take it as referring to the content of the knowledge Indra is supposed to have, which is stated in what follows. I take the actual content of the knowledge to be the model given in cd, that of the (rising?) sun freeing itself from concealment, while pāda b is the advice itself: don’t keep yourself hidden. This pāda is very similar to VII.100.6 *mā várpo asmád āpa gūha etád, yád anyárūpaḥ samithé babhūtha* “Do not hide away this shape from us, when you have appeared in another form in the clash,” though the addressee is Viṣṇu, not Indra and the word for ‘clash’ is different (*samithé* rather than our *samaranyé*, which recalls *samāraṇa-* twice in vs. 3). In our case I don’t think that “another form” (*anyárūpa-*) is at issue, just that Indra should not conceal himself at all—though of course Indra’s notorious shape-shifting might also be referred to.

As for the model in cd, we should first address the phonologically problematic word *busa-*, a Vedic hapax, which, like *bṛbūka-* in vs. 23, shows non-IA phonology. The word is possibly related to a later, identical word for ‘chaff’, also found in MIA and NIA, as well as some NIA words for fog and drizzle (see EWA s.v.). In our context ‘mist, fog’ makes good sense, since the sun is often concealed by such while it is rising, but often breaks through it with beams of light.

In d *pādú-* is another word isolated in Vedic. Contra Old, I very much doubt it means ‘shoe’ (despite later *pādukā-* ‘shoe’). Bad enough for the sun to have a foot—a shoe seems an image too far! As indicated in the publ. intro., I think the idea is that, as the sun rises out of the mist, a sunbeam shoots down towards the earth, as if shaking itself free of a garment of mist or fog. On this as a possibly optimistic final note, see publ. intro.

X.28 Indra

In addition to Ge, there are tr. by Doniger (146–48) and Schnaus (Dialoglieder, 203–32). Both Old and Ge provide lengthy introductions and assessments of the general sense and tone of the hymn. None of these treatments convinces me (esp. the true and false Indras of Old and Ge), and I will not engage with them in detail.

This hymn is half the length of the preceding one, and serves as a sort of complementary companion piece, with Indra ostensibly offering simple instruction appropriate to the intellectual level of the artless and naïve, rather than framing it in the deep obscurity of most RVic revelations, incl. those in X.27. However, of course, this “simple instruction” is not so simple after all, though it is couched in the form of abbreviated animal fables, like those used in the Pañcatantra and such texts for the instruction of the callow young. The hymn is also tightly structured as an omphalos hymn. I have discussed the hymn in detail in a number of publications, in addition to the publ. intro. See, for a brief characterization, the Brereton–Jamison Rigveda Guide (2020), esp. pp. 152–53. For the structure, see my 2004 “Poetry and Purpose in the R̥gveda: Structuring Enigmas,” in *The Vedas: Texts, Language, and Ritual* (ed. A. Griffith and J. Houben), 237–49, and pp. 80–83 in my 2007 *The Rig Veda between Two Worlds*; for the animal fables, my 2009 “The Function of Animals in the Rig Veda, RV X.28, and the Origins of Story Literature in India,” in *Penser, dire et représenter l’animal dans le monde indien* (ed. Nalini Balbir and Georges-Jean Pinault), 197–218. I will not reproduce all of these discussions in what follows.

Like the early vss. of X.27, the hymn is a dialogue, mostly between Indra and the poet-sacrificer, but introduced by the Sacrificer’s Wife, a controversial role in the late RV, as I have discussed at length elsewhere. As disc. below, esp. ad vs. 1, I think the brief presence of the Sacrificer’s Wife here places this hymn in the group that obliquely addresses the introduction of this ritual role in the late RV. As in other such hymn Indra seems to favor this innovation. I do not entirely understand why this complex hymn is introduced by this fleetingly present female, but as I suggested above it may be to call attention to the new ritual model that involves a Sacrificer’s Wife and perhaps to set the stage for the animal stories, simple instruction adapted perhaps for the limited intellect of the woman.

X.28.1: This vs. is clearly spoken by a woman, because the kinship term *śvāśura-* ‘father-in-law’ in the phrase *māma ... śvāśuraḥ* only refers to the father-in-law of the wife, given the patrilocal bias of in-law terminology. There is no symmetrical usage for in-laws of the husband. See Macd/Keith Vedic Index s.v. *śvāśura*, where they assert that “not till the Sūtra period does it include the ‘father-in-law’ of the husband.” (Schnaus, 207–8, suggests that the singer, as son-in-law of Indra, speaks this vs. and that a daughter-in-law does not appear in the hymn, but she fails to understand the asymmetry of the kinship terminology.) The speaker should be the wife of the sacrificer/singer, the male who assumes the role of dialogue partner with Indra in the rest of the hymn. And her father-in-law is presumably Indra: after she marks the surprising absence of her father-in-law, Indra appears, and this is unlikely to be a coincidence. But we should keep in mind that the identification Indra=*śvāśura-* is only implied, not stated. (See also the disc. below ad pāda c of the roasted grains [*dhānāḥ*].) The female speaker vanishes after the first vs. and is not referred to again. The vs. is also, in my view, typed as women’s speech by the concentration of perfect optatives: *jakṣ(ī)yāt ... papīyāt ... jagāyāt*. On the pf. opt. as such a marker, see my 2003 “Women’s Language in the Rig Veda?” (Ged Elizarenkova), pp. 160–64, esp. 161.

The phrase *viśvaḥ ... anyó arīḥ* is variously interpr., the different readings being driven in great part by likewise variable interpr. of the controversial word *arī-*. For a summary of the various suggestions for this phrase see Schnaus, Dialoglieder, 204. The most natural interpr. of the three words is as a single unit, “every other *arī-*,” and this is completely compatible with both the context and the view of the meaning of *arī-* that I follow (see comm. ad IX.79.3), namely that of a stranger who is nonetheless a member of the larger Ārya society. In context, if all *other arīś*

have come, we must conclude that her father-in-law is also an *arí-*. Further, if her father-in-law is Indra (see immed. above), then Indra also must be part of the *Ārya* community – and in one sense who embodies the *Ārya* better than Indra?! Why then is he a ‘stranger’? Given Indra’s busy and peripatetic life as the most active god of the Vedic pantheon, I think we can assume that the standard model of the patrilocal joint family, with the father-in-law living with and presiding over his sons and their wives and families (as exemplified, e.g., in the *Purūravas* and *Urvaśī* hymn, X.95.4), did not hold in this case, and Indra was at best an occasional (and not always reliable) visitor.

This first clause contains a *hí*, which is quite unlikely to have its usual causal value: **“Because every other stranger has come, my father-in-law has not come.”* One doubts that Indra is avoiding the sacrifice because he doesn’t like the guest list. Hettrich (*Hypotaxe*, 177) ascribes an “adversative” value to *hí* here, which is plausible, though I am not entirely certain how it would develop from the usual sense of *hí*. Perhaps because of the otherwise universal attendance of *arís* depicted in pāda a, the absence of the father-in-law is all the more noteworthy.

In b the poss. 1st ps. prn. *māma* is triply emphasized: by being a first-position tonic pronoun followed by two emphatic particles *íd áha*. It is not clear to me why “*just my* father-in-law” has this emphasis: if this soma sacrifice follows the standard later *śrauta* model, implicit also in the RV, of having a single sacrificer (and so a single Sacrificer’s Wife), the absence of other fathers-in-law would need no remark, since no other daughters-in-law should be participating in the sacrifice. It is all the more striking because our 1st-ps. female speaker disappears from the hymn after this 1st vs.

The three pf. opts. in the 2nd hemistich are ordinarily interpr. as expressing past irrealis “he should have Xed.” I have argued at length against this interpr. of the pf. opt. in general; see esp. my 2009 “Where Are All the Optatives? Modal Patterns in Vedic,” in *East and West: Papers in Indo-European Studies*, ed. Kazuhiko Yoshida and Brent Vine, 27-45. I will not repeat the arguments here in detail; suffice it to say that the attested pf. opts. are almost always the only optative stems to their root system and therefore presumably simply express pure optative value, since they are not contrastive with pres. or aor. optative stems. Although in context here, past irrealis could work (“he should have eaten,” e.g.), in fact a straight opt. sense “he should eat / be eating” fits better: the sacrifice is in progress, and her father-in-law, not yet arrived, should be eating and drinking *now*.

As Old points out, *jakṣīyāt* is problematic for two reasons: the form should be **jakṣyāt* and the transmitted form produces an over-length pāda. Both problems can be solved by reading **jakṣyāt* and explaining the transmitted form as a redactional change induced by pāda-final *papīyāt*. This is no doubt the correct solution. I do wonder, however, if this form could be another, indirect piece of evidence of women’s speech, with the pseudo-distraction of the cluster -*kṣy-* to -*kṣīy-* reflecting the svarabhakti vowel sometimes found in Pāli optatives like *jāniyā-* beside *jaññā-* (see, e.g., v. Hinüber, *Überblick*, §440; Geiger/Norman, *Pali Gr.*, §129A (1), etc.). A MIA-type form would reflect women’s lower speech register, and the overlength of the pāda would call attention to it.

The roasted grains (*dhānāḥ*) that provide the food portion of the sacrificial meal may provide more indirect evidence that Indra is the father-in-law in question, because *dhānāḥ* are a fairly rare part of the ritual menu and are (almost?) always associated with Indra and, esp., his two fallow bays, which are given *dhānāḥ* to eat in III.35.7, with *dhānāḥ* offered to Indra generally in conjunction with his horses (I.16.2, III.35.3, 43.4, III.52.7). They are also associated with the Third Pressing (see, e.g., III.52.6), which is in large part the domain of the Sacrificer’s

Wife, as I have discussed at length elsewhere (SW/SW, esp. 132–46). This may be the explanation for the question I raised above: why does the Sacrificer’s Wife speak the first vs. of the hymn? She would be esp. active in the Third Pressing, when *dhānāḥ* are employed in an offering to Indra, and this establishes an association between women and *dhānāḥ*, found also in the Apālā hymn (VIII.91.2), on which see my Ravenous Hyenas 161–65. The most prodigious use of *dhānāḥ* in the Third Pressing is in the Hāriyojana graha, the cup for “yoking the bay horses,” in which the roasted grains are liberally mixed with the soma (see, e.g., Hillebrandt, Rit Lit. 133 and MŚS II.5.4.2–7). Note that our vs. ends ... *púnar ástaṃ jagāyāt* “he should go home again”: Indra’s departure for home is the action that would immediately follow the yoking of his horses. On the Hāriyojana in the RV, see I.61.16, 62.13. Thus the female speaker is talking specifically about the behavior Indra should exhibit at the Third Pressing, where she plays an important role.

The third of the three pf. opts. we have been discussing is *jagāyāt*, a puzzling form (see Kü 161-62). It is the only pf. form to the root $\sqrt{gā}$ in Vedic (save for a single, unconnected med. form in JB; Kü 162), which builds a very well-attested redupl. pres. *jīgāti* and an also well-attested root aor. *ágāt*. Moreover, as Kü also points out, the full-grade root syllable is morphologically aberrant; we should expect **jagīyāt*, which would match *papīyāt* to parallel root $\sqrt{pā}$, which ends the preceding pāda. The form is all the more surprising because it follows two pf. indic. forms to the synonymous root \sqrt{gam} in the same vs., likewise pāda final: *ājagāma* (a), *ājagāma* (b). The 3rd sg. pf. opt. to \sqrt{gam} , *jagamyāt*, is metrically identical to *jagāyāt* and would therefore fit the cadence, and that form is well established in the RV, with 4 independent occurrences, one in a repeated pāda with 8 occurrences. Moreover, another form of that opt. paradigm, the 1st sg., occurs in the phrase “go home,” like here: I.116.25 #*ástam ... jagamyām*#. Since all circumstances conspire to place **jagamyāt* at the end of our vs., the fact that it is avoided in favor of a form to a non-existent pf. stem with the “wrong” grade of the root demands an explanation. The poet must be calling special, even frenzied, attention to the form – but why? I suggest that he is forcing us to recognize the speech in vs. 1 as *woman’s speech*, and doing so by this concentration of pf. opts., the first two legitimate (more or less, though see remarks on *jakṣīyāt* above) and the last a bit of a monstrosity. He seems to be conveying that his female speaker *had* to use a pf. opt. and, lacking one, she made it up, rather incompetently, on the fly, producing something that no *man* would say. Had he used the innocuous and well-formed *jagamyāt* the sociolinguistic point would have been lost, since men in fact use this opt. all the time. Now how did our hapless female produce the form? Probably starting with the redupl. pres. *jīgā-(ti)*, which only requires vowel-substitution in the redupl. to get a perfect stem. (For another woman using the opt. to a redupl. pres. as the moral equivalent of a pf. opt., see Yamī’s *bibhīyāt* in X.10.9 and comm. there.) There are no modal forms to this pres. stem (nor would we expect an opt., at least by my rules) and also no (pre-C) zero-grade forms to the root at all (only pre-V part. *jīg-at-* 1x, 3rd pl. root aor. *ag-uḥ*), so our female speaker would have been on her own for ablaut and would have chosen just to reproduce the full-grade stem *jīgā-* → *jagā-* before the optative suffix.

I realize this is a small point, which is entirely elided in translation and which even the most punctilious philologists focus their lenses on only in order to comment on the morphological disruptions of the form. But if we evaluate the form in context—in the context not only of linguistic form but of “content,” I think it tells us a great deal about how the poet is setting up his hymn and what he wants us to take away from it.

X.28.2: Indra now makes his appearance at the sacrifice and takes the speech. His first hemistich is in high-register Rigvedic rhetorical style, in sharp contrast to the first speaker. As often in such discourse, the subject is not identified. Old (fld. by Schnaus 205–6) suggests that the pf. *tasthau* is 1st sg., which would match 1st ps. *pāmi* in c and constitute an *ātmastuti*. However, the *sá* that opens the pāda makes that interpr. impossible. In my treatment of “*sá* figé” (HS 105 [1992] 213–39) I show that Rigvedic forms of the *sá/ tá*m pronoun with 1st ps. reference are vanishingly rare (see esp. pp. 217, 230–31), and in particular there is only one ex. in the whole RV with sg. *sá* and a 1st ps. verb. The standard view (Gr, Ge, etc.) that *tasthau* here is 3rd ps. must be correct. Who then is the referent? Although those who take it as 3rd ps. (Ge, Doniger, etc.) are not explicit, I infer that they think it’s Indra praising himself in the 3rd ps. However, parallel passage with the same rhetoric point in a different direction: to Soma. For pāda a cf. the almost identical X.86.15 (also cited by Ge n. 2a) *vṛṣabhó ná tigmásṛṅgo ’ntár yūthésu róruvat* “Like a sharp-horned bull constantly roaring within the herd,” whose referent is Soma (see also *tigmásṛṅga-* by itself in IX.97.9) —in addition to numerous occurrences of the intens. part. *róruvat-* in IX (e.g., IX.86.7, 91.3, in both of which the part. modifies *vṛṣā* ‘bull’), also characterizing Soma. As for b, passages like IV.54.4 ... *prthivyā váriman ... vārṣman diváh* (cf. also III.5.9) suggest that we should supply *diváh* with *vārṣman* here (contra Ge, though he partially concedes in n. 2b). For Soma as referent in this type of phrase see VI.47.4 *ayám sá yó varimāṇam prthivyā varṣmāṇam divó ákṛmod ayám sáh* “This is the one [=Soma] who created the expanse of the earth; who created the height of heaven is this one here.” There is one major piece of counterevidence to my claim that ab refers to Soma: a similar phrase in the next hymn, also by Vasukra: X.29.7 *sá vāvṛdhe várimann ā prthivyāh* “He has grown strong on the expanse of the earth.” The subject here is presumably Indra, though it is not excluded that it could be, or could be in addition, Soma. Weighing all the evidence, I find the strong association of pāda a with Soma and the association of the phraseology of pāda b with Soma elsewhere stronger on balance than X.29.7c, though I acknowledge that it is somewhat awkward.

Although this is not strictly relevant to the interpr. of this passage, both of the *-man*-stems in this passage show a curious distribution. Here we have the endingless locatives *vārṣman* and *váriman*, both root accented. Both are identified as neuters by grammars and lexica, but in fact both stems are found in the RV only in the loc. (*váriman* 5x, *vārṣman* 5x) and so their gender is not assured – though of course root-accented *-man*-stems *should* be neut. They both have suffix-accented stems attested beside them, *varimán-* and *varṣmán-*, identified as masc. and both having clear masc. forms (e.g., acc. *varimāṇam*, *varṣmāṇam*). But these suffix-accented forms do not have the expected poss. adj. sense of, e.g., the Paradebeispiel *brahmán-* to n. *bráhman-*, but seem identical in meaning to the root-accented forms. I have no explanation (beyond positing a cyclic ‘height’ >> ‘having height’ → ‘height’, which may be correct but is not very satisfactory).

From this showy high-style evocation of cosmic Soma, in the 2nd hemistich Indra switches to a balder and more idiomatic presentation of the expected tit-for-tat: my protection for your soma. The first hemistich has no further purpose, I’d say, than to establish Indra’s rhetorical superiority and to cloak the soma he is demanding in exalted language.

In c Ge takes *vṛjāṇeṣu* as referring to troubles in battle: “(Kriegs)bedrängnissen,” but *vṛjāṇa-*, a deriv. of √ *vṛj* ‘twist’, means in the first instance ‘enclosure’ and, by metaphorical development, a group of affiliated people (the same development seen in Engl. expressions like “circle of friends”), and then simply community. It is so used in the previous hymn, X.27.4–5, also spoken by Indra.

On *kukṣí-* as ‘cheek’, not ‘belly’, see my 1987 “Linguistic and Philological Remarks on Some Vedic Body Parts” (Ged. Cowgill), pt. II “*kukṣí* (and *āsyā*),” pp. 71–81, where I argue for the sense ‘cheek’ on the basis of the consistent dual number of this word and its association with the head and its parts in both RVic passages and YV body part litanies, as well as a telling ŚB passage.

X.28.3: It is generally assumed, correctly in my view, that the sacrificer/singer now enters into dialogue with Indra; Indra’s voc. *jaritar* in the next vs. (4a) essentially guarantees this. He briskly and perhaps a bit testily answers Indra’s possible implication that the sacrificial arrangements for the god have been inadequate. In 2d, in exchange for his protection (2c), Indra demanded a *sutásoma-* ‘one who has soma pressed / has pressed soma’, in the form of a *bahuvrīhi*, and 3ab responds to that, with a full VP utilizing the same words decomposed: *sunvānti sómān*. The speaker makes sure to note that not only has the soma been pressed, but Indra drinks it (*píbasī*)—implicitly linking this statement to his wife’s phrase in the opt. *sómam papīyāt* “he should drink the soma” in 1c. His wife’s words about food, *jakṣīyād dhānāḥ* “he should eat roast grains” (1c), are also echoed, though not lexically, by 3c *pácanti te vṛṣabhāṁ átsi teṣām* “They cook bulls for you. You eat them.” As noted above ad 1c, the roasted grains are associated with the Third Pressing and the Wife and are appropriate in her speech; the cooked bulls are perhaps more masculine. (See the cooked bulls in the preceding hymn, X.27.2, 3.)

Although adjectival *tūya-* appears only here, against 21 occurrences of the adv. *tūyam*, there seems no reason either to emend it or (as Ge does) to render it as an adv. despite its clear acc. pl. form.

The identity and function of *yán* (in sandhi before *m*) in d is disputed. Does it represent the subordinating *yád* (so Pp, Schnaus p. 207, implicitly Doniger), or the masc. nom. sg. pres. part. *yán* to *√i* (so Old, flg. Keith), or both (Ge n. 3cd). I find Ge’s interpr. the most appealing and it is reflected in the publ. tr. “coming when you are summoned.”

The instr. *prkṣéna* is construed by Ge with his pres. part. *yán*: “mit Ungestüm kommend,” but this would be an unusual sense for *prkṣá-*, which generally means ‘strengthening, nourishing; strengthening nourishment’; see comm. ad II.34.3. Gr takes it as a PN; but, although it seems definitely to be a name in II.13.8, there seems no reason to interpr. it as such here. (See Mayr PN, s.v., where he accepts it for II.13.8, but hesitates about this passage.) Schnaus (206–7) takes it as an adj. qualifying the (non-overt) personal agent of *hūyámānāḥ* (“von einem Kraftvollen herbeigerufen”). I see it rather as the nominalized ‘nourishment, food’ and a real instrument instrumental, with *√hū*. Cf. IV.34.6 ... *námasā hūyámānāḥ* “being summoned with reverence.”

X.28.4: Indra’s instruction proper begins here. He introduces it with an injunction to his interlocutor to pay close attention to it, using the fronted near-deictic *idám*. To convey its force, the pāda might be better tr. “This (speech) of mine – mark it well.” There follow three tiny vignettes of counter-intuitive events, one per pāda, the second two (c, d) hinting at animal stories, each barely summarized by its climactic act. The first (b) describes in unequivocal fashion a physical impossibility: flotsam floating upstream. This provides the framework within which to interpr. the more ambiguous animal scenes not only in this vs. but in the vss. to come. The overall lesson of all these condensed episodes appears to be that, using the tools and skills appropriate to its species, the weak can best the strong. This may seem like a strange message for Indra to be conveying, since his strength is so overwhelming that he doesn’t need stealth or cunning to prevail. But perhaps it is his hint to the mortal singer/sacrificer that though he is far

weaker than the god, his device—the sacrifice—can be appropriately wielded to exert some control over the god, just like the fox over the lion.

In c Ge (fld. by Doniger) tr. the sense we expect: “Der Fuchs hat von hinten den Löwen beschlichen.” Unfortunately this is not what the Skt. says: Ge’s “von hinten” renders *pratyāñcam*, which does not mean “from behind” but quite the opposite: “facing towards.” Moreover, the adj. qualifies the lion and is neither an adverb nor a modifier of the fox. Schnaus (209–10) faces the problem more squarely, tr. “Der Fuch hat den gegen ihn gewandten Lösen beschlichen” and suggesting that instead of using its usual craftiness and slyness, the fox is engaging in direct confrontation with the lion. Although this admirably reflects the meaning and morphology of *pratyāñcam*, to my mind it doesn’t quite capture what’s likely to be going on: direct confrontation is not what the verb *atsār* ‘crept up on’ implies, and direct confrontation is also unlikely to end well for the fox. My own tr., “the lion, his opponent,” is, I admit, a cop-out. I now think it’s possible that the mismatch between *pratyāñcam* and *atsār* may be the point of the passage: though the lion is directly facing the fox, the latter still manages to creep up on him by stealth and take him by surprise by attacking him frontally. The most widespread fox in India, the Bengal fox, preferentially inhabits open grassland or scrub forest and is nocturnal, both of which could mask its stalking. I would now tr. the pāda “The fox crept up on the lion, (though) he was facing him.”

Note that *atsāḥ* (underlying *atsār*) echoes *ātsi* in 3c, to two entirely different roots. (Noted also by Schnaus, 210.)

Pāda d also depicts a weaker, smaller animal (the jackal) taking on a stronger one (the boar), though here the method of hunting seems to be one standard for the jackal— judging from the Wikipedia description of the way golden jackals, which are widely distributed in India, hunt: “Once prey is located, the jackal conceals itself, quickly approaches its prey and then pounces on it. ... They hunt rodents in grass by locating them with their hearing before leaping into the air and pouncing on them.” The root √*tak* seems to be esp. used for the swooping of birds, and our verb *nīr atakta* here may express precisely an airborne pounce. Google “jackal pouncing” for impressive images of a jackal in midflight.

Another phonetic figure, *atakta kākṣāt*, also noted by Schnaus, 210.

X.28.5: Once again the singer/sacrificer echoes Indra’s words, this time picking up Indra’s pf. impv. *cikiddhi* with a 1st ps. form to the same stem, *ciketam*, while substituting *etād* for *idām* to refer to Indra’s speech. He, perhaps disingenuously, emphasizes the intellectual gap between himself, a simple man (*pāka*-), and Indra, the clever one (*gṛtsa*-) who knows (*vidvān*). As disc. in my 2009 “Function of Animals” (pp. 216–17), the *pāka*- regularly seeks instruction or enlightenment from someone who is *gṛtsa*- or more knowledgeable (*vidúṣṭara*-) or discriminating (*vīcetas*-)(see, e.g., I.31.4, IV.5.5). As I also argue there, the animal fables with which Indra has already begun are the appropriate vehicle for the instruction of such a man – and, quite possibly, for his wife, as I suggested above.

The other quality the singer attributes to Indra, strength (*tavās*- ‘strong’), seems unconnected with Indra’s intellectual attainments, but it’s worth noting that *gṛtsa*- and *tavās*- are paired elsewhere (see III.1.2 and nearby X.25.5 two vss. after an occurrence of *pākyā*, X.25.3; see comm. ad X.25.5). Perhaps the idea is that the two qualities together define an ideal, someone with both brains and brawn (in the Engl. phrase).

The verb *ciketam* is most likely a pf. injunc in modal usage; so KH (246), Kü (175), though in n. 186 Kü allows the possibility that it is a subjunctive with 2ndary ending, and Lub identifies it as a subj.

On the lexeme *ví√vac* see comm. ad X.11.2, where I argue that it means ‘provide a decisive answer to a question’, a sense that certainly fits our context. For our particular phrase see VI.18.3 ... *tád ṛtuthā ví vocaḥ* “you will announce that at the proper season,” also of Indra. The injunc. here seems to have modal or future sense. *Pace* KH (263) I do not think it is a “hortative injunctive,” the functional equivalent of an impv. Rather the singer expects Indra to instruct him, but to do so at the time the god deems appropriate.

The timing is, in my view, expressed by the adv. *ṛtuthā* ‘seasonably, at the proper time’—contra the standard view (Gr, Ge, Doniger, Etter [Fragesätze, 204], Schnaus) that it means ‘truly’ / ‘richtig’ in this context. The base *ṛtú-* is of course synchronically completely distinct from *ṛtá-* ‘truth’ and means ‘right time, season’ (see EWA s.v.) both in terms of the regulation of time and, in ritual context, of the proper order of ritual acts, the ritual sequence. The adverb derived from this stem, *ṛtuthā*, should not switch its semantic allegiance to *ṛtá-*, and even in conjunction with the roots *√vid*, *√vad*, and *√vac* (despite Gr’s meaning 5) “in rechter Weise, der Wahrheit gemäss”) it refers to timely knowledge or timely speech.

What the singer expects Indra to expound to him, expressed in pāda d, is quite obscure, since it both lacks a verb and is couched in metaphor, indeed several metaphors. The subject is Indra’s chariot pole (*dhúr-*), “that part of the yoke which is placed on the shoulders of the animals drawing the chariot or cart” (Macd/Keith Ved Index s.v.), “Anschrirwerk, Gestänge; means of harnessing a horse to the car, pole, forecarriage” (Sparreboom, Chariots 132, citing KEWA s.v. *dhūḥ*). Because the two draught animals are attached to either end of the *dhúr-* with the chariot’s shaft between them, the two sides can be imagined as “halves” (*ārdha-*). Moreover, with a perfectly matched team, the *dhúr-* would be exactly parallel to the ground, but its actual angle is determined by the comparative heights of the two animals whose shoulders it’s attached to. Therefore, one side of the pole may be higher or lower than the other. See *uttarā dhūḥ* in the next vs. as well as VIII.33.18 and a similar phrase in X.102.10. In the latter two passages, esp. VIII.33.18, the chariot pole and the two yoked animals are a metaphor for marriage, with the higher end of the pole (just a little bit higher) ideally representing the husband. Although I do not think this is the primary sense here or in the next vs., it may be lurking, given the presence of the Sacrificer’s Wife in vs. 1.

Here instead I think the question has to do with who or what Indra plans to team up with. The word “half” invites us to consider a number of standard oppositional pairs: heaven/earth, gods/men, Ārya/non-Ārya, men/women, humans/animals, but I think in this case the answer is narrower: which sacrificer will fill the other side of the yoke? It is the usual worry that Indra will attend someone else’s sacrifice.

The adj. *kṣemyā* is the closest we come to a verb or verb substitute in the rel. cl. It is found only here in the RV, though it appears in other early Vedic texts: once in an impenetrable passage in AVŚ XII.2.49, more helpfully in passages in MS (III.2.2) and TS (V.2.1.7) concerning the Agnicayana, in which wanderers (*yāyāvarā-*) are contrasted with *kṣemyā-* ‘stay-at-homes, those at rest’. In my view, the singer is asking which sacrificer or group of sacrificers the (other end of) Indra’s chariot pole will rest upon. Ge (fld. by Doniger) takes *kṣemyā-* rather as ‘peaceful’, an interpr. he explains (n. 5d) as indicating that his pole is looking not for battle, but for peace. This seems to me misconceived: though the base noun *kṣéma-* can mean ‘peace’ as well as ‘repose, rest’, the war/peace dichotomy does not fit the context. Moreover, interpr. it as

‘resting upon’ gives the acc. *árdham* something to (quasi-)govern it, whereas a “peaceful chariot pole” leaves *árdham* entirely up in the air (Ge supplies “geht”).

X.28.6–7: With vs. 6 we arrive at the paired responsive vss. that form the omphalos of this tightly structured hymn in its exact center. Both vss. are spoken by Indra in my opinion, though most (e.g., Ge and Doniger, flg. Sāy.) divide them between Indra (6) and the sacrificer (7). The vss. begin identically: *evā́ hí mām tavasám* and continue with Indra’s extravagant self-praise, his *ātmastuti*. I disc. these vss. and their place in the hymn in my Animals art. (pp. 241–43), where I suggest that the vss. constitute the technical epiphany of Indra that was hoped for in vs. 1.

X.28.6: I take the subj. of *vardháyanti* to be the mortal sacrificers, harking back to the pl. subjects of *sunvánti* ‘they press’ and *pácanti* ‘they cook’ in vs. 3, where the singer affirmed that ritual offerings were being made to Indra. Cf., e.g., VIII.16.9 *índraṃ vardhanti kṣitáyah* “Indra do the separate peoples make strong”; alternatively it could be the soma drinks or the hymns or some other ritual offering, as in IX.46.3 *eté sómāsa índavaḥ ... índraṃ vardhanti* “these soma drops strengthen Indra.” In any case the subject belongs to the human realm, in my opinion. The *evā́* ‘in this way’ may be a blanket reference to these ritual activities as well as a ref. to those activities in vs. 3. I also take *tavásam* as a proleptic adj., the result of the action expressed by *vardháyanti*.

Indra’s response to the singer’s question about the chariot pole is given in pāda b in his typical hyperbole: his chariot pole is higher than lofty heaven. This would, in fact, not be a good arrangement for a yoked team. As disc. immed. above, the ideal position for a *dhúr-* is parallel to the ground or at most a bit asymmetrical (favoring the husband in the marriage metaphor). But here Indra’s end of the pole would be so high that it would be closer to perpendicular, which would make hitching up the other draught animal and driving the chariot quite challenging. But Indra of course does not aim to be a team player, but to assert his overwhelming superiority, and he may even have found the singer’s question about the location of his *dhúr-* somewhat insulting.

The *úd-* ‘up’ (in *úttara-*) in b is complemented by *ní* in the hostile verb *ní śísāmi* “I ‘grind down,’” an idiom found elsewhere (cf. VI.18.13, X.48.4 adduced by Ge n. 6c). In all three cases the obj. is neut. *purū́ sahásrā* “many thousands,” which phrase is also found in other contexts (I.62.10, IV.28.3, V.37.3, X.23.5). Interestingly, only in X.23.5 is a referent directly supplied: neut. pl. *ásívā* ‘the hostile’, but in IV.28.3 it is likely the Dasyus mentioned in the first hemistich, who are the referents of the gen. pl. part. *yātām* ‘of those going’ that depends on *purū́ sahásrā*. In any case in all three cases the object to be supplied to ‘grind down’ is enemies.

X.28.7: As noted just above, this vs. is generally assigned to the singer. I find this unlikely: I do not believe that the singer would— or could—claim for himself, in cd, the two signature actions of Indra, the killing of Vṛtra and the opening of the Vala cave, esp. with Indra on the scene. Even less likely is Old’s take, based on his belief that the hymn contains both a true and a false Indra; by his interpr. the false Indra praises himself in vs. 6, while the true one does so in vs. 7, though addressing the false Indra as “Indra” ironically.

There is one very good reason for the standard view: the vocative *indra* in pāda b. I recognize this as a stumbling block – but not as major a one as putting cd in the mouth of anyone other than Indra. I suggest that in b Indra is ventriloquizing the gods calling on him for help “in every action” (*kárman-karman*; that is, in every battle), that is, saying “o Indra” again and again. Although it is not strongly parallel, cf. a passage like V.40.3 *vṛṣā tvā́ vṛṣaṇaṃ huve, vājriṇ*

citrābhir ūtibhiḥ / vṛṣann indra vṛṣabhir vṛtrahantama “Bullish I call upon you, the bullish, possessor of the mace, with your bright help. / Bullish Indra, with your bulls, best smasher of Vṛtra.” I think it also possible that in ātmastutis the self-praiser can address himself, rather in the manner of the poets’ self-address discussed in my 2005 “Poetic Self-Reference” (Fs. Skjærvø), though I have not yet found parallels. I realize that my solution is ad hoc and not strongly supported, but it saves us from worse.

The pf. *jajñūḥ* in pāda a echoes *jajāna* in the immed. preceding pāda, 6d. The 3rd pl. in our pāda is of course ambiguous, however, as it can belong to either $\sqrt{j}an$ or $\sqrt{j}ñā$ ‘know’. (Though the 3rd pl. to $\sqrt{j}an$ is *jajanur* in VIII.97.10 (q.v.), the weak forms of the pf. to that root generally have *jajñ-*, including 3rd pl. act. *jajñuḥ* I.159.3, *jajñūḥ* VII.62.4.) Flg. Sāy., Ge and Don. take the form to $\sqrt{j}ñā$, while Gr (in Nachtr. col. 1761; it’s missing in the orig. lexicon) assigns it to $\sqrt{j}an$, and this interpr. is fld. by Lub and Schnaus (p. 214). (Curiously Kü does not cite or disc. this passage.) Because it immed. follows *jajāna*, the initial audience interpr. would surely be as a form of $\sqrt{j}an$, and it is only as the hemistich unfolds that $\sqrt{j}ñā$ might seem like a more appropriate contextual reading, since the gods are more likely to *know* Indra as something than to *beget* him. However, $\sqrt{j}an$ does not have to refer just to physical birth but can also refer to the metaphorical creation of someone in a new role or behavior; see VIII.97.10 with the unambiguous *jajanuḥ* just discussed, where Indra is fashioned and begotten for ruling: ... *tataksur índram jajanuś ca rājāse*. The agents in VIII.97.10 are unexpressed but are probably the singers (so Sāy.) or other officiants (see Ge’s n. 10b); obviously Indra already existed, but their actions fit him for ruling. The gods in our passage also have the capacity to shape Indra’s behavior to their own ends, and I therefore think $\sqrt{j}an$ is a possible root affiliation and *jajñuḥ* here is a pun.

The 2nd hemistich is strongly alliterative, esp. pāda c: *vádhīm vṛtrám vājreṇa ... , vrajám ... vam*. The VP *vádhīm vṛtrám* reproduces the alliteration of the more common formulaic variant *áhann áhim* by other means, with lexical substitution in both terms. The 1st sg. *vádhīm* is of course grammatically “wrong” – we expect **vádham*, but it has been mechanically generated to the extremely common *iṣ*-aor. (*á*)*vadhīs*, -īt. The 1st sg. is only found once elsewhere, in I.165.8 in the same phrase #*vádhīm vṛtrám*. Our pāda is identical to IV.17.3 except for the 3rd sg. *vádhīt* found there and has simply been transposed here, with the minimal substitution of the final of the 1st sg. ending -*m* for 3rd sg. -*t*. Note that the expected form **vádham* (which, however, is not actually attested) is metrically identical to *vádhīm* and could easily have been used.

An even greater grammatical solecism is found in the next pāda, *ápa ... vam*. Just like pāda c, this one contains an unmistakable formula, here the one for the opening of the Vala cave: *ápa* $\sqrt{v}r$, which otherwise never shows up in the 1st sg. If it did, we should expect the injunctive to the root aor. to be **varam*. The formulaic content of the pāda (for *vrajám* in this context, see I.92.4 *vrajám ... ví ... āvar ...*; for the injunc. in the formula, e.g., II.14.3 ... *ápa hí valám vaḥ*) allows the audience easily to interpr. the fairly monstrous form *vam* as a nonce 1st sg. root aor. to $\sqrt{v}r$. The 2nd/3rd sg. instantiations of the formula involve monosyllabic *vár*, which is always (5x) pāda final and therefore realized as *vaḥ* in pausal sandhi. Based on this pausal form, where the -*r* of the root is not found on the surface, a monosyllabic 1st sg. has been confected, marked only by substitution of the 1st sg. -*m* for -*h*. Unlike *vádhīm* ∞ **vádham*, *vam* ∞ **varam* differ in metrical shape and the expected form would not fit here. I wonder if the easily interpretable—and unnecessary—*vádhīm* in c was used to set the stage for the less transparent *vam* in d.

X.28.8: This may be the most peculiar vs. in this peculiar hymn. It is a one-off, belonging neither with the responsive ātmastuti vss. 6–7 nor with the dialogue or animal fable vss. that surround them. It is universally (beginning with the Anukr.) and I think rightly assumed to be the speech of Indra. It presents itself as a de-contextualized narrative of some actions of the gods in the past. Ge (fld. by Doniger) thinks the point is that the gods can distinguish the good from the bad—supposedly exemplified by cd esp., where they collect the good wood for making their vehicles (“zu ihre Wagenbau”) and burn up the bad. I see no trace of that scenario in the vs. itself.

Instead I generally follow the interpr. of Pischel (Ved. St. I.179ff.), that this vs. depicts the primal institution of the sacrifice. As he says (179–80), “Die Götter werden hier dargestellt als das Holz zum Opfer schlagend und es dann auf die *vakṣānās* d.h. den *yonī* legend, wo Agni entflammt wird.” The same original establishment of the sacrifice was treated in the previous, related hymn, by my interpr. See esp. X.27.15, in which various groups come together in this enterprise; the first pāda of that vs., *saptā vīrāsaḥ ... úd āyan* “seven heroes came up” (and cf. c *nāva ... āyan* “nine came”) is similar to our *devāsa āyan* “the gods came,” with *abhī ... āyan* in the next pāda. In X.27 the emphasis in the sacrifice-instituting vss. is on the creation of the ritual fire (13–14, 16), and our vs. here depicts the gods cutting the firewood with their axes and placing it in the “belly” – here, in my opinion, the hearth where the fire will be kindled. The same loc. pl. *vakṣānāsu* is found in X.27.16, also concerning the first kindling of the fire, though with slightly different referent: there it refers to the belly of the lower kindling stick (see comm. there).

The instr. pl. *vidbhīḥ* is found only here. It is universally, and I think correctly, assigned to *vīś-* ‘clan’, though it could in principle belong to the very marginal *vīś-* ‘work’. On the stages of the phonological development of *vīś+bhīs* to *vidbhīs*, see the disc. in my 1991 (MSS 52) “An Ox, a Cart, and the Perfect Participle,” pp. 83–84. But who are these accompanying clans? Acdg. to Sāy., the Maruts, and Pischel follows him. Ge rather “mit ihrer Dienstmännern,” fld. by Don. (“servants”), but this seems a reductive interpr. of *vīś-* particularly in its RVic attestations. Oberlies (I.336), who interpr. the vs. as a depiction of the clearing and settling of new land, takes *vidbhīḥ* as referring not to beings (human or divine) but to places where such beings settle (“mit den Niederlassungen”), which seems to be reflected also in Schnaus’s (215–16) “durch die Siedlungen,” with her identification of the form as “Instrumental der Raumerstreckung.” Again I think a comparison with the similar material in X.27 is illuminating: in X.27.15 the original institution of the sacrifice and the establishment of the ritual fire were accomplished by the cooperative labor of different groups. We seem to have the same picture here: the (various) gods, each with his own *vīś-*, that is, his kin-group and followers, come together in this enterprise.

In contrast to simple *āyan* in pāda a, pāda b contains *abhī ... āyan*. I supply “ritual ground” as the goal of *abhī*.

The interpr. of the 2nd hemistich is hampered by (at least) two uncertainties: 1) the referent of *sudrvām* ‘having / made of good wood’ and 2) the meaning and referent of *kṛpīṭa-*. With regard to the first, despite my publ. tr. ‘good wood’, *sudrú-* must be a bahuvr.; see its other occurrence, VII.32.20, where it modifies fem. *nemí-* ‘felly’, which is ‘made of good wood’. Ge here (n. 8c) supplies *vrkṣá-* (m.) as referent, ‘(tree) having good wood’, and develops a scenario in which the gods load these good logs into their wagon (“in dem (Wagen)inneren niederlegten”), leaving behind the stuff that’s only fit for burning. I do not find the fact that *sudrú-* is a bahuvr. fatal to Pischel’s (and my) interpr., as Old and Ge seem to; we just need to find a suitable referent, either masc. or fem. The *vána-* ‘wood’ of pāda b won’t work, because it’s neut., but something like *samídh-* (fem.) ‘kindling (stick), firewood’ or *idhmá-* (masc.) ‘id.’

certainly would, and in fact the latter might be suggested by the bahuv. *svidhmā-*, with the same structure as *sudrū-*, in the phrase *svidhmā ... vanādhitih* “wood pile provided with good kindling” (I.121.7, by my interpr.). I would therefore slightly adjust my tr. to “depositing the (kindling) consisting of good wood ...”

Ge’s interpr. of c requires that *vakṣānā-* refer to some part of a wagon, the wagon-belly/innards, that is, presumably, the cargo bed. This is a leap, since there is no sign of a vehicle in this vs. and the stem *vakṣānā-* is not otherwise so used. Admittedly the stem isn’t used elsewhere directly for ‘hearth’ either, but see X.27.16 just cited, where it appears in the same context of the kindling of the ritual fire. Moreover, the apparent root noun cmpd *vakṣaṇe-sthā-* in V.19.5 has the ritual fire as referent and should mean “(Agni,) standing in the belly [=on the hearth]” (though see the formal issues raised by Scar 654–55).

Another piece of evidence in favor of interpr. this pāda as the primal establishment of the ritual fire is the verbal lexeme, *ní√dhā* lit. ‘set down’, which is often used of the installation of the ritual fire; see I.45.7, III.27.10, VIII.19.17, etc. etc. A particularly succinct version is found in V.21.1 *manuṣvāt tvā ní dhīmahi, manuṣvāt sām idhīmahi* “Like Manu, we would install you. Like Manu, we would kindle you,” where the kindling immediately follows the installation, as I think it does in our cd. See also *ní√dhā* in the preceding hymn, X.27.14, and *súdhita-* in the same hymn, X.27.16, both of the ritual fire.

kīpīṭa- is a hapax. Given the context, the standard renderings ‘Buschwerk, Gestrüpp’ (EWA s.v. < Neisser), ‘Dürrholz’ (Ge), ‘thicket or firewood’ (Kuiper, Aryans 14), ‘scrub wood’ (Don.) are perfectly reasonable, but all of them assume a sharp contrast between whatever this word refers to and the “good wood” of pāda c, hence the deprecatory nuance of the glosses. But there is no evidence for a contrast in the context; it’s simply been read into the passage by the interpr. In fact, *kīpīṭam* could in principle refer to the same thing as *sudrvām* in the previous pāda – not the same underlying word, because of the difference in gender: *sudrvām* must be masc. or fem., *kīpīṭam* must be neut. if it is the subject of a nominal clause consisting only of *yātrā kīpīṭam* – but the same real-world referent. Interpr. it is severely hampered not only by its isolation but also by the fact that it has no etymology and no derivational web. I do not have a solution, but I would point to one clue that has not been utilized heretofore: the parallelism with Vasukra’s preceding hymn X.27, esp. the vss. concerning the installation of the ritual fire and the establishment of the sacrifice (X.27.13–18), which we have already invoked in the disc. of this vs. With regard to *kīpīṭa-* I would point to X.27.16 with *kapilā-*, meaning (in my interpr.) ‘the brownish one’ and referring (in my interpr.) to the nascent fire or to the kindling stick; our *kīpīṭa-* could be a hyper-Sanskritization of that stem – or conversely, *kapilā-* could be a MIA development from *kīpīṭa-*. I would be more comfortable with this hypothesis if the accents weren’t different (and if the quantities of the medial *i*-vowel matched), but it is perhaps not an accident that these two phonologically similar RVic hapaxes are found in adjacent hymns in similar contexts. If they are connected (and actually even if they’re not), the *kīpīṭa-* can refer to the just-kindled fire or the kindling stick that produced it, with the subj. of *dahanti* the god-priests.

X.28.9: We here return to the précis of animal fables last encountered in vs. 4, one per pāda. Most (Anukr., Ge, Don.) assign the vs. to Vasukra, though Old (intro.) agrees with me that Indra is the speaker. He is continuing his instruction in the medium appropriate to his simple (*pāka-*) audience. Like the stories summed up in vs. 4, these depict the surprising success of a weakling confronting (or pursuing) a stronger opponent. For possible parallels/sources of these stories,

esp. the first about the hare and the razor, see esp. Old, Ge n. 9a, and my 2009 “Function of Animals,” pp. 216–17.

In the first story “the hare swallowed the razor coming towards [/facing] it.” Note first that *pratyāñcam* recurs from 4c, a verbal sign of ring composition, marking out the intermediate vss. (5–8) as an extended omphalos. It is not clear from the bare summary how the hare fared: did the swallowed razor tear him apart internally (as real-world knowledge would lead us to predict), or by the clever ploy of swallowing it did he eliminate its threat? It is only in the larger context of the following stories that the latter, the favorable outcome, seems the likelier (if unrealistic) one. It is a story I certainly wish we had the whole of—the elements so ill assorted and the climactic action so dramatic. Although I will not speculate about the plot behind the summary, I do wonder if it’s not a disguised cosmological reference. As I say in my 2009 article (p. 216 n. 34) “it is tempting to see in the hare/razor story an astronomical allusion to the well-known later conceit of the hare in the moon, already found in Vedic (SB X1.1.5.3 and JB 1.28). If the razor is curved, it could represent the new moon, which the hare of the full moon absorbs (‘swallows’).” If this lunar image lies behind it, the lack of injury inflicted by the razor would make sense.

The middle two pādas (b, c) are distinguished from the rest by the 1st ps. speaker (b: *vy ābhedaṃ*, c: *randhayāni*, with the verbs in the impf. and subj. respectively). Although all-powerful Indra is the putative subject and agent of both, the theme of the victory of the weak over the strong is maintained: in b Indra uses an inferior instrument (a clod of earth) to split what should have been impregnable, a rock; is this an early variant on the children’s game rock–paper–scissors? In c, in a more standard Indraic act, he uses his power to render the strong subject to the weak. In b the breaking into the Vala cave seems indirectly referred to; *√bhid* is regularly used for this action (see e.g., II.24.3, VIII.14.7, X.62.2). And though in the standard story Indra does not use an earth clod, his instrument is another seemingly ineffectual one, namely a song, a formulation. In c the root *√ra(n)dh* plus acc. and dat. (as here) is a stereotyped construction regularly used of Indra’s subjecting an enemy (acc.) to a client-beneficiary (dat.) (see I.51.6, II.11.19, etc. etc.). The use of 1st ps. expressions employing typical Indra phraseology in these two pādas reinforces my view that Indra is the speaker of this vs.

Note the phonological figures in c and d: *bṛhāntaṃ cid rhaté randhayāni, vayad vatsó vṛṣabham ...*

The dat. *rhaté* is a hapax, clearly employed here to function in opposition to *bṛhāntaṃ*. Its general meaning is easy to extract from context, since it must be a semantic opposite to *bṛhānt-* ‘lofty’—hence, ‘weak’, ‘low(ly)’, or the like. Its etymology is unclear (see EWA s.v.), and since it is situated between *bṛh-* and *radh-* its phonological shape may have been manipulated to fit the context, esp. given the possibility that the medial *-h-* might represent MIA loss of occlusion. Old suggests a connection with *√arh* ‘be worthy, deserve’ (with “small, low” assumed [“sei er noch so klein”] but not overt: a twist on “the deserving poor”). Though the phonology works, I am less convinced by the semantics. The old connection with *√raṇh*, *raghú-* ‘quick’ (Gr; see EWA) is even more problematic semantically; more attractive is Mayr’s suggestion of *√ra(n)dh* in intransitive usage, ‘subject to, subordinate’, so that *rhaté randhayāni* would be a disguised etymological figure. I would myself suggest a connection with *ārbha-* ‘small’ (or even *ardhá-* ‘half’), which would work well semantically. But there is no way to go further here. As for its morphology, Lowe (Participles in RV, 285 and n. 108), flg. Rau (2009: ... *Caland System*, 90), takes it as a Caland adjective, like, in fact, *bṛhānt-*. But given its isolation, nothing prevents it

from belonging to an athematic root formation or a Vith class pres. or thematic aorist, which is otherwise unattested.

The verb of d, *váyat*, is one of the rare subjunctives to $\sqrt{vī}$ ‘pursue’; cf. the 1st sg. injunc. *váyam* in the preceding hymn, X.27.9, and comm. there.

X.28.10: In this vs. the strong are depicted as getting into trouble by themselves, without any direct intervention of the weak. In the first three pādas three different powerful animals, an eagle (or other large bird of prey: *suparṇá-*), a lion, and a buffalo, all get trapped; the implication is that in the arrogance of their power they weren’t paying attention. The traps and snares were, however, surely set by comparatively weak humans, and so the overall theme persists.

With most (Old, Ge, Lü [KlSch 515], Don 147, Kü 548, Scar 297) I see the *suparṇá-* in pāda a as another trapped victim. Schmaus (pp. 218–19) suggests rather that the bird has his talon firmly fixed in a prey animal, indeed in the lion of the next pāda—reviving, unaware, the view of Pischel rejected by Old. She sees the mismatch of predator (bird) and prey (lion) in ab as a continuation of the weak-versus-strong theme of the previous vs., and parallel to the pairing of buffalo (c: strong / victim) and lizard (d: weak / predator) in the 2nd hemistich.

The two middle pāda, b and c, once again resemble each other—this time by having a large mammal trapped, using the same ppl. of the same root \sqrt{rudh} (*ávaruddhaḥ* b, *niruddhāḥ* c) compounded with the semantically equivalent preverbs *áva* and *ní*, both ‘down’. I have no idea why the 2nd form, *niruddhā-*, is accented on the suffix, not the preverb, contrary to the usual rule (see, e.g., Macd. VGS p. 462) embodied by *ávaruddha-* in the preceding pāda – esp. since the other occurrence of this form is accented on the preverb, *nírudhha-* in I.32.11. For another suffix-accented form in this hymn, see *avasṛṣṭá-* in 11c.

The acc. *paripādam* in b is somewhat surprising: a loc. “entrapped *in* a snare” would be more comfortable. See disc. of the stem and of the case syntax by Scar 297–98. The simplest solution seems to be that reflected in Ge’s “wie ein in die Fusseschnelle (geratener) Löwe,” with a dynamic reading of the ppl. *ávaruddhaḥ*—hence my “into.”

On the sandhi of *godhā* in vss. 10 and 11, see Old, Scar 271, and disc. below ad 11a. The word is discussed at length by Lü (ZDMG 96 [1942] 23–50 = KlSch. 490–517, treating this passage pp. 48–49 = 515–16) and Scar (269–72). Lü’s identification of the animal as a monitor lizard, a large lizard widely distributed in the subcontinent and, though terrestrial, also at home in the water, is quite convincing, and his treatment covers vast textual and linguistic ground.

My interpr. of d differs radically from the standard, but is close to Old’s and Scar’s (270). The standard (Ge, Lü [KlSch 515], Don 147, Kü 548, Schnaus 218–19) sees the *godhā* as seizing the foot/leg of the buffalo and dragging the hapless animal away: e.g., Ge “Ein Krokodil wird ihm dann das Bein wegschleppen.” This interpr. founders, in my opinion, on three points: 1) the rendering of *ayátha-* as ‘foot, leg’; 2) the interpr. of dat. *tásmai* as a possessive; 3) the necessity of reconciling this interpr. with the almost identical repetition of this pāda in the immediately following one, 11a, with the substitution of pl. dat. *tébhyaḥ* for sg. *tásmai*. To start with 1): *ayátha-* is found only in these two almost identical pādas 10d, 11a. Although ‘foot’ is the standard interpr., the *-átha-* suffix normally forms abstracts shading into nomina actionis (see AiG II.2.171–73), such as *vakṣátha-* ‘growth’. The best comparandum for our form is *carátha-*, also built to a verb of motion. It is found 5x in the dat. *caráthāya* in (pseudo-)infinitival usage “for moving, to move”. (The 8 [or 9] non-dative forms are morphologically and metrically somewhat troubled [see comm. ad I.66.9, etc.] and are best left out of account here.) If *carátha-* means ‘movement, moving’, then the most likely sense of *ayátha-* is similarly abstract ‘going’, or

concretized to ‘a going, a way’, as Old suggests (‘Gang’), in rejecting the ‘foot’ interpr. Scar (270) also brings up the usual abstract function of *-átha-* as a problem for ‘foot’ and accepts Old’s re-interpr. Scar also points out that this reinterpr. makes it easier to accommodate the dative, since with ‘foot’ we would expect a genitive or perhaps “in partitiver Apposition” an accusative. Although the dat. can be used for possession in Vedic, this use is restricted to existential predication “(there is) a foot to him / he has a foot,” in my experience. Rendering *ayátha-* as ‘foot’ also complicates the interpr. of 11a, for there it would not be the buffalo’s foot that was grabbed, but that of the stingy people who taunt brahmans. Although interpreting 11a requires a certain metaphorical latitude, eliminating the “foot” at least removes an extra layer of metaphor.

If the lizard is not dragging the buffalo by the foot, what is it doing? Let us now focus on the verb *karṣat*, which belongs to the root $\sqrt{kṛṣ}$ (though see other spec. by Scar 270, which he ultimately rejects), an item of agricultural vocabulary whose primary sense is ‘plough’, not ‘drag’. The form itself is synchronically an injunctive to the 1st class pres. *kárṣati* (see, e.g., Gotō, 1st Kl. 112–13; no RVic forms are accented, but see AV XV.13.7 *kárṣet* [though the passage is obscure]), whatever its history may be: the existence of both 1st and 6th cl. presents hint at a root formation in its past. In my opinion the fact that the form is injunctive is crucial to the interpr. of these two vss., because the transition from vs. 10 to vs. 11 takes us from Indra’s narrative animal fables to the current situation pitting non- (or bad) sacrificers against good ones. The injunctive in 10d, found in a narrative verse couched in the past, is to be read as a preterite, but the one in 11a has modal/future value: it is a warning that what happened to the buffalo can happen to you! The functional ambiguity of the injunctive provides an ideal pivot.

And what did happen to the buffalo? Here I think Old is essentially correct: the lizard ploughed a way for the trapped buffalo, ostensibly to free it, but “in Wirklichkeit wohl, wie v. 11 zu ergeben scheint, zu seinem Unglück” – presumably by opening a way for the buffalo that led to a place where the lizard could more easily gain control over it (perhaps a body of water? the buffalo was already “thirsty” *tarṣyāṁvān*). The root $\sqrt{kṛṣ}$ ‘plough’ is quite apposite: because the monitor lizard has a long, heavy, dragging trail, its tracks show a distinct furrow-like ridge between its footprints (google ‘monitor lizard tracks’). The characteristic tracks of this large lizard would presumably be familiar to any human who lived in proximity to it.

(As an aside, a google search for monitor lizard hunting turns up the title “Giant lizard versus buffalo.” There are a number of videos on YouTube of komodo dragons attacking and killing water buffalo. Unfortunately the lizard in question is the Indonesian komodo dragon, the largest monitor lizard species and not of course found in the subcontinent – but still ...)

X.28.11: With this vs. we return to the outer ring, with its concern for proper modes of sacrifice matching that of the first 3 vss. of the hymn. As was just noted, this return is effected by pivoting on the almost identical pādas 10d / 11a, using the ambiguity of the injunctive *karṣat* to transition from the narrative past to the ritual present. The fate of the thirsty buffalo in 10cd serves as a cautionary example for the greedy men depicted in 11ab. Although an actual monitor lizard is not bringing them to ruin, the point seems to be the one cited from Old above: although it appears that an easy path has been created for these heedless people, as there was for the thirsty buffalo, it leads to disaster. They think that they can satisfy themselves directly, by eating luxury food (oxen) that others would offer in sacrifice to the gods and, thereby, to the brahmans who perform the sacrifice. But this gluttony and disrespect for gods and brahmans destroy their strength and their bodies.

As I said just above, the first pāda needs to be interpr. metaphorically: the greedy men are not being led astray by a real lizard. However, Scar (270–71) makes the attractive suggestion that *godhā-* in this pāda (though not 10d) is a pun on *go-dā-* ‘cow-giver’ (5x), primarily an epithet of Indra (III.30.21, IV.22.10, VIII.45.19). If Indra is lurking in the background of this word—and identified as the one who provides the bovines in the first place—the expression in pāda a would not be metaphorical and the warning would be more acute: Indra has the power to prepare a path to perdition for those who offend him and wrongly eat the oxen he gives (some of which in turn should be sacrificed to him). I would now slightly emend my tr. to “The monitor-lizard (/the cow-giver [=Indra]) will plough ...”

If Scar’s suggestion is accepted, it may also provide a solution to the problematic sandhi variation in the two occurrences of *godhā-*. In 11a the word appears in hiatus followed by a vowel-initial word: *godhā ayátham*, suggesting an underlying nom. sg. form *godhās* with final -s. But in 10d it appears before *tásmai*; if the nom. sg. ended in -s, we should find *godhās tásmai*. So the form in 10d must lack the ending -s, as it does also in its other occurrence (in a different meaning) in VIII.69.9; such is the Pp analysis too. The apparent -s of the form in 11a (so also Pp) needs an explanation: if it is a pun on *godā-* it may owe its -s to the influence of that word. In its four nom. sg. attestations the form is always underlying *godās*. Curiously, though the pun is Scar’s idea, he only mentions the possibility of morphological influence of *godāh* on the form of *godhāh* glancingly in a footnote (271 n. 380) as an alternative to his favored explanation, which is both more complex and less plausible.

The offending action that leads to the downfall of the subjects is “mocking the brahmans with food” *brahmāṇaḥ pratipīyanty ānnaiḥ*. Exactly what that means is unclear; Ge (n. 11b) points out that it must be the opposite of *pratiśīkṣanty ānnaiḥ* in the next hymn (X.29.5), also by Vasukra. Unfortunately that phrase is at least as obscure as this one, so it does little to illuminate our passage. I think they “mock” either by words (“we’ve got food and you don’t – nyah nyah nyah”) or, more likely, by actions—in the latter case by ostentatiously consuming food that was meant for sacrifice, some of which would have been distributed to the officiating priests, had it been sacrificed. Their eating is expressed by the same root *√ad* used for Indra’s (proper) eating of the sacrificial animals in 3c: *pācanti te vṛṣabhāṃ āsi tēṣāṃ* “they cook bulls for you. You eat of them,” here echoed by *ukṣṇāḥ ... adanti* “they eat oxen.” See also X.27.6, where the non-sacrificers “drink the cooked milk oblation and serve the foreleg without offering to Indra.” The specific mention of the brahmans here is reminiscent of the two fierce AV hymns against interfering with “the Brahman’s cow” (in Whitney’s title), AVŚ V.18–19 / AVP IX.17–18, promising dire penalties to those who do so. The first hymn begins (AVŚ V.18.1 = AVP IX.17.1 [the latter wo/ accents]) *naítām te devā adadus, túbhyaṃ nṛpate áttave / mā brāhmaṇásya rājanya, gām jighatso anādyām* “The gods did not give her to you to eat, o king; do not seek to eat the cow of the brahman, which is not to be eaten, o Rājanya.” The overt hostility between varṇas in the AV hymns, which is especially characteristic of the AV, is absent from our passage, but similar disaster is in store for our unidentified subjects.

The extent of their mockery, indeed their blasphemy, is expressed by the ppl. *avasṛṣṭān* ‘released’ in c. Although the lexeme *áva √sṛj* has a number of applications, a particular ritual use is in play here. The sacrificial animal is “released” (*áva √sṛj*) from the post to which it was tied immediately before it is sacrificed. See the stereotyped usage of this lexeme in the Āprī hymns, where the *vānaspāti-* ‘lord of the forest’, that is, the post, “releases” the animal, generally referred to as “the oblation” for taboo reasons, for sacrifice to the gods. Cf., e.g., I.13.11 *áva sṛjā vanaspate, déva devébhyo havīḥ* “Release, o Lord of the Forest, the oblation to the gods, o god”

(very sim. also 142.11, II.3.10, III.4.10=VII.2.10, X.110.10). The very next action in the Āprī hymn template is the sacrifice itself. An even clearer instance of the usage of this lexeme is found in a non-Āprī hymn, X.91.14, where a list of sacrificial animals, including *ukṣāṇaḥ* ‘oxen’, are *avasṛṣṭāsa āhutāḥ* “released (and) offered.” Although the qualifier ‘released’ might suggest that the animals have been let loose and are roaming free, in fact they are on a narrow path to ritual death. In other words the offenders in our vs. have snatched and themselves consumed the sacrificial animals on the point of being offered to the gods – they have invaded and hijacked the sacrifice. (Ge [n. 11c] also recognizes that *avasṛṣṭā-* describes specifically Opfertieren, but, referring only to a gṛhya sūtra passage, seems to think it refers to animals that had been bound for sacrifice but were then actually released without being sacrificed.)

On *simā-* see esp. Old ad I.95.7, where he considers all the relevant passages incl. this one—which he renders “sie (und keine Andern).” The Pp interpr. the Samh. *simā* as sg. *simāḥ*, but *simé* with pronominal nom. pl. ending is the better reading. See Old’s disc. ad I.95.7.

Pāda d depicts the comeuppance that the arrogant eaters bring on themselves—their role in their own downfall emphasized by both *svayām* and *tanvāḥ*, as well as by the middle voice of the part. *śṛṇānāḥ*, the only middle form to this stem. Most take *tanvāḥ* as gen. sg. dependent on *bālāni* (“breaking the powers of (their) body”). This is possible, but because of the number disharmony (one body / plural subjects) and the acc. pl. *tanvāḥ* in the matching contrastive vs. 12b, I take it as an acc. pl. parallel to *bālāni*. However, as to my first argument, the sg. instr. *tanvā* in clear pl. context in the companion hymn X.27.2 *tanvā sūśujānāḥ* “puffing themselves up in body / with their body/-ies” renders that consideration less cogent.

X.28.12: The arrogant, impious, but ultimately self-defeating behavior of the actors in vs. 11 is contrasted here in the first hemistich with the good sacrificers, who bring themselves success. The hymn ends with an address to Indra, asking for bounty for “us” – presumably those who perform sacrifice in ab.

The standard interpr. of pāda a involves two etymologically near-identical instr.: *śāmībhiḥ suśāmī* “by ritual labors, by good ritual labor.” For a poet of the skill of Vasukra this seems an exceedingly flatfooted way to end this tour-de-force hymn. It also leaves the verb *abhūvan* with surprisingly little to do. Ge (n. 12a) suggests that the verb has the pregnant sense common for *√bhū* in the Brāhmaṇas, namely ‘thrive’ – a sense he also claims for *ābhūḥ* in the preceding hymn, X.27.7—where, however, the straightforward “came into being” fits the context better. I suggest in contrast that *suśāmī abhūvan* is a pseudo-/proto-*cvī* construction, a type found in the RV only in *akhkhalī-kṛtyā* in the Frog hymn, VII.103.3. Here the base noun would be the well-attested indeclinable *śām* ‘weal, luck’. This form in fact is regularly compounded with *√bhū*, in the adjectives *śambhū/-bhū-*, *viśvá-śambhū-*, with the splv. *śāmbhaviṣṭha-*. There are also a number of examples with finite forms of *√bhū*: e.g., I.90.9 *śām no bhavatv aryamā* “Let Aryaman be weal for us” (see also I.189.2, II.3.8.11, III.17.3, etc.). But, as the tr. shows, this VP does not mean “become lucky,” but “be luck for” – that is, the subject transfers the luck to the dative recipient. In order to indicate that it’s the subject that possess or acquires the luck, in this late RVic hymn it would not be surprising to improvise with the *√bhū* version of transitive *√kṛ* in the nascent *cvī* construction. Though I do not know of other examples with a root noun (or whatever we want to call *śām*) as base in the *cvī* type, it is not unlikely that various experiments were tried as the construction was emerging. That the resulting *śām-ī* coincides with the stem of the noun *śāmī-* ‘labor’ is, for Vasukra, a happy rhetorical result. By my interpr., then, *śāmībhiḥ suśāmī* is a punning expression, since the two *śām*-s are unrelated. Rather than the pedestrian

doubling assumed by other interpr., we see here yet another example of Vasukra’s poetic artfulness.

On *hinviré tanvāḥ* see comm. ad X.65.2.

The *ukthaiḥ* that ends b contrasts with identically placed *ánnaiḥ* in 11b, characterizing the tools of the bad sacrificers.

The last hemistich is addressed to Indra. Note the framing: *#nṛvát ... vīráḥ#*, two words that can be applied to both humans and to gods, but here applicable to Indra. The poet may be underlining the relationship between superior humans and Indra, the qualities they share. “Speaking like a man” (*nṛvát vādan*) may also refer to the verbal instruction Indra has given in the middle of the hymn, which were composed in the human style.

The nom. *vīráḥ* may simply double the subject, in which case the pāda should be rendered “(As) hero, in heaven you have established your fame and name.” But far more likely is that standard interpr. (incl. the publ. tr.) that *vīráḥ* is the actual name, which reverts to the nom. in quoted speech, though *nāma* is in the acc. See a similar ex. in I.103.4.

X.29 Indra

This last hymn attributed to Vasukra does not let up on the enigmas or the splashy poetic displays. In fact, vs. 1 is a leading contender for the most complex and trickiest single verse I have encountered in the RV. Unfortunately the tight control of structure exhibited in the preceding two hymns, esp. X.28, is not encountered here, so that we cannot use structural clues to help untangle the mysteries of the hymn.

X.29.1: As I have treated this vs. at extraordinary (perhaps wearisome) detail in my 2015 Fs. Gerow article (“Śleṣa in the Ṛgveda? Poetic Effects in RV X.29.1,” *International Journal of Hindu Studies* 19: 157–70), I will simply insert most of the text of that article here. In it I argue that the verse anticipates techniques well known from Classical Sanskrit poetry, such as bitextuality, ambiguity of reference, and other types of punning, while serving to sketch a larger ritual situation than the verse appears to depict on the surface.

Although the various poetic effects operate simultaneously, I will first treat them separately under some of the following rubrics: phonological patterning, syntactic reversal, syntactic ambiguity, lexical ambiguity, dual reference, bitextuality, and thematic allusion. I will be as explicit as possible about the mechanisms, to the point, I fear, of tedium.

The hymn begins with a striking phonological and morphological sequence. The first four syllables, ending with the caesura -- *vāne ná vā* – are a near phonological chiasmus, with initial *vā* matching final *vā*, and *ne ná* echoing each other internally. This pattern is rendered particularly salient by the unusual sequence of four monosyllables following the initial disyllable: *vāne ná vā yó ní*. Or apparent monosyllables: we will see below that there are several ways to construe this sequence besides the monosyllabic interpretation of the Padapāṭha. The opening calls attention to itself also by the unbalanced *vā* ‘or’ syntactic construction, where *vāne* ‘in the wood’ and *ná* ‘not’ are the apparent non-parallel disjunctive possibilities set up by ‘or’.

The rest of the pāda sets up a syntactic puzzle. The last two words are both finite verbs, *adhāyi cākān* (or better *ní adhāyi*), but their order is the opposite of what Ṛgvedic syntax would dictate. In the first verbal lexeme *ní adhāyi*, the finite verb is unaccented but immediately follows the relative pronoun *yāḥ*, which should trigger verbal accentuation (that is, **ní adhāyi*) if that verb belongs in the relative clause, while the second finite verb *cākān* is accented, though it appears to be a main clause verb. (The accentuation of a main-clause *cākān* is less problematic

than the non-accentuation of a subordinate clause *adhāyi*, because *cākān* in this interpretation would resume the main clause and so possibly count as syntactically initial.)

One solution (going back to Baunack 1886: 377; see Oldenberg, *Noten* ad loc.) has been, as in Geldner's translation, to switch the functions of the two verbs, i.e., to interpret *ní adhāyi* as the main verb and *cākān* as the verb of the subordinate clause. Thus, "[he] has been deposited who takes pleasure ..." For Geldner and other interpreters of earlier eras, a period that subscribed, explicitly or implicitly, to the notion of free word order in Vedic, the order of the verbs assumed here would be unusual but not really problematic. But in the more regulated RVic syntax of our time we expect neither embedded relative clauses nor—worse—embedded main clauses. But the Baunack/Geldner interpretation, which construes the initial locative *vāne* with the final *cākān* ("[he/it] has been deposited who takes pleasure in the wood or not"), requires that the main clause verb *ny ādhāyi* be embedded in the discontinuous relative clause *vāne ná vā yāḥ ... cākān*. (Even English, which embeds relative clauses with abandon, would have serious trouble with an embedded *main* clause, as here; note that a literal English translation of the proposed interpretation of the pāda is unparseable: "Who in wood or not -- he is deposited -- takes pleasure.")

As it happens, I think the embedded-clause interpretation is the correct one. But not because I believe that embedded clauses were generally licit in R̥gvedic discourse, but because I believe that they were not. This is a deliberate syntactic violation, and it is also a syntactic-semantic pun. The clause "(he) has been set down/deposited" is literally "set down" (that is, embedded) in the middle of the relative clause; its *meaning* replicates its *syntactic position*. The grammatical embedding is, as it were, iconic of the "setting down" of the referent in the main clause. I do not know if there is a technical term, either in Sanskrit or in the larger literary world, for this type of rhetorical figure, but even if it does not fit into a particular named category in literary theory, in my opinion it displays a remarkably sophisticated consciousness of how grammatical form can be made to follow and mirror semantic function.

There is a way to avoid the verbal accent problem while retaining the relative clause: by interpreting it as a nominal relative clause: *vāne ná vā yāḥ* "who is in the wood [=Agni] or not." What follows this putative nominal relative clause, the two verbs *ny ādhāyi cākān*, would then be taken as two parallel verbs in the main clause: *ny ādhāyi cākān* "he has been installed (and) takes pleasure." The accent of *cākān* would then be explicable according to the resumptive verb condition alluded to above. This seems to be Ludwig's solution, cited by Oldenberg (*Noten*, ad loc): "Der im Holze oder auch nicht im Holze (weilt), wird niedergelegt, er wars zufrieden." This is possible but not particularly elegant.

This pāda has not yet yielded all its secrets, however. Let us return to the string of monosyllables discussed above: *ná vā yó ní*. In the Geldner interpretation (which I generally follow, as the primary reading), which is based on the Pp. analysis, this sequence is, in translation, "not / or / who / down," each with its separate function in the syntactic complex. But different interpretations are made possible by unverbating adjacent syllables in different combinations, and even if these were not meant by the poet as the *dominant* reading these alternatives add an elusive (but I would claim, deliberate) resonance and thematic nuance to the overall "meaning" of the verse.

Let us begin at the very beginning of the line, with *vāne ná*, where we could read the two ostensible words as one, the instr. sg. *vānena* (with erasure of the second accent). As this reading doesn't seem to buy us anything thematically, I will not discuss it at length. Nonetheless, it opens the poem with a possible ambiguity and sets the stage for the following multiple readings.

Proceeding then from left to right, the first two apparent monosyllables *ná vā* could be combined and read as a form of *náva-* ‘new’. What would this contribute to the verse? Note that the first actual nominative in this verse is *stómaḥ* ‘praise-song’ in pāda b; the two verbs in pāda a lack overt subjects. Given that ‘praise-song’ is the subject of pāda b, it would not be surprising if a semantically related noun, such as ‘hymn’, ‘song’, ‘praise hymn’, were the underlying subject of the verbs in pāda a, and ‘new(er)’ is a regular qualification of hymns and songs in the RV, expressing the crucial goal of the RVic bard: to attract the gods to the sacrifice by producing a strikingly novel verbal composition generated from traditional materials. True, if *návā* is to modify it, the noun should be feminine, as opposed to masculine *stóma-*, but such feminine nouns are easy to find (e.g., *gír-*, *dhī-*, *dhītí-*, *matí-*, *stutí-*, etc.); fem. *návā-* in fact modifies *gír-* in II.24.1 (*ayā ... návayā mahā girā* “with this great new song”). Although I do not believe that “new (hymn)” is the primary intended subject of pāda a (*pace* Lanman, Noun inflection 505, flg. Roth), given the lack of overt subject in that line the audience would be pardoned for falling into such a trap, especially as “has been set down/deposited” is certainly a possible predicate for such a subject. See nearby X.31.3 *ádhyāyī dhītīḥ* “The insightful thought has been set in place,” also in ritual context (additionally, e.g., I.162.7, 183.6). And I venture to say that the poet consciously laid this trap.

Combining the next two words, *vā yó*, gives us several possibilities, one of which has a long interpretational pedigree. Yāska (VI.28) follows this unverbated reading *vāyó*, interpreting it as a patronymic, ‘son of a bird’ (*veḥ putrah*), i.e., presumably a vṛddhi derivative of the root noun *ví-* ‘bird’. Yāska is followed by Sāyaṇa and by Oldenberg. Sāyaṇa’s gloss of *vāya-* spells out the implications of the vṛddhi at some length (couched in the accusative because he rewrites the aorist passive as a transitive present): *śakuniḥ sve nīḍe vāyam ātmīyaṃ putraṃ nyadhāyī nidadhāti śisukam ajātapakṣam* “a bird places in its own nest the *vāya*, (viz.) the son of its own self, its little chick whose feathers haven’t grown.” Here is Oldenberg’s translation of the first pāda with the vṛddhi interpr.: “Wie im Wald ein Vogel (weilt), ward er (im Wald = Holz) niedergelegt, fand (daran) Befriedigung,” interpreting *ná* as the simile marker, not the negative, and also doing away with the somewhat awkward *vā* ‘or’. See also the explicit vṛddhi reading in Klein’s (DGRV II.208-9) preliminary translation “As the son of a bird (dwells) in the wood, he (i.e., Agni) has been set down (in the wood).” But this is just Klein’s pūrvapakṣa; he rejects the “bird” reading and accepts the Śākalya / Geldner interpretation with *vā yó*.

Not surprisingly the proposed simile is a fairly common image, as in IX.96.23 *sīdan vāneṣu śakunó ná pātvā* “sitting in the woods like a flying bird.” The entity compared to the bird must be Agni, a comparison often made in the Ṛgveda. Although this interpretation is tempting and, by eliminating the supposed relative pronoun *yó*, would also eliminate the problem of verb (non-)accentuation in a subordinate clause discussed above, there are some problems with it in turn. The primary one is the fact there is no independently attested stem *vāyá-* ‘bird’ to which *vāyó* would be the nom. sg. in sandhi -- only the archaic paradigm *ví-* (nom. sg. *vés* as well as synchronically regular *vís*) and a marginally attested collective neuter *s*-stem *vāyas-* with short vowel, generally assumed (see AiG II.2: 227) to have been reinterpreted from the identical root noun nominative plural. The only ‘bird’ word with long vowel in the initial syllable is the transparent vṛddhi derivative with thematic suffix *vāyasā-* (I.164.52 and later), built to the *s*-stem. Although a putative thematic vṛddhi derivative to *ví-*, namely **vāyá-*, would probably be theoretically possible (see AiG II.2: 127-28 on vṛddhi derivatives to *i*-stems, but there are no examples given of root nouns in *-i*), it seems preferable not to invent an otherwise unattested stem for just this passage. Moreover, at least in Oldenberg’s rendering (see also Klein’s

pūrvapakṣa), the simile is supplied with a different verb (weilt / dwells) from the frame (ward ... niedergelegt / has been set down), a serious violation of Ṛgvedic simile structure (see Jamison 1982). Nonetheless, I do not reject the possibility that a “bird” reading is one of the several recessive alternatives hidden in this syllabic sequence.

But a reading *vāyó* suggests another possibility, though it requires the elimination of the accent -- namely the vocative of the god Wind, Vāyu. As with *nāvā* I am not suggesting that this is the primary reading, but a secondary possibility that actualizes some underlying themes. Why a fugitive reference to Vāyu might be appropriate here will be discussed below.

Let us finally turn to the last two monosyllables, *yó ní*. Read together, with elimination of the second accent, they produce the word *yóni* ‘womb’ in both literal and extended senses. The fireplace at the sacrifice is often called a *yóni* and the ritual fire / god Agni is established therein (generally with the lexeme *ní√sad* ‘sit down’, sharing the preverb *ní* with our *ní√dhā*, e.g., VI.16.41 *ā svē yónau ní śīdatu* “let him [=Agni] sit down in his own womb”). Since one of the few things that is clear about this verse is that it at least partially concerns the establishment of the ritual fire in its fireplace, a subsurface reference to *yóni* is entirely apt.

We can map these various possible readings as follows. (Asterisks mark forms where one accent has been erased. Combinations of the listed variants are also possible, e.g., *vāne nāvā *yóni*.)

vāne ná vā yó ní (per Padapāṭha)

* *vānena vā yó ní*

vāne nāvā yó ní

vāne ná vāyó ní (per Yāska, etc.)

*vāne ná *vāyo ní*

*vāne ná vā *yóni*

I find it hard not to see embryonic śleṣa or bitextuality in the six superimposable possibilities of this six-syllable sequence, most of which subtly underline the thematics of the verses as a whole.

Such are the verbal intricacies of the first pāda, but several larger questions about it remain not only unsolved but as yet unposed. Chief among them is the identity of the unexpressed subject of the two verbs, and this will lead us to the larger question of reference in this verse, which is generally quite coy about the identities of the entities contained therein. For the first pāda the verb *ny ādhāyi* is the major clue, for the lexeme *ní√dhā* is a standard technical expression for the installation of the god Agni as ritual priest (see Geldner, n. 1a, with numerous parallels cited). Combined with the initial word *vāna*- ‘wood’, a substance not surprisingly associated with fire and the deified Fire, circumstantial evidence strongly points to Agni as subject. This surmise finds some support in the priestly title Hotar found at the end of pāda c, since Agni is regularly identified as a Hotar and identified with the human Hotar.

But pāda c also raises problems with this identification, because the nom. sg. *hótā* at the end of the pāda is matched in case, number, and gender by *índraḥ* earlier in the line. There is nothing explicit in the pāda to disjoin the two nominatives, though an audience’s general knowledge of the Vedic context should produce strong opposition to equating Indra and the Hotar. Nonetheless, Scarlatta (302 n. 430) tentatively suggests the possibility, among many others floated, that Indra is being referred to as Hotar here. (I find this very unlikely.) Sāyaṇa also takes *hótā* as a qualifier of Indra, but interprets it not as the priestly title, but as a transparent -tar-agent noun to *√hū / hvā* ‘call’, glossing it *āhvātā*. This contrasts with his gloss of *hótar*- when he is comfortable with a priestly reading – e.g., referring to Agni in I.1.1 *hotāram ṛtvijam / devānām yajñeṣu hotṛnāmaka ṛtvig agnir eva*.

The identification of Indra and Hotar can be blocked, but this produces a different conceptual disharmony. It would be technically possible to divide the pāda into a nominal relative clause (*yásyéd índrah*) and a nominal main clause (*purudīṇeṣu hótā*), with *hótā* [=Agni] as the referent of *yásya*. This seems to be Scarlatta's (302) preferred solution: "... er, dem Indra ja zugehört, an vielen Tagen der Hotr ..." But, the implication, that Indra belongs to Agni, is at least as hard to accommodate within the R̥gvedic conceptual universe as that Indra is the Hotar. We will return to the syntax of this pāda below.

So, we have implicit reference to Agni in pādas a and c and explicit reference to Indra, who is also the dedicand of the hymn, in pāda c. What is the relationship of the two gods here? This question is further muddled by pāda d in the phrasal etymological figure *nṛṇām nāryo nṛtamaḥ* "the manly one, best man among men." Although the phrase is in the singular, it is actually applicable to either Indra or Agni -- or both. The adjective *nārya-* is generally typed for Indra when it modifies a god, but (*nṛṇām ...*) *nṛtamaḥ* is used of both gods (though somewhat more often of Indra). Out of ca. 50 occurrences of *nārya-*, about 8 apply directly to Indra, including one in verse 7 of this same hymn; it is also used of a few other gods, also of legendary heroes and of humans, as well as of inanimate objects and forces. Indra and Agni are almost the only referents of the approximately thirty independent occurrences of *nṛtama-* (with or without *nṛṇām*), though a few characterize human heroes or the Maruts. The absolute numbers are skewed towards Indra, however, because the word is found in a common Viśvāmitra refrain (14x: III.30.22, etc.). For Agni, cf., e.g., ... *nṛtamo yahvó agnīḥ* (III.1.12, IV.5.2); for Indra, e.g., X.89.1 *índram stavā nṛtamam yásya mahnā*. Of course the splv. phrase (undistracted: *nṛtamasya nṛṇām*) occurs in the next vs. (2b) clearly referring to Indra, but I don't think this requires the phrase here to apply exclusively to Indra. Thus, the final pāda seems designed *not* to resolve the puzzle set up by the juxtaposition of Indra and (Agni) Hotar, but to allow both gods to be evoked by the descriptive phrase in the singular. Note that this phrase shows an embedding reminiscent of the embedding in pāda a, with the two halves of the superlative phrase (*nṛṇām ... nṛtamaḥ*) surrounding the adjective *nāryaḥ*. If the superlative is more likely to refer to Agni and the adjective to Indra, interspersing the words in this fashion further blurs the separate identities of the two gods. What makes this double application especially nice is that the various derivatives of *nṛ-* 'man, superior man' select different manly qualities in the two gods: Indra's superior manly heroism, but Agni's closeness to men, as the god who lives in their dwellings and mediates between them and the gods. (Recall also that in the final vs. of the previous hymn, X.28.12, Indra speaks *nṛvát* 'like a man'.)

The final word of the verse, *kṣapāvān*, does little to resolve the duality. In modern times the standard reading of this adjective is 'protector of the earth' bleached to simple 'protector' (*kṣa-pāvant-*, with the first element a zero-grade from of the archaic noun *kṣám-* 'earth'). Although this word (thus accented also in I.70.5; with initial accent, *kṣá-pāvant-* 3x) is clearly used of Agni in three of the four other occurrences (I.70.5, VII.10.5, and VIII.71.2; in III.55.17 the referent is ambiguous, but the most likely candidates are Agni and Soma), there seems no reason that an adjective with such a meaning could not equally describe Indra. But the word displays what we might term morphological śleṣa, as it can also be analyzed *kṣapā-vant-*, with the first element containing the word *kṣáp-* 'night'. Such an analysis has ancient roots, as Sāyaṇa's gloss shows (though with unjustified additions to its semantics): *rātriparyāyeṣu somabhāgaḥ* "having a share of soma in the rounds of the (Ati)rātra [=Overnight] ritual." With a suggestion of Scarlatta (303), we could analyze *kṣapāvant-* as based on a syntagm with original predicative instrumental (*kṣapā* "[he is] with night"), which was then provided with a *-vant-*

possessive suffix. Scarlatta (303) also suggests other ways to incorporate *kṣáp-* ‘night’, e.g., by haplology from **kṣápā + pā-* ‘protecting by night’ (his reconstructed initial accent reflects a posited adverbial accent shift from inst. *kṣapā*; see p. 303 and n. 452). The exact details matter less than the fact that the Vedic audience could likely see a pun in this word, between *kṣa-* as a combining form of *kṣām-* ‘earth’ and *kṣap-* ‘night’ (for another poss. ex. see I.70.5, 7 and comm. thereon). An analysis involving ‘night’ would favor Agni as referent, since fire is depicted in the RV as man’s defense against encroaching night and, in particular, the kindling of the ritual fire is associated with the return of daylight and the defeat of night.

If pādas c and d can both be read as applicable simultaneously to Indra and Agni, we might reconsider pāda a, where we identified only Agni as the subject of the verbs in that line. Could Indra also be lurking in that pāda as well? I think it possible, on the basis of the odd phrase *vāne nā vā yāḥ ... cākān* “who takes pleasure in the wood or not.” Agni as fire certainly does “take pleasure in the wood” throughout the RV, burning his way through both ritual and profane versions of that substance. But Indra is not likely to get any satisfaction from wood. If Indra is a potential subject of the verbs in pāda a, he may be “set down” at the ritual ground as the recipient of the dawn sacrifice whose epiphany is much desired. In this case, he could be the subject associated with the disjunctive negative “or not.”

Ambiguity of reference also clouds pāda b, which we have yet to deal with. Unlike the other pādas, the general message of this one is fairly straightforward: *śúcīr vām stómo bhuraṇāv ajīgaḥ* “The gleaming praise-song has awakened you two, o bustling ones.” The problem is posed by the vocative *bhuraṇau*. First, so far there has been at most one being referred to in the hymn, namely the unnamed subject of the verbs in pāda a, so where do we get a dual 2nd person? The general context allows us to surmise who the dual might be. On the one hand, as we saw above, the verb *ny ādhāyi* is likely to have Agni as its subject on the basis of multiple parallel passages and the technical ritual sense of the verb; on the other, the hymn is dedicated to Indra, as the audience would of course be aware. Thus the enclitic *vām* ‘you two’ and the vocative *bhuraṇau* ‘o bustling ones’ could easily identify the pair Indra and Agni. Such an identification is supported by the second hemistich discussed above: the presence of both Indra and (Agni) Hotar in pāda c and the epithets applicable to both those gods in pāda d, as well as by the possible lurking presence of Indra in pāda a, as was just suggested. But the adjective *bhuraṇa-* is only found in the dual (3x total; only voc. so unaccented), and the other two duals are addressed to the Aśvins. Moreover, the phraseology of pāda b has reminiscences in explicitly Aśvin contexts. Those gods are twice objects of the verb *ajīgaḥ* (III.58.1, VIII.67.1); III.58.1 is an especially close parallel: *uśāsa stómo aśvínāv ajīgaḥ* “The praise-song of Dawn has awakened the Aśvins.” So, although the pragmatics of our hymn suggest that Indra and Agni should be the referents of the 2nd ps. dual in pāda b, the larger formulaic system suggests the Aśvins instead. Indeed, this is Sāyaṇa’s view – one that causes him some distress (*tad asādhū*), given that the first ṛc of a sūkta dedicated to Indra should not be in praise of the Aśvins.

Can these competing referents be reconciled? I would argue that they can, or rather that throughout this verse we are meant to hold distinct referents in our minds simultaneously and superimpose them upon each other: Indra upon Agni, and Indra and Agni upon the Aśvins. Simultaneous reference is quite common in the R̥gveda. This practice is not quite equivalent, at least in scale, with composing a poem that narrates the Mahābhārata and the Rāmāyaṇa simultaneously, but it arises from the same impulse – to encourage multiple readings, rather than forcing the audience to choose one. I would further argue that in our verse these multiple readings are in service of a larger project: evoking the dawn sacrifice and its attendant divinities

in a verse that makes almost no overt reference to this ritual complex. The gods associated with the dawn ritual are Agni, whose kindling initiates the sacrifice, the Aśvins, Indra and Vāyu, the pair who receive the first offering, and of course Dawn herself. And, although only Indra is mentioned by name in the verse, (almost) all the others are indirectly present here: Agni, because of his characteristic vocabulary (pādas a, cd), the Aśvins, because of their formulaic evocation in pāda b, and Vāyu, in the śleṣa identified in pāda a discussed above. Note that it is the vocative of his name, *vāyo*, that floats to the surface in the reanalysis of pāda a. This is probably no accident, as it evokes the well-known conjoined address to Indra and Vāyu, *vāyav* [voc.] *īndraś* [nom.] *ca*, an archaic construction found in dawn-ritual hymns inviting the two divinities to soma drinking (e.g., I.2.5, 6).

But where is Dawn? She may be evoked by the parallel to pāda b just cited: *uṣāsa stómaḥ ... ajīgaḥ* “The praise-song of Dawn has awakened...” The *śúciḥ* ‘gleaming’ modifying *stómaḥ* in our verse can also be a stand-in for Dawn’s light; see I.134.4 .. *uṣāsaḥ śúcayaḥ*..., etc. But more importantly she appears overtly at the beginning of verse 2: *prá ... asyā uṣāsaḥ* “At the forefront of this dawn here...” Thus, the poet skillfully sets the stage for the dawn sacrifice in verse 1 using none of the standard tropes, but rather by śleṣa and lexical and formulaic evocation. Only then, in verse 2, does he straightforwardly introduce the dawn and proceed to the sacrificial performance that is to draw Indra to our ritual ground. If it is poetic cleverness and linguistic indirection that lure Indra, the poet will certainly succeed.

There remain a few loose ends, concentrated in pāda c. The pāda lacks a verb and, as we saw above, the referent of the rel. *yásya* is unclear. Here I follow Ge in supplying *cākān* from pāda a as the verb and the *stómaḥ* of b as the referent of the relative. I diverge from Ge in taking *īndraḥ* and *hótā* (=Agni) as separate subjects of the supplied *cākān*; Ge nudges pāda-final *hótā* into the next pāda. Ge makes the nice point (n. 1a) that *cākān* can take both loc. and gen. complements, with the first in pāda a and the other in pāda c – though in the midst of all the other poetic complications this effect is hardly noticed.

Pāda c also contains the hapax *purudína-*, with the ‘day’ element (-*dína-*) found otherwise only in *madhyāṃdína-* ‘midday’ and *sudína-* ‘day-bright’ (?), on which see EWA s.v. *madhyāṃdína-*. Since *sudína-* is an adj., *purudína-*, with the same accent, probably is too; so Gr “vielleicht ein *vieltägiges Fest*,” EWA ‘viele Tage enthaltend’. It is thus likely that this is the temporal designation of some ritual (a sattra? or just a soma sacrifice, but reckoning in the days of preparation?), but the exact ritual reference escapes me. Nonetheless the tr. should probably be altered to “at (rituals) of many days.”

In the publ. tr. I limited the number of alternatives presented for the sake of (semi-)intelligibility.

X.29.2: This vs. lacks the verbal tricks of vs. 1 but is discouragingly enigmatic nonetheless.

The multiple days of the sacrifice indicated by *purudíneṣu* in 1c may also be reflected in the expression *asyā uṣāsaḥ ... áparasyāḥ* “of this dawn and a/the later one.” With Old and Ge I take this gen. phrase as a temporal expression; I construe the genitives loosely with the repeated *prá*, which seems associated with the two temporal alternatives (*prá ... asyā uṣāsaḥ prāparasyāḥ*). The *prá* is otherwise difficult to account for; it should not be a preverb with *syāma* in b because *prá √as* means ‘be preeminent, surpass’, which does not fit the context—pace Ge’s “bei deinem ... Antanzen ... den Vorrang haben,” which suggests that we’re hoping for front-row seats. On the temporal genitive see Delbrück, AIS §113, which mentions *uṣāsaḥ* specifically. Gr construes *uṣāsaḥ* with *nṛtaú* (see s.v. *nṛtí*), and Ge (n. 2b) suggests this as an additional syntactic

connection on the basis of I.92.4, where Dawn is compared to a dancer. However, Indra most definitely dances elsewhere (cf. V.33.6, where Indra's *nṛmṇāni* appear in the same pāda, with the same word play as here), and I think his "dance" here is his much-desired epiphany.

Like 1d, pāda b contains a sequence of three *nṛ* forms, including the repetition of the splv. phrase *nṛṇām nṛtama-*, though in a different order and a different case. But the third word *nṛtaú* 'at the dance' is not etymologically bound to this phrase, as *nārya-* in 1d is (though it surely is by folk etymology).

As Ge says (n. 2c), the 2nd hemistich presents a "dunkler Sagenzug." The problem (or one of them) is *triśoka-*. This word is always a PN, seemingly of a human ṛṣi/poet. In I.112.12 he is one of the many clients aided by the Aśvins, in a series of vss. that name men of similar ilk, like the far better known poets Kakṣīvant (vs. 11) and Bhāradvāja (vs. 13); in VIII.45.30 he is aided by Indra. In both cases the aid he receives allows him to drive cattle up or out (of a mountain in VIII.45.30), in a Vala-like denouement. VIII.30 is also attributed to Triśoka Kāṇva by the Anukr, probably on the basis of his appearance in vs. 30. And in AV IV.29.6 he appears in an overstuffed list (vss. 3–6) of clients of Mitra and Varuṇa that includes many of the best-known RVic poets. (In vs. 6 he finds himself between Medhātithi and Uṣanā Kāvya.) What is this rather recessive poet/hero doing here? As indicated in the publ. tr., I think there is a pun here, and that in addition to the man's name, *triśoka-* is a reference to Agni, who, of course, is represented at the ritual by three fires, hence 'having three flames' as an epithet. (Three of the five occurrences of *śoka-* are connected with Agni.) A reference to Agni could continue the theme of vs. 1, the establishment of the ritual fire. But it doesn't get us much further with the Sagenzug, and in fact I now think that the Agni identification is a red herring planted by the poet.

For the Sagenzug we should start further along, with a name we know better: Kutsa. Kutsa is famous for his association with Indra in the battle against Śuṣṇa, in which exploit Uṣanā Kāvya also figures. Kutsa regularly rides on Indra's chariot. See, e.g., IV.16.11 *yāsi kútsena sarátham* "you [=Indra] drive on the same chariot with Kutsa" (sim. V.29.9, also with *sarártham ... kútsena*). It is this phrase that I think underlies the puzzling relationship between the main clause and the relative clause, with the latter having as subject *rátho yáh* "which chariot" (nom.), which has no apparent antecedent in the main cl. If *kútsena* belongs to the main clause and allows us to supply the phrase **sarátham kútsena*, then the antecedent is covertly there, though locked in an adverb, which, moreover, is unexpressed in the text. (Construing differently, though with more or less the same sense, Ge: he takes *kútsena* with the rel. cl. and supplies **ráthena* in the main cl.: "... auf dem Wagen, der durch Kutsa der Gewinnende werden sollte." On the difference see below.) But Indra not only travels on the same chariot with Kutsa, he sometimes "conveys" (√*vah*) him: V.31.8 ... *ávaho ha kútsam* "you conveyed Kutsa" or they are "conveyed" together: V.31.9 (next vs., same hymn) *indrākutsā váhamānā ráthena*. Now √*vah* provides the verb of the main clause in this hemistich: *ánu ... ávahat*. The subject of this verb is Triśoka, who may or may not also stand for Agni, as noted above – but the subject I would really like to see here is Indra – and I do not see any way to make *triśoka-* an epithet of Indra beyond arbitrary fiat.

There is also the problem of the verbal lexeme: *ánu-ā√vah*, which occurs only here in all of Skt. as far as I can see. Ge also feels (n. 2c) that decoding the hemistich depends on understanding the sense of that lexeme.

And a further problem is the 100 men whom Triśoka conveyed, for which I know no mythological precedent.

I can make some further headway but am far from understanding the whole. Looking at the Trisoka passages elsewhere we can situate him in a web of associations that point to the episode of Indra's slaying of Śuṣṇa with the help of Kutsa and the counsel of Uśanā Kāvya. Trisoka is linked to Kutsa at least marginally, since I.112, which contains one of the few attestations of *trisoḥka-*, is attributed to Kutsa; Trisoka is directly linked to Indra because Indra aids him in VIII.45.30. On the basis of AV IV.29.6 we can also connect him to Uśanā Kāvya. The phraseology of our passage also points to this same episode, as outlined above. It is almost as if Trisoka is a kind of Zelig figure (from the movie of the same name), a nearly anonymous minor figure absorbed into a well-known plot. Perhaps the 100 men he conveys are reinforcements or auxiliaries for the combat, and the *ānu* of *ānu-ā √ vah* means 'convey in addition'. But if this is an variant of and expansion on the more familiar Śuṣṇa slaying tale, this is its only occurrence, as far as I know, and we will never know more about it.

Even if this is all true (and in fact it doesn't fit together very well), what does this contribute to this vs. and this hymn? I remain mostly baffled. One clue to the contribution it makes is the switch from mythological past to potential future: the verb of the main cl. is (most likely) an augmented impf. (so Pp.), though technically it could also be an injunc., *ā vahat*. The verb of the following rel. clause is subjunctive, made even clearer by being periphrastic (*āsāt sasavān*). So the mytho-historical snippet in the main clause must be serving as model for the present: the chariot journey in the main clause led to success and victory (the killing of Śuṣṇa, if I've identified the myth right), and so the chariot with which we're currently concerned will be victorious too. I would suggest that current chariot is the one on which Indra is traveling to our sacrifice – for the epiphany that seems to be the topic and goal of this hymn. (Note that if I am correct about the division between mythological past and ritual present, this provides more support for my view that *kútsena* belongs to the main cl., despite the preceding pāda boundary [*pace* Ge], since Kutsa belongs to the myth, not our current ritual.)

Here and in two other occurrences (VII.87.2, IX.74.8), the nom. sg. of the pf. part. to *√ san* should be read with a heavy root syllable, reflecting, one way or the other, the seṭ root. On this issue see KH (Aufs. 544–46), who weighs the merits of **sasāvān* and **sasanvān*; I would favor the former.

X.29.3–5: These three vss. present themselves technically like an omphalos structure, with the two outer vss. (3, 5) responsive, with their vs.-final *ānnaiḥ* and forms of *√ śak*. This would define vs. 4 as the omphalos, and, rather cutely, it also has a form of *ānna-*, but the recessive *ānne* beginning 4d. However, in terms of content this doesn't work: vss. 3 and 4 pattern together, and vs. 5 change the subject, so, although the structure of the three vss. is promising and they are found in the middle of the hymn, I don't think that's what's going on. Instead it's better to concentrate on the similarities of the first two of these vss. (3–4), where the poet peppers Indra with questions about when and how Indra will come to our sacrifice and what will induce him to choose our sacrifice (over those of competing sacrificers).

X.29.3: In pāda a the publ. tr. renders *rāntyo bhūt* as if it were a gerundive periphrasis ("is to be enjoyed by you"), but since *rāntya-* is built to the *-ti-* stem *rānti-*, the tr. oversells its verbal nature. I'd now emend to "... is / will be enjoyable to you." The injunctive *bhūt* is functionally ambiguous.

In b the verbal lexeme (*abhí ... ví dhāva*) is construed with a double acc. *dúraḥ gírah*. I think it likely that *dhāva* selects a different preverb for each acc.: *abhí* for the goal *gírah* 'hymns',

ví for the doors, through which Indra is to run. *ví* is regularly associated with ‘doors’ elsewhere, esp., but not only, with the lexeme *ví√vr* ‘open’.

But the doors of what? I think it likely that they are the same as the enigmatic “divine doors” (*dvāro devāḥ*) found in the Āprī litanies, generally in vs. 5 (I.188.5, VII.2.5, etc.) or 6 (I.13.6, 142.6). In the Āprī context the doors open up for sacrifice (e.g., I.13.6 *yāṣṭave*) or for the gods to come through (e.g., I.142.6 *prayaí devébhyaḥ*). See esp. III.4.5 *abhīmāṃ yajñām ví caranta pūrvāḥ* “They [=gods] proceed through the many (doors) towards this sacrifice,” with *ví* and a verb of motion, as here. The doors are discussed in detail by van den Bosch in his comprehensive treatment of the Āprī hymns (IJ 28 [1985] 95-122, 169-89), with the doors disc. pp. 104-6, incl. a survey of previous lit. Though the disc. is useful, I cannot follow the au in taking them as real doors, “special gates ... erected for this sacrificial performance” (p. 105) of, in his view, an archaic domestic animal sacrifice. Instead I think they must be the conceptual doors that give the gods access to our ritual ground, that open up for them when we perform sacrifice, and that, when conceptually shut, keep the divine and mortal spheres safely separate.

Note the phonological play *dúro gíro ... ugró*, with parts of the 1st two words combined in the third.

Pāda c poses some questions, beginning with the first word, *kád*. Is it a lexicalized ‘when?’ (per publ. tr.) or the neut. nom./acc. sg. of the interrogative prn/adj. ‘what/which?’ (per Ge, Old [ZDMG 50 (1896) 430 = KISch 8])? I now favor the latter against my previous tr. The final word of the pāda is also problematic: *manīṣā* in the Saṃhitā text. Since *d* begins with a vowel (*ā*), the underlying form should be *manīṣāḥ*, and this is the interpr. in the publ. tr. The presence of an indisputable *manīṣāḥ* at the end of the next vs. (4d) might support this reading. However, the Pp. reads *manīṣā* despite the resulting hiatus; on this reading see Old’s various reff. starting with the Prātiśākhya, which favor the form in hiatus. I now see that I should accept this sg. form, though in fact it will not make much difference in my interpr. (which will change considerably for other reasons). In the publ. tr. I took it as nom. pl.; I now interpr. it as nom. sg., though it could also be an instr. sg. (so Gr).

To understand the pāda we need to consider the meaning and use of the keyword *vāhas-*. (As for its form, I have no opinion on the lengthened grade in this word and some other derivatives of the root *√vah*.) Gr glosses it ‘Darbringung’, which is adopted in EWA (s.v. *VAH*, p. 536); Ge renders it “Anziehungskraft” (force of attraction), I’m not sure on what grounds. (In fact Ge makes no comment on this vs. whatsoever.) The word is discussed at length by Old in the art. cit. above (“Vahni und Verwandtes,” ZDMG 50 [1896] 423-33 = KI Sch 1-11) with his customary acuity: he situates it within the well-known RVic conceptual equation of the sacrifice with a chariot. He notes the fact that *vāhas-* is primarily – and widely – found as a 2nd cmpd member in bahuvrīhis whose first member is a word for ritual speech: *ukthā-vāhas-*, *gír-vāhas-*, *stóma-vāhas-*, etc. Old’s interpr. (429=7) of such cmpds is “dass das Loblied als mystischer Wagen oder als Gespann den Priester zu Erfolg und Gewinn hinführt, oder dass der Priester es dem Gott als Gespann ausrüstet, der Gott mit diesem Gespann zum Opfer fährt.” His 2nd suggestion seems to me the one most generally in play: the poet’s hymn serves as the vehicle that brings Indra to the sacrifice. Two (III.30.20, 53.3) of the uncmpd occurrences of *vāhas-* involve poets making a *vāhas-* for Indra. Cf., e.g., III.30.20 ... *matībhis túbhyaṃ vípra, índrāya vāhaḥ ... akran* “The inspired poets have made a vehicle for you, for Indra, with their thoughts.” Although *vāhas-* is not cmpd here, it does appear in the same pāda, and probably the same case, as *manīṣā*, a word for ritual speech, though not one cmpd with *-vāhas-* elsewhere.

The syntax of the pāda is compressed; there is no verb and no Indra, but the phrase *arvāg ūpa mā* “near by, to me” suggests that “me” is the goal, and we need a verb of motion (cf., e.g., VII.72.2 *ā naḥ ... ūpa yātam arvāk* “drive here near to us”) or perhaps better a form of \sqrt{vah} with *īndram* as supplied object and *mā* as goal. I also now think that initial *kād* should, with appropriate (if silent) adjustment in gender be construed with *manīṣā* as well as *vāhaḥ*, thus equating the two words, as if in a cmpd **manīṣā-vāhas-* ‘having inspired thought as vehicle’. Putting all this together I would now emend the tr. to one of the following: “What vehicle, (what) inspired thought (will come) nearby to me?” or “What vehicle, (what) inspired thought (will convey you) nearby to me?” I favor the latter, even though it requires supplying more, because the poet is deliberating about how best to craft his *manīṣā* to bring Indra to him.

The lexeme $\sqrt{śak}$ is uncommon in the RV and does not seem to have a settled sense or even a settled case frame. I would now change my “would compel” to “would empower”; in other words the poet by the offering of both praise and food would give Indra the power (as well as the inclination) to reward the poet. This rendering also conforms better to the one for the desid. *pratiśīkṣanti* in 5d.

X.29.4: The poet’s questions continue in this vs., and indeed, like 3c, it begins with *kād*. As in that pāda *kād* here can be either ‘when?’ or ‘what/which?’. Either would be grammatical, since *dyumnām* is neut., but despite the apparent parallelism with 3c I prefer ‘when?’ here (contra Ge, Old), since we’re not choosing between various *dyumnā*-s that Indra has to offer, but hoping that he will arrive with *dyumnā*- to bestow. Moreover, *kād* in b cannot be ‘which?’ but should be ‘when?’ or at the very least a question particle as Ge takes it, so intra-vs. parallelism supports the ‘when?’ interpr.

My interpr. of pāda a differs from those of Ge and Old because of divergent interpr. of the final phrase *tvāvato nṛṇ* and divergent morphological analyses of the final word *nṛṇ*. The same phrase is found in II.20.1; see esp. Old ad loc. Both Old and Ge (and indeed a number of scholars; see in general AiG III.211–12) see a morphological multivalence in *nṛṇ* to which I am highly resistant (see comm. ad I.146.4, IV.2.15, 21.2): I think it can almost always be interpr. as the acc. pl. it appears to be, while Ge allows gen. pl. as well (e.g., here and in II.20.1) and Old takes it in those two passages as gen. sg. (and elsewhere even as nom. pl.). There is, in my view, strong pressure to take it as acc. pl. here. On the one hand the same form is a clear acc. pl. in 2c, and there are also two perfectly formed gen. pl. (1d, 2b, as often, better read **nṛṇām* to repair the cadence; see Old) and a nom. pl. *nāraḥ* in 5d, so the poet must have had the conventional paradigm in his head. Against a gen. singular reading is the nom. pl. *nāraḥ* in 5d, who appear to be the same people as our *nṛṇ*. Moreover, 3c, our pāda 4a, and 4b all have the same conceptual structure in my view: all three contain an acc. goal referring to us or our side: 3c *mā*, 4a *nṛṇ*, 4b *naḥ*, and all three are questions about when or how Indra will come to us—though only the last has an overt verb of motion, *āgan*.

In b we return first to the question of *whose* hymn, *what kind* of hymn will attract Indra (as in 3c): *kāyā dhiyā karase*. But the next question, which continues into the next hemistich, is about the timing of Indra’s advent.

In c I take *satyā-* as ‘actually present’, with reference to Indra’s epiphany, rather than the standard ‘true ally’ construed with *mitrāḥ* in the simile.

The dat. *bhṛtyaī* is ambiguous: it can either refer to our bearing offerings for Indra (as I take it) or to his support for us (or, indeed, both). There are no other dat. occurrences to this

stem, but the two acc. sg. *bhṛtīm* (VIII.66.11, IX.103.1) both refer to our offerings to the gods, and since the next pāda refers to such offerings I favor that interpr.

Ge's interpr. of d is entirely different from mine: "da eines jeden Sinnen auf Speise gerichtet sein wird." He thus takes *manīṣāḥ* in an entirely different sense from *manīṣā* in 3c (a vs. that also contains *ánna*-), which speaks against his interpr. In my view, the poet is returning to the issue of competing sacrifices, which is implicit in the urgent questions he's been raising. Now he makes it explicit: admitting that the sacrifice of someone else (*samasya*) will also feature both food (*ánne*) and *manīṣā*-, the two items he promised Indra in 3cd. This admission seems a bit like a strategic blunder – though surely Indra knows it already – but (again implicitly) the poet is asserting the superiority of his own offerings. My interpr. requires loc. *ánne* to refer to the ceremony of food offering, not just to the food itself, but this doesn't seem like too much of an expansion.

The unaccented pronominal stem *sama-* (13x, excluding reps.) is generally taken as a straight indefinite 'someone, anyone', but it's worth noting that it's almost always found in clear pejorative context, of unspecified opponents. English 'some' can develop the same sort of negative sense – e.g., "some guy" in contexts like "Some guy was Xing ..." generally refers to someone doing something disapproved of ("some guy was making trouble" rather than "some guy was helping an old lady"). For the RV cf. passages like I.176.4 *ásunvantam samam jahi* "Smite anyone who doesn't press (soma)." For the three passages that appear to have neutral sense (VI.27.3, VIII.21.8, and X.54.3), see comm. ad locc.; all three are best interpr. negatively.

X.29.5: Another vs. studded with puzzles. The first pāda seems to consist of several interlocked similes anchored by *préraya* 'send forth', with Indra the unnamed addressee of this impv. in my view (versus Ge [n. 5ab]: self-address of the poet). The first simile consists of nom. *sūrah* (*pace* Gr, who takes it as gen. to *svār*-, but in agreement with Ge, KH [139], Scar [252]) and acc. of goal *ārtham* "send forth (as) the sun (sends forth X) to the task/business," with the direct object – who or what is being sent there – unexpressed. But it is not difficult to supply the object, since this is the common trope of the dawn / sun / Savitar dispersing humans to their tasks in the morning (cf., e.g., I.113.6, VII.63.4). In the 2nd simile, by my interpr., the only expressed element is the goal, *pārām* 'far shore'. I supply "boat" as the direct object being sent there, in keeping with the literal meaning of *pārām*, though the others cited above simply take it as the goal in the frame (e.g., Klein DGRV I.122 "Impel forth over to the other side ..."). In his n. 5ab Ge does introduce the possibility of a boat and cites the telling passages II.42.1. *íyarti ... iva nāvam*, X.116.9 *síndhāv iva prérayam nāvam* "I send forth (speech) like a boat on a river." Although the position of *ná* might seem to speak against my interpr., as has been discussed elsewhere (VIII.76.1, X.21.1), *ná* 'like' is blocked from pāda-final position and flips with the simile word in those circumstances. In any case the direct object of the frame is, by general agreement, the gapped masc. pl. prn. **tān*, which would serve as antecedent of the rel. *yé* in pādas b and cd.

These two clauses (b and cd), conjoined by *ca*, presumably define the groups of humans who will benefit from Indra's nudge and who have in some way earned his helpful push. The 2nd rel. cl. (cd) works very well in this scenario, depicting the humans' ritual activity. But b is a different matter.

The interpr. of b is considerably complicated by the hapax root noun cmpd *janidhā(h)* 'wife providers' (?). By form this can be either nom. or acc. pl., but neither choice contributes helpfully to the interpr. Before tackling the wife problem, it's useful to determine the referent of

asya. This is generally taken to be Indra (Ge, Old, Klein, Scar, but not KH), but Indra must be referred to in the 2nd ps. in cd, given the enclitic *te* and the voc. phrase *tuvijāta ... indra*. As indicated above, I also think that Indra is the addressee of the 2nd sg. impv. in pāda a. Although switch between persons is not unusual even within a single vs. in the RV, it would, I think, be unusual to have a 3rd ps. sandwiched between two 2nd ps. in the same vs. The case for the Indra ref. of *asya* is based on the larger context: if men are trying to fulfill Indra's wish (*asya kāmam*), they deserve his aid, just like the ritualists in cd. But I find the reference sandwich too problematic and think that b is actually less parallel to cd than it appears (or indeed should be). Instead it seems to be a recasting of one of the similes in pāda a: just as the sun sends people to their task(s), so (in b) do people pursue each his own desire. The sg. *asya* would be individuating the various different *kāma*- the plural subjects have.

So what do the *janidhā*- have to do with this, and are they being compared with the subjects, the *yé* who go to the *kāmam*, or with the object, the *kāmam*? Most opt for the former, while the publ. tr. reflects the latter. Before attempting to adjudicate the case identity, we should make a stab at figuring out what the cmpd might mean. I will start with an outlier suggestion, that of KH, which I wish I could adopt but which seems an impossible interpr. His tr. of b (139) is “der einem (*asya*) auf den Wunsch eingehen wie ein zum Eheweib bestimmtes Mädchen (?).” Unlike the standard interpr. noted above, he does not take *asya* as a reference to Indra (as far as I can see), but as a sort of indefinite. But it is his interpr. of *janidhā*- as a nom. sg. fem. “zum Eheweib bestimmtes Mädchen” that is more radical, since it assumes a passive sense of the root noun *-dhā*-, which would be unprecedented for *-dhā*- cmpds (and in fact questionable for most root noun cmpds). But it would yield some sense in the pāda: those fulfilling the wish of the unidentified *asya* would be likened to a new bride fulfilling the wish of her husband. However, I think this interpr. has to be rejected because of the twisting of the root noun cmpd, which is esp. unlikely given the existence of the parallel cmpd *jani-dā*- ‘giving wives’ (IV.17.16, of Indra). Conforming to the standard model of root noun cmpds, the first member should be the obj. of the root noun – as in cmpds like *dhiyaṃ-dhā*- ‘creating thought’, *ratna-dhā*- ‘creating / establishing / providing treasure’, etc., as well as the just-cited *jani-dā*-. What would a bride-creator/establisher/provider be? Ge suggests “Ehestifter” (matchmaker), which makes literal sense, but I do not know of any evidence for such a role in Rigvedic society (not that we would necessarily have it). Nonetheless, the publ. tr. adopts a version of this, “providers of wives,” with the further assumption that men go to such people to fulfill their wish (for a wife). I now think this was an ill-thought-out translation of desperation, though I don't have much better to replace it with. I now think Gr's ‘Brautführer’ / Scar's ‘Brautwerber’ are closer to the mark and have some connection to what we know about the mechanics of ancient Indian marriage. As I have discussed elsewhere (see esp. SacWife 221–23 and passim), a prospective bridegroom does not seek the hand of a maiden himself, but sends “wooers” (*varā[ka]-*) to the prospective bride's family to arrange the match. These wooers are already found in the RVic wedding hymn X.85.14, and the institution is treated more straightforwardly in the gr̥hya sūtras. The wooers can reasonably be considered ‘arrangers/providers of the bride’, and they would perform this task “at the desire” (*kāmam*) of the bridegroom. I now therefore would tr. the pāda “(those) who pursue each his own desire, like bride-providers (=wooers) at his (=bridegroom's) wish,” with *asya kāmam* used in two different senses and syntactic functions (the one in the simile being adverbial) and *janidhā* nom. rather than the acc. of my publ. tr.

After this, the interpr. of the 2nd hemistich is comparatively uncomplicated. As noted above, this clause must express the ritual actions directed at Indra that attract his aid. As in the

previous two vss., which treat the same matter, food is a crucial element: pāda-final *ánnaiḥ* matches that of 3d, with loc. *ánne* in 4d somewhat recessive, since it describes the ritual of the rival sacrificer. The previous two vss. also showcase the verbal portion of the ritual, with *manīṣāḥ* (3c, 4d). In our vs. *gíraḥ* is substituted. The use of a form of $\sqrt{\text{śak}}$ ‘be able’, here the semi-lexicalized desid. *śikṣ* with *práti*, a combination found only here, also recalls vs. 3 *ā* ... *śakyām* – though the two uses of *śak* are slightly different. In 3d the object is Indra, who is empowered by the ritual offerings to (display) generosity; here it is the hymns that are empowered, to be offered to Indra.

X.29.6: The worst is now over, and the hymn drifts to its conclusion with no more than normal difficulties.

My interpr. of the first hemistich differs considerably from Ge’s, and there are arguments in favor of each—though ultimately I favor my own. The points of difference are 1) what is predicated of what, 2) how *mātra*- ‘measure’ is used and what it refers to, 3) what root *súmita*- belongs to: $\sqrt{\text{mā}}$ ‘measure’ or $\sqrt{\text{mi}}$ ‘fix’, 4) what the instrumentals in b are doing and who do these qualities belong to.

Ge’s tr. is “Die beiden sind für dich reichliche, gutbemessene Massstäbe: der Himmel an Grösse, die Erde an Weisheit.” He thus takes *mātre* as predicated of Heaven and Earth, with *te* a dative enclitic. That is, “the two (=H+E) are a measure (/measuring rods / standards) for you.” For him *súmite* also belongs to $\sqrt{\text{mā}}$ and forms an etymological figure with *mātre*: “the two well-measured measures.” As he indicates in his n. 6ab, only Heaven and Earth are vast enough to serve as measuring standards for Indra. By contrast I take *mātra*- as a measure, that is, a unit of mass (like “a measure of grain”) and, further, the container that would hold that mass (in a phrase like “quart measure,” the “measure” may be the amount of liquid in a quart or the cup that holds it). So H+E are conceived of as very large, hollow containers.

I take *súmite* to $\sqrt{\text{mi}}$ ‘fix’. Syntactically *mātre* is the subject and *súmite* ‘well fixed’ is its predicate, referring to the standard cosmogonic deed of Indra’s, propping apart Heaven and Earth. Cf., e.g., III.30.4 *táva dyāvāprthivī párvatāso, ánu vratāya nímiteva tastuh* “It is following your [=Indra’s] commandment that heaven and earth and the mountains stand (/stay) like (pillars) implanted. By my interpr. *te* goes with the instr.s in b, but occupies standard Wackernagel’s position.

And the instrumentals name Indra’s powers, which he used to fix the two world halves. For Ge, by contrast. they are the measuring standard for Heaven and Earth respectively (“Heaven in greatness, Earth in wisdom”). There is something to be said for both interpr., though *majmánā* works better for him than *kāvya*- does. The former, *majmán-*, is generally associated with Indra, and it is often the instrument he uses to effect his deeds (e.g., I.55.5, I.130.4), thus supporting my position, but it can also be the standard by which Indra is judged (III.32.7, 46.3 [both cited by Ge]), supporting Ge’s. That “greatness” would be an appropriate standard for evaluating both Indra and Heaven is easy to accept; it is harder to see how *kāvya*- ‘poetic skill, sagacity’ could be a shared standard for Indra and Earth, since I’m not aware of passages in which Earth is credited with mental capacity of this sort. But *kāvya*- can be used as an instrument, even in cosmogonic contexts. Cf. the following passage, which describes the separation of Heaven and Earth; though the deed is attributed to Soma, the action is one of Indra’s standard ones: IX.70.2 *ubhé dyāvā kavyenā ví sísrathe* “through his poetic skill he [=Soma] has loosened both, Heaven (and Earth), from each other.” Although *kāvya*- is more generally associated with Soma (as here) or Agni, recall that Indra in the Vala myth opens the cave through his verbal skill, not his physical power.

In balance, therefore, though I find Ge's interpr. appealing in many ways, I think the evidence points rather in the direction of my own. And in particular, despite the suggestive interlacing of NOM. INSTR. NOM. INSTR. in b, the two instrumentals are Indra's means – the complementary physical power and verbal skill displayed in the Vṛtra and Vala myths respectively – and are used to fix both entities, Heaven and Earth, with no association of one of the instr. with one nom., and the other with the other.

The two pādas of the 2nd hemistich are constructed as parallels, each hoping that one of the substances offered to Indra will be acceptable to him. Given the parallelism, initial dat. *vārāya* "for your liking" should correspond to loc. *svādman*; cf. Ge's "nach deinem Wunsche ... nach deinem Geschmack." Although this is surely the intent, the use of the loc. is somewhat odd.

X.29.7: *āmatra*- in pāda a appears to be playing off *mātra*- in 6a, and since *āmatra*- is a large liquid measure, this may make it more likely that my interpr. *mātra*- in 6 is also one.

Note that *satyā*- from 4c and *rādhas*- from 3d, both used in reference to Indra, are reprised here in one cmpd.

Flg. Ge's cited parallel, VII.21.6 *abhī krátvendra bhūr ádha jmán* "Become preeminent through your will, Indra, on the earth," I supply a participial form of 'be/become' with *abhī* in d.

The *nr* theme of vss. 1–2 returns here with *náryah*, doubled by and contrasting with adjacent *paúmsyaiḥ*.

X.29.8: The first pāda here is almost identical to VII.20.3 *vy āsa índraḥ pṛtanāḥ svóajā(h)*; see comm. ad loc. Bloomfield (RReps ad VII.20.3) works himself into a state of near apoplexy because of differing translations of the two pādas, esp. different renderings of *pṛtanā*-, which he declares always means 'battle'. Although the two pādas are too similar to be chance resemblances and although I agree with Bl that *pṛtanā*- should be interpr. in the same way in both, I differ from him on two points. 1) I do not think that *pṛtanā*- in general only means 'battle'; rarely, as here (in my view, contra Ge), it seems to refer to the battlers themselves. (For the contribution of the root noun cmpd *pṛtanā-śāh*- to such a reinterpret. see comm. ad III.24.1.) 2) I think the choice of two different but phonologically similar verbs, *vī√as* (VII.20.3) and *vī√(n)as* (here), shows that the poet of the derivative pāda (probably our Vasukra) meant to vary the sense, not reproduce it. In VII.20.3 Bl takes *vy āse* as lit. 'threw himself through', but pregnantly 'pervaded', with our *vy ānaṭ* also meaning 'pervaded'. For the verb in VII.20.3 I prefer 'dispersed', for the one here 'penetrated'. The point here is that Indra has taken position in the middle between the armies, which marshall themselves (pāda b) competing to secure his patronage and help in battle for their side.

Pāda c is somewhat unclear. Ge, who interpr. both instances of *pṛtanā*- in this vs. as 'battle', tr. *ā ... rátham ná pṛtanāsu tiṣṭha* as "Besteige den Wagen wie in den Schlachten," with the simile consisting only of *pṛtanāsu*. But the position of *ná* speaks against that (and this is not a situation like that in 5a where *ná* is flipped because it's barred from pāda-final position [see comm. there and ad X.21.1], though I admit that **pṛtanāsu ná* would not work metrically). My interpr. takes *pṛtanāsu* as the frame and *rátham* as the simile, both construed with *ā ... tiṣṭha*. Since *ā√sthā* can take either acc. or loc., this is an example of case disharmony between simile and frame, of the type discussed in my 1982 IJ article "Case disharmony in RVic similes." The point is that Indra shows himself superior to both sides in the battle – he mounts (perhaps 'surmount' would be better here) them like a chariot. So in fact he does not tip his favor to any

side (despite the competition implied between the hosts in pāda b), but takes control of them all. The metaphorical chariot made up of the *pṛtanā*-s he will then drive (pāda d) to his own advantage (and perhaps ours, given his benevolent *sumatī*). The middle voice of *codāyāse* expresses the same self-involved action as the same form in VI.46.13, where Indra spur on his own steeds.

For *sumatyā* and suggested substitute reading *sumatī* see Old ad I.31.18.

Commentary X.30–60

X.30–34

These five hymns are attributed to Kavaṣa Ailūṣa, whose name is, intriguingly, non-Indo-Aryan phonologically (see Mayr. PN s.v.). He figures in the AiB and KauṣB as the son of a dāsī (see Kuiper, Aryans p. 7 and passim), and in the Ten Kings Battle a “famous old” Kavaṣa (*śrutām kavāṣam vṛddhām*) gets drowned (or at least dragged into the water) by Indra (VII.18.12). This does not seem to have kept him (or his supposed namesake) from dedicating a hymns or parts thereof to Indra (X.32; see its publ. intro.; X.33.2–3 per Anukr.). The subjects of the hymns in this collection are heterogeneous, and the last one (X.34) is the famous “Lament of the Gambler.” Much less famous, but very appealing is X.33, which we can call “Lament of a Singer.”

See Ge’s detailed intro. to this hymn group. It should also be noted that Old suggests that the Vasukra hymns (X.27–29) and the Kavaṣa hymns may form not two series but one on the basis of phraseology etc. (see Prol. 234).

X.30 Waters

On the ritual background of this hymn, see publ. intro. and Ge’s and Old’s intros. to the hymn. The hymn treats the ceremonial fetching of the waters for the preparation of soma and their installation on the ritual ground. Re tr. and comm. EVP XV.127ff.

X.30.1: Ge and Re take *devatrā* and *apāḥ* as separate goals of *prá ... etu* (Ge: “Götterwärts soll der Weg ... gehen, hin zu den Gewässern ...”). I have consolidated them (“... the waters that are among the gods”) to avoid the duplication and also because in c the wellspring (*dhāśi-*) belongs to Mitra and Varuṇa.

On *dhāśi-* see the various reff. in Comm. Lexicon. I basically follow Janert. Re quotes Janert’s tr. of this vs., commenting rather acidly “traduction védique <<typique>> des exégètes modernes,” though he doesn’t explain his disdain. With Ge I construe c with ab; both Old and Re take it instead with d, which in turn leads them to consider *dhāśīm* in c to be coreferential with *suṣṛkṛīm* in d. Re tr. c as “la puissante projection (émanée) de Mitra (et) de Varuṇa.” The *dhāśi-* of Mitra and Varuṇa is also found in IV.55.7, where it is not as clearly tied to water as it is here (at least acdg. to Janert and me: Ge tr. “Schöpfung”), but I take it there as the repository of waters in heaven that produces rain. In any case, whether one takes *devatrā ... apāḥ* in ab separately or together, the conceptual location of the waters to be fetched for this sacrifice appears to be in heaven, not whatever terrestrial water source is actually going to be tapped. This conflation of the earthly element and its heavenly counterpart is of course a standard move of the RVic poet, and in the first vs. of this hymn it frames the action to come as more significant than a little expedition with a bucket down to the river.

The root affiliation of the 1st sg. subjunctive *rīradhā* is disputed. Gr and Lub assign it to *√randh* ‘be/make subject’, and I follow them; Old, Ge, Re, Janert all prefer *√rādh* ‘(make) succeed’. At first glance ‘make succeed’ is easier to fit into the passage than ‘make subject’, but there are several arguments in favor of the more difficult interpr. ‘make subject’. First, although a causative system, with pres. *randhāya-* and redupl. aor. *rīradha-*, is very well established in the RV for *√randh*, the *-āya-*transitive *rādhaya-* to *√rādh* is first found in the AV, the corresponding redupl. aor. *arīradhat* first in TS (1x). So the default interpr. of *rīradha-* in the RV would be to *√randh*—although it must be admitted that the other 8 exx. are in *mā* prohibitives: this is the only

occurrence in positive context. Second, the case frame here, ACC *suṇṛktīm* + DAT *prthujrāyase*, is exactly that found with the causative forms of $\sqrt{\text{randh}}$, but the dative is foreign to $\sqrt{\text{rādh}}$. Those who favor $\sqrt{\text{rādh}}$ must therefore resort to makeshifts in rendering the verb (Ge, Janert) or the dat. (Re). In my view “making the hymn subject to DAT” indicates that hymn’s composer recognizes the superior power of the entity denoted by the dative and sends it to do service to that entity.

Who or what then is the referent of *prthu-jrāyas*? In its other occurrence (III.49.2) this *s*-stem bahuvr. modifies Indra, but though Sāy and Re supply Indra here, there is no contextual support for him here (or Janert’s Agni). The uncmpd *jrāyas*- refers to space generally, and here the most likely entity to “have broad expanse” is a body of water, whose size would dwarf and humble the hymn approaching it (another argument for *rīradha*- ‘make subject’). I do not have a candidate for the underlying noun, which should be masc. or neut. sg. – rather than the fem. pl. of *apāḥ* (b) and fem. sg. of *dhāsīm* (b), both of which also refer to this water source. Perhaps *samudrām* found in 3a.

X.30.2: In the publ. tr. I take *bhūtā* as an injunc., with the clumsy tr. “since you have become provided with oblations ...” I would now change my grammatical analysis to imperative (with Ge, Re), in the well-known construction in which an impv. in a *hī* clause followed by another clause with an impv. provides the grounds for the 2nd impv. I would therefore emend the tr. to “Become provided with oblations, (and then) go ...” Although on general grounds we might expect the priests’ fetching of the waters to precede their providing themselves with oblations, in fact vs. 3b explains the sequence: the Adhvaryus must sacrifice to Apām Napāt “with an oblation” (*haviṣā*) so that that god will release the waters to them.

In agreement with Ge, Re, Lü (296), contra Sāy. (Soma), I take the ruddy eagle to be the sun. Ge (n. 2c) points out that that phrase is esp. appropriate for the morning and/or evening sun (which often appears red), times prescribed in the later Soma sacrifice for the water-fetching.

Gr, Ge, Re, Lub all assign *āsyadhvam* to the root $\sqrt{\text{as}}$ ‘throw’, flg. the Pp analysis *āsyadhvam*. I am persuaded, however, by Old’s connection with $\sqrt{\text{sā}}$, *si* ‘bind’. Note first that an undoubted 2nd pl. impv. to this stem is found in vs. 11 of this hymn (*vīsyadhvam*), and that $\sqrt{\text{sā}}$ is found in nearby X.28.10 *āsiṣāya* ‘caught’ (in a Vasukra hymn, a collection that Old considers verbally connected with the Kavaṣa hymns [see Prol. 234]). As Old points out, $\sqrt{\text{as}}$ has no medial forms in the RV, and he also suggests that $\sqrt{\text{sā}}$ ‘bind on, harness’ would be the opposite to the better attested *āva* / *vī* $\sqrt{\text{sā}}$ ‘unbind, loose’.

X.30.3: On the *haviṣ*- see comm. ad 2a.

X.30.3–4: The referent of *tāsmāi* in d must be Apām Napāt, or at least all discourse signs point to him. It is striking that he receives honeyed soma in 3d, while in 4cd Indra is strengthened for his *vīryā*- by honeyed waters (*mādhumatīr apāḥ*), even though Indra is of course the usual recipient of soma, esp. in the context of his heroic deeds. The slight paradox is surely meant. (See, however, the passages cited by Ge in n. 4d, which associate the waters with Indra’s strengthening.)

X.30.4: By accent *dīdayat* in pāda a belongs to the redupl. pres. that is emerging in the RV by reinterpr. of the old presential perfect *dīdāya*. The act. pres. part. *dīdyat*- (8x) is unambiguous testimony to this present stem. Besides redupl.-accented *dīdaya*- (2x in addition to this passage), the stems *dīdāya*- with pf. accent (6x) and *dīdaya*- (unaccented, so ambig., 5x) are also found.

All of these should be subjunctives (whether pf. or pres.), and indeed, save perhaps for this one, all of them are at least compatible with and generally best interpr. as subjunctives (see Narten “Vedisch *dīdāya*...” [1987 = KISch 368–79], n. 5, as well as my 2017 “Vedic Perfect Subjunctive,” 316–18)—including the two other redupl.-accented *dīdayat* occurrences (VIII.6.24, X.95.12). However, our form works better as a general present: it is characteristic of Apām Napāt to shine without fuel in the waters; it is not an action that an offering of Soma (3d) will/should bring about. Cf., from the only hymn devoted to Apām Napāt in the RV, II.35.4 *dīdāyānidhmaḥ ... apsú*, with the indicative presential pf. *dīdāya* in identical context. That the parallel rel. cl. in our 4b contains an unambig. indic. pres. *īlate* also supports an indic. interpr. I don’t quite know what to do about this conflict between function and form, but think it at least possible that the shifting nature of the verbal system of $\sqrt{dī}$ allowed a nonce interpr. of *dīdayat* as thematic injunc. On the averbo of this root both in the RV and in later Vedic, see the above cited art. by Narten.

X.30.5: On the ritual act expressed by pāda d, see Ge’s n. 5d.

X.30.6: For a similar use of *sām* + med. pf. of \sqrt{cit} see X.92.4, 10 *sām cikitrire*.

X.30.7–9: These three vss. constitute a direct address to the waters, with the content kept fairly consistent across the vss. In each vs. the waters/ivers are urged to “propel” (*prá* \sqrt{hi}) their wave (*ūrmím*) to Indra. Vss. 7–8 share the pres. impv. *prá hiṇota* (7c; note the retroflexion) / *prá ... hiṇota* (8a), the acc. phrase *mádhumantam ūrmím* “honeyed wave” (7c, 8a), and a dative referring to Indra (*tásmā índrāya* 7c; *asmai* 8a). Vs. 9 has streamlined the expression to *ūrmím prá heta* (9b), with aor. impv., no ‘honeyed’ (though there are other descriptors of *ūrmím*), and Indra tucked into a cmpd. *indrapānam* ‘Indra’s drink’ (9a). I doubt that there is any functional difference between pres. impv. *hiṇota* and rt. aor. impv. *heta*; instead the poet is seeking variety in the third iteration of the command.

X.30.7: Gr (fld. by Lub) assigns *ṛtābhyah* to the fem. noun *ṛtā-*, glossed (by Gr) “Arbeit, Werk oder Bewegung,” found in V.48.2. But it surely is simply the fem. dat. pl. ppl. to \sqrt{vr} ‘enclosed, blocked’, as in IV.19.5=42.7 *tvām ṛtām ariṇā indra síndhūn* “you made the blocked rivers flow, o Indra,” referring to the same mythological deed, but with masc. acc. pl. modifying *síndhūn*. The ppl. interpr. is assumed by Old, Ge, and Re.

X.30.8: Pāda b is a full-pāda izafe-type construction, a nominal relative clause containing two appositives, embedded within the acc. phrase of a and c. See my “Proto-proto-izafe” (Fs. Mark Hale).

X.30.9: Pāda b contains a short rel. cl. characterizing the acc. *ūrmím* and embedded within the acc. phrase, begun in pāda a and continuing in cd. The structure of the vs. is thus parallel to vs. 8; however, the rel. cl. in this vs. has a finite verb — *yá ubhé íyarti* — and thus violates the general prohibition against non-nominal embedded clauses. I would explain it here as modeled on the licit izafe-type in 8b, while driven by the poet’s desire to vary the pattern in the last of the three-vs. sequence. See comm. above on X.30.7–9.

The identity of the “both” that the wave rouses is disputed. Both Ge and Re supply “worlds” (that is, Heaven and Earth), and this is certainly a possible pair. Ge (n. 9b) additionally

suggests both races (gods and men), which I follow in the publ. tr., or even the two streams (*dhārā-*) found in the next vs. (10a). The referent of *ubhé* must of course be either fem. or neut. Though the overwhelming number of instances of *ubhé* probably refer to the two worlds (fem. *ródasī*, etc.), there is a subset of passages referring to the two races (neut. *jánmanī*, *jánasī*), and this makes more sense to me in context (though I don't have strong feelings about it).

Pāda c lacks a syllable, and the word in the affected part of the pāda, *ausānām*, is a hapax. The current standard view of this word (Ge, Re, EWA s.v. *usānā-*) is that it's a vṛddhi deriv. of *usānā-*, named as the plant from which soma is derived once (repeated) in the ŚB (III.4.3.13=IV.2.5.15): *vṛtró vai sóma āsīt tasyaitác chārīraṃ yád girāyo yád āsmānas tád eṣósānā nāmaúśadhir jāyata iti ha smāha śvetāketur aúddālakis tām etád āhītyābhīsunvanti* "Soma was really Vṛtra. This is his body, namely the mountains and the rocks. There is born the plant called Uśānā – so says Śvetakeu Auddālaki. Having brought it [=plant] here, they press it." Although this is certainly suggestive, I am reluctant to hang too much on a single passage in a later brāhmaṇa, with the content attributed to Śvetaketu—esp. since, acdg. to Macdonell/Keith (Vedic Index, s.v. Śvetaketu), "All the references to Śvetaketu belong to the latest period of Vedic literature." The major exception to the embrace of this etym. is Old, who (like Gr) suggests rather that it belongs to \sqrt{vas} 'be eager, desire' and that the transmitted form represents *ā-usānā-*, with the preverb in hiatus providing the missing syllable (sim. Arnold) and showing shortening to *a-* in hiatus. There are several potential drawbacks to his scenario. First, \sqrt{vas} does not otherwise appear with *ā-*; however, other verbs of desiring (e.g., \sqrt{kan}) occur with this preverb, and nonce spread here would not be surprising. Second, the pres. middle part. *usānā-* is quite rare, compared to the very well-attested act. *usānt-*, which in fact is found twice in this hymn in the twinned expression *usānt- usātī-* ("desirous [m.] / desirous [f.]") in 2b, 6b (as well as the single *usātī-* in 15c). When it occurs, *usānā-* also means 'eager, desirous', and that could be the sense here as well—describing the waters' eager pursuit of Indra. Or, it could show a nonce passive value developed in opposition to the act. *usānt-* pairs, "being desired." Despite the minor problems with this idea, it seems stronger to me than the other, and I would now emend my transl. from "stemming from the uśāna-plant" to "being eager."

Ge and Re (and Gr by implication) take *tritāntum* as a modifier of the acc. *ūrmīm* that dominates the vs. (see Old for doubts). But this doesn't make a lot of sense—how would a wave have three threads?—and it also leaves *pāri* with nothing to do. In contrast, I take *tritāntum* with *pāri*, specifying the location of the action of the participle *vicārantam* referring to the 'wave', and I supply *yajñām* as the referent of *tritāntum*. Both Ge (n. 9d) and Re cite *saptā-tantu-* as a parallel, and this adj. modifies *yajñā-* in its two occurrences (X.52.4, 124.1). The three threads here are presumably either the three fires or the three soma pressings.

X.30.10: This vs. is paradoxical in content: the waters, feminine in both grammatical gender and personal qualities, are here depicted as powerful, martial, and commanding—no longer the lovely and yielding young women of earlier in the hymn.

The intens. part. *āvárṇātātī-* in pāda a is glossed by Schaeffer (192) with 'sich schlängeln' (meander), but given the rest of the vs., I think a more dynamic movement is envisioned: strenuously whirling, roiling, or the like.

The "two streams" of the bahuvr. *dvidhārāḥ* are plausibly identified by Ge (n. 10a) as the two varieties of ritual waters, the Vasatīvarī and the Ekaḍhanā (on which see, e.g., Re Vocab. du rituel s.vv.).

In b the waters are compared to ‘cattle-raiders, (those) fighting when cattle (are at stake)’ (*goṣu-yúdh-*; see Scar 441), a hyper-masculine and violent role, as is seen in its two other occurrences (I.112.22, VI.6.5).

niyavám is a hapax, but despite Ge’s refusal to transl. it, it is plausibly derived from *ní* √*yu* ‘team up, harness’, with well-attested root noun compd *niyút-*, etc. See Gr, Old, Re. The publ. tr. accepts BR’s suggestion (reported by Gr) that it’s an adverbial acc. ‘in teams’; so, apparently, also Scar (441), though with a closer connection to the part. *cárantīḥ*: “in Niyut-Formation wandelnden (Wasser).”

The paradoxical nature of this vs. comes to the fore in pāda c—and presents us with a translational problem created by English. The waters are called the *jānitrīḥ* and the *pātnīḥ* of existence (/ creation / the world), *bhūvanasya*, using the fem. gender equivalents of m. *jānitar-* ‘begetter’ and *pāti-* ‘master, lord’. In Sanskrit the derivational relationship between the masc. and fem. terms is clear, and this relationship establishes the tension between the active power and authority inhering in the usual masc. forms and the counter-expectations created by the feminine derivative. The audience would also be aware of masculine equivalents of these phrases: *bhūvanasya yāḥ pātiḥ* (V.51.12; sim. IX.31.6, 86.5, X.128.7; note also the one other fem. *bhūvanasya pātnī*, of Dawn in VII.75.4), *bhūvanasya pitāram* (VI.49.10; no ex. of *bhūvanasya jānitar-* is found in the RV). In my opinion the poet is covertly asserting that the female waters are equivalent in power to their male counterparts, hence my tr. “begetters and masters of existence.” But this tr. elides the feminine markers in the Skt. Although English does have the corresponding gendered terms, they would distort the sense. For *pātnī-* we have ‘mistress / lady’, but these give the wrong impression: the waters are not the girlfriends / kept women (=mistresses) of existence but the commanders of it, and “ladies of existence” is nonsensical. For *jānitrī-* we could try ‘genetrix’, but this is too lexically specialized, and ‘mother’ has the wrong nuance: the waters are not nurturing existence but creating it. In the end I opted for the masculine terms, but something is lost in translation.

X.30.11: This vs. is a partial reprise of vs. 1. The “yoking of truth” (*ṛtasya yóge*) here echoes the “yoking of mind” (*mānasaḥ ... práyukti*) in 1b. In 1a a way is made for the *bráhmaṇ*, while here the waters impel it (b).

Ge, flg. Sāy., interpr. *devayajyā* as a functional dative, parallel to *sanáye* in b, but there’s no reason it can’t work as the instr. it appears to be (see Old, Re), either as a true instrument or as instr. of accompaniment, indicating the time when the waters’ action is to take place.

The loc expression *ṛtasya yóge* “at the yoking of truth” in c also establishes a temporal connection between the loc. and the action of the main verb: the waters are to “unloosen their udder” (i.e., be poured forth) at a particular moment in the ceremony.

X.30.12: Because the verbs of pādas a–c are accented (a: *kṣáyathā*, b: *bibhrthá*, c: *sthá*), they must all be in the domain of *hí* in pāda a, with d the corresponding main cl.

On my tr. of *pātnīḥ* as ‘masters’, not ‘mistresses / ladies’, see above ad 10c.

The waters in general and their powers and characteristics elevate the riverine goddess Sarasvatī in d as their divine representative.

X.30.13: With Ge and Re (contra Old), I take this vs., consisting of a *yád* clause (a) with three following participial adjuncts, each a pāda length, as dependent on the main cl. of 14. Vs. 13 describes the approach of the waters, 14 their arrival and installation.

On 3rd pl. mid. ending *-ram* in *adṛśram* see the extensive disc. by Old ad IX.7.1.

Pāda a is metrically disturbed in all its parts—concisely summarized by HvN as “Uncommon opening ... Uncommon break ... Rare cadence” (what’s left?!). Arnold suggest switching the order of the last two words to **āyatīr ādṛśram*, which would give a Triṣṭubh cadence but do nothing for the rest of the pāda; Old counsels against this metathesis on formulaic grounds, adducing VII.81.1, VIII.101.11 ... *adarśy āyatīḥ*##

Pāda c *adhvaryúbhir mānasā saṃvidānāḥ* “(the waters) allying / united in mind with the Adhvaryus” echoes 6cd *sām jānate mānasā sām cikitre, adhvaryāvo dhiṣānāpas ca devīḥ* “They are agreed in mind and they perceive alike -- the Adhvaryus, the Holy Place, and the divine waters.” In our vs. the *dhiṣānā* is absent, but is probably represented by the place where the waters will be deposited. See also *apām nāptrā saṃvidānāsaḥ* in 14d.

Pāda b contains the redupl. pres. part. *bībhratīḥ*, which echoes the finite *bībhṛtha* of 12b; pāda d has the 1st class pres. part. *bhārantīḥ*. All three have the same referent/subject (waters). Although Re remarks “Distinction nette entre *bībhrat* (aussi 12*b*) et *bhārant d*,” I don’t see it, and Re’s tr. don’t help – at least don’t help me (“vous portez-en-vous” 12b, “qui (com)portent” 13b, “apportant” 13d). Ge tr. all with “bringen.” It’s worth noting (see Ge’s n. 13d) that d is identical to III.36.7 save for the gender of the participle. It could therefore have just been patched in here, without much attention to the resulting contrast between the present stems of *√bhr̥*.

X.30.14: *revātīḥ* reprises the voc. in 8d, 12a as well as *rāyāḥ* ... *pātnīḥ* in 12c.

The voc. *sakhāyaḥ* referring to the Adhvaryus can express relationships in several directions: the Adhvaryus can be comrades of each other, comrades of us, and – given the emphasis on the agreement between the waters and the priests in vss. 6 and 13 – comrades of the waters.

In d the part. *saṃvidānāsaḥ* is most naturally interpr. as nom. pl. masc., modifying the Adhvaryus. But because the same part. (ending in *-ās*) was nom. pl. fem. modifying the waters in the immed. prec. vs. (13c), there is contextual pressure to take it as acc. pl. fem., modifying adjacent *enāḥ*, with the extended ending *-āsaḥ* unusually employed in this paradigmatic slot. See esp. disc. by Old (as well as Ge’s n. 14d, Re’s comment). I think it likely that it is applicable to both (though my publ. tr. only reflects the fem. acc.), esp. given the emphasis on universal harmony in these vss.

X.30.15: *devayajyā* is repeated from 11a, though as nom. rather than instr.

X.31 All Gods

On the structure of the hymn and the obscurity of some of its contents, see publ. intro.

The early vss. of the hymn have a surprising number of perf. optatives (2a *mamanyāt*, 2d *jagrbhyāt*, 4a *cākanyāt*, 4c *anajyāt*), though the conditions that usually prompt such clusters – women’s or low-register speech – are not found. If Old is correct that the Vasukra (X.27–29) and Kavaṣa (X.30–34) collections are a unity (see ad X.30–34 above), we could invoke X.28.1 with its pf. opt. cluster (see comm. ad loc.) – though there they are in the mouth of a woman. I do not understand the phenomenon in this hymn, though see the pf. subjunctives in X.32.1.

X.31.1: Old and Ge take the gen. *devānām* in the phrase *devānām ... śāmsaḥ* as a subjective genitive, but I don’t see why. Although the gods may help us, they don’t ordinarily praise us; the subjects of active transitive forms of the root *√śams* are humans or their counterparts. In asking

that the laud of the gods seek us out, we are expressing the usual hope that poetic inspiration and its product, the hymn, will come to us at the right moment for producing praise for the gods.

The stem *turá-* ‘strong, overpowering’ is almost always used of gods. Here in the phrase *vísvebhis turaiḥ* it substitutes for *devaiḥ*, which already appeared as gen. *devāñām* in the previous pāda, to establish the All Gods as the nominal dedicands of the hymn.

The bahuvr. *suśakhāyaḥ* in c reminds us of the emphasis on comradeship and harmony in the previous hymn, esp. voc. *sakhāyaḥ* in X.30.14.

X.31.2: With most (Gr, Old, Lub, EWA s.v. *MAN*², though not Ge or Kü [364–66, with extensive disc. with lit.]; Re uncertain), I take *mamanyāt* to a separate root \sqrt{man} ‘stay, wait’, whose other two verbal forms are found in this limited group of hymns: X.27.20 (Vasukra), X.32.8 (Kavaṣa). See also comm. ad X.27.20. Among other things it is distinguished from \sqrt{man} ‘think’ by its active voice. Unlike Gr, I do not take the form here as caus. in value (zum Stillstand bringen, festhalten). I think the point rather is that if the poet proceeds along “the path of truth” (*ṛtasya pathā*) by composing good poetry, he will receive his just reward and should simply wait for it in this location. I do not know what the *pāri* contributes: it goes too easily into English as ‘wait around, hang around’, meaning (originally) ‘in the general vicinity’.

I also don’t know what the *cīd* is doing.

Although *ṛtasya pathā* is found in the next pāda, adjacent to the instr. *nāmasā*, I take the former phrase with pāda a. The pāda-opening sequence *ṛtasya pathā nāmasā* is also found in I.128.2 and X.70.2, but in both cases the first phrase is better construed with the preceding pāda and *nāmasā* with what follows.

Note that the redupl. desid. opt. *vivāset* is the moral equiv. of the redupl. opts. elsewhere in the vs., *mamanyāt* and *jagṛbhyāt*. See above.

Most supply “gods” as the obj. of *ā vivāset*; this is certainly possible, but *dráviṇam* in the preceding pāda presents itself as well. If so, the point is that the poet will win his share by performing his ritual duties properly. How to do that is outlined in the 2nd hemistich.

Note that the partial anagrams *nāmasā* and *mānasā* occupy the same post-caesura metrical position in pādas b and d respectively.

X.31.3: The first pāda of this vs. indicates that the advice in 2cd has been successfully followed. In my opinion the rest of the vs. sustains this ritual theme.

On the plupf. *asasṛgram* (also IX.97.30), manifestly based on the well-attested pass. aor. *asṛgram* with the same passive value, see Kü 555. In our passage the showcasing of unusual pf. forms may have contributed to its appearance, but that situation is not found in IX.97.30.

With Ge (see his n. 3b) I take *tīrthé ná dasmám* as a minor example of case disharmony in similes of the type discussed in my 1982 IJ article “Case Disharmony in RVic Similes.” Both the loc. and the acc. function as goal.

I take *dasmá-* as a reference to Agni, a common but far from exclusive referent of this stem. This identification may be facilitated by a pun: Agni is often called a ‘guest’ (*átithi-*), a stem phonologically similar to *tīrthá-* ‘ford’. Cf. the voc. phrase VIII.74.7 ... *dásamātithe* “o wondrous guest” of Agni.

With Ge I take *ūmāḥ* ‘helpers’ as the gods. The stem is only used of gods, as Gr points out.

Although *sūṣā-* is an adjective ‘fortifying, powerful’ (on which see comm. ad IX.97.54), it is often used of praise songs or chants, generally with the headnoun gapped. And that is surely

its use here: the poet has been honing his verbal skill and has now achieved his goal, a powerful hymn. For *abhí√(n)as* with a verbal product as obj., cf. VI.49.8 *abhy ānaḍ arkām* “he has attained the chant,” adduced by Re.

I take gen. *suvitāsaya* as a dative purpose gen.: “the hymn of good faring” is the hymn that will afford us good faring.

On *nāvedas-* as the product of false segmentation of **bhūtana vedasaḥ*, see Schindler Fs. Knobloch, summarized in EWA s.v.

X.31.4: Each of the four pādas in this verse is a self-contained clause, which, each by itself, is reasonably easy to interpret (or, rather, to translate). It is, however, very difficult to figure out how they fit together and what their referents are. This shiftiness is surely deliberate; in fact, I see the poet laughing at us in the last pāda, which begins *só asmai* “he to him,” with two pronouns whose referents are completely opaque even though they should be available from the preceding discourse. The poet does strew clues throughout the vs., but some of these seem to be red herrings, inviting us to identify the wrong referent. And of course, as often in the RV when straightforward reference is evaded, several different referents may be simultaneously meant.

We are on firmest ground—comparatively firm anyway—in the first pāda. Both *nītya-* and *dāmūnas-* point to Agni; the latter is mostly an epithet of Agni, the former regularly modifies him. (On *svāpati-* and *nītya-* in this passage see comm. ad X.44.1.) Moreover, at least by my interpr., Agni is the *dasmá-* on whom the gods have converged in the previous vs. (3b). Old also points to the similarity of our pāda, with *cākanyāt*, and X.29.1a where Agni is the presumed subj. of *cākán*. The question here is what Agni is supposed to take pleasure in, since there is no complement to the verb. Ge supplies the *sūṣá-* (my “fortifying [hymn],” Ge’s “Ansporn” [which he identifies with praise; see his n. 3c as well as n. 3 at the bottom of the pg.]) from the preceding vs. 3c. This makes sense and would emerge from context, but there are other possibilities: Old favors the sacrificer, and the publ. tr. follows him (though I now reject that). The complement of the pf. *cākán-* can be either a thing (like hymns [X.91.12] or wealth [II.11.13]) or a person or persons (e.g., Kutsa [I.33.13], the patrons [X.147.3]), so that either of the just cited suggestions is in principle possible. However, I now favor Ge’s *sūṣá-*.

The rel. clause in b presents us with several puzzles, though the subject and verb, *savitā jajāna*, are straightforward: “Savitar begot / created.” The first puzzle is the referent of the dative rel. prn. *yásmai*, the second the object to be supplied with the verb (if any). The most obvious referent for *yásmai* would be an entity in the preceding pāda, and there is only one (at least overt): Agni. Old again suggests the sacrificer instead, and the publ. tr. follows. Once again I have developed serious doubts and now think the obvious solution—Agni—is probably the right one, or at least the initial reading.

As for the object of *jajāna*, Ge thinks it is the *sūṣá-*: the Ansporn = Loblied. (Klein [DGRV II.15, 184] follows Ge’s interpr. of both pādas.) This would simplify matters by repeating the supplied material of pāda a, but I am (or was) a bit dubious about the sense: did Savitar create the hymn? This is not part of his usual remit; in fact Savitar seems to have very little to do with begetting or creating. The only passage I’ve identified in which Savitar is the subject of a form of *√jan* is IV.53.2 *ājjanat savitā sumnām ukthyām* “Savitar has given birth to praiseworthy benevolence,” which doesn’t seem relevant here. However, I think Ge’s idea can be rescued and indeed considerably enhanced—if we see it as a diabolical pun, or set of puns, on the part of our poet. The word *sūṣá-* is not, of course, derived from *√sū*, the basis of Savitar’s name, but they are phonologically similar, with an initial sibilant followed by long *ū*, and they can

therefore be poetically associated, with Savitar ($\sqrt{sū}$) giving birth to a $\acute{sūṣā}$ -. This would be enabled by another diabolical pun. There are two roots $\sqrt{sū}$: 1) ‘impel’, the source of Savitar’s name and actions; 2) ‘give birth’. They are etymologically distinct, and their verbal systems also don’t overlap. But the agent noun Savitar could in principle be derived from either one. I suggest that the poet is playfully associating him with the 2nd root ‘give birth’, and then lexically substituting the semantically (almost) identical pf. of \sqrt{jan} for the pf. *sasūva* ‘gave birth’. The proposed underlying VP “gave birth to a $\acute{sūṣā}$ ” would thus rest on three puns, two phonological ($\acute{sūṣā}$: $\sqrt{sū}$ ‘impel’; $\sqrt{sū}$ ‘impel’ : $\sqrt{sū}$ ‘give birth’) and one semantic ($\sqrt{sū}$ ‘give birth’ : \sqrt{jan} ‘beget’). The outcome also has the merit of making Savitar the subject of the gender-appropriate ‘birth’ root: $\sqrt{sū}$ has the mother as subject, while \sqrt{jan} generally has the father or a father-like figure. (Note the occurrence of $\sqrt{sū}$ ‘give birth’ in 10a *sūta*, with female as subj. This root was clearly in the poet’s head.)

I would now retract the publ. tr. and return to Ge’s interpr., though it is, I hope, on a firmer footing: “Our own proper lord and master of the house [=Agni] should find pleasure (in the hymn)—(Agni) for whom the god Savitar gave birth (to it).” (For a full re-tr. of the vs., see below.) (For the substitution of ‘proper’ for ‘constant’, rendering *nūtya*- see comm. ad X.44.1.)

On to the 2nd hemistich. The first issue that confronts us is that pāda c, with *vā* in 2nd position, seems to be presented as a disjunctive clause. But what is it disjoined from and what are the two opposing choices? Because it is a main clause, it seems unlikely to be directly connected with the preceding rel. clause (b), and because its verb is in the optative it seems likely to be the parallel to pāda a with its optative. This suggests an interpr. of a, c as “Agni should take pleasure (in the hymn), or Bhaga and/or Aryaman should anoint (him/it) with cows.” The pressure of the discourse leads to an interpr. of the obj. *īm* here as something already known to us from the parallel clause, that is, either Agni or the (supplied) hymn.

These are both possible choices, and we will return to them – but first we should consider the 2nd hemistich on its own. If we do so, we get an interpr. that directly conflicts with the one just offered and that identifies a very different referent for both *īm* in c and *só* in d. The phrasology points strongly to Soma. In pāda c the VP “anoint with cows” (*góbhiḥ √ añj*) is a fairly common phrase in both active and passive; though a few other entities get so anointed (e.g., Agni V.3.2, Mitra and Varuṇa I.51.8, music VIII.20.8), it is overwhelmingly used of Soma (e.g., IX.10.3, 32.3, 45.3, 50.2, 85.5, 86.47, 96.22, 103.2, 107.22), referring to the mixing of milk with the just-pressed soma juice. Similarly in d *cāru*- modifies a number of different entities mostly connected with the ritual (*yajñā*- itself, e.g., VII.84.3, *adhvarā*- I.19.1, *ghṛtā*- X.96.1, etc.), but it is extraordinarily common with *sóma*- (e.g., IV.49.2, X.39.2, etc.) and other words for soma (e.g., *sutā*- I.137.2, *indu*- IX.109.8). If we put this phraseological evidence together, Soma seems the obvious referent: “Bh + A should anoint him [=Soma] with cows; he [=Soma] is pleasing ...” (with the referent of *asmai* still unclear). But there’s no real place for Soma, even in this ritual context. Indra does not appear in this hymn; there is no mention of pressing or ritual drinking. Certainly in this verse no rhetorical space has been created for Soma. I therefore think that this is another of the poet’s jokes – a deliberate red herring: everything points to Soma, except that Soma makes no sense when the vs. and hymn as a whole are considered.

Let us now return to the possibilities identified above. I now think that the referent of both *īm* (c) and *só* (d) is the hymn, $\acute{sūṣā}$ -, covertly present in each pāda, though overtly absent from all four. The phrase “anoint (the hymn) with cows” is unusual, but interpretable; it means to reward the hymn (or rather its poet) with the gift of livestock. (In one of his shifting interpr., Old suggest something similar: that Bhaga and Aryaman are bestowing Kuhbesitz on the sacrificer

[whom he takes as the referent of *īm*].) This brings us back to 2ab, where the poet awaited his material reward “along the path of truth,” on which see comm. ad loc.

As for the last pāda, though as noted above, *cāru-* is esp. characteristic of Soma, it applies to a variety of referents, incl. verbal products (e.g., *matí-* VI.8.1, *ṛtá-* IX.97.24.), and so *śūṣā-* is certainly possible. As for *asmai*, since it’s unaccented it must be someone already in the discourse, and, though Bhaga and Aryaman are closer, Agni has dominated the vs. and is the god whose delight in the hymn is sought. Pāda d closes the circle with pāda a: the sentiment we wanted to produce in Agni has arisen.

I would now re-translate the verse in this way: “Our own proper lord and master of the house [=Agni] should find pleasure (in the hymn)—(Agni) for whom the god Savitar gave birth (to it). / Or Bhaga (and) Aryaman should anoint it [=hymn] with cows. It [=hymn] seems dear to him [=Agni] and so it should be.”

A few final notes. First I still don’t see why pāda c should be disjunctively related to pāda a, since the two actions (Agni’s delight in the hymn / the anointing of it with cows) do not block each other. Perhaps it’s simply a way to shift our attention to a different way of thinking about the hymn. Kü (95) takes the *vā* as disjoining the two gods: “Bhaga oder Aryaman ...,” but though this would solve the problem, *vā* is wrongly positioned for that. IH has suggested a different, and appealing, explanation for the *vā*, as providing a further enhancement for the hymn if Agni does not find the pleasure in it that we hope for in pāda a; anointing it with cows might make it more appealing. IH’s modified tr. of the relevant parts of the vs.: “Our own proper lord and master of the house [=Agni] should find pleasure (in the hymn ... / Or **[if he doesn’t find pleasure in it as is, then]** Bhaga (and) Aryaman should anoint it [=hymn] with cows. It **[i.e., the cow-anointed hymn]** seems dear to him [=Agni] and so it should be.” The anointment with cows would, on the one hand, refer to the material reward for the poet, as disc. above, but also to the ghee that would be poured into the ritual fire.

As Kü (95–96) points out, the pf. *anajyāt* should have a long initial vowel, like the rest of its stem (*ānájé*, etc.). The superficially peculiar redupl. of this pf. is similar to that in the indic. pf. *ānaśma* ($\sqrt{(n)aś}$) in 3c and would be even more like it (and to the pf. opt. in pāda a *cākanyāt*) if it were **ānajyāt*. These phonological similarities may help account for this surprising pf. opt. cluster.

X.31.5–6: On these two responsive vss. as a likely omphalos, see publ. intro. The connections between the two vss. make Ge’s assertion (intro. to hymn) that the first five vss. have no relationship to the rest of the hymn unlikely. The evidence for the interdependence of vss. 5 and 6 includes the three different words for ‘earth’ (*kṣāḥ* 5a, *bhūman-* 6b, and by implication *pṛth(i)vī* via *paprathānā* 6a [the three being reunited in vs. 9]) and the three hemistich-initial *asyā* (5c, 6a, 6c). The theme of the whole world as the ritual ground is what unifies their content.

X.31.5: By my interpr. this vs. depicts the fundamental exchange relationship between mortals and gods, taking place on the ritual ground conceived of as the earth itself. Here meet the gods and the mortal ritualists, esp. the poet. The gods possess livestock (b) and prizes (d) to distribute, and are eager to receive the praise of the singer (c), which will motivate their generosity. In my view the singer is the same poet who was honing his craft in order to receive his material reward already in vs. 2 and whose fortifying hymn was to be anointed with cows (same image as here) in 4c.

In pāda a I read *kṣāṇh* in both simile and frame, in slightly different senses. In the frame it doubles init. *iyām*, which by itself can pregnantly refer to “this (earth)” (a usage very common in Vedic prose, but already developing in the RV); in the simile it has the extended sense of ‘place’, a place proper to someone or other (here the dawns), that is, their particular “world.” (I would now erase the parens around “(the place)” in the publ. tr.) As indicated in the publ. intro., I take pāda a as willing the identification of the sacrificial ground with the earth itself, or, rather, the reverse: the whole earth should become the sacrificial ground. The sacrificial ground is referred to as “the earth/place of the dawns” because the dakṣiṇās are distributed at dawn (as is often emphasized in Uṣas hymns) and this vs. focuses on the rewarding of the singer for his praise. Ge (n. 5ab) also sees this as a reference to the dakṣiṇā. For the rhetorical move to identify the place of sacrifice with the whole world, see the responsive question-and-answer exchange in the riddle hymn, I.164.34–35, in which the vedi is identified with “the farthest end of the earth” and the sacrifice with the navel of the world: I.164.35 *iyām védīḥ páro ántaḥ prthivyāḥ, ayām yajñó bhūvanasya nābhiḥ*.

The word order in this pāda is somewhat unusual, with the annunciatory deictic *iyām* immediately followed by the discourse pronoun *sā* in the same case, number, and gender, with the referent *kṣāṇh* postponed till the end of the pāda. Although init. *iyām* is not infrequently separated from its referent in this way (e.g., V.57.1 #*iyām ... matīḥ*#), the interposition of the *sā* is found only in I.186.11 *iyām sā vo asmé dīdhitiḥ* ..., as far as I can tell (though it is somewhat more common in the masc. phrase *ayām sā*). In order to reflect this unusual order, in addition to assigning the dynamic ‘become’ sense to the precative *bhūyāḥ*, I would now slightly change the tr. to “This (earth) – she should become like the “earth”/place of the dawns.”

Ge takes bc as dependent on pāda a, whereas I connect them with d. But there is little actual difference in sense between the two.

In b I suggest in the publ. tr. that either gods or patrons could be the referent of *kṣumántaḥ*. Though this is certainly possible in principle, I now think that the gods are the intended referents, both because of the larger context of the hymn and because in c only the gods are likely to partake of the praise. For *kṣumánt-* in a Dawn/dakṣiṇā context, see X.11.3, where Dawn herself is called *kṣumátī* in a vs. concerned with the ritual distribution (*vidátha-*).

In c Ge disjoins *asyá ... jaritúḥ*, taking *asyá* as referring to Agni, an objective gen. with *stutím*. I am sympathetic to his arg. (n. 5c), that it should be coreferential with the two *asyá*’s in vs. 6, but I’m not sure that that’s strictly necessary. However, an alt. tr. would be “the singer’s praise of this one [=Agni].” Ge also takes *jaritúḥ* as an abl. – again possible, but not necessary.

X.31.6: This vs. is somewhat more opaque than its twin, vs. 5, and returns us to the Agni focus that was missing (or muted, if *asyá* in 5c refers to Agni) in that vs. However, the theme of the sacrificial ground as the whole world and of the dakṣiṇā as manifested there is strongly present in the first half of the vs.

As Ge says (n. 6b), the “foremost cow” is probably the dakṣiṇā herself. She has been produced from / transformed from the *sumatī-* of Agni (assuming that referent for *asyéd*). In this context Agni’s “good favor / benevolence” involves his benignly engineering the benign cooperative meeting of gods and mortals for their mutual benefit, symbolized by the gift cow. This *sumatī-* spreads out to encompass the whole world, which is now entirely the place of the sacrifice and, esp., of the distribution of dakṣiṇās.

As noted in the publ. intro. and above ad vss. 5–6, in addition to its participial function I take the mid. part. *paprathānā* as representing the third term for ‘earth’, namely the transparently related *pr̥th(i)vī*. See vs. 9.

I assume that *asyā* in c refers to the same entity as the one in pāda a, and further that that entity is Agni. (These assumptions are not universally shared; for ex., WE Hale [Asuras, p. 73] suggests that *asyā ... āsurasya* refers to Dyaus, though he gives no reasons.) In any case, proceeding from my assumptions, the womb is presumably in the first instance Agni’s hearth or fireplace, as it is so often in Agni hymns, thus again situating us on the ritual ground – but, I would say, further extended to include Agni himself. The two hemistichs contrast the psycho-physical dimensions of Agni: in ab he expands (flatly) to cover the whole world; in cd he concentrates within his enclosure (the fireplace) and indeed within himself the gods – if that is the referent for *sānīlāḥ* ‘those of the same nest’, as seems likely (so Ge, also Sāy.) – though it could refer to his flames (see comm. ad X.99.2). So Agni is both spread wide and contracted into a tight spherical enclosure.

Pāda d contains two morphologically isolated forms, both derived from *√bhr̥* ‘carry, bear’, which form an etymological figure. The *-ana*-noun *bhāraṇa-* is transparently formed, but not found elsewhere in Vedic (save for the synchronically distinct fem. *bhāraṇī-*, the name of a nakṣatra). The middle part. *bībhramāṇa-* is likewise transparently formed, to the redupl. pres. *bībharti*, a form of which is found in 8b, but it is an isolated thematic form; we should expect athem. **bībhrāṇa-*, which is not attested. Our form is in fact doubly isolated, because the redupl. pres. is otherwise only active; it is only the 1st cl. pres. *bhāra-* that has a sizable number of middle forms. Gotō (1st Cl. 227), fld. by. Lowe (Part. 253), explains *bībhramāṇa-* as modeled on *paprathānā-* at the end of pāda a. This hypothesis may be possible but it does not seem to me to be strong: although the two participles are isosyllabic, they are otherwise manifestly distinct— with one athem., the other them., one a pf. with redupl. in *-a-*, the other a pres. with redupl. in *-ī-*, one with final accent, the other with initial.

By creating these two forms, the poet seems to be signaling a special effect, but for what purpose escapes me. I do wonder if *bībhramāṇa-* is meant to secondarily evoke the root *√bhram* ‘move unsteadily, flicker’. Although verb forms to this root only begin to be attested in very late Vedic, the noun *bhramā-* ‘flickering’ (of fire) appears three times in the RV. And the theme of the next vss. will be the constant motion of Agni, contrasted with his fundamental stability.

Both *sānīla-* and, even more so, *yóni-* in c define this as a birth context, which carries over into d, so that the ‘bear (offspring)’ sense of *√bhr̥* is strongly favored in the two forms in d. The *bhāraṇa-* ‘carrier’ is presumably the womb of pāda c, and the point would be that all the gods (assuming they’re the *sānīlāḥ*) are carried and contained in the same womb, namely Agni(‘s). The publ. tr. (“being borne in the same burden”) is maladroit and misleading; I would now tr. “being carried in the same carrier” or even “being contained in the same container.”

X.31.7–10: On my view of the contents of these vss., see publ. intro.

X.31.7: The cosmic question that begins this sequence, pādas ab, is identical to X.81.4ab, in one of the two hymns to Viśvakarman (X.81–82).

On *itāūti-* see comm. ad VIII.99.7.

With Ge, I take *jaranta* as intrans. ‘become old’; Gotō (1st Cl., 152) thinks the stem can have either intrans. or trans. value and here favors the latter: “die vielen Morgenröten machen die Tage (mit sich) alt.” I think this unlikely. Although the trope of the dawns making us (etc.) age is

well established, that doesn't seem to be what's at issue here. For one thing, I don't know what it would mean for the dawns to make the *days* age. More importantly, as indicated in the publ. tr., the contrast here seems to be the unchanging solidity of the cosmic structures Heaven and Earth and the ever-changing nature of time.

X.31.8: As indicated both in the publ. intro./tr. and in comments above, I consider this vs. to refer to Agni, a view I share with Ge (see his intro. to the hymn, though his nn. 8b and 8c seem to retract this), but there is absolutely no direct evidence for it, I fully admit. There are no overt referents, only pronouns (*enā́ a*, *sá b*, *īm d*), a 3rd sg verb without overt subject (*kṛṇuta c*), and a metaphorical identification (*ukṣā́ b*). I base my view in great part on the rest of the hymn, which is more clearly Agnaic; although this is an All God hymn, it doesn't have the list structure of some All God hymns, but seems to focus on a single entity.

The vs. seems to follow logically from vss. 5–6, esp. 5a, in which the ritual ground becomes the whole earth, and 6ab, in which the good favor of Agni, spreading out, becomes “the foremost cow throughout the land.” If the place of sacrifice is now coterminous with the entire world, then, as 8a says, nothing else exists beyond it. And of course the most conspicuous entity on the ritual ground is the ritual fire, which is now conceived of as an ox—perhaps the transformation of the *gauḥ* in 6b into something more gender-appropriate for Agni—that bears both Heaven and Earth. That is, the fire flames up to support heaven and, like a pillar, to connect it with earth. Agni is elsewhere unambiguously called an *ukṣán-*; see the passages so identified by Gr (e.g., I.146.2).

Pāda c is, as Ge says (n. 8c), “dunkel,” and we will return to it. In d the entity is in motion, being conveyed, and is compared to the sun on its journey. The identification of Agni with the sun is of course a RVic commonplace. As for the conveying, I suggest that this is a reference to the carrying of Agni eastward on the ritual ground, to establish the new offering fire. Since the ritual ground is now the size of the earth, this would involve a considerable journey.

Pāda c: first note that the adj. *svadhāvan-* is used more often of Agni than any other god, even Indra (again see Gr's lemma). However, both ‘skin’ and ‘purifier, filter’ are initially hard to associate with Agni. The latter (*pavitra-*) is of course a standard piece of Somic vocabulary, attested almost exclusively in Maṇḍala IX. However, Agni's association with the root $\sqrt{pū}$ ‘purify’ is also strong, by way of the epithet *pāvaká-*, which in the sg. masc. is almost limited to him. This may be the link between Agni and the *pavitra-*.

Agni's association with ‘skin’ is much harder to establish. I can only tentatively suggest that his flames, or their visible outline, could be so construed—though I cannot find a passage that indicates that. I will adduce the bahuvr. *pāvaká-śocis-* (10x, all of Agni) ‘having pure/purifying flames’, which might provide the missing semantic link.

Both Ge and Re adduce a number of passages that might bear on our interpr. of this vs. One they didn't mention is the Soma hymn IX.83 (q.v.), which has two striking similarities with this one. 1) The middle vs., an omphalos, is very like our pāda b: IX.83.3b *ukṣā́ bibharti bhúvanāni vājayúḥ* “The ox, seeking the prize, bears the worlds,” with *ukṣā́*, *bibharti*, and a different expression for the cosmos. 2) The controlling mystical metaphor of the hymn is the *pavitra-* ‘filter’. Although I definitely do not think that Soma is the referent in our vs. here, I do suggest that some of the phraseology and conceptual structure of this vs. has been informed by IX.83 or something very like it.

And that's as far as I can get.

X.31.9: As noted above, this vs. reunites the three words for ‘earth’ found in vss. 5–6: *kṣām ... pṛthivīm ... bhūma*.

The vs. opens with the semantically impenetrable *stegāḥ*, whose range of glosses shows the despair with which it has been met by interpr. These include frog, fly, reed, arrow, ploughshare, little worm, and, my choice, snake. See EWA s.v. It is found only here, in the AV (somewhat garbled) repetition of this vs., AVŚ XVIII.1.39, and as both *stegā-* (TS V.7.11.1, etc.) and *tegā-* (VS XXV.1; also KS and MS) in a mantra from the Aśvamedha, (*s*)*tegān dāmṣṭrābhyām*, associating parts of the sacrificed horse with external entities. Oberlies (MSS 53 [1992] 123–24) plausibly derives it from the root \sqrt{tij} ‘be sharp, stick’ < IE $\sqrt{*(s)teig}$, whose *s*-mobile is well established outside of Indic. But he identifies its referent as a ‘reed’ (Schilfrohr), which makes no sense as a subject of our *eti* ‘goes’ (he is concerned with the YV mantra, not our vs.). Oberlies also reports a suggestion of Thieme’s, starting from the same root etymology, that it refers to a snake (presumably as striking with its fangs). The mantra *stegān dāmṣṭrābhyām* “the *stega*-s with its 2 fangs” would fit the snake well, the horse less so: in my sampling of horse dentition on the web I can’t find anything obvious in a horse’s mouth that comes in twos and would be sharp – maybe the canines? (Although note that in RV X.87.3 the word, also in the dual, seems to refer to the upper and lower jaws.) As noted in the art. cit., Agni is elsewhere compared to a snake; cf. I.79.1 *āhir dhúnir vāta iva dhrājimān* “a snake, tumultuous, swooping like the wind.” The point of comparison is presumably the twisting and unpredictable progress of a wild fire across open land, esp. when fanned by wind. Note that both our passage and I.79.1 compare the fire to the wind as well as to a snake.

In b with Re I take *ví ... vāti* as having double sense: in the simile, with *mīham* as obj, it means ‘blow away’; in the frame, without obj. but with acc. of extent, it means ‘blow across / far and wide’.

I do not understand the presence of Mitra and Varuṇa in pāda c. Although Agni is sometimes identified with Mitra and/or Varuṇa (see, e.g., II.1.4 for the two individually), the overlap in functions that enables such identification is not visible here, at least to me.

The part. *ajyāmānaḥ* is also found in the next vs. (10a) in the same metrical position; there I take it as double-sensed, both ‘being anointed’ and ‘being driven’, and esp. given the emphasis on Agni’s movement in this vs., the second sense should be present here as well.

In fact I think this double sense interacts with pāda d. Like Ge, the pub. tr. takes *agnīḥ* as part of the simile *agnīr vāne nā* “like a fire in the forest.” But of course the simile marker *nā* is wrongly positioned in that case. I now think that only *vané nā* constitutes the simile proper, and that there are two fires, one in the simile, one in the frame. The one in the frame belongs with Mitra and Varuṇa in c and with the ‘being anointed’ sense of *ajyāmānaḥ*: when Agni, the ritual fire, is anointed with ghee in the functions of Mitra and Varuṇa, he lets loose his flame, which is fed by the ghee. The fire in the simile is the forest fire, driven by the wind (see *vāta-codita-*, *vāta-jūta-* ‘spurred/sped by the wind’), with the 2nd sense of *ajyāmānaḥ*. I would therefore now emend the tr. of cd to “where, being anointed as M+V, Agni has let loose his flame, as a fire in the forest, being driven (by the wind), lets loose its flame.”

X.31.10: With Ge (and despite Old’s doubts) I take this vs. as depicting the kindling of the ritual fire, with a focus on the kindling apparatus. In this it resembles vss. 13–14 (esp. the latter) of X.27, showing once again the connection between the Vasukra and Kavaṣa hymns that Old noted. As in X.27.14 the equipment and the process are both sexualized and, paradoxically, desexualized – or, better, de-fecundized. In X.27.14a the rod that connects the two kindling

sticks is described as a tree without leaves or shade, in other words a barren object (see comm. ad loc.). Here in pāda a I think the same entity, the rod, is identified as a barren cow (*starī-*), which nonetheless, paradoxically, gave birth (*sūta*). This identification is surprising because of the rod's phallic shape, and in fact I think the same piece of equipment is depicted as phallic in d—but dizzying layers of paradox should not surprise us in contexts like this. In both X.27.14a and here the rod is barren because it is the mere connector of the two kindling sticks, but it is also productive through its interaction esp. with the lower *araṇi*. Its giving birth in our pāda happens while, and because, it is *ajyāmānā*: “being driven” by the priests rapidly turning it back and forth (see descrip. ad X.27.14) – but also “being anointed,” perhaps with drops of ghee, as Ge (n. 10a) suggests, or with sparks from the friction.

The barren cow / friction stick remains the subject of b. She is described as *svāgopā* ‘having her own herdsmen’, probably the priests who manipulate the stick, per Ge (n. 10b). The opening of this pāda, *vyāthir avyathīḥ* with its X and negated X, surely expresses another paradox, but its contents are not entirely clear, and I am now certain that the publ. tr. “though faltering, did so unfalteringly” did not capture it. I now follow (more or less) Old’s suggestion that *vyāthir avyathīḥ kṛṇuta* contains a double acc. constr., rather like 8c, also with *kṛṇuta*. And I think further that in addition to the paradox expressed by the positive and negated nominal forms of *vyath*, there has been a flipping of values. Generally ‘falter, waver’ is a negative notion, evidenced by the number of passages in which it is proudly asserted that *nā vyath* “he/they do not falter.” However, in terms of the fire kindling, it is desirable to set the inert kindling materials in motion, in the very type of wavering motion that nascent flames and smoke would show. I therefore now take *avyathīḥ* as a fem. acc. pl. to the *i*-stem *avyathī-*, referring to the ‘non-wavering’ (i.e., inert) kindling materials, the referent per haps being f. *samīdh-* (see comm. ad X.27.13), and the *vyāthīḥ* as the second (neut. *-is*-stem) acc. with *√kṛ*. Although *avyathī-* is ordinarily a good quality, here it is not. I would now emend the tr. to “she set the unmoving / unwavering (kindling materials) to wavering / to a wavering course.”

Pāda c expresses the usual beloved paradox of the son being born before his parents. As Ge (n. 10c) says, this must mean that Agni as a god and an elemental substance existed before his particular birth as the ritual fire right now.

Pāda d returns us to the birth scene, with a different and more sexualized image, one that restores the expected gender relations. The cow here (*gaūḥ*) is presumably the lower *araṇi*, conceptualized as female, which lies flat on the ground. It has a hole in it, called the *yoni* (see disc. ad X.27.14). This fecund cow contrasts with the barren cow (*starī-*) of pāda a, but may be assimilated to “the foremost cow throughout the land” of 6b.

The interpr. of the pāda turns on the word *śamyām*. In this form it can be either the loc. sg. of *śamī-* (AV+) ‘śamī tree’ or the acc. sg. of a *śamyā-*, not found elsewhere but quite likely the same as *śamyā-* (III.33.13, AV+) ‘yokepin, peg’. In an item of homely usage, it would not be surprising for the accent to be insecure. If it is the latter, it is the obj. of ‘swallowed’ (*jagāra*); if the former, the obj. of that verb must be supplied. Ge tr. it as the acc. (“so hat die Kuh den Pflock verschlungen”), though in his extensive n. 10d he seems to favor the loc. Both on syntactic grounds—if there’s an available object, we should take it—and poetic grounds I favor the acc. This expression is then a different sexualized depiction of the kindling of the fire; here the lower *araṇi* “swallows” (that is, takes into its hole, the *yoni*) the friction stick, the rod that is inserted in the lower *araṇi* and set to whirling to produce the friction and the sparks that will set the kindling material afire. The peg is clearly phallic; the image is of sexual intercourse. It’s worth noting that the AV has an occurrence of *śamyā-* in a sexual context (VI.138.4). Conceptualizing the rod as a

phallus“repairs” the disharmony of pāda a, where it was seen as female—though, it is true, a failed female, a barren cow.

I am completely baffled by the end of pāda d, the seemingly unconnected dep. cl. *yád dha prchān* “if/when they will ask.” This appears to be the effective end of the hymn, since the last vs. (11) is a pseudo-dānastuti. I can float two speculative accounts of this clause, neither of which I find particularly compelling. As I say in the publ. intro., the clause may hark back to the question posed in vs. 7, which began the treatment of the space/time conundrum, which finds its resolution in Agni. “When/if they will ask” sketches what precedes as the answer to such questions and thus provides closure to the hymn. Alternatively, it may provide the transition to the seemingly unconnected vs. 11: when “they” (unidentified) ask, “they” (also unidentified) reply (*āhuḥ* 11a). But since I don’t really understand why vs. 11 has been appended to this hymn, I can’t get any further.

X.31.11: As is frequently noted (Old, Ge, Re, Lü 618), this vs. bears a clear resemblance to I.117.8, in a Kaksīvant Ásvin hymn:

1.117.8 *yuvām śyāvāya rúsatīm adattam mahāḥ kṣṇásyāśvinā kṇvāya /
pravācyam tād vṛṣaṇā kṛtām vām yān nāṣadāya śrávo adhyádhattam ||*

In the publ. (JPB) tr.:

You two gave a bright (body) to Śyāva Kaṇva [/ Kaṇva, the Dark One] of the great flood (?), Ásvins.

That deed of yours is to be proclaimed, o bulls: that you bestowed fame upon the son of Nṛṣad [=Kaṇva].

Given the coincidence of vocabulary, there can be no doubt that the two passages are deeply interrelated, though they throw less light on each other than we might hope. I think it likely that Kaṇva is not only called Śyāva (‘dusky’) in both passages, but also Kṣṇa (‘dark’) in this one, and therefore, rather than seeing a dusky horse (Ge’s “der dunkelbraune Renner”) as the subj. of our pāda b, I take that pāda as depicting Kaṇva’s own triumph. Pāda c then depicts the payoff for the same Kaṇva under another epithet, *kṣṇá-*, semantically equivalent to *śyāvá-*: the “gleaming udder” of riches / honors swells for him, with a nice contrast between the bright udder and the dark recipient. Who is this Kaṇva? I can only assume that here he is a poet, indeed the poet of this hymn – perhaps adopting a more Indo-Aryan name than the phonologically aberrant Kavaṣa, but one still phonologically relatable to it – and associating himself with the great mass of Kaṇva poets elsewhere in the RV. If Kaṇva is our poet, then we can make sense of pāda d, a sense already suggested by Re: no one other than himself swelled his *rtá-*, that is, “nul ne l’a aidé dans la composition poétique.” He therefore deserves all the prizes and accolades he has received.

I doubt that the Kaṇva of I.117.8 is the same person; rather our poet has appropriated that “dunkle Sage” to outfit himself with a pedigree and a back-story. The *āhuḥ* “they say” may be a way of distancing this story from factual truth.

I would now slightly emend the tr. to “And they say that Kaṇva is the son of Nṛṣad, and (that) the dusky one, as prizewinner, took the stakes. / The gleaming udder swelled for the black one, (but) no one (else) made the truth swell for him there.”

X.32 Indra

See the publ. intro. for the structure of the hymn, esp. the clear division into two parts (vss. 1–5, 6–9) by meter and subject matter. Ge’s reconstruction of the mise-en-scène of this hymn at the beg. of his intro. to the hymn seems fanciful.

X.32.1: The first hemistich of this vs. is difficult and disputed, the second reasonably straightforward. In the first half it is clear that Indra's two horses are coming or have come to the place of sacrifice. Unclear are the exact sense of the pseudo-part. *dhiyasānā-*, the morphological analysis, root affiliation, and function of *sakṣāṇi*, and the identity and role of the *varā-*.

With regard to the first, see comm. ad V.33.2, which contains the only other occurrences of the stem. In contrast to the standard rendering 'aufmerksam' (etc.), I give the stem more complex semantics, in part encouraged by the larger context of both passages, the rarity of the form, and its unusual morphology, which sets it apart from standard participles to $\sqrt{dh̥}$. In both passages the part. modifies Indra, who in both instances is on his way to the sacrifice. I take the stem as meaning 'being conjured up', that is, 'being brought (to epiphany) by our *dh̥-* [poetic vision]'. In other words, the appearance of Indra at our sacrifice is under our mental control: our visions and the hymns they give rise to can literally "materialize / realize" Indra on our ritual ground. In our passage this conceit may provide the theme for the five "journey" vss. of the first part of the hymn. As disc. in the publ. intro., the standard Indra journey trope is overlaid with a different and almost contradictory journey theme, that of the bridal procession, in which the bride leads the husband rather than the standard vice versa. I now suggest that the "bride" in this scenario is the (fem. gender) *dh̥-* (see also Ge n. 3cd). It is she who leads Indra to us, in a role reversal that gives power not only to the bride-as-*dh̥-*, but also to us, who created her. Although the word *dh̥-* does not appear in this hymn (nor *dh̥t-*, though see X.31.3), I would argue that it is signaled by the very rare pseudo-participle found prominently in the first pāda. See also *dīdhaya* in 4a.

Now *sakṣāṇi*. Although it could be derived from either \sqrt{sah} or \sqrt{sac} , an affiliation with the former is more likely on semantic and lexical (other *sakṣ-* forms to this root) grounds. Flg. Baunack, both Old and Ge (n. 1a) take it as an infinitive in imperatival usage, presumably a loc. inf. to an otherwise unattested *n*-stem **sakṣān-*, and Lub also classifies it as an inf. to \sqrt{sah} . In the publ. tr. I took it as a loc. to such a stem, but not in infinitival usage: "in the power of ..." But I now find neither locative interpr. convincing, esp. because there exists an *i*-stem *sakṣāṇi-* of the appropriate shape, but no **sakṣān-* (though of course an *n*-stem probably underlies both *sakṣāṇi-* [8x, excluding this passage] and *sakṣāna-* [1x]). I return to the view that our *sakṣāṇi* represents an irregular shortening of dual *sakṣāṇī* in pāda-final position, a view that dates back to BR and is also held by Gr, Delb (AiS 416), and Lanman (Noun Infl. 390). The dual *sakṣāṇī* is found in VIII.22.15 modifying the Ásvins, also on a journey, and the very similar *-in*-stem *prasakṣín-* (like our *prá ... sakṣāṇi*) has a dual *prasakṣīṇā* modifying Indra's *hárī* in VIII.13.10 (followed immediately in the next pāda by *gántārā*, like our *gmántā*). Despite Old's contemptuous dismissal of the dual interpr., I find it less problematic than the loc. infinitive one and would now emend the tr. to "The two overpowering (horses) of the one being conjured up [=Indra] are come." Although the shortening would be irregular, it may have been facilitated by the short *-i* ending pādas c and d.

The first evidence of the bridal motif is found in pāda b, with the 'wooers', both acc. and instr. (*varébhīr varān*). This first evidence is also the first evidence of the role reversals the characterize this motif in the hymn. The wooer is already a defined role in the RVic wedding; see in the wedding hymn, X.85.8–9. As I have discussed elsewhere (Sac Wife 222–23 and passim), the function and behavior of the wooer are most clearly set out in the grhya sūtras. The wooer or wooers are proxies for the bridegroom, who go to the house of the prospective bride and perform the formal wooing of the girl in discussion/negotiation with her family. This always involves

their journey *to* the bride, but here they—or at least some of them— stay put, and Indra, the pseudo-bride, comes to them. I am a bit puzzled by the plethora of wooers, in two different cases, and am not certain of their identities, but I am now inclined towards the solution sketched by Ge in his n. 1b, that they represent two different groups. The acc. *varān* are the priests and ritual personnel, who are wooing Indra with their *dhī-* and sit awaiting his arrival. The instr. *varébhiḥ* are the wooers who accompany Indra, the gods or specifically the Maruts. I am not sure why wooers would come along with Indra in this scenario, unless (most likely) the image is of the standard model of wooing, with Indra as bridegroom accompanied by his posse of wooers, coming to woo the *dhī-*. The poet thus superimposes the two models one upon the other, leaving his audience off balance. I would now slightly emend this part of the tr. to “... are come, along with the wooers, to the (other) wooers (who are) taking their seats in front.”

The part. *prasīdataḥ* is taken by Gr and Ge as a gen. sg. modifying Indra, but Old points out that word order favors taking it as an acc. pl. with *varān*. I would add that it is not only word order but sense. *prá √ sad* in the RV does not have its widespread later sense ‘be/make pleased’. It is quite a rare lexeme and seems specialized in the sense of taking a forward position at the ritual (e.g., IV.1.13, V.60.1). Here the participle locates the acc. *varān* as stationary on the ritual ground, as opposed to the approaching *vará-* in the instr.

In c *ubhāyam* probably refers to both oblations and praise, as Sāy. and Ge suggest (Ge’s n. 1c).

On the pf. subj. *jujoṣati* and *búbhodati* see my 2017 art. on the perfect subjunctive (Fs. García Ramón). As I argue there, there is no reason to assign any anterior value to them (of the ‘will have enjoyed’ type). The pf. subjunctives here may help explain the poet’s penchant for the pf. opt. in X.31 (see above).

X.32.2: This vs. is blessedly straightforward, a rarity in this poet’s oeuvre.

As Ge (n. 2cd) suggests, the pl. subjects of cd are probably not Indra’s horses, despite the verb *vāhanti*, because it is difficult to interpr. d with horses as subject— not to mention that Indra’s two horses figured prominently in vs. 1, so the switch to pl. would be jarring. Instead, as Ge says, the subj. is probably the singers or their praise hymns. This fits nicely with my interpr. of vs. 1 and the situation more generally—that the poets have the power to make Indra appear at their sacrifice, to convey him there, through their poetic vision.

vagvaná- is a hapax, with a very rare suffix (AiG II.2.905), though clearly, if irregularly, derived from *√ vac*. Its creation here may owe something to *vagnúnā* in the next vs., 3c. The negative interpr. (‘chattering’) is entirely dependent on context. It is most likely an adj. modifying acc. pl. *arādhāsah*, but as Ge (n. 2d) points out, the latter could instead be a gen. sg. dependent on a substantivized *vagvaná-*: “the chatterings of the ungenerous one.” It hardly matters. It does matter that what the presumed subjects, the poets, are overcoming is something verbal.

X.32.3: This is the omphalos vs., in the exact middle of the first part of the hymn, and, as often, it overtly signals that it contains enigmas—here by the whole 1st pāda. After which follow three “wonders,” one per pāda; I do not consider all three to hang together as a single story, though cd present two views of a single situation. The topsy-turvy quality of each of the *vāpūṃṣi* recalls that of the animal fable vignettes in X.28, another sign of the connection between Vasukra and Kavaṣa.

The verb *adhīyati* (Pp. *adhi-īyati*) is plausibly taken by Old as a nonce thematization of the root pres. to \sqrt{i} , like nonce thematized *bībhramāṇa-* in the previous hymn (X.31.6). For the semantics of *adhī* \sqrt{i} see comm. ad IV.17.12. The wonder in this pāda—the son knowing the birth of his parents—is a variant on the theme found in the last hymn, X.31.10, of the son being born before his parents. I do not think it needs to be interpr. in the context of the 2nd hemistich.

As already noted, these two pādas present two different views of the same thing: (c) a wife conveying her new husband on the wedding journey rather than vice versa; (d) a bridal procession arranged for the bridegroom, not as is usual for the bride. Both of them can be interpr. in light of my suggestion (above ad vs. 1) that our *dhī-* is the bride who will bring Indra to our sacrifice. In c she is the wife and Indra the husband; in d the bridal procession is for Indra. This is also succinctly stated by Ge (n. 3cd): “Der Gemahl ist Indra, die Frau, die ihn heimführt, ist die Dichtung; seine Fahrt zum Opfer ist ein Hochzeitszug.” For \sqrt{vah} in the specialized use of ‘convey (home), marry’ see, e.g., V.37.3 *vadhūr iyám pátim ichánty eti, yá īm váhāte máhiṣīm iṣirām* “Here she goes, a bride seeking a husband who will take her home as vigorous chief wife” (sim. in a nearby Vasukra passage, X.27.11). In V.37.3 in the following pāda the chariot sounds loudly (*ā ... ghoṣat*); if that pāda is connected to what precedes, this may refer to celebratory noisemaking from bystanders and could be reflected in our *vāgnunā sumāt* “amid the uproar.” Numerous passages show *vahatú-* as specifically for the bride, including X.85.14 (wedding hymn) *vahatúm sūryāyāḥ* and, as obj. of \sqrt{kr} , the notorious X.17.1 *tvāṣṭā duhitré vahatúm kṛṇoti* “Tvaṣṭar is making a wedding for his daughter.” The *íd* in our *pumsá íd* emphasizes the oddness of making a *vahatú-* for a male. Despite the gen. *pumsáh* of the Pp., we should probably read dat. *pumsé*, as Old also suggests. As X.17.1 just cited shows, *vahatúm* \sqrt{kr} takes a dat.; see also X.85.20.

X.32.4: In the publ. tr. I render *abhí ... dīdhaya* “I ponder,” on the basis of III.38.1 *abhí ... dīdhayā* (see also IV.33.9), but I now think that it should be interpr. in conjunction with *dhiyasānāsya* in 1a and the underlying *dhī-* that I consider the bride figure in this multi-verse conceit. Ge’s characterization of the action here (n. 4a) is close to my understanding of *dhiyasānāsya* in vs. 1: “Der Dichter *sieht im Geist* [my ital.], wohin die Brautfahrt Indra’s geht, zu der Opferstätte.” I would now change the tr. slightly to “Just this dear seat do I envision ...”

I read *abhí* in pāda with *dīdhaya* but also supply it with *śāsana*, an unorthodox silent repetition in the rel. cl. suggested by the *abhí* in d, introducing the third subject of *śāsana*. For *abhí* $\sqrt{sās}$ meaning ‘direct (to a goal)’, cf. VI.54.2 *yó gṛhāṁ abhiśāsati* “who [=Pūṣan] will direct (us) to the house(s).” In the simile in our passage *vahatúm* ‘bridal procession’ serves as the obj. corresponding to “(us)” in VI.54.2. The goal of both simile and frame is “this seat” (*tād ... sādhasatham* of pāda a), expressed by *yād* in the rel. cl. The frame lacks an expressed object. Ge supplies “(deine Fahrt),” with the 2nd sg. poss. prn. presumably referring to Indra, who was addressed in the 2nd sg. two vss. before (vs. 2). I supply “(their journey),” referring to the cows, who, in the form of milk to be mixed with soma, are converging on the ritual ground. Ge (n. 4b) also thinks these are Somakühe, but I don’t see how these cows would direct Indra’s journey, as Ge has it.

The identities of the subjects of the other two pādas, also making their way to the seat, are unclear. Ge (n. 4b) suggests “sonstige Opfer (c) und Lied (d).” In particular (n. 4c) he sees “the foremost mother of the flock” (*mātā ... yūthāsya pūrvyā*) as the *Idā*, on the basis of V.41.19 *īlā yūthāsya mātā*, but we should perhaps also bear in mind *pūrvyā bhūmanā gauḥ* “the foremost

cow throughout the land” in the immediately preceding hymn (X.31.6), which we identified as the dakṣiṇā, arisen from Agni’s good favor.

In d *vāṇāsya saptādhātuḥ ... jānaḥ* “the sevenfold people of the music” is compared by Ge (n. 4d) with IX.103.3 *vāñīr ṛṣīṇām saptā* “the seven voices of the seers” – in both cases presumably referring to the chanters among the ritual personnel, assimilated to the Saptarṣi.

X.32.5: As indicated in the publ. intro., I see this vs. as depicting a two-way, crisscrossed journey: Soma goes to the gods (a); Indra and the gods come here (bc). I am almost alone in identifying the subj. of pāda a as Soma. Ge suggests the poet, Sāy. the Hotar, Baunack Agni, Old Soma or Agni. Although I am not absolutely certain that Soma is the subject – Agni remains a distinct possibility – the sg. of *devayū-* is used more often of Soma than of any other entity.

The lexeme *prá√ric* cannot, in my opinion, have its usual sense ‘project beyond, surpass’ here, since that idiom generally takes an abl. However, Ge and Old both, in different ways, try to wring that sense out of it, with Old supplying “the others” for the missing ablative: Ge “Der Gottverlangende reicht weiter bis zu eurer Stätte”; Old “Hervor (über die Andere) zu eurer ... Stätte hin reicht der Götterverehrer.” Both construe *áchā* with pāda-final *padám*, which they interpr. as ‘place’. By contrast, because *ácha* is often postposed to its complement, I take it rather with preceding *vah* ‘you’, referring to the gods. (For postposed *ácha*, see the common pāda-opening *devāṁ áchā* I.44.4, etc., and for this collocation #PREV ENCL.-PRN *áchā* the identical IV.34.3 *prá vó ‘chā*, etc.) This frees up *padám* to be obj. of *prá√ric*, in a different idiom ‘leave behind’; cf. X.13.4 *priyām yamás tanvām prāṛirecīt* “Yama left behind his own dear body” (and see VI.20.4). Here I think the point is that Soma leaves a trail on his journey to the gods.

Meanwhile in b Indra, who is the single surpassing one (*ékaḥ ... turváṇiḥ*), drives to the place of sacrifice along with the Maruts (*rudrébhiḥ* b) or with the gods in general (c). I would now slightly emend the tr., to more or less match Ge’s “oder mit den Unsterblichen,” to “or (with) the immortals among whom ...” with gapped instr. in the main cl. and “immortals” demoted into the rel. cl. as a loc. The position of *vā* is then somewhat anomalous, but (in my opinion) anomalous within reasonable limits.

The rel. cl. seems a bit of a throw-away, without relevance to the topic of the vs. It seems that the immortals have it in their power to “give” old age; indeed, since they’re immortal, the only relevance of old age to them is to inflict it on mortals—or, more positively, to give it to them. If the latter is meant, presumably “old age” here stands for the “complete lifetime” we aim for elsewhere in the RV.

As noted above (comm. ad X.31.3) *ūma-* is only used of the gods, so here it must refer to the immortals of c or perhaps Indra and the Maruts in b. The pl. subj. of the impv. *pāri ... sīñcata* must be the mortal ritual personnel.

X.32.6–8: These three vss. concern Agni, or rather 6 and 8 do, with 7 a general statement motivated by the previous vs. The final vs. (9) stands apart, though it is in Triṣṭubh like 6–8.

X.32.6: This vs. begins the second, Agni-focused portion of the hymn, though Indra, as the impartor of knowledge about Agni, provides the transition. The last three pādas are identical to V.2.8bcd.

The identity of the *vrata-pā-* ‘protector of commandments’ is left unclear, and the poet may be having a little joke at our expense. Sg. *vrata-pā-* is most often used of Agni (I.31.10, VI.8.2, VIII.11.1, possibly X.61.7); the only other sg. god who serves as referent is Sūrya

(I.83.5). But since the contents of the Vratapā's speech concern Agni, he is unlikely to be the speaker. Since Varuṇa is particularly associated with *vratā-*, he might be expected to be the default referent, but the stem is never directly applied to him, and there is no other sign of him in this hymn. In order to avoid multiplying entities, I suggest that Indra, who is explicitly named at the beginning of the next pāda, is also the referent here. By virtue of his militant actions on behalf of the gods and their clients, he can be considered the protector of their *vratās*.

X.32.7: Just as vs. 3 serves as omphalos in the first Indra-oriented portion of the hymn, this vs., the middle one of the three devoted to Agni, seems to have a similar profile: it is detached from the ritually focused vss. that surround it and expresses a maxim embedded in a general truth: that asking directions leads to a good outcome. As indicated in the publ. intro. the emphasis on the instruction of the ignorant reminds us of X.28. In any case, the *ānuśiṣṭaḥ*- of 6d, modifying the 1st ps. speaker, is picked up by *ānuśiṣṭaḥ* of 7b and *anuśāsanasya* of 7c, both used in general statements.

Although the *-víd-* of *kṣetra-víd-* most likely belongs to *√ vid* 'know' (so Gr etc.; see Scar 482–83) and picks up *vidvān* used of the instructive Indra in 6c, note that *√ vid* 'find' provides the final finite verb in the vs., *vindati* in d, and 'finding the field' is not an impossible interpr. of the cmpd.

X.32.8: This vs. concerns the rekindling of the ritual fire, subsequent to its being re-deposited in 6a *nidhīyāmānam*.

The plupf. (or redupl. impf.?) *āmaman* belongs with *√ mar*² 'stay, wait', forms of which are confined to the Vasukra / Kavaṣa hymns (see comm. ad X.27.20, 31.2). Agni's waiting may refer to his sojourn in the waters or to his staying quiescent once reinstalled on the ritual ground – or both.

Although 'covered over' (*āpīvṛtaḥ*) could refer either to his time lying within the waters or to his being covered with kindling materials on the hearth, the sucking of his mother's udder (*adhayan mātūr ūdhaḥ*) most likely describes the nascent fire's contact with the kindling sticks.

The paradoxical expression "old age has reached the youth" (*āpa jarimā yūvānam*) presumably refers to the gray of ashes, once the fire begins to burn.

Note the enclitic doubling in *īm enam*.

X.32.9: Like immed. preceding X.31, this hymn ends with a twisted dānastuti-like vs. In the vs. here the poet seems to be praising gifts he (and his colleagues) are giving, rather than those they received – hence a sort of reverse dānastuti. The situation is further confused by the fact that the first hemistich contains two vocc., one apparent addressed to a soma vessel (*kalāśa*) and one to a certain Kuruśravaṇa, who, according to the next hymn (also by Kavaṣa), was a king (X.33.4 *kuruśravaṇam ... rājānam*) chosen as patron by Kavaṣa and, by the time of X.33, apparently dead. It is difficult to imagine a semantic or pragmatic class to which both the jug and the king could belong – and I think we would be wise not to try to identify one. Instead, the poet is addressing first the object (the vessel) and then the king, for different purposes. Both Ge and Old suggest that the *kalāśa-* is the referent of *sāḥ* in c—that is, it is the gift (or part of the gift) itself.

As a close parallel to ab Old and Ge aptly adduce V.30.12 *bhadrām idām ruśāmā agne akran, gāvāṃ catvāri dādataḥ sahāsrā* "The Ruśamas have done this auspicious thing, o Agni, in giving four thousand cows." In our pāda the poet may be addressing the soma vessel as an object made auspicious by being part of the gift we are giving. By contrast, in addressing

Kuruśrávaṇa in b, he may be asking covert permission of the king to perform this giving – or more likely calling attention to the unusual *giving* by the poet (& co.) in order to prompt lavish countergiving by Kuruśrávaṇa and the patrons, a sort of priming of the pump. Certainly the munificence of Kuruśrávaṇa to our poet is described in extravagant terms in the next hymn, X.33.4–5.

In c *dānāḥ* is universally taken (incl. by the publ. tr.) as nom. sg. of *dānā-* ‘gift’, but I now wonder if it is not another ex. of the root aor. med. part. (not recognized in the grammars) in passive value. See another possible ex. in V.52.14 (and comm. thereon). Here it would modify the unexpressed nom. *kalásah*: “(the vessel) being given—let it be yours, o bounteous one, and this soma here ...” Though the publ. “let this be a gift for you ...” works fine, the participial interpr. is smoother.

X.33 Lament of a singer

On the situation depicted in this hymn, see Old, Ge, Bl (RR ad I.105.8), Don (64). The meter of the hymn is quite various and reflects the changes of mood and theme in this consistently 1st person discourse. The hymn gives the impression of a remarkably personal testament.

X.33.1: My tr. of *prayúj-* as ‘advance team’ here and in I.186.9, X.96.12 is not a happy one, sounding too close to the operatives of a modern political campaign. Presumably *prayúj-* refers to the horse(s) at the front of the team, and here the point is that the poet is hitched up even in front of those forward horses, in an especially prominent position. Because I doubt that the “teams of the peoples” (*prayújo jánānām*), a phrase also found in X.96.12, actually did their own hitching, I would like to take *prayújah* as an acc. pl. (as it is in I.186.9, in the phrase *prá yuñjate prayújah*). I would then tr. “They hitched me up (even) in front of (before) the teams of the peoples,” though I’m not certain the syntax will work: no other forms of *prá √ yuj* have a double acc. Old dismisses the possibility of an acc.

The use of *sma* with pres. *váhāmi* is unclear. Re (EVP XVI.131) asks “premier ex. de *sma* prétérisant le verbe?” In the publ. tr. I render it as ‘always’, but also “preterize” the verb. This is in part because of the tenses of the other verbs in this narrative: the impfs. *araksan* (c) and *āsīt* (d) should situate the vs. in the narrative past, while *yuyujre* (a) is compatible with that reading. The situation depicted also strongly suggests the non-recent past: in the first three pādas the poet reflects on the privileged position he had under the previous, now dead, king and recalls in d the shout that presaged his abrupt change of fortune. Perhaps the pres. with *sma* here has a past progressive sense “I was always carrying ...”

Pāda b presents two other, related questions: why Pūṣan and what is the sense of *ántareṇa* here? The latter seems to have attracted more attention than it perhaps deserves. See the various suggestions of Old, Ge, and Scar (427 and n. 603). I think it is an adverbial instr. ‘interiorly, intimately’, expressing the close relationship between the poet and Pūṣan. Although Pūṣan is a minor deity, he is invoked for aid in finding the way on journeys, and given the poet’s position as metaphorical lead horse, Pūṣan is an appropriate companion. Old plausibly suggests that Pūṣan here may be connected with the unnamed ‘field-knower’ in the previous hymn, X.32.7, who “finds the straight course” (*srutīm vindati añjasīnām*); see also nearby X.26 (though by a different poet), a hymn to Pūṣan that ends (vs. 9) with a hope for Pūṣan’s aid to our chariot.

See Ge (n. 1d) for two possible interpr. of the hapax *duḥśāsu-*. I take it as referring to the new king, who will replace the poet’s old generous and benevolent patron.

X.33.2: The first hemistich is identical to I.105.8, uttered by a speaker in similar emotional distress. As Ge suggests (n. 2ab), this may be a stereotyped phrase.

ámati- (c) and *matí-* (d) form a contrastive pair. On the sense of *ámati-* see comm. ad X.42.10, where it is argued that it refers to a physical state, which would be supported here by “nakedness and exhaustion.”

X.33.3: The second half of I.105.8 (see immed. above) is found here.

X.33.4: It is striking that the poet “chooses” his royal patron, not vice versa, at least in this telling. Is this a role reversal similar to that of the svayamvara?

X.33.5: I take this vs. as the poet’s “choosing” expression at the time of vs. 4, when he chose Kuruśravaṇa. Sim. Ge.

X.33.6: I take the *yásya* cl. as parallel to 5ab, with 5c almost an interlude. The main cl. in this vs. is c, with neut. *kṣetram* a nominative compared to the unexpressed Kuruśravaṇa.

Ge (sim. Don) assumes that the sweet *gírah* of pāda were Kuruśravaṇa’s own (“dessen Worte angenehm waren”; “whose words were sweet”). But *gír-* doesn’t simply mean ‘word’, but refers to the praise songs / hymns produced by poets, and surely these *gírah* were presented to Kuruśravaṇa by our speaker, who in the preceding pāda announced his intention to praise the king (5c *stávai*).

I do not understand the function of *prá-* in *prásvādasah*. No other forms built to *svād-* are compounded with this preverb (anywhere in Skt.), nor does it appear with verb forms built to \sqrt{svad} or $\sqrt{sūd}$. There is an orphaned, functionless *prá* in V.7.6 *prá svādanam pītūnām*, but that doesn’t help much.

For a dwelling, described as *raṇvā-*, compared to an animate being, cf., e.g., I.66.3 *okó ná raṇvāh* “delightful like a home,” of Agni, VI.3.3 *raṇvó vasatīh*, also of Agni.

X.33.9: *śatātman-* ‘having a hundred selves’ verges on “a cat has nine lives” territory, as Don also suggests.

X.34 Gambler

See the publ. intro. for an assessment of the hymn. Like the immediately preceding hymn, X.33, it is a monologue that traverses a landscape of shifting emotions, though the 1st person speakers and their preoccupations are very different. It has been much translated; in addition to the standard ones, Re *Hymnes spéc.*, Macd both *Hymns from the Rigveda* and *Vedic Reader*, Maurer, Thieme *Gedichte*, Don, Falk *Bruderschaft* 181ff.

The Anukr. ascribes the hymn to Kavaṣa Ailūṣa, which is surely correct, or alternatively and fancifully to *Akṣa Maujavant* “The dice (/die) from (Mt.) Mūjavant.”

X.34.1: Note the phonological semi-scrambling in the openings of the first two pādas, *#prāvepā mā ... #pravātejā*.

The tr. ‘dangling’ for *prāvepāh* is a bit misleading; it should have a greater sense of movement; perhaps ‘quivering’ or ‘shaking’.

Although *írīṇa-* is literally a salt pocket (see comm. ad VIII.4.3), in this context it refers to a such a pocket, a hollow in the ground, used for gaming, since it can contain the nuts and allow them to whirl freely.

The root \sqrt{chand} can mean both ‘seem’ and ‘please’. I favor the latter sense in d, with most tr., but Ge (fld. by Don) takes in the former sense, with the simile as the predicate: “seemed to me like a *bhakṣá-*.” Since ‘seemed’ is essentially built into the simile, a verb meaning ‘seem’ is superfluous. Moreover, the attraction that the nuts exert on the speaker is better expressed by ‘pleased’. Ge (n. 1d) considers the point of comparison between the nuts and soma to be the wakefulness expressed by *jāgrvi-* in d, but this seems overelaborate. Although, as he points out, *jāgrvi-* is also used of soma elsewhere in the RV, other qualities of soma might make it seem pleasing to the speaker.

X.34.2: The “one die too many” (*akṣásya ... ekaparásya*) refers to the leftover nut once the handful has been divided by four. As indicated in the publ. intro., a single leftover nut is worse than two, which is worse than three.

X.34.2–3: Note the symmetry between 2d *ápa jāyām arodham* and 3a *ápa jāyā ruṇaddhi*.
Note the opening of 3c, *#áśvasya*, matching 2c *#akṣásya*.

X.34.3: The mother-in-law of pāda a is actually the mother-in-law of the wife, that is, the *mother* of the speaker. In the system of patrilocal marriage prevailing at this period, terms for in-laws would only refer to the in-laws of the wife, who would be embedded within them. See disc. ad X.28.1 and Thieme (M+A 14 and n. 5); in M+A (n. 5) and Gedichte (74 n. 5) he suggests that “mother-in-law” is used here because the woman in question no longer considers the gambler her son because of his unacceptable behavior. She has disowned him, and her relationship to him is only through her daughter-in-law.

X.34.4: Init. *anyé* in pāda a, as well as *anyéśām* init. in 10d and 11b, conforms to my rule that indefinite *anyá-* is always init., while def. *anyá-* is generally in 2nd position.

X.34.5: Although some tr. take b as continuing the direct speech of *ná daviṣāṇi ebhiḥ* (a), it seems best (with Ge, Thieme, etc.) to limit the direct quotation to the three words just quoted. In b the gambler then describes the unhappy effect of the virtuous resolve he just announced – abandonment by his *sákhi-*.

There is some discussion about who these *sákhi-* are, the dice themselves or his human gambling pals (see Old, Ge, etc.). I assume it refers to both.

The sense and morphological value of *áva hīye* in b are disputed. I take it as a passive to $\sqrt{hā}$ ‘leave (behind)’, while others (see esp. Kulikov, *ya-presents*, p. 448) as an intrans. ‘stay behind’. The RV gives us no help. This is, in my view, the only RVic form to the stem *hīya-* belonging to the root $\sqrt{hā}$ ‘leave behind’; the other two forms classified there by Gr are cmpd with *ní* and in my interpr. belong to the root $\sqrt{hā}$ ‘change position’ and mean ‘be bent double’ (see VI.52.1 and VII.104.10). Our RVic form is unaccented, and forms in Vedic prose show both accents (*hīya-* and *hīyá-*; for details see Kulikov). Kulikov interpr. it as a non-passive intransitive (anticausative) form, tr. “I fall behind.” Although the formal facts provide no help, I find the passive makes for better drama. Note also the ppl. to this root in passive value in vs. 10, *hīnā* ‘abandoned, left behind’.

As shown by the accent on *ákrata*, *ca* in *c* is a subordinator. See, e.g., Klein DGRV I.243.

X.34.6: On *śúśujāna-*, see comm. ad X.27.2, where, flg. Insler, I take it as a deformation of *śúśuvāna-* ‘swelling up’. As I have often remarked above (flg. Old), there are numerous close connections between the Vasukra hymns (X.27–29) and the Kavaṣa hymns (X.30–34), and the limitation of this supposed root ($\sqrt{śuj}$) in this particular phrase, *tanvā śúśujānaḥ*, to a Vasukra hymn and a Kavaṣa hymn adds to the list.

Among the many tr., opinion is divided about whether *jeṣyāmi* is a question, “will I win?,” introduced by *prchāmānaḥ* (Macd, Th, Don, Falk [185], Mau) or a confident assertion “I will win” (Ge, Re [Hymnes spéc], Scar [224, 306]). I think the best interpr. is that it’s both, showing the mind of the gambler divided between trepidatious self-doubt and boastful over-confidence, surely a psychologically astute observation. Formally the verb can be either question or statement, and note that it is situated just in between *prchāmānaḥ* and *tanvā śúśujānaḥ*, which express the two emotional poles.

X.34.7: This is the only Jagatī vs. in this Triṣṭubh hymn (though see 5c in the otherwise Triṣṭubh vs. 5); it is also the middle vs., esp. if we take vs. 14 as somewhat aside. Falk (p. 183) cleverly points out that Jagatī with its 12-syllable pādas is divisible by 4 – that is, it is essentially *kṛta*, the winning hand, and further suggests that if there’s a Wahrheitszauber in the hymn (as a number have asserted, with various candidates; see Falk 182–83), this is it. He considers it a *nāmagrāha*: the speaker knows the real names of the dice, or rather the real name, *aṅkuśá-* ‘hook’ (in *aṅkuśín*), which is a phonological scrambling of *akṣá-* (p. 185 n. 534). Although I’m not sure that I’d follow Falk all the way, I am quite taken by his observation that this vs. is the only one that can be divided by 4; he does not make anything of its being the middle vs. (his publication predates my work on the omphalos), but its position fits it to be an omphalos vs., which gives further support to Falk’s suggestion. Rather than considering the various adj.s in the first hemistich, or just *aṅkuśín-*, as the real name(s) of the dice, I wonder if the intent is the reverse, an intent signalled by *íd*: an attempt to demystify and disempower the dice by cutting their name down to size, “they are just *akṣāḥ*.” This would make it a kind of reverse omphalos: rather than embodying the enigma of the hymn, it reveals (or tries to) that the apparently irresistible actors, the nuts, are actually just pedestrian objects. But clearly this belittling doesn’t work: the compulsive attraction remains too strong, and the dice are depicted as animate agents in vss. 8–9, 11. For a similar reversion of inanimate actors to mere objects see the end of the pressing stone hymn, X.94.14.

For a somewhat over-the-top interpr. of the adjectives see Th’s tr., beginning (with *aṅkuśín*) “das sind Elefantentrieber, Ochsentreiber ...” This level of specificity seems unnec. and in fact counterproductive.

On *ní√tud* see comm. ad I.58.1, where I argue for rendering the *ní* (‘force down’), rather than the standard ‘spur on, goad’. I opted for the latter here, despite the sequence *nitodíno*, *nikṛtvānaḥ*, because rendering the *ní* produced the awk. “down-thrusting, down-putting.”

X.34.8: The Pp reads the Saṃhitā *nā* as *ná*, and Macd (VR ad loc. [p.191]) cites it as “the only example in the RV. of the metrical lengthening of *ná*,” but better, with Old, to take it as *ná + ā*, which preverb is not uncommon with \sqrt{nam} . Although some forms of $\tilde{a}\sqrt{nam}$ take an acc. (‘bend X’), others seem indistinguishable in usage from the simplex (e.g., VI.50.4 $\tilde{a} naḥ$... *namantām*).

X.34.9: Note that *divyá-* ‘heavenly’ evokes the pres. stem *dh̥vyā-* ‘gamble, play dice’.

X.34.10–11: The “scorching, burning” theme, from 7b *tāpanās tāpayiṣṇávaḥ* and 9d *nír dahanti*, is continued by *tapyate* (10a), said of the abandoned wife, and *tatāpa* (11a), said of the gambler—hence my tr. “is scorched / it scorched” rather than the more generic “is pained / it pained.”

X.34.10: Although my assumption (and I think that of most interpreters) is that the “mother” of pāda b is the gambler’s mother, who is pained by his wanderings occasioned by his poverty and consequent homelessness, EM suggests that the mother could be identical to the wife, who opens pāda a – that is, the mother of his child(ren). Although I think the standard interpr. is probably the correct one, due to the “wandering child,” there is nothing syntactic to prevent the alternative, and it may add some resonance.

Although “money” as a tr. for *dhānam* in c is anachronistic—the Rigveda does not depict a cash economy—I chose it over the usual renderings of this stem: ‘prize, stakes, wealth’, all of which would be misleading here. The gambler is not seeking riches, but just something to settle his debts.

With most, I consider the gambler’s purpose in d in “approaching the house of others” to be theft. See Re’s (EVP XVI.132) apposite invocation of the debtor turned thief in VI.12.5. However, Ge (n. 10c) suggests as an alternative that he hopes to borrow money, and Maurer in his n. suggests either borrowing or seeking shelter. The benign idiom *úpa √i*, rather than the more aggressive *abhí √i* or the like, might give some support to this view, but I still think theft is much more likely; *úpa √i* might simply indicate a stealthy approach.

X.34.11: Several tr. (Don, Falk 186, Kü 212) take the *strī-* to be the gambler’s own woman, now the wife of others. This seems quite unlikely (see Ge’s n. 11a); among other things, if she’s now the wife of (pl.) others, the sight will pain him in a different way. Furthermore, as far as I can tell, *strī-* never otherwise means ‘wife’. When it’s contrasted with something it’s generic ‘men’, and no passage requires, and most discourage, a ‘wife’ reading. The point here is that when he’s skulking around other people’s houses, nose pressed against the glass as it were, he sees scenes of domestic happiness that remind him of what he gave up.

The sense of the 2nd hemistich, particularly pāda d, is not entirely certain. In c he yokes his “brown horses,” the dice, in early morning and presumably keeps gambling all day. In d the questions are what *agnér ánte* designates and what *vṛṣalā-* (only here until BĀU) means. As for the former, I am inclined to see it as a temporal designation complementing *pūrvāhṇé* in c, and also matching the *náktam* of 10d. The “end of the fire” would be late at night, when the cooking fire would be allowed to subside into coals until the next day. Ge (n. 11d) considers this a possible alternative. But most take it as a location, “near the fire” (Ge “in der Nähe des Feuers”). In his n. Th interpr. the “end of the fire” as its ashes, a comparatively warm place for someone who has no fixed place to sleep – implying that the gambler has kindled a fire for himself outdoors. Others (esp. Maurer) seem to imply that the gambler has taken refuge with the cozy family of pāda b, but was only given a grudging place there. I still favor the phrase as a temporal designation, reminiscent of accounts of people who, in the sensory deprivation of Las Vegas casinos, gamble non-stop with no notion of whether it’s night or day. The time range from early morning to the end of the fire is an indication of how obsessed the gambler is.

As for *vṛṣalā-*, KH (Vedica 87 [MSS 41, 1982] = Aufs. III, 793ff.) considers this passage as well as the much later ones and settles on “Hausgesinde arischer Herkunft.” But this seems

too specific a social role for our period and our hymn. It seems more likely that this derivative of ‘bull’, with its diminutive and deprecatory suffix *-la-* with “popular” *l*, is a familiar and condescending way of referring to a social inferior or someone down on his luck, of the “poor guy” variety. A different species but the same general intent might be “miserable cur” or “mongrel” or “mutt.”

PS points out the mirror-image phonology of the two perfects, *tatāpa* ending pāda a and *papāda* ending d.

X.34.12: The second half of this vs. is taken, almost universally, as the gambler’s admission that he has no more funds to stake and as a gesture of submission to the dice, an interpr. with which I am in agreement. Falk (183–84), by contrast, thinks that “holding nothing back” means that the gambler has won, a victory set in motion by the Wahrheitszauber of vs. 7. Although Falk’s treatment of the other occurrences of *ná dhānam* √ *rudh* is suggestive, I find his interpr. contextually impossible.

X.34.13: *kṛṣīm it kṛṣasva* could go nicely into a Voltaire/Candide-style “cultiver notre jardin.”

The verb in d, *vī caṣṭe*, is given the sense(s) ‘explain / reveal / tell’ in all the tr. cited above. However, I am reluctant to ascribe a trans./caus. sense to this middle root pres., which ordinarily means ‘see’—despite Falk’s ingenious attempt (p. 187 n. 546) to make it a two-way street of lightbeams. I prefer ‘watch out for’ (similarly *vī cakṣate* in VIII.45.16): Savitar’s good and bracing advice is his way of exercising benevolent oversight over the (reformed) gambler.

Although *aryāḥ* is most likely the nom. sg. of the thematic adj. *aryá-*, it could also be the gen. sg. of *arí-* and modify *me* (“me, the stranger”), indicating that by his behavior the gambler has estranged himself from Ārya social bonds (as is amply demonstrated throughout the hymn), but that he is being brought back into the fold.

X.34.13–14: Note the juxtaposition of *aryāḥ* // *mitráṃ* across the verse boundary. It almost seems that the gambler is being reintegrated into Ārya society, and the two gods esp. associated with the smooth internal running of that society, Aryaman and Mitra, are indirectly invoked. Savitar seems like a stand-in for Aryaman here.

X.34.14: The particle *khálu*, though extremely common in Vedic prose, is found only here in the RV.

The instr. adj. *ghoréṇa* has been interpr. in a variety of ways: Ge and Th supply “Zauber,” Falk (somewhat anachronistically) “Kali”; Macd. tr. “magic power,” Don “the force of your terrible sorcery,” Maurer “cruelty,” and Re (Hymnes spéc) takes it adverbially “de cette façon cruelle.” I favor supplying either ‘eye’ (on the basis of the cmpds. *ghorá-cakṣas-* and *ághora-cakṣus-*) or ‘mind’ (on the basis of VII.20.6 *mánaḥ ... ghorám*; cf. also the beg. of the Purūravas/Urvaśī dialogue X.95.1 *mānasā tīṣṭha ghore*).

X.35–38: These four hymns are persuasively grouped together by Old (Prol. 229 n. 2, 235), though only the first two, which are a matched pair, are attributed to the same poet. The names of the poets given by the Anukr. for X.37 and X.38 are fanciful and based on the divine dedicand.

X.35–36: The next two hymns, both to the All Gods, are attributed to one Luśa Dhānāka, not otherwise mentioned in the RV. On the structural similarities between the hymns see the publ.

intro. to X.36. Both hymns are top-heavy with 1st pl. middles in (-) *īmahe* and *-īmahi*, both in their refrains and outside of them.

X.35 All Gods

On the matutine character of this hymn and its structure in general, see publ. intro.

The refrain that dominates the middle part of the hymn and the dense repetition found throughout give a slightly claustrophobic feeling to this hymn. Even before the refrain that dominates vss. 3–12 is established in 3d, pronounced chaining links the first three vss.: Heaven and Earth are found in all three vss. (1c, 2a, 3a), in the first as a dual dvandva in the nom., in the 2nd as a gen. du. dvandva (*diváspṛthivyóh*), in the 3rd again in the nom., but with the two members separated. The stem *uṣás-* is likewise found in all three vss., in different case/number (1b, 2c, 3c), and the adverb *adyá*-*ā* ‘today’ occurs in all three (1c, 2d, 3a). The end of vs. 1 (d *áva ā vṛṇīmahe*) is repeated in 2a, and *anāgāstvám* (2c) reappears in *ánāgasah* in 3a. Note also *mahī* (1c, 3b), *māṭīn* (2b) / *māṭārā* (3b). Lexical and phrasal repetition characterize the hymn throughout. See comm. ad vs. 5, for example. Particularly persistent is the word *adyā* ‘today’, found in vss. 1, 2, 3, 5, 7, 9, 13, (i.e., half the vss.). It is notable that *adyā* and the VP *ávaḥ ... vṛṇīmahe*, which figure prominently in this hymn, form the post-caesura part of the refrain ... *ávo adyā vṛṇīmahe* that dominates the next hymn (X.36.2–12).

X.35.1: I am not sure why the fires are said to be *īndravant-*; is it because he is a regular at the early morning pressing?

X.35.2: With Old and Gr (contra Ge and Re), I take *śaryañāvataḥ* as acc. pl., not gen. sg.

X.35.3: When the refrain gets established in the final pāda of this vs., its verb *īmahe*, in final position, not only repeats the *īmahe* that ends 2c, but echoes pāda-final *vṛṇīmahe* (1d, 2a).

X.35.4: The form *sudevyām* occurs twice in the RV, here and in I.112.19, both pāda-final. In I.112.19 I take it, with some but not all interpr. (see comm. ad loc.), as an acc. of a PN *sudevī-* with *vṛkī* inflection, rather than assigning it to a them. stem *sudevyā-* as Gr (etc.) does. In our passage in the publ. tr. I attempted the same thing, except analyzing it as a nom. phrase **sudevī iyām*, with vowel contraction and shortening (**sudevīyam > sudevyīyam*) as well as loss of the accent on *iyām*. I wish I could make this work, but on reflection I see that it rests on too many shaky factors – not only the unprecedented sandhi and loss of accent, but the unlikelihood of starting and ending the pāda with the same deictic *iyām* with the same referent. Not to mention the fact that, like *sudevā-*, *sudevī-* should be a bahuvrīhi, which works for the PN in I.112.19, but would not work here, since it would modify a figure who is already a goddess. I would now detach this form from the identical one in I.112.19, still assigning that one to a *vṛkī* stem *sudevī-*, while accepting the thematic adj. deriv. here (though it occurs nowhere else) and taking it as an adverb. But I would still maintain that it was constructed to evoke *-devī-* and means something like “in the manner of a good goddess.” The emended tr.: “This foremost ruddy one here — in the manner of a good goddess, let her, the rich lady, dawn richly for our gain.” Just as the adv. *revāt* matches the fem. nom. sg. *revātī* “the rich lady richly,” so does *sudevyām* match the unexpressed **(su)devī*. Assuming an allusion to the goddess seems preferable to the almost random collection of meanings others have assigned to *sudevyā-*: Gr “Schar der guten Götter”; Ge “Glück”; Re (EVP V.50 tr. of this hymn) “la faveur des dieux” (as obj. of *vy ùchatu*, which is otherwise

generally intrans., though see possible exception in 5c), but in the notes on the hymn (EVP IV.112) “fait d’avoir les dieux pour soi” (see also EVP XVI.11 ad I.112.19 “rendant les dieux favorables”).

The stem *durvidātra-*, the negative of the better-attested *suvidātra-*, is found three times in the RV: twice in Luśa Dhānaka’s slender oeuvre (here and in the following hymn, X.36.2) and in X.63.12. The adj. is generally given a generic gloss: Gr ‘Schlechtes austheilend, Böses erweisend’, Ge ‘unzugänglich’, AiG II.2.170 ‘Böses erweisend’. The exception is Re, whose rendering ‘funeste à rencontrer’ has real semantics. As disc. with regard to *suvidātra-* (comm. ad II.9.6), the question is what root *-vidātra-* belongs to. For reasons detailed ad II.9.6, I connect it with $\sqrt{\text{vid}}$ ‘find’, and my assumption is that this root etymology also underlies Re’s ‘... à rencontrer’: ‘to find’, that is, ‘to run across / encounter’. Two of the three examples of *durvidātra-* actively support this derivation by wishing the entity described as *durvidātra-* to be or go far away: here “set the fury in the distance (*āré*)” and in X.63.12, where repeated *āpa* ‘away’ as well as *āré* ‘in the distance’ apply to a series of afflictions we seek to have banished. The point is that the further away all these things are, the less likely we will encounter them.

Re, somewhat bizarrely, takes *dhīmahi* as passive (“Pussions-nous être placés ...”), which requires him to construe the acc. *manyúm* rather loosely. Since *dhīmahi* is almost never passive, I see no advantage in this.

X.35.5: *uśāsaḥ* in b is morphologically ambiguous: it could be the gen. sg. or the (modernized) nom. pl. (as in 6a), agreeing with *yāḥ* in pāda a. Since b is identical to 1b, save for the gender of the nom. pl. pres. part.: m. *bhárantaḥ* 1b, f. *bhárantīḥ* 5b, the gen. sg., construed with *vyùṣṭiṣu* as in 1b, is the more likely choice (so also Re, though he allows for simultaneous readings). However, Ge opts for nom. pl. at least as the primary ident. (tr. *vyùṣṭiṣu* with a pronominal gen. “bei ihrem Aufgang”), and though Old favors the gen. sg. on the grounds of parallelism, he allows for both readings. It is certainly possible that the poet wanted to introduce variation, or at least doubt, in his repeated pāda.

Pāda c introduces another ambiguity: the Samhitā form *bhadrā* can represent either neut. pl. *bhadrā* or fem. pl. *bhadrāḥ* (Pp. the latter). The pub. tr. reflects the former, as acc. obj. with *vy ùchata*. I now think this is wrong: not only is $\sqrt{\text{vī}}/\sqrt{\text{vas}}$ otherwise intrans. (see comm. ad vs. 4), but unambig. *bhadrāḥ* modifies pl. ‘dawns’ elsewhere (IV.51.7, VII.41.7). I would now emend the tr. to “as auspicious ones, dawn widely today for our fame.” This adj. picks up *bhadrām* in 2d, where it is a neut. substantive, which is perhaps a weak support for taking it as such here. However, the other arguments outweigh that.

The vs. switches from 3rd pl. in the first hemistich (or at least pāda a; b is ambiguous) to 2nd pl. in the second, while maintaining the same subject (dawns) – as is, of course, often the case.

X.35.6: The ambiguous form in this vs. is *āyukṣātām*. The Pp. reads *āyukṣātām*, that is, based on a form with a lengthened augment (which conforms to Prātiśākhya 181), and this preterital interpr. is accepted by the standard interpr. (Gr, Ols, Ge, Re, implicitly Narten [Sig aor. 215]; see esp. Old’s disc. ad V.17.3). But I do not see why in this context we cannot interpr. the Samhitā form as *āyukṣātām*, with an imperative (or imperatival injunctive) plus preverb. The context favors it, with two parallel preceding impvs., *ā carantu* (a) and *úd ... jihatām* (b). There are, admittedly, countervailing factors in addition to the Prātiśākhya. In favor of the lengthened augment interpr. is the unambiguous form *āyunak* in I.163.2, which cannot have the preverb *ā*,

because of the lack of accent; there is also the fact that unambiguous $\bar{a}\check{y}uj$ is fairly uncommon. But cf. $\bar{a}yuyujré$ at V.58.2, X.44.7, where \bar{a} cannot be the augment because it is prefixed to a perfect, and so must be the preverb; also III.35.2 $\bar{a}yunajmī$ with \bar{a} and a pres. indic. It is true that the other occurrence of $\bar{a}yukṣātām$, at I.157.1, is very like our passage ($\bar{a}yukṣātām aśvínā ... rātham$) and is in preterital context with augmented forms (preceded by $\bar{a}bodhi ... \bar{a}vaḥ$, followed by $prāsāvīt$), so “have yoked” is the most likely interpr. But nothing prevents our form from being analyzed $\bar{a}yukṣātām$, versus $\bar{a}ayukṣātām$ in I.157.1. Or, even if the form in I.157.1 has a lengthened augment and no preverb, it is perfectly possible that our poet misunderstood the form as containing the preverb and, potentially, the unaugmented $yukṣātām$. One could construct a scenario to cover the standard interpr. and explain why the first half of our vs. is in the imperative, but the third verb is an augmented aorist: the Ásvins are notoriously early travelers ($prātar-yāvan-$, etc.), and so perhaps they had already yoked their chariot before we urge the dawns and the fires to spring into action. But on the whole an interpr. with three impvs. fits the context better.

X.35.7: The first hemistich of this vs. contains what is surely a deliberate echo of the Gāyatrī mantra (III.62.10), which begins $tāt savitūr vāreṇyam, bhārgaḥ ...$, very similar to our $... savitar vāreṇyam, bhāgām ...$. An expanded, Jagatī version of the Gāyatrī mantra’s 1st pāda is also found at I.159.5 (see comm. ad loc.), which contains the $adyā$ of our pāda: $tād rādhō adyā savitūr vāreṇyam$.

On $dhiśāṇā$ - see comm. ad IX.59.2.

X.35.8: Although $devānām$ is generally (Ge, Re, Lü [506]) construed with $pravācanam$, I follow Old in taking it with the b pāda, as a genitive indirect object – both because of the pāda boundary and because of the standard god/mortal polarity expressed here by $devānām ... manuṣyāḥ$.

I take pāda c as the content of the $ṛtāsya pravācanam$. Although it seems a somewhat banal satyakriyā, it does express a basic truth about the cosmos. Note that nearby X.37.2 contains a $satyókti$ - ‘statement of reality’ that also asserts that the sun rises every day.

X.35.9: The first word of the vs., $adveṣás-$, a negated s -stem, should by accent be a bahuvrīhi, of the type $cétas-$ ‘insight’: $acetás-$ ‘lacking insight’, $jávas-$ ‘speed’: $ajavás-$ ‘lacking speed’, etc. However, in none of its 4 (or possibly 3 or possibly 2 [see below]) occurrences is a straightforward bahuv. interpr. possible. In all 4 of the passages supposedly containing it, it is pāda-initial in the form $adveṣāḥ$, i.e., an apparent neut. sg. N/A, but with no neut. sg. referent in context. In our passage the publ. tr. interpr. it as a neut. abstract noun ‘lack of hatred’; Ge’s “Friedfertigkeit” also seems to assume an abstract noun (“Wir bitten heute um Friedfertigkeit”), as also, I think, Re’s elaborate “Nous demandons qu’on ne nous veuille pas de mal,” where the “que” clause seems to be his rendering of $adveṣāḥ$, though it’s not clear to me how his tr. matches up grammatically with the Skt. An acc. noun as object of \bar{imahe} works well here; the problem is, as indicated above, that it shouldn’t be that kind of compound. But the other three passages are less amenable to an interpr. as a noun. In V.87.8 $adveṣó no maruto gātúm étana$ “Without hatred, come on your way to us here, Maruts,” it seems to be a bahuv. used adverbially, to be more literally rendered as “in a manner without hatred,” apparently so interpr. by both Ge and Re. The same interpr. would in principle be available for I.186.10 $adveṣó víṣṇur vāta ṛbhukṣāḥ$ in a loose series of individual gods’ names, but here I think it preferable to take it as nom. sg. masc. of the thematic bahuv. adj. $adveṣá-$, marginally but clearly attested as du. $adveṣé$

at IX.68.10=X.45.12. Ge's "Die nie feindselige Viṣṇu" and Re's (EVP V.10) "Viṣṇu qui exclut l'inimitié" seem to reflect the same analysis, though neither comments. The final ex. is in I.24.4. Although the publ. (JPB) tr. of I.24.4 interpr. it as a noun 'freedom from hatred', this does not seem to be the prevailing view – which, however, is a bit hard to figure out. See esp. Old's elaborate disc. of this problematic vs., which does not mention *adveśāḥ*. Ge seems to take it again as a nom. sg. to the them. adj., referring back to *bhāgaḥ* earlier in the vs.; I *think* he tr. *adveśāḥ* as "unangefochten" (unchallenged, undisputed), but this seems so far from the underlying meaning that I matched the tr. and the Skt. only by process of elimination. Re tr. (EVP V.4) "à l'abri de l'envie," claiming his tr. of the vs. follows Thieme's (Oriens 6 [1953]: 399), who renders *adveśāḥ* as "[so, dass er] ohne Feind [ist]." Neither Th nor Re comments on the morphology or syntax, but judging from Th's representation (brackets and all), I assume he's taking it as the them. bahuv. adj. modifying *bhāgaḥ*. To return to our passage, I still weakly favor a noun 'lack of hatred', but given the problematic morphology (expect a bahuv.) and the distance between this hemistich-init. word and the hemistich-final verb that is supposed to govern it, I also consider it possible that we have an adverbial usage as in V.87.8, yielding an emended alternate tr. "In a manner without hostility we beg for the realization of our thought ..."

The next issue in this hemistich is the Saṃhitā form *sādhā* in b, analyzed by the Pp. as *sādhe*. The two preceding GEN LOC phrases referring to ritual activities invite us to interpr. *sādhe* as a loc., with dependent gen. *mānmanaḥ*, to a them. stem *sādha-*. It is so classified by Gr and Lub, and Re (somewhat defiantly) also holds to this analysis. But such a them. stem would be found only once in the RV (namely here) and in fact in Skt., acdg. to Wh's Rts and MonWms. Ge suggests rather that *sādhe* is a dat. inf. to the root (an interpr. Re disputes). This is certainly possible. But I am persuaded by Old, who restores *sādhah* for Pp. *sādhe*. This provides *īmahe* with a handy object; if *adveśāḥ* is in fact not a potential obj., *īmahe* will have need of one; if *adveśāḥ* is an obj. of that verb, *sādhah* would be an *s*-stem neut. morphologically parallel to it. The expressed wish for "the realization of our thought" (*mānmanaḥ sādhah*) follows directly on 8b where "we thought up" (*āmanmahi*) a truthful speech.

Finally, in pāda c the question is the identity of the 2nd sg. subj. Acdg. to Ge (fld. by Re), pāda c is a self-address by the singer, but the fire / Agni makes more sense to me. That Agni is referred to in the 3rd ps. in the next pāda is no impediment: that pāda is the refrain, detached from context, and in any case switch of persons is common (see vs. 5 above). The verbal complex *bhur(an)-* relatively frequently has Agni / fire or fires as subj.: e.g., *bhuraṇyūḥ* I.68.1, *bhuraṇyāvaḥ* X.46.7, *jārbhurat* II.2.5, X.92.1, *jārbhurāṇaḥ* II.10.5, and the type of movement – quivering, flickering – expressed by this verb is characteristic of fire, less so of the poet (though cf. *vīpra-*).

X.35.10: The first hemistich can be syntactically split in several different ways, none of which is entirely satisfactory. The most obvious disposition, made by both Ge and Re, is to take it as containing two clauses, the first ending after *īḷe* in pāda b. Although this provides a neat cut and two clauses each with a finite verb (*īḷe* in the 1st, *sādāyā* in the 2nd), it poses a few problems. For one thing in the first cl. there are two independent accusatives, *barhīḥ* (+/- *brhāt*) and *devān*, and only the second one is appropriate with *īḷe*. A related problem is that $\sqrt{\text{īḷ}}$ is never otherwise construed with *ā*. (Ge [n. 10ab] claims that it is also found in IV.3.9, but there the *ā* belongs to the phrase *ā gōḥ*, whatever that may mean. See comm. ad loc.) Ge (as he presents it in n. 10ab) and, as far as I can tell, Re construe *ā barhīḥ* together as a rough-and-ready adjunct to the verb: "call (the gods) to the barhis," which would be unprecedented with $\sqrt{\text{īḷ}}$ (admittedly many of our

RVic interpr. are without precedent). Ge also takes *bṛhāt* as a modifier of *barhīḥ*, which locates the ritual strew in an odd, presumably heavenly, place. (Re takes *bṛhāt* adverbially, which makes more sense.)

Old divides the sequence into two clauses, but with one being discontinuous: *devāṃ īle* is a parenthesis within a larger clause that construes *ā no barhīḥ* with *sādāyā saptā hótīn*, a more natural conjunction of words and supported by X.36.5 *éndro [= ā índro] barhīḥ sīdatu* in the next hymn. But he does not say what he would do with the rest of pāda a (*sadhamāde bṛhād diví*), at least the last two words of which might be expected to belong within his parenthesis, which would then begin to get unwieldy.

My own solution is, I think, superior to both the others but is certainly not without flaw. I split the sequence into three, continuous clauses: *ā no barhīḥ sadhamāde / bṛhād diví devāṃ īle / sādāyā saptā hótīn*. The first is a nominal clause, with *ā* functioning essentially as the predicate “here is ...” (substituting perhaps for *idám*). Alternatively, and perhaps better, the predicate may be the purpose dative *sadhamāde*: “the barhis here is for the joint revelry” or “the barhis is here for the joint revelry.” (Although Gr takes *sadhamāde* as the loc. to the them. *-māda-*, it can equally be the dat. to the root noun cmpd *sadha-mād-*, as I take it.) I would now, with Re, take *bṛhāt* as an adverb with *īle*; in this usage with a verb of speaking it reminds us of the Gṛtsamāda refrain in Maṇḍala II (II.1.16, etc.) *bṛhād vādema vidáthe suvīrāḥ* “May we speak loftily at the ritual distribution, in possession of good heroes.” A slightly revised tr. of the clause here is “Loftily I reverently invoke ...” The sequence *bṛhād diví* is reminiscent of the cmpds *bṛhāddiva- / bṛhaddivá-*, and Ge points out that the same phrase, *bṛhād diví*, is found in V.27.6, separated by the pāda boundary. However, none of these forms is helpful in the interpr. of our pāda.

The verb of the third cl., *sādāyā*, is morphologically ambig.; it can be a 2nd sg. impv. with lengthened ending or a 1st sg. subjunctive. I take it as the latter because of the immed. preceding 1st sg., as do Ge/Re, but the Pp. reads *sādāya*, as the impv. There is very little riding on the choice.

Pāda c contains a list of divine names in the acc., with another purpose dative. We can supply *īle* from c, as Re does. But since 11c has the same structure (i.e., a list of acc. god names) without a prior verb to govern them, it seems best to import *īmahe* from the refrain for both 10c and 11c, as Ge also does (see n. 10c).

X.35.11: It cannot be determined in pāda b whether it is our sacrifice (so Ge) or ourselves (so Re) that we wish to grow strong. The publ. tr. opts for the latter, but “aid our sacrifice for it to grow strong” or “aid our sacrifice to grow strong” is possible as well. Again nothing much rides on it.

X.35.12: The wished-for *supravācanam chardīḥ* “shelter good to proclaim” conflates the Ādityas’ shelter in 9c (*śárman-* not *chardís-*) and our *pravācanam* in 8a, which may help account for the slightly odd conjunction of ideas.

X.35.13: The first hemistich seems to contain an extra *vísve* (*vísva ūtī*).

The last occurrence of the refrain is found at the end of the previous vs. (12d). Here the poet steps away from it gradually by means of a transformation: the acc. sg. NP at the end of the refrain *agnīm samidhānām īmahe* appears in 13b in the nom. pl. *agníyah sámiddhāḥ*. This pāda could also be tr. “let all the fires be kindled” (so Sāy.; see Ge n. 13b), but the parallel clauses in the rest of the vs. speak against this.

X.35.14: The generalizing (“who(m)ever”) 3rd sg. relative clauses of abc (3rd ps. guaranteed, or at least suggested, by c *yáḥ ... véda*) are picked up by a 1st pl. *syāma* introduced by predicated *té* (“may we be those who(ever) ...”).

X.36 All Gods

On the parallelism with X.35, see publ. intro. X.36, however, seems to have a more miscellaneous character than its twin.

X.36.1: At best this vs. has been carelessly put together: the first hemistich is in the nom., as becomes clear at the end (*váruṇo mitró aryamā*), while the second continues the enumeration of gods’ names in the acc., as objects of *huve*. Even within this hemistich the waters are mentioned twice (c, d), and one du. dvandva referring to Heaven and Earth, *dyāvākṣāmā* in b is replaced by another, *dyāvāpṛthivī* in d. If this were all that was required to compose RVic verse, even *I* could do it!

X.36.2. Heaven and Earth return in the first pāda, this time as overtly coordinated singulars. This emphasis on H+E in these first two vss. matches that of X.35.1–3.

On *īśata* see comm. ad I.23.9.

The refrain for this hymn gets established in the 2nd vs. As noted in the intro. to the comm. to X.35, it is a minor variant of X.35.1d *adyā devānām áva ā vṛṇīmahe*, with scrambling of word order and the addition of an initial *tád*.

X.36.3–4: The c pādas of vss. 2 and 3 end with the variant optatives *naśīmahi* and *aśīmahi* respectively. In 4 the inherently heavy final syllable of immed. preceding *marútām* provides the necessary heavy syllable at the beginning of the Jagatī cadence, hence allowing *aśīmahi*—while in 2 *avṛkām* **aśīmahi* would have a light syllable there and *naśīmahi* usefully makes position. The other 3 exx. of *aśīmahi* at the end of a Jagatī, all close to each other, also follow heavy syllables, each ending with a nasal, as here: X.37.6 *jaraṇām aśīmahi*, X.40.12 *dúryām aśīmahi*. There are no other instances of *naśīmahi* at the end of a Jagatī line (of 3 total), but see subjunctive *násāmahai* at the end of 11c, where it likewise makes position. (Of course full-grade *naś* is expected in the subjunctive, but not the optative.)

X.36.5: In b note the presence of both *sāman-* and *īc-* (the latter implied by *īkvó arcatu*).

The verb *dhīmahi* is, of course, the medial root aor. opt. to *√dhā*. My tr. “compose,” borrowed from Re, is an attempt at an English pun that recognizes the apparent association between *dhīmahi* and *dhī-* ‘thought, vision’. The same VP *mánma dhīmahi* is found in X.66.2, which, however, also contains a loc., making the ‘place, set’ sense more overt.

X.36.6: Flg. Sāy., Ge takes Agni as the referent of the accusatives in c. Although it is true that Agni is almost always the referent of *āhuta-*, esp. when it is construed with an instr. of *ghṛtá-*, *yajñá-* seems an unimpeachable substitute. Ge’s interpr. requires him to supply a new verb, and it also goes less well with *prācīnaraśmim*, which fits the common sacrifice-as-chariot trope. Cf. also VII.7.3 *prācīno yajñáh*.

X.36.8: On *péru*- see comm. ad IX.74.4; the somewhat fuller rendering here follows the lead of Ge.

I have reinterpr. some instances of *-śrī*-compds with ritual items as first members; see I.44.3 and comm. ad III.26.5, and I now think an alt. tr. of *adhvara-śrī*- here as “perfecting/completing the ceremony” should be considered in this passage.

X.36.9: The first pāda has a triple etymological figure, *sanema ... susanītā sanítvabhiḥ*, which I can only call clunky. The two nominal forms, *susanītā*- and *sanítvan*-, are both hapaxes, which makes it difficult to figure out just what kind of winning and what kind of winners we’re hoping to employ. Ge (n. 9a) suggests that the *sanítvan*- are sons, but the parallel passages he adduces don’t support that notion. The double etym. figure in b, *jīvā jīvāputrāḥ*, is less inelegant, but this hemistich as a whole seems clumsily constructed. The figure *-(d)vīṣo vīṣvag* in c is somewhat more pleasing.

X.36.11: Pāda a contains another elementary etymological figure, *mahát ... mahatām*.

X.36.12: The first hemistich redistributes elements from the refrain of the previous hymn, X.35.3–12d *svastí agnīm samidhānām īmahe*, with gen. *agnēḥ samidhānāsya* in pāda a and *svastāye* ending d.

X.36.13: The ostensible dedicands of this hymn appear in a spaced-out nominal relative clause in ab: # *yé ... vīśve, ... devāḥ* #

The relative / correlative structure shows some signs of cleverness (rare enough in this hymn). The first hemistich appears to be a normal 3rd ps. relative clause (“which All Gods ...”), with the second hemistich opening with what appears to be a 3rd ps. resumptive prn. *té* (“they”). But d opens with a 2nd pl. impv. *dádhātana*, which forces the audience to reconfigure the whole vs.: the *té* in c reflects the usage of forms of *sá* with 2nd ps. ref. with impvs. (see my “*sá* figé”), which then requires that the nominal rel. cl. of ab have 2nd ps. ref. too (“[you] who are the All Gods ...”).

X.37 Sūrya

On the relationship between this hymn and the preceding ones, see publ. intro.

As noted above, the supposed poet of the hymn, Abhitapas Saurya (“Scorching Heat, son of the Sun”), is simply based on the divine dedicand.

X.37.1: With Re, I interpr. *mahāḥ* as an adverb; Ge, with Sāy., takes it as an honorary dat., while Scar (231) tentatively has it as a gen. dependent on *devāya* (“... den Gott des grossen [Lichts?]”).

X.37.2: The *satyókti*- ‘expression of reality/truth’ is, in my view, the statement in cd. See the *ṛtāsya pravācanam* “proclamation of truth” in X.35.8 in this same hymn group; in both cases the truth is the fact that the sun rises every day.

The *ca*’s in b conjoin an elliptical dual *dyāvā* ‘Heaven (and Earth)’ and the neut. pl. *āhāni* ‘days’. Although Ge (n. 2b) suggests that *dyāvā* might refer here to day and night, as it sometimes does (though he does not follow this interpr.), I think the poet is making a totalizing statement about both space and time.

In d nom. *āpaḥ* lacks a verb; both Ge and Re supply one. I simply extract *ējati* from the preceding pāda or *eti* (minus preverb) in the same pāda.

X.37.3: The verb that ends the first pāda, *nī vāsate*, is a hapax, and its meaning and root affiliation are disputed. It is discussed sensibly and at length by Old, who rejects affiliation with any of the roots \sqrt{vas} as well as the roots $\sqrt{vā}$, while tentatively favoring \sqrt{van} , by way of the desid. *vīvāsati*, -te (a suggestion that goes back to Ludwig). See also Gotō (1st class, 297), who refuses to endorse any suggestion. I find the Ludwig/Old explanation (fld also by Re) the most likely, though it does have some problems – chief among them: 1) the desid. stem does not appear with *nī* and 2) it is more commonly active than middle. However, forms of *vīvāsa-* of this metrical shape (L H L X) are very common at the end of Jagatī and dimeter pādas, and our *nī vāsate* rhymes nicely with *vīvāsati*, necessitating only haplology of *nī vī-* or—more likely in my view—the substitution of the preverb *nī* for the reduplicating syllable, which could appear to be the preverb *vī*.

So where does the *nī* come from and what is it doing here? First note the phonological parallelism with metrical shift: 2c ends *nī vīsate yād ējati* #, with the preverb *nī* construed with a verb with the template *v_SIB-ate*, exactly like our pāda. But in our pāda this verbal complex has been shifted to the right, and *yād eta(śébhiḥ)*, which echoes *yād ēja(ti)*, pushed into the next pāda (*nī vāsate* # *yād eta(śébhiḥ)*). The *nī* also polarizes with *úd* in 2d, where “the sun goes up” asserts the supreme positive and protective truth. This positive truth is reinforced by a negated negative in 3a: a godless one cannot bring it *down*, however much he wants to. I would prefer that *te* were **tvā*, but I interpr. this as an oblique expression, hence my “seek the upper hand against you.” Re’s “ne pourra gagner contre toi” is similar. The middle voice simply expresses the subject’s desire to bring the object under his control.

My tr. of *pradīvaḥ* in that pāda as “early in the day” is almost surely wrong. No other forms of this adverbial ablative have this sense; it generally instead means “from of old” vel sim. See for this passage Old’s “altersher,” Ge’s “seit alters,” Re’s “du fond des jours.” In fact the standard sense is perfectly compatible with the meaning I assign to the verb here. *pradīvaḥ* regularly appears with a present-tense verb, depicting a state of affairs that has obtained since hoary antiquity – where English would use the English “perfect” tense. See, e.g., III.47.1 *tvām rājāsī pradīvaḥ sutānām* “You are the king of the pressed drinks from olden days” (more idiomatic English “you have been”) (cf., e.g., III.51.4, VI.44.12, X.5.4, etc.). Here the point would be that no matter how often and for how long the godless has sought to keep the sun down, it keeps rising every day. I would therefore alter the tr. to “No godless one has sought the upper hand against you from olden times.”

The “Night Sun” and the “Day Sun” seem to appear in the 2nd hemistich—a pair more often invoked by commentators than I think warranted (see my disc. ad I.115.5). However, here the contrast between the one that “rolls eastward” (*prācīnam ... vartate*) and the other, which is light (*jyōtis-*) and goes upward, does suggest a picture of the dark side of the sun making a return journey to the east, whence it will rise again. Ge construes *rājāḥ* with *anyāt* in c, but I think *rājāḥ* is an acc. of extent of space, governed by *ānu*. With the verb *vartate* ‘turns, rolls’, ‘wheel’ seems the likely referent.

X.37.5: Both finite verbs in the first hemistich, *rākṣasi* and *uccāraṣi*, are accented. The default interpr. of the two accents would be that both verbs are in the domain of the *hī* in pāda a (so, e.g., Hettrich, Hypot. 188) and are parallel, and that is perfectly possible. However, semantically I

think the clause in b is dependent on the one in a, explaining in what way Sūrya demonstrates that he is guarding the commandment – namely by rising. I therefore take b as an unsigned “when” clause.

The standard interpr. of cd seems to be as a relative/correlative clause with gender disharmony: *yád ... tām ... krátum*: clearest in Re’s “(Ce dessein) pour lequel aujourd’hui ... nous nous adressons à toi, veuillent les dieux agréer ce dessein de nous” (but so, apparently, Ge; also, sort of, Hettrich 535–36). I do not understand why c is not a straight “when” clause with *yád*. Among other things *úpa √ brū* ordinarily only takes an acc. of the being(s) appealed to, not an accusative of the topic of the appeal. The few exx. given by Gr with supposed double acc. (IV.51.11, VIII.25.21, X.97.4) are equivocal and only contain *tád*, which could be adverbial; in any case they are far outnumbered by those with a single acc.

X.37.6: As is recognized by all comm., the first pāda with the patterned variation *tām* [MASC] *no* X [NOM.] *tán* [NEUT] *no* Y [NOM.] is picked up at the very end of the hemistich with the accusative objects of the appropriate genders, *hávam* [MASC] *vácaḥ* [NEUT]. It’s a clever, if artificial, construction.

śūna- ‘want’ generally takes a genitive; the loc. *saṃdṛṣi* is plausibly attributed to attraction to the loc. *śūne*. The clause could, however, mean “may we not be in want while we still see the sun,” though I consider that unlikely.

X.37.7–8: The d pādas of these two vss. are identical, save for the first word of each, and each takes as obj. a 2nd sg. phrase referring to the sun.

X.37.7: The enclitic *tvā*, found in Wackernagel’s position in pāda a, is pleonastically repeated in the same position in c.

X.37.8: In c I take *brhatāḥ* as a gen. dep. on abl. *pājasah*, supplying ‘heaven’ with that gen.: “from the surface of lofty (heaven).” Both Ge and Re take it as abl., modifying *pājasah*. This is of course quite possible and simplifies the expression somewhat, but I find the geography easier to envision in my tr.

X.37.9: The first hemistich seems more appropriate to Savitar (who is sometimes assimilated to Sūrya), since Savitar gives the signals both to go forth in the morning and to settle down in the evening. But of course the position of Sūrya’s beacon (rising / setting) gives the same type of signal.

The ‘blamelessness’ (*anāgāstvéna*) should be ours: see *anāgasah* modifying the 1st pl. in 7b. But it is the Sun, as the spy of Mitra and Varuṇa, who testifies to this state – or its absence. See esp. VII.62.2 *prá no mitráya varuṇāya voco, ’nāgasah ...* “You [=Surya] will proclaim us to Mitra and Varuṇa to be without offense.”

X.37.11: Pāda c consists of a series of neut. sg. participles (acdg. to most; other analyses of individual forms are possible), arranged in a logical series—from the consuming of food and drink, to the deriving of nourishment from them, to satiation. The neut. sg. referent isn’t entirely clear; most take it as a global reference to the two- and four-footed of b. This makes sense, though the syntax is a little lax. I suppose the sg. *jánmane* of pāda a accounts for both the singular and the neuter.

The final term of the series, *āśīta-*, is taken, quite plausibly, by Old as the ppl. to a caus. *āśayati* (not attested till the Brāh.). He struggles to account for the initial accent, since \sqrt{as} does not otherwise appear with the preverb *ā* and ppls to causatives ordinarily accent the *-tā-*, like ppls to roots (see Wh, Gr. §1051, Macd. VGS §168f), but Old's invocation of *ārpita-* is apposite.

X.37.12: To harmonize the hapax *práyuti-* with my view of the meaning of the ppl. *práyuta-* as 'scattered, dispersed' (see comm. ad V.32.2), I would now tr. *mánasaḥ ... práyutī* "through distraction of mind." Cf. also VII.100.2 *āprayutam ... mánah* "concentrated thought."

X.38 Indra

As with X.37, the supposed poet Indra Muṣkavant ("Indra possessing balls") is extracted from the hymn itself, in this case the final pāda of the hymn. The hymn contains some apparently slangy and irreverent expressions; see vss. 2 and 5.

X.38.1: On *śīmīvant-* see comm. ad X.8.2.

X.38.2: The *-in-*stem *medīn-* is glossed by Gr with the anodyne 'Genosse, Verbündeter'; sim. Ge "Wir möchten deine Verbündeten sein." My "share the fat" is a somewhat slangy rendering of the stem, based on its presumed relationship to *médas-* 'fat', etc. See EWA s.v. *médas-*, esp. 377, where Mayr. labels the semantic dev. of *medīn-* not entirely comprehensible, with the additional parenthetical remark "(Slang?)." Given the positive associations of fat in Vedic, having or sharing the fat that Indra has means having a share in the good things the god commands.

X.38.3: The adj. *suśāha-* takes the dative to express agency; cf., e.g., IX.94.5 *víśvāni hí suśāhā tāni túbhyam* "because all these things are easy to conquer for you." I therefore take the instr. *asmābhiḥ* not as the primary agent, but as an expression of accompaniment.

X.38.4: Despite its position, *adyá* might be better construed with the verb: "today may we make ...," as Ge does.

X.38.5: The interpr. of the hapax rt. noun cmpd *svavṛj-* has gone in two basic directions: Old "wer etwas als seinen Besitz an sich reisst" versus Ge "dein eigener Herr bist." In other words, Old takes the *sva-* as referring to an object that becomes Indra's property, Ge as referring to Indra himself. Interestingly Scar presents us with both, in different places, without comment: "einer, der [alles] als sein Eigentum an sich reisst" (flg. Old, p. 200 s.v. **anudā-*) and "über sich selbst verfügend" (flg. Ge, p. 505 s.v. *svavṛj-*). My 'tightly wound' is a slangy rendition, leaning in Ge's direction (but far from identical); a more literal version would be 'wound up in oneself, twisting oneself up'.

On the surprising and impertinent ending of the hymn, see publ. intro.

X.39–41: All three of these hymns are dedicated to the Aśvins. The first two are attributed to a female poet, Ghoṣā Kakṣivātī, in the family line of the dazzling First-Maṇḍala poet Kakṣivānt (I.116–26), who also focused on the Aśvins. The last very short one (X.41) is ascribed to her son Suhastya Ghauṣeya. There is no way to tell whether a female poet actually composed X.39–40, but at least the name is not a wholly invented one, like the supposed female composer of X.109, Juhū Brahmajāyā "Sacrificial Ladle, Wife of (a) Brahman," with both of the names extracted

from the hymn itself. However, it is the case that a woman identified as *Ghoṣā* is named in X.40.5, so a fictional woman may have provided the first of the names. For further on these hymns, see the publ. intro. to each hymn and to the series in general.

X.39.1: The voc. *aśvinā* was omitted in tr.; it can be inserted anywhere the English rhythm allows.

In b *uṣāsaḥ* in the temporal expression *doṣām uṣāsaḥ* could be either a gen. sg. or an acc. pl. (with Old and Lanman [Noun Infl. 546] I prefer the latter, *pace* Gr); in either case it must be a species of backformation, with the strong suffixal form *-ās-*, which is in the course of being replaced by weak *-ās-* in the RV even where it is lautgesetzlich, being introduced into a weak case. Old attributes it to the meter, somewhat reluctantly. He also adduces V.5.6 *doṣām uṣāsam* with the acc. sg., which has the historically expected *-ās-*, as possible influence on our passage, which seems plausible. One wonders, however, why the poet didn't just use *uṣāsam* here: being sg., it would be more parallel to *doṣām* and it is metrically identical to *uṣāsaḥ*.

The sequence *hāv(i)yo havīṣmatā* provides a phonological figure with forms built to two different roots. The second hemistich, which follows immediately, opens with nom. pl. *śaśvattamāsaḥ*, with what would ordinarily be a pāda-opening construction *tām u vām ...* seemingly displaced to the right. I wonder if this is to allow final *-matā* of b to have a mirror image echo in *-tamā-*. The final pāda ends with a figure both phonological and etymological, *suhāvaṃ havāmahe*, a sort of poetic repair to the discordant root affiliations of pāda b.

X.39.2: Ge provides an appealing tr. of d, different from mine, but one that has a syntactic problem: “machet uns den Gönnern angenehm wie Soma.” Under this interpr. we are asking to be commended to the patrons, so we can receive abundant rewards. He takes *cārum* ‘dear’ as characterizing ‘us’ (*naḥ*), but of course *cārum* is stubbornly sg. and *naḥ* is pl. It would be possible to finesse this by interpr. sg. *cārum* as attraction to *sómam* in the simile (and this must be Ge’s strategy). But since there’s a sg. noun in the immediate vicinity, *bhāgām* in c, I have gone with the syntactically safer option.

X.39.3: The *bhāgaḥ* of pāda a echoes *bhāgām* in 2c.

X.39.4: Note that the opening of pāda a *yuvām cyāvānam* seems to be telescoped into *yúvānam* in b.

On the apparent unredupl. pf. *takṣathuḥ* see Kü 206–7.

X.39.5: The subjunctive *prá bravā* “I shall proclaim” in pāda a semantically doubles the gerundive *pravācyā* “to be proclaimed” that ends vs. 4. The substitution of $\sqrt{brū}$ for \sqrt{vac} in this expression seems to reflect a tricky formulaic play. We would expect the annunciatory 1st ps. to be *prá vocam* as so often (see, of course, the celebrated I.32.1), and this would easily pick up the gerundive to the same lexeme. But *prá $\sqrt{brū}$* is considerably less common than *prá \sqrt{vac}* , and this is the only 1st sg. occurrence in the formula – though I must admit that 1st pl. *prá bravāma* is found several times (e.g., X.112.1) in this type of context. My point is that the poet invites us to expect *prá vocam* on the basis of *pravācyā* and then substitutes a less common variant. (Of course *prá vocam* would also not fit this metrical slot, but the poet could have juggled the word order if he had wanted to.)

The logical connection of pāda b with pāda a is not immediately clear. I think the point is the implicit contrast between the Aśvins' martial activities, expressed by *vīryā* 'heroic deeds' in a, with their healing and comforting described in b.

Pāda c introduces further contrasts. On the one hand, the Aśvins' 'ancient' (*purāṇā*) deeds of pāda a contrast with the Aśvins made 'new' (*nāvyau*) here. But more strikingly what *we* are doing to the Aśvins—making them new—is what they implicitly did for Cyavāna in 4ab. It isn't clear to me how we mortals can make the Aśvins new; we might expect this to be in the power only of the gods. I assume that our renovation involves making new hymns of praise, which, as it were, transfer their youthful luster to the dedicands. Ge avoids the problem by taking *nāvyau* as an adverb or quasi-adverb ("... bewegen wir euch aufs neue zur Gnade"), with the operative syntagm being a kind of periphrastic causative: ACC *āvase* √ *kṛ* "make you (to) help," like (acdg. to his n. 5c) X.38.4d in the preceding hymn. But there, like here, there is a predicate adj. (*arvāñcam*) with the acc. *īndram*, inviting an interpr. "make X Y" with double acc. I therefore think that we should take "make you two new" seriously, esp. because it plays off the Aśvins' action with regard to Cyavāna.

The meaning of the purpose clause of d and its connection to what precedes are somewhat puzzling. The interpr. depends on who we think the *arí-* is and what we think the near-deictic *ayám* is doing. Both Old and Ge (in somewhat different ways) consider the *arí-* to be the patron of the sacrifice (or so I interpr. Ge's "dieser hohe Herr"). Old, who takes *arí-* to mean "der Geizige," thinks that getting the *arí-* to trust will unlock his stinginess and cause him to give to us, the priests. If they are correct that the *arí-* is the patron (I think they're not), then the *ayám* would make sense: he would be right there on the scene. But I don't see why our actions with regard to the Aśvins would bring all this about – perhaps we're extraordinarily successful at getting the Aśvins to help us, including the patron? Re comments rather breezily about the *arí-*: "l'Homme (collectif) au nom de qui nous parlons"; I'm not sure what that is meant to mean. Thieme's view (Fremdl. 38–39) is quite different; he interpr. the *arí-* in the context of the dangers of hospitality given and received, which requires trust on both sides (I may be reading a bit more into his brief treatment than is overtly there). This fits my own understanding of the meaning of both *arí-* and *śrād* √ *dhā* (which latter I think is often specialized for trust in the hospitality relationship; see pp. 176–84 of my *Sacrificed Wife*). Th tr. "Damit dieser Fremdling Vertrauen fasse." The question is why the activity in the earlier part of the vs. should cause the stranger to trust. I think the answer is that the Aśvins are the guarantors of the safety of all sorts of beings in distress and that our renewing the Aśvins in order to enable them to dispense this aid is what will cause the *arí-* to trust and take heart: help is on the way. The catalogue of the Aśvins' good deeds that the poet has recited earlier in the hymn gives the *arí-* reason to hope that they will show the same care to him. I might now tr. pāda c as "Now we shall make you new (for you) to help," without the "us" that I supplied as obj. to *āvase* (it's not in the Sanskrit); the Aśvins' help is more generally distributed than just to us. But why "*this* stranger" (*ayám ... aríḥ*)? I am not entirely certain, but I wonder if *ayám* is a way of adducing a salient example – so it functions as rhetorical deixis rather than expressing physical proximity. In any case it also serves to introduce the initial *iyám* of the next pāda (6a) and the dramatic intrusion of the woman in distress, which may be its primary purpose.

X.39.6: As was just discussed, the fem. deictic *iyám* that opens this vs. explicitly contrasts with the masc. *ayám* qualifying *aríḥ* in 5d. The intrusion of the forceful female voice in this vs.,

demanding the Aśvins' attention, points up the poet's implicit assumption in vs., 5 that he and his colleagues were praising the Aśvins in order to make them inclined to help a *male* in need.

The speaker here is ordinarily identified as Ghoṣā, who is named explicitly in the next hymn (X.40.5) as well as being the putative poet of these hymns, per the Anukr. As I argue in the publ. intro., I find this identification unlikely, because Ghoṣā in X.40 is the daughter of a king, while the female speaker here emphasizes her utter isolation and lack of relatives and protectors.

As was also noted in the publ. intro., her appeal to the Aśvins is in part modeled on (or echoes) the first vs. of this hymn: her *ahve* "I invoked" is built to the same root $\sqrt{hvā}$ that is prominent in vs. 1: *hāvyaḥ* (1b), *suhávam havāmahe* (1d), and the simile involving the father found in *pítūr ná nāma* (1d) is elaborated in her *putrāyeva pitārā* (d).

The series of privative cmpds in pāda c that describe the woman's plight ends with *ámatih*. Although the other three—*ánāpir ájñā asajātyā*—reference her lack of human ties, I render *ámatih* as 'heedless', seemingly a defect of her own making. I now am inclined towards Re's interpr. "sans (personne) qui pense à moi" – 'heedless' in the sense of lacking anyone to heed me. Unfortunately I cannot think of a single word in English that expresses this – the closest perhaps is 'neglected' or, to maintain the privative sequence, 'without attention'. I would slightly alter the tr. to the latter. For further on *ámatih*– see comm. ad X.42.10.

In d I would also change 'shame' to 'curse'.

X.39.7–10: As noted in the publ. intro., the catalogue of the Aśvins' deeds, interrupted by the direct speech of the woman in vs. 6, continues thereafter, and in fact it is more formally constructed: 7 consecutive hemistichs (7a–10a) open with the dual pronoun *yuvám* 'you two' (see also 7d and 8d) whereas only one hemistich in the first part of the catalogue, 4a, begins with *yuvám*. This opening is a characteristic feature of Kakṣivānt's Aśvin hymns, though not as consistently carried out; cf., e.g., I.117.7a, 8a, 13a, 14a, c, 20c; 118.7a, c, 8a, 9a; 119.4a, 6a, c, 7a, 9c, 10a. (For another such sequence in the Ghoṣā hymns, see disc. ad X.40.) The same deeds are also treated in the Kakṣivānt hymns, often with very similar or identical phraseology. E.g., their bringing a wife to Vimada (our 7ab) is found in I.116.1 ... *vimadāya jāyām ... nyūhātū ráthēna*, 117.20 *yuvám ... vimadāya jāyām nyūhathuḥ purumitrāsya yōṣam*, like our *yuvám ráthēna vimadāya ... ny ūhathuḥ purumitrāsya yōṣaṇām*. For the parallels to the other stories see Ge's nn.

X.39.7: Ge takes *śundhyū-* as the name of Vimada's wife(-to-be)(so also Mayr, PN s.v.), but since *śundhyū-* is otherwise an adj. meaning 'preening, sleek', I see no reason not to take it as an adjective here. See also Remmer (Frauennamen 39–40), who also takes *śundhyúvam* as an adj. here and thinks Kamadyū is the actual name of Vimada's wife.

X.39.8: Ge makes *cakrathuḥ yuvád váyaḥ* into a double acc. constr. "Ihr machtet das Alter ... wieder jugendlich," but this requires interpr. *váyas-* as "Alter." Re remarks that "*váyas* s'orienté en effet vers <<âge>> au Livre X," but the passages he cites do not, in my view, support this statement. The very similar expression *tákṣan ... yúvad váyaḥ* in I.111.1 (Ṛbhus) is rendered by Ge "... zimmerten ... jugendliches Alter," but "youthful vigor" is a better creation for the Ṛbhus' parents than simply a youthful old age.

X.39.9: On the Atri saga, see my disc. in Hyenas (228–31), but I have emended my tr. of this passage (found on p. 230) in light of Houben's disc. in Fs. Migron, where he argues that *utá* here

connects two separate places where Atri was confined. See also Re's n., suggesting that two separate versions of the tale are conflated here.

X.39.10: This last vs. of the "deeds" sequence is entirely devoted to one story, whereas the first two (vss. 7–8) treated three each, and the following one (vs. 9) two.

I take the dat. *nṛbhyaḥ* as agent with the gerundive *havyam*, as often, not as a dat. of benefit as Ge does ("für die Herren"). But there's relatively little difference in effect.

X.39.11: Ge (n. 11a) takes the referents of the voc. *rājānau* to be Mitra and Varuṇa, not the Aśvins—both because the Aśvins are never called kings and because of the presence of the voc. *adīte*. I admit the justice of these two arguments and think it quite possible that the expression was adapted from an Āditya hymn. However, for me it beggars belief that a hymn that never takes its eyes off the Aśvins, in a vs. that caps a sequence of vss. containing the relentlessly repeated 2nd du. pronoun *yuvām* referring to the Aśvins, along with a sequence of 2nd du. verbs with them as subject, would suddenly address a different set of dual entities, who have nothing to do with the hymn otherwise, and then address the Aśvins again (voc. phrase *aśvinā suhavā rudravartanīc*) in the same sentence in the same vs. I think rather that the poet is borrowing M+V's qualities to enhance the Aśvins' prestige, and that this may have been originally suggested by an appeal to Aditi – who as a mother figure may have been addressed because of the females in distress whom the Aśvins helped, as well as the presence of the wife in pāda d. The same infusion of other deities' power and prestige may be seen in the voc. *rudravartanī*, which brings the Maruts into the mix (see comm. ad I.3.3). For another possible use of voc. *rājānā* for the Aśvins see X.61.23 and disc. there.

The 2nd hemistich is oddly and ambiguously phrased. It contains a double acc. construction with a bahuvr. as predicate adj.: *yām ... purorathām kṛṇuthaḥ* lit. "whom you make (to be) one having his chariot in front." The clause also contains an instr. of accompaniment (clearly so marked): *pātnyā sahā* "along with his wife." The question is whether the wife is being conjoined more closely with him and or with the chariot – that is, do the Aśvins make the chariot to be in front for him and for his wife, or do they make the chariot and the wife to be in front for him. Although it's a bit more complex, I incline towards the latter interpr. I consider this another allusion to the new ritual model that includes the Sacrificer's Wife as a participant in the sacrifice (a model I have discussed endlessly, both in the SW/SW book and in a number of articles addressing the introduction of the wife in the late RV). This model is sometimes presented through the image of a chariot with a team of equals (husband and wife) pulling it. The most striking exploration of this image is the Mudgala / Mudgalānī hymn (X.102, q.v.), where Mudgalānī acting as charioteer brings ritual and personal success. The wife leading here, alongside the chariot, presents a similar image.

X.39.12: The juxtaposition of instr. *jāvīyasā* and acc. *rātham* across the pāda boundary strikes a discordant note, since they are co-referential. But *rātham* is part of the rel. clause, with 'chariot' fronted around the rel. prn. (*rātham yām*). This was surely a deliberate effect by the poet to shake us up. (I have silently promoted 'chariot' to the main cl., since "Drive here with the swifter-than-thought one, which chariot ..." does not parse well in English.)

X.39.13: Although Gr interpr. the three occurrences of *jayūṣā* (also I.117.16, VI.62.7) as a dual modifying the Aśvins, I follow Ge in taking it as an instr. sg. modifying a gapped 'chariot', on

the basis of the parallels adduced in his n. 13a. See also Pirart (Aśvins I.219 ad I.117.16). The parallels sketch a myth even less filled out than most of the Aśvins' exploits, but the duplication of phraseology strongly suggests that the passages belong together. Note the echoes of our ... *yātām jayúṣā ví párvatam* in the three passages, two of which are from Kakṣīvant's Aśvin hymns:

I.117.16 *ví jayúṣā yayathuḥ sānu ádreḥ* "With your victorious (chariot) you journeyed across the back of the rock."

I.116.20 *vibhindúnā ... ráthena ví párvatān ... ayātām* "With your chariot that splits apart ... you journeyed through (/across?) the mountains."

VI.62.7 *ví jayúṣā rathyā yātām ádrim* "With your victorious (chariot), you charioteers drove through (/across?) the rock."

Ge tr. *yātām* here as an impv. ("Machet eure Umfahrt ..."), and in fact it should be one by rule: the subject-doubling prn. *tā* is proper with 2nd ps. only in the impv. (see my "sa figé"). Nonetheless, the parallels clearly refer to a past deed of the Aśvins, with two (and possibly all three) of them containing a preterital verb: I.116.20 impf. *ayātām*, I.117.16 pf. *yayathuḥ*, VI.62.7 injunc. *yātām* (per Pp.), but note that in the sequence *rathyāyātām* nothing forbids an augmented analysis *ayātām* as in I.116.20 (see comm. ad VI.62.7). Moreover, the rest of the vs. treats previous good deeds of the Aśvins, with two augmented impfs. (*ápinvatam* b, *amuñcatam* d). I have therefore (reluctantly) translated *yātām* as a preterite, against the syntax. Our passage may have been adapted from VIII.87.3 *tā vartir yātām*, which does contain an impv. Note that it also rhymes with the opening of 12a *ā ... yātām*.

X.39.14: The $\sqrt{takṣ} + rátham$ "fashion a chariot" motif returns from vs. 4, where the rejuvenation of Cyavāna was compared to it. See also 12b, where the Ṛbhus fashion the Aśvins' chariot, while here "we" compare ourselves fashioning a praise-song to the Bhṛgu fashioning a chariot.

The syntax and purport of pāda c are very troubled. The problems are 1) the sense of *ny àmrkṣāma* and 2) the function of loc. *márye*. There is an easy way to solve both, and that is to ascribe a contextual meaning to $ní\sqrt{mrj}$ that will make the case frame (acc. *yóṣānām*, loc. *márye*) work. This is the route that Ge takes: rendering $ní\sqrt{mrj}$ as "hingegeben" (give up, surrender), which works well (or well enough) with acc. + loc. This is also what Re's note seems to suggest, though he floats three different and not entirely compatible glosses for the verbal lexeme: "donner," "vouer," and "soumettre (comme en employant la force)." But I think that in this case the easy way is the wrong way. $ní\sqrt{mrj}$ is a striking idiom, and if the poet simply wanted to express 'give' or 'surrender' there are easier ways to do that. For $ní\sqrt{mrj}$ see comm. ad II.38.2, VII.26.3: it means lit. 'wipe / rub down' but metaphorically both 'drag down' and 'clasp to oneself'—sometimes, in sexual contexts, both at the same time. Cf. VII.26.3 *janīr iva pátir ékaḥ samānó ní māmṛje púra índraḥ sú sárvaḥ* "As a single common husband does his wives, Indra has dragged down all the strongholds to submission." This meaning could work in our passage: we clasp our own praise-song to ourselves, as a cherished object; the same sentiment is found in the next pāda, which is part of the same clause, where we hold the song close like a cherished son (*nítayam ná sūnūm ... dádhānāḥ*). I think we should take into account the complex semantics of this idiom. But this suggestion runs headlong into the problem of loc. *márye*: the dashing youth should be nominative, parallel in the simile to the 1st ps. subject in the frame: *he* should be clasping the maiden to himself. There is a way out of this – though it is slightly tricky. I suggest we are dealing with a mixed syntactic construction. In X.65.7 and X.66.9 we find a reflexive construction with this idiom: *tanvī* [loc.] $ní\sqrt{mrj}$ "clasp ACC to oneself [LOC]," with the loc. *tanvī*

coreferential with the subject. So, e.g., X.65.7 *yajñām janitvī tanvī ní māmījuh* “They [=heaven-rulers], having created the sacrifice, clasped it to themselves” (sim. X.66.9). I suggest that the construction here is based on this coreferential structure, such that we should have **máryo* [nom.] *márye* [loc.] *yóṣānām *mārṣti* “(as) a dashing youth clasps a maiden to [same] dashing youth.” In this hypothetical sentence the loc. *márye* should be replaced by the reflex. prn. *tanvī*, as in the passages just cited. But instead it’s the nominative **máryaḥ* that has been gapped, leaving the loc. *márye* unreplaced. In the publ. tr. this loc. is tr. as if it were nom., because conveying what I think underlies the passage could not be conveyed in brief. But perhaps it would be a bit clearer if tr. “We have clasped it to ourselves like a maiden *to* a dashing youth.”

Notice that the secondary sig. aor. *amṛkṣāma* (see Narten SigAor. 196–98) rhymes with *átakṣāma*, which opens the preceding pāda (b), though that form is of course not an aorist.

X.40 Aśvins

For my view that *Ghoṣā* in this hymn is not the same as the woman in distress in X.39 see the publ. introductions, as well as disc. above ad X.39.

The hymn is also tr. by Doniger (pp. 264–66).

This hymn contains another sequence of fronted 2nd du pronouns; see comm. ad X.39.7–10. The concentration here is in vss. 4–8, with such pronouns beginning 4a, c, 5a, 6a, c, 7a, b, c, d, 8a, b, c. Unlike X.39.10, where the only form found is the nom. *yuvām*, this sequence contains varied case forms: nom. *yuvām*, acc. *yuvām*, and gen. *yuvóḥ*, somewhat like the “versified paradigm” of *agní-* in I.1.

X.40.1–4: Note the emphasis on the two poles of the day, dawn and evening, esp. the former. The *āmreḍita vāstor-vastoh* is found in 1d and 3b, *doṣā (...)* *vāstoḥ* in 2a and 4b, and *prātār* in 1c and 3a.

X.40.1: With Ge, I take the final instr. phrase *dhiyā śāmi* with *prāti ... bhūṣati* in b. Doniger seems to construe them as instruments/agents with *vāhamānam* (“brought by thought and care”), but though the middle pres. *vāhate* is found with instr. of the draught animals, I cannot find a real passive usage of this middle.

X.40.2: The two interrogatives that introduce the question in vs. 1a, *kúha káh*, are here separated and given independent clauses, with *kúha* found 4x in ab and *káh* introducing the implicitly disjunctive question in cd.

Pāda c provides unequivocal evidence for *niyoga* or levirate marriage already in the (late) RV. See Ge’s n. 2c.

The maiden *yóṣan(ā)-* and dashing youth *márya-* of the end of the previous hymn (X.39.14) reappear here. The word *sadhástha-* ordinarily just means a ‘place’ or ‘seat’, but here it must carry the additional of a specific or special place, in this case their trysting spot. Doniger’s “as a young woman takes a young man to a room” seems somewhat anachronistic; I imagine trysts in Vedic times were more likely to occur in the open air.

X.40.3: The sequence *jarethe jaraṇéva* “you awake like two old ones” provides a nice phonological figure built to two different roots. The purport of the simile is unclear, however. Is it alluding to the fact that old people are light sleepers? (And is that a human universal or just a fact of the modern West?) The complete obscurity of the hapax *kāpayā* does not help.

Morphologically this can be an instr. sg. fem. to a *kāpā-* (so, e.g., Gr) or a nom. du. masc. to a *kāpaya-*. In the absence of any etymological help even its morphological identity cannot be determined; the interpr. vary wildly, and rehearsing them all would not be instructive (see Old, Ge [n. 3a], Re, EWA s.v. *kāpayā*, etc.). To add another baseless speculation to the array: if we start with a deriv. of \sqrt{krap} , *kṛp* ‘long for, mourn, lament’ (*kṛpā-* ‘pity’ would be nice, though it isn’t attested until MBh), and run it through the MIA sounds laws, we get (or could get) **kapā-*; cf. to the same root Pāli *kaṇa-* ‘pitiable’ and the RVic pres. *kṛpaṇa-*, *kṛpaṇya-*. From there, a vṛddhi deriv. might yield *kāpaya-*. But this chain of events has no foundation and my “(?)” should probably have at least two ?? As usual, Old pronounces the sensible verdict: “Mir scheint das Rätsel des Worts unlösbar.”

The second hemistich raises the usual anxious question – whose sacrifice will the gods attend, and whose will they pass over? This is usually formulated with regard to Indra, but it is of course an issue with all the gods. The case of the Aśvins’ non-appearance (in c) is nicely phrased: *dhvasrā bhavathaḥ* means ‘become occulted / occluded / obscured (by smoke or the like)’. See disc. of $\sqrt{dhvāms}$ and *dhvas(i)rā-* ad IV.19.7. Because the Aśvins travel early in the morning (see *prātar-yāvan-* in 1c), morning mists can hide their passage over the spurned sacrifices while they make their way to the favored one.

As disc. in the publ. intro., the tatpuruṣa *rājaputrā-* ‘king’s son’ is found only here in the RV. As I say there, I think this simile sets up the marriage to be depicted in the following vss. as a svayamvara. Ghoṣā as daughter of a king (*rājñāḥ ... duhitā* 5b) would, at least in later times, be likely to acquire her husband through Self-choice, and the suitors who would be eligible and would attend should be kings’ sons.

X.40.4: Although elephant-hunters probably didn’t set out to catch two (or only two) elephants, the simile *mṛgéva vāraṇā* has been attracted into the dual to match the Aśvins in the frame. The simile is striking and is only loosely connected to the verb of the frame: presumably elephant-hunting did not involve invocations or oblations. Ge’s “locken” (lure, entice) seems to presuppose a more precise knowledge of hunting techniques than I think we possess and is not supported by the additive semantics of *ní√hvā* ‘call down’.

The designation *śubhās pātī* occurs 4x in this hymn (as unaccented voc. *śubhas patī* 4d, 12c, 13c, as accented nom. 14b). Ge (also Don.) tr. *pātī* in all four occurrences with “Gatten” (husbands), even though elsewhere, even in the wedding hymn (X.85.15), where it also refers to the Aśvins, he uses “Herren.” Although our hymn is deeply concerned with marriage, I don’t see that this conventional epithet needs to be pulled into the marital orbit – except perhaps in vs. 12.

X.40.5–7: On the unexpected instances of *pāri* in these vss. see publ. intro. All four of the exx. (5a, 6a, 6c, 7c) occur in the same metrical position, in the break after an opening of 5, and the first three are found immediately before the voc. *aśvinā*.

X.40.5: In b *prché* can be a 1st sg. mid. or a dat. inf. (see Old, Ge n. 5b); I am strongly in favor of the 1st sg. The middle may be used to emphasize the special circumstance of a woman, esp. an unmarried woman, speaking.

The standard tr. take the 2nd du verbs in cd, *bhūtām ... bhūtām ... śaktam*, as impvs.; I think rather that they’re injunctives, expressing the questions Ghoṣā is asking the Aśvins.

How to take the datives in d is disputed. As Ge (n. 5d) and Old point out, the same general configuration is found in the previous hymn, X.39.6 *māhyam śikṣatam* “do your best for

me,” also in the mouth of a female speaker. Ge takes *áśvāvate rathíne* and *árvate* as two separate beneficiaries of the Aśvins’ help: “tut für den Besitzer von Ross und Wagen (und) für das Rennpferd, was ihr vermöget,” but (n. 5d) sees the whole phrase as a metaphor, referring to Ghoṣā and her desire to win a husband. Old offers two different interpr., the second of which I follow: like Ge, he supplies “me” as the real beneficiary, but suggests that she is compared to the *árvant*- ‘steed’, which should be helped to become possessed of horse and chariot, that is, to win the prize.

X.40.6: This vs. contains two of the sequence of *pari*’s (a, c). The 2nd enables a sort of pun, but the first is problematic. Ge divides pāda a into two clauses, with *sthaḥ* (/Samhitā *ṣṭhaḥ*) the verb of the first, and *pári* the preverb to a supplied verb “(fahret).” He does not indicate what Skt. verb he would supply – perhaps *√ vah*, which can take acc. *rátham*. I do not see the necessity, or the utility, of this division. Preverbs can follow their verbs, and esp. in this vs. sequence, where *pári* has a fixed place, the order *sthaḥ pari* poses no problem. What the lexeme *pári* *√ as* means in this context is harder to determine. As Ge points out (n. 6a), it has a different sense (‘encircle [to halt]’) even with *rátham* as obj. in VII.32.10. As I indicated in the publ. intro., I think the intrusive *pári*’s in this sequence are hinting at the marriage theme, by way of the circumambulation of the fire that is part of the wedding ceremony. In 5a Ghoṣā circumambulates the Aśvins; in 6a here the Aśvins seem to circumambulate their chariot—perhaps an allusion to the importance of the Aśvins’ chariot in the RVic svayaṃvara passages. (See my 2001 “The Rigvedic Svayaṃvara? [Fs. Parpola], 306–9.) For a possible association of the chariot with the simile of pāda b, see below.

Pāda b is difficult to interpr, primarily because of the uncertainty of the simile. The problem is to determine what belongs to the simile and what to the frame; in particular, the opening of the pāda, *vísó ná*, seems to plant *vísah* firmly in the simile, given the position of *ná*. In the publ. tr. I take it, much against my principles, as part of the frame (“you arrive at the clans of the singer”). This is given some support by the expression in the next (related—see comm. on X.39–41 above) hymn, X.41.2 *vísó yéna gáchathaḥ* “By which you [=Aśvins] come to the clans ...” But the positioning of the simile particle *ná* immediately after at least one part of the simile is almost exceptionless, and I have grown uncomfortable with disregarding that here.

The path to a solution has to begin with Kutsa, who must be a part of the simile, since he is in the nom. sg. and the verb (*naśāyathaḥ*) is 2nd dual, so Kutsa can’t directly be its subject. Although, as Ge says (n. 6b), our knowledge of the Kutsa saga “ist leider zu lückenhaft,” what we do know about Kutsa mostly involves his participation, with Indra, in the killing of Śuṣṇa – which myth involves an intermediate episode, in which Kutsa and Indra make a chariot journey to Uśanā Kāvya (for counsel or weapons or both—not entirely clear); see comm. ad V.31.7–8, 8, X.29.2, etc. I think this is the journey alluded to here, through oblique hints. First, the Aśvins are *kaví* in pāda a. There is nothing about the rest of that pāda that requires (or even invites) them to be identified as poets, and *kaví*- is a rare designation of the Aśvins, found only in I.117.23 (a Kākṣīvant hymn, note) and VIII.8.2, 5, 23. In the next vs. (7ab) the Aśvins come to a number of named personages, including Uśanā. That the elements of the name Uśanā Kāvya (including *uśānā*- itself) surround the pāda containing Kutsa suggests to me that the Aśvins’ journey in 6b is being compared to Kutsa’s to Uśanā. The somewhat puzzling mention of the chariot at the end of pāda a (see disc. above) may also be a clue to this mythic complex, since Kutsa is especially associated with the chariot (see comm. ad X.29.2).

The sticking point for me has been how to make *vísah* fit into the Kutsa / Uśanā Kāvya scenario, since “clans” don’t form a part of the mythic fragments available to us. Ge simply tr. “Häuser” (followed by Doniger “houses”), and in V.29.9 and X.22.6 Indra and Kutsa in fact drive to the *grhām* of Uśanā. My slightly sleight-of-hand solution here is to take *vísah* with both frame and simile: “you (Aśvins) arrive at the clans [cf. X.41.2 cited above, also X.43.6 disc. below] of the singer, as Kutsa (arrived) at the “clans” (of Uśanā),” with *vísah* a loose reference to the house or household of Uśanā. (It is also possible that *jaritūh* ‘of the singer’ can be read with both simile and frame as well.) I would now substitute that translation for the publ. one. As with a number of other passages involving Uśanā Kāvya, the disiecta membra of the myth have to be assembled from neighboring pādas and arranged into a simulacrum of a story. See disc. in my Rigveda between Two Worlds.

The hapax 2nd du. *nasāyathah* I take as a variant of the already anomalous *asāya-* (4x); see comm. ad VI.33.2. Note that one of the forms of the latter stem is found nearby in X.43.6, construed, as here, with an acc. of *vís-* (*vísam-vísam ... páry asāyata*).

As noted above, pāda c contains a second instance of *pári* in this vs.; it also contains both a simile and a bold image – and, if I’m right, a pun connecting the two, turning on the instr. *āsā* ‘mouth’. The striking image is that of a bee (*mākṣā-*, or fly, though that is contextually less satisfactory) holding enclosed (*pári ... bharata*) the honey of the Aśvins with her mouth. It is not entirely clear what this is meant to convey: the Aśvins are associated with honey (see, e.g., Macdonell, VedMyth 49–50), both as dispensers and consumers of it. So, the bee may either be carrying bee-produced honey to bestow on the Aśvins or, in a role reversal, holding the honey they produced – either physical honey or, perhaps, the honey of their words.

The simile in the same hemistich seems at first to have little to do with this image: *niṣkṛtām ná yōṣaṇā* “like a young woman a *niṣkṛtā*,” with the young woman compared to the bee and the *niṣkṛtā-* to the honey. A *niṣkṛtā-* is generally a place to which one goes, but often a particular type of secretive place: a trysting place, a rendezvous. Cf., e.g., IX.93.2 *máryo ná yōṣām abhí niṣkṛtām yán* “like a young blood going to a maiden at the trysting place.” Here I think it refers not to the place but to the tryst, the secret meeting itself, and the VP *pári ... āsā bharata niṣkṛtām* is figurative: the maiden “holds the tryst enclosed by her mouth” – that is, she keeps it secret. (Lü [211, 342] suggests the exact opposite: “mitteilen” [inform, notify], taken up by Re “transmettre par la bouche” → “communiquer.”) The Lü/Re view might seem to find support in I.119.9 (in an Aśvin hymn of Kakṣīvant) *utá syā vām mādhuman mākṣikārapat* “And the little fly [or bee] whispered honeyed (speech) to you [=Aśvins],” since the *mākṣikā* is conveying her *mādhumat* by speech. But I think this only points up the cleverness of the pun in our passage: the phrase *āsā pári √ bhṛ* can signal not only that the *mākṣā* has something for/or the Aśvins in her mouth (possibly to say to them), but by another reading of the *pári* that the maiden is keeping her secret within. The *arapat* ‘whisper, mutter’ in I.119.9 also emphasizes the secretive nature of the communication.

X.40.7: The first three personages to whom the Aśvins come are known from other Aśvin contexts – esp. Bhujyu, but also Vāsa and, less commonly, Śiñjāra (see Mayr. PN s.vv.); only Uśanā lacks a stable Aśvin association, but the reason for his appearance here was disc. ad 6ab.

Ludwig’s resegmentation of the first two words of c from *yuvó rārāvā* to **yuvór árāvā* has been generally, in my opinion rightly, accepted; *árāvā* belongs to the well-attested stem *árāvan-* ‘hostile, ungenerous’. The Aśvin passage VII.68.7 (adduced by Old), which contains both Bhujyu and a clear *árāvā*, supports this change. Gr lists two occurrences of the supposed

stem *rārāvan-*, this one and *rārāv^añām* in VIII.39.2, which should also be resegmented to **ārātīr ārāv^añām* (see comm. ad loc.).

Pāda c also contains another instance of *pāri*; the sense of the lexeme *pāri* √ *ās* here is unclear—another instance of the “off” nature of the *pāri* occurrences in this section of the hymn. Some (Old, Re) take the verb to be basically positive: (even) a hostile/ungenerous man will “court / pursue” (umwerben, brügger) the Aśvins, while Ge takes it as negative “verpassen.” I am inclined towards the negative approach; my “circumvent” is meant to reflect the *pāri*, though the term itself is somewhat off – but I think the general sense is either “avoid” or “impede.”

X.40.8: Śayu is another regular client of the Aśvins, including in the previous hymn (X.39.13), but Kṛśa is not otherwise associated with them. The stem *kṛśá-* is of course an adj. meaning ‘emaciated, starving’ and is attested in this meaning several times in the RV, including in the previous hymn (X.39.3). Its appearance in the sequence there, *andhásya cid ... kṛśásaya cid ... rutásya cid* “even of the blind man ... even of the starving ... even of the broken,” guarantees that it has the adjectival sense there and is not a personal name, as it appears to be here, at least in part. In our passage it might be possible to take *kṛśám* as an adj. with *śayúm* (“starving Śayu”), but the rhetorical structure of the pāda, with repeated subj. pronoun, makes that unlikely: *yuvám ha kṛśám yuvám aśvinā śayúm*. The two pronouns define two separate subclausal entities, as in the preceding vs., 7ab *yuvám ha bhujiyúm yuvám aśvinā váśam, yuvám śīñjāram ...*

In fact, I now think we are dealing with a pun here: *kṛśá-* and *śayú-* are indeed PNs here, in the manner of the catalogues of the Aśvins’ clients. But they also are adjectives: *kṛśá-* has its usual sense just mentioned, ‘starving’, and *śayú-* the sense ‘orphan’, on which see comm. ad IV.18.12. With these interpretations, the pāda conforms nicely to the following one, esp. the mention of the widow. I would now emend the tr. to “You two make wide space for Kṛśa, you for Śayu / for the starving, for the orphan, o Aśvins, you for the worshipper and the widow.”

As for *kṛśá-* as a PN, it is so twice in the Vāḷakhilya (VIII.54.2, 59.3). The latter passage is esp. suggestive with regard to our passage. In VIII.59.3 “the seven ‘voices’ of Kṛśa milk out a wave of honey for you two” (... *kṛśásya vām mádhva ūrmím duhate saptá vāñīḥ*). The “you two” in question are, in context, Indra and Varuṇa, the ostensible dedicands of the hymn. But as I point out in the publ. intro. to VIII.59 (see also comm. ad VIII.59.3), the vocabulary is in many cases more appropriate to the Aśvins (e.g., in that very vs. VIII.59.3c and also vs. 5, the voc. *śubhas patī* “o lords of beauty,” which in its numerous occurrences is otherwise only used of the Aśvins). It seems likely that Aśvin phraseology has been adapted to the Indra-Varuṇa context of VIII.59. I would suggest that in our passage the “thundering seven-mouthed enclosure” (*stanáyantam ... vrajám ... saptáśyam*) that the Aśvins open up in our cd can be compared to the “seven voices” of Kṛśa that pour out honey in VIII.59.3 – perhaps the dakṣiṇā, as Ge suggests (n. 8cd), more likely in my view a variant of the Vala cave and its contents, particularly since *saptáśya-* is an epithet of Bṛhaspati in that myth (IV.50.4; cf. IX.111.1) – perhaps both.

“The worshiper and the widow” in b do not form a natural semantic pairing, but are probably grouped together because of their phonology: *vidhántam vidhávām*. But the widow and the orphan of the pun in pāda a form a natural class.

X.40.9: On my interpr. of the images of this vs. in a marital context, see publ. intro. As I say there, the coming of age of the maiden in this vs. reminds us of Apālā’s (VIII.91), esp. the plants sprouting in b, which stand for the growth of pubic hair on the newly mature Apālā (VIII.91.5–6). It may not be an accident that Apālā’s fantasy suitor, Indra, is called a *vīraká-* (VIII.91.2)

“dear little hero,” while here, paired with the maiden (*yoṣā*), is a similar *-ka*-form, *kanīnakā* ‘little lad’ – referring either to the new husband or, as I suggest in the publ. intro., possibly to his penis.

The accent on *áruhan* in b indicates that the *ca* there is subordinating (*pace* Old n. 2). See Klein DGRV I.247.

As most comm. point out, *áhne* in d echoes *áhne ... aktáve* “for the day ... for the night” in 5c. As I discuss in the publ. intro., I see a role reversal in our passage: in vs. 5 she asks the Ásvins to “be there for me” (*bhūtám me*) day and night, but here it is she who (in my reading) will “be there for him” (i.e., the bridegroom; *asmaí ... bhavati*). Here the “for night” is not explicit. Perhaps it would be a sly reference to what happens at night, namely sex, but tactfully suppressed, given the innocent state of the new bride.

I take *tāt patitvanám* as a separate nominal clause, not the subject of *bhavati* because that interpr. loses the parallelism with vs. 5. Cf., e.g., Old’s “Ihm hilft zu (glücklichem) Tage diese seine Gattenschaft.” By my reading it is a triumphal announcement of the achieved marital state. The heavy suffix *-tvaná-* (on which see AiG II.2.716–17) may add a bit of gravitas to this final statement.

X.40.10: As disc. in the publ. intro., I take this vs. as concerning the public and social aspects of marriage, in particular the inter-family connection that it forges. However, there are a number of uncertainties in the vs., which has been much discussed; Bloomfield (AJP 21 [1900]) and Gonda (Fs. Norman Brown [1962]) each devoted an entire article to this verse alone, and Old’s, Ge’s, and Re’s remarks are relatively full, esp. Old’s. I will not discuss these treatments in detail, but for the most part simply present my own interpr.

The first question concerns the first clause in pāda a “they weep over the living” (*jīvām rudanti*). As Gonda (inter alia) suggests, *jīvām* implicitly invokes its opposite “the dead”; in fact, 3 of the 4 occurrences of *mṛtá-* in the RV are juxtaposed to *jīvá-*. Since the more natural trigger for tears is death, not life, the phrase “they weep over the living” is, on the one hand, a striking reversal of expectations and a paradox. However, on the other, tears are not an uncommon reaction to any emotionally charged situation, including a joyful one, and many people (including me) cry at weddings. This seems to be what’s going on here – whether as the result of universal human psychology (as I think) or a ritual mandate (so, approx. Gonda, who samples a wide range of the anthropological literature). It could also be more specifically related to the separation of the bride from her natal family as she sets out with her new husband to her new home – an esp. fraught part of the marriage ceremony, as I’ve discussed elsewhere (e.g., SW/SW 223–26). Although it is tempting to interpr. the clause in this light, with her family mourning her departure, the fact that *jīvām* is masc. or neut. makes that interpr. difficult (although it would be possible, but probably inadvisable, to emend to the fem. **jīvām*, which would be metrically identical in this context).

The sense of the rest of this pāda, *ví mayante adhvaré*, has also been much disputed. I see in it an expression of the mutual exchange between the bride’s family and the groom’s that lies at the heart of marriage socially conceived. Hence my “they make a mutual exchange at the rite.” The middle voice supports this reciprocal interpr., and the specifying loc. *adhvaré* indicates that the arrangements become legal at the marriage ceremony. Re’s suggested “faire un contrat” also has a legal aspect, though his added parenthesis “(lors du sacrifice: paradoxe!)” is puzzling – why would this be paradoxical? Gonda’s (p. 84) “they (i.e., those concerned, i.e., either the bridal couples or their relatives, the priests, etc.) take turns at the (marriage) sacrifice” doesn’t

make much sense to me; I assume he means that different people perform different ceremonial actions, but he doesn't say, and if so, the statement seems trivial. Gotō's (1st Cl. 241, cited also by Kü 257) "sie wechseln sich bei der [Hochzeits]feier ab" seems to reflect the same general sense as Gonda's, but even less defined.

In pāda b the interpretational debate has centered on the sense of *prāsiti-* and the phrase *dīrghām ānu prāsitim*. On the general sense of *prāsiti-* see comm. ad IV.4.1, where I suggest that the word is a conflation of two etymologically distinct words, one meaning 'onslaught' or, less pointedly, 'trajectory'. Here an attenuated sense referring to a stretch of time seems warranted; see KH Aufs. II.418. In my view this refers to the protracted marriage negotiations between the two families; I find it impossible to follow Gonda's (p. 85) speculation that "this pāda may allude to the men's gaining a visionary insight into the meaning of marriage, the deep secret of procreation, the continuation of family and race."

The second hemistich is less challenging. The two pādas are structurally parallel, with an opening abstract notion (*vāmām* 'a precious thing' c, *māyaḥ* 'joy' d) followed by a dat. of the beneficiaries of this abstract; the two datives refer, in my view, to the parents and close relatives who arranged the match (*pitṛbhyaḥ*) in c, and in d to the actual parties to the match, the husbands (*pātibhyaḥ*) and the wives they embrace. I do *not* think, with some interpr. (e.g., Old), that the *pītar* in c are the dead ancestors who will be benefited by the offspring of the new couple. As for *sameriré*, I take it to mean "set this [=marriage] in motion," "brought it together." The publ. tr. omits the *idām*, and should be slightly changed to one of the tr. just suggested. Although *māyaḥ* in d echoes (*vī*) *mayante* in a, I consider this word play only phonological, not etymological

X.40.11: In contrast to the detailed treatments of vs. 10 just cited, vs. 11 has attracted very little comment, though it is hardly perspicuous – and the first pāda ("we do not know this – proclaim it to us") makes the unclarity explicit. As indicated in the publ. intro., I think it concerns sex, or rather sex and procreation.

The second pāda seems to allude both to the sexual act itself and to the notion (at least later) that the husband is reconceived/reborn in his wife's womb: "that/how a young man dwells peacefully in the womb of a young woman" (see also X.85.45 in the wedding hymn). The plural *yóniṣu*, which I've silently emended to an English singular (like Ge's "im Schosse"), is, on its surface, surprising. The stem is extremely well attested and almost always in the singular, including the very common locatives *yónau* and *yónā*, so it is not a case of a body part that is plurale tantum. The only plural forms are 5 exx. of this very loc. *yóniṣu*. In the other 4 cases the wombs can indeed be multiple, including in a passage where procreation is at issue: X.63.15 *svastí naḥ putrakṛthéṣu yóniṣu* "(let there be) well-being for us in the wombs at the making of sons" (though in that passage plurality isn't necessary). In two of the passages (I.15.4, II.36.4) *yóniṣu* is qualified by *triśú* 'three' and clearly refers to the three fireplaces where Agni takes his ritual position. (The fifth passage is in the Vena hymn, X.123.5, and like the rest of that hymn is hard to interpret.) Despite the clear conceptual plurality in two of the five passages, in our passage (and quite possibly in X.63.15) I consider the pl. of *yóniṣu* a metrical contrivance: loc. sg. *yónau* is very common pāda-final in Triṣṭubh. Both our passage and X.63.15 are in Jagatī, where pāda-final *yónau* won't fit; I therefore consider the pl. an automatic adjustment to the meter. It is only these two passages where *yóniṣu* is pāda-final.

I now think the publ. interpr. of the first hemistich is wrong, or at least incomplete. The question I did not previously consider is the identity of the 1st pl. speakers and 2nd pl. addressees: *ná táśya vidma, tád u ṣu prá vocata*. Given the number, neither can have the Áśvins

as referent. The only previous 1st pl. in the hymn is *ní hvayāmahe* “we call down” (4b) in the early generic ritual portion of the hymn – though the next vs. (12d) contains the opt. *aśīmahi* “might we reach.” There are no 2nd pls. anywhere else in the hymn. Since pāda a of our vs. clearly sets up an interactive speech situation, we need to try to identify the parties to this exchange. I now interpret the vs. as a continuation of vss. 9–10, which concern the marriage itself. I suggest that the first hemistich treats the announcement of the consummation of the marriage. The 2nd pl. addressees are the elders who would announce the consummation, having been shown the evidence – most likely the bride’s bloody garment, as in X.85.28–29. The “we” who await the news are the bride’s relatives (or the relatives of the couple in general); cf. X.85.28, where, after the garment turns bloody, “her relatives are elated” (*édhante asyā jñātāyaḥ*). Note the verb *prā vocata* ‘proclaim’, which suggests a formal and public announcement. The 1st ps. speakers are not asking for private enlightenment about a mystery (as I first thought), but for an authoritative statement made to the assembled group.

On this basis I would now alter the translation from “*how ...*” (which is not supported by the *yád* in the text) to “*that ...*,” and interpret *yúvā* and *yuvatyāḥ* not as generic “a young man ... a young woman,” but as references to the couple in question – yielding an emended tr. “We do not know this – proclaim it to us – that the young man dwells in the womb of the young woman.”

The 2nd half of the vs. expresses the further wish that the marriage just consummated will be procreative and the new husband virile. This is expressed in the familiar bovine terms: the “seed-laden bull” (*vṛṣabhásya retínah*) and his beloved, the ruddy cow (*priyósriyasya*). Less familiar is the trope of the house: “may we go to the house” (of bull and cow), *grhām gamema*, but this image is reinforced in the next vs. (12d), *priyā aryamṇó dúryām aśīmahi* “Dear to Aryaman, might we reach his porticos (/house)” (per publ. tr.) or, perhaps better, “As dear ones, might we reach the porticos (/house) of Aryaman.” On the one hand, “reaching the house” in both vss. is a metaphor for attaining a desired state or situation: 11cd wishes for the new marriage to be generative; in 12d, since Aryaman is the patron of marriage, we are asking for a successful, divinely sanctioned marriage. On the other, we can take “house” more literally as the physical location, the container, of the desired domestic state and representative of it. The motif of the house continues in the final two vss.: 13a *mānuṣo duroṇā ā* and 14d *vīprasya vā yājamānasya vā grhām*; in fact *grhām* is the final word of the hymn. In 13 and 14 the “house” shows the more standard RVic usage, as the locus of ritual activity and the goal of the gods, here the Aśvins, coming to the ritual. Nonetheless, the “house” motif resonates throughout this last part of the hymn, even as the focus shifts back to the Aśvins.

X.40.12: As just noted, the Aśvins reappear here, having been absent from the three wedding vss. (9–11).

In b the publ. tr. attributes both the desires (*kāmāḥ*) and the hearts (*hṛtsú*) to us, but this is not explicit in the text. Ge expresses no ownership of the desires and attributes the hearts to the Aśvins: “die Wünsche sind euch ans Herz gelegt worden.” I was hesitant to assign the hearts to the Aśvins partly because of pl. *hṛtsú*: although I would not expect the poet to use the dual (the stem has no dual forms, not surprisingly), I thought it likely that for two beings, with only one heart apiece, he would use the sg. *hṛdī*. However, in at least one passage (I.179.5) pl. *hṛtsú* seems to belong to a single individual, so this argument doesn’t hold. Also, *hṛd-* is generally used of humans, but given I.32.14 with *hṛdī* used of Indra, this argument also falls. I now think that the desires are ours – the desires we just expressed for a successful marriage – but that the hearts are the Aśvins, or the gods in general (see Aryaman in d). Cf. X.64.2d *devēsu me ādhi kāmā*

ayamsata “My desires have fastened upon the gods,” with *kāmāḥ* + med. *s*-aor. *ayamsata*, as here; only the preverbs, *ní* here, *ádhi* there, differ (though X.64.2 is slightly complicated by having *hṛtsú* in pāda a clearly referring to our hearts). I would now change the tr. to “(Our) desires have been fastened down in (your) hearts.”

This is the only place in the RV where the Aśvins are identified as a *mithunā* ‘(oppositional) pair’. Though the stem *mithunā-* is by no means limited to a sexual pair – it is used in I.83.3, for example, of the pair of priests, the Adhvaryu and the Hotar – it is often so used, often in sexually charged context, e.g., in I.179.3 of Agastya and Lopāmudrā, VIII.33.18 of the sacrificer and his wife. I therefore think it is used of the Aśvins here to fit the marital context.

On *śubhas patī*, see comm. above ad vs. 4. I think it’s possible that in our vs. this conventional epithet of the Aśvins (found 3x elsewhere in the hymn) has been attracted into the marital context and might be interpr. “husbands of beauty,” as opposed to the standard “lords of beauty,” though its appearance in vss. 13 and 14 might either speak against this or suggest that they all have a marital undertone.

As disc. ad vs. 11, the phrase *dúryāṁś aśīmahī* echoes *grhām gamema* (11d), and both have both a metaphorical and a literal sense. The house here is that of Aryaman (*aryamṇāḥ*), who, of course, presides over the institution of marriage, and I attribute his presence here to that function. In the publ. tr. I construe this gen. with *priyāḥ* (“dear to Aryaman”) and supply him with *dúryān* (“his porticos”). I am now not sure that *priyāḥ* should be limited in that way. It is possible that we are dear to the married couple, or the married couple and their family circle, or to the Aśvins, whereas I am tolerably certain that the dwelling is Aryaman’s. I would now slightly emend the tr. to “May we, as dear ones, reach the porticos of Aryaman.”

X.40.13: The phrase *tīrthām suprapāṇām* “a ford that offers good drink” is somewhat jarring, but it cannot be separated from vs. 7 in X.114, a mystical treatment of the sacrifice: *āpnānaṁ tīrthām ... yéna pathā prapībante sutásya* “The Opulent Ford ... the path by which they take the first drink of the soma?” with both *tīrthā-* and *prá√pā*.

On *pathe-ṣthā-* (also V.50.3) see Scar 649. The anomalous loc. sg. *pathe-* is presumably a rhyme form to fairly common and inherited (cf. Aves. *raθaēštā-*) *rathe-ṣthā-* ‘standing on the chariot / chariot-fighter’, with loc. to a thematic 1st member.

X.40.14: As noted in the publ. intro., this final vs. echoes the opening of the hymn, with its anxious questions about the location of the Aśvins.

In c *ní yeme* responds to *ní ... ayamsata* in 12b, though the *s*-aor. in 12b is intransitive and our form is transitive, despite agreement in voice.

X.41 Aśvins

On the place of this hymn in the Ghoṣā Aśvins sequence, see comm. ad X.39–41 above and the publ. intro. to X.39–41 and to X.41. Besides the Anukramaṇī ascription there is little to connect this little hymn to the two preceding ones.

X.41.1: All three hymns in this sequence begin with a vs. dedicated to the Aśvins’ chariot – though since the Aśvins’ chariot often features prominently in Aśvin hymns, this is hardly diagnostic of a shared poetic lineage. This one is esp. close in phraseology to X.39.1 – though there the chariot is in the nom. for most of the vs., while here the first three pādas are couched in the acc., modifying *rātham*, which begins pāda b.

With regard to *samānām* ‘common’, Ge (n. 1a) asks whether the chariot is “common” to the two Aśvins or to all men, offering parallels that could support either. As the 1st word of the hymn, *samānām* seems positioned for significance, but it isn’t possible to determine what its scope is.

X.41.2: The focus on the chariot continues in this vs. The vs. also ends with a mention of the Hotar priest (*yajñām hótṛmantam*), setting the stage for vs. 3.

On *kīrī-* see comm. ad V.52.12.

X.41.3: After the mention of the Hotar in 2d, this vs. presents at least two more ritual functionaries and as many as four: the Adhvaryu and Agnidh are presented as disjunctive goals of the Aśvins’ journey, with double *vā*: #*adhvaryúm vā ... agnídham vā*. But the presence of a third *vā* in c in the off-balance expression *víprasya vā ... sávanāni* “or to the pressings of an inspired poet” suggests that *vípra-* is a third such personage, esp. since the *vā* immediately follows that gen., while *dāmūnasam* ‘domestic leader, household master’ can either be in apposition to *agnídham* or refer to yet another distinct person and role.

X.42–44: These three hymns are all attributed to Kṛṣṇa Āṅgīrasa and all dedicated to Indra, with clear verbal connections among them, including sharing their two final vss. (X.42.10–11 = X.43.10–11 = X.44.10–11). To a poet of the same name are ascribed three Aśvin hymns in VIII (VIII.85–87), though there is no clear thematic or verbal connection between the two sets that I can see.

X.42 Indra

The hymn contains a number of striking comparisons, often not overtly marked as similes.

X.42.1: With Ge, I take *lāyam* as an early example of the *-am* gerund (/absolutive), rare in the RV/AV, more common in the Brāh. and Sū. (see Whitney, Gr. §995), to √*lī* ‘cling’, etc. Ge’s invocation of *nilāyam* in AVŚ IV.16.2 is apposite, whatever the form means there. Ge’s interpr. here, “geduckt” (crouching), is close to mine (“in ambush”), though mine spells out the scenario I see for the simile in pāda a more clearly—with the poet compared to an archer who, being hidden, can take his time aiming. The ultimate target is, in my view, Indra, who is brought down (like a game bird?) to our ritual in pāda d. The poet must “shoot further” in order to overcome the speech of the *arī-* in pāda c. Old, by contrast, thinks *lāyam* refers to the arrow being shot, flg. Gr (and Ge Gl., inter alia), and that it is compared to the *stómam* in b (which, however, is the object of a different verb).

X.42.1–2: The three even pādas 1d, 2b, 2d all begin with a 2nd sg. act. *-aya* impv. preceded by a preverb (*ní rāmaya / prá bodhaya / ā cyāvaya*), all with Indra as object, taking final position (1d, 2b *índran*#, 2d *sūram*#). In 1d and 2b the impv. is immediately followed by the voc. *jaritar* ‘o singer’.

X.42.2: Old advances good reasons not to accept Roth’s emendation of *dóhena* to *dóhe *ná*, primarily parallel passages with *úpa síkṣ-* + INSTR. Presumably the objection to the instr. that led to Roth’s emendation to the loc. is that milking would not be an enticement to a cow – but in

reality that is not the case: cows with full udders want to be milked. Ge (n. 2a) toys with the suggested emendation and in the end settles for a haplology **dóhena ná*, which seems like the worst of the options. I see no reason why pāda a can't contain a simile without overt marking, just as pāda b does.

On *úpa śíkṣa-* with acc. complement, see comm. ad I.112.19, 173.10.

As Ge notes (n. 2b), *jaritar jārām* is a word play, with the words belonging to two different roots.

X.42.3: The hapax nominal *śísayá-* is assigned by everyone to the root $\sqrt{sā}$ / *śí*, which furnishes the immediately preceding verb *śísīhi* 'sharpen!'. I therefore don't understand the apparently universal tendency to give it a gloss that separates it from its root (Gr 'stärkend, kräftigend, AiG II.2.85 'stärkend(?)', EWA s.v. *śā* 'stärkend', and most egregiously Ge "dass du ausgiebig bist"), even though it is explicitly recognized (by Ge and EWA at least) that it is a word play with *śísīhi*. The poet has heard that Indra is a consummate practioner of $\sqrt{sā}$ and asks him to perform this action. I might slightly emend my rendering to "you are the sharpener" or "you are sharpening." As to what "sharpen" means here, I assume the poet is asking Indra to sharpen his (=poet's) mental and verbal skills; the immediately following reference (c) to the poet's *dhī-* 'insight', which he hopes to monetize, supports this interpr.

In d the poet calls upon Indra to "bring to us" (*ā bharā naḥ*) Bhaga, while in 1b the roles were reversed: the priest is urged to "bring to him [=Indra]" (*prā bharā ... asma*) the praise – emphasizing the theme of reciprocity that dominates this hymn.

X.42.4: With Old, I accept Ge's (Gl) analysis of *mamasatyá-* as a univerbation of *māma sāt* ("[this] being mine"), with *-ya-* a nominalizing suffix, rather than deriving it from *māma satyá-*.

Pāda b contains the common contrastive juxtaposition of *sām* 'together' and *ví* 'apart, separately'; here the peoples take their stands together (*saṁtasthānāḥ*), that is, reciprocally facing each on the battlefield, while each side calls on Indra separately (*ví hvayante*) for his help.

Since there's no acc. prn. in c, the VP could also be tr. "... makes (him=Indra) his yokemate." My supplied "you" looks back to the 2nd ps. ref. to Indra in ab; "him" would look forward to the 3rd ps. *vaṣṭi sūraḥ* of d. The choice doesn't really matter.

sūra- returns here from 2d, in both cases referring to Indra. That vs. also contains *sākhāyam* 'comrade' referring to Indra (2a), while here *sakhyá-* ('fellowship', perhaps better 'comradeship') is what Indra seeks (or doesn't) with humans.

X.42.5–8: This set of 4 vss. has the formal presentation of a little omphalos. Vss. 5 and 8 define a ring: 5ab *bahulám ... tīvrān sómān* / 8b *tīvrāḥ sómā bahulāntasaḥ* // 5d *ní ... yuvāti* / 8c *ní yaṁsan* // 5b *āsunóti* / 8d *sunvaté*. The intermediate vss. 6–7 are responsive (as omphalos vss. tend to be): 6 *ārāc cit ... śátruḥ* / 7 *ārāc chátum*. But this set of vss. is not in the center of the hymn and the subject is not consequential enough or enigmatic enough to count as a real omphalos.

X.42.5: This vs. is a sort of duplicate and expansion of the 2nd hemistich of the preceding vs. (4cd), depicting the reward Indra provides to one who makes oblation to him. The reciprocal relationship between the two recipients, Indra and the sacrificer, is conveyed by the balanced dative pronouns: *asmai* (pāda a) referring to Indra and *tásmāi* (pāda c) referring to the sacrificer.

The simile that opens the verse (*dhānam ná syandrām bahulām* “like ample streaming wealth” / “ample like streaming wealth”) has a somewhat complex relationship with its target, *tīvrān sōmān*, found in pāda b. Ge (n. 5a) suggests that *syandrām bahulām* has been “attracted” by *dhānam*, implying that the phrase really modifies the pl. *sōmān*. His suggestion is understandable, because the root $\sqrt{\text{syand}}$ means ‘flow’ and generally has either liquids or animate beings as subject. In fact Soma is one of the standard subjects of the verb (see, e.g., the multiple occurrences of aor. *āsiṣyadat* in Maṇḍala IX). The adj. *syandrā-* generally modifies gods (in motion). Therefore applying it to an apparently static substance *dhāna-* ‘wealth’ seems off-balance. But as Ge also suggests, the adj. seems to have a double meaning here. The semantically straightforward application to soma, as a substance that flows, is semi-thwarted by the clash of number and the clear positioning of the adj. in the simile. not the frame. This forces a ‘flowing, moving’ reading on *dhāna-*; Ge: “... beweglich, von dem aus Vieh bestehenden Besitz.” In other words, this is wealth in livestock, wealth on the hoof. The use of *syandrā-* ‘flowing’ may reflect the visual impression of a large herd in movement, which from a distance can look like liquid flowing (google videos of “herds in motion”). Note that the Maruts are compared to “streaming bulls” (V.52.3 *syandrāso nokṣānaḥ*) and that other livestock serve as subjects of, or similes with, $\sqrt{\text{syand}}$ (for example, milk cows in IX.68.1).

In the other direction, *bahulā-* is quite at home modifying ‘wealth’ (esp. *rayí-*, e.g., II.1.12, III.1.19), but in our hymn is found in the cmpd. *bahulānta-* (8b) modifying the same *tīvrā- sōma-* as in our vs. So both adjectives in the opening simile of 5a are implicated, if unequally and in opposite directions, with both simile and frame.

As I indicated above, this vs. is an expanded variant of 4cd – but (if I’m right) with a twist. The first part describes the sacrificer offering soma to Indra in expectation of a reward. In 4c this reward is to form a team with Indra, to become his yokemate – a happy situation; 5cd also involves forming a team, but here the image of the team is negative. It consists of the rivals to the sacrificer, whom Indra makes into a team subject to the sacrificer, to be broken and controlled by him with spurs and goad. For a comparable expression see VII.18.9 *sudāsa índraḥ sutúkām amitrān, árandhayat* ... “Indra made those without alliance (to us) subject to Sudās, (as ones) easy to thrust away / easily goaded,” where the establishment of dominance over the *sutúka-* is more explicit. For the meaning and etymology of *sutúka-* see comm. ad VII.18.9.

I do not entirely understand why this should happen in the early morning, but I assume the temporal expression really applies to the soma pressing of the first hemistich, presumably the Morning Pressing.

The *śátru-* is also a preoccupation in the next two vss., 6–7.

X.42.6: The balanced reciprocity expressed by grammar in the immediately preceding vs. (5a and c) is also found here, in the two relative clauses of the 1st hemistich—with the locative #*yásmín* ... *índre*# of pāda a corresponding to loc. *asmé*# at the end of b. Both pādas contain a verb of setting that governs the locative, with the subject being the other member of the pair of opposites: “we” in *dadhimā* (a) versus Indra (*maghāvā*) in *śísṛāya* (b). The use of two different verbal roots keeps the balanced expression from giving too pat an impression.

In b in the publ. tr. I assigned the *kāma-* to Indra (“his desire”), thoughtlessly flg. Ge (“seinen Wunsch”), though there is no overt expression of possession. (Kü [526] neutrally “den Wunsch.”) I now think that the *kāma-* may be ours, the reward for our praise – or, at least, that it is ambiguous or meant to be read in two senses. The same expression, *kāmam* $\sqrt{\text{sri}}$ (PF), is found in the next hymn attributed to the same poet, with 1st sg. *śísṛaya* and Indra in the loc. (*tve*). There

the desire is mine—that is, it belongs to the subject. This parallel cuts both ways: on the one hand, if the coincidence between the subject of the verb and the owner of the wish is the important thing, interpreting it as Indra’s wish in our passage would be correct. On the other, if the human 1st person’s ownership of the wish is crucial, then it should be our wish in this passage as well. If the ambiguity is deliberate, we can interpret it to mean that Indra sets his desire for further praise in us, while at the same time we set our desire for the reward for our praise in him. I would now slightly alter the tr. to “fixed (his/our) desire in us.”

In d Ge takes *jánya-* as referring to other people (“die Herrlichkeit anderer Leute”), a sense ascribed to the stem already by Gr (meaning 2). This seems reasonable (or at least arguable) in context: the poet first hopes (pāda c) that Indra’s rival will take flight, and then that the *dyumná-* of the poet’s enemies should fall to Indra (who might redistribute them to the poet and his people?). But as discussed ad IV.55.5, all clear cases of *jánya-* refer to *our* people. On the other hand, a certain no. of the occurrences of pl. *dyumná-* are found in passages where “we” wish to wrest away, or otherwise take possession, of *dyumná-* belonging to others. Cf., e.g., IV.4.6, 9 (the latter cited by Ge n. 6d) and IX.61.11 *enā́ víśvāny aryá ā́, dyumnā́ni mānuṣāṇām / sísāsanto vanāmahe* “Seeking to gain all the brilliant things of humans (/sons of Manu) from the stranger, with it [=soma] we shall win them.” Although I don’t think I want to go as far as Ge in rendering *jánya-* here as “other people’s,” I think it may here define the *dyumná-* as belonging in the first instance to humans rather than gods, which latter might be the default interpr., given the etymology of *dyumná-*. This may be conveyed in part by *mānuṣāṇām* of IX.61.11. But *jánya-* may also have a more narrow interpr., referring to the people with whom we might have rivalrous relationships, fighting over the same goods and bragging rights—the larger Ārya community—rather than people beyond the pale, as it were. The same *mānuṣāṇām* of IX.61.11 with this more specific sense “sons of Manu” singles out the Āryas as members of the group that follows the ritual practices stemming from Manu. See also VI.19.6, also with *mānuṣa-*: *víśvā dyumnā́ vṛṣṇyā mānuṣāṇām, asmábhyaṃ dāḥ ...* “All things brilliant and bullish that belong to the sons of Manu -- give them to us,” which may envisage Indra as the redistributor of goods belonging to our rivalrous co-religionists.

X.42.7: The rival, who was already far away in the previous vs. (6c *ārāc cit sán ... śátruḥ*), now needs to be thrust away (7a *ārāc chátum ápa bādhasva ...*), which seems narratively reversed.

Pāda b is syntactically interesting, as containing an embedded nominal relative cl., resumed by the anaphoric pronoun of the main clause referring to the subject of the rel. cl.: ... *ápa bādhasva ..., ugró yáḥ śámbaḥ ... téna*. Here the *téna* is to be construed with the impv. *ápa bādhasva* “thrust away with that,” and the preceding rel. specifies what *téna* refers to. As I’ve discussed elsewhere (“Proto-proto Izafe,” Fs. Hale), such nominal clauses are exceptions to the ban on (or disfavoring of) relative-clause embedding in Vedic. But this example is esp. striking because it is a reverse izafe: the anaphor follows the relative. In function the relative clause here contains the hapax *śámba-* and seems designed to formally introduce this unfamiliar word. The construction is so unusual that it cannot be rendered both literally and intelligibly (“Thrust the rival far away – what is the mighty śamba-pole of yours, with that”).

Although the noun *śámba-* is found only here, the *-ín-*stem *śambín-* occurs in the AV (AVŚ IX.2.6 = AVP XVI.76.5), in a passage that helpfully limits the sense to a pole or long stick: AVŚ IX.2.6 ... *prá nude sapátnām chambīva nāvam udakéṣu ...* “I thrust forth my rivals as a man with a pole (does) a boat in the waters.” On Pāṇ. *śambā́ √ kr*, see KH (Aufs. 315) and for the word in general EWA s.v.

On *kṛdhī dhīyam ... vājaratnām* see VI.35.1. *dhīyaḥ karasi vājaratnāḥ*.

X.42.8: The postponed referent of the rel. prn. (a: ... *yám* ..., b: ... *índram*##) matches and expands the construction in vs. 6a #*yásmin* ... *índre*##, where the prn and its referent were contained in a single pāda.

For *vṛṣa-savá-* Ge (n. 8a) compares III.42.7, VI.44.20 with *vṛṣabhiḥ sutá-* “pressed by bulls” (probably the pressing stones, in my view). But I see no reason to introduce an agentive reading for the 1st member of the compound here. Instead it seems to me to contain the intensifying *vṛṣa-* ‘bullish’, often found as compd 1st member and often rendered by Gr (etc.) as “stark, männlich.”

Gr considers the *ánta-* ‘end(s)’ of soma to be the dregs or sediment (Bodensatz), but Ge cites VI.43.2, which has not only *tīvrá-* soma, but also its middle and end. He suggests, persuasively, that this refers to the three soma-pressings. The first pressing produces the sharp (*tīvrá-*) juice, which presumably mellows over the day (esp. at the 3rd pressing, where at least in later śrauta ritual it is made of re-pressed stalks). Here presumably *bahulánta-* suggests that the supplies remain ample even at the end of the ritual day, or, if we take *bahulá-* to mean ‘thick’ (as Gr does in some passage), that the soma has thickened over the course of the day. But this seems less likely.

X.42.9: The controlling image in this vs. is the dice game, and the interpr. is therefore hampered by our incomplete understanding of the terminology. A similar vs. is found in the next hymn (X.43.5). The passage is tr. by Falk (Würfelspiel 127, 183 [slightly differently]) and is discussed at length by Scar (698–700, with regard to *prahā-*). On the basis of AVŚ IV.38.3 Scar argues plausibly that *prahām* should be construed with *jayāti*, not with *atidīvyā* (contra Ge, Falk, though with Lü, Wurf. 44 [see Ge n. 9] and Wh [AVŚ VII.50.6]). He provides several different possible interpr. of the root noun, of which I find the most convincing the stakes / pool / kitty “left in front” (*pra √ hā*), which the gamblers play each other to win. See my disc. of *prahāvant-* ad IV.20.8.

The lexeme *āti √ dīv* in the gerund *atidīvyā* is found only here and in the parallel vs. AVŚ VII.50.6, which has the variant *átidīvā* (Wh “superior player”). (Note that this AV variant without gerund [if it is correctly transmitted] would also support construing *prahām* with *jayāti*; unfortunately there is no AVP parallel.) I take it to mean ‘overplay’ in the sense “go for broke” – that is, play excessively and daringly. (This lexeme might be compared to *ati √ prach* ‘ask beyond / over-ask’ in the famous exchange between Yājñavalkya and Gārgī in BĀUp III.6, where Y. warns G. about the dire consequences [=shattered head] of over-asking.) I take the subj. to be the poet (more or less with Ge, n. 9 “Opferer”), taking bold verbal chances to attract Indra’s attention. In this case the extremity of his action pays off.

The expression in pāda b, *kṛtām ví √ ci*, also belongs to dicing vocabulary and has a number of parallels in the RV (I.132.1, V.60.1, IX.97.58, X.43.5, X.102.2; see Falk 126–27 for this VP). It is clear that its overall sense is ‘win’, but the mechanism of that win is of course obscured by our ignorance of the minutiae of the game. Assuming the general correctness of the current understanding of the play – pulling out handfuls of nuts that are ideally divisible by 4 – I take the verbal lexeme as containing *√ ci* ‘pile’, and with *ví* to mean ‘pile apart’, which is similar but not identical to Falk’s “Abtrennen von Vierereinheiten vom *gláha* [the mass of nuts the player has pulled out],” with the gloss ‘fertig abtrennen, ohne Rest den *gláha* zerlegen’. Acldg. to Falk (pp. 116–17), *kṛtā-* refers to a group of 4 nuts (the best result). In order to avoid the

bewilderment that a more technically accurate tr. would occasion, I render the VP as “pull out [*vī* √ *cī*] the perfect [*kr̥tām*] (hand of dice).”

śvaghnín- lit. ‘dog-killer’ (even more lit. ‘having the dog-killing X’) is a slang term for the winner at dice. I tr. “having the best throws,” again in order to provide some interpretable analog in modern discourse. (Falk, 100–101, seems to make heavier weather of the derivation of this term than seems necessary.)

In c *yó devākāmaḥ* must be a nominal relative clause complete in itself, since *ruṇaddhi* is not accented. The lack of resumptive pronoun *sá* is not surprising, and the position of the *ná* is appropriate if the main clause begins there. This clausal division is supported by the two parallels I.102.10 *tvám jigeṭha ná dhánā rurodhitha* and X.34.12 *tásmai kṛṇomi ná dhánā ruṇadhmi*, in both of which the clause begins after the caesura, preceded by an independent clause (ending in an unaccented finite verb).

In our passage I take the main clause “he does not withhold the stakes” to mean what I take *atidīvyā* to mean in pāda a, namely that the poet has gone all out; he has not pulled any punches, has pushed his poetic skills to the limit. The two parallels just cited mean something slightly different and different from each other. In X.34.12 I (with most interpr., but contra Falk; see comm. ad loc.) think that the defeated gambler demonstrates by his empty hands that he has no more funds to stake. It is in this way that he holds nothing back. In I.102.10 after Indra is victorious he does not withhold the prizes won, but redistributes them to his clients – a different sense of “holds nothing back” – but both senses are available to the English expression as well.

In d the audacious chances the poet took are rewarded.

X.42.10: In pāda b the affliction to be overcome, hunger (*kṣúdh-*), is combatted with an appropriate remedy, barley (*yáva-*). The connection between affliction and remedy is not so clear in pāda a: how is *ámati-* (here rendered ‘neglect’) to be helped by cows? Here the solution lies in what kind of neglect is meant. The word *ámati-* lit. means ‘without having thought, without having [=receiving] attention’, for which ‘neglect’ is a reasonable single-word substitute. But it often seems to indicate the *physical* results of neglect or lack of attention. It is paired with *kṣúdh-* ‘hunger’ also in VIII.66.14 as well as in the next hymn X.43.3. It appears to refer to a physical state also in X.33.2, where it is paired with *nagnātā jásuḥ* “nakedness and exhaustion.” In I.53.4 it is checked by cows, as here, and by my interpr. of the difficult vs. III.53.15 a notional cow banishes *ámati-*. Hunger and the physical results of neglect can be countered by cows or rather their nourishing products, and that seems to be the sense here. See also X.39.6.

Although the instr.s in ab (*góbhiḥ ... yávena*) are clearly instruments, the function of those in cd (*rājabhiḥ ... asmākena vṛjānenā* “with our kings and our community”) is not clear: are they instr. of accompaniment “along with ... might we win” (that is, the kings and community share in the good fortune) or true instrument instrumentals (that is, we achieve the win by virtue of them)?

Note that *dhána-* is repeated from vs. 9.

In c *prathamā* is ambiguous. The Pp. reads as *-āḥ*, modifying the subject of *jayema* (so also Old, Ge, and the publ. tr.), but Gr as neut. pl. *-ā* with *dhánāni*. Either is possible and not much rides on it.

X.42.11: I take *bṛhaspátih* in pāda a as an epithet of Indra, and promote *índrah* from c to a (against Ge, who gives each a separate clause). HPS (B+I 80–81) also argues that it is an epithet or identification of Indra in this vs. and points out that no other god is mentioned in the hymn.

(His dismissal [p. 81 n. 19] of *bhágam* in vs. 3 is rather cursory, however.) Although it is not unusual for the final vs. of a hymn to name more gods than featured in the body of the hymn, Schmidt's other arg. (p. 80 and n. 18), that parallels to the protector-from-all-sides trope have a single god as subject, is stronger.

Contra Ge (and HPS) I take c with ab and keep d separate (implicitly also Klein DGRV I.343). Both Ge and HPS seem to take the ablatives in c as the source of the *váriveraḥ* made in d – e.g., HPS (80) “Indra soll uns von vorn und von der Mitte ... Weite schaffen.” I know of no parallels for making *váriveraḥ* out of something. Moreover, if the ablatives of c are not construed with ab, the protective shield is incomplete; in particular the crucial direction “in front” is missing.

X.43 Indra

On the different deployment of similar verbal elements between X.42 and X.43, see the publ. intro. to X.43.

X.43.2: On the reciprocal expressions involving LOC *kāmam* √ *śri* in these two hymns, see comm. ad X.42.6.

On *sadaḥ* as having impv. value, see comm. ad IX.2.2.

I take *asmín* ... *sóme* as a nominal loc. absol., though this is probably not nec.

On *avapāna-* see comm. ad VII.98.1. As disc. there, there is no verbal lexeme *áva* √ *pā*, but the noun *avapāna-* occurs 5x in the RV. In three of these it refers to a drinking hole frequented by wild beasts. In I.136.4 (the only pl.) it can just mean ‘drink(s)’, but I tr. it there as “drinking places”, and I think something like that should be at issue here, given the very limited attestation of the noun and its associated lexeme. Perhaps the idea is that we should provide the equivalent of a watering hole for Indra, perhaps an ample receptacle for soma or a suitable place to drink it; cf. the use of “watering hole” to mean a bar in modern English. I would therefore slightly change the tr. to “let there be a drinking place for you.”

X.43.3: The root noun cmpd. *viṣūvīt-* must belong to the root √ *vr* ‘obstruct, ward off’, despite the homonymous stem based on √ *vr* ‘turn’ in II.40.3. See Scar 507 and 511–12 respectively.

The pair *āmati-* *kṣúdh-* is also found in the previous hymn, X.42.10.

X.43.3–4: As Old notes, there's a pun on *várayaḥ* in these two vss., with 3d containing the neut. *s-* stem ‘vitality’ and 4a the nom. pl. to *vi-* ‘bird’.

X.43.4–8: Just as X.42.5–8 defines a small internal ring, so too in this hymn we find some evidence of an internal ring, with 4d *vidát svār mánave jyótir āryam* echoed by 8d *āvindaj jyótir mánave havíṣmate*. But the material in between is even more various than in X.42, and I hesitate even to call attention to this possible structure. However, it is the case that the immediately following vs., 9, abruptly shifts focus from Indra to (unnamed) Agni, and vs. 9 is the real final vs. of the hymn, since 10–11 are shared with X.42. So the echo of vs. 4 that is found in 8 may close out the Indra hymn proper, in preparation for the ritual vs. that follows. This suggestion is supported by the fact that “sun-finding” is also found in vs. 1 (pāda a), and so the whole Indra portion would be marked by a ring structure.

X.43.4: The VP *vidát svâr* resonates not only with 8d, as just noted, but also with 1a, where our thoughts are *svâr-víd-*. Here it is the soma drops, so that both the verbal and the physical parts of the sacrifice are sun-finding.

The appearance of *Manu* – and the consequent switch to mythological time – is surprising, since heretofore the focus has been on the ritual here-and-now and *Indra*’s appearance there, a temporal frame to which we return in the next vs. The (aor.) injunc. *vidát* facilitates this balance between ritual present and mythological past. The reprise at the end of the ring, 8d, contains by contrast an augmented imperfect, *ávin-dat*, which situates the action fully in the past.

Although Gr does not register a lexeme *prá √ dyut* and it is not found elsewhere in Vedic till ŚB, it is difficult to do anything with *prá* in c but construe it with the intens. part. *dávidyutat*. (VB does list this passage as a lexeme, the sole entry under *pra √ dyut* in the Veda vol.) Certainly other verbs of shining / lighting up take *prá* (e.g., *√ruc*). Although *prá* would be in tmesis with a participle, not a finite verb, this is hardly unknown.

X.43.5: The first pāda, with its technical dicing phraseology, is almost exactly X.42.9; see disc. there. Unlike that vs., however, I think *Indra* is the subject of *ví cinotí*, not the poet.

On *saṃvárga-* see comm. ad VIII.75.12, X.61.17.

The VP *sūryam jāyat* “wins the sun” matches semantically, but not lexically, *vidát svāḥ* in the previous vs., 4d. The verb is also an injunctive (though to a present stem this time), and at least in my interpr. has a present-time sense.

X.43.6: On the stem *asāya-* see comm. ad VI.33.2; the stem is found with *pári* as here also in I.34.7. Though in both I.34.7 and VI.33.2 the verb is active, a 3rd sg. mid. *asāyata*, matching the one here, is found in X.92.1. In nearby X.40.6 the related verb *nasāyathaḥ* takes *vísah* as goal/object, as here. See comm. ad loc.

On *dhénā-* see comm. ad I.2.3, 101.10, and V.30.9. As indicated in the publ. intro., I think this portion of the hymn has to do with the forward progress of the *Ārya* through desirable territory, under *Indra*’s watchful protection. In pāda a he encircles the clans perhaps to safeguard them (but see below), while in b he watches over the nourishing streams that the *Ārya* are conquering. The sense of geographical space as defined by these streams may be found in the similar passage VIII.32.22 *ihí tistráḥ parāváta, ihí páñca jánāṃ áti / dhénā indrāvacākaśat* “Pass through the three distant realms; pass over the five peoples, / keeping watch over the nourishing streams, o *Indra*.” Note the pl. *jána-* there as here. In VIII.32.22 *Indra* is urged to come to our soma sacrifice rather than someone else’s, and this involves traveling across a good deal of territory. It is possible in that passage that *áva √ cakṣ* would be better rendered literally, as “looking down upon the streams” from the air, as he passes over a series of them. The *dhénāḥ* could also refer to the inviting streams of soma that *Indra* is keeping an eye out for. And both these interpr. can work here as well. In that case, the āmreḍita *vísam-vísam* in pāda a might refer less to *Indra*’s protective embrace than to his passing over or circling around other clans to reach ours – where *Indra* will rejoice in our pressing (cd). Competitive soma sacrifices are also at issue in VIII.32.22.

śakráḥ in c picks up *śakat* in 5c.

The finale of the verse seems to sketch an infinite loop of beneficial streams. The successful soma presser pleases *Indra* with his streams of soma, which enables this same man to vanquish his foes in battle, allowing him (and his fellows) to conquer more territory containing nourishing rivers, streams of water.

X.43.7: The relationship between streams of soma and streams of water (=rivers) suggested in vs. 6 is reinforced in the first hemistich of this vs. by the similes that bookend the two pādas. The cause-and-effect between water and food is laid out in d, where the rain makes the barley grow. Barley (*yáva-*) returns from X.42.10, where it overcame hunger.

dānu- is ambiguous between ‘gifts’ and ‘drops’, and both fit here; indeed the gift *is* the drop, namely rain.

X.43.8: It is not clear to me why Indra should be “like an *angry* bull,” per the publ. tr., and I now think a tr. of *kruddhá-* as ‘raging’ (as in JPB’s V.15.3 *siṃhām ná kruddhām* “like a raging lion”) better conveys the unbridled behavior of a powerful animal. Note that Indra is a “tempestuous bull” (*vṛṣabhāsya śuṣmīṇaḥ*) in vs. 3.

Ge (n. 8b) suggests that the *aryá-* who becomes the husband of the waters (*aryá-patnīḥ ... apāḥ*) is Indra. This is most likely true: Indra leads the people in the conquest of the new land defined by rivers. But I think another sense is also latent: the land is being Aryanized by the conquest of rivers, and so the people (*jána-*) of the Ārya collectively become the husband(s) of the waters – though we might expect **ārya-patnī-*, with the vṛddhi deriv. as 1st member.

In c *jīrā-dānu-* incorporates the same pun as *dānu-* in 7d. Here the “drops” would presumably be soma, thus continuing the identification of soma with the life-giving waters of rivers and rain.

On pāda d see disc. above ad vss. 4–8 and on *āvindat* above ad vs. 4.

X.43.9: On this vs. as being outside the rings formed by 1–8 and 4–8, see above ad vss. 4–8.

As Ge (n. 9) points out (flg. Ludwig), the subject of this vs. must be the ritual fire, often compared to an axe (see, e.g., comm. ad IX.67.30). The hortatory impvs. *új jāyatām* (a), *vī rocatām* (c) mark the kindling of the fire in preparation for the ritual day.

As Ge notes (n. 9b), *ṛtāsya sudúghā* recalls VII.43.4 *ṛtāsya dhārāḥ sudúghā dúhānāḥ*. However, in VII.43.4 the Saṃhitā reading *sudúghā* represents acc. pl. *sudúghāḥ*, which is the obj. of *dúhānāḥ*, whereas here *sudúghā* is nom. sg. In VII.43.4 I take “the good milkers, the streams of truth” to be the hymns that the gods milk for themselves (from the poets). This is in general agreement with Ge (n. 4b). Here, though he cross-references VII.43.4, Ge identifies the *sudúghā* rather as the Schmalzlöffel. I do not see why. It can easily be, once again, the praise hymn recited as the fire is kindled. Or, perhaps, the stream of ghee that will cause the fire to flare up and shine out.

The second hemistich with its focus on the blazing fire compared to the sun is a culmination of the sun-finding theme found in vss. 1, 4, and (slightly disguised) 8; it turns out that the “sun” is in fact the ritual fire.

This hemistich also contains an echo of Svarbhānu, in the phrase *bhānúnā ... svār ná*, split between two clauses (in my tr. and Ge’s). Recall that, by my analysis (Hyenas), Svarbhānu is an epithet of Agni.

This hemistich also provides a sustained ex. of sibilant alliteration: ... *śúcīḥ, svār ná śukráṃ śusúcīta sátpatīḥ*, with three of the words also an etymological figure (*śúcīḥ ... śukráṃ śusúcīta*).

X.43.10–11: For these repeated vss. see comm. ad X.42.10, 11.

X.44 Indra

X.44.1: The stem *svápati-* occurs three times in the RV, all in X (here, and X.27.8, 31.4). Gr glosses ‘sein eigener Herr’, reasonably enough (sim. AiG II.1.264 ‘eigener Herr’). Other *svá-* cmpds. have the sense ‘(having) self/own-X’, and the well-attested stem *sva-rāj-* ‘independent king’ (lit. ‘ruling by oneself’?; see Scar 450 for disc. of the possibilities) is a superficially good parallel. We might then gloss *svá-pati* similarly as ‘independent lord’, via ‘lord of himself’ or ‘lord by his own (power)’? However, it should be noted that all other *svá-* cmpds in the RV are adjectives (generally bahuvr. like *svá-yaśas-* ‘having one’s own glory, self-glorious’), including probably *sva-rāj-* originally, and so there are in fact no direct parallels to the noun *svá-pati-*. And, though Scar also gives *svápati-* as a virtual synonym (“gleichbedeutend”) of *svarāj-*, in context *svá-pati-* is not as clear as we might hope: the referent of *svá-* is not necessarily the *-pati-* himself.

Clearest is X.27.8 (if anything in that devilish hymn is clear), which depicts cows straying and following false / other cowherds (in my interpr.; see comm. ad loc.). In the final pāda the question is asked *kíyad āsu svápatís chandāyate*, in my tr. “For how long will their own lord find pleasure in them [=cows]?” with the referent of *svápati-* being Indra. In this passage the most natural interpr. of *svápati-* is not ‘his own lord, lord of himself’, but rather ‘their own lord’, referring to the cows. Although Ge’s interpr. of the larger context is different from mine, he tr. sim. “ihr Eigentümer.” There are (at least) two plausible ways in which *svá-* could have acquired this unexpected sense in this cmpd, and both may have contributed. On the one hand, *svá-* in this cmpd may not have the adj. sense ‘self/own’ but rather be based on the nominalized neut. *svám* ‘own property’, which is marginally attested in the RV (see VI.28.2 *ná svám muṣāyati* “he [=Indra] does not steal the own property [of the sacrificer]”). An analysis of *svá-* as ‘own property’ in this cmpd seems to underlie Thieme’s (Fremdling, p. 12) “der Herr des Eigentums” (master of the property) in X.27.8. Since the “own property” here is in fact the cows, it is not difficult to reinterpret the referent of *svá-* as the cows themselves: “lord of the property of/in cows” = “lord of the cows” → “the cows’ own lord.” The other contributor may be the fact that differently accented *svapati-* is a bahuvrīhi, found once in the AV: AVŚ VIII.6.16 *yá imāṁ samvívṛtsaty, āpatih svapatīm strīyam*. “... whoever, not (her) husband, tries to embrace (?) this woman who has her own husband” (=AVP XVI.80.7, with *svapatīm*). Here, once again, the *sva-* is not coreferential with *-pati-*, but refers to the woman. (The use of *-pati-* not *-patnī-* in this fem. bahuvrīhi is noteworthy [see AiG II.1.90 with Nachtr.]; I would attribute it to the desire to match immediately preceding *āpati-* in this polarized expression.) This split reference, with *sva-* not coreferential with *-pati-*, might help enable split ref. in our non-bahuvrīhi.

The other two RVic occurrences of *svápati-* are harder to interpr. or, rather, less contextually defined and more amenable to a variety of interpr. In X.31.4 the referent of the whole cmpd. is Agni (or rather, he is the most likely referent of the pāda; see comm. ad loc.). He is also identified there as *nítyah ... dāmūnāḥ* ‘constant / one’s own ... master of the house / domestic leader’. The default interpr. of *svápati-* as ‘self-lord, lord of himself’ could work here: Agni functions independently; at least once (I.36.7) he is called *svarāj-* and is frequently characterized as *svadhāvant-* ‘possessing autonomous power’. On the other hand, Ge tr. *nítyah ... svápatiḥ* as “Der ständige Eigentümer (owner)” without comment; such a tr. might point to an interpr. of *svá-* as ‘(own) goods’, as discussed above. And this is certainly possible: Agni often holds sway over material goods; such goods could be his own or those of the household. And finally Re (EVP XVI.129) remarks that *nítya* reinforces *sva* in *svápati-*. I find this an appealing

suggestion, though it requires a small detour through *nītya-*. This adj. can mean both ‘regular, constant’ and ‘one’s own, own proper’; the former is generally the sense continued in later Sanskrit, but the latter is quite common in the RV, esp. used of relatives and friends. See, e.g., nearby X.39.14 *nītyam ná sūnúm tánayam* “our own son who continues our lineage.” Since each household has its own fire, *nītya-* ‘own proper’ is an appropriate modifier of this household fire. If Agni in X.31.4 is “our (own) proper” (*nītya-*), he can also be “the lord of ourselves / our own lord” (*svá-pati-*), and this interpr. is what is reflected in the publ. tr. – though see the revisions to the whole vs. in comm. ad loc.

Finally, the occurrence of *svápati-* in our vs. Here the various alternative possibilities for the interpr. of this cmpd. are unrestrained by context. The referent is Indra. He can be ‘self-lord, lord of himself’ just as he is often *svarāj-* and operates with and possesses *svadhā-*. Certainly his control of all sorts of power is emphasized in the vs. But he could be ‘lord of goods/possessions’, since his power over material goods is constantly on the poets’ minds. And, finally, he can be ‘(our) own lord’, whom we are urging to come to our soma sacrifice. This last alternative underlies the publ. tr., but I would not now rule out either of the other two. Indeed all three may be meant simultaneously.

In bc Indra’s power and energy are expressed by three etymologically independent words beginning *tu/v*: *tūtujānās túviṣmān / pratvakṣāṇāḥ*.

The sense of *dhármaṇā* is, as often, hard to pin down, but it needs to be evaluated in conjunction with the same word in 5d. I tr. it here as “according to his own principle,” which is shorthand for something like “his foundational essence,” the qualities and acts that define Indra. Indra is in a way the quintessence of power, which is his *dhárman-*, his “foundation.” And his actions projecting this power, as described in bcd, are done according to this foundational principle.

The *vísavā sáhāṃsi* over/beyond which Indra projects his vigor are presumably those of others.

X.44.2: The parallelism of the two *su-* cmpds in pāda a (*suṣthāmā ... suyámā*), echoed by *supáthā* in c, is broken by my tr. “provides a good standing place ... easy to control,” but attempts to produce parallel tr. came out stilted.

X.44.3: This vs. recycles some previous material. Perhaps most obvious is the adj. *prátvakṣasam* beginning c, which matches the part. *pratvakṣāṇāḥ* beginning 1c. Otherwise, *nṛpátim* in a echoes *svápatiḥ* in 1a (though in a slightly different metrical position) and matches *nṛpate* in 2b; *vájrabāhum* recalls the clause in 2b *mimyaḥkṣa vājraḥ ... gābhastau* “your mace is attached to your fist”; *taviṣāsaḥ*, used of his horses in b, is etymologically related to *túviṣmān* modifying Indra in 1b, and *sadhamādaḥ* (d) echoes *mádāya* (1a); Indra as bull (*vṛṣabhám*) in c recalls his bullishness (*vṛṣnyena*) in 1d. There are also the vs.-internal echoes *indravāhaḥ* (a) ... *vahantu* (d) and *ugrám ugrāsaḥ* (b).

The sole finite verb in the vs., *vahantu*, is postponed till the last word, while its etymological-twin subject *indravāhaḥ* is the first full word; in between is an alternating sequence of nom. pls. and acc. sgs. that further specify the two parts of the cmpd. *-vāh-* and *indra-* respectively. The publ. tr. dampens this poetic effect by inserting two extra copies of the verb “let ... (them) convey,” in pādas a and b. These should, at the least, be put in parens.

X.44.4: The poet plays a few tricks on his audience in this vs., in part arising from the repeated material noted in the comm. to vs. 3. The first is the use of *pátim* in pāda a: since Indra was identified as some variety of *-pāti-* in each of the first three vss., our expectation, on encountering *pátim* as the 2nd word in this vs., would naturally be that its referent is Indra as well. The next two acc. sgs., the hapax *dronasācam* ‘companion of the cup, accompanying the cup’ and *sācetasam* ‘like-minded’ do not rule out this interpr.: the first is liable to various interpr. and the second is used once of Indra (I.61.10). But the beginning of b, *ūrjā skambhām* “the prop of nourishment,” would begin to call our identification into question, and the 2nd sg. verb *ā vṛṣāyase*, which should have Indra as subj., pretty much demolishes this hypothesis and forces us to produce another referent, namely soma.

The verb itself is ambiguous. The denom. stem *vṛṣāyā-* generally means ‘act the bull’; in this sense it is entirely medial, and the voice of our occurrence thus conforms. Indra is often the subject, and he is the likely subject here, and his association with bulls and bullishness is already prominent in the first part of the hymn (1d, 3c). However, several factors complicate this picture: the other occurrences of this stem do not take the acc., but most of the first hemistich here consists of an acc. phrase. And none of the denom. forms appear with the preverb *ā*. There is another, less well-attested stem *vṛṣāya-*, belonging to the root *√ vṛṣ* ‘rain’, attested once in as an act. trans. *vṛṣāya* ‘make rain’ (X.98.1) and quite possibly in the middle in the meaning ‘rain’ in IX.71.3 (so Gr, Lub; I actually consider it a pun, like the similar form here [see below]). Perhaps more to the point, the zero-grade thematic stem *vṛṣa-* (6th cl. pres.? or them. aor.? – see Kü 474–77 [aor.]; Hill, Aor.-Präs 226–29 [pres.]) is also exclusively middle (mostly 2nd sg. impv. *vṛṣasva*) and exclusively found with the preverb *ā*. Although Kü argues that this stem belongs with the dominant *vṛṣāyā-* stem and means ‘sich erheben, sich ermannen’ (see also Baum, Impv. 130, ‘take courage’), Hill points out that it is almost always found in soma-drinking contexts; he assigns it to *√ varṣ* ‘schütten’ (= *√ vṛṣ* ‘rain’). Moreover, it can take an acc. (but only III.60.5) or gen. (regularly, e.g., X.116.1, 4) complement referring to soma, and several times also appears with the loc. *jaṭhāre* ‘in the belly’, as the destination for the soma (I.104.9, X.96.13). Such complements are not compatible with the ‘take courage’ interpr., as far as I can see. The preponderance of evidence thus favors a connection with *√ vṛṣ* ‘rain, pour’, with soma metaphorically standing for rain. Taking account of the middle voice and the *ā*, I tr. ‘drench yourself (in [liquid])’. The *ā vṛṣāyase* in our passage tracks *ā vṛṣasva* closely, with the acc. phrase referring to the soma (see above). The VP also contains the loc. *dharúṇe*, which can be parallel in function to *jaṭhāre* in the *ā vṛṣasva* passages. Ge (n. 4b), flg. Sāy., suggests it means “die Grundlage in Indra, d.h. sein Bauch”; see also Scar (590 and n. 837). I now find this interpr. of *dharúṇe* appealing, against my colorless “upon its support,” and would now slightly emend the tr. to “drench yourself in the lord ..., (pour it) into your ‘support’.” I have argued for a similar usage for the abstract *dhāman-* ‘foundation, fundament’, transferred to a body part, in VIII.92.24 (Vedic Body Parts, 81–83), also in soma-drinking context. See comm. ad loc.

To sum up, I consider *ā vṛṣāyase* here to have a double meaning and a double stem affiliation: on the one hand, it belongs with other forms of *vṛṣāyate* meaning ‘acts the bull’, a sense supported by the other occurrences of bull words in the preceding vss. But more dominant is the sense ‘drench yourself, rain/pour into your self’, parallel to *ā vṛṣasva* belonging to *√ vṛṣ* ‘rain’. To bring out the double sense I would slightly alter the tr. to “you act the bull / drench yourself ...”

Note the phonological echo in (*drona*)*sācam sāce(tasam)*; *drona-* and *dharúṇa* also respond to each other.

The image of Indra's physical assimilation of soma is continued in pāda c with *ójaḥ kṛṣva*: “make it your might / make its might your own,” with the middle voice emphasizing the internalization of the soma and its power – as well as *sám grbhāya tvé ápi* “take it entirely within you.”

Despite some problems it seems capricious to separate *kenipá-* here from *ākenipá-* in IV.45.6 and the *āke-* in that cmpd from *āké* in II.1.10. For *āké* as ‘in der Nähe’ see Gr s.v. and AiG II.2.519 (contrasting with, e.g., *parāké* ‘in der Ferne’). The unverbated form is found in *ākenipá-* in IV.45.6, and our *kenipá-* appears to be the result of false segmentation of this cmpd. (see, e.g., AiG II.2.744). Although the sandhi context here, *áso yáthākenipānām* in continuous text (analyzed by Pp. as *yáthā kenipānām*), would technically allow an analysis *yáthā *ākenipānām* matching IV.45.6 *ākenipá-*, this is unlikely because of the caesura flg. *yathā*, as Old points out. Nonetheless some such ambiguous context probably set the stage for the false segmentation. Assuming that *nipá-* derives from *ní√pā* ‘protect’ (whatever the contribution of the preverb *nī*), note that that lexeme is found with contrastive locales in X.63.16 *sā no amā só áraṇe ní pātu* “Let it [= ‘well-being’ *svastí-*] keep guard over us at home and in a foreign place.” As to who “those who keep watch nearby” are, I suggest the patrons, although it could be some other group in the relevant Ārya community.

X.44.5: The first hemistich contains a pseudo figura etymologica, which is esp. clever because the figure is displaced: the two words belong to different clauses (separated by the pāda boundary), but the second, the noun, evokes its gapped twin as the object of the preceding verb. The relevant material is ... *ā hí śáṃsiṣam, svāśiṣam bhāram ā yāhi* ... The 1st sg. aor. *ā ... śáṃsiṣam*, to *√śams*, unusually lacks an overt object. It also unusually appears with the preverb *ā*, which is otherwise rare with this root in the RV. The verb is immediately followed, across the pāda boundary, by the bahuvrīhi *svāśiṣ-* ‘having good prayer(s)’, belonging to the root *√śās* and containing the root noun cmpd *āśiṣ-* ‘prayer’. The bahuvrīhi here modifies *bhāram* ‘offering, what is borne (forth)’: this physical offering is accompanied by good prayers. This NP is the goal of the impv. *ā yāhi*. The juxtaposition of the two clauses suggests that *ā ... śáṃsiṣam* gapped its original object, which can be recovered from the immediately following bahuvrīhi: *ā ... śáṃsiṣam *āśiṣam / āśiṣaḥ* “I have pronounced my prayer(s).” This would look phonologically like a figura etymologica, but it of course is not, since *√śams* and *√śās* are distinct roots. Their apparent etymological relationship is furthered by the use of the preverb *ā* with the verb, matching the preverb in the root noun. The publ. tr. assumes a more realized figure than the Skt. text presents: it should read “I have expressed (my prayer),” with parens. (Ge’s rendering of *ā ... śáṃsiṣam* “denn ich rechne darauf” doesn’t seem to fall within the usual semantic range of *√śams* and can, I think, be ignored.)

The odd English “your cups cannot be ventured against” would be better as “your cups are inviolable.”

X.44.6: Ge suggests that pāda a contains the image of a race; this seems reasonable, and the winning of fame that the invocations achieve for themselves (note the middle *ākṛṇvata*) fits the picture well. I assume that the separate *devāhūti-* originate from separate sacrificers at distinct sacrifices, though if so, how is it that they all seem to win fame?

In any case the second hemistich provides a contrasting picture of sacrificial failures, memorably expressed in the striking “not able to board the ship of sacrifice.” Interpretation of this hemistich is considerably hampered by the impossible (Old “hoffnungslos”) hapax *képayah*,

which presumably modifies or indeed is the plural subject of the 3rd pl. verbs in the two clauses, *śekūḥ* and *ny àviśanta*—and therefore presumably belongs to a stem *képi*-. I have no solution to this word. Gr's connection to \sqrt{kamp} 'tremble' (see also Whitney's [Roots], tentatively) with the gloss 'zitternd, zappelnd' founders on the phonology, not to mention the fact that the root \sqrt{kamp} is almost exclusively of late attestation (though see Gotō, 1st Cl. 110–12 for Kāṭhaka-Kap. attestations of the present stem); Kü (510) keeps the tr. ("die zappelnden (?)"), though presumably as a placeholder. No other suggestion (see Old ad loc., EWA s.v.) is at all compelling. I do think that, as often with impenetrable hapaxes, it was contextually generated, at least partially. First note that the problematic hapax *kenipānām*, discussed at length above, is only two vss. previous (4d), and our word here, *képayah*, shares with that preceding one an initial *ke* (/ké) and a *p*, which seems to begin what might as well be the root syllable. I find it hard to believe that there's not some felt connection between *kenipānām* and *képayah*, esp. since they are both isolated. Note also that two verses later (8b) the hemistich-final *kopayat* shares phonology with *képayah* (6d) in the same metrical slot. These observations get us no closer to a meaning, a morphological analysis, or an etymology, but they do situate the problematic word in a context that favors its shape. The publ. tr.'s "*non-protectors (?)" is not a serious attempt at any of the three issues just raised, but a mild suggestion that this word may be meant to be a negative contrastive play off the positive *kenipānām*.

X.44.7: Doubled and doubly accented *evaívá* occurs only here and in IV.54.5 as far as I can tell. In the latter passage it correlates with doubled (but singly accented) *yáthā-yathā*. In IV.54.5 the second accent of *evaívá* is secure, but here, as Old points out, the Saṃhitā text is ambiguous (*evaívāpāg*), and the second accent is dependent on the Pp analysis. The reason for the doubling in this vs. isn't clear to me; I doubt that it responds to the single *evā* in 4a; as shown below, in the rhetoric of this vs. it corresponds to *itthā*, which begins the 2nd hemistich, but that form isn't doubled.

Pāda b is 11 syllables and, courtesy of the final *āyuyujré*, has a Triṣṭubh cadence. Gr (also tentatively Arnold) suggests reading **āyuyujrīré*, which would fix the problem. However, Old sensibly rejects the emendation, esp. in this hymn of mixed Jagatī and Triṣṭubh vss. See comm. ad IX.70.1.

Ge (n. 7) suggests that this vs. continues the thought of vs. 6, esp. 6ab. This seems correct. The apparent racing motif of 6ab is made more literal by the badly yoked horses in 7b, which cause their owners to fall behind. Beyond this there is no consensus on who is being contrasted with who(m), because there is no consensus on the sense in context of the ambiguous paired words *āpare* and *ūpare* or *āpāk* and *prāk*, or whether the first pair are nom. pl. m. or loc. sg. Ge takes the first pair as (near) synonyms (später and künftig). Since this makes it difficult to get a stark contrast between 7ab and 7cd, he decides the contrast is instead between the previous generations, identified as *prathamāḥ* in 6a, and new generations, referred to by *āpare* and *ūpare* in 7a and c. While *āpāk* and *prāk* he takes as opposites (zurück- and voraus), referring to different outcomes of ritual invocations. The point, he thinks, is that just as in the past (6) the results of invocations of the gods were variable (successful in 6ab, not in 6cd), so also are they now (unsuccessful in 7ab, successful in 7cd). Old, focusing on *āpāk* and *prāk*, takes these as cardinal directions, west and east respectively; for him the vs. concerns only one group of people, who are currently (7cd) doing well and facing east (the region of light), but who, as evil-doers, should end up facing west (the region of darkness). It is not clear to me what he does with *dāvāne* in c, which should problematize his interpr. of the people in that pāda as malevolent. Kü (407) also

takes *ápāk* as ‘westlich’, but since he does not consider the 2nd half of the vs., it is not clear what contrasts he sees there.

Another problem for the interpr. is the lack of *syntactic* parallelism in the two halves, contrasting with the strict pairing of *lexical* items in pādas a and c. Lexically the two pādas line up exactly:

a:	<i>itthā</i>	<i>ápāk</i>	<i>ápare</i>	<i>santu</i>	<i>dūḍhyàḥ</i>
c:	<i>evaívā (yé)</i>	<i>prāk</i>	<i>úpare</i>	<i>sánti</i>	<i>dāvāne</i>

But syntactically the two half-verses are skewed: ab consists of a main clause (a) and a rel. cl. dependent on it (b), but cd is, at least superficially, entirely made of dependent clauses, signaled by *yé* in c and *yātra* in d. We should instead have expected **(té) prāk úpare *santi* to correspond with *ápāg ápare santu*. (Though note that 6c is also a relative clause; however, 6d is its corresponding main clause.) Old is troubled by the skewed syntax and considers several possibilities – including the one that I adopt, which he rejects.

Without sorting further through the various proposed interpr. of this vs., I will set out my choices: 1) I take *ápare* and *úpare* as nom. pl., not loc.; 2) I do not consider them synonyms (as Ge does), though there is overlap in part of their semantic ranges in other contexts; instead, they are here functional opposites: *ápara-* ‘behind’ and *úpara-* ‘nearer, close by’; 3) I do not take a and c as parallel single clauses, despite the superimposable line-up of the parallel words, but split c into two: a nominal relative cl. *yé prāk úpare* “(those) who are nearer and facing forward,” with the main clause beginning with *sánti*, hence its accent: “they are (ready) to give.” There is no generational split (in the Ge mode) between vss. 6 and 7; rather both vss. present us with the same picture, of ritualists (6ab, 7cd) and their unsuccessful rivals (6cd, 7ab). As for d, I think it’s a temporal/circumstantial rel. -- the good guys are ready to give when the ritual patterns etc. are in place -- i.e., at the sacrifice. Ge (n. 7d) takes *yātra* as standing for *yéṣām* and pāda d as concerning the Dakṣiṇā; his interpr. depends on a dubious (to me) interpr. of *váyunāni* as Rechtwege.

X.44.8: We now turn to the heroic deeds of Indra, expressed by an interesting series of tenses. The first deed, giving foundation to mountains and plains, is expressed with an augmented imperfect (*adhārayat* 8a)). The actions performed by Heaven (b) are in the injunctive (*krandat ... kopayat*), while Indra’s propping apart of Heaven and Earth (c), usually treated as another of Indra’s cosmogonic deeds, is in the present (*vī śkabhāyati*). I do not quite understand the present, unless it is a way to transition to the current ritual moment in d, where Indra himself recites (in the present *śamsati*). Or perhaps the separation of the two spaces is considered to be a daily action, since the disjunction between earth and heaven only becomes visually clear at dawn, every dawn. In any case the injunctives in b mediate between the imperfect of a and the present of c.

The depiction of Indra as performing like a poet/reciter at the sacrifice is striking; see Ge’s n. 8d for some parallels.

X.44.9: The hook or crook (*aṅkuśá-*) that the poet presents to Indra most likely stands for the hymn, as Ge points out (n. 9a), but the exact employment of this metaphorical implement requires discussion. The word appears 3x in the RV. In VIII.17.10 Indra is urged to use a long (*dīrghá-*) *aṅkuśá-* to hold out (*prayāchasi*) goods to the sacrificer. Although it is not clear from the passage how the long crook will enable Indra to hold out goods, the image must be a compressed one, which is illuminated by the use of the related word *aṅkín-* ‘having a

hook/crook’ in III.45.4. There Indra is urged to shake down goods for us as if shaking a tree for its fruit: the hook allows its user to get purchase on the branch: *vṛkṣām pakvām phālam aṅkīva dhūnuhīndra ... vāsu* “As a man with a crook shakes a tree for ripe fruit, o Indra, shake (us) goods ...” In VIII.17.10 the tree and the fruit and their shaking by means of the crook must be understood. A long *aṅkuśā-* and a tree branch (and the root \sqrt{yam}) are also found in X.134.6, which seems to contain the same image, this time with the mediation of a goat: *dīrghām hy aṅkuśām yathā śaktim bībharsī mantumaḥ / pūrveṇa maghavan padājo vayām yāthā yamaḥ* “Because you carry your ability like a long crook, you rich in counsel / as a goat (holds) a branch with its forefoot, you will hold (a branch? fruit? goods?) (with your ability/crook), o bounteous one.” In the 2nd half of the verse the crook must be understood in the instr. parallel to the goat’s forefoot, the instr. *padā*, with which the animal, on its hind legs, pulls the branch down and keeps it steady with its forefoot in order to eat the leaves and bark.

But in our passage, despite the presence of a hoof or hooves (*śaphārūj-*), it seems impossible to extract the tree branch / fruit / goat+forefoot image; instead Indra is aggressively wielding the *aṅkuśā-* against opponents identified as *śaphārūj-* ‘breaking (with) the hoof’(?). Indra uses the (metaphorical) *aṅkuśā-* to break or shatter them in turn, also with the root \sqrt{ruj} . This alternative use for the *aṅkuśā-* allows us to formulate a clearer picture of the tool. Since something like a shepherd’s crook ending in a semicircular hook would be an inefficient tool to use for breaking/shattering, the two uses of the *aṅkuśā-* in the RV suggest that the single tool incorporated two different devices (a sort of rudimentary Swiss Army knife), a hook and something suitable to use for breaking – a combination that exactly fits the Indian elephant goad, not coincidentally called an *aṅkuśa* (modern *aṅkus*, etc.). This stick-shaped device ends in a point, but has a hook protruding backwards from the handle right behind the pointed end. (See numerous images on the internet.) At least according to (quite possibly suspect) discussion in Wikipedia, there is archaeological evidence for these tools in the 2nd half of the 1st millennium BCE, and, judging from the many images on the web, the shape of the elephant goad has remained stable for the ensuing two and a half millennia, which might suggest that even prior to its emergence in the archaeological and visual record, its form was set. (On the *aṅkuśa-* see also Trautmann, *Elephants and Kings*, 65–76.) So here Indra must be goading / ramming / sticking the *śaphārūj-* with the end of the *aṅkuśā-*, while in the other two occurrences he is using the hooked part to grab and shake a tree branch. A nice example of textual confirmation of the visual form of a piece of physical realia. We do not have to suppose the device was specialized for elephants at this period; any goadable animal would do.

Let us now turn to the object of the goading / breaking in this passage. The root-noun compd. *śaphārūj-* is found once elsewhere in the RV, in X.87.12, where it qualifies a sorcerer (*yātudhāna-*) against whom Agni is urged to act. But neither of these passages allows us to narrow down what heinous action these enemies perform. Although the publ. tr. (indeed most tr.) render it as a root noun compd with ACC first member (‘hoof-breaker’), there are in fact a number of possibilities, laid out in some detail by Scar (460–61), who does not choose among them. The uncertainty of the meaning is tied up with a formal problem. The Pp analyzes the compd as *śapha-ārūjah* (likewise the form in X.87.12) (see also Gr s.v.), with the verbal lexeme \sqrt{ruj} , which is found elsewhere. The Pp also analyzes the opening of the pāda, *yēnārūjāsi*, as *yēna ārujāsi* with the same preverb-verb combination. But root noun compounds with a nominal 1st member, esp. with object function, and a preverb+verb root combination are rare to non-existent – PREVERB + ROOT formations are of course very common; NOUN + ROOT formations likewise—but the two types are not ordinarily combined. See Scar (649 and n. 921) and my 2020 Fs. Lamberterie

article (p. 486), where I argue that a preverb has been gapped by rule in precisely this type of underlying NOUN + PREVERB-ROOT formation. (See also my forthcoming article on the limits of Indo-Iranian compounding.) This fact about root noun cmpds makes the *-ā* in *śaphārúj-* a problem, one that already exercised Wackernagel (AiG II.1.213) about precisely this form. Obviously in order to avoid positing a preverb between the nominal 1st member and the root, Wackernagel divides the cmpd as *śaphā-rúj-* and hesitates between taking the *-ā* as an instr. ending (‘breaking with hooves’) or as due to compositional lengthening. Scar considers both those possibilities, as well as that *śaphā* could be a collective or a dual (both as objects of *-rúj-*). He does also consider the Pp. analysis, with the lexeme *ā√rúj-*, but with the proviso that *ārúj-* would have to have been deeply anchored in the poet’s Wortschatz to allow the violation of root noun cmpd norms. Scar does not say anything about the verb that governs the cmpd in our passage, which, as we’ve seen, is taken by the Pp as *ārújāsi*. If this analysis of the verb were secure it would strongly suggest that the preverb is also incorporated in the root noun cmpd contrary to usual practice. However, the sandhi context is ambiguous: *yénārújāsi* could just as well be cut *yénā rújāsi*, with the final lengthening of *yénā* that is far from rare (acdg. to Lub 21x, v. 98 *yéna*, but the numbers of *yénā* could well be higher, since his *yéna* list contains numerous examples in which the rel. is combined with a following vowel in sandhi).

I can claim no more certainty than Wackernagel or Scar, but given the general ban on NOUN-PREVERB-ROOT combinations in root noun cmpds., I think the Pp. analysis of the cmpd as containing *ā√rúj* is unlikely, and we must find another way to account for the long *ā*. I also think that the finite verb in the same pāda lacks the preverb. For the cmpd. I am at least open to the idea that *śaphā-* is an instr. and the cmpd means ‘breaking/shattering with a hoof / hooves’. The use of an animal body part as a weapon could associate the sorcerer with the bestial and the primitive (as in other vss. concerning the *yātudhāna-* in X.87 at any rate)—though I am perhaps too influenced by the Western Christian image of cloven-footed Satan. In our passage, since Indra is urged to use an (elephant) goad against the *śaphā-rúj-*, the enemies might again be considered animal-like (though not elephants obviously, since they don’t have hooves). In any case, as an alternative tr. I would consider and indeed favor “against those who break with their hooves.”

X.44.10–11: For these repeated vss. see comm. ad X.42.10, 11.

X.45–47: The first two hymns (45–46) are dedicated to Agni and attributed to the same poet, Vatsaprī Bhālandana. As Old argued (1888: 236 n. 2), the next one, X.47, dedicated to Indra, belongs here as well on the basis of structural considerations: the three appear between groups identified by the Anukramaṇī as trios and also share Triṣṭubh meter (though on X.46 see below), against the triads on each side with Jagatī. The Anukramaṇī names the poet of X.47 as Saptagu Āṅgīrasa, but this has simply been extracted from vs. 6, where the two halves of the supposed name are qualifiers of the god Bṛhaspati.

The poet of X.45–46, Vatsaprī Bhālananda, is also identified by the Anukramaṇī as the poet of the first of the trimeter hymns in Maṇḍala IX, IX.68. The last hemistich of IX.68 (10cd) is identical to that of X.45 (12cd). Old (1888: 253) explicitly associates IX.68 with the Xth Maṇḍala and, more narrowly, X.45. IX.68 is concerned with the double birth of Soma and hidden versus visible forms of the same god, and these themes are important in X.45 and X.46, esp. the former, which treats the triple births of Agni.

X.45 Agni

X.45.1: The three births of Agni. The ordinals *prathamám* ‘first’, *dvitīyam* ‘second’, and *trtīyam* ‘third’, distributed through the first three pādas mark this structure well, but note that there is syntactic variation. The first pāda begins with ABL + POSTPOS. (*divás pári*), with close sandhi; in the second the ordinal intervenes in the same syntactic construction (*asmát ... pári*); whereas in the third the location of the birth (*apsū*) substitutes for the source. In b the form of Agni is identified explicitly as Jātavedas; in c the ‘waters’ point to Apām Napāt. The heavenly source of the first birth, in pāda a, suggests Agni Vaiśvānara, the solar form of fire, and *vaiśvānarā-* appears in the last vs. of the hymn (12b), sketching an implied ring.

The second hemistich is structurally ambiguous; see Ge’s (n. 1cd) and Re’s extensive discussions. On the basis of pādas a and b, where Agni is in the nominative, we expect the third birth also to be couched in the nominative, with the verb *jajñe* in pāda a serving for both b and c. This expectation seems to be supported by nom. *ṛmanāḥ*, an epithet characteristic of gods (mostly Indra, however). Re in fact renders the pāda this way, ending the cl. before *ājasram* at the end of c: “une troisième fois (il est né) dans les eaux, (le dieu) qui pense en seigneur.” The *ājasram* must be an acc., object of the part. *īndhānaḥ* ‘kindling’ that begins d, and so the Agni reference must have shifted to the accusative before the end of c. However, it would be awkward to have a nominative and an accusative, adjacent to each other in the same pāda, both referring to Agni, with a clause break between them. This awkwardness is greatly increased by the near paraphrase of 1cd in 3ab *samudré tvā ṛmánā apsv àntāḥ, ... idhe ...* “In the sea, in the waters has the one with a manly mind kindled you,” where *ṛmánāḥ* must refer to a priest-figure, not Agni, who is unambiguously the acc. *tvā* – a paraphrase that gives Re pause. (As an aside, *ṛmánas-* also refers to a human ritualist in X.92.14, by my interpr.) It therefore seems best to follow Old and Ge in taking cd as a single clause, with an unsigned switch of Agni to the acc. throughout the hemistich and *ṛmánāḥ* qualifying the priestly subject of the participle and finite verb in d.

The verb of d, *jarate*, could belong to either ‘awake’ or ‘sing’; Ge and Re opt for the former, but, with Gr and Gotō (1st cl., 154), I assign it to ‘sing’. Very little rides on this decision.

X.45.2: The four pāda-initial *vidmā* ‘we know’ produce a strong impression of certainty.

Both Ge and Re supply ‘forms’ with *tredhā trayāṇi* “threefold triads.” This seems unduly limiting: the poet is referring to different sets of three that pertain to Agni. Most obvious, given the preceding vs., are his three births, but surely any mention of three and Agni will evoke the three ritual fires. Since *trayāṇi* is pl., we might hope for more than these two triads – three to be exact, but the third is harder to identify: perhaps it’s an oblique reference to the service to the fire at the three soma pressings. Or perhaps to the ritual fire, the household fire, and the cremation fire (or the wildfire), or to the sun, lightning, and the earthly fire. In any case the neatly numbered triads contrast with pāda b *dhāma víbhṛtā purutrā* “domains dispersed in many places,” which I think refers to the fire found in every household; the *purutrā* indicates that there is no limit placed on the number. (For an almost identical expression, see X.80.4; see also III.55.4 and comm. thereon.)

The “highest hidden name” in c is implicitly single, thus contrasting with the multiplication of Agnis in pādas a and b. I don’t know if we are meant to identify this name, but it might be Vaiśvānara, as I suggested also for 1a. The appearance of this name in the last vs. (12b) would indicate that we are displaying the knowledge we assert in this vs.

Pāda d, concerning Agni's source, returns us to vs. 1, particularly the opening phrase *divās pári* "from heaven."

X.45.3: As noted ad vs. 1, the first hemistich of this vs. is a close paraphrase of 1cd. However, the vs. as a whole seems to reverse the neat progression of births in vs. 1. The first pāda here concerns the kindling in the waters (=1c); in our c the ordinal *ṭṛtīya-* opens the pāda, as in 1c, but in the loc., modifying *rājasi* 'realm'. The other occurrences of *ṭṛtīya- rājas-* (IX.74.6, X.123.8; cf. also IX.86.27 *ṭṛtīye prṣṭhé ádhi rocané diváh*), insofar as they can be interpr., seem to refer to heaven, or the highest part of heaven, and so it seems likely that cd here refers to Agni's residence and growth in heaven, which would then correspond to 1a. The middle pāda, b, would thus seem to match the birth in between, found in 1b, but the match is not exact if 1b depicts the kindling of the fire on the ritual ground. Ge (n. 3b) identifies the "the udder of heaven" (*diváh ... ūdhan*) as a cloud, though this is disputed by Lü (390–91), who wants to see yet another Himmelsquell. Ge's cloud would at least place this kindling in the midspace. But as often these riddling locales are hard to penetrate. Re thinks there are only two events in this vs. – Agni, residing in the waters (a), is kindled in b; Agni residing in heaven (c) is raised by buffalo in d. But the parallelism with vs. 1 favors a trio.

Buffalos, Agni, and the lap of the waters are found together in two other passages, neither of which is much help with this one (or vice versa). In VI.8.4 unidentified buffalos "grasped" Agni in the lap of the waters (*apām upasthé mahiṣā agrbhnata*); in X.8.1 Agni is himself the buffalo, but the verb is √ *vṛdh* as in our passage here: *apām upásthe mahiṣo vavardha*. The only possible clue in these passages is that VI.8.4 concerns Agni Vaiśvānara in particular (VI.8.4cd), and if our cd concerns the birth/growth in heaven, this would be (as noted above) Agni as Vaiśvānara. Also relevant may be X.5.1 also treating the birth of Agni in enigmatic terms.

X.45.4: I would now change my tr. of *ákrandat* "has roared" to a simple preterite "roared," flg. immed. on similarly augmented imperfect *avardhan* ending 3d.

With Old I interpr. *kṣāmā* as an elliptical dual; the two world halves of d (*ródasī*) support this interpr. Ge and Re take it as a sg., referring only to earth, presumably following Gr's explanation of the final *-ā* as metrical lengthening. Although the earth is the primary locale for the spreading and "licking" of fire, the rising flames can also be seen as licking at heaven.

X.45.5: *udārā-* is found only here in the RV, though it is fairly common later. Ge renders it 'freigebig' on the basis of later usage, but the usage of the fairly common verbal lexeme *úd√r* in the RV is surely a better comparandum – as in, for example, nearby X.37.4 *yéna sūrya ... , jágac ca víśvam udiyārṣi bhānúnā* "and with which radiance you rouse up every moving creature, o Sūrya" or, with bounties/gifts as obj. (more or less as here), VI.44.12 *úd abhrāñīva stanáyann iyartíndro rádhāmsy áśvyāni gávyā* "Like the thunderer the rain clouds, Indra raises bounties of horses and cattle." It's esp. noteworthy that transitive *iyarti* is found two vss. later in our hymn (7c), with Agni as subject (and smoke as obj.), and the flg. pāda begins with *úd*, though probably to be construed with the participle *ínakṣan*.

Given its accentuation *sóma-gopāh* should be a bahuvrīhi – as I take it (also Old, Re, and Scar [304]), *pace* Gr, Ge. The latter (n. 5b) notes that all commentators take it as a tatpuruṣa, though he reluctantly acknowledges that it could be a bv.

X.45.6: The word order of pāda a favors an interpr. of a pair of GEN – NOUN constructions; so Ge “Das Banner des Alls, das Kind der Welt” (also Gr). This interpr. would also fit well with the chiasitic pair of GEN – NOUN NOUN – GEN that opens the previous vs. (5a). But the very common phrase *vísva- bhúvana-* cuts the other way (so Re as well as the publ. tr.), suggesting that we should take the two genitives together and that this gen. phrase is dependent on *kétuḥ*, with *gárbhaḥ* is to be taken separately. Either interpr. would fit here, and there is little practical difference.

Ge (n. 6cd) identifies the second hemistich as an instantiation of the Paṇi myth. The parallel he cites, I.71.2, certainly concerns the breaking of the Vala cave by the Aṅgirasas, and it is in an Agni hymn. But Agni is not, to my knowledge, elsewhere a principal actor in the Vala affair; he is at best connected by his kinship with the Aṅgirasas and the association of both the Vala myth and Agni with dawn (see, e.g., IV.1, an Agni hymn with an embedded account of the Vala myth). In our vs. I do not know what mythic (or ritual) event is referred to by “he split even the solid rock in leaving it.” The Vala theme recurs in 11cd, where the priests open the cowpen.

X.45.7: I construe *pāvakāḥ* with flg. *aratīḥ* on the basis of the phrase in the paired hymn, X.46.4c *aratīm pāvakām* (a vs. that also contains *uśj-* in its first pāda). Ge/Re/Th (Unters. 35) instead take *pāvakāḥ* with *uśík*; there is precedent for this as well: I.60.4 *uśík pāvakāḥ*, cited by Ge (n. 7a). However, the parallel in X.46, immediately following and attributed to the same poet, should have more weight. Little rides on the decision, however.

X.45.8: I would now take *ḍṛśānó rukmāḥ* as a non-overtly marked simile “appearing (like) a bright ornament,” similar to Ge’s “(Wie) ein Goldschmuck aussehend.” Several parallels adduced by Ge (n. 8a) do have overt similes: IV.10.5 *śrīyé rukmó ná rocata upāké* “For beauty it shines like a gold ornament in the nearness” and VII.3.6 *vī yád rukmó ná rócasa upāké* “when, like a jewel, you glow nearby” (jpb), and *ḍṛśānāḥ* in our passage acts as a de facto simile marker. Note that both the just-cited passages have a verbal form of \sqrt{ruc} making an etym. figure with *rukmá-*, as does our passage, though postponed till the end of b: *śrīyé rucānāḥ*. Dat. *śrīyé* is also found in IV.10.5.

The phrase *durmārṣam āyuh* is variously construed. I take it as acc. extent of time; Re supplies a verb to which it serves as obj.: “(en sorte d’atteindre) une durée-de-vie inoubliable.” Gr seems to take it as a sort of Inhaltsakk. (s.v. \sqrt{ruc} meaning 2 [found only here]: “etwas [A] ausstrahlen, herbeistrahlen”). I’m not sure what syntactic role the phrase is meant to be playing in Ge’s “in unvergesslicher Lebenskraft zur Pracht erglänzend.” Sāy. takes *durmārṣam* as an adv., glossed *durabhibhavam*, separate from *āyuh*. Of these choices I favor my extent of time, as requiring less machinery and also belonging to a recognized syntactic class.

Assuming, contra Sāy., that *durmārṣam* is to be construed with *āyuh*, why is this lifetime ‘hard to forget’ (or, less likely, ‘hard to neglect’)? Most likely unforgettable because of its extraordinary length – or its brilliance? The two other occurrences of this stem are not much help. In IX.97.8 (q.v.) it qualifies *vāṇām* ‘music’, but a “music” that may be likened to the raucous honking of geese – hence either ‘difficult to forget’ or ‘... to neglect’ is possible. In VIII.45.18, acdg. to my emended tr. (see comm. ad loc.), *durmārṣa-* also modifies a sonic element, in that case a call (*imām hāvam*) and means “difficult to neglect” (i.e., to fail to pay attention to), and a number of the verbal forms to the root $\sqrt{mṛṣ}$ also take speech or the like as obj. (I.145.2 *vācaḥ*, III.33.8 *vācaḥ*, VII.22.5 *gīraḥ ... suṣṭutīm*). However, ‘lifetime’ does not fit this semantic pattern.

X.45.10: The transaction envisaged between Agni and his worshiper is more complex than it first appears. Agni is urged to give him a portion in two different things: *sauśravéṣu* (a) and *ukthá-ukthe ... śasyámāne* (b). The second, “in every solemn speech being proclaimed,” identifies it as a ritual act, which suggests that “in (things) deserving good fame” the otherwise unidentified *sauśravá-* falls in the same semantic domain, that of ritual activity (so Ge: “an ruhmreichen Werken”). This further suggests a two-step process: Agni does not directly give the worshiper in question a share in various desirable things (cows, horses, gold, or, in this case [see d] sons), but in the ritual acts that will indirectly yield such things, by pleasing the gods who bestow them.

Although the root noun cmpd *udbhíd-* is attested a robust 8x in the RV, this is the only instance of a verbal form of this lexeme in our text. On the lexeme see comm. ad VIII.79.1, with lit. The literal sense ‘burst out/up’ leads to the metaphorical use ‘be (dramatically) successful, have a breakthrough, get a lucky break’, esp. in gambling context, and that (minus the gambling) must be meant here. Notice that *√bhid* recurs here from 6c, where Agni is subject.

X.45.11: Ge (n. 11cd) again identifies the 2nd hemistich as the Paṇimythos (that is, the Vala myth); see above ad 6cd.

X.46 Agni

Although the Anukramaṇī gives the meter of this hymn as Triṣṭubh, it is actually a mixture of Triṣṭubhs and Virāj (5 / 5) vss. and those that could be either one (depending on distraction or not) or neither. As an ex., consider vs. 1 with three 10-syl. pādas (caesura after 5) followed by a regular Triṣṭubh (likewise caesura after 5). For further on the meter of the hymn see Old, Prol. 91 and Noten ad loc.

X.46.1: The hymn opens with the preverb *prá-*, with no associated verb in the first pāda. Although *prá-* does occur marginally with *√sad-*, which supplies the verb in b (and Gr so identifies this passage), Ge (see his n. 1ab), Re, and the publ. tr. supply a verb of motion with *prá-* rather than construing it with *sīdat* in b. For good reason: in addition to the fact that the expression ‘go forth’, realized by various verbs of motion (esp. *√i-*), is extremely common, elliptical *prá-* is the structural skeleton of the hymn, opening the middle vs. (5) and the last pāda (10d); see disc. ad locc.

The hapax *nabho-víd-* is generally taken as ‘cloud-*knower*’ (Gr, Ge, Re); Scar’s gloss (484) hedges (“des Gewölks kundig; Wolken findend”), but he tr. “Kenner des Nassen” in the passage. Ge explains (n. 1ab) that Agni is at home in the cloud(s), since one of his births takes place there (see X.45.3b, acdg. to Ge, with comm. ad loc.). But are “knowing” and “being at home in” the clouds the same thing? Without any certainty I have opted for ‘cloud-*finder*’, the image being Agni’s smoke and flames rising to the clouds on their way to heaven.

Pāda c (*dádhir yó dhāyi śá te váyāmsi*) is oddly constructed: the rel. cl. / main cl. dyad, with *yáḥ* corresponding to *śá* is of course unexceptionable, but the *dádhiḥ* that opens the pāda is taken by all (Ge, Re, publ. tr.) as the referent of *śá* and the verb substitute in the main cl., with *váyāmsi* as obj. On the one hand, this makes good sense: redupl. nominals of this type regularly show verbal rection; see, for example, the three such phrases in VI.23.4 *babhúr vájram papíḥ sómam dadír gāḥ* “bearing his mace, drinking soma, giving cows,” with the well-attested *dadí-* ‘giving’, rhyme form to our hapax *dádhi-* (though with different accent). Moreover, the VP *váyas √dhā* is very common, also in the root noun cmpd *vayo-dhā-*. But the interpr. represented by,

e.g., the publ. tr. “He who has been established establishes vital powers for you” would be an egregious example of an embedded relative clause, with *yó dhāyī* inserted between the main cl. subject and the rest of that cl., and, further, a tr. literally reflecting the word order would be awkward. I now think that *dādhih* is a predicate nominative with the rel. cl. verb *dhāyī* and that we must supply a verb form of $\sqrt{dhā}$ in the main clause, with subj. *sá*. I would now alter the tr. to “Who has been established as the establisher, he (establishes / has established) vital powers for you.” Although this creates more machinery, I think it better represents the word order.

The agent noun *yantár-* is found with both nominal and verbal rection, even though the suffix-accented form should only take the genitive. Our form takes the acc. here.

X.46.1–3: Vss. 2 and 3 are partially concerned with the well-known myth of the flight and concealment of the ritual fire and his finding and reinstatement. But the ritual here-and-now exerts its oppositional pull: both vss. begin with the near-deictic *ímám* ‘this one here’, pointing to the fire on the ritual ground at the time of recitation. The vss. are also connected by concatenation, which also ties vs. 1 to vs. 2: 1d *vidhaté* / 2a *vidhánto*, along with 1b *apām upásthe* / 2a *apām sadhásthe* // 2d *ichánto* ... *avindan* / 3a *avindat ichán*. The question is whether vs. 1 also contains a reference to the flight and concealment myth, esp. in 1b where Agni “sits/sat in the lap of the waters” – comparable to the *apām sadhásthe* in 2a. I’m inclined to think not: that *apām upásthe* in 1b is instead alluding to the same event as in the preceding hymn, X.45.3d, which seems to deal with one of Agni’s births. But since I’m rather hazy about what’s going on in that vs., I am far from certain about this one.

X.46.2: The first pāda is identical to II.4.2, which likewise makes reference to the flight and concealment myth. In both I would now emend the tr. “having done honor” to “doing honor,” in part to match the dat. *vidhaté* “to the man who does honor” in 1d, but also because the act of honoring Agni does not have to precede the following / finding him treated in the rest of the vs. In fact, I would be tempted to assign *vidhántaḥ* to the ritual here-and-now represented by *ímám* except that \sqrt{vidh} does not take an acc. of the honoree, but a dative, so *ímám* cannot be the direct obj. of the participle. Assuming the participle belongs with the rest of the mythic material in the vs., the likeliest sequence is that they do honor to Agni hidden in the water *after* they have pursued and located him.

Our pādas bc are also quite close in wording to I.65.1–2, which also treats this Agni myth. See comm. ad loc.

X.46.3: Like vs. 2 the first half of this vs. concerns the seeking and finding of the vanished Agni, but it is not clear that it refers to the same episode. The finder, Trita Vaibhūṣa, is different (from the Bhṛguṣ in 2d), and also, it seems, the find spot: “on the head of an inviolable cow” (*mūrdhāny ághnyāyāḥ*). Ge (n. 3) suggests that this resembles the version of the story in which Agni spends one of his nights on the lam between the horns of a ram (TS VI.2.8.4, ŚB III.5.2.18, etc.), but the two versions seem too divergent. Re cites as parallel I.30.19 *aghnyāsya mūrdhāni* “on the head of the inviolable (bull),” of the place where the Áśvins anchor one wheel of their chariot. This is a good match verbally (save for the gender); I suggest there that this is a mystical expression for the ritual ground, but that is unlikely here. Perhaps it simply refers to the earth. It might be worth noting that Trita destroys a three-headed monster in X.8.8–9 (though the ‘head’ word is *śíras-*), and that in that same hymn Agni seizes the head (*mūrdhán-*) of his parents

(X.8.3) and sets his own head (also *mūrdhān-*) in heaven (X.8.6), but I can't make anything of that for our vs, here.

Trita's patronymic (different from Trita Āptya found elsewhere) is *vaibhūvasá-*, found only here – abbreviated from **vaibhū-vasava-* (Mayr, PN s.v.), to the bvr. *vibhū-vasu-* 'possessing conspicuous goods', twice of Soma. Trita (without patronymic) is also found in the nearby hymn X.48.2 (by a different poet) as a recipient of cows, though it is not clear if the two Tritas are connected.

The second hemistich brings us back to the ritual ground and current time.

The sense of *śévṛdha-*, presumably haplologized from **śéva-vṛdha-*, is hard to pin down; see disc. ad V.87.4. I would here slightly alter the publ. tr. to "with kind attention" for the sake of the English.

X.46.4: The phrase *uśíjo nāmobhiḥ* is repeated in pāda a from 2c, both in the post-caesura position.

Most of the first hemistich consists of accusatives (mostly?) referring to Agni; *akṛṇvan* has to be imported from the second hemistich to govern them, as well as governing the accusatives in cd. There are several ways to interpr. the acc. in ab. One way, fld. by Ge and Old, is to allow the agent noun *netāram* to take both an acc. obj. (*prāñcam yajñām* to its left) and a gen. obj. (*adhvarāñām* to its right), although the suffix-accented *-tār-*stem should only take the gen. (but see *yantār-* above, 1d). Hence Ge's "der das Opfer vorwärts führt, zum Leiter des Gottesdienstes." The other, fld. by Re and the publ. tr., is to take *prāñcam yajñām* and *netāram adhvarāñām* as two separate objects of *akṛṇvan*, both with secondary predication: "made the sacrifice (to) advance and (Agni) the leader of the ceremonies." Old provides a good parallel (VII.19.1) for a suffix-accented *-tār-*stem with acc. and gen. rection simultaneously; Ge adduces several passages (X.66.12, 101.2) where *prāñcam yajñām* is the object of *prá √ nī*. These parallels support the Ge/Old interpr., which is also favored by the fact that construing *yajñām* directly with *√ kṛ* would interrupt the parade of statements about Agni. On the other hand, see I.18.8 *prāñcam kṛṇoty adhvarām* "he makes the ceremony advance" and III.1.2 *prāñcam yajñām cakṛma* "we have made the sacrifice advance," with the construction presupposed by the publ. tr., and see Re's comm. In the end I think either interpr. is possible, and I would allow an alternative "... made him the gladdening Hotar-priest, the one who leads the sacrifice forward, and the leader of the ceremonies."

On *aratīm pāvakām* see X.45.7 in the immed. preceding hymn.

Re construes *havyavāham* separately from *dádhatāḥ* ("ils firent (de lui) ... convoyeur d'offrandes, en (le) plaçant chez les humains"), but 10a *dadhiré havyavāham* speaks for the VP.

X.46.5: Note that the 2nd pentad of the first three pādas begins with a disyllabic noun with light first syllable ending in *-ām*: a *mahām*, b *purām*, c *vanām*, the second two of which are gen. pl. to root nouns. The fourth pāda is likewise 10 syllables but, with an apparent opening of 4, is a Virāṣthāna vs. (so Arnold, HvN). Analyzed in this way, the simile particle (which is badly positioned anyway – see below) would follow the caesura, coalesced with the flg. noun. Now it is my impression (though I have not sorted through the 2000+ exx. of *ná*) that simile-marking *ná*, like *iva*, does not immediately follow the caesura. Moreover, Arnold (§122) states that *ná* 'as' is ordinarily found in hiatus with flg. vowel (approx. 60x) and combined only 3x – our passage and I.104.5, X.106.7 "no one of the instances being quite certain." If we distract *nārvāṇam* to *ná árvāṇam*, we would get a regular 11-syllable Triṣṭubh, but with a quite irregular break (_ _) after

a five-syllable opening (if we assign *ná* to the opening to avoid a post-caesura position). But *árvāṇam* may be our problem (or one of them). It's notable that *árvāṇam* is the only acc. sg., indeed the only non-nom. sg., to the putative stem *árvan-*, beside quite frequent nom. sg. *árvā*, which serves as the de facto nom. sg. to *árvant-*. I wonder if we should read **árvām* here, along with distracted *ná*, that is, a pentad vs., *hírīśmaśruṃ ná *árvām dhánarcam*. This would allow the *ná* to avoid both post-caesura position and coalescence and also provide us with another pentad-opening disyllable nominal ending in *-ām*. This proposed form **árvām* would be a nonce, created to the nom. sg. *árvā*, and liable to redactional correction, in this case to match *dharmāṇam*, which ends pāda b.

This vs. presents us with a number of other problems, beginning with the 1st pentad: the sequence as analyzed by the Pp., *prá / bhūḥ / jáyantam*, cannot be easily construed. If *bhūr* (*/bhūḥ*) is taken as a 2nd sg. root aor. injunctive (the only possible verb form, though see Scar below), we are lacking a likely addressee (Sāy., in his first analysis, supplies voc. *stotar*), and the sense of *prá √bhū* 'overcome, dominate' would not work well with Agni as object. Various solutions have been suggested, which I will not rehearse; see Old, Ge n. 5a and vol. IV.269, Re ad loc., Scar 262 and n. 361. The most appealing and perhaps the oldest is *bhūrjáyantam*, registered already by Sāy. as Udgītha's reading. But Udgītha further analyzes it as *bhūrādīm̐ lokāñ jáyantam*. Ludwig (cited by Old and Ge) takes the same proposed *bhūrjáyā*- rather as a denom. to the unclear *bhūrj-* (AV, SV; see EWA s.v.). Whatever its further analysis is, the univerbation to an *-áya*-participle with root syllable *bhūrj*, which requires no alteration to the Saṃhitā text, seems the best of the proposals. In the publ. tr. my "*glittering" reflects an analysis as an intrans. *-áya*-formation built to the zero-grade of *√bhrāj* 'shimmer, glitter', which is used frequently of Agni, the same zero-grade as is found in *bhūrjā*- 'birch' (see EWA s.v.). Scar's (n. 361) first proposal is close to mine: a denom., to **b^hrHǵ-ó-* (rather than an *-áya*-formation built to the zero-grade root, like me), meaning (acdg. to the tr. in the text) "der hell hervorstrahlt (?)"; unaccountably he gives the resulting form with short vowel, as **bhurjáy°*. But the rest of his n. 361 is devoted to an alternative: an attempt to pry a 3rd pl. root aor. out of *bhūr*, which is unlikely. Another alternative analysis has recently been suggested by R. Ginevra (UCLA Conf. Proc. 2016), that *bhūrjáyā*- is the *s*-mobile-free version of *sphūrjáyā*- 'crackle, roar', used of Agni in X.87.11 – both belonging to a putative PIE root **(s)b^hrǵ(h₂)g*. He also derives the name *bhṛgu-* from this root; note the occurrence of the name in 2d. (Ginevra's proposed tr. for our passage, "sizzling," seems inapt, but 'crackling' or 'roaring' would do nicely.) Ginevra's proposal is appealing and certainly possible, but I will stick with the *√bhrāj* derivation. For further on his proposed root, see comm. ad X.68.1.

With the supposed injunctive *bhūḥ* off the table, the initial *prá* needs a home. As I said above (ad vs. 1), elliptical *prá* serves as the structural skeleton of this hymn. Our vs. has echoes of 1a: cf. 1a *prá ... mahān nabhovíd* 5a *prá ... mahām vipodhām*. As for the construction of *prá* here I would supply (or simply read backwards) *náyantah*, which opens the 2nd hemistich (see also *netāram* in 4b). Given the accent on *prá*, this seems preferable to reading it as in technical tmesis with the immediately following participle (as Scar seems to do).

We have already discussed the metrical and morphological problems with d, but the *ná* there poses another difficulty: the adj. it follows does not appear to be part of the simile, despite the well-nigh unbreakable rule that *ná* does not begin a simile. (It of course usually follows the first word, but can sometimes follow the second – and occasionally there is intervening material between the first word and the simile – but never [as far as I know] does it precede the first word.) Here by all accounts the simile consists only of *árvāṇam* (or **árvām*; see above) or at most

ārvāṇam dhānarcam (see Ge n. 5d). The adj. *hīriśmaśru-* ‘gold-bearded’ is used of Agni also in V.7.7, with the image presumably the flames shooting out of the center of the fire. It is highly unlikely that it is meant to describe the steed in the simile: “like a gold-bearded steed.” I do not have a real solution to the *ná*-flip, but if my proposal for the metrical and morphological situation in d given above is accepted, the rhetorically driven pattern of X-*ām* opening the second pentad of each pāda might have caused the displacement of *ná*, to allow **ārvām* to occupy that slot.

Finally we have the hapax *dhānarcam*, on which see esp. Old, with previous proposals. Perhaps influenced by the SV variant *dhanarcīm*, several interpr. take the 2nd member as ‘shining’ vel sim.: Gr ‘Glanz der Beute, des Reichtums habend, glänzende Beute tragend’, Re ‘qui ... brille sous l’enjeu’. Both Ge and Old by contrast connect the 2nd member to ‘sing’; Old’s interpr. (q.v.) seems over-busy. Ge (n. 5d) points out (correctly) that only the first part of the cmpd. is strictly applicable to the ‘steed’ in the simile: the steed receives a prize (*dhāna-*) appropriate to the race, whereas the *ṛc-* is only appropriate to Agni. Ge tr. “der sich den Preis aussingen,” with a verbal interpr. of the 2nd member. I prefer my double noun (*dhāna-* + *ṛc-*) interpr.: “for whom a verse is the prize”; in other words, Agni is rewarded with praise poetry after his victory in the equivalent of a race. Very sim. is Scar’s (262) “wobei die ihm zugeeignete (=dessen) Ṛc der { von ihm gewonnene } Kampfpfeis ist.”

X.46.6: It is difficult to avoid the conclusion that nom. Trita in pāda a = Agni here; Agni is clearly the nom. referent in c, and Trita apparently performs the same action (sitting: *sīdat*) as Agni did in 1b. But in vs. 3 Trita is emphatically *not* Agni; rather he finds the vanished Agni. Ge (n. 6a) cites Ludwig’s opinion that Agni is called Trita because Trita discovered him, but this seems a bit ad hoc. In any case the first hemistich depicts the fire’s installation (note *nī* in a, in tmesis with *sīdat* in b) on the ritual ground.

On *pastyā*- see comm. ad I.40.7, IX.97.18.

On *parivīta*- see comm. ad IV.3.2. I think it likely that this refers to the surrounding of the ritual fire by the *paridhī*- ‘enclosing sticks’.

While the 1st hemistich depicts – again! – the installation of the fire on the ritual ground, the second one, in my view, treats Agni’s journey to the gods in heaven conveying the oblations to them. By this interpr. *nīn* ‘superior men’ at the end of the d refers to the gods, as so often. The verbal form *īyā^{te}* is regularly used of this journey of Agni’s; cf., e.g., VII.3.3 *sām dūtó agna īyase hí devān* “For as our messenger, o Agni, you speed to the gods.”

The next puzzle is *saṃgṛbhya*: what, if anything, is its object? Both Ge and Re take *nīn* at the end of d as the object (both construing it also with *īyate*). Old instead supplies ‘goods’ vel sim.: “von dort zusammenfassend (Güter, Gaben ...),” adducing I.53.3, also beginning *ātaḥ saṃgṛbhya*, where *vāsu*, which ends the preceding pāda, is to be read as object. Cf. also III.54.15 *saṃgṛbhyā na ā bhārā bhūri paśvāḥ* “Having massed it together, bring to us here an abundance of livestock.” The publ. tr. follows Old: “having amassed (goods?),” but I now wonder if, with my current interpr. of the purport of cd, “the oblations” or similar should be supplied instead.

vidharmanā ‘through/with the/his spreading expanse’ can refer either to the expanse of the midspace between earth and heaven through which Agni’s smoke passes or the expansion of the smoke itself. On this stem see comm. ad IX.4.9, 64.9.

On *ayantrā*- Old says firmly “offenbar Bahuvr.” The question is what missing nominal notion it modifies. Old supplies “mit Kräften, Helfern,” while Ge (n. 6d) suggests ‘hands’ or ‘reins’. I think it more likely to be horses : Agni’s reinless horses are the billows of smoke,

which do not make straight and controlled progress towards heaven and are therefore ‘without reins/guiding straps’.

X.46.7: This vs. contains several bold (one might say “jarring”) images describing the fires.

The first is *ajarāsaḥ ... aritrāḥ* the “unaging oars” or “unaging rudders” of the houses (*damām*). Neither ‘oar’ nor ‘rudder’ is easy to understand here, and our lack of knowledge of the technology of boats at this period doesn’t help. If ‘oars’ is the right choice, perhaps the fires are considered to be the things that keep the houses moving; if ‘rudders’, they keep the houses steering on the right course. Ge (n. 7a), Re, and Scar (571 n. 808) all adduce the potentially helpful I.140.12 *rāthāya nāvam utā no gṛhāya nītyāritrām padvātīm rāsi agne / asmākaṃ vīrām utā no maghóno jánāms ca yā pārayāc chārma yā ca* “For our chariot and for our house, o Agni, give us a boat with built-in oars and a foot [=keel? rudder?], / which will carry our heroes and our bounteous (patrons) and our peoples to the further shore and which (will be) our shelter.” In this fuller expression the boat is a metaphor for something that will carry the people out of danger and to the safety of the far shore. The *aritra-* are likely oars, since the ‘foot’ is probably either a rudder or a keel/centerboard. Ge cleverly suggests that “for our chariot and for our house” refers to times of war and peace respectively. The *gṛhá-* ‘house’ there can correspond to our *dám-* ‘id.’, and the fires as oars here propel the houses (or rather their denizens) to success in a peaceful domestic setting. It would be nice to find a visual analogue to the oars in the ritual fire, but flames don’t look much like oars to me (at least the oars I’m used to); the only other visual candidate I can think of is the sticks of firewood – but the explicit identification in the verse is with “fires” (*agnīyah*), not their fuel.

The sense of the first member of the hapax cmpd *arcāddhūma-* is not entirely clear. Gr’s ‘glänzenden Rauch haben’ associates it with ‘shining’ forms like *arcī(s)-* ‘beam’, etc., but the (pseudo-)participial form suggest an affiliation rather with the verbal forms *ārcatī*, etc., which always mean ‘sing, chant, recite,’ not ‘shine’. So Ge “rauchsingend,” Re “(feux) dont chante la fumée,” the publ. tr. “with singing smoke.” Scar allows both, though apparently favoring the former: “mit dem glänzenden (/sirrenden?) Rauch.” It is hard to know what this synaesthetic description is meant to convey, but I wonder if it is the hissing sound that accompanies the first appearance of smoke from a newly lit fire. Besides the issue of root affiliation there is the question of what type of cmpd it is. I (and Gr) take it as a bahuvrīhi with adjectival first member, but Ge as a 1st member governing cmpd. (perhaps following Bergaigne; see AiG II.1.319). Although I am generally sympathetic to such interpr., in this case I find it hard to see how “smoke” could provide a meaningful direct obj. to “sing”: acc.s with *ārcatī* are either objects of praise (like gods) or the verbal products that provide praise (songs, etc.).

The adjectives of pāda c easily modify fire, but pāda d presents us with a new challenge: what at first glance appears to be a single simile *vāyāvo ná sómāḥ*, with two incompatible terms, “like winds, soma drinks.” This is universally (Old, Ge, Re, Scar) and convincingly interpr. as two distinct similes, each capturing a different facet of the shared quality *vanarśād-* ‘sitting in/on the wood’. Fire of course “sits in the wood” by virtue of its location on the firewood that feeds it. Soma drinks do so by taking their place in the wooden cups after the preparation of the soma, ready for offering (see a number of such passages in IX with *vāneṣu √sad*). As for “winds,” Ge finds this comparison suspect (verdächtig), a sentiment shared by Scar (571 n. 808). As Scar points out, we might have expected a comparison to birds – and perhaps *vāyāvah* is meant in part to call to mind phonologically similar *vāyah* ‘birds’). To circumvent the problem, Ge tries, not

very hard, to produce an alternative analysis (n. 7d), and already Gr simply declared *vāyāvas* an old genitive form). Old sees a sort of secondary comparison: the fires are compared to soma drinks, and since both flames and soma drinks can be driven by the wind (see Old's citations), they are then compared to the wind. This seems too complex to me; I think the wind simile is (somewhat) more straightforward: wind is more perceptible, both visually and aurally, when it blows through trees than in open country. Winds therefore can also be considered *vanarṣād-*, though 'sitting' might be an odd description, perhaps 'situated'. Given the "off" comparisons elsewhere in this vs., this one seems reasonably sensible.

X.46.8–10: The complex imagery and verbal expression of the earlier parts of the hymn are no longer evident in these final vss., and the meter settles down to straight Triṣṭubhs. From the 2nd hemistich of 8 through the first one of 10, Agni is the acc. object of several different verbs describing his birth, fashioning, and establishment by a variety of gods, natural forces, and primordial ritualists. Note also the near-repetitions: 8d *dadhire yájiṣṭhan#* / 10a *dadhiré havývāham#* // 9d *mánave yájatram#* / 10b *mānuṣāso yájatram#*

X.46.8: On *vépas-* see comm. ad I.80.8. Here, as there, the verbal component of Ge's "Wortswall" seems unrec.: the point is that his flame (=tongue), constantly in motion, shows Agni's state of trembling excitation. The middle voice of *prá ... bharate* is appropriate because the *vépas-* is Agni's own.

In b Ge supplies a new verb "(er kennt)," but the repetition of the preverb *prá*, found initially in tmesis in pāda a, strongly favors a gapped form of \sqrt{bhr} . If that surmise is correct, what's happening in b is that the bright light of the fire (its "appearance" – *cétas-*) allows the patterns of the earth (*vayúnāni ... pṛthivyāḥ*) to be discerned.

X.46.9: Notice the reappearance of the Bhṛguś from vs. 2.

X.46.10: The ref. to Agni switches from 3rd ps. to 2nd in pāda a, transitioning to the direct appeal to the god for benefits in c.

The very well-attested rt. noun cmpd. *puru-spṛṇ-* generally has the passive sense 'much craved / sought after', but at least in this passage an act. sense 'craving much' works better. So also Scar (670), Ge (n. 10b).

The VP *váyo dhāḥ#* in c responds to 1c *dádhiḥ ... váyāmsi#* (on the syntax of 1c see disc. ad loc.), forming a ring. It also echoes the middle verse 5a *vípodhām#* and 5c *dhíyaṃ dhuḥ#*.

On elliptical *prá* as a structural element in this hymn, see comm. ad vss. 1, 5. In this vs. the main cl. of d consists only of the preverb and a nom. sg. part.: *prá devayán -- yaśásah* does not belong there, for reasons given below. All the standard tr./comm. (Old, Ge, Re, publ. tr.) take *prá devayán* as an elliptical clause, only differing on what to supply to fill the ellipsis. I think it best to match the initial pāda of the hymn as closely as possible. There I supplied a verb of motion with *prá* ('goes forth'), here the same, though with a diff. English rendering, 'advances', to indicate that the subj. goes forth towards glory.

The phrase *yaśásah sám hí pūrvāḥ* is found also in III.1.11, thus showing that *yaśásah* does not belong directly with what precedes. In III.1.11 JPB tr. "for glory gets the girls." Although not entirely literal, this is far superior to the ploddingly accurate "many (fem.) (assemble) together for a glorious one," and I have adopted it. The phrase has the feel of a gnomic utterance, an old saying (Ge [n. 10d] Sprichwort) – a saying that leaves open the exact

identity of what the glorious man receives. *pūrvīh* is fem. pl., but there are many desirable feminine entities: women/girls, of course, but any fem. noun is fair game: cows, hymns, refreshments, waters, and so on (for other somewhat farfetched possibilities, see Re's comm. ad loc.). In VI.34.1, which contains a similar phrase, the fem. referent is spelled out: *sām ca tvé jagmúr gíra indra pūrvīh* "many songs have converged on you, Indra." But I doubt that hymns are what are meant here. In the words of Re, more tentative than necessary, "Peut-être n'était-il pas dans ses intentions de circonscrire le choix."

X.47 Indra

On the authorship of the hymn, see above ad X.45–47 and also the publ. intro. On the structure of the hymn and the persistent ambiguity of reference between Indra and 'wealth' see publ. intro. Ge (intro. to hymn) thinks all the acc. phrases qualify 'wealth', specifically wealth in sons, but I find this interpr. reductive.

Note that the d pāda throughout is a refrain.

X.47.1–5: As noted in the publ. intro., the non-refrain portions of vss. 2–5 consist entirely of accusative phrases dependent on vs. 1 (though *which* accusative in vs. 1 is the question). Given the syntactic independence of almost all RVic vss. (*muktaka* verses avant la lettre), this run-on sentence is noteworthy – though perfectly easy to interpret. If it were couched in the nominative, it would be an unremarkable example of RVic nominal style.

X.47.1: The syntagm "X-lord of X-es" appears twice in two pādas: b voc. *vasupate vásūnām* and c acc. *gópatim ... gónām*, the latter with the younger gen. pl. *gónām* rather than *gávām*, which wouldn't work metrically here. The presumed older form of this phrase, *gávām* (...) *gópati-*, does occur on several occasions (I.101.4, VII.98.6, X.108.3; also reversed in X.166.1 *gópatim gávām*).

X.47.2: My tr. of pāda b, "supporting four seas worth of riches," is not literal, in that *cātuḥsamudram* is a separate qualifier. On the phrase *dharúṇa-rayīṇām* see comm. ad X.5.1. In that passage the phrase is preceded by NUM. *samudrá-* (*ékaḥ samudráḥ*), rather like our cmpd. *cātuḥsamudra-* but a free phrase. Both seem to depict the sea as a particularly vast trove of riches.

X.47.4: Pāda b is found also in VI.19.8, where it modifies *śúṣma-* 'unbridled force'; see Bloomfield's (RV Reps.) somewhat acid remarks there about our hymn ("rigmarole"). In c *dasyuhānam pūrbhídā* favor Indra as referent, but 'wealth' is not entirely excluded.

X.47.5: The poet seems to have run out of steam here: *vīpravīram* (c) is repeated from 4a and lexically doubled by *vīrávantam* (a). On the other hand, *s''varṣām* 'sun-winning' nicely echoes 3c *śrutārṣi-* (to be read *śrutārṣim*).

X.47.6: Save for the initial *prá* this vs. seems to be starting like vss. 2–5, with a continuation of the string of accusatives, but pāda b confounds this expectation: we have a different acc. referent *bṛhaspátim*, a nominative (!) *matíḥ*, and a verb *jigāti*.

X.47.7: The hapax *vānīvānaḥ* clearly belongs to the root \sqrt{van} , or one of the roots \sqrt{van} , but its morphological identity is uncertain. Wh (Roots; fld. by MonWms) takes it as a primary nominal deriv. of an otherwise unattested intens. *vanīvan-*. The disyllabic redupl. ending in long \bar{i} would conform to exx. like *pānīphaṇ-* (\sqrt{phan}), *varīvart-* (\sqrt{vrt}) and thus would not decide for set \sqrt{van}^i ‘love, long for’ rather than \sqrt{van} ‘win’. Schaeffer calls our *vānīvānas* (wrongly cited as **vanīvanās*) an inten. part. (p. 27 n. 29) and lists *vānīvan-* as an intens. stem (p. 34). The form is not mentioned in AiG. An alternative interpr. takes it as a possessive nominal *-van-*stem built to the *-i-*stem *vanī-* ‘wish’ (so Gr), a stem found mostly as 2nd cmpd member (on this stem, see AiG II.2.31–33 etc.); *-i-*stems generally lengthen the final before *-van-* (AiG II.2.900–901; e.g., *śruṣṭīvān-*). Although this single occurrence gives us little to go on, I’m inclined towards the intensive interpr., because of the lack of a clear possessive sense – though ‘having desires’ is certainly not out of the question, esp. given *sumatīr iyānāḥ* “begging for favors” at the end of the hemistich. If it belongs to a *-van-*stem, it is straightforwardly a nom. pl. masc., as the passage requires. But if it belongs rather to an intens. stem, we must reckon with its aberrant inflection. I would like to analyze it as a haplology of a middle part. **vānīvan-āna-*. The haplology itself seems quite plausible, but the form in the passage *vānīvāno (-as)* has then to be a singular m. nom. This could be fixed by emending the final syllable to **-ās* (*-ā* in sandhi), and that is my preference, however unsatisfactory. However, there may have been an intermediate nominal form, or so I interpr. Wh’s listing of *vānīvan* as a primary nominal deriv., rather than as a verbal form to the desid. stem. But what kind of nominal? If it’s a pseudo-root noun, then the nom. pl. should be **vānīvan-as*, with short vowel in the root syllable (cf., e.g., nom. pl. *śatru-hānas*). To get a long vowel in that syllable we have to assume that it belongs to a *-van-*stem, which rather defeats the purpose of assigning it to a desid. stem *vānīvan-* -- unless he’s also positing a *-van-*stem built to that desid. stem (**vānīvan-van-*), which then underwent haplology – an unprecedented derivational path. It seems less cumbersome simply to emend the vowel of the final syllable to \bar{a} , as I just suggested. Or, if we want to follow Wh’s path, to assume that a root-noun-like stem *vānīvan-* was reinterpr. as having a *-van-*stem and given a nom. pl. *-vān-as*. In any case, there is no direct route to the form we have.

The sense of the root $\sqrt{vañc}$ in its various forms has been discussed frequently in this comm. (see lexical list). Since I think the root meant ‘move waveringly’ (sim. already Whitney / Macdonell [VGS 415] ‘move crookedly’; see Kulikov’s [ya-pres. 218] first gloss ‘move (waveringly)’), I find the standard renderings of individual forms as ‘jump’, ‘gallop’, ‘fly’, and the like somewhat puzzling, since these seem like very different kinds of movements. In our passage Ge tr. “mit dem Gedanken fliegend,” Scar (669) “vom Geist in galoppierenden Bewegung versetzen.” The closest passage to ours in content and phraseology is III.39.1 in which ‘thought’ (*matīḥ*) exits our “heart” (abl. *hṛdāḥ ā*) by a movement described as *vacyāmānāḥ*, which I render as “curling herself out of ...” See comm. ad loc. A similar graceful contortion seems depicted here, esp. in combination with the intimate contact expressed by immediately preceding *hṛdispṛś-* ‘touching the heart’. The publ. tr. has “intertwining with the mind,” which I still think is fine, but the root sense might be even better conveyed by “curling up with the mind.

X.47.8: *yād ... yāmi* “what I beg” in pāda a picks up 7b *sumatīr iyānāḥ* “begging for favors.”

On this trio of hymns see publ. intro. Of especial interest are the first two, Indra's ātmastuti, couched in the 1st ps. sg. On the genre of ātmastuti see esp. George Thompson (1997) "Ahaṃkāra and ātmastuti: Self-Assertion and Impersonation in the Ṛgveda," *History of Religions* 37: 141–71.

X.48 Indra

The 1st person self-assertion in this hymn is forcefully established in the first vss.: every pāda of the 1st vs. begins with a form of the 1st sg. prn.; in the 2nd vs. each hemistich begins thus; the third vs. presents itself as a type of versified paradigm (see comm. ad I.1), with four different oblique forms of the pronoun, each opening its pāda: 3a dat. *māhyam*, 3b loc. *māyī*, 3c gen. *māma*, 3d acc. *mām*. Thereafter the pronominal presence recedes: vss. 4–6 each begin with *ahām*, but there is no other tonic form of the pronoun in any vs.; vs. 7 has no tonic form, though here is an enclitic *mā* in the last pāda, along with two 1st sg. verbs, *asmi* (a), *hanmi* (c). Vs. 8 once again begins with *ahām*, and there is a postpositive *ahām* in d; vs. 9 has only an enclitic *me* (a) but two 1st sg. verbs. Vs. 10 lacks any 1st sg. reference at all and stands aside from the rest of the hymn in content. The final vs. (11) has an enclitic acc. *mā* (c) and a 1st sg. verb (*mināmi* [b]). As noted in the publ. intro., the only forms of the 1st sg. prn. absent from the hymn are the poorly attested instr. *māyā* and abl. *māt*.

On the distribution of tenses and moods in this hymn compared with X.49, see intro. to X.49 below.

X.48.1: Each pāda of this vs. has a finite verb; the verbs in bcd are all present indicatives: *sām jayāmi* (b), *havante* (b), *vī bhajāmi* (d), but pāda a contains a 1st sg. aor. injunc. *bhuvam*. In the publ. tr. I render *bhuvam* as a straight preterite: "I was" (sim. Ge. "Ich ward"; Sāy. *abhavam*). Given the present indicatives of the rest of the vs. and its general content, I now think that that rendering is wrong, but I am not certain what the correct one is. I would be inclined to tr. it as a general present ("I am / become") in keeping with the other present verb forms, save for two factors: The next hymn, X.49, which is the ātmastuti companion to this one, contains two forms of *bhuvam* (out of 5 total in the RV): X.49.1c, 4c. Although X.49 is dominated by injunctives and so the temporal values are hard to establish, most of the hymn concerns specific deeds of the speaker (=Indra) in the past, and so *bhuvam* there may have past reference. Moreover in our own vs. the adj. *pūrvyā-* is ambiguous: it can mean 'foremost' with regard to quality or location, with no temporal reference, but it can also mean 'former, earlier' or 'ancient, primordial' or 'foremost' in a temporal sense. If *pūrvyās pātīḥ* here means "earlier / primordial / first lord," then *bhuvam* must have some past reference, but if the adj. only refers to the quality of Indra's lordship, the temporal reference of *bhuvam* is unconstrained. It is probably worth noting that *pūrvya-* is found in the first vs. of the next hymn as well, X.49.1a, though not in the same clause as *bhuvam* in that vs. Although a survey of all the forms of *pūrvyā-* / *pūrvya-* in the RV shows that temporal reference predominates, there is a solid group with the meaning 'foremost' in quality or location, and a very large group where it is difficult or impossible to tell whether temporal or qualify/location reference (or both) is meant. In this case I incline towards the quality interpr. (so also Sāy., who glosses *mukhyah*). Weighing the various factors, I suggest an emended tr. to "I have become the foremost lord of gods," a role Indra has acquired by his regular winning of the stakes, as stated in pāda b. ("I am ..." would also work.) Alternatively IH suggests presential "I become," meaning that he acquires the role on a regular basis; I am not persuaded because I doubt that Indra would ever admit that he *lost* the lordship in between such

episodes. However, if *pūrvyā-* has a temporal sense here, the whole might mean “I am / have (always) been the primordial lord of goods / lord of gods (from) of old.”

Note that the phrase *vasunaḥ ... pātīḥ* reprises *vasupate vāsūnām* in the first vs. of the previous hymn (X.47.1), though they are by different poets. The phrase in our hymn has the newer gen. sg. *vasunaḥ*, found also in *vasunaḥ ... pātīḥ* in I.53.2, against *vasoḥ ... vāsupatim* in I.9.9. The phrase with gen. pl., *vasupāti- vāsūnām* is fairly common.

For *dhānam* √*ji*, see vs. 5 below.

The morphological identity and usage of *śāsīvataḥ* in b are disputed. Gr takes it as a gen. sg. dependent on *dhānāni* in the meaning ‘ein jeder, alle’ (his meaning #10; Sāy. also gen.). Ge takes it as acc. pl. masc. to be (irregularly) construed with the neut. acc. *dhānāni*, tr. “alle Schätze.” But *śāsīvant-* doesn’t mean ‘all’, at least not straightforwardly – rather, it indicates an unbroken, or regularly repeated, sequence: “one by one, one after another, time after time,” shading into “constant, perpetual.” Sometimes the sequence is synchronically distributive: “each and every,” which could be taken as tantamount to “all.” But rather than expressing an undifferentiated “all,” *śāsīvant-* indicates a succession of individual items considered collectively. Ge (n. 1b) cites III.3.7 as exhibiting another ex. of neut. pl. noun construed with masc. pl. adj., but that passage should be otherwise interpr. He also adduces IX.76.3, where pāda-final *śāsīvataḥ* (as here) modifies the masc. acc. pl. *vājān* earlier in its pāda: *dhīyā nā vājāni ūpa māsi śāsīvataḥ*. Presumably he cites this to show that acc. pl. *śāsīvataḥ* can modify a synonym for *dhānāni*, in the right gender, and need not be a gen. here. My interpr. of *śāsīvataḥ* in our passage starts from passages like IX.76.3; I take it as a quasi-adverbial acc. pl. ‘time after time’ that became detached from the NP in which it began because of its location at pāda end at some distance from its noun. In my own tr. of IX.76.3 “As if according to our vision, mete out prizes to us over and over,” *śāsīvataḥ* is also semi-independent, though it properly matches *vājān* in number, gender, and case. (A less independent Engl. tr. might be “ever-new/continuous prizes.”) I thus avoid the awkwardness of mismatch of gender in our passage, though at the cost of recognizing a new adverbial usage. It would also of course be possible simply to follow the Sāy./Gr interpr. and take it as a gen.: “I win the stakes of each and every one.”

As Ge (n. 1c) points out, *jantāvaḥ* has a double sense and should be read with both simile and frame – hence my “creatures ... kinfolk.”

Note the implicit contrast between *sām jayāmi* (b) and *vī bhajāmi* (d). The *dhānāni* gathered in b are redistributed to the deserving in d.

X.48.2: Acdg to Ge (n. 2), the named recipients of Indra’s help in this vs. are among the first Soma-offerers. Unfortunately the mythic incidents mentioned in this vs. are difficult to reconstruct, and the various figures named – Atharvan (if this is a PN, not a title), Trita, Dadhyañc, and Mātariśvan are not clearly connected elsewhere, except that Dadhyañc has the patronymic *ātharvañā-* already in the RV (I.116.12, 117.22; also VI.16.14 *putrāḥ ... ātharvañāḥ*).

In the nominal clause in pāda a, either Indra or the following common nouns (*ródho vākṣaḥ*) could be the primary predicate(s) of *ahám*. Contra Ge’s “Ich Indra ward ...,” which makes the second choice, I take *índraḥ* as the principal predicate, on the basis of vs. 5a, which also opens with *ahám índraḥ*, where the wording of the rest of the pāda suggests the opening two words form a nominal clause. However, the other alternative is certainly possible and changes very little.

Trita is elsewhere associated with cows, but as, himself, a releaser of cows – not the beneficiary of Indra’s action with regard to the cows. See the famous Trita Āptya appendix to the

Agni hymn, X.8.8-9, where Trita first smites the three-headed monster and then ... *nīḥ sasṛje trió gāḥ* “T. let loose the cows.” Indra is also mentioned in that brief passage, but it seems as if he is there being assimilated to – substituted for – the Indo-Iranian *Trita, who also figures in this myth in Avestan (under the name *Θrita* *Äθβiia*).

What exactly Indra does for Trita in our passage is also unclear, though not because of unclarity of the verbal expression. The *pāda* is unambiguous: *tritāya gā ajanayam āher ādhi* “I begat the cows from the serpent.” See Ge’s tr. “Für Trita *trieb* ich vom Drachen die Kühe *ab*,” with the somewhat dramatic *abtreiben* ‘abort’. There are two problems here (at least). The first involves which myth we’re actually dealing with. The word *āhi*- ‘serpent’ is a powerful clue that it is the *Vṛtra* myth, since *Vṛtra* is constantly identified as an *āhi*- and the encapsulating formula of that myth is *āhann āhim*. But when we can pin down Trita’s activities in the Vedic mythical universe, he is associated instead with the Vala myth. See I.52.5 *índro yád ..., bhinád valásya paridhīm̐r iva tritāḥ* “When Indra split the barricades of the Vala-cave, as Trita had.” Although the Vala and *Vṛtra* myths are often assimilated to each other, in our case (i.e., X.48.2) I think Trita has been grafted into the *Vṛtra* myth signaled by *āhi*-. This seems preferable to interpreting the serpent (*āhi*-) as an image of the Vala cave. (Nor do I, *pace* Ge [n. 2b], think that the serpent is *Viśvarūpa*, the monster of X.8.8–9.)

So what action does *ajanayam* depict? Presumably a simulacrum of birth: the cows (=waters, probably) are within the serpent and Indra causes them to come out, alive. If what is at issue is the identification cows = waters, the likelihood is that the snake swallowed them, as in X.111.9 (adduced by Ge) *ṣṛjāḥ síndhūn̐r āhinā jagrasānān* “You let loose the rivers that had been swallowed by the serpent.” The release of the waters from within the serpent would seem like birth – indeed like the breaking of the waters that precedes birth. The image is a striking one, but I think there is another reason the poet chose *ajanayam*: the beginning of this verb recalls and may have been meant to evoke in the audience several verbs more regularly found with “cows” in the Vala and *Vṛtra* myths: *√aj* ‘drive’ and *√ji* ‘win’. Cf. phrases like *gā ajati* (I.33.3) and *gā ājayah* (I.32.12).

I don’t know quite what to make of this mash-up of at least three myths in a single *pāda*: Trita (and Indra) and *Viśvarūpa*, Trita (/Indra) and Vala, Indra and *Vṛtra*, but I think it is deliberate on the part of the poet. Perhaps he is calling attention to the overreach of Indra’s boasting.

In c the verb *ā dade* could be either a pres. indicative to the redupl. pres. stem or a perfect. Because of the mythological content of the vs., I opt for the pf., as does Kü (241).

As discussed ad I.112.19 etc., simplex forms of the old desid. *śíkṣa-* (*√śak*) only take the dat., but here the part. *śíkṣan* also has an acc. obj., *gotrā*. The lexeme *ā śíkṣa-* does take an acc., in the sense ‘seek to obtain’, with *ā* in the same function as the lexemes *ā√yaj* ‘obtain by sacrifice’, *ā√pū* ‘obtain by purification’. See again I.112.19. I suggest that the *ā* is in fact found in our passage: *gotrā śíkṣan* can easily represent *gotrā ā-śíkṣan* in sandhi.

In the publ. tr. “their cowpens” refers to the cowpens of the *Dasyus*.

As far as I know, *Dadhyañc* and *Mātariśvan* are never otherwise associated.

X.48.3: On the verb *ārya-* see comm. ad VIII.16.6.

The fronting of the oblique 1st sg. prn. is carried through the whole vs., but it is broken in the publ. tr. in *pāda* d, since “me they recognize ...” sounded stilted to me.

X.48.4: The first hemistich lacks a verb and definitely needs one, since it has both a nominative and an accusative phrase. It's easy to supply 'win / gain' – perhaps from *sám jayāmi* in 1b, but cf. also the almost identical expression in V.61.5 *sánat sã áśvyam paśúm, utá gávyam ...* "She gains livestock in horses and cows," with a form of synonymous \sqrt{san}

On the slangy idiom *ní√sã* 'grind down' see ad X.28.6. As noted there, the referent of the obj. *purũ sahásrã* "many thousands" is likely to be enemies, perhaps the Dasyus of 2c.

X.48.5: Given the position of the *ná* in pāda a, it seems likely that *ahám índraḥ* is a nominal clause. See comm. ad vs. 2 above. So also Kü (189) "Ich bin Indra."

ná párá jigya íd dhánam is the negated opposite to 1b *ahám dhánāni sám jayāmi*, though the image in 5a is specifically from dicing (see Ge n. 5a), while that in 1b seems to be more generalized.

The lexeme *áva√sthā* with dative appears to be unprecedented. Normally it means 'go/step down' with an acc. of goal, incl. in the middle pf. (as here): V.44.9 *samudrām āsām áva tasthe agrimā* "The foremost of those (females) has stepped down into the sea." The sense of our passage is fairly clear contextually: 'descend/step down for death' can mean 'give way, concede' or perhaps simply 'come down [from heaven] to approach'; Gr anheimfallen (fall victim to), Ge verfallen (fall for).

In any case the two pronouncements in ab, each couched in the negative, seem odd things for Indra to boast about, esp. the latter, since Indra should not be susceptible to death anyway. Indra's promise in d is also expressed negatively.

Ge tr. the pres. part. *sunvántaḥ* as a functional impv., as if coordinated with *yācatāḥ*: "Presset Soma aus und bittet mich um Gut!" (Sim. Lowe, Part., 263.) I certainly agree that the two are closely connected and temporally / logically ordered, But such an interpr. fails to account for the *íd* (and I also see no reason to erase the morphological identity of the participle). I think the point is – do your begging only when you're pressing soma for me; don't even think about begging for stuff if you're not engaged in pressing soma.

X.48.6: The verb for pāda a must be supplied from *ahanam* in c (with a rel. clause intervening in b).

The intens. part. *śáśvasataḥ* echoes *śáśvataḥ* in 1b phonologically, though they are of course etymologically and semantically completely distinct.

Pāda b has a functional periphrastic causative in the present middle: *yudháyé 'kṛṇvata* "they caused to fight." It is not at first clear why this periphrasis is used here, since a morphological causative *yodháya-* exists. However, the various formations to the root \sqrt{yudh} show subtle functional and syntactic distinctions (see my *-áya-*, p. 151). The causative means 'set X (and Y) to fighting', where the various parties to the fight are in the acc. and the subject is the instigator, who takes no part in the fight himself. The *-ya-*present *yúdhya-* in the act. also takes an obj., but it means 'attack': the subject fights the object. Its middle equivalent, *yúdhya-* means 'contends (mutually)', the non-causative equivalent of *yodháya-*. The periphrasis in our b has yet another sense: "X (subj.) causes Y (obj.) to fight X" – in other words the subject both instigates the fight and participates in it. The middle voice of *ákṛṇvata* expresses this dual role. (For a different, and to my mind less compelling, interpr. see Zehnder, Periphr. Kaus, 24, 66.)

The publ. tr. renders *ánamasyur namasvínah* as "(I) unbowable ... those to be bowed"; very similar is Ge's "die sich Beugenden ... (selbst) unbeugsam." This is what context suggests it ought to mean—but there are problems. The stem *namasvín-* (8x) otherwise means 'reverent,

offering homage’ The gerundive feature in my tr. (“to be bowed”) is surely wrong, but even without that, it is difficult to square the usual meaning with the context here. If they are already reverent, why does Indra need to smite them – and how can the “challenging” acc. pl. (*āhváyamānān*) be reconciled with the meek *namasvínah* in the same case and number? Negated *ánamasyu-* is found only here, but *namasyú-* does occur twice elsewhere (I.55.4, VIII.27.11), again meaning ‘offering homage’, and it belongs to the larger morphological system that includes the denom. *namasyá-*, which means the same. If we take these observations seriously, the violence that dominates the whole vs. up to this last phrase is suddenly absent. Although I would prefer to keep some version of my and Ge’s interpr., I find that hard to justify. I would now take *namasvínah* as a proleptic descriptor of the challengers, who, once struck down and rendered humble, offer their homage to Indra. As for him, *ánamasyu-* would be a restatement of *ḍṛhā vādan* “talking tough.” Though his opponents have been subdued and offer him *námas-*, he does not do so in return. This is not particularly satisfactory, but I can’t otherwise account for the phraseology. I would now emend the tr. to “I struck down with my stroke those who were challenging (me), (I) talking tough, giving no homage to those (now) offering homage.” Note that Gr must have been sufficiently disturbed by *ánamasyuh* that he identifies it as a verb form, an imperfect (!) to the denom. *namasyá-* (which, however, doesn’t help matters).

X.48.7: The numerical sequence — “one against one” (*ékam ékah*), acc. “two” (*dvā*), nom. “three” (*tráyah*) — builds on the āmreḍita *dvā-dvā* “by twos” in 6a.

On the shape of the root noun in (*niṣ-*)*ṣāḥ*! see comm. ad IV.88.7. The lexeme *nīḥ* *√sah* is found only once as a verb form (I.127.3 *niṣṣāhamāṇah*) and twice as a root noun, here and in I.181.6. In the other two instances I render the movement implied by the preverb: I.127.3 “going forth to conquer,” I.181.6 “setting out to conquer.” The tr. “utter victor” here does not attempt to do so (nor do Ge’s Sieger, Scar’s “der überlegene Sieger” [603]), though I suppose an alternate “I go forth to conquer, one against one” would be possible.

The verb *karanti* is classified by Wh (Roots) as a root pres., a stem that otherwise doesn’t exist, but it surely is, with Macd (VGS verb list), a root aor. subjunctive. Although grammars give the 3rd pl. act. subj. ending only as sec. *-an*, it does not seem to me that the Sprachgefühl for this part of the paradigm is terribly strong, and it is easy to imagine extending the 3rd *singular* choice between sec. *-at* and prim. *-atí* to the 3rd pl. I would also point out that if it is to be interpr. as a pres. form, it could just as easily belong to a thematic Class I pres. (there being no accent), and have developed from the root aor. subj. A root pres. 3rd pl. should properly have the weak form **kranti*. A modal sense “can/will do” fits the context better than an indicative. For a parallel see *gámanti* in VII.34.20, which Wh identifies as a Class I pres.

The publ. tr. is somewhat clumsy, since the simile seems to qualify Indra rather than the multitude, who are being compared to threshed ears of grain. The intrusion of a homely agricultural image here is striking, esp. as one would expect a more exalted comparison from Indra’s own mouth. The word *parśá-* is a hapax, but its probable sense ‘sheaf, ears of grain’ is supposedly anchored by the YAv hapax *parša-* (Yt. 13.71), which is likewise the obj. of a form of *√han* (/ Av. *√jan*) – though it should be noted that the Avestan context is hardly diagnostic and there’s a certain circularity whereby the meaning of the Vedic word is supported by the Avestan one and vice versa. On the other hand, *khāla-* ‘threshing floor’ is reasonably well attested in Vedic (esp. AVP, which abounds in agricultural materials) and in Middle and Modern Indo-Aryan (see Turner s.v.), and its presence in this simile certainly helps establish the presumed sense of *parśá-*.

X.48.8: The Guṅgus are otherwise unknown, though they presumably have some connection with the isolated female divine figure Guṅgū in II.32.8. Atithigva is better known. In fact Indra slays the same Paṇaya and Karañja with Atithigva's help in I.53.8, though nothing further is known about these victims. It's also possible that there are multiple Atithigvas (see esp. Macdonell + Keith, Vedic Index, s.v.).

On the lexeme *īṣ* √*kṛ* see comm. ad VII.76.2. Ge (n. 8b) suggests that the simile *īṣaṃ nā* that begins the next pāda in fact goes with pāda a, as a word play; this seems eminently sensible and is reflected in the publ. tr. (though Scar [190] takes it with b). Ge disavows any etymological connection of the two *īṣ*- here, but as indicated in the comm. ad VII.76.2, it is quite likely that they are etymologically the same, though their meanings and functions have diverged; so also EWA s.v. *īṣ*-.

The cmpd. *ṛtra-túr*- (5x, always acc. sg. *ṛtra-túram*) occurs three times in positions 4–7 in trimeter vs., as here (*īṣaṃ nā ṛtratúram* ...). In each case HvN comment that a caesura after 3 is rare, but surely the caesura is simply a late caesura in 5th position as usual, coming at the cmpd seam after *ṛtra*-.

The question is who/what the *ṛtra-túr*- is. Since Indra is the subject, it cannot be him, though he would be the default. Gr suggests Atithigva, and this may be the best solution. Note that in IV.42.8 Trasadasyu is named as a *ṛtra-túr*- “like Indra”: ... *trasádasyum* ... *índraṃ nā ṛtratúram*, so non-gods qualify. But it is possible that it's Indra's mace: cf. X.99.1 *tákṣad vájraṃ ṛtratúram* “he fashioned the mace that overcomes obstacles.”

The (almost) identically built loc. sg. cmpds *paṇayaghne* and *karañjahé* in c contain two different thematic derivs. of √*han*. Scar (696) plausibly suggests that the *-ha-* in the latter is a metrically conditioned nonce form; he might also have noted *ṛtra-hátye* in the flg. pāda, which would have supported the *-ha-* form preceding it.

I consider the mention of the *Ṛtra*-smashing in d to be an implicit comparison: the smiting of the two presumably human enemies in c is likened to Indra's great paradigm deed. I think it less likely that the *Ṛtra*-slaying is simply lumped in, as a third ex., with two lesser such killings.

The redupl. 1st sg. *ásuśravi* is generally taken as a plupf. (Gr, Wh [Rts], Macdonell [VGS 425]), and it may well be. However, it is possible that it belongs instead to the redupl. aor. associated with the caus. *śrāvāya*- ‘make hear(d)’. This seems to be implied by Klein's (DGRV II.170) “after I had caused my fame to be spread.” The redupl. aor. is otherwise represented in the RV by the single form act. 3rd pl. *asuśravuḥ* (X.20.12). A mid. pluperfect might be expected to have passive value like the single indic. pf. in the middle, *śuśruve* ‘has been famed’, in VIII.66.9. A medial caus. could have the reflexive transitive sense ‘cause oneself to be heard of’, ‘spread one's own fame’, and the engagement of the subject in creating his own celebrity fits the boastful tone of this ātmastuti. No alteration of the publ. tr. is needed, since “I spread my fame” essentially expresses the reflexive nuance (though Klein's tr. is more explicit). The full grade (but light syllable) in both *ásuśravi* and *asuśravuḥ* may also fit the template of the redupl. aor. better than a plupf., though the weak forms of redupl. formations to such roots are quite variable.

X.48.9: Namī Sāpīya is found also in VI.20.6 and I.53.7, in the latter without the patronymic. But in its place is *sákh'yā* as a play on words. Our passage has the patronymic in c, directly flg. *námī*, though without distraction (probably), but in d *sakh'yā* appears in the same metrical position,

echoing the pun found in I.53.7 (though note that in I.53.7 *sákhyā* is the instr. sg. of *sákhi-* ‘comrade, partner’, while here (differently accented) *sakhyā* is neut. pl. to *sakhā-* ‘partnership’.

The double dat. *īśé bhujé* is also found in VIII.20.8. As Ge suggests (n. 9a), *īśé*, the functional obj. of *bhujé*, has been attracted to it in case. The double-barrelled tr. “restoring refreshment” for *īśé* is meant to capture the word play in 8ab. Tichy (KISch 207) takes *me* with *īśé* (“um meine Stärkung zu genießen”), but as Ge points out (n. 9a), in VI.20.6 it’s Indra who bestows *īś-* on Namī.

In d *éše* plays on *īśé*, though they are grammatically and etymologically distinct.

X.48.10: As noted in the publ. intro. as well as the hymn intro. above, this is the only vs. that lacks a 1st ps. reference. It is also entirely unclear why this vs., which violates the stylistic unity of the hymn, is found here at all – though I will speculate on this below.. It is true that the meter changes to Triṣṭubh from Jagatī, also for the immediately flg. final vs. 11, but vs. 7 is also in Triṣṭubh, and both 7 and 11 fit conceptually into the hymn. The puzzling content of the vs. does not help: it has given rise to quite different interpr., esp. because of the hapax *asthā* in b.

The hapax *asthā* is taken by Ge (flg. Ludwig) as the instr. sg. to **asth-* ‘bone’ (Aves. *ast*), which he then interpr. as referring to the myth of Dadhyañc and his revealing the location of the hidden soma. His tr. of the hemistich is “Bei dem Einen ward der Soma im Inneren geschaut; den anderen tut der Wächter durch den Knochen kund.” The contortions that he must engage in (see n. 10 and esp. n. 10ab) to fit the wording to the myth are sufficient evidence for the unlikelihood of the interpr. A more likely, though not entirely trouble-free, approach starts with connecting the word to the root noun *√sthā*, a possibility thoroughly discussed by Old; see also Scar (646–47). Although Gr interpr. it as an adverb ‘sogleich’, Old’s negated root noun “der nicht Stehende” yields a richer semantics. He sees the passage as contrasting the good person, in whom the presence of interior soma can be detected (a), and the evil one, who can be shown to be without it (b). “In Manchem (dem Guten) wird der Soma darinnen (verweilend) erblickt. Manchen (den Bösen, vgl. cd) macht der Wächter (über Gute und Böse) sichtbar (kenntlich) durch den (in ihm) nicht verweilenden (Soma).” By this analysis *asthā* is an instr. sg. to the root noun cmpd. This analysis is also fld. by AiG II.2.35 and with some hesitation by Scar, and it is registered, though not fully endorsed, by EWA 766 (s.v. *STHĀ*).

The publ. tr. in general follows Old’s interpr., but questions remain. In particular, who is the *gopā-* who reveals the lack of soma in the second party? And is that *gopā-* the unidentified subject of cd or not? Acdg. to Old, the *gopā-* is the one who watches over good and evil; he says nothing specific about the identities in the 2nd hemistich. My current views slightly emend Old’s interpr., in an attempt to explain why the vs. is found in this hymn. Let us begin with the fact that Indra’s signature deed, the slaying of Vṛtra, is barely mentioned in this hymn, found only in vs. 8 and backgrounded there. In that vs. someone/thing besides Indra is touted as a *vṛtratúr-* (8b) and the Vṛtra slaying is compared to Indra’s slaying of two lesser beings (8cd). I suggest that Indra’s signature deed is treated in our vs., which is the climatic one before the summary vs. 11, but it is an indirect treatment of the Vṛtra slaying, expressed in riddling fashion to escape the clichés of that narrative. I therefore think that the contrast in ab is not between good and evil beings (per Old), but between the one powerfully strengthened by soma and the weakling who does not possess it (who in this case is Vṛtra). In pāda a the soma that Indra drinks to prepare himself for battle is discernible (*dadṛśe*) in Indra, though the soma is within him. Presumably the signs of battle fury and soma exhilaration are evident in his external demeanor. In b the one who is exposed by his lack of soma is Vṛtra, and I am inclined to think that Indra is the *gopā-* who does

the exposing – by showing up Vṛtra’s inability to fight back. This seems more economical than dragging in a third party, and Indra is at least once called *gopā-* (e.g., V.31.1), though the designation is more often of Agni or Soma, less commonly other gods.

As for the subject of cd, I emphatically don’t think it’s the *gopā-*, *pace* Ge (n. 10c) and Heenen (Desid. 207–8). Rather it is Vṛtra (or if my identification of the soma-less being in b is not accepted, some unspecified enemy of Indra). The same desid. part. *yúyutsant-* ‘desiring/trying to fight’ is used of Vṛtra in V.32.5, where Indra in the exhilaration of soma consigns him to darkness (cf. also I.33.6 of a group of Indra’s enemies, also defeated).

By my interpr. the obj. of *yúyutsan*, the “sharp-horned bull” (*tigmáśṛṅga- vṛṣabhá-*), has a double sense. This phrase is several times used of Soma: he is clearly so called in X.86.15, and I argue ad X.28.2 that the same phrase refers to Soma there (contra Ge). See also *tigmáśṛṅga-* in IX.97.9, also of Soma. But the same phrase is used once clearly of Indra (VII.19.1). (The other similar phrase, *tigmáśṛṅga- vámsaga-* [“sharp-horned buffalo (?)”] in VI.16.39 applies to Agni.) The first reading here is probably Indra, with the two primal opponents, Vṛtra and Indra, serving as subj. and obj. respectively. But in trying to fight Indra, Vṛtra is also battling the soma within Indra that gives the god his invincible power.

With Ge (n. 10d) I supply a word for ‘fetter’ (*pāśa-*) with *bahulé*, on the basis of *baddhá-* ‘bound’ and VII.59.8 with the phrase *druháḥ pāśān* “the fetters of deceit” in VII.59.8. Note also that *bahulá-* directly modifies *drúh-* in III.31.19 *drúhaḥ ... bahulá ádevīḥ*. I have not found a passage that explicitly links Vṛtra with *drúh-*, but as in the just-cited III.31.19 anything Indra is against can be so characterized.

To summarize briefly: if I am correct, this apparently aberrant vs. in the otherwise unbroken ātmastuti, which contains no 1st sg. forms and makes no explicit indentifications, is Indra’s indirect boast about his major achievement, the Vṛtra slaying, made possible by Indra’s access to soma and Vṛtra’s lack of it.

X.48.11: Ge takes *devānām* as parallel to the gen. pls. of pāda a: “das Gesetz der Āditya’s, Vasu’s, Rudriya’s, der Götter.” But its positioning after *deváh* invites us to construe the two words together, and the archaic ring of the phrase (“god of gods”) fits nicely with the whiff of Indo-Iranian antiquity in the previous vs., where the arch-enemy of Indra is linked to the Lie.

The negated past participles, near-synonyms, that fill the last pāda, *áparājitam ástrtam áśālham* “invincible, indestructible, unconquerable” bring the hymn to a powerful close. Note that *áparājitam* harks back to 5a *ná párá jigye* and *áśālham* to 7a *niṣṣāl*.

X.49 Indra

Although X.48 and X.49 are companion pieces—ātmastutis consisting of the same no. of vss.—there are notable differences in the stylistic impression they make, esp. with regard to pronouns and verb forms.

As noted in the publ. intro., the nom. sg. *ahám* is ubiquitous in this hymn: 16 of the 20 hemistichs (excluding the summary vs. 11) begin with *ahám*, as do 4 of the even pādas (1b, 2d, 3b, 5d). This overwhelming presence contrasts with X.48, where the 1st sg. pronouns recede after vs. 3 (see intro. to X.48 above).

X.49 also presents a remarkable collection of injunctives – 19 in all, in the 10 vss. under consideration: 1a *dām*, 1b *kṛṇavam*, 1c *bhuvam*, 1d *sākṣi*, 2a *dhuḥ*, 3a *śísñatham*, 3c *yamam*, 4b *randhayam*, 4c *bhuvam*, 4d *bháre*, 5a *randhayam*, 5c *karam*, 6b *rujam*, 6d *karam*, 8c *karam*, 8d *vakṣayam*, 9a *dhārayam*, 9d *vidam*, 10a *dhārayam*. (A few of these require some comment.

Thematic 1st sg. mid. *bhare* in 4d could be either a present or an injunctive, but context favors a past reading and therefore an injunctive identification. In 5c *āyāve 'karam* the Pp. reads *akaram*, but of course *karam* is quite possible in this sandhi situation: Old says the augment is doubtful and points out that even Sāy. reads *karam*. In 6b and d the Saṃhitā *vrtrahārujam* and *rocanākaram* could conceal augments (*a/[ā]rujam*, *a/[ā]karam*), and the Pp. so analyzes, both times with accent, but injunctives are just as possible.) Against this accumulation of injunctives there are 5 securely augmented forms — 3b *āvam*, 5b *ājihīta*, 5d *arandhayam*, 8b *prāśrāvayam*, 10b *ādhārayat* — and a miscellany of other finite forms: 3 perfects: 2d *dade* (or redupl. pres., but see comm. ad X.48.2), 3d *rare*, 7c *āha*; 2 presents: 7a *yāmi*, 9c *tirāmi*, as well as whatever *kṛṣe* in 7d may be. By contrast, consider the distribution of tenses and moods in X.48: 7 injunctives: 1a *bhuvam*, 8a *iṣkaram*, 8b *dhārayam*, 9a *bhūt* (which, given phonological context, could be augmented (*a*)*bhūt*, but isn't so read by Pp.), 9b *kṛṇuta*, 9c *maṃhāyam*, 9d *karam*; 6 securely augmented forms (by meter): 2b *aṇayam*, 3a *atakṣat*, 3b *avṛjan*, 4d *āmandiṣuḥ*, 6b *ākṛṇvata*, 8d *āśuśravi*, and one likely one (6c *ahanam*, though the Saṃhitā text *hānmanāhanam* would allow an injunc. *hanam* reading); 10 presents: 1b *jayāmi*, 1c *havante*, 1d *bhajāmi*, 3d *āryanti*, 4c *śiśāmi*, 7a *asmi*, 7c *hanmi*, 7d *nindanti*, 10b *kṛṇoti*, 11b *mināmi*; 6 perfects 2c *dade*, 5a *jigye*, 5b *tasthe*, 10a *dadṛṣe*, 10d *tasthau*, 11c *tatakṣuḥ*; 2 subjunctives: 5d *riṣāthana*, 7b *karanti*; 1 imperative: 5c *yācata*.

As noted in the publ. intro., I find it surprising that Hoffmann did not treat this hymn as a testing ground for his interpr. of the injunctive. (He does treat a few vss. piecemeal.) In the publ. tr. I render the injunctives as general preterites, except for *sākṣi* in 1d, which I now would rethink.

On the metrical disturbances in this hymn, see Old's various comments.

X.49.1: As just noted, my tr. of *sākṣi* in d (“I have vanquished”) contrasts with my renderings of the other injunctives in this hymn and I would now change to a general preterite: “I vanquished.” There is no functional difference between the present and aorist injunctives in this hymn that I can detect, and although *sākṣi* is the only *s*-aor. form in this hymn, that should not correlate with a different usage.

X.49.2: Pāda c has no overt verb; I have supplied *ā dade* from d. Ge supplies ‘lenke’, though the parallel he cites, I.63.2, has instead the verb *veh* ‘pursue’. Ge also couches the whole hemistich in the present: “ich (lenke) ... ich ergreife ...” This is grammatically possible: as noted ad X.48.2 *ā dade* is ambiguous between 1st sg. redupl. pres. and 1st sg. pf. And it would also make sense if the half-vs. is describing Indra's usual preparations for his innumerable deeds in the present/future. However, in the context of this vs. a past tense reading works better: the first hemistich seems to depict the original initiation of Indra into his name and role, and the second half then describes his acquisition of his two most characteristic accoutrements, his pair of horses and his mace.

But I also wonder if 2cd should be read in conjunction with vs. 3, with the whole referring to the Uśanā Kāvya, Kutsa, Śuṣṇa myth. Or rather, that both readings are simultaneously possible — the first given above, that Indra is acquiring his horses and weapon for the first time after being given the name Indra, and the second, that the horses and weapon are specifically those for the Śuṣṇa battle, with this reading providing a transition to vs. 3. For the horses and weapon in the UK / Kutsa / Śuṣṇa saga, recall that when Indra takes Kutsa on his chariot to journey to UK, he first yokes the two horses of the Wind; cf., e.g., I.174.5 *rjṛā vātasya*

ásvā “the two silvery horses of the Wind” (cf. I.175.4, IV.16.11, VIII.1.11, X.22.4–5). Then when they arrive at UK’s, the latter produces the weapon for Indra to use against Śuṣṇa. In I.51.10 the weapon is referred to as the abstract ‘might’ (*sáhas*), but UK definitely ‘fashions’ it: *tákṣad yát ta uśánā sáhasā sáhaḥ* “When Uśanā fashions might with might for you.” But in I.121.12 the weapon thus fashioned is a mace: *yám te kāvyá uśánā mandínam dād, vṛtrahāṇam pāryam tatakṣa vájram* “What Uśanā Kāvya gave to you to provide exhilaration, that decisive, Vṛtra-smiting mace had he fashioned.” With more details V.34.2 *yád īm mṛgāya hántave mahāvadhah, sahásrabhṛṣṭim uśánā vadhám yámat* “... when Uśanā, possessing the great weapon, held the thousand-spiked weapon (out to him), to smash the wild beast.”

X.49.3: This vs. names by name two of the participants in the exploit just discussed, Kutsa in b and Śuṣṇa in c. I suggest that Uśanā Kāvya is also present, in the *kaváye* in pāda a; UK is elsewhere referred to by the designation ‘poet’ (*kaví-*), substituting for his patronymic. See, e.g., IV.16.2–3, 26.1, V.34.3 and comm. ad VI.20.4. Note that Sāy. glosses *kavaye* with *uśanase* here. Ge’s identification of the poet with Kutsa (n. 3ab) is a less happy choice and leads him to misinterpret the pāda in my opinion.

But determining the identity of the poet in pāda a is only the beginning of our challenges. On the surface of it, the pāda involves slashing, piercing, or otherwise doing harm to a cloak (*átka-*) for / on behalf of the *kaví-*. This somewhat puzzling action was obviously too much for Ge, who supplies the verb ‘gave’ to govern the cloak, from *raré* in d, and supplies Śuṣṇa from c as obj. of *śíśnatham*, thus manufacturing two separate clauses in the pāda, one lacking an overt verb, one lacking an overt object. (This interpr. was followed in all particulars by Elizarenkova [168].) This redistribution of elements seems somewhat perverse, esp. in this hymn and esp. in this verse, whose construction is so four-square, with an *ahám* at each corner (beginning each pāda)—esp. since there’s a perfectly good transitive verb to govern *átkam* in the pāda in question. Old defends interpreting the syntactic deployment of the pāda as given (that is, with *átkam* as obj. of *śíśnatham*), even though we can’t restore the plot. He also properly rejects the notion, found already in Sāy., that *átka-* here is a PN.

Clearly the cloak and what was done to it are the key to this pāda. Here we are lucky enough to find a cloak in another treatment of the UK/Kutsa/Śuṣṇa myth, X.99.9cd; unfortunately it doesn’t provide a clear key: *ayám kavím anayac chasyámānam, átkam yó asya sánitotá nṛṇām* “This one here [=Indra] led the poet who was being praised, who won his cloak and was the winner among superior men” (by my tr.; others’ v. diff.). The first hemistich of this vs. contains a compressed account of the victory over Śuṣṇa, with Kutsa the beneficiary. In my view the “poet” in c is once again Uśanā Kāvya. Here (in my view) he carries off a/the cloak as a prize, perhaps a reward for supplying the weapon that did Śuṣṇa in. This suggests that the cloak belonged originally to the enemy, probably Śuṣṇa himself. In our passage then, Indra may be rendering Śuṣṇa’s cloak harmless and up for grabs – in which case perhaps ‘struck down’ or the like might be a better tr. than ‘pierced’ for *śíśnatham*. Indra dispatches the cloak (pāda a) before doing the same to Śuṣṇa himself (c). I tentatively suggest that Śuṣṇa’s cloak is a garment of enveloping darkness, consisting of *māyā-* (‘magic art’, etc.). Śuṣṇa’s *māyās* are mentioned several times, as objects of Indra’s attack (I.56.3, V.31.7, VI.20.4, prob. IV.16.9); it is also said that the slaying of Śuṣṇa keeps darkness away (V.31.9), and Śuṣṇa is also said several times to be hidden or in possession of something hidden (X.22.10, 61.13). By contrast Ge suggests (again n. 3ab) that the cloak is Indra’s or Kutsa’s and refers to the apparent switching or blending of the appearances of Indra and Kutsa, glancingly referred to in IV.16.10 and embroidered in

entertaining fashion in the JB. (See comm. ad IV.16.10 and the publ. intro. to that hymn.) I find this unlikely, since the cloak is the object of a hostile act that is identical to what happens to Śuṣṇa. (However, cf. VI.33.3, a passage containing instr. pl. *átkaīḥ* deployed by Indra; I explain these cloaks as a reference to Indra's shape-shifting; see comm. ad loc.)

There is another possible explanation for the cloak here; though I think it is less likely as the primary reference than what was just presented, it may contribute to the overall interpr. In the UK/Kutsa/Śuṣṇa portion of IV.16 (vss. 9–14) we find (IV.16.13) *átkaṃ ná púro jarimā ví dardah* “You shredded their fortresses, like worn-out age a cloak.” The simile is hard to interpret (see comm., ad loc.), but syntactically the cloak is being compared to the fortresses (*púrah*) that Indra destroyed. Since it is Śuṣṇa's fortress(es) that are attacked in some passages (I.51.11, IV.30.13, VIII.1.28), the “cloak” here might be a metaphor for these destroyed fortresses.

In b “with this help” conceals the pl. of the Skt. phrase *ābhir ūtibhiḥ*. As so often, I have suppressed the pl. because in Eng. both “with these helps” and “with these forms of help” are awkward.

My tr. of c agrees with Ge's, in construing *śuṣṇasya* with the agent noun *śnáthitā*. More grammatically punctilious scholars, unwilling to accept that some root-accented agent nouns take genitive complements rather than expected accusatives (and vice versa: suffix-accented *-tār-* stems with genitives), have disordered what seems (to me) the obvious sense of the pāda to accommodate their syntactic scruples, construing gen. *śuṣṇasya* with *vádhaḥ* and supplying an object (from nowhere) for *śnáthitā*. Thus, Tichy (*-tar-* stems, 152; fld. word-by-word by Kü [421]) “Ich habe in meiner Eigenschaft, (jeden Gegner) zu Boden zu strecken, der Waffe des Śuṣṇa Einhalt geboten”; Tichy cites the similar ploy of Re (BSL 39.110) “c'est moi qui, (le) massacrant, ai arrêté l'arme de Ś.” The Tichy-Kü interpr. introduces a generalized enemy (“jeden Gegner”) that is out of place in the tight confines of the UK/Kutsa/Śuṣṇa saga. (Re avoids this by supplying Śuṣṇa as object of *śnáthitā*, which indirectly restores what I think the grammar says.) These interpr. also require that the *vádhar-* belong to Śuṣṇa and that Indra's act (expressed by the verb *yamam*) involves checking or parrying Ś's weapon in some way. These assumptions are not impossible: *vádhar-* can be the weapon of the enemy (e.g., I.174.8), and *√yam* can sometimes mean ‘restrain’. However, the more likely interpr. is that Indra is wielding the weapon; cf. the very similar phrase (*vádhar úd √yam*) in V.32.7, where Indra brandishes his *vádhar* against Vṛtra: *úd yád índro mahatē dānavāya, vádhar yāmiṣṭa ...* “When Indra held up to the great Dānava his weapon.” It is also worth noting that in another version of our myth Uśanā Kāvya performs a very similar action, proffering the weapon to Indra: V.34.2 (quoted above) *sahásrabhrṣṭim uśānā vadhām yāmat* “U. held out the thousand-spiked weapon (to him).” Ge (n. 3c) also adduces V.34.2 and suggests (n. 1 at bottom of page) that Indra is holding the weapon out to Kutsa, producing a kind of chain of transmission. I think it more likely that Indra is holding it out against Śuṣṇa, as in V.32.7 (though we lack the preverb *úd* here).

Pāda d seems to sum up the fortunate result of the destruction of Śuṣṇa, but what that result is also has to be probed. The Dasyu is presumably Śuṣṇa. Acldg. to Tichy (/Kü), Indra did not give away the Ārya Schar (host / troop) to him (“der ich die arische Schar nicht dem Feind preisgegeben habe”), with an unmotivated substitution of “group / troop” for “name.” (Ge. does not make this substitution: “der ich den arischen Namen dem Dasyu nicht preisgab.”) I think we need to take “name” seriously and read this pāda in conjunction with 2a, where the totality of creatures (“of heaven and earth and the waters”) conferred the name “Indra” on him. “Indra” is in some ways the “Ārya name” par excellence, and in 3d he seems to be saying that by his heroic actions he has not ceded or handed over this proud name to a creature with the opposing name

Dasyu. That is, he has not disgraced the name or allowed the Dasyu to lay claim to it. The middle voice of *raré* reinforces this boast; it can be tr. somewhat heavily “I did not give *my own* name ...” (though such self-involvement of the subject is not as strongly perceptible in all middle perfect forms to $\sqrt{rā}$).

X.49.4: The same personnel (more or less) appear in VI.20.8, VI.26.4; see comm. on the former esp. for some decipherment of the story involved. The presence of the same names in all three vss. makes it likely that a single mythic complex is involved in our vs., rather than a set of unconnected anecdotes, one per pāda. In both passages in VI, Indra works on behalf of Vetasu and Tuji and against Tugra. Vetasu and Tuji are found only in those two passages (the latter in disguised form in VI.20.8, q.v.) and this one; Tugra is better attested, esp. as the father of Bhujyu, but it’s not clear to me that these two Tugras are the same. (It is also worth noting that the client Tuji and the enemy Tugra appear to be etymologically related, with a Caland-y configuration; see EWA s.v. *túji*-.)

Vetasu in VI.20.8 and 26.4 is singular, against the pl. here.

In the publ. tr. I take acc. *vetasūn* with *pitéva* (“like a father to the V.s”) in order to avoid supplying a verb. But when *pitár-* has such a complement, it is normally in the dative (typically *sūnáve* ‘to a son’). I therefore now think a verb needs to be supplied to govern *vetasūn* and the dat. inf., perhaps a form of \sqrt{kr} (see *karam* in the next vss., 5c, 6d), as in I.129.1 ... *tám abhīṣṭaye, káraḥ* “you will make it prevail” or $\sqrt{pā}$, as in X.93.11 *sádā pāhy abhīṣṭaye* (also V.17.5). The latter would fit better with “like a father,” but the former makes fewer syntactic waves. I would now emend the tr. to “I, like a father, (made) the Vs prevail.” Ge supplies ‘help’, Old (ZDMG 55.328 n. 1 [=KISch 788 n. 1]) ‘brought’, citing I.129.1 just quoted, with *káraḥ*.

In b *smádibham* is generally taken as the PN of another enemy humbled by Indra, parallel to Tugra. VI.20.8 contains a similar configuration, with acc. *túgram* and *ibham* in the same pāda, subject to Indra’s will. Ge-Pi (Ved. Stud. I: xvi) take *ibha-* there as a short form of our *smádibha-*, both *ibha-* and *smádibha-* being PN. Old (ZDMG 55.329 [=KISch 788]) follows this interpr; see also Mayr (PN s.vv.). I am dubious. The word *ibha-* otherwise means ‘vassal’ or the like, and I suggest that in the phrase *túgram śásvad ibham* in VI.20.8, *śásvad ibham* is an appositive to *túgram*: “Tugra (as) perpetual vassal (to s.o.).” In our passage *smádibham* is phonologically similar to VI.20.8 (*śá*)*śvad ibham*. I suggest that our passage is based on, or rather deformed from, VI.20.8, with *smád-* an apheresized, phonologically adjusted form of (*śá*)*śvad*. Since *smád* can form cmpds (e.g., VIII.28.2 *smád-rāṭisac-* “(Agni), along with the Gift-escorts”), it has captured *ibha-*. Unfortunately I have to assume a serious amount of misunderstanding of VI.20.8 to arrive at our passage. The real problem is *ca*, which, in our phrase *túgram ... smádibham ca*, pretty unequivocally signals that we are dealing with two conjoined entities, rather than the single one I would like to see in VI.20.8. To get to my tentative interpr. of the passage here, we must first assume that a phrase like *túgram śásvad ibham* in VI.20.8 was reinterpreted as consisting of two people, not the original one: “Tugra (and) (his) vassal.” This interpr. could be made clearer in two different ways—either by adding a *ca* (**túgram ibham ca* “T and (his) vassal”) or by cmpding with *smád* (**túgram smádibham* “T along with (his) vassal”)—and our passage represents an irrational blend of the two. This may be far more trouble than it’s worth, and simply accepting a PN Smadibha may be the line of least resistance. But I faintly suggest an alternative tr. “I made Tugra along with his vassal subject to Kutsa.”

The challenges of this vs. continue. Pāda c contains the hapax *rājāni* (≠ differently accented *rājani* loc. sg. ‘king’), over which much ink has been spilled (see, e.g., EWA 445–46,

Keydana [Inf. 190–91, both with lit; most recently Weiss [“King: Remarks on an East-West Archaism,” Fs. B. A. Olsen (2017)]]). The form is surely a loc. sg. and is also fairly surely related to the G and Y Aves. *r̥n* stem *rāzar* / *rāzan-*, which is variously rendered (Barth. ‘Gebot, Satzung, Anordnung’, Insler ‘directive’, Humbach₁ ‘Verkündigung’, KP ‘adresse’, Humbach₂ ‘prayer’). I will not further pursue the Aves. evidence here, on the assumption that, if the more liturgically limited interpr. are correct, they result from inner-Avestan developments; not will I pursue the prehistory of the formations, for an ingenious account of which see Weiss. I also think it is unlikely to be an infinitive, as, e.g., Ge (n. 4c) suggests. (On this question see Keydana cited above.) But, assuming the stem means something like ‘rule, direction, control’ the question is who is doing the controlling – Indra or the sacrificer (*yájamānasya*), who is in the gen. and presumably dependent on *rājāni*. The categorical difference that even subtle changes in wording can express is clear in the two English phrases “X is in control of Y” and “X is in the control of Y”: in the former X controls Y, in the latter Y controls X. (My sympathies to non-native-speakers of English, who have to confront these two semantically opposite expressions, distinguished only by the presence or absence of the definite article.)

To approach this question it would help to know the identity of the sacrificer. Since this pāda is found within a vs. otherwise devoted to the Tugra, Vetasu, Kutsa, Tuji saga, it is unlikely to be a generic, present-day sacrificer; rather it should be one of the participants in the same story. Sāy. identifies him as Tuji, who appears in the next pāda. Given their proximity, this makes contextual sense, and note that in VI.26.4 Tuji is characterized as singing / a singer (*gr̥nānt-*), that is, as a ritual participant. Or it could be Kutsa, who appears in the preceding pāda (b); Kutsa is called ‘pious’ in VI.26.3 (*kútsāya ... dāsúše*), one of the treatments of this saga. In either case the sacrificer would be, not surprisingly, a devotee and client of Indra, not one of the enemies. This only gets us so far, however, because it is possible to construct opposing scenarios in which Indra is either “in control of” or “in the control of” said person. Although the former is, in some ways, the more likely—Indra is all powerful and can exert control over any mortal—I think the latter, the counterintuitive one, may be the more appealing. In response to a plea, phrased as a directive, from one of his clients confronting a threatening situation, Indra voluntarily puts himself under the direction of the emperiled mortal. This role reversal may account for the unprecedented verbal expression, with *bhuvam* + hapax loc.

We come, at last, to pāda d. As was already noted in the intro. to the hymn above, *bháre* could be either pres. or injunctive, and I take it as injunc. because it belongs to the mythological recital in progress, as the presence of Tuji shows. Before probing what the pāda means, we need to address its syntax: is d a single subordinate clause, dependent on c, or is *prá yád bháre tujáye* the subord. cl, with a flg. nominal main cl, *ná priyádhīše*. Both Ge and I take it as the latter, but Old produces two possible tr. both reflecting the former. The choice makes rather less difference than it might appear.

The next question is what, if anything, is the obj. of *prá ... bháre*. One of Old’s suggested tr. takes *priyā* as obj.: “bring forward the dear things (that are) not to be assailed”; Ge supplies “Wagen.” But I think it more likely that this mid. locution is reflexive / self-involved: “bring oneself to the fore, present oneself.” This action would be the logical follow-up to Indra’s putting himself under the direction of Tuji: he “puts himself out” for T, insuring that the T’s *priyā* were not vulnerable. What these *priyā* were, we don’t know: Ge thinks it’s a pair of horses, but horses don’t figure in the other passage(s) with Tuji, and the form does not have to be a dual. I think it’s more likely to be just general beloved stuff, in the neut. pl.

X.49.5: In contrast to the previous couple of vss., the episodes here are unfamiliar, but the verbal expression is more straightforward (with the major exception of pāda b). Note the bookending (*a*)*randhayam* “I made subject” in pādas a and d (echoing 4b). On likely injunc. *karam* in c, see intro. to hymn above.

Śrutarvan figures in VIII.74, where he is explicitly mentioned in vss. 4 and 13, but is in addition the object of the dānastuti in vss. 13–15 (see Anukr.). Vs. 14 of the dānastuti contains a comparison to the rescue of (Bhujyu) *tūgryam* ‘son of Tugra’. Although in my comment on the vs. just above (vs. 4) I am skeptical that this Tugra is the same Tugra as in the Tugra / Kutsa tale, it is possible that this sketch of the Śrutarvan / Mṛgaya episode was attached here because of the connection in VIII.74.14.

No opponent of Śrutarvan’s is mentioned in VIII.74 (which is an Agni hymn). The opponent here, *mṛgaya-*, is found as the designation or descriptor of different enemies defeated by Indra in IV.16.13 and VIII.3.19; because of its likely derivation from *mṛgá-* ‘wild beast’ (see EWA s.v. *mṛgá-*), it is quite possible that *mṛgaya-* is not a name, but an adj. ‘wild, bestial,’ or the like.

Pāda b is quite challenging: the only words that present no (or few) problems are the first two, *yád* and *mā*. Let us begin with the third word, the impf. 3rd sg. *ājihīta* (so Pp.). I assume (with Ge, Th [Unters. 25], and hesitantly Old) that Śrutarvan is the subj. of this verb and *mā* (=Indra) is the complement (though see below). To get further, we must first be clear on what the form is out of sandhi. Old points out that it could actually contain the preverb *ā-*: *ā-ājihīta*, but I think we can dismiss this suggestion quite easily: *ā-* is not otherwise found with *√hā* ‘move’. But this raises another issue: forms of *√hā* are almost never found without preverb; most of those listed as such in Gr either appear with derivational extensions of preverbs or belong to the other *√hā* ‘leave (behind) / be bereft of’. For an ex. of the former see VIII.20.6 ... *dyaúr, jihīta úttarā brhāt* “heaven raises itself higher aloft,” with *úttara-* substituting for *úd*, as in X.35.6 *úd agnāyo jihatām jyótiṣā brhāt* “Let the fires rear up loftily with their light.” In V.32.9d pāda-final *jihāte* does appear without preverb, but it contrasts with the immediately following *ní ... jihīta* in 10a. Only the part. *jihānaḥ* in III.38.1 seems to be a genuine independent ex. without preverb. What then to do with our apparently naked *ājihīta*? I suggest, very tentatively, that the *ānu* underlying *ānuṣāk* is to be understood with the verb; the lexeme *ānu √hā* is reasonably well represented (III.31.17, VI.18.15, VII.34.24, X.89.13) in the sense ‘follow, conform to, yield to’, as in the extravagant X.89.13, also with Indra as object: *ānv āha māsā ānv íd vānāny, ānv óṣadhīr ānu párvatāsaḥ / ānv índraṃ ródasī vāvaśāné, ānv āpo ajihata jāyamānam* “The months gave way to (him), the trees gave way, the plants gave way, the mountains gave way; the two world-halves eagerly gave way to Indra; the waters gave way to him as he was being born.” In our passage Śrutarvan may have yielded to Indra (per the publ. tr.) or simply followed him; in any case he is a client of Indra for whom Indra accomplished the deed presented in pāda a.

We still have more than half the pāda to go, however. Though the next word is the perennially problematic *vayúnā*, we might first address the value of the following word, *caná*, another perennial problem. This word has fortunately been treated in detail by Klein (DGRV I.285–92), though he does not deal with this passage. As he clearly demonstrates, although *caná* overwhelmingly appears in negative contexts, by itself it does not have negative value; the negative is expressed elsewhere in the context and, as it were, bleeds (not his term) into the *caná*, in part because of the coincidence of *-ná* with the negative *ná*. (See however comm. ad II.24.12, IV.18.8.) He finds only one passage where *caná* has “indisputably negative value” (VIII.1.5), but as I argue ad loc., this counterex. is only apparent, because a trio of negative expressions follow

caná in the same clause. Klein (p. 286) identifies only two examples of his fourth category of *caná*, “in positive clauses, where *caná* does not possess a negative value.” Our passage can be added to this category, as well as V.34.7 (see comm. ad loc.). In V.34.7 I suggest that *caná* is the equivalent of *cīd* in that context, and it may serve thus here as well. Note that Old says that *vayúnā* is “hervorgehoben” by *caná*. In any case we need not try to include a negative in our interpr. (as Ge does; see below). On the problematic ex. in X.56.4 see comm. ad loc.

Let us now return to *vayúnā*. The first issue is the grammatical identity of the form, which can be either instr. sg. or nom.-acc. pl. neut. Ge (n. 5b) opts for the former, although allowing the possibility of the latter if a participle is supplied. But Ge’s interpr. of the whole pāda renders *vayúnā* entirely too freely: “als er zu mir nicht einmal gebühlich, wie sich’s gehörte, eilte.” I think his interpr. of *vayúnā* is “gebühlich,” with *caná*, interpr. as a negative, accounting for “nicht einmal” and *ānuśák* for “wie sich’s gehörte.” In his note he suggests that Śrutarvan was in such a hurry to get to Indra that he in essence forgot his manners; this doesn’t accord with any other usage of *vayúna-* that I know of. By contrast both Th and Old interpr. *vayúnā* as neut. pl. and *caná* as non-negative. I think both choices are correct (inter alia, because neut. pl. *vayúnāni* is found twice nearby, in X.44.7, 46.8), but neither of the resulting interpr. do I find satisfying. If we take *vayúnā* as neut. pl., we then have to figure out how to construe it. Th takes it as an acc. appositive to *mā* in the meaning ‘protection’ (a semantic extension of his preferred interpr. of *vayúna-* ‘Umhüllung’): “als er (Śrutarvan) in stetiger Folge (immer wieder, unablässig [= *ānuśák* sj]) zu mir (Indra) kam als seinem Schutz.” He notes “[d]er harte Plural der Apposition” (to sg. *mā*) but explains it as expressing Śrutarvan’s repeated seekings of protection. Both the “hard plural” and the lack of other exx. of *vayúna-* as “Schutz” make this interpr. unlikely. It is Old’s interpr. that is closest to mine: “als er zu mir hinstürzte, den Ordnungen richtig folgend.” The syntactically controversial decision here is to construe *vayúnā* with *ānuśák*; he seems to take *ānuśák* as an adjective (“richtig folgend”) modifying the subj. of *ājihīta* and governing the acc. *vayúnā*.

Let us now turn our attention to *ānuśák*, for which see also Scar (588–89). As for adjectival use of *ānuśák*, Scar (589) finds no certain exx. of it, though a number of passages are suggestive and in his opinion the adverbial usage must have arisen from a predicative use of an original adj. Although Scar doesn’t discuss this, I can find no clear exx. of *ānuśák* governing an acc., as Old wants it to. What do I do with the combination *vayúnā ... ānuśák*? As disc. ad II.34.4 and passim, I interpr. *vayúna-* as meaning ‘patterns’, both physical patterns made, e.g., by the alternations of light and shade, and, by extension, ritual patterns, the template of repeated ritual actions, as in VI.52.12 *ímāṃ no agne adhvarām, hōtar vayunaśó yaja* “O Agni, Hotar-priest, perform this ceremony as sacrifice for us according to its patterns.” Now, *ānuśák* is regularly used of the proper ordering of the sacrifice or elements thereof, as in VIII.23.6 *ágne yāhi suśastibhir, havyā júhvāna ānuśák / yāthā dūtó babhūtha havyavāhanah* “O Agni, drive with our good lauds, pouring oblations in yourself in the proper sequence, as you have become our oblation-carrying messenger.” Since *vayúna-* often refers to ritual elements, I think we have the same type of expression here: Śrutarvan’s *vayúna-* ‘ritual patterns’ were properly ordered when he yielded to me or followed after me, and I responded positively to this evidence of Śrutarvan’s piety and helped him out. How does this fit syntactically in b? Since I know of no ex. of *ānuśák* with acc., I take *vayúnā* as neut. nom. pl., with *ānuśák* as adverbial predicate: “the ritual patterns (were) in due order,” in other words as a nominal clause. In the publ. tr. this is presented as an unsigned 2nd *yád* cl.: “when he yielded to me *when* the ritual patterns were in due order.” This is skirting the edge of acceptability, or has even crossed it, I realize. There are two other ways to

configure this, still keeping *vayúnā* as nominative. It may be that b contains two clauses: dependent *yád ...*, fld by *vayúnā canānuṣák* as the main cl.: “when he yielded to [or followed after] me, his ritual patterns were in due order,” such that the *yád* cl. does not depend on pāda a, as it is universally interpr., but on the flg. nominal clause. Or *vayúnā* could be the neut. pl. subj. of the sg. verb *ājihīta*: “when his ritual patterns followed after me in due order.”

I realize that all of these suggestions for pāda b (which now amount to over 1300 words, commenting on the 6 that constitute the pāda) are super-tricky and suspect because of their trickiness, starting with the manufacture of a preverb *ānu* from *ānuṣák*, which nonetheless gets to keep its own integrity. I’m certain of at least one thing – that *canā* isn’t negative here – and certain that several other interpr. are on the wrong track, notably Ge’s. The rest is much shakier, and I do not think anyone has cracked the code of this pāda.

The beneficiary of Indra’s action in pāda c, Āyu, is, as Mayr. points out (PN s.v.), sometimes a client of Indra’s (besides this passage, VIII.15.5), sometimes an opponent (I.53.10, II.14.7, VI.18.13, VIII.53.2 [Vālah., where the preceding hymn, VIII.52, is attributed to Āyu Kāṇva]) — in addition to many passages in which it has the adjectival sense (‘lively’ vel sim.) or refers to a different, primordial Āyu. Since the passages in which Āyu is Indra’s opponent all combine Āyu, Kutsa, and Atithigva into a trio and since Kutsa in our hymn is a client of Indra’s we may assume that we’re not dealing with two different Āyu-s but with different family takes on the Indra / Āyu, Kutsa dynamic.

Ge (n. 5c) interpr. the pāda as a clash between the Ārya, represented by Āyu, and the non-Ārya, identified as *veśá-*, which he takes as the settled (hence presumably indigenous) population subordinated by the conquering Ārya. This interpr. depends on what I consider wrong interpr. of Āyu and of *veśá-*. Although Ge identifies Āyu here as “der arischen Stammeskönig,” as was just noted there seem to be several Āyus, and I doubt that the client/opponent of Indra, associated with Kutsa, is the same as the primordial Āyu. As for *veśá-*, it is not well-attested -- 3x, plus *āsvaveśa-* (1x), *dāsáveśa-* (1x PN?), and *prátiveśa-* (1x) (*niveśá-* (1x) and *svāveśá-* (3x) appear to be independent derivatives of \sqrt{vis} with the sense ‘entry, entrance’; for the latter see comm. ad VII.97.7) – but its other two occurrences call Ge’s interpr. seriously into question. V.85.7 lists a series of associates against whom we might have committed an offense: *aryamyāṃ varuṇa mitryāṃ vā, sákhāyaṃ vā sádāṃ íd bhrātaraṃ vā / vesám vā nityāṃ varuṇāraṇaṃ vā, yát sīm āgaś cakṛmā śísráthaś tád*, with *veśá-*s of two different types ending the list. The publ. tr. reads “O Varuṇa, the offense that we have committed against any partner, be he one by alliance or one by custom, or against a brother, / or against a neighbor—whether native or foreign—o Varuṇa, loosen that.” I would be inclined to tr. *nitya-* here rather as ‘one’s own’ (see comm. ad X.44.1) and *āraṇa-* as ‘alien’, but whatever the fine-tuning, it is clear that a *veśá-* can belong to one’s own group, that is the larger Ārya community. The difficult vs. IV.3.13 contains a similar, though less elaborated, series of associates of the speaker: *veśá-, āpí-* ‘friend’, *bhrātar-* ‘brother’, *sákhī-* ‘partner’. Given that the other terms define a relationship of some intimacy with the speaker, it seems unlikely that *veśá-* would refer to an unrelated non-Ārya. Again ‘neighbor’ seems a reasonable interpr.; I suggest that this sense for the simplex was extracted from the cmpd *prátiveśa-* (RV 1x, X.66.13, but common starting in the AV, esp. in Saṃhitā and Br. prose), with the literal meaning given by AiG II.1.284 as “die Wohnung gegenüber habend.” Such an interpr. starts with a *veśa-* *‘house’ (quite possibly accented **veśa-* and the equivalent of Grk. φοῖκος, etc.), but given that all three RVic occurrences of *veśá-* denote people, synchronically *veśá-* must have the personal sense backformed from *prátiveśa-*. I realize that this interpr. is more complex (or complex in a different way) than the one set forth by Mayr (EWA s.v.), whereby *veśá-* is

from the *IE* nom. ag. **u_oi_k-ó-* (√*ue_ik* ‘sich niederlassen’) and not directly derived from Ved. √*viś*, but the occurrences of *veśá-* in V.85.7 and IV.3.13 require a relational meaning like ‘neighbor’, not simply ‘settler, inhabitant’. *dāsáveśa-* in II.13.8 is the PN of an opponent of Indra’s, but should mean ‘having Dāsas (/a Dāsa) as neighbor(s)’, so also seems to contain the back-formed personal sense. As for *āsvaveśa-* in the difficult vs. VII.37.7, see comm. ad loc.; it may contain the old ‘house’ sense. For other disc. of *veśá-* see Macd-Kelth Vedic Index, s.v., Thieme ZDMG 91 (1937): 107, Renou EVP IV.100 (ad VII.37.7), and EWA s.v., with further lit.: the word has attracted considerable attention. In any case in this passage I would now substitute “his neighbor” for “the vassal.” This change does not of course get us any closer to knowing what actually happened, but it does eliminate the misleading ‘vassal’ sense. Taking *veśá-* as a PN in this passage (Gr; explicitly rejected by Mayr, PN s.v.) does not advance us any further either.

Pāda d is quite straightforward, with another occurrence of the verb *randhaya-* and two likely PNs, one of Indra’s opponent (*pádgrbhi-*) and one of his client (*sávya-*). Both are almost speaking names. *Sávya-* must be related to the adj. *savyá-* ‘left’ with accent retraction; despite the usual negative associations of the left, he is Indra’s beneficiary here. Note that one Śavya Āṅgīrasa is the poet of I.51–57, acdg. to the Anukr. As for *pádgrbhi-* its transparent literal sense is ‘grabbing the foot’, and it is of course possible that this is not a name, but a description of the enemy. For the retroflex *d*, cf. *pádbīśa-* and the instr. pl. of *pád-* ‘foot’ (*padbhíh*); see Old (ZDMG 63.300–302 = Kl Sch. 316–18), EWA s.v. *pádbīśa-*. For the phonology see AiG I.172, etc.

X.49.6: As noted in the intro. to the hymn above, I interpret the hemistich-final verbs as injunc. *rujam* and *karam* respectively, because of the dominance of injunctives in this hymn. However, this comes at some cost: if we follow the Pp. in reading accented *árujam* and *ákaram*, we can have finite verbs for the subordinate clauses introduced by *yáh* (pāda a) and *yád* (c). By my interpr. both those clauses need to be otherwise configured, and it may not be worth the necessary contortions to keep the unaccented injunctives. However, even taking them as accented imperfects does not produce a smooth interpr. of either hemistich, as Ge’s tr. demonstrates.

To begin with, even if we read *árujam* and make it the verb of the relative clause beginning with *yáh*, it cannot govern the accs. in pāda a, *návavāstvam brhádhratham*, because this phrasal name (or names) is used of a client (or clients) of Agni in I.36.18 and *návavāst^uvam* alone of someone under the protection of Indra in VI.20.11 (see Ge n. 6a). Therefore he (or they) is/are unlikely to have been shattered by Indra in our vs. To deal with this problem Ge supplies a participle (“schützend”) to govern this acc phrase. If we don’t take a and b together (as I don’t), we simply need to supply a finite verb with a positive sense in pāda a. I see very little difference between Ge’s participle and my finite verb: both need to be manufactured and the accs. in pāda a construed differently from those in b. I tentatively supplied ‘aided’ in the publ. tr.; ‘led’ would be possible on the basis of I.36.18 *agnír nayan nāvavāstvam brhádhratham*, or some other verb with positive sense.

As for whether we’re dealing with one client or two, Sāy. takes them as two, and Ge follows. I prefer one (though not very strongly), with *brhádhratha-* an epithet or descriptor, “N. possessing lofty chariots.” Note that the full phrase *brhánt- rátha-* is found in I.35.4, the hymn immed. preceding the other attestation of *návavāstvam brhádhratham*, suggesting that it is a descriptor in I.36.18 too.

The interpr. of the 2nd hemistich is even trickier. See Old's thoughtful, somewhat discouraging, and ultimately indecisive disc. of the possibilities. Besides the question of *ākaram* v. *karam* and one clause or two, there are the issues of 1) who/what the referent of the acc. caus. participles in c is, 2) what the object of these participles might be (*rocanā* or to be supplied?), 3) what (*ā*)*karam* governs and how it interacts with the participles, 4) what to do with *ānuśāk*. Let us first examine what Ge does with a single-clause interpr. of cd – and how it fails – before attempting one with two clauses. Acdg. to Ge. (nn. 6cd, 6c), the referent of *vardhāyantam prathāyantam* is Vṛtra and as object to these two causatives we should supply *tanvām*, rendering the participles reflexive: "... den sich auswachsenden, gehörig [his tr. of *ānuśāk* sj] sich ausbreitenden (Vṛtra)." But these interpr. would better fit a medial simplex participle, like *vārdhamāna-* in III.30.8, which he cites as semantic parallel. (Note that Sāy. simply glosses the two participles with their medial simplex equivalents: *vardhamānam ... prathamānam*, making no attempt to account for the morphological differences.) The numerous act. forms of *vardhāya-* (and fewer but not negligible ones of *prathāya-*) are never so used: there is always an external object. And although one of the two medial forms of *vardhāya-* does take *tanvām* as object, it is not a mere reflexive but a transitive-causative with internal object: X.59.5: *ghṛtēna tvām tanvām vardhayasva* "strengthen your own body with ghee." Ge then construes *ākaram* with two accs., the participial phrase (X) and *rocanā* (Y), in the sense "make X into Y": "als ich den ... (Vṛtra) ... in Himmelslichter verwandelte." But this is a notion that is foreign to the RV: in all the seemingly myriad treatments of Indra's slaying of Vṛtra in this text, Indra's turning him into heavenly lights, or realms of light, is never the final (or any) act, as far as I know. Ge (n. 6c) cites one RV passage (X.138.6), which should be otherwise interpr. (q.v.), and a few equivocal passages in Vedic prose. Given that his interpr. of the participial acc. phrase is already deeply problematic, Ge's solution of desperation can be properly set aside.

There is another potential comparandum, adduced and discussed by Old, which I think is another red herring: II.11.8, which has *vardhāya-*, a transitive form of *√prath*, and *dūrē pārē*, but the two verbs are construed separately, with two different objects that have no counterparts in our passage, and the whole is quite obscure in any case.

In my view the passage that gives us the best clue is X.94.9, which contains parallel intrans. forms of *√vṛdh* and *√prath*, with Indra as subject: *tébhir dugdhām papivān somyām mādhu, índro vardhate prāthate vṛṣāyate* "Having drunk the somyan honey milked by them [=pressing stones], Indra grows strong, spreads out, plays the bull." On this basis I suggest that Indra [/ "me"] should be the supplied obj. of *vardhāyantam prathāyantam* in our passage, with the whole phrase the transitive equivalent of X.94.9. But who/what is the referent of the participles, their subject? Judging by X.94.9 alone, it should be soma – but soma is not found in our passage, and introducing yet another entity is not a good idea. Looking to the larger context, the subject could be the one who provided the soma, in other words the organizer of the soma sacrifice, the sacrificer. I suggest that this is Navavāstva, who receives Indra's aid in pāda a. He is the one who in c performs the strengthening and spreading out of Indra "in due ritual order" (*ānuśāk*), in other words, during the proper performance of a soma sacrifice. Recall that in the immediately preceding vs. (5ab), by my interpr., Śrutarvan was the beneficiary of Indra's action because *his* ritual patterns were *ānuśāk*; here Nāvastva organizes his sacrifice in the same proper way. In both vss. Indra does something for somebody (5a, 6ab), who does the right thing by him ritually (5b / 6c).

But how would this fit together syntactically? Here we come to the realm of dangerous speculation, which may bring my whole house of cards crashing down. As I just said, I take the

acc. sg. participial phrase in c to be coreferential with *nāvāstvam* in a, which is also acc. sg. In order to construe them together I suggest (very tremulously) that *yád* in c is functioning as a rough izafe connecting the two acc. phrases. Unfortunately this would be the only such ex. in early Vedic, to my knowledge. Although in Old Iranian (both OP and Aves) non-nom. forms of the rel. pronoun can connect non-nom. NPs and in YAves the neut. *yať* substitutes for various oblique forms of the rel. prn. in this type of construction, giving rise to the later Iranian izafe, insofar as Vedic has a similar construction, it shows different parameters. In the RV there exist nominal relative clauses with izafe-like characteristics, but they are always in the nominative, whatever case the antecedent is, and the rel. prn. agrees with the antecedent in number and gender. In early Vedic prose *yád* is in general use, instead of a number- and gender-matching rel. prn., but the clause is also always in the nominative. (For detailed treatment see my “Stray Remarks on Nominal Relative Clauses in Vedic and Old Iranian: Proto-proto-izafe,” to appear in a forthcoming Festschrift.) Here we would have two features that conflict with the other Vedic exx. of the phenomenon – 1) default neut. *yád* rather than matching rel. prn., 2) a (pseudo-)clause in the same case as the antecedent, not the default nominative. Even though both find matches in some of the Iranian materials, I certainly do not want to claim that the construction here is inherited – rather that it was a maladroitness attempt at a fix to a particular contextual problem. The presumed underlying phrase would have been a simple acc. NP *nāvavāstvam brhádṛatham vardháyantam pratháyantam*, which, however, was too long to fit in a single pāda. For whatever reason the poet inserted the parenthetical main cl. b (... *rujam*) between the name+epithet and the modifying participles, but the latter needed some resumptive device. The poet could have made it all into a rel. cl., **yó vardháyati pratháyati* – but this would have caused confusion with the opening construction of the vs., *ahám sá yáḥ* “I am he who ...,” where *yáḥ* is of course Indra. A 2nd *yáḥ* clause would have invited the Indra interpr. Wanting to make it clear that Navavāstva remained the referent, the poet kept the phrase in the acc. with an inert introducer. (Too bad this strategy sowed confusion rather than reducing it.)

Pāda d is again an independent cl., expressing one of Indra’s cosmogonic actions. Elsewhere he is said to have ‘upheld’ ($\sqrt{dṛh}$) the *rocaná*:- VIII.14.9 *índreṇa rocanā divó, dṛḷhāni dṛmhitāni ca / sthirāni ná parāṇúde* “Through Indra the luminous realms of heaven are firm and made firm, / stable and not to be shoved aside.” (Cf. also II.27.9=V.29.1 of other divinities.) Here he either created the realms or placed them (/ “made them be”) on the far shore of space. This pāda transitions us away from the specifics of the N. story and into the more general situation found in the next vs.

To summarize the structure I see for this vs.: a and c are a single clause, in which we have to supply a verb like “aided” to govern the long acc. phrase that bleeds from a to c. Their connection is signaled by the pseudo-izafe *yád* opening c. Pāda b is a parenthetical main cl., specifying the aid Indra gave N. – we might supply a dative: “(for him) I shattered the Dāsa ...” The final pāda is another independent main cl.; it is not strictly tied to the Navavāstva story, but falls more into the category of Indra’s cosmogonic deeds. I have no faith that my interpr. of the vs. is correct either in general or in detail, but I do think it is an advance on Ge’s and Old’s attempts.

X.49.7: Another discouragingly obscure vs. The first thing to note about it is that it is set in the present, after all the injunctives with past/mythological reference in previous vss. The first hemistich contains the finite present *yāmi* (a); the second the perfect *āha* (c), which always has present value (see Kü 115–17), and whatever *kṛṣe* (d) is, it’s unlikely to have preterital value, a

point made also by Kü (116 n. 47, *pace* Ge's tr. of *āha* and *kṛṣe* as "riet" and "beseitigte" respectively), but see disc. below.

The first hemistich is fairly straightforward: Indra drives around with the Sun's steeds (a), further specified as pl. *Étaśa*-s in b. Since in the sg. *Étaśa*- can be the name of Sūrya's horse and since *Étaśa* is regularly mentioned in the context of the dim story of Indra's conflict with Sūrya over the latter's wheel, our vs. seems to depict a post-conflict phase, in which Indra has prevailed and has acquired the Sun's steeds for his own use. This surmise is supported by the fact that the other two occurrences of pl. *Étaśa*- are in conjunction with the Sun (VII.62.2, X.37.3).

The 2nd hemistich is a different story. Its difficulties begin with the 3rd word *sāvāḥ*. As a simplex, it is a hapax, but (assuming it's the same word) it appears in the cmpds. *prātaḥ-sāvā-* (3x) and *sahasra-sāvā-* (2x). The stem is almost universally (incl. by Sāy.) derived from \sqrt{su} 'press', a derivation supported by the cmpds. (presumably 'early-morning pressing and 'pressing of thousand(s)' respectively), but the influential voice of Ge takes it instead to $\sqrt{sū}$ 'impel' (see n. 7c), tr. it as "Anweisung" (instruction), a rendering that actually seems relatively far from the root meaning 'impel' to me. Ge's deviating opinion can be discounted here (though Kü [116] allows the possibility of both, with "der Antreib / die Pressung"), even though it makes for a smoother tr.: that is, it is easier to imagine "instruction" as the subj. of a verb "says" than a soma-pressing. Nonetheless, RVic discourse contains far stranger pairings.

The next question is whose *sāvā-* is at issue. There is a dependent genitive, *mānuṣaḥ*, which Sāy., Ge, and Kü (116) take as referring to an unidentified man (see esp. Ge's n. 7; he thinks it might be Uśanas Kāvya). In contrast, with Old and Scar. (285) I take it as referring to Manu(s), the first sacrificer: "the pressing of Manu(s)" is both the primal offering of soma and every re-creation of it since. By associating it with Manu, the poet gives it the charter to make authoritative statements (*āha*).

And what is that statement? It is embodied in a single word, the dat. *nirṇīje* (in sandhi it could also be abl./gen. *nirṇījah*, but this is less likely; Pp. goes for dative). This dat. is found three times closely packed in IX (IX.69.5, 70.1, 71.1), as a purpose abstract / (quasi-)infinitive: "for / to be (s.o.'s) raiment" (see Scar 284–85). Here I think Soma is announcing himself as Indra's raiment – that is, that Indra's ritual drinking of soma, starting with the very first soma pressing, provides him with a protective garment or shield in preparation for battle. Alternatively Soma could just be telling Indra to suit up (which is what Old's "... sagt mich sauber zu machen" and Scar's "mich zum Ausschücken anhielt" more or less add up to), but the point of hearing this from Soma would be lost if Soma is not the garment itself.

The result of Indra's arraying himself is given in the main cl. in d. It is quite clear that Indra seriously damages the/a Dāsa with his *hātha-* ('blows, thrusts' vel sim.), but the verb in the clause, *kṛṣe*, is extremely problematic. It is presumably to be construed with the adv. *īdhak* 'apart, aside', but the morphological analysis and even the root affiliation are hard to determine. On the one hand, it looks like the accented *kṛṣé* found in VIII.3.20=32.3, but there are serious divergences. If *kṛṣé* is a finite verb, it is a 2nd sg.; the other possibility is a predicated dat. infin. (see disc. ad VIII.3.20). In either case, this allows a root affiliation with $\sqrt{kṛ}$, which fits the context. But here the default interpr. is 1st sg. (Gr simply invents an aor. stem *kṛṣa*, to which this is the 1st sg.). Though it would be possible to recast d as the words of Soma addressed to Indra: "you (will) do ..." (on this poss., see Ge's n. 7d) and preserve the 2nd sg. interpr., this doesn't fit the rhetoric of the rest of the hymn, where Indra is always the speaker, and it introduces another layer of complication. And we cannot interpret it as a -ṣe 1st sg. (of the *stuṣé* type), because those forms belong to a tight semantic class, that of praising. There is another factor to keep in

mind: two more exx. of *kṛṣe* are found in the next hymn, X.50.5 \cong 6, attributed to the same poet. These three forms must obviously be considered together, but finding a common denominator isn't easy. Among other things, the usual interpr. of the forms in X.50.5–6 is as 2nd sgs. (like *kṛṣé* in VIII), as opposed to the 1st sg. here – though see disc. ad loc. for my rejection of that interpr. Moreover if the repeated *kṛṣé* in VIII is a finite form, it is probably preterital, but that value doesn't fit here. Note Kü's explicit insistence (116 n. 47) that *kṛṣe* cannot be a preterite in our passage.

Taking it by itself (that is, in conjunction neither with *kṛṣé* in VIII nor *kṛṣe* in the next hymn), I see two possibilities, both of which have their problems as well as their advantages. 1) It belongs to $\sqrt{kṛ}$. The advantages are obvious: $\sqrt{kṛ}$ is an overwhelmingly well-attested root; moreover, *īdhak* $\sqrt{kṛ}$ is found elsewhere, in an appropriate meaning: 'put aside, set aside, separate'. Cf. VIII.18.11 *īdhag dvēṣaḥ kṛṇuta* ... "Set hostility aside" (also IV.18.4 and prob. IV.34.9). The publ. tr. "sideline" is a slightly idiomatic version of this. But the drawback of this interpr. is serious and indeed insurmountable in my opinion: we need a source for the -s-, and I have been unable to find any way to get the -s- that is not breathtakingly arbitrary. There is a marginally attested zero-grade medial s-aor. (*akṛṣi*, *akṛṣata*), found in JB and BSS (see Narten, s-aor. 96), presumably based on the old medial root aor. (so Narten). Our form could belong to such a stem – but 1) the stem is very late, 2) we would still have to assume that it had been reinterpr. as a pres. stem, to explain the -e ending – or else that it shows an archaic -e subjunctive ending (rather than -ai) built to an anomalously zero-grade stem. Just to set this down in writing shows how desperate a confection it is. If we want to preserve the root affiliation with $\sqrt{kṛ}$, I'm afraid we have to renounce any attempt to account for the -s-. 2) But there is another avenue: the root $\sqrt{kṛṣ}$ 'plough; drag, draw'. Here the morphology is (relatively) unproblematic. The root has both a 1st class pres. *kārṣati* and a 6th class pres. *kṛṣāti*. Although both presents are generally active, both have medial forms in Vedic (e.g., to the 6th cl., *kṛṣasva* RV X.34.13). On the presents, see Gotō (1st. cl. 112–13) and Hill (Aor.-pres. 115–21); on injunc. *karṣat* see comm. ad X.28.10. Our form can straightforwardly be the 1st sg. med. pres. to *kṛṣá-*. Assuming a meaning 'drag, draw', there is no problem with the semantics of our passage: 'draw/drag aside/apart' can produce the same 'sideline' sense for *īdhak* $\sqrt{kṛṣ}$ as for the same idiom with $\sqrt{kṛ}$. There are a few problems: the root is not otherwise found with *īdhak* and in fact forms of the root are relatively poorly attested in general, esp. compared to $\sqrt{kṛ}$. Moreover, the 'plough' sense is dominant; in fact Gotō (112) claims that the 6th cl. pres. is only used in this technical meaning, whereas *kārṣa-* has a wider semantic range (sim. Hill). But given the (Rig)Vedic propensity for metaphorical extension, I find it difficult to believe that *kṛṣá-* could not widen in the same way as *kārṣa-*. On balance I favor interpr. *kṛṣe* here as a med. 6th cl. pres. 1st sg. to $\sqrt{kṛṣ}$. Or, that *kṛṣe* is a blend, a form originally of $\sqrt{kṛ}$ that has borrowed the -s- from $\sqrt{kṛṣ}$ on the basis of passages like this, where the semantics were neutralized ('put aside' = 'drag aside'). But the blend idea seems more trouble than it's worth.

The rest of the pāda is unproblematic.

X.49.8–10: These three vss. show concatenation, though their contents are otherwise divergent: 8a *sapta(hā)* matches 9a *saptá* in the same metrical position; 9a *dhārayam* matches 10a *dhārayam*, though in a diff. position. Note also 9b *sīrā(h)* and 10d *āśīram*.

X.49.8: This vs. comes as a relief after the many knots that precede it. It also returns us to the mythological past, with two injunctives (*karam* [c], *vakṣayam* [d]) in addition to the augmented *prāśrāvayam* in b.

On the seven whom Indra smites (*saptahā*) see Ge's n. 8a; of the parallels he cites, X.120.6, with its *saptā dānūn* shattered by Indra, is the most apposite. See also his remarks on Nahus in the same n.

The c and d pādas are implicitly contrastive: the definite *anyām* 'the one' in c evokes an unexpressed **anyān* 'the others' as complement, modifying the acc.s of d (so also Ge).

Since *sāhaḥ* is neut. and *anyām* is masc., they must be two parallel objects: the individual enemy (*anyām*) and the abstract power he represents (*sāhaḥ*); for a similar passage (also adduced by Ge n. 8c) where the *sāhaḥ* is Vṛtra's, which is defeated by Indra's corresponding *sāhasā*, see I.80.10 *īndro vṛtrāsya tāviṣīm, nīr ahan sāhasā sāhaḥ* "Indra has smashed forth the power of Vṛtra, has smashed forth the might of Vṛtra with his might."

The apparent act. participle *vrādhant-* is essentially isolated; the sole finite form to the supposed root *√ vrādh* (V.6.7) is plausibly explained by Hoffmann (Inj. 122 n. 32; see also Gotō [1st cl. 302]) as a backformation to *vrādhant-*. Lowe (Part. 291) considers the poss. that it is a Caland adj. In any case it lacks synchronic participial function, serving as a plain adj., but one with shifting value: 'arrogant, overweening' of enemies, 'proud' of clients. For the former, cf., e.g., X.69.11 *āva vrādhantam abhinad vṛdhaś cit* "as strengthener you [=fire] cut down even the greatly arrogant one." For the latter I.122.10, where Nahus, found also in our vs., is so described: *vrādhato nāhuṣaḥ ... śārdhastaraḥ* "more forceful than proud Nahus"; see also I.150.3. Since the ninety-nine here are the object of Indra's strengthening, a positive interpr. is called for. See Ge's n. 8d.

X.49.9: On Indra's holding the waters fast, see comm. ad I.51.4, also I.61.11 (adduced by Ge n. 9a). KH (Inj. 192) takes *dhārayam* as having the same presential-general sense as the identical form in 10 and tr. "ich erhalte die sieben Ströme", but, despite the pres. tense verb in c, I think the rest of the verse is couched in the mythological past.

I do not know why c has a pres. tense verb *vī tirāmi*, while d has the injunctive *vidam* (which could in fact be augmented *avidam* in its sandhi context: *yudhā[avidam]*, though this seems unlikely), esp. since, as Ge asserts (n. 9cd), the actions in the two pādas are elsewhere associated (see esp. X.104.9).

X.49.10: KH tr. and disc. this vs. (Inj. 192). He takes *dhārayam* as "generell" in function (= "allgemeine Eigenschaft bzw. Fähigkeit") and tr. "Ich halte ... fest," while the augmented *ād dhārayat* in b he renders as a semi-modal "festhalten konnte." As he points out, the vs. seems to concern one of the beloved Vedic paradoxes about cows and milk: that "cooked" milk comes from "raw" cows, or that white milk comes from red cows. But in fact the particulars of the vs. point to neither of these (save possibly for the *rúṣat* 'gleaming' in 10b); the content more resembles another standard paradox, that the fetus doesn't fall out of the womb or the sun out of the sky. It is also not clear why/how Tvaṣṭar failed while Indra succeeded, that is, what episode this refers to. Ge (n. 10ab) says that Tvaṣṭar is the creator of animals, but this only makes his failure in this endeavor the more mysterious. Because of the contrast between Indra's and Tvaṣṭar's actions here, I think it must refer to a mythological incident in the past, not a general situation holding now, contra KH.

Pāda b is metrically problematic; for various possible solutions see Old – while Arnold (metrical comm.) suggests reading *tvāṣṭa ádhārayat* with the contraction of *tvāṣṭādhārayat* unloosed and shortening of *tvāṣṭā* in hiatus. What no one seems to have suggested is to read *ná* not as the last word of pāda a, but as the first word of b. This would yield a well-formed Triṣṭubh in pāda a (and the following and final vs. 11 is in Triṣṭubh) and a Jagatī in b, without the need to dissolve the contraction of *tvāṣṭādhārayat*. The break of b would be irregular (two heavies), but it is also under the current pāda division, hence the makeshifts of Old, Arnold, and HvN. My suggested division also eliminates pāda-final *ná*, which is vanishingly rare and places the *ná* in a standard pāda-initial position. (There are numerous examples of # *ná* ... *caná*; see Lub s.v. *caná*.) For disc. of supposed exx. of pāda-final *ná* see comm. ad X.111.7.

The loc. pl. *ūdhasu* (or *ūdhaḥsu*) in c would be better read as degeminated **ūdhasu* to avoid a rare break (– – ∪).

The phrase *sómam āśíram* has been variously interpr. The problem is that although the acc.s throughout this vs. have so far referred exclusively to milk, we suddenly have soma, followed by *āśír-*, the technical term for the milk mixed with soma. Ge (n. 10d) suggests that *āśíram* here is an infinitive, with *sómam* as its complement: “to milk-mix into soma” in an awkward English rendering. (His is smoother: “um den ... Soma zu mischen.”) Alternatively he allows for the possibility of a loose cmpd “die Soma-Mischmilch.” The publ. tr. follows Old’s interpr. (given Noten I.411 n. 1), whereby the milk is *identified* with soma, presumably as a particularly exalted liquid, as well as with the milk to be mixed with it. After all it has just been called “the honey of honey,” another valued substance that is not chemically identical with it. (KH’s [192 and n. 162] “den Zusatz zum ... Soma” seems to follow Ge, though he cites Old.)

X.49.11: Unlike its companion hymn X.48, in this ātmastuti Indra does not remain in character through the whole hymn. The final vs. of X.48, vs. 11, continues the 1st sg. reference with *mināmi* in b and *mā* in c. By contrast, the final vs. of our hymn is a 3rd ps. summary, beginning with the formulaic summary-verse particle *evā* “just in this way,” with Indra the 3rd ps. subject of ab, followed by 2nd sg. reference to him (*te* + heavy voc. *harivaḥ śacīvaḥ* ... *svayaśaḥ*) in cd.

There are two problems associated with ab and esp. its verb. 1) The pf. *vivīye* is the only medial form not only to the pf. to $\sqrt{vī}$, but to any stem belonging to the root. (Wh’s and Gr’s root pres. part. *vyānā-* X.85.12 is universally interpr. instead as ‘breath’; see comm. ad loc.) 2) Moreover, the lexeme *prá* $\sqrt{vī}$ is relatively rare in the RV; see comm. ad I.34.4 as well as Scar (501). (Ge’s suggestion [n. 11a] that *prá* “excuses” (entschuldigen) the middle voice is belied by the fact that all other finite forms of *prá* $\sqrt{vī}$ are active.) I propose to deal with one of these issues by the simple expedient of separating a and b into separate clauses. Taking them as a single clause results in an unusual verbal configuration: not only would *prá* be separated from *vivīye* by tmesis, but it would follow it at some distance, introducing the next pāda. Although preverbs in tmesis sometimes follow their verbs, they generally follow them immediately and remain in the same metrical unit; I do not offhand know of another example of this type (which is not to say they don’t exist).

With the *prá* eliminated, we are free to interpr. pāda a with a simplex *vivīye*, which allows us to tap into a common formula. The VPs *devān* $\sqrt{vī}$ and *nṛṇ* $\sqrt{vī}$ are occasionally found as free syntagms (e.g., VI.50.2 and VI.2.11 respectively) and the cmpds *devā-vī-* and *devā-vīti-* are quite common, all in the meaning ‘pursue / seek to attract the gods (/men)’, i.e., seek to attract their attention and their presence. As a summary of the intent of his self-praise (*ātmastuti*), “Indra pursued / sought to attract the gods” seems accurate and would immediately evoke the

stereotyped VP. His string of boasts is meant to impress the audience with his powers and previous deeds and excite their admiration. The unusual middle voice would reflect Indra's intense self-involvement in the action; the verb is otherwise syntactically identical to the active, as Kü remarks (454) with some puzzlement.

In the publ. tr. I take *devān ... nṛṇ* as a conjoined phrase without overt conjunction: “gods and men.” I now think it at least equally likely that *nṛṇ* refers to the gods, as so often, and the whole should be tr. “the gods, the superior men.” Cf. VI.2.11 *vīhī ... divó nṛṇ* “pursue the men of heaven,” clearly referring to the gods.

This leaves us with pāda b, independent by my interpr. but lacking a finite verb. This can be easily remedied by attending to the first two words: *prā cyautnéna*. The latter of course is derived from \sqrt{cyu} ‘stir, rouse’; *prā* is the most common preverb with \sqrt{cyu} . I generate a verb form for b from this combination, *prācyāvayat* vel sim., supplying as obj. *devān ... nṛṇ* from pāda a.

It is also possible that the second hemistich should be divided into two clauses, rather than being a single cl, as in the publ. tr. The first (c) would be a nominal clause: “all these (deeds) are just yours,” with a displaced *íd*, or “all these (deeds) are yours.” Pāda d would then simply supply *tā* as obj. from its nominative in c: “The powerful ones applaud (them).” This separation might allow more of a role for the *íd* in c, though both interpr. are possible and pretty much amount to the same thing.

Since *abhī√gṛ* means rather ‘greet, welcome, applaud’ rather than ‘sing’, the tr. should be adjusted accordingly.

X.50 Indra

The hymn has an intriguing structural omphalos, although it does not seem to correlate with specially emphasized content. In vss. 3, 4, and 5 each hemistich in the vs. has a more or less matching opening: 3a *ké té*, 3c *ké te* (note the accentual and therefore morpho-lexical difference in the 2nd word); 4a *bhúvaḥ*, 4c *bhúvaḥ*; 5a *ávā nú kam*, 5c *áso nú kam*. Vss. 3 and 4 also have echoes of the opening further along: 3a and the beginning of 3b continue the pronominal pattern: *ké té nára indra yé ta iṣé*, *yé te ...*, with 3d opening with *ké* again; 4b starts with the same *bhúvaḥ* as 4a and c.

There are a few other patterns worth noting: the word *nṛ-* and derivatives dominate the first four vss. of the hymn: 1b (*viśvā*)*narāya*, 1d *nṛmṇám*, 2a *nárya*, 2b *naré*, 3a *náraḥ*, 4c *nṛṇ*. And note contrastive *paúmsye* in 3d. Pāda 5d and 6a are identical save for a minor variation (#*viśvéd etā* v. #*etā viśvā*). And the first (1a) and last (7d) pādas of the hymn end with *ándhasaḥ*, construed, not surprisingly, with a form of $\sqrt{ma(n)d}$.

X.50.1: The verb *prā ... árcā* can be either 2nd sg impv. or 1st sg. subj. I have followed the Pp. (etc.) in taking it as the former, despite the presence of 2nd pl. *vaḥ*. As I discuss in “Poetic Self-Reference” (Fs. Skjaervø, 2005: 69 and n. 10), a poet sometimes urges himself, in the 2nd sg., to praise, while referring to his priestly colleagues on behalf of whom he is acting in the 2nd pl. (regularly *vaḥ*). It is awkward to render the enclitic in English, and so I left it out of the publ. tr.; Ge. takes it as a possessive with *ándhasaḥ* (“an eurem Tranke”), but this seems just like a place to park the pronoun.

With Gr, Old, Scar (360), but contra Pp., I analyze *viśvābhū-* as *viśva-ābhū-* ‘present / available to all’, which distracted reading salvages the meter. The argument against this analysis might be that rt. noun cmpds generally don’t contain both a nominal 1st member and a preverb

(see my *iṣudhyā-* [Fs. Lamberterie, 2020] 486 and my forthcoming “Limits on Root-noun Compounds in Indo-Iranian”; Scar 649 and n. 921). However, this restriction seems to be limited to nominals with object function; *viśva-* is more loosely construed with the rest of the cmpd. here.

As disc. ad I.18.9, III.31.7, *makhā-* and its derivatives and cmpds can have both martial and bountiful sense. Here since *súmakha-* modifies *sāhaḥ* ‘strength, power’, it is more likely to be the former, hence my “good-battling strength” versus Ge’s somewhat discordant “des freigebigen ... Siegeskraft.”

I take *māhi* with *śrávaḥ* despite the pāda boundary between them, because *māhi śrávaḥ* is a fairly common phrase (I.43.7, 79.4, etc.), but there is no harm in taking it with *sāhaḥ* as Ge does.

X.50.2: The *sákhi-*, Indra’s “comrade,” doing the praising in pāda a is by implication the “man like me” who is supposed to celebrate Indra in b — which neatly identifies me as having such a privileged relationship with the god.

The various locatives in cd sketch a range of situations in which Indra is hard pressed and needs – and receives (*abhí ... mandase*) – the exhilaration of soma. The English might be more parsable if the locatives had been rendered more uniformly. I now would take the list as a series of unmarked locative absolutes, tr. “Whether it’s a question of ...” The standard interpr. (incl. in the publ. tr.) is that four different circumstances are enumerated: *viśvāsu dhūrṣú*, *vājakṛtyeṣu*, *vṛtré*, and *apsú*, with *vā* preceding the last member of the series in a construction “X₁ ... X_{n-1} (*utá*) *vā* X_n” (see JSK, DGRV II.172–73). I now wonder if there are only two items on the list, each with a characterizing loc.: the two items would be *vājakṛtyeṣu ... vṛtré vā* (with conventionally placed *vā*), with each further characterized by a circumstantial locative, the initial *viśvāsu dhūrṣú* and the final *apsú* – thus producing a chiasmic construction. On this basis I now suggest an alternative tr. “whether it’s a question of seeking prizes among all the chariot poles or of Vṛtra among the waters.” The reason for my change of heart (beyond a better placement of *vā*) is that an independent situation “among the waters” that would require Indra to rev himself up with soma is a bit difficult to conjure up, and “amidst all the chariot poles” is also somewhat hard to construe independently – witness the varying interpr. given by Sāy., Ge (n. 2c), and Klein. My second proposed item, “Vṛtra among the waters,” would refer to Vṛtra’s confinement of the waters, and Indra’s need to smite Vṛtra in order to free the waters.

As for the first item, we must first take a brief detour through *vājakṛtya-*. The 2nd member of this cmpd, *-kṛtya-* is presumably a neut. abstract ‘doing’ (so AiG II.2.828), found also in AV *karma-kṛtya-* ‘doing of deeds’. But what does ‘doing (or ‘making’) of *vāja-*’ mean? The syntagm *vājam / vājān √kṛ* is very rare: I have been able to find only one example, the throw-away final pāda of VIII.26, vs. 25 *kṛdhí vājān apó dhíyaḥ* “(O Vāyu,) make prizes, waters, and insights for us.” I suggest that *√kṛ* in our *vāja-kṛtya-* is, as it sometimes is, a dummy verb, that is, it serves as the abstract of the denom. to *vāja-*, *vājayá-* ‘seek prizes’; with its associated adj. *vājayú-* ‘seeking prizes’. With this array, we might expect a long-*ā* abstract **vājayā-* ‘the seeking of prizes’ – cf., e.g., *śravas-yá-* ‘seeks fame’, *śravas-yú-* ‘seeking fame’, and *śravas-yā-* ‘the seeking of fame’. I suggest that *vāja-kṛtya-* is substituting for **vāja-yā-*, perhaps to avoid a pile-up of fem. loc. pl. Alternatively *√kṛ* in this cmpd might be used in the same way as in VIII.26.25: ‘make’, that is, ‘supply’ prizes to someone else.

In either case the “seeking / making of prizes” happens “amidst all the chariot poles.” This must refer to the disordered scrum of chariots and the horses yoked to those chariots found

either on the battlefield or in a contest or chariot race. So acdg. to my two-item interpr., Indra receives an infusion of soma at his (mythological) battle with Vṛtra and in the confusion of (present-day) battles and contests in which he gives aid to mortals.

So I now suggest an alternative rendering of the 2nd hemistich “Whether it’s a question of seeking/making prizes amidst all the chariot poles or of Vṛtra amidst the waters, you find exhilaration.” I have not entirely rejected the four- (or an alternative three-) item interpr., however, because the independently construed *apsú* in the next vs., 3d, may respond directly to *apsú* here.

X.50.3: As Ge says (n. 3), the answer to “who are these men (*nárah*)?” is probably a resounding “we are!” This answer has been prepared by the explicit “a man like me” (*māvate naré* 2b). However, since *nṛ̥-* can also be used of gods and in the pl. is especially common with the Maruts, the poet may be setting up a sneaky identification between the human adherents to Indra and the gods who have the same type of relationship to him. In any case the concentration of *nṛ̥-* forms early in the hymn gives weight to the question “who are these men?”

Judging from the various tr., it almost seems that the dative pred. *iṣé* could belong to any number of stems *iṣ-* (several of which don’t exist). I take it to *iṣ-* ‘refreshment’ (so also Scar 291 and Sāy., who glosses *annāya*), the point being that the men in question provide Indra with *iṣ-* (in this case, probably soma). Ge “nach Wunsch” (wouldn’t this be an instr.?) or better (n. 3) “zu deiner Freude” (presumably to the same *iṣ-* as mine); Heenen (Desid. 80–81) “à ta force” (what stem?). Note that VI.68.1, adduced by Ge (n. 3), contains both *iṣé* and *sumnāya*, like the *sumnám* in our pāda b. See comm. ad loc. Our passage makes the reciprocity between the two terms clear: we provide Indra with *iṣ-* and in turn receive *sumnā-* from him.

On *sadhanyām* see comm. ad IV.1.9, VI.51.3, where I accept Scar’s re-analysis of this stem as ultimately based on *sa-dhana-* ‘common wealth’, with the developed meaning of *sadhanī-* ‘companion’, contra the usual deriv. from a rt noun cmpd with $\sqrt{nī}$. In Scar’s rendering of this passage he takes the companion to be Indra’s: “dein Wohlwollen, das dein [ständiger] Begleiter ist (?)” I think it more likely that the men are seeking to make Indra’s favor into *their* companion. I would now slightly emend the tr. to “as their companion,” eliminating “travelling,” which is a ghostly trace of the old interpr. with $\sqrt{nī}$. Curiously Ge tr. *sadhanyām* here as “deine Mitanteil an der Beute gewährende (Huld)” (fld. by Tichy [1983 = KISch 207 n. 22], W. E. Hale [Asuras (1986) 93, “booty-apportioning”], Heenen [“qui procure des butins”]) though Ge’s renderings of the stem elsewhere are in the “companionship” range.

In c the “lordly prize” (*vājāyāsuryāya*) for which the men strive matches the prize in *vājakṛtya-* in 2c. Likewise, the loc. phrase *apsú svāśūrvārāsu paúṃsyē* seems to have a function similar to the locatives in 2cd, except here they express what is at stake for the men, rather than for Indra as in 2cd. The presence of the reflexive adj. *svāsu* ‘their own’ emphasizes the men’s self-interest. Note that *apsú* is found in both 2d and here; in 2d it referred (probably) to the waters associated with Vṛtra, but here it must be the waters that the men are battling for. I therefore think that *svāsu* not only modifies flg. *urvārāsu* (“their own fields”) but, more importantly, preceding and likewise fem. *apsú* (“their own waters”), in order to contrast with the waters in 2d, which are in Indra’s domain. Gr, Ge, and, flg. Ge, Hale take *svāsu* only with *urvārāsu*. I would now slightly emend the tr. to “when their own waters (and) fields (or) their masculine power is at stake.”

The last loc., *paúmsye* ‘masculine power’, implicitly contrasts with the many forms of *nṛ-* so far encountered, esp. the subj. of this vs., pl. *náraḥ*. For a similar contrast see comm. ad X.29.7.

X.50.4: The three insistent pāda-initial forms *bhúvaḥ* are of course troublingly ambiguous, because formally they can be either injunctive or subjunctive (see disc. ad IV.16.18, X.8.5–6) and because the influential disc. of KH (Injunk., esp. 214ff.; see also just cited comm.) imposes what to me is an overly narrow interpr. of these forms. In the publ. tr. I take the three *bhúvaḥ* here as subjunctive “you will become” (so also JSK DGRV I.99); this may be supported by the undoubted subjunctives in the next vs. (*ásah ... vārdhāḥ* 5c). However, I now think it possible, though not necessary, to take them instead as injunctives “you become” — meaning that Indra periodically takes on these roles (see comm. ad X.8.5–6). If we maintain the subjunctive interpr., the first hemistich is a promise to Indra from the poet and ritualists, while the second portrays the aid Indra will provide in return. I think it less likely that the forms are injunctives in preterital sense “you became” (pace Ge’s “Du ... wardst ...”) although this is not excluded.

The stem *cyautná-* is otherwise neut. in the RV (pl. *cyautná(ni)*); as the numerous occurrences in Aves. (both O and Y) of the exact cognate *šīiaoθ(a)na-* are also neut., this seems like an inherited trait. The masc. nom. sg. *cyautnáḥ* here is a grammatical nonce, with the stem pressed into service as a rough-and-ready agent noun. I suggest that it was generated from the last vs. of the previous hymn (X.49.11) where I suggested that *prá cyautnéna* is a compressed expression of * *prācyāvayat cyautnéna* “With his stirring action he be(stirred) (them),” where in fact *nṛn* forms part of the object. Here, with Old, I take *nṛn* again as an acc. to be construed with the nonce nom. agentis *cyautná-*. The tr. would better reflect this as “you will become the rouser of men” (cf. Ge. Aufrüttler, sim. KH, JSK ‘mover’).

In d identifying Indra as a mantra, a solemn utterance, or if we take its suffix literally, “an instrument for thinking,” is a surprising turn; in fact it is rather like identifying him as a (hastily masculinized) *cyautná-* in the previous pāda. Since the ordinarily word *mántra-* is already masculine, it does not need to be masculinized here, but perhaps our form is the equivalent of masculinized *cyautnáḥ*, a nonce agent noun from a nom. act. (Gr glosses this usage as Berather.) Note also that the pair *cyautná- / mántra-* shows the deeply embedded IIr. opposition between deeds and words/thoughts.

Three of the pādas in this vs. contain *visva-* ‘all’: b *visveṣu sávaneṣu*, c *visvasmin bhāre*, d *visvacarṣane* – thus universalizing Indra’s roles. This *visva-* concentration resonates with *visvānarāya visvābhūve* in 1b, with *visvacarṣane* ‘common to all domains’ being esp. similar to *visvānarāya* ‘common to all men’ in sense.

X.50.5: *jyāyān* in pāda a picks up *jyēṣtha-* in 4d.

The hapax *ómatrām* is very problematic; see esp. Old’s detailed disc. He favors a combination of *óman-* (m.) ‘aid’ and *trā-* ‘protect(ion)’ because the two roots regularly appear together. But the morphological details are very difficult. I have rendered it as an unholy (or at least unorthodox) dvandva “succor and protection” without any faith in its correctness.

The conjoined subjunctives in c, *ásah ... vārdhāś ca*, seem functionally untethered, which is why I interpr. them as belonging to an unsignalled purpose clause dependent on (my interpr. of) d. This is not necessary, however – the pāda can simply mean “you will be unaging and will make (us) strong.”

As for *vārdhāḥ*, Gr, Ge, and JSK (DGRV I.80, 83) take it as intransitive (JSK: “grow (even) stronger”), but the active 1st class pres. *vārdhati* is overwhelmingly transitive. Gotō (1st Cl. 290) hesitantly registers only 3 possible intrans. forms of the act. simplex, incl. this one. It seems a simple matter to interpr. it in its usual function and supply ‘us’ (vel sim.) as object, esp. given that the first half of the vs. depicts the help Indra gives to mortals.

The last pāda (essentially repeated as 6a) has two problematic forms, which are run together in the Saṃhitā text: *tūtumākṛṣe*. The Pp. divides as *tūtumā kṛṣe*, an analysis followed by all subsequent tr. (but the publ. tr.) and interpr. (as far as I know), starting with Sāy. Flg from this word division, *tūtumā* is a hapax neut. pl. adj. modifying *sāvanā*, perhaps meaning ‘strong’ (Gr ‘kräftig’) or ‘abundant’ (‘ausgiebig’ BR) to $\sqrt{tū}$ ‘be strong’ and somehow derived from *tumrā-* (so Gr, AiG II.2.85 etc.). *kṛṣe* is a 2nd sg. verb to $\sqrt{kṛ}$, identical to the problematic accented *kṛṣé* found in a repeated passage in VIII.3.20=32.3 (see comm. ad VIII.3.20). The whole assemblage means “you made all these pressings strong / abundant.” There are several glaring problems with this interpr.: 1) The supposed adj. *tūtumā-* is oddly formed; 2) Although it is possible to interpr. *kṛṣe* in the same way as *kṛṣé* in the repeated pāda in VIII, this requires separating it from the identical *kṛṣe* in the immediately preceding hymn (X.49.7) attributed to the same poet as this one. The standard interpr. of that form is as a 1st sg., which would rest on a very different set of morphological processes. Ignoring the nearby form in favor of the distant one is not good philological method; 3) In terms of the content of the pāda, it isn’t really *Indra*’s job to make the pressings strong/abundant; that should fall to the mortal worshipers.

I have a radically different interpr., which depends on a different analysis of the Saṃhitā text: *tūtuma ākṛṣe*. (This requires no emendation of the Saṃhitā text, only a deviation from the Pp.) Note the lack of accent on *tūtuma* and the accented *ā* attached to *-kṛṣe*; both are crucial for the analysis to follow. With this word division we have, first, a 1st plural verb to the reduplicated stem *tūto-* (3x: *tūtos* VI.26.4, *tūtōt* II.20.5, 7). All three other occurrences are transitive, and the two in II.20 take ritual objects: *brāhmā* ‘sacred formulations’ and *sāmsam* ‘laud’, so *sāvanā* ‘pressings’ would be an appropriate obj. for my *tūtuma*. Contra Wh and Macd (VGS), *tūto-* probably does not belong to the perfect system but is a redupl. aor., as identified already by Gr and argued for by Kü (220-21), flg. KH etc. (see Kü’s n. 298); see comm. ad VI.26.4. Assignment to a redupl. aor. seems reasonable, since the single clear pf. form, *tūtāva* (I.94.2), is intrans. and so the *tūto-* forms are functionally distinct. I am somewhat disturbed that there is no *-āya*-pres. attested (**tāvāyati* ‘makes strong’), since in my view trans./caus. redupl. aorists are all secondarily dependent on such present stems. However, since verbal forms to this root in Sanskrit are confined to the RV and are quite rare, the absence of **tāvāyati* may result from the accidents of attestation – esp. since Old Persian has the corresponding stem *tāvaya-* (see EWA s.v. *TAV*⁷; Cheung, Etym. Dic of Iran. Verb 386; Schmidt, Altpers. Wö. 252, etc.), and Vedic could well have inherited the same. That the redupl. aor. is athematic suggests that it belongs to an early layer of such formations. The redupl. aor. analysis also explains the short root vowel – since $\sqrt{tū}$ is set, we might have expected **tūtū(-ma)* in weak forms – since the metrical template of redupl. aors. is heavy redupl. + light root syl. (not achievable in the *tūtos*, *-ot* forms however).

Having exchanged an oddly formed adj. *tūtumā-* for a well-formed finite verb, we now must confront my suggested *ākṛṣe*, and this requires revisiting *kṛṣe* in the previous hymn X.49.7. As argued in the comm. ad loc., I take *kṛṣe* there not as a form of $\sqrt{kṛ}$ (the universal view), but of $\sqrt{kṛṣ}$ ‘drag, draw’ – in that case the 1st sg. mid. of the 6th cl. pres. *kṛṣā-*. I assume the same root affiliation here, but take it not as a form of the 6th cl. pres. but rather as a dative inf. *ākṛṣe* with purpose sense: “to draw (you) here.” This makes for a satisfyingly conventional sense for the

pāda: we make our soma particular powerful / abundant in order to attract the god. There are a few loose ends to be cleaned up, however. First, *ā* is not otherwise attested with $\sqrt{kṛṣ}$ in Vedic. However, it would be exceptionally easy to create on the model of the numerous lexemes with *ā* like $\sqrt{kṛ}$ ‘make (to be) here’, \sqrt{bhr} ‘bring here’, etc., and in fact $\sqrt{kṛṣ}$ ‘draw to oneself’, etc., is quite common in epic and Cl. Skt. A more serious problem is the accent: in a rt. noun cmpd like this we should expect *ā-kṛṣe*, rather than having the accent on the preverb. I have no good answer for this; I can only suggest that the accentuation was adjusted (with retraction onto the preverb) redactionally on the basis of (*ṛdhak*) *kṛṣe* in the preceding hymn (X.49.7) after the correct analysis of the form, and the configuration of the pāda, had been forgotten.

X.50.6: The rel. cl. in pāda b, depicting Indra’s assimilation of the pressings, seems to support my interpr. of 5d/6a.

The mantra takes its more accustomed place with other elements of the sacrifice, after its unusual identification with Indra in vs. 4.

X.50.7: On a slight ring with vs. 1, see comm. at the beginning of the hymn.

Ge construes *sumnāsya* with *pathā* “auf dem Pfade (deiner) Gunst,” while I take it with adjacent *mānasā*. There seems no principled way to decide.

X.51–53

These three hymns concern the well-known myth of Agni’s flight and concealment in the waters to avoid his ritual role as conveyor of the oblations, his discovery by the gods, and his return to his role. The first two hymns are in dialogue form. All three are attributed to Agni Saucīka, a name presumably generated from the subject matter of the hymns. On the patronymic *saucīka* see Ge’s intro. to the three hymns.

X.51 Agni

As noted in the publ. intro., the responsion in vss. 4 and 6 define vs. 5 as an omphalos, and it is in this vs. that the gods emphasize Agni’s responsibilities to Manu as first sacrificer. The responsion is esp. pronounced in 4a ABL ... *varuṇa bībhyaḍ āyam* and 6c ABL *bhiyā varuṇa ... āyam*, but note also “this business” (4d *etām ārtham* / 6a *ārtham etām*).

The first four vss. are also characterized by the repetition of the adv. *bahudhā*.

In addition to the usual treatments, see Schnaus, Dialoglieder 233–52.

X.51.1: That Agni was covered with a caul on his entering the waters suggests that the episode is configured in part as a pregnancy and re-birth. On the caul, see below ad X.53.6.

Note the phonetic echo in ... (-) *viṣṭitaḥ* ... (-) *vivésitha*, though the two forms belong to diff. roots ($\sqrt{viṣṭ}$ and $\sqrt{viś}$). Note also (-) *viṣṭam* in 4b.

Final *ékaḥ* contrasts with hemistich-init. *viśvā* as well as *bahudhā*.

X.51.2: The use of $\sqrt{kṣi}$, which ordinarily means ‘dwell’, is somewhat surprising for Agni’s kindling sticks; its usual meaning is found in 5b.

Ge (n. 2cd) suggests that what lies behind Agni’s question about the location of his kindling sticks is his assumption that he could not be visually located in the waters by his pursuers because the kindling wood is not making him bright. That the kindling sticks are said to

“lead to the gods” (*devayāñīḥ*) seems a little off; perhaps Agni is suggesting what Ge did: that the brightness of the kindling sticks would lead the gods to him. See also comm. ad vs. 5.

X.51.3: The root √ *viś* from 1a returns, but as a ppl. -*viṣṭa-*, morphologically matching the ppl. to the root √ *viṣṭ* also in 1a.

On *daśāntaruṣyā-* and *antār* √ *vas*, see Old and AiG II.2.831.

X.51.3–4: The plupf. *aciket* in 3c has clear preterital function, parallel to the impf. *aíchāma*. It contrasts with the presential pf. *ciketa* in 4d (on the presential value of this pf. see Kü 169). The two forms also have different semantic values: ‘perceived’ versus the extended meaning ‘attend to’ ‘think about / consider’.

The opening of 3c *tām tvā* is echoed by the opening of 4c *tāsya me*, both reinforcing an enclitic personal prn. with a form of *sāl tām*.

X.51.5: On the gods’ somewhat disingenuous use of Manu as argument for Agni’s return, see publ. intro.

Opinions differ about the deployment of the gerund *aramkṛtyā* in b. With Ge, I take it with pāda a with Manu as agent, despite the pāda boundary. Like Ge (n. 5b), I supply **yajñām* as obj., extracted from *yajñā-kāma-*. Cf. with similar obj. X.63.6 *kó vo ’dhvarám tuvijātā áram karat* “Who will properly prepare the ceremony for you, o powerfully born (gods)?” But most interpr. take it with pāda b with Agni as agent: Old, Don., Schmaus (Dialog, 238–40 with disc.). Sāy. considers both possibilities and gives an alternative interpr. for each; Schnaus cites Tikkanen (Gerund, 352) as favoring the Ge solution. The problem with respecting the pāda boundary is that the result doesn’t make a lot of sense (at least to me). If Manu is the subject, the point is clear: the sacrificer has everything in readiness, but lacks the means (i.e., sacrificial fire) to offer it and convey it to the gods. But if Agni is the subject, what has he previously prepared? Sāy. supplies *ātmānam*, seeming to suggest that Agni has arranged himself so that he can’t be seen. Old thinks the object is the sacrifice: Agni previously prepared (/used to prepare) it (as a general rule?), but now he rests quietly out of the fray. Don implicitly takes *kṣeṣi* as a modal, suggesting (n. 9) that the gods are promising that if Agni will (return to) perform the sacrifice for them “you may rest after serving us.” Schnaus accepts Sāy.’s *ātmānam* and discusses possible semantic nuances, not to much purpose. The range of interpr. if the gerund belongs with the rest of b shows how ill it fits there. Taking it with pāda a fits the urgency of the gods’ address to Agni, with the three 2nd sg. impvs. (*éhi ... kṛṇuhi ... váha*): Manu is prepared and waiting impatiently for your (=Agni’s) action.

Note *tāmasi*: since Agni is a perpetual source of light, his dwelling “in darkness” is surprising, almost paradoxical. This paradox is also found in the 1st vs. of the famous hymn X.124 (on which see my 2016 “The Divine Revolution of Ṛgveda X.124: A New Interpretation. Beyond Asuras and Devas”), where Indra tempts Agni to join his sacrifice, with the argument *jyóg evá dīrghám táma āśayīṣṭhāh* “For a long time indeed you have lain in long darkness.”

On *kṛṇuhi* see comm. ad vs. 7 below.

devayāñīḥ in 2d is reprised by *devayāñān* in c. As with the two forms of √ *kṣi* (see comm. ad vs. 2), the second occurrence is more easily interpretable than the first, and we may consider both pairs as showing a species of poetic repair.

X.51.6: On the responsions with vs. 4 see publ. intro. and the above intro. to the hymn.

The Pp. divides *rathīvádhvānam* as *rathī iva ádhvānam*; under this analysis *rathī* would be the nom. sg. of the *-ín*-stem *rathín-* ‘having a chariot’. Old (see also Gr s.v. *rathín-*) prefers to restore *rathīr va*, with the *vrkī*-stem *rathī-*.

Old remarks that *ánv ā* ... is not an exception to the accentual rule regarding two preverbs the second of which is *ā*, whereby the first preverb loses its accent. Here *ánu* is to be construed with preceding *ádhvānam*.

As is generally agreed (explicitly Gr, Old [with copious earlier lit.], Re [EVP XIV.79–80], Schaef. [Intens. 192–93], Schnaus [241], though contra Sāy., who favors \sqrt{vr}), on the basis of formulaic context the verb *āvarīvuḥ* must belong to the intens. of \sqrt{vrt} ‘turn, roll’ (*varīvart(t)i*, etc.). But the morphology is wrong, with a mostly missing root syllable: we should expect a 3rd pl. **avarīvrtur*. Old plausibly suggests that the 3rd sg. pres. *varīvart(t)i* with simplified underlying geminate *-tt-* and the *t*-less 3rd sg. impf. *avarīvar* gave rise to our *t*-less form, by haplology. Old does not, however, provide an intermediate preform. We should expect either **avarīvrur* with zero-grade root syllable or perhaps (on the model of the imperfects of redupl. pres.) **avarīvarur*, with full grade. The latter would be a candidate for Old’s haplology, the former for liquid dissimilation. Either process would work, but it’s too bad Old wasn’t more explicit. Re suggests that the impetus was “de conserver le quadrisyllabisme, typique dans cette classe d’intensifs” – but the zero-grade form would have done just that.

There is some difference of opinion about the structure of the phrase found in the simile (*gauro ná*) *kṣepnóḥ* ... *jyāyāḥ*. Both forms are abl.-gen.; one of them should be an ablative construable with *avije* ‘I flinched (from)’, with the other a genitive dependent on it. The uncertainty is located in the hapax *kṣepnú-*. This is a clear deriv. of $\sqrt{kṣip}$ ‘throw, hurl’, but the question is whether it refers to an agent who performs such an action (‘hurler, shooter’) or to an action or abstract. Most tr. (incl. the publ. tr.) take it as the former, i.e., ‘hunter, archer’ vel sim., in which case it is a gen. dependent on the abl. ‘bowstring’ (so my “from the bowstring of an archer”). But AiG II.2.742 takes *kṣepnú-* rather as an abstract ‘quickness, swiftness’ (das Schnellen), presumably connecting it semantically with another deriv. of the root *kṣiprá-* ‘quick’. This interpr. flips the case relations, imposing an interpr. “from the swiftness [abl.] of the bowstring [gen.],” as reflected in Schnaus’s “vor dem Schnellen der Bogensehne” (p. 241; see also her explicit case idents. on the same page). Without certainty about the meaning of *kṣepnú-* it is not possible to be certain; however, I still favor the first interpr. “Swiftness” is not the first quality one thinks of in a bowstring, and when an animal is afraid of being shot, its fear would not, I think, be concentrated on how fast the string would go from behind the shooter’s ear to its normal position a few inches in front, but on whether the shooter was going to use the bowstring to propel an arrow its way.

X.51.7: It is worth noting that this hymn contains one of only three forms in the RV of the developing irregular 8th class pres. to $\sqrt{kṛ}$ (*karóti*, *kuruté*), viz. 1st pl. act. pres. *kurmáḥ* here – the other two being the 2nd sg. impv. *kuru* (X.19.2, 145.2). The form here is esp. surprising because the standard 5th class pres. impv. *kṛṇuhi* is found two vss. earlier, also in the speech of the god(s). There is more to be said about *kurmáḥ*, some of it puzzling. The first thing to note is that the expected 1st pl. act. of the 5th class present, *kṛṇmās(i)*, is not found in the RV, though its medial counterpart *kṛṇmahe* occurs twice (VII.16.4, X.84.4). The 5th cl. form *kṛṇmās(i)* is, however, very common in the AV (approx. 15 occurrences in Ś, most with P parallels), but the AV entirely lacks the 1st pl. found here, *kurmās(i)*, even though the 8th class present is otherwise far better developed in the AV than the RV. (*kurmáḥ* predominates in the other early Vedic texts,

though KS also has *kṛṇmah* in addition to *kurmah*.) That *kṛṇuhi* and *kurmah* not only appear in the same hymn, but within two vss. of each other in the speech of the same individuals (and gods at that!) suggests that, at least for the composer of this hymn, the two forms didn't belong to different paradigms or signal different registers, but that *kurmah* was the de facto 1st pl. act. present to the "normal" pres. stem to $\sqrt{kṛ}$. I don't quite know what to make of this, esp. given the strong representation of *kṛṇmās(i)* in the AV.

In context the form also strains to be a modal: the gods seem to be promising that they will do something for Agni (hence my "will make") rather than that they are doing so at present. A subjunctive would have done nicely; both pres. subj. *kṛṇāvāma* and aor. subj. *karāma* are attested in the RV and would have been available (though not metrically apt).

The rest of pāda a contains an apparent nominal izafe-type clause: *āyur ajāraṃ yād* "a lifetime that is free from old age." On such constructions, see my article in the Mark Hale Fs. This phrase is so interpr. by all the standard tr. (Sāy, Ge, Re, Don). However, Schnaus takes it differently, and it is worth considering her divergent interpr.: she takes *yād* as subordinator ("wenn") of the whole pāda. Even though it is quite late in the clause, this seems syntactically possible, since what precedes it is in some sense a single constituent, the VP. So, by her interpr., the first hemistich is subordinated to the main clause found in the second. Like me, she takes cd as a non-overtly-marked question: "Wenn wir dein Leben alterlos machen ... wirst du dann ...?" This could be a solution to the non-modal form of *kurmah* just disc., since in a "when" clause the pres. indic. would be at home. I therefore consider that an acceptable alternative tr. would be "When (/if) we make your life free from old age ..., will you ...?" flg. Schnaus.

The standard tr. take cd as a flat statement: "then you will convey ...," not a question. This would seem somewhat presumptuous on the part of the gods and also not to square with the hard-ball negotiations Agni undertakes in the next vs. I prefer to take it as a question.

Pāda c reprises 5d, with the 6-syllable pres. part. *sumanasyāmānaḥ* occupying the whole of each pāda after the opening and the subjunctive *vahāsi* matching the impv. *vāha* in 5.

X.51.8: Agni bargains for considerably more than the life without old age that the gods were offering in 7a. The numerous examples of *ca* in this vs. nicely express the pile-up of perks that Agni is demanding, as Schnaus points out (245): "Agni will nicht nur die Voropfer, sondern auch noch die Nachopfer, und die Schmelzbutter und und und." The "long life" of the original offer is relegated to the final pāda.

The referents of the expressions in c, "the ghee of the waters and the man of the plants," are disputed, particularly the second. Ghee is of course a prized ritual substance and a main contributor to the blazing up of the offering fire. As to its relationship with the waters, it can be conceived of as the essence of liquids, the distillate of the class of substances whose cover term is waters, or as the final and best product of the process that begins when cows drink water. Both possibilities have been suggested; I favor the former.

On the model of the first expression we should expect "the man of the plants" to be 1) another ritual substance offered into the fire, and 2) the essence of the class of substances whose cover term is plants, or the product of a process that begins by the ingestion (vel sim.) of plants. It is very difficult to identify anything that meets both criteria. If "man" is taken literally, then we must use the second alternative of criterion 2: "product of process," since a literal man can't be the essence of a different class of substances (unless, with JSK I.141, we silently replace "plants" with "animate things," a superordinate class I doubt if Vedic India had). In the "process" interpr., we must assume that men eat plants and therefore count as the product of plants (the linkage here

being rather fragile). Even if we accept this reasoning, what ritual substance would man represent? Old (in his long and thoughtful disc. of the *pāda*), fld by Klein, suggests it's the dead body that is given to the fire to devour. I think this is unlikely: the "flesh-eating" (*kravyāḍ-*) fire of cremation is carefully distinguished and forcefully separated from the ritual fire that conveys oblations to the gods (see esp. X.16.9–10), and it's the latter that's in question here. I very much doubt that the oblation-conveying Agni who is speaking here would associate himself with the cremation fire or remind the gods that one form of fire has this inauspicious job. Though see the anxiety expressed in the next hymn, X.52.3, and also bear in mind that Yama is the one who found him in our vs. 3. Alternatively Schnaus (245) suggest that the man here is the sacrificer, who makes offering to and nourishes Agni – and that plants are the principal nourishment of men.

If we do not take "man" literally but as an entity embodying the essence / best of plants, other interpretational possibilities open up. Perhaps the best is that the "man" is Soma (see Ge n. 8c, Re), an idea that goes back to Hillebrandt. The plants are elsewhere said to have Soma as king (*óṣadhīḥ sómarājñīḥ* X.97.18–19, sim. 22); certainly in the RVic universe Soma would be considered the pinnacle of the plant world. And Soma is a ritual substance. The problem, however, is that soma is not offered into the fire – for obvious practical reasons: unlike ghee, which makes the fire blaze, a liquid like soma would put it out or at least put a damper on it. I therefore doubt that Agni would be requesting soma. Ge (n. 8c) suggests rather offhandedly that "the 'man' of plants" might be the tree, which, in the form of firewood, is crucial to the ritual fire's continued existence. Trees can have a vaguely anthropomorphic shape (trunk and limbs), and "firewood" makes sense as a ritual substance Agni would want— but "soma" has more conceptual oomph. Perhaps this is just a riddle we (and the bewildered gods, who ignore or reconfigure this request in their response) are meant to ponder. But in the end, I favor the tree / firewood interpr.: ghee and firewood together provide the food, the fuel, for the fire.

Schnaus (245) points out that Agni entered into the waters and plants (*apsv óṣadhīṣu*) in 3b, so their return here has been prepared.

X.51.9: The gods echo (and accede to) Agni's requests from the first hemistich almost word-for-word; the metrical disturbance in 9a (extra syllable) may be meant to call attention to the respension, as elsewhere: see, e.g., comm. ad Yama/Yamī hymn, X.10.11–12.

If (like us) the gods had trouble figuring out what Agni was demanding in 8c, their corresponding offer of "the whole sacrifice" (*yajñāḥ ... sárvaḥ*) in 9c may be meant to cover all possible bases. (Note *sárva-* for *vísva-*, which prevails in the older RV and is found [in the pl.] in vss. 1 and 2.)

X.52 Agni

Ge asserts that the entire hymn is in Agni's mouth (save for the final summary vs. 6); as noted in the publ. intro., I consider vs. 3 to be an intrusion from a human ritualist. Re tentatively considers 3 and 4cd not to be Agni's speech.

In addition to the usual treatments, see Schnaus, Dialoglieder 253–65.

X.52.1: The two hemistichs are constructed in parallel: a 2nd pl. impv. of speaking addressed to the gods (*śāstānā a, prá ... brūta c*), followed by a *yáthā* clause, with the *yáthā* reinforced / doubled by a second subordinating *yá-* form (*yád b, yéna d*). But this 2nd subordinator makes some trouble for interpr. in the first construction. The construction in cd is fairly straightforward: in *yáthā ... yéna pathā*, the phrase *yéna pathā* more nearly specifies *yáthā* "how, by what path"

(at least in my interpr.; see below) and *yéna* is clearly a modifier in a noun phrase. But the function of *yád* in b is more open to interpr. For one thing, it is not adjacent or near-adjacent to *yáthā*. For another, though it could be a neut. sg. NA and function as a modifier like *yéna*, there is no surface noun it can attach itself to, and of course it could instead be a subordinating conjunction, introducing a new clause, or doubling *yáthā* to introduce the old one. Old cf.s *kathā kád* in IV.23.5a, c, but there the two are adjacent and there is a noun *sakhyám* associated with *kád*. Ge (n. 1ab) cites III.32.14 with *yátra ... yáthā*, on which see comm. ad loc. Re compares *yád ... yáthā* in the immed. preceding hymn (X.51.7), but those two forms are quite unconnected contextually.

On first glance it appears that *yád* is pleonastically marking the gerund as a clausette, but gerunds don't require such marking. (See Hettrich, Hyp. 231 n. 41 on this point with regard to this passage.) Re supplies a noun referring to speech for the *yád*, though in a somewhat twisted construction: "... je pourrai concevoir (un thème poétique et) le quel." Although this solution is in part supported by an expression in the next hymn (X.53.4 *vācāḥ prathamām masīya* "might I devise the foremost of speech," also with a modal form of $\sqrt{\text{man}}$), the context here does not seem to me to be about Agni's poetic development but about his figuring out how to perform the role assigned, that of Hotar. On the basis of the similar construction in cd, I think *yáthā ... yád* are parallel subordinators, but this goes awkwardly into English ("how, what (task) I shall conceive ..."); in the publ. tr. the *yád* is therefore represented by "it." Ge's rendering (253) is more faithful without losing too much parsability: "wie ich and woran ich ... denken soll" (sim. Schnaus 253), but I would prefer not to use a simple "think (about)" for *manávai*.

This verb may be responsible for much of the trouble, and its presence here is, I think, part of a buried verbal play. Recall that in X.51.5 the gods argued that Agni owed it to Manu, who was all prepared to perform sacrifice, to return and take over the role of his oblation-conveyor. The verb *manávai* looks very like the dat. *mánave* "for Manu," save for accent (and ending), a dative that regularly occupies just this metrical position (e.g., IV.26.4 *havyám bháran mánave ...*). I take this as the poet's subtle reminder of Manu's part in this scenario.

In contrast to my interpr. of *yáthā ... yéna pathā* as doubled subordinators of a single clause, both Ge and Re both take them as introducing separate clauses, the first being a nominal cl. consisting only of *bhāgadhéyam yáthā vaḥ*, the second spanning pāda d with the finite verb – though Re in his n. considers the possibility of a unified cl. The best evidence I can see for a two-cl. interpr. is the doubled enclitic *vaḥ*, but as seen in the publ. tr., I take the two *vaḥ* as having different functions: as genitive with the nouns referring to the gods' share and as dative indicating them as recipients/goals with *ā (...)* *vāhāni*. Schnaus has yet another way of configuring cd, with *bhāgadhéyam* as the obj. of *prá ... brūta*, and what follows as a single cl. with double subordinators: "Sagt mir die Anteilsverschaffung, wie ich euch, auf welchem Weg ich euch die Opfergabe hinfahren soll." None of these interpr. takes proper account of the parallel structures of ab and cd.

X.52.2: The first hemistich reprises the first hemistich of vs. 1: pāda a *ahám hótā ny àsīdam ...* \cong 1b *hótā ... niśádyā*, while b opens like 1a with the *vísve devāḥ*, though in nom. not voc. But other elements have been added. Agni claims to be "the better sacrificing" (*yājīyān*) Hotar; as Ge suggests (n. 2a), he may be comparing himself to his older brothers or to the human Hotar or both. And in b all the gods are joined by the Maruts, for reasons that are not clear to me (though see the passages cited in Ge's n. 2b for the Maruts' presence at Agni's kindling).

I render the impf. *ny àsīdam* as an immed. past “I have sat down,” though this is not a standard use of this tense (see IH’s work). However, the context certainly favors this interpr.

The publ. tr. of the first part of d is quite different from the standard, which take *brahmā* and *samīd* as two independent subjects of *bhavati*: “the Formulator is (there, and) the kindling stick”; Re “le *brahmān* (est présent), la bûche-flambante est (là).” I take *bhavati* as expressing an equational transformation, “X becomes Y” – “The kindling stick becomes the Formulator.” Although this may not make immediate sense, I think it in fact gives richer semantics. It may be that the crackling of the just-kindled fire is compared to the verbal part of the sacrifice, or that the recitation of the formulation coincides with, and appears to cause, the kindling of the fire. However, as an alternative I would consider the tr. given above.

X.52–3: Both 2c and 3c begin with the āmreḍita *āhar-ahar*, which draws especial attention because in the first instance this produces a very rare opening of four light syllables (as Schnaus points out, 255), slightly ameliorated to three lights in 3c.

X.52.3: As indicated in the publ. intro. and the hymn intro. above, I think that this middle vs. is not spoken by Agni. Besides the third-person reff. in the vs., note that vs. 3 is distinguished structurally from the two flanking vss., 2 and 4. Vs. 2 opens *ahām hótā* rhyming and contrasting with 3a *ayām yó hótā*, while vs. 4 firmly reestablishes the 1st ps. reference by beginning *mām*. Nonetheless, Ge (flg. Sāy.) considers Agni to be the speaker of vs. 3; acdg. to Ge, Agni poses the questions in ab to himself, and answers them in cd. This seems overly complex. Most other comm. (Lanman [Reader, 387], Old, Re, Schnaus) agree that the speaker is “Andrer als Agni” (Old), but there is no consensus on who the speaker is. The most likely, in my view, is a human ritual participant (Re’s tentative “Le récitant?”; Schnaus “Sänger”). On seeing the newly (re-)installed Hotar, the speaker expresses some anxiety about the Hotar’s identity – and esp. his possible connection with Yama. Recall that it was Yama who discovered Agni in hiding in the previous hymn (X.51.3), and Yama’s role as king of the dead raises the unappealing possibility that the fire now installed as Hotar is actually the cremation fire or one closely related to it. Hence “who is he to Yama?” On the need and desire to keep the ritual fire of divine worship and the cremation fire strictly separated, see comm. above ad X.51.8 and passages in the funeral hymns, esp. X.16.9–10.

On *āpy ūhe* see comm. ad VII.104.14, where I uphold the old root affiliation with √ *ūh* ‘solemnly proclaim, laud’, rather than accepting Kü’s (489–90) assignment to a putative √ *vāh* ‘anerkennen’. I take *āpi* √ *ūh* to mean ‘(solemnly) address / call upon’, with the *āpi* contributing the sense of closeness, directness: in both passages the obj. of the verb is a god or gods in a ritual situation, and here especially the speaker is in intimate proximity to the ritual fire, addressing it with the words of the liturgy. With this second question I think the ritual officiant is asking which actual fire he is addressing in the current ritual, which is a sacrifice to the gods, not the dead.

Pāda c contains two āmreḍitas, *āhar-ahar* and *māsī-māsī* “every day / day after day” and “every month / month after month.” It is not clear if they are meant to be contrastive or sequential. In the publ. intro. I tentatively accepted Lanman’s suggestion (Reader, 388) that the birth every day is that of the ritual fire (for the Agnihotra, destined for the gods) and the birth every month is that of the fire for the Śrāddha celebration, destined for the ancestors (Pitars). I now consider this doubtful, because 1) I am not aware of any RVic evidence for the monthly Śrāddha, and 2) if this is actually the sense, it would mean that there is no distinction between the

fire(s) for these two purposes, even though I have just argued that this issue drives the anxious questions in the first half of this vs. I now think it more likely that the fire born every month is for the RVic equivalent of the Darśapūrṇamāsa, with the daily and monthly sacrifices marking the most temporally significant ritual observances.

It is for these sacrifices that the gods established Agni as their oblation-carrier. Note the middle *dadhire*, signaling the gods' stake in the action. Note also that *havyavāham* reprises 1d *havyām ... vāhāni*.

However, with regard to the Śrāddha, I have to admit that it does seem referred to in the *Atharva Veda*; see AVŚ XVIII.4.63 *pārā yāta pitarah ... / ādhā māśi pūnar ā yāta no grhān havir āttum* "O forefathers, go away; then in a month come again to our houses to eat the oblation."

X.52.4: Save for the emphatic reestablishment of the 1st ps. via vs.-initial *mām*, in pāda a Agni repeats 3d verbatim. Although many recommend reading disyllabic *mām* here (Gr, Lanman, Arnold, Schnaus [oddly Old doesn't comment]), I think this may be another instance in which metrical irregularity calls attention to patterned repetition; see in this hymn sequence X.51.8–9 as well as X.10.11–12 and comm. thereon.

Note the "popular" *I* in *āpamluktam* to the rare root \sqrt{mruc} , *mluc*, found only here in the RV.

With Ge (n. 4cd) I take cd as the gods' words – in my view, quoted by Agni as the verbal accompaniment of their formal installation of Agni in his role. Note that pāda c consists of 8 straight heavy syllables, with the first (and only – the final being anceps) light syllable found in the cadence at position 9. This metrical structure may express the solemn and ponderous nature of the gods' instructions.

Pāda d is identical to X.124.1d; interestingly that passage also depicts an attempt to coax Agni into becoming the oblation-carrier of the gods, though this time in the context of the "divine revolution" – on which see my 2016 "The Divine Revolution of Ṛgveda X.124: A New Interpretation. Beyond Asuras and Devas" (Ged. Frits Staal). I will not speculate on the numerology in this characterization of the sacrifice; there is quite enough such speculation out there already.

X.52.5: The standard tr., incl. the publ. tr., take the 1st sg. med. aor. *ā ... yakṣi* in modal/desid. value; KH (Injunk. 253) includes this passage among the 1st sg. injunctives he considers to have immediate future value. Given that Agni doesn't seem to have embarked on his duties yet, some version of these views is probably correct. I do now suggest, however, that pāda b need not be as closely linked to pāda a as all tr. (incl. mine) assume, which would take the pressure off the modality of *yakṣi*. It does not make a lot of sense that Agni would win immortality for the gods so that he can make wide space for them: these two actions aren't causally linked. I now think that b may rather be a prelude to c: in order to win wide space, Agni wishes to put the mace in Indra's arms, so that Indra can perform his usual martial feats. Winning battles is generally the necessary prelude to gaining wide space elsewhere in the RV. Cf., e.g., VII.98.3 *yudhā devébhyo vāriṇaś cakārtha* "Through combat you [=Indra] made wide space for the gods" (= I.59.5, with Agni as subj.); sim. III.34.7 (Indra). I therefore suggest an alt. tr. for bc: "So that I may make wide space for you, o gods, might I place the mace in Indra's arms. Then ..."

X.52.6: This is a 3rd ps. summary vs. I do not think the speaker is the same as the ritualist in 3, who appears to be on the scene.

In c *aúkṣan ghr̥taiḥ* “they sprinkled (him) with ghee” seems to further specify *samañjānti devāḥ* “the gods anoint (him)” in 3b.

The final words of the hymn *hótāraṃ ny āsādayanta* echo 1b *hótā ... niśádyā* as well as 2a *hótā ny āsīdam*. This ring composition is hardly surprising, since the installation of Agni as Hotar was the aim of the dialogue and the hymn.

X.53 Agni

On the structure of this hymn, see publ. intro. and the introductory remarks of Old and Ge. See also Schnaus, *Dialoglieder* 267–89 and Köhler, *Kaví*, 114–17 and 326–28.

One of the verbal tics of this hymn is the use of a rel. cl. beginning with *yéna* identifying the means by which something is accomplished: 4b the speech with which the gods defeat the Asuras, 7d the chariot by which the gods lead (something), 9d the hatchet with which Brahmanaspati hews his formulation, 10d the track or word with which the gods achieve immortality. See also 10b *vāśtbhir yābhiḥ* with the instr. rel. in 2nd position and a different gender and number, but functioning in the same way.

X.53.1: Note the annunciatory here-and-now quality of *sò 'yám*, which is difficult to render in English in conjunction with a relative cl.

In c it might have been better to render *yájīyān* as ‘better sacrificer’, given its use as a true comparative in X.52.2.

X.53.2: For a construction similar to pāda a see I.70.8 *árādhi hótā ... niśattaḥ*, adduced by Ge. My rendering there is “he has been brought to success, installed as Hotar-priest”; I use “realized” here to distinguish *árādhi* from the form of *√sādh* in the next vs.

On *yájīyān* see comm. ad vs. 1.

Pāda b is essentially identical to VI.15.15; see comm. there. On the position of *hí* and on the peculiar behavior of forms of *√khyā* with preverbs and *hí*, see comm. ad III.31.12.

I interpr. the function of the injunc. *abhí ... khyát* as presential/general. Ge as modal “so möge er ... sich ansehen”; Re and Schnaus as preterital “il a pris en considération” and “er hat ... beschaut” respectively. I connect b with cd and assume that b indicates that Agni has made the conditions favorable for the sacrifice that we wish to perform. The other tr. take b with pāda a. This is possible but, to my mind, less likely because his success / realization in pāda a is not the result of his watching over the oblations, as the *hí* would suggest.

The second hemistich is notable for the interjection *hánta* and for the two syntactically parallel fig. etym.: *yájāmahai yajñīyān* and *īḍāmahā īḍīyān*. Note also that *yajñīyān* echoes the two previous occurrences of *yájīyān* (1a, 2a)

X.53.3: The opening of pāda a, *sá āyur āgāt*, echoes the end of 1a *sò 'yám āgāt*. Pādas a and d are also entirely parallel in structure: ADJ (FEM. ACC) *akar deva-Xtīm no adyá* “he has made our X-of-the-gods Y today.”

Ge remarks on pāda b (n. 3b) that the hidden tongue is sacred speech (“die sakrale Rede”). This is one possible reading, but surely the primary referent is Agni, who is often called the tongue of the sacrifice (e.g., II.1.13). Although strictly speaking it wasn’t the human ritualists but the gods who found Agni in hiding, they can be pardoned for taking some of the credit. Re in his comm. recognizes both possibilities.

The publ. tr. agrees with Ge and Re in construing *āyuh* with *vāsānah*, as in X.16.5. Schnaus (269–70) takes it instead with *āgāt*, which would certainly be possible, but this leaves *vāsānah* without an object. She takes it as reflexive with a pred. adj.: “sich wohlreichend kleidend,” but I know of no reflexive uses of this present without an expressed obj. In X.16.5 I render the phrase more fully as “clothing himself in (new) life,” of the dead man’s embarking on the afterlife (see comm. ad loc.). The phrase here can be interpr. similarly. As noted ad X.51.1, the prominent mention of the caul in the first vs. of this hymn sequence suggests that Agni’s entry into his hiding place in the waters is configured as a pregnancy, and so his emergence to take up his duties as Hotar is a type of (second) birth.

Schnaus tr. *devahūtī*- as ‘Göttertrank’, a minor lapse, I assume

X.53.4: Pāda b contains one of the rare representations of the Deva/Asura conflict that so dominates the later Vedic mythological scene, but that is essentially absent from the RV, as W. E. Hale has definitively shown. Only in this late hymn and in X.157.4 do we find pretty clear evidence of the Asuras as a group in structural and hostile opposition to the gods. Hale in fact (p. 85) suggests that the Asuras here could instead be human enemies, but this seems unlikely. It’s noteworthy that Agni seems to think that a particularly well-devised speech is what will defeat the Asuras.

On the formation of *ūrjād*- and its problems see Old and Scar (34).

The 2nd hemistich is addressed to both gods and men, the former clearly identified as *yajñiyāsaḥ* and the latter as *pāñca janāḥ* (though see Ge’s n. 4d for some very flimsy evidence that the five peoples may have been deified). Who the *ūrjādaḥ* are is a little less clear, in part because the cmpd is a hapax. Acdg. to Re, they are gods, but since *ūrjādaḥ* is explicitly (*utā*) conjoined with *yajñiyāsaḥ*, we might expect it to have a different referent. Moreover, we regularly ask the gods to provide *us* with *ūrj*-; cf., e.g., VIII.35.10–12 *ūrjam no dhattam aśvinā* “provide nourishment to us, o Aśvins,” and as far as I know, the only instantiation of the VP *ūrjam* √ *ad* in the RV has cows as subj.: X.100.10 *ūrjam gāvo yāvase pīvo attana* “Cows, eat nourishment in the pasture, eat fat” (though these cows in fact stand for the milk to be mixed with soma). The question cannot be settled without considering the telling variant on the conjoined phrase in the next vs., 5b *gójāta utā yé yajñiyāsaḥ* “the cow-born and those who are worthy of the sacrifice.” Who are the “cow-born”? The word is found twice elsewhere (VI.50.11, VII.35.14); in the former it appears in a list with “earthly, heavenly, and watery,” in the latter, in a pāda identical to ours, with “earthly and heavenly” immed. preceding. Note that in our vs. the second hemistich contains references to both heaven and earth (as well as the midspace), though not to beings identified as earthly and heavenly. In both the other passages there is a presumption that all of these groups are divine in some way, though it is not explicitly stated. Ad VI.50.11 I tentatively accept a suggestion of Re’s, that the cow-born are the Maruts, and that is possible here. But I would not rule out a reference to livestock. To summarize, the referent of *ūrjādaḥ* in vs. 4 is not certain, and the parallel *gójātāḥ* in 5 isn’t as much help as it might be. In balance, I think humans are the more likely referent or *ūrjādaḥ*, but neither gods (or a set of gods) nor even livestock are excluded.

X.53.5: On *gójāta*- see disc. of immediately preceding vs. 4.

X.53.6: This vs. is addressed, presumably by the human ritualist(s), to Agni (ab) and the speaker(s)’ fellow priests (cd), who are urged jointly to proceed with the sacrifice. In particular,

Agni is to go towards heaven along paths readied by ritual speech. These paths are probably the “work” that the humans are urged to “weave,” in a different metaphor. Cloth-making metaphors in fact unify the vs.: Agni “stretches the thread” of the sacrifice (a), while the priests “weave” (c).

The word *anulbaṇā-* occurs twice in the RV, here and in VIII.25.9. Despite superficial similarity, it is generally held that it is unrelated to *úlba-* ‘caul’; see the curt rejection by KH (MSS 8 [1958]: 18 = Aufs. 398), followed by EWA s.v. I think this is worth revisiting. To begin with, the only occurrence of *úlba-* in the RV is found in the first pāda of this hymn sequence (X.51.1a); that one of the two RVic occurrences of *anulbaṇā-* is found two hymns later, in the same hymn group, seems unlikely to be a coincidence, esp. given their aberrant phonology – though it could, I suppose, be just a deliberate phonological echo. The negated *anulbaṇā-* is usually glossed ‘without bulges / knots’ (Gr “ohne Wulst oder Knoten”), for no particular good reason that I can see. It is then considerably widened to ‘faultless’ (Gr “ohne Fehl”). Let us first consider the example in VIII.25.9, where it modifies *cákṣas-* ‘(eye)sight, vision’. Since sight generally has neither knots nor bulges, the semantically widened version has to be used – e.g., Ge’s “mit fehlerlosem Gesicht” (or, as in the publ. tr., with a reasonable facsimile of knots, there ‘motes’). However, if we start with ‘caul’, an obvious interpretation imposes itself: the blurry vision and semi-opacity of the eye’s lens resulting from cataracts were surely known in ancient India (it’s a condition that afflicts most people as they age), and a “caul” over the eye is an appropriate metaphor for both the appearance and the experience of this condition. (For a [close-to] current day analogue, note that David Knipe in his *Vedic Voices* [p. 198] records how the smoke from the daily Agnihotra damaged the eyes of some of the Āhitāgnis he studied in late 20th c. Andhra, rendering them blind or close to it – though the fact that these Agnihotras were performed indoors may have exacerbated the eye condition.) The sense of the word in our passage is more difficult to determine, since as far as I know, there is no weaving failure that could be conceived of as a caul. Here I think it must be metaphorical for veiling, unpellucidity, or cloudiness of the poetic product, esp. since in the preceding pāda Agni is supposed to be associated with “paths of light made by insightful thought.” I would emend the tr. to “a work without a veil [=clear].” Note that Schnaus (276–77) discusses *anulbaṇā-* at length and comes to similar conclusions.

On the hapax *jógū-*, derived from the intens. of *√gū* ‘sing’, see Schaef (114). It is presumably a subjective genitive (so Schnaus, 275) with *ápas-*; that is, the singers are to perform the work that has been woven, not to receive it. Both Schaef. and Köhler (*Kaví-*, 327) assert that the stem no longer has intensive semantics, but I do not see on what grounds: my “ever-singing” or a more “intensive-like” “laut singend” (Gr) are perfectly compatible with the context.

The last pāda is syntactically and lexically straightforward, but has somewhat surprising content. Agni is urged to “become Manu” and “generate the divine race,” on first glance a cosmogonic act not within the capability of a human, even the first human. Ge (n. 6c) is surely correct, that Manu as first sacrificer *makes them appear* at the ritual (“zum Vorschein, zur Stelle bringen”) by his ritual activity; he thus “begets” them metaphorically at a particular place and time. The relationship between Agni and Manu first highlighted in this hymn sequence in X.51.5 comes to its climax here, with Agni actually transforming into Manu.

X.53.7: On *íṣ* *√kr*, see comm. ad VII.76.2.

Gr, Ge, Schnaus all supply *raśanāḥ* ‘reins’ as obj. of *ā ... pīmśata*. I follow Re (also JSK DGRV I.436), who supplies ‘chariot’, on the basis of the focus on the chariot in cd and the NP in I.49.2 *supéśasam ... rátham*.

Klein (l.c.) points out the unusual position of the second *utá* in this hemistich “following a preverb within a conjoined set of verbal lexemes,” where he would expect *ca*. (The set consists of ... *nahyata-utá ... íṣkṛnudhvam ... ā-utá pīmśata*.) Acdg. to him, this is the only such ex. in the RV, but he defines the context rather narrowly. For another ex. of *utá* between preverb and verb, see V.59.5.

There’s a surprising lack of comment on what the eight seats on the chariot represent in the ritual. I’d don’t mind admitting that I have no idea.

In d it is impossible to know if *priyám* is the object of *ánayan*, as in the publ. tr. (also Gr, Ge, Schnaus) or the goal, with the object “us” to be supplied or none at all: “led to something dear” / “led (us) to something dear” (so Re and Ge alt. in n. 7d). Since *priyám* isn’t further specified, we have no info. with which to make a decision. In any case, the pāda seems to reverse the direction and director(s) of the chariot. In abc it seems that the ritualists are being exhorted to prepare the chariot of sacrifice and drive it (presumably towards heaven and the gods), but in d the gods seems to have taken the reins. This may (as Schnaus seems to suggest, 278) reflect the two-way street of ritual reciprocity: “die Opfergaben werden damit ebenso zu den Göttern gefahren wie die Gaben der Götter zu dem Menschen.”

X.53.8: On the vs. see Old’s comments in his intro. to the hymn. On pāda a see Ge’s long n. 8. As he points out, this vs. is often used in later ritual for a real or symbolic river-crossing. Unfortunately, of course, the word ‘river’ is missing from our text; we must triangulate from the fem. gender of the nom. *ásmanvatī* (most words for river and most river names being fem.) and the meaning of the verb *rīyate* ‘flows’ (cf. X.40.9 *rīyante ... sīndhavaḥ* “the rivers flow”). The interpr. of the phrase is greatly aided by the variant verse in AVŚ XII.2.27 *úttiṣṭhatā prá taratā sakhāyó, ’śmanvatī nadī syandata iyám*, with an explicit ‘river’ modified by *ásmanvatī* and a verb, *syandata*, synonymous with our *rīyate*. This vs. immed. follows one that quotes our pāda directly (AV XII.2.26a *ásmanvatī rīyate ...*) and seems to be meant as a gloss or explanatory expansion – let us hope they got it right.

Ge suggests that the stones are stepping stones (or rather a bridge of them) in a powerfully flowing stream; I am dubious, because I think even a lot of closely bunched stones would provide precarious footing for horses pulling a chariot (if the chariot of 7 is still in question), or oxen pulling a cart, or even for a group of men walking. I think more of a river or stream with a stony bottom that would provide better footing than a soft one, but admittedly I know nothing about the bottoms of the rivers in NW India. (On the potential problems for vehicles crossing a river, see III.33, esp. 9–13, and III.53.17.) In any case the crossing here is metaphorical, but presumably involves the metaphorical chariot from vs. 7.

The medial idiom *sám √rabh* is generally construed with an instr. and means ‘be clasped / embraced by’ metaphorically (e.g., I.53.4–5). Here, however, it appears without instr. and must mean something like ‘clasp each other’. See X.72.6 where JPB tr. *súsaṃrabdhā átiṣṭhata* as “well clasped to one another, you stood ...” (of the gods). The point in that passage and ours must be that by embracing each other, a group creates a united and formidable front and can proceed to action. My tr. here, “pull yourselves together,” is not literal, but I think it conveys the intent better than “embrace each other” – but perhaps “pull together” or “stick together” might be closer to the literal.

In c the publ. tr. wrongly renders the subj. *ásan* as if it were an imperfect. The tr. should be changed to “those who will be unfriendly.”

In d the question is whether *śívān* modifies *vājān* or is an independent and parallel goal. Although Ge and Re choose the former solution (e.g., “zu günstigem Gewinn”), with Schnaus I think the latter is more likely. *śívān* is obviously meant to contrast with *ásēvāḥ* in the previous pāda, as their juxtaposition across the pāda boundary shows. And the *ásēvāḥ* in c are definitely beings (probably human enemies), not things. The point being that we want to find ourselves a more agreeable set of companions, as well as acquiring prizes.

X.53.9–11: As disc. in the publ. intro., these three vss., in Jagatī stand somewhat apart from the rest of the hymn, though they also continue its themes—the most important of which is the crafting of effective ritual formulations, as seen esp. in vs. 6 and also 4.

Vss. 9 and 10 are esp. parallel; note the repetition of *nūnām* and forms of the pres. *śísā-* / *śísī-*. More important is the fact that 9cd and 10ab depict the same actions (though with partly varying lexicon) performed by gods (Tvaṣṭar and Brahmaṇaspati in 9) and human poets (*kavayaḥ* in 10): the production by carving with axes/hatchets of the verbal portion of the ritual. Strikingly neither in 9b nor in 10b is there an overt object for the verb of hewing (*ṛṣcāt*) / carving (*tákṣatha*), despite the clear assumption that it is a verbal product.

X.53.9: See Ge’s note on this vs.

In the publ. tr. the pf. injunctive *vet* is rendered as the preterite “knew,” but, given the context (pres. part. *bíbhrat* b, pres. *śísīte* c, subj. *ṛṣcāt* d), I now would follow the other tr. in taking it as a general present ‘knows’. KH (Injunc. 169) pronounces it “generell.” In the sandhi context (*māyāvet*) it could be an augmented plupf. *avet*, but this is unlikely.

Calling Tvaṣṭar “the best worker of workers” (*apāsām apástamaḥ*) links his activity to that of the human ritualists in 6c, urged to “weave a work (*āpaḥ*).” Tvaṣṭar provides the drinking cups for the soma (pāda b), thus contributing to the oblation/physical portion of the ritual. But more important, in the second hemistich, he sharpens the tool that the “lord of the formulation”—“das göttliche Vorbild des Dichter,” in HPS’s felicitous phrase (B+I 126)—will use to produce the formulation, the verbal portion of the ritual.

Parts of this vs. are reminiscent of the enigmatic X.28.8, which I argue depicts the original instantiation of the sacrifice by the gods (see comm. ad loc.). The first hemistich of that vs. reads *devāsa āyan paraśúm̐r abibhran, vānā ṛṣcānto abhí viḍbhír āyan* “The gods came; they carried axes; hewing the trees, they advanced with their clans towards (the ritual ground),” with the redupl. pres. *abibhran* matching our part. *bíbhrat*, the axes (*paraśú-*), and the verb ‘hew’ (pres. *ṛṣcá-*) present in both. I don’t quite know what to do with these similarities.

The most puzzling part of the second hemistich is *étaśaḥ*, which must be a qualifier of Brahmaṇaspati. This stem usually names, or refers to, the sun’s horse or horses, but it is unlikely that Brahmaṇaspati is being identified with that animal. The stem is generally derived from *éta-* ‘mottled, dappled’, and most tr. render it as a color term here (buntfarbig / bigarré). But why would Brahmaṇaspati be multicolored? Th (Stud. z. idg. Wortkunde, 68), adopted by HPS (and see EWA s.v.), interpr. it as ‘bunte Tiere (Kleinvieh) gewinnend,’ but with an unfortunately typical Thieme overreach (*-śa- < *-psva-*). My “(chariot-)steed” is a placeholder, as if the image in this pāda were a sort of transition figure from the chariot image in vs. 7. But this may be worse than useless. However, I do think a whiff of the chariot image recurs in vs. 11 (q.v.).

X.53.10: The poets are now exhorted to follow the the model of Brahmanaspati.

The identity and function of *satáh*, which opens the vs., are much disputed. It is generally taken as an adverb (‘equally’ vel sim.: Ge, Re, Schnaus [281 and n. 302], Köhler [327]), but I follow Old’s preferred interpr. as an acc. pl. masc. of the pres. part. of \sqrt{as} , meaning ‘being (t)here’. As for its referent, flg. a suggestion of Re’s I think it picks up the *paraśúm* in 9c, which is the obj. of *śísīte* ‘sharpens’, with Tvaṣṭar as subj. Here the pl. Kavis are the subj. of pl. *śísīta* and we might expect pl. **paraśūn*. Instead we get, in the rel. cl., the fem. pl. *vāśibhiḥ*, a virtual synonym of *paraśú-*, and *satáh* referring to the *paraśú-* serves as transition to this synonym, which we might have expected as an acc. pl. **vāśīh* in the main cl. For disc. (and rejection) of other poss. exx. of *satáh* as adv., see X.27.4, VII.104.21, IX.21.7.

The connection between pādas c and d is loose at best. On the one hand, the *yéna* with which d opens has no clear referent. Given the structure of the hymn so far, with its *yéna* clauses (see hymn intro. above), we would expect its referent to be the pl. *padā gúhyāni* “hidden tracks/words” of c, but the numbers don’t match. On the other, there is also a mismatch of tenses: c contains an imperative *kartana*, but d a perfect *ānaśuḥ*. I think the clue to understanding the connection is the existence of both these anomalies. To take the second first, we cannot order the poets to create (impv. *kartana*) something that has already produced its effect (“they achieved” *ānaśuḥ*). So I think d presents the already successful model for the type of things the poets are now urged to create. It worked for the gods, so make more of them now. There is thus a disconnect between the two clauses, even though the same type of causal relation is gestured to as in 3cd, 7cd, and, with plurals, 10ab. Because that pattern was strongly set earlier, the audience is invited, in fact more or less compelled, to interpret 10cd in the same vein and to use its ingenuity to deal with the number and tense-mood mismatches. I do not see the advantage of taking *yéna* as a conjunction, despite Köhler’s detailed disc. (327 and n. 1008), and I actually don’t see how his “wodurch” differs from the usual instr. rendering of *yéna*.

Almost all tr. and interpr. take *padā* as ‘words’, and I am in agreement that this is the underlying intent. However, with Schnaus (“Fussspuren,” 291), I think the surface, literal meaning is ‘tracks’. This allows the vs. to be connected with 6b *jyōtiṣmataḥ pathāḥ ... dhiyā kṛtān* “the paths of light made by insightful thought.” The radiant paths to heaven are created by the poets’ insights and the words they are formed into, and so in 10cd the poets are exhorted to create these paths, these tracks, which are in fact words.

X.53.11: Unfortunately, if this final vs. is an example of the *padā gúhyāni* of 10c, as I think it is, the tracks remain hidden indeed. The first question is who the subj. of *ādadhuh* is. With Ge and Re (Old, Schnaus, and Köhler do not specify, though Kö seems likely to favor poets as well), I take it to be the poets addressed in 10 (*kavayaḥ*). They perform their work “with cryptic mind and tongue” (b *apīcyèna mānasotā jīhvāyā*), a phrase that resonates with *gúhyāni* of 10c and whose accuracy we can certainly endorse. Old sensibly says about the vs. “die vieldeutigen Rätsel zu lösen versuche ich nicht,” and though I will make a stab at solving them, I acknowledge the wisdom of Old’s forbearance.

Pāda a contains two chiasitic NP paradoxes—*gārbhe* (LOC) *yóṣām* (ACC) ... *vatsām* (ACC) *āsāni* (LOC) “in embryo young woman ... calf in mouth.” Between them is the verb *ādadhuh* “they placed,” which must owe its accent to its contrastive use with both NPs.

The first phrase is the clearer paradox: in real life the embryo would be placed in the young woman—that is, she would become pregnant—not the reverse (so also Ge n. 11). (My tr. “maiden” is somewhat misleading, since a *yóṣā* can give birth; cf., e.g., III.48.2 ... *te mātā* ...

yóṣā jānitrī “Your mother, the young woman who gave you birth”). The paradoxical content of the second phrase is more obscure, but it may be that, since mother cows ordinarily lick their calves (e.g., III.33.3, III.55.13=X.27.14, IV.18.10) and this involves putting their mouth, or at least their tongue, on the calf, putting the calf in/on the mouth reverses this image. This is Ge’s interpr. (also n. 11), but I am a bit dubious. The words for ‘mouth’, *ās-* and *āsán-*, aren’t found in expressions of the calf-licking image, as far as I can find, nor even ‘tongue’. However, I don’t have a better solution. (For a reversed image that does involve both cows and mouths, see IX.99.3 and comm. thereon; unfortunately it won’t work here.)

Such are the possible conceptual paradoxes behind these two phrases, but for them to work in the hymn they must have a real-world (that is, ritual) reference, and ideally this reference should connect with the content and themes of the rest of the hymn, the recovery of Agni as oblation-conveyor and the successful progress of the ensuing sacrifice. I think that Agni is present in both NPs in pāda a, but in different cases – loc. *gárbhe* and acc. *vatsám*. Both words, esp. *gárbha-*, are regularly used of Agni; for a passage containing both, see X.8.2 *mumóda gárbhaḥ ... vatsáḥ ... arāṁvīt* “he rejoices as an embryo ... the calf has bellowed” (as well as X.27.14). If my identifications are correct, we must determine the referent of the other word in each expression: acc. *yóṣām* and loc. *āsáni*. For the first, I think the most likely referent is (one of) the (paired) kindling sticks, who is/are regularly referred to as Agni’s mother(s), particularly the lower kindling stick. See, e.g., III.55.4 and esp. X.27.14bc (and comm. ad loc.) *tasthaú mātā víṣito atti gárbhaḥ / anyásyā vatsám rihatī mimāya* “The mother [=kindling stick] stands still; unloosened the embryo [=Agni] eats. Licking the calf [=Agni] of another [=kindling stick], she [=oblation] lows,” also containing both *gárbha-* and *vatsá-* referring to Agni. Placing the kindling stick in the embryonic fire may simply mean that the sticks are positioned where the fire will begin to catch. Alternatively the young woman might be some piece of ritual equipment with fem. gender (like the *ukhā-* ‘pot’) or even be a reference to Dawn, sometimes called a *yóṣā* (e.g., VII.75.5, 77.1), and be a metaphor for putting light into the newly kindled fire. But I strongly favor the kindling stick.

As for putting the calf into the mouth, what is the “mouth” here? The question is complicated by the fact that Agni himself is often called the mouth of the gods and oblations are poured into his mouth. Such an interpr. would produce the awkwardness of two references to Agni in this two-word phrase, and I do not think it means “they played Agni in Agni.” Instead I suggest very tentatively that in this case the mouth is the hearth or fireplace, rather than the fire itself. Although I cannot find a parallel usage, it seems conceptually possible – the place, roughly mouth-shaped, on the ground in which the kindling materials are set.

(For a quite different interpr. of this hemistich, see Schnaus 283. Though thoughtful, it is not convincing, at least to me.)

As for the 2nd hemistich, again I think we have to think about it in the context of the whole hymn and indeed the three-hymn sequence – the reinstallation of Agni and the successful reinstitution of the sacrifice. After Agni as embryo and then calf has been re-kindled in ab (by my interpr.), he proceeds to glorious victory in cd (again, by my interpr.). I do not think that the subject of this hemistich is either Indra (tentatively floated by Old) or a man (supplied by Re), but Agni himself. Given the focus in this three-hymn sequence on the return of Agni for the sake of the sacrifice, the supreme victor in the final vs. can hardly be anyone but him. Certainly the vocabulary doesn’t impede this identification. The adj. *sumānas-* can modify a variety of referents, but is particularly common with Agni; note esp. that in the first hymn of this sequence, X.51.7, the gods hopefully suggest that Agni should return, *sumanasyāmānaḥ* “showing your

benevolence.” The recurrence of *sumānas*- here implicitly announces that this has happened. Agni is also one of the most common subjects of the verb stem *vāna*- (e.g., I.140.11, III.19.1, V.3.10, 4.3, etc.). And although the strongly martial tone of the hemistich might at first point in another direction (Old’s Indra?), Agni is hardly lacking in martial aspects.

With most of the standard interpr. I take the Saṃhitā *kārā* as loc. *kāré*, against Pp. *kārāḥ*.

The problematic part of the hemistich is *yogyā abhí* in c. By most interpr. *yogyā* is taken as an acc. pl. fem (*yogyāḥ* out of sandhi). with postposition *abhí*, loosely construed either with *sumānāḥ* (Ge, Re, sort of Schnaus, 282) or with *siṣāsaniḥ* (Köhler, 328 and n. 1009). The stem *yogyā*- lit. means ‘harness/yoking cords’, a sense clearly found in III.6.6. In our passage (and supposedly in VII.70.4) it is taken metaphorically to mean something like ‘obligation, task’ (lit. ‘what is to be yoked [to oneself]’?). This is not impossible, and a tr. “well-disposed towards his tasks” is not excluded. But *sumānas*- doesn’t otherwise take such a complement, and the desid. *siṣāsa*- takes as object material things we want to gain (prizes and the like), not duties or tasks, so that Köhler’s “der die Werke zu gewinnen sucht” seems off. I am also dubious about postpositional *abhí*, though I confess that I haven’t checked all 739 examples (per Lub) of the form. For all these reasons I make bold to suggest an unorthodox reading of the two words, as a mangled instr. pl. In III.6.6 (one of the two other occurrences of the stem *yogyā*-) we find a pāda-final instr. pl. *yog’yābhiḥ* in a Triṣṭubh cadence. Here, in a Jagatī cadence, we have *yog’yā abhí*, which I suggest is a species of distraction and misinterpretation of **yog’yābhiḥ*. I take it in its literal (or literal-metaphorical value): Agni wins with his yoking strings, that is, with his horses yoked to his chariot. This would continue the chariot metaphor, with its technical terms, of vs. 7 (and possibly vss. 8 and 9d; see above). It’s a long shot, I realize, and the tr. floated above (“well-disposed towards his tasks”) is a possible alt. Still I favor the emendation. The publ. tr. should have an asterisk before “with the yoking strings.”

X.54–56

The next three hymns are attributed to Bṛhaduktha Vāmadevya, the first two dedicated to Indra, the last to the All Gods, per the Anukr. The Indra hymns have 6 and 8 vss. respectively, violating the usual principle of ordering – a fact that causes Old (Prol. 238–39) some distress. He rejects Bergaigne’s suggestion to assign the second hymn to the All Gods, which would restore order since the final, All Gods, hymn has 7 vss. and would follow one with 8. Old’s rejection is based on the supposed difference in content between 55 and 56, but, as disc. in the publ. intro. to X.55, I am inclined to follow Bergaigne, for reasons stated there: although 55 and 56 are indeed quite different, X.56 is a kind of one-off, while X.55 has a number of hallmarks of enigmatic All God hymns. Both fall well within the loose parameters of All God hymns. Although X.55 begins and ends with Indra (never named), it is hardly a conventional Indra hymn and its mysterious center (esp. vss. 4–6) strays far from Indra, while sharing themes, particularly “light,” with X.56. It does not help Old’s case that his only suggested explanation for the violation of ordering in the two supposed Indra hymns is that it reflects “eine alte, traditionelle Reihenfolge” based on grounds “die sich unsrer Kenntniss entziehen,” if not in fact on chance – hardly a compelling alternative hypothesis, esp. given the rigidity of the ordering in other (and older) parts of the RV.

X.54 Indra

X.54.1: The hymn begins with a syntactically incomplete pāda, with the acc. *tām ... kīrtīm* governed by no verb. Ge supplies “(will ich) ... (verkünden),” which is certainly possible, but I

think something trickier is going on. First of all, the structure of 1ab is very like that of the 1st hemistich of the following hymn, X.55.1ab. The b pādas are almost identical: 54.1b *yāt tvā bhīṭé ródasī áhvyayetām* / 55.1b *yāt tvā bhīṭé áhvyayetām vayodhaí*. And the first pāda of 55.1 also lacks a verb and its principal noun, *nāma* ‘name’, is semantically similar to *kīrti-* ‘reputation, fame’ here. The difference of course is that *nāma* is neut. and can therefore be the subject of a nominal clause (Ge: “Weit ... ist jener ... Name”), whereas the undeniably acc. *kīrtim* cannot be. On the one hand, I think this is the poet’s little joke.

But on the other it needs to be interpr. in the context of the overall sense of the hymn, at least as I understand it. As disc. in the publ. intro. to X.54, I think that in this poem the poet is implying “that Indra’s great deeds and the words that express them are essentially the same,” in fact that the words generate the deeds. The very first hemistich announces this, by equating Indra’s *kīrti-* with himself (*tvā*): the frightened world halves are actually calling on his reputation when they call out to him. (It might be noted that *kīrti-* is found only here in the RV, though it’s fairly common in the AV.)

In the c pāda the two verbs, *prāvaḥ* and *ātiraḥ*, can technically be either main-clause verbs with accented preverbs (*prá=āvaḥ*, *ā=atiraḥ*) or still under the domain of the *yád* of b with accented verb (*pra=āvaḥ*, *ā=atiraḥ*). The Pp. opts for the former, as do Ge and I, although I was tempted by the alternative. But the parallelism with X.55.1 supports the Pp. solution, since X.55.1c *úd astabhñāḥ* with unequivocally accented preverb has to be a main-clause verb.

The referent of *prajāyai tvasyai* of d is not made clear – again, I think, deliberately. Ge (n. 1d) thinks this already reflects the later notion of the double descent of Prajāpati (gods and demons), but the implicitly contrastive *tva-* form seems to me to set up a dichotomy with both terms in c: the gods whom Indra helped (*prāvo devān*) suggest their antonymic opposite, humans, and the *dāsas* he overcame suggest the other half of that pair, the Ārya. Putting those together, we get the ideal human – namely us, the Ārya.

X.54.2: If I am correct about vs. 1, that it expresses the identity between the verbal reputation of Indra and his actual actions, this same sentiment is expressed considerably less politely in this vs. The first hemistich has Indra going about *proclaiming* (*prabruvāṇāḥ*) his own powers—that is, representing them in words, rather than performing them as deeds—and this boasting is dismissed curtly in the next pāda (c) as just *māyā*, which in this context comes very close to the later meaning ‘illusion’. Indeed, “what they call battles” are simply Indra’s *māyā*. (Note that Ge’s tr. “da war nur Blendwerk, was sie von *deinen* Kämpfen sagen” [my ital.] is slightly wrong: *te* cannot qualify *yuddhāni*, because this would require an enclitic to begin the clause [... **te yāni yuddhāny āhúḥ*]; the *te* must go with the main clause and qualify *māyā*.) In this context pāda d has a cynical and deflating tone. It plays on, and against, the triumphal statement found in I.32.4, the great Indra-Vṛtra hymn, which states *tādītñā śátruṃ ná kílā vivitse* “you surely never found a rival since” – meaning that after Indra’s decisive victory over Vṛtra, no one could rival him. But here, despite the near identity of wording, *nādyá śátruṃ nanú purā vivitse* “neither today nor before have you discovered a rival” seems rather to mean that Indra has done none of his vaunted fighting, has never confronted an enemy – it’s all words and *māyā*. As both Old and Ge point out, this hemistich is quoted in the ŚB (XI.1.6.9–10), where it forms part of a denial of the truth of the tales of the Deva / Asura conflict. I think that it has been partly repurposed there, rather than that our passage already reflects the whole ŚB situation, which in fact primarily concerns Prajāpati’s acts of creation. It’s worth noting that the ŚB paraphrases our pāda d in less

ambiguous terms: *ná tvám yuyutse katamác canāhar ná te 'mítro maghavan kás canāsti* “Not for a single day hast thou fought, nor hast thou any enemy, O Maghavan” (Eggeling).

X.54.3: In this vs. the poet seems to retreat a bit from his extreme Indra-denigration of 2cd, but I think this is more a matter of ambiguous wording than a change of attitude: the intent of the vs. is hard to read. (I now depart in part from my assessment of this vs. in the publ. intro.) The initial impression of the first hemistich is that Indra’s greatness is such that it is impossible even for poets (previous poets) to have entirely grasped it, “reached its end.” This is a fairly common expression emphasizing the unlimited power of Indra. Cf., e.g., I.100.15 *ná yásya devā devātā ná mártā, āpaś canā sávaso ántam āpuḥ* “The limit of whose [=Indra’s] vast power no gods in their divinity, nor mortals, nor even the waters have reached.” However, I think in our passage the apparent exaltation of Indra’s *mahimán-* is undercut by the adj. *sama-* in the genitive phrase and, quite possibly, by the deed that exemplifies it in the 2nd hemistich.

To begin with *sama-*: as disc. ad X.29.4, this indefinite stem is always used in pejorative contexts, even when it appears to be neutral or positive. Particularly pertinent here is VI.27.3, which is very like our passage: *nahí nú te mahimánaḥ samasya, ná maghavan maghavattváśya vidmá/ ná rādhaso-rādhaso nūtanasyéndra nákir dadṛṣa indriyám te*. Ge’s rendering, more or less followed by the publ. tr., puts a positive spin on the phrase containing *samasya*: “But yet we do not know your whole greatness, nor generosity, o generous one”—implying that although we know some of his greatness, we have not yet experienced the full amount. But Ge’s “ganz”/ my “whole” for *sama-* is not a legitimate rendering of *sama-*, and the final pāda “your Indrian strength has not shown itself” (my “your (whole) Indrian strength” is even less justified than the earlier “whole”) indicates that Indra has simply not been there for us at all. Hence my emendation of VI.27.3 to “But yet we do not know any (*samasya*) of your greatness ...” I now would interpr. our passage in a similar way. Once again “whole” (Ge’s “ganz” again) for *samasya* is a contextual invention; once again I think the idea is not that Indra’s greatness is so vast that its limit cannot be reached, but rather that it’s a question whether *any* greatness has been deployed on our behalf. I would now emend the tr. to “what seers before us reached the limit of any greatness of yours?” – with a somewhat scornful emphasis on “any.” They didn’t reach the limit, because there was no limit to reach.

However we interpr. 3ab, the 2nd hemistich sits oddly in relation to it, though since it is introduced by *yád*, it should be dependent on what precedes. On first glance this is just another of the endless expressions of Indra’s cosmogonic powers, while also displaying the RVic partiality for paradoxes of birth, whereby the child gives birth to its own parents. Flg. Sāy.’s plausible suggestion that the mother and father here are Earth and Heaven, the statement at first does not seem *very* different from passages where Indra begets, for example, “the sun, heaven, and dawn” (e.g., I.32.4 *āt sūryam janāyan dyām uṣāsam*). But there are notable distinctions. For one thing, although Indra is often credited with begetting things / beings (generally in the active of the stem *janāya-*, as above), they are not identified as his family members. I do not know of any other passages in which Indra is credited with begetting his own parents. The closest is I.159.3, in which their sons, that is, the gods (presumably including Indra), are said to have begotten (act. pf. *jajñuh*) their “two mothers” (*mātārā*), Heaven and Earth. But our passage depicts the birthing as much more intimate: it is expressed in the middle, one of the only “real” middle forms (*ājanayathāḥ*) to the extremely common trans./caus. stem *janāya-*, whose middle forms are otherwise almost entirely confined to 3rd pl. *-anta* replacements (see my 1979 “Voice fluctuation in the Rig Veda: Medial 3rd plural *-anta* in active paradigms,” *III* 21: 146–69) and

forms based on them, with active sense. Here, though the form is transitive, the medial self-involvement of the subject is underlined by the reflexive abl. expression *tanvāḥ svāyāḥ* “from your own body.” The middle verb and the reflexive (one might almost say “double reflexive,” since *tanũ-* has quasi-reflexive value in addition to its lexical meaning ‘body’) expression of source highlight the physical aspects of this birth – and in fact depict Indra as a mother, a female from whose body the child emerges. This is, needless to say, uncharacteristic of Indra, at least in the RV—in my 1991 *Hyenas* (pp. 76–81 and passim) I argue that Indra is depicted as a mother hyena in a complex of Brāhmaṇa stories, but even there he is not shown giving birth to them (and, moreover, female hyenas are formidable, Indra-like animals).

But why is this episode here? Is it meant to be a culminating example of Indra’s greatness touted in the first hemistich – or, if I’m correct about the sly derogatory tone of ab, as an example of just how paltry his greatness is? Is his begetting of Heaven and Earth, his own parents, meant to awe us – or should his role as mother diminish him in our eyes? This feat, if feat it is, merits no further mention in this hymn, or elsewhere. What relationship there might be between the invocation of Indra by the frightened world halves in 1ab (also X.55.1) is not clear either. I confess myself baffled. It might be noted that 3cd is essentially the middle of the hymn, so bafflement is to be expected.

X.54.4: This vs. firmly returns us to the equivalence of words and deeds. It is in fact *through / by means of* his names that Indra performs his deeds (see pāda d). The names are presumably epithets like *vṛtra-hán-* (so also Ge n. 4ab) that encapsulate the deeds in question. They are *ádābhya-* — here tr. ‘unfalsifiable’ rather than the usual ‘undeceivable’ — because the very existence of the names testifies to the reality of the deeds. As Ge points out, the adj. implicitly contrasts with the *māyā* of 2c. What exactly the four names are I have no idea and won’t speculate, but see VIII.80, esp. vs. 9, for a similar connection between names and deeds, also with four as the number of names.

X.54.5: As the poet gets closer to the end of the hymn and the implicit “ask,” he softens his tone towards Indra. The last pāda of the vs. contains two agent nouns applied to Indra, *ājñātā* ‘heeder’ and *dātā* ‘giver’, which might be interpr. as among the names referred to in the previous vs.: the reality (or not) of “giver” would be esp. pertinent to the poet. By giving Indra the name “giver,” he is affirming the reality of the (expected and hoped for) act of giving, just as in vs. 4 a name like “Vṛtrahan” makes the act of killing Vṛtra “unfalsifiable,” undeniable. See X.55.6 for another pair of agent nouns.

The tr. of d would be more faithful to the rhetoric as “you are the one who takes heed; you the one who gives, Indra.”

X.54.6: By my interpr. (in part flg. JSK DGRV II.96–97), the first hemistich hangs off 5d, as another characterization of Indra, this time dynamic rather than the static expression via agent nouns. The last hemistich is a meta- hymn-ending summary. On the structure of the last pāda and the play on the poet’s name, see publ. intro.

X.55 Indra (per Anukr.; better, All Gods)

On the disputed dedicand of this hymn, see pub. intro. as well as the intro. to X.54–56 above.

In the publ. intro. of this hymn there is an error in the 3rd para.: “... in the next hymn

(X.55.1)” should read X.56.1.

X.55.1: As disc. ad X.54.1, these two initial vss. are very similar, esp. in their 1st hemistichs, with our pāda a syntactically better formed than that in X.54. The emphasis on the name as embodiment of power and of the potential for action is prominent here.

As Ge points out (n. 1b), the verb “prop up” is strictly only applicable to heaven, not to earth.

The identity of the *bhrātuh putrān* “brother’s sons” is quite unclear. First, whose brother? Although both Ge and I assume it is Indra’s brother (“die Söhne deines Bruders” / “... of your brother”), it could of course be someone else’s brother (Heaven and Earth’s?), although context favors Indra. The problem is to identify who it might be, since generally Indra appears to be an only child with a traumatic birth and a fraught homelife (see esp. IV.18). Ge starts with the sons and worries about the brother secondarily; he suggests (n. 1d) that the sons are the Maruts, the sons of Rudra, which latter would here count as Indra’s brother, since gods seem to use “brother” among themselves as a kind of courtesy title (see his citations). This is, as Old says, possible, but I do not find it compelling (nor does Old). The highlighting of the double kinship relationship, “sons of the brother,” seems too prominent for “brother” to be just a courtesy title, and although the Maruts seem to appear, unnamed, in vss. 7–8, that context is quite different from this one: the Maruts don’t generally participate in the propping up of Heaven and Earth (though see VIII.94.11). An even less likely possibility: in VI.55.3 Pūṣan is called the brother of Indra in a series of statements about Pūṣan’s kin, but this seems a deadend: if Pūṣan has sons they don’t figure anywhere, as far as I know.

I will now venture a very fragile alternative suggestion. Although the dominant account of Indra’s birth in the RV is the dramatic one found in IV.18 and alluded to glancingly elsewhere, he is also once named (in the MS) among the Ādityas, the eight sons of Aditi, born two by two. Although the RV vss. treating the pair-wise birth of the Ādityas (X.72.8–9) do not name the sons, nor do most of the Vedic prose versions, the MS passage (I.6.2 [104.10ff.]) gives the names in pairs: Dhātār and Aryaman, Mitra and Varuṇa, Aṃśa and Bhaga, and finally Indra and the aborted fetus, Mārtāṇḍa. (For the story and relevant Vedic passages, see KH, Aufs. 422ff.; my Hyenas 404–8; Brereton Ādityas 244–45.) By this account Indra is an Āditya, albeit a minor one barely mentioned among them, and his closest brother, with whom he shared Aditi’s womb, is the aborted fetus, “stemming from a dead egg,” who – notably – is the ancestor of mankind. So I tentatively suggest here that “the sons of your brother” are actually humans, and his “sparking” (*tītvīṣāṇāḥ*) them, energizing or even vivifying them, establishes the all-important relationship between Indra and his human devotees. Our RVic passage seems late enough to share mythological content with that early prose text the MS. I would now tentatively withdraw the statement in the publ. intro. that Indra has no brother.

X.55.2–3: The numerology in these two vss. is characteristic of All God hymns; the references of these numbers are not clear, as often in such passages.

X.55.2: The notion that it is by means of his name(s) that Indra performs his deeds, as expressed in ab, is also found in the previous hymn in vs. 4, with the same instr. rel. construction (X.54.4 *nāmā* [or -a?] ... *yébhiḥ* ..., 55.2 *nāma* ... *yēna* ...).

Note that the injunc. *janāyaḥ* is multivalent enough to express both the previous begetting and that to come. Contrast this with the impf. *ājanayaḥ* in a similar construction in 4b, which

refers only to the past.

Pāda c lacks two syllables; Ge (n. 2cd) suggests supplying another *priyám*, presumably at the end of the pāda, which would have been lost by haplology: *... *priyám, priyám priyāḥ*. This seems unlikely to me, esp. as it would produce a bad Triṣṭubh cadence. Old suggests various distractions, which are likewise unconvincing; Arnold (§227 iii c) suggests two “rests,” before and after the caesura, with a Triṣṭubh cadence. I think rather than trying to fix the meter, we should accept it as a truncated pāda, whose brevity is in harmony with its syntactic configuration as a kind of topicalized nominal clause, either marked as dependent by *yád* deep in the clause (“which light ...,”) or with *yád asya* as a nominal izafe (“the light that is his ...”), for which see my forthcoming “Proto-proto izafe.” The publ. tr. reflects the latter, but the former would also be syntactically possible.

The lexeme *sám √ víś* is barely attested in the RV (here and in the flg. hymn, X.56.1, as well as X.18.7; cf. also *saṃvśana-* also in the next hymn, X.56.1). Here and in the AV, where it is somewhat better attested, it seems to be partly specialized for funerary contexts, for the merging into or joining with light. If “merging into the light” here refers to death, then the vs. contains the endpoints, birth and death, both associated here with Indra, the begetter in b, the owner of the light after death in c.

The identity of the “five dear ones” cannot be determined. Ge (n. 2d) follows Sāy. in supplying *jānāḥ*. Although the phrase “five peoples” accounts for many of the occurrences of RVic *pāñca*, I do not think that is the referent here. Given the rarity of *sám √ víś* in the RV and its use in the next, related hymn (X.56.1) for the merging of the dead body with light, I find it hard to believe that the occurrence here, which also involves light, simply depicts a sociopolitical fact. Although it seems way too early for this idea to be circulating, could it refer to the later doctrine of the five elements that the dead dissolve into, in expressions like *pañcatām √ gam* (etc.) ‘go to fivehood’, i.e., ‘die’?

X.55.3: The vs. begins as a conventional Indra vs., with his filling of the world-halves and the space in between (pāda a), but the numerology that follows and the multiplicity of Indra’s lights, picking up the light of 2c, soon take it in a new and baffling direction. Ge makes trouble for himself (in my opinion) by construing the acc. in b with the verb in a, *ā ... aprṇāt*. Since the phrase *ā √ prā* WORLDS “fill worlds” is stereotyped in the RV as one of Indra’s deeds, trying to join a very dissimilar direct object, “gods,” to this expression puts both off balance. The presence of the “fill worlds” expression is probably owing to the emphasis on light: what Indra ordinarily fills the space with is light. Contrary to Ge I construe b with cd; besides avoiding the ill-assorted expression resulting from grafting b onto a (see above), this has the advantage of providing the verb in c, *ví caṣṭe*, with an object. Although *ví √ cakṣ* can occur without an object, it frequently has one.

The numerological material in b and c has been amply chewed over by both Old and Ge (nn. 3b, 3c), though there is no fixed consensus on the referents of the numbers – nor do I intend to add to the discussion. Based on my grouping of the pādas, the general outline of what’s going on seems to be that Indra surveys the ranks of the gods arranged by some numerical principle (perhaps, five groups of seven)(pāda b), by means of the light from thirty-four sources (pāda c), probably a collection of heavenly lights (stars, etc.), which are, however, really underlyingly only one light (pāda d), though with different functions. This single light is presumably the same as Indra’s “light born of old” (*pratnām jātām jyótiḥ*) of 2c, into which the mysterious five merged in 2d. We can also recall Indra’s deed in the previous hymn, X.54.6, whereby he “placed

light within light” (*ádadhāj jyótiṣi jyótir antáh*).

X.55.4–6: As disc. in the publ. intro., these vss. do not appear to be Indra vss., esp. 4–5, but rather seem to allude to cosmic mysteries or paradoxes. Since vss. 4–5 are the exact center of the hymn, they fit the omphalos template. In my opinion all three center on astronomical phenomena and form a sequence that sketches the end of night and the beginning of the day, though not quite in sequence. Vs. 4 announces the dawn, while vs. 5 describes the moon amid the stars and its disappearance in the gray of dawn; vs. 6 presents us with the ruddy sun at daybreak. For details see the comm. on the individual vss. below.

X.55.4: This vs. is addressed to Uṣas; her appearance here has probably been motivated by the emphasis on light(s) in the previous vss., esp. cosmic light, as well as by the theme of unity and diversity (see below). As noted in the publ. intro., the final pāda of the vs. seems a deliberate echo of the notable refrain in III.55 (1–22) *mahād devānām asuratvām ékam* “great is the one and only lordship of the gods.” It is remarkable that this solemn general pronouncement has been adapted for one of the less majestic (or at any rate non-male) gods.

Each of the first three pādas is a dependent clause under the domain of a *yá*-form: *yád* a, c, *yéna* b. In the publ. tr. I take the three clauses to be sequential and parallel and the *yá*-forms to be functionally similar, expressing cause (“in that ..., because ..., in that”), but I now think that the *yéna* clause in b should be taken separately from the surrounding *yád* clauses and that it is dependent on pāda a. I base this on the other instr. rel. clauses in this hymn sequence that express the means whereby a god (=Indra) accomplishes a deed—namely X.54.4 *yébhiḥ kármāni ... cakārtha* and esp., earlier in this hymn, X.55.2 *yéna bhūtām janáyo yéna bhávyam* “by which you begat what has been and by which (you will beget) what is to be.” Our pāda contains the same verb (though augmented), *ájanayaḥ* in addition to the *yéna*, and I doubt that this match is accidental. But what is the antecedent of *yéna* here? In both the Indra exx. just cited, the antecedent is “name(s),” and the point is that it is by the name(s) alone that the god performs his action(s). But there is no obvious antecedent in our main clause. Dawn is herself the subj. of *ájanayaḥ* and should not be the referent of *yéna*, not to mention that she’s feminine and *yéna* is not. It might be that a singular could be extracted from the gen. pl. *vibhānām* “of the radiant ones” in pāda a, but this hapax stem *vibhā-* is most likely (though not entirely certainly) fem. as well (see Scar’s disc. [350]). I think the referent has to be ‘light’ (*jyótiṣ-*) plucked from the larger context: 2c, 3d; note esp. instr. *jyótiṣā* in 3d. The main clause in 4a is suffused with light, even though *jyótiṣ-* is not found there. I would now emend the tr. of ab(c) to “In that, o Dawn, you dawned as the foremost of the radiant ones, by which (light) you begat the thriving of the thriving, / in that ...”

It is not clear to me what *puṣtásya puṣtām* refers to, but we should begin with the fact that though *puṣtá-* is formally a past participle to \sqrt{pus} , it never shows clear adjectival use in the RV but is always nominalized as ‘(a/the) thriving, flourishing’ vel sim. (see already Gr’s definitions 6 and 7, of neut. *puṣtá-*), essentially doubling the fem. abstract *puṣtí-*. Because all clear cases of *puṣtá-* are nominal, I doubt that the gen. here is implicitly adjectival referring to a person/being who thrives, with the sense of the phrase “the thriving of the thriving (one)” (implied by Gr’s interpr. of the gen.); rather I think it’s an implicit superlative: “the thriving of thriving” = “the thriving of (all) thriving(s),” “the best thriving.”

Exactly how to construe and interpret c is unclear, muddled by the often-paired relational terms *ávара-* and *pára-*, as well as by the question of whether *te* and *párasyaḥ* are coreferential or

to be construed separately. Let us begin with the paired terms *ávāra-/ pára-*, which can show several different spatial or temporal polarized values: “lower/higher” // “nearer/further” // “later/earlier.” As it happens, this pairing is found in the next, related hymn, X.56.7, where the temporal sense is found, referring to earlier and later generations. I think our passage also has a temporal sense, though displayed in a spatial metaphor. I assume it is expressing the familiar trope of the kinship, indeed identity, of all dawns, from time immemorial till the dawn of the current day and on to future dawns.

The trick is to figure out exactly what form this trope takes here. To solve this, we now turn to the second question: is *te* corefential with *párasyāḥ*? Although Sāy. interprets it that way and Gr so indicates (see also W.E. Hale, *Asura* 97), I think this unlikely, because it requires that the Dawn addressed in pāda a is the Dawn of the distant past, but if she is the past Dawn, how can she be on the scene to be addressed? True, she is called *prathamā* ‘foremost, first’ in pāda a, but in other Uṣas hymns (cf. esp. I.113.8, 15) *prathamā* is used of today’s Dawn, the first of those who are to come, as the passages in I.113 make explicit. I therefore think that *párasyāḥ* is to be construed independently of *te* and it refers to a Dawn long in the past. The enclitic *te*, which here could be either gen. or dat., depends on the *jāmitvām ávaram* and is explicitly contrasted with the previous (*pára-*) Dawn; note that Ge also takes them separately. The whole phrase then indicates that “you,” the current Dawn, have a close kinship (*jāmitvām ávaram*) even with the/a Dawn of the far distant past (*párasyāḥ*), with *ávāra-/ pára-* expressing a temporal relationship through a spatial metaphor. The theme of unity in multiplicity found in vs. 3, with the many lights counting as a single light (3cd) is reprised here, with a more familiar example, that of the fundamental identity of the infinite number of dawns in the past and to come. The unity is emphasized by the adaptation of the “one and only lordship” refrain to Dawn.

X.55.5: This is the most challenging vs. in the hymn and the middle verse of the three astronomical ones (4–6). Each of the pādas presents its own problems. The standard interpr. of this vs. runs counter to the usual: there is general agreement about the *referent* of the principal entity—the moon—but none about the meaning or etymology of its first epithet, *vidhú-*, though it is also generally agreed that it is a riddling designation in a riddling vs.

In my view, the first pāda continues the theme of unity and multiplicity found previously, and this polarity helps in interpreting the much discussed word *vidhú-*. The scholarly back-and-forth about this word has been conveniently summarized by Carmen Spiers in her recent (2020) EPHE diss., “Magie et poésie dans l’Inde ancienne,” 308–10, and I will not repeat this disc. in detail, nor will I engage much with the much disputed question of its etymology and word formation. Instead I will first focus on the rhetorical organization of the pāda in which it’s found: *vidhūṃ dadrāṇām sámāne bahūnām*, with its final loc.-gen. phrase “in a gathering/crowd of many.” Given the balanced contrast between one and many / unity and multiplicity that we have noted in the previous two vss., the “many” at the end of pāda a invites a “one / alone” interpr. of *vidhú-* at the beginning. And in fact much of the older lit. so interpr. it: Gr (flg. BR) ‘vereinsamt, einsam’, MonWms ‘lonely, solitary’, sim., though tentatively, Old. There are several, not entirely incompatible, ways to get to this sense, one of which involves a connection with *vidhávā-* ‘widow’ as ‘the solitary one’ (see Old, again tentatively) and/or derivation from the root $\sqrt{\text{vidh}}$ ‘divide’ (which, however, is a secondary root with somewhat different semantics). The connection with ‘widow’ was maintained by Tichy in her treatment of *vidhú-* (HS 106 [1993]: 15–17 = KISch 365–67), but she proposes a very different root etymology, to $\sqrt{\text{vyadh}}$ ‘pierce, wound’ or, in her gloss, ‘jdn. verletzen, mit dem Pfeil treffen’, besonders ‘tödlich treffen’. She

considers the interpr. “tödlich getroffen” for *vidhú-* justified by the fact that later in the vs. the referent dies (*mamāra*). But there is a certain rhetorical tone-deafness to this interpr.: it seems to me that the local context of pāda a, which favors ‘alone’ versus ‘many’, should outweigh the dying at the end of the vs., esp. because *mamāra* enters into its own rhetorical pairing with immediately following *sām āna* ‘he breathed’. Moreover, neither the phases of the moon nor the setting of the moon at daybreak (which are both possible real-world analogues for ab) conceptually involve wounding. Nonetheless, Tichy’s interpr. has mostly carried the day, having been adopted by Mayr. in EWA s.v. *vidhú-* (in a fascicle publ. in 1995, soon after Tichy’s art.) and by Kü (254). But note that Lubotsky (“RV *ávidhat* [1994: IXth Fachtagung IGG, 205]) asserts the connection with *vidhávā-* and with *√vidh*, though with a different and somewhat dubious etymology of the root and a different sense for *vidhú-* ‘divided in two parts, a crescent’. (Since this publication arose from a 1992 conference, the original paper predated Tichy’s article, which is not mentioned.) To summarize my own view briefly, I find Tichy’s etymology and interpr. of the word quite unsatisfactory, despite their current dominance; I am more sympathetic to Lub’s view, but I still find it dubious. (Inter alia, surely ‘divided in two parts’ with reference to the moon would identify a half moon.) To my mind, the ‘alone’ sense is rhetorically the best supported, and a connection with ‘widow’, whatever the further details of root and word formation, can underlie this sense. Thus the first pāda can depict the solitary (moon) running in a crowd of many (stars), as it crosses the sky from moonrise to moonset.

The next question is – what happens to this moon in pāda b? As I have indicated above, I think the image is that of the moon setting into the gray clouds/haze at the horizon at dawn, (or alternatively, as I also suggest in the publ. intro., the gray could be the smoke from the ritual fire kindled at dawn). A possibly similar image, of sunrise through gray clouds, may be found in the Pūṣan hymn VI.56.3 (q.v.), with a different word for ‘gray’ (*paraśā-*), but that passage is even more obscure than this one. I am puzzled by Old’s suggestion that the gray one is the “old sun” (“der alten Sonne”) – I cannot think of a naturalistic situation in which the sun could appear to swallow the moon, and furthermore the sun is hardly gray, esp. at sunrise. Ge’s suggestion (n. 5b) that the *palitā-* is “das personifizierte Greisenalter” is worth more consideration, but I think we are dealing with a semantic association of gray with old age, rather than a personification. The pāda set us a semantic polarization between the young and the old, via the association of gray (hair) with old age, with the young moon, presumably the new moon, being swallowed up by the gray cloudbank.

One issue that no one dealing with the passage seems to have confronted: despite the universal assumption that the referent of the accusatives in this half-vs. is the moon, the gender is masc. – and the standard word for moon is feminine. (However, other words used for the moon, most notably *sóma-* (already so used in the wedding hymn, X.85.1–5) can be masc.) I don’t know what to do about this, but given the other strong evidence for the identification of this entity as the moon, I do not think the gender mismatch invalidates it. Perhaps this is part of the riddle.

Although pāda c is morphologically and syntactically unproblematic and the words are all familiar, its sense and its relevance to the rest of the verse are not. To begin with, what is the referent of *devāsya*? Is this the moon from ab, once again unusually masc., or is a god external to the rest of the vs., perhaps Indra, who is the subject of the first and last vss. of the hymn? I am inclined towards the former, since it seems to point to the subject of pāda d, who seems to be identical to the accs. in ab.

Then, what does *kāvya-* mean here? I usually tr. it as ‘poetic skill/art’ or, in the pl.,

‘products of poetic skill, poems’. In passages with any sort of diagnostic context, the word is found in association with other words for speech and verbal products (e.g., IV.3.16, 11.3, V.39.5, VIII.79.1, IX.97.7). Others render it as “sagacity, understanding, wisdom”. But neither tack works very well here. In particular, if pāda d is meant as an illustration of the god’s *kāvya*- (as the colon after c in Ge’s, Tichy’s, and Kü’s (370) tr. suggests), dying does not seem a great example of his wisdom. But even less is d an example of poetic art. In the publ. intro. I suggest that *kāvya*- here refers to the *previous* hemistich, which is identified as a piece of *kāvya*-, a hyper-“poetic” description of the moon’s journey, which then, in pāda d, is expressed in stark and simple terms. In the absence of anything more convincing, I still think this is the best available interpr. But I remain disturbed by the *devāsya*: by this interpr. the *kāvya*- is not a product of the god [=moon], but *about* the god, which is a somewhat odd use of the genitive. I am also disturbed that d does not seem to describe quite the same situation as ab. The first hemistich, by my interpr., describes the moon’s traversal of the sky and its setting at dawn; d is most easily taken as a depiction of the moon’s phases, with “he died” referring to the dark period between the waning crescent and the new moon. But if “yesterday” can refer to the night before the dawn, perhaps the two pictures can be reconciled.

In d *mamāra* presumably owes its accent to the short contrasting clauses in this pāda, or else we should assume unsigned subordination: “(Although) today he died, yesterday ...”

X.55.6: As noted above and in the publ. intro., I think this vs. refers to the sun at daybreak. Ge (n. 6), similarly but not identically, to Indra as Sonnen-*haṃsa*. In favor of the sun as referent is the fact that the phrase *aruṇāḥ suparṇāḥ* is used of the sun in X.30.2 (so Ge’s n. 6a), V.47.3 (see comm. ad loc.), and *suparṇā-* by itself is frequently used of the sun (see Gr’s def. 6, even if the referent in not all these passages is correctly identified). I do not know why the sun is called ‘nestless’ (*ānīla-*)—perhaps because the sun is constantly on the move, even at night when most birds settle down in their nests, while he must make his invisible return journey to the east, to be ready for sunrise.

The first hemistich lacks a verb, and in addition the morphological identity and the syntax of *mahāḥ* is unclear. Ge takes *mahā-* as nom. sg. and supplies a verb of motion with *ā* in b: “der als der grosse ... herbei(kommt).” This may be the easiest solution, though not the most inspired. The publ. tr. reflects an assumed ellipsis of a verb form of $\sqrt{\text{śak}}$ (a type of haplology after *śākmanā śākāḥ* opening the vs.), with *ā*, governing *mahāḥ* (prob. an acc. pl., so Old). Note that finite forms of (*ā*) $\sqrt{\text{śak}}$ are sometimes used as essentially etymological glosses of *śakrá-*, e.g., VIII.32.12 *sá naḥ śakráś cid ā śakat* “He as ‘able one’ will be able for us” (also I.10.6, VII.20.9).

Pāda c expresses the common trope that the Sun, traversing the sky, sees everything and everyone and spies out the truth for Mitra and Varuṇa (see, e.g., VII.60.1–4).

The last pāda of the vs. effects a transition to the final two Indra vss., though it can also be applied to the Sun.

As Ge notes (n. 6d), the paired agent nouns *utá jétotá dātāḥ* recall the somewhat less tightly knit pair in the previous hymn, X.54.5 *ājñātā ... dātāḥ*, though interestingly with different accent. The suffixed-accented pair in X.54.5 function as names of Indra, whereas these root-accented forms describe deeds and govern an acc.

X.55.7–8: These two vss. return to Indra, who, however, is not named. But his epithet *vajrín-* and association with the Vṛtra-slaying in 7b make his presence undeniable, and his drinking of the soma in 8c is hardly less diagnostic. Much else remains unclear, esp. in vs. 7.

X.55.7: As was just noted, the unnamed Indra is the subject of this vs., but we must also identify the unspecified “gods” (*devāḥ*, the last word of the vs.) by virtue of whom Indra acquires his manly powers (pāda a) and becomes strong for the Vṛtra-slaying. Here I think Ge is correct (and Sāy. well before him) that these are the Maruts, who are regularly mentioned as Indra’s supporters in the Vṛtra battle. I do not think this necessarily means that Ge’s identification of “the sons of the brother” in 1d as the Maruts is also correct. It’s worth noting that though Sāy. names the Maruts as the referents here, in vs. 1 he has an entirely different (if unlikely) interpr.: the brother is Parjanya, and the sons are “a collection of water(s)” (*udakasamstyāyān*).

With the Maruts plugged in as the referents of *ebhiḥ* (a) and *yébhīr* (b), the interpr. of the first hemistich is fairly straightforward. Not so the second. Here the gods, who must be the Maruts, “were born / came into being / arose” under some unclear circumstances. The immediate cause or concomitant circumstance is “the greatness of the deed/action being done/performed” (*kármaṇaḥ kriyámānasya mahnā*). Given the context, it is difficult not to identify this deed as the Vṛtra-slaying of the previous pāda, which is depicted as happening concurrently, with the present passive participle. But did the Maruts come into being or arise because of the Vṛtra-slaying? Not in the standard accounts – and it is hard to see how they could have supported Indra at the time if they weren’t in existence yet. How to reconcile pādas c and d is made considerably more difficult by the word opening d, *ṛtekarmám*.

There has been curiously little discussion of the hapax *ṛtekarmám* despite the fact that its meaning is unclear (it’s been given two quite distinct senses in the literature), its second member seems to show a very early thematization of the old *n*-stem *kárman*-, and the accent may be anomalous. The only mention in the lit. that I can find is in EWA, s.v. *ṛté*, with a gloss ‘ohne (eigenes) Zutun’, but with no disc. of its formation. It is entirely absent, as far as I can tell, from AiG and from other standard grammars. In the older lit. the first member is taken as the loc. sg. of *ṛtá*-; see Gr’s ‘dem beim Gottesdienste vollbrachten Werke gemäss’ and the large (earlier) BR ‘handelnd nach der Ordnung, nach der Jedermann angewiesenen Bestimmung’ (though with ?). This analysis is also reflected in Sāy.’s gloss and paraphrase *ṛtakarma vṛṣṭipradānakarma*. But in the short (later) BR (/br) the word has been given a radically new meaning: the full entry there is “Adv. *ohne Werk*,” which is reflected in MonWms “without work” (attributed to “BRD,” presumably the short br). I have found no disc. or justification of this abrupt about-face. Ge’s “ohne eigenes Zutun” follows this new view. (Old fails to comment on anything in this strange verse.) This later interpr. obviously takes the first member as the adposition *ṛté* ‘without’, found sparingly in the RV, always with the ablative. This would be the only such cmpd. in the RV (*ṛte-jā*- ‘born in truth’ belongs with *ṛtá*-), but a few exx. begin to appear in Vedic prose, already MS and KS. See AiG II.1.314–15 and its Nachtr., p. 86. The MS contains two accented forms (with unaccented parallels in KS), whose accents clash with each other: *ṛté-mūlam* ‘without roots’ (MS I.10.17; cf. KS XXXVI.12) with 1st member accentuation and *ṛte-yajñám* ‘without a sacrifice’ (MS I.11.5; cf. KS XIV.5) with 2nd member accentuation, both to thematic stems. The only other accented form is *ṛté-gu*- ‘without cow(s)’ in ŚBK I.2.4.10, corresponding to the phrase *ṛté góḥ* in ŚBM II.2.4.13. With so little data it is hard to draw any conclusions about the accent, but, for what it’s worth, the two forms with first-member accent appear to be adjectives, whereas our *ṛte-karmám* and, probably, MS *ṛte-yajñám* are adverbs and so may show adverbial accent shift. As for the apparent thematic ending *-ám*, I am puzzled. Perhaps it is an effort to distinguish the adverb from the case forms to the neut. *n*-stem *kárman*- found in these two vss.: gen. sg. *kármaṇaḥ* (7c), clearly to an *n*-stem, and acc. pl. *kármāni* (8a), the usual *-n*-stem form, though it

could of course belong to a putative *a*-stem **kárma*-. We can also note that the word precedes a vowel-initial word *udájāyanta* and so the *m* could have originated as a hiatus-filler.

Let us now focus on the meaning. The fact is that neither the older interpr. nor the younger one fits easily in the passage. To start with the later one and with Ge's tr. of the hemistich: "die [=Götter] durch die Grösse (seines) getanen Werkes auch ohne eigenes Zutun emporkamen" – the tr. implies that because of Indra's ("seines") activity the gods arose / came into being / got born without any action on their part. But does this follow? What does Indra's deed have to do with the birth of gods – esp. if this act is indeed the Vṛtra-slaying, as I suggested above? And does the birth of gods involve their own activity under other circumstances? The Maruts' birth is generally depicted as complex and problematic (see esp. VI.66.1–6, where they do seem to take an active role in their own birth). Or must we reckon with a very bleached sense of *úd√jan* 'come to prominence' or the like? This lexeme is rare (6x in the RV), and it generally refers to real birth or at least to physical (a)rising. In short, Ge's interpr. is not impossible, but it does not conform to any mythological situation I'm aware of, and the formation envisioned, a cmpd with *rté* 'without', seems a little early. The older interpr. does not fare much better; here again we'd need an adverb, in this case meaning something like "in the manner of (an) action in (accord with) truth." Such an adverb could qualify the immediately preceding phrase *kármaṇaḥ kriyāmānasya mahnā* "by the greatness of the action being performed" and indicate that the action was not only great but in harmony with the truth – perhaps a nervous preemption of the blood guilt associated with killing. Once again the word formation is anomalous, but that's a problem with both interpr. Although the publ. tr. follows the later interpr., I am now inclined towards the earlier one: "... which gods arose/came into being by/because of the greatness of the action being done, in a manner of (an) action in accord with truth." This still doesn't solve the problem of what the Vṛtra-slaying (or other deed of Indra's) has to do with the birth/arising of the Maruts, but I think I've gotten as far as I can.

X.55.8: This vs. is blessedly straightforward. Assuming that it follows more or less directly on vs. 7, we can supply "with them/the Maruts" to flesh out *yujā*. The *kárman*- prominent in vs. 7 returns here, obj. of the root *√jan*, which, as we saw, complicated 7d. As was likely there, we have to deal with an attenuated sense of 'beget' -- 'give rise to', vel sim. -- rather than a literal one.

The hymn limps to the end with a 10-syllable pāda (d).

X.56 All Gods

On the aim of the hymn, see publ. intro. As was disc. there, there are two competing views: that the hymn is the poet's memorial for his dead son Vājīn (Sāy.) or that it concerns a dead horse, either sacrificed (Old) or deified (Ge). The horse interpr. is strongly defended also by Doniger, but Re (EVP XVI.133) questions it: "peut-être l'allusion au cheval est-elle à rejeter?" As was also noted in the publ. intro., I reject both interpr.; there is simply no evidence for a horse save for the word *vājīn* 'prizewinner', which need not apply to a horse (see the numerous passages under Gr's definitions 3–8), nor is there any evidence for a father-son connection between the poet and the dead entity. Instead the hymn seems to be a general treatment of what happens after death, picking up and developing some themes found in the previous hymn, X.55, particular that of light.

X.56.1: The fact that this vs. is found in the AV (AVŚ XVIII.7 ≅ AVP XVIII.69.5) and

elsewhere in a normal funeral hymn is another piece of evidence that the dead in question is a person, not a horse.

The three lights are probably more or less as Ge indicates (n. 1a): this one here (*idám*) is the light of earth, quite possibly the fire; the distant one (*paráh*) is that in heaven, probably the sun; the third one is in the furthest distant heaven beyond the sun.

As noted above ad X.55.2, the lexeme *sám* √ *vis* is very rare, and its attestation twice in this vs. and once in a vs. in the preceding hymn is strong evidence for the continuity of thought between the two hymns. Both passages concern the “merging” of being(s) with or into light.

As elsewhere (I.163.4, VII.34.2, 56.2) I take the instrument suffix *-tra-* serious in *janitra-* and tr. it ‘means of begetting’, not ‘birthplace’ with most. Here the point would be that merging with the third light is the best kind of birth.

X.56.2: It must be admitted that this vs. is found in AVŚ in a short hymn to a horse (VI.92.3; the AVP IX.34.13 equivalent is in a longer and more miscellaneous collection).

Sāy., fld by Ge and Don, interpr. *tanūḥ ... tanvām nāyantī* as meaning that the body of the horse is carrying the body of its rider, but this seems like a forcing of the horse theme on a phrase that resists it. For ex., Don tr. “carrying a body,” but √ *nī* doesn’t mean ‘carry’, but ‘lead’. For Don’s suggested meaning we would expect a form of √ *bhr* instead. Re appositely cites the compd. *āsu-nīti-* ‘leading to the (other) life’, found in the funeral hymns (incl. nearby X.59.5–6), referring to the one who guides the dead person to the beyond and reunites him with his faculties, a sort of psychopomp. In fact I now think that the nom. *tanūḥ* does not refer to the body of the dead man in question, which is rather the acc. *tanvām*; 2nd-position *te* can as easily qualify this following form, separated only by a voc. *vājīn*, as the preceding *tanūḥ*. (I do not think that the close sandhi *tanūṣ te* requires a syntactic connection to the preceding: a preceding rukifiable *-s* generally seems to ruki before *te* regardless of the syntax. See, e.g., *vidúṣ te* [I.11.6, 7], *nákīṣ te* [I.48.6, 69.7].) I would therefore change the tr. to “Let the body, leading your body, establish ...” Who the nom. body belongs to I’m not sure – perhaps it refers to a generic body, the psychopomp, that leads the other dead along the way.

The accent on *dhātu* is motivated by its participation in two clauses, between which it stands.

In d *jyótiḥ* can be read with both simile (to the left: *divīva*) and frame (to the right: *svám*). I take “own light” as referring to the *idám ... ékam* in 1a, “one light here [on earth]” – in other words, to the light that the person had while alive, which he will exchange for another light, the third one mentioned in 1b. Why the exchange partner is expressed in a simile “as if for the light in heaven” has to do with the three lights of 1ab. The dead is merging with the third light, beyond the one in heaven, i.e., the second light – but since that second one, the sun, is the only one we can see and therefore imagine, the poet compares the merging with the distant invisible third light with the less (but still) distant and visible second one. Ge’s interpr. is different: he supplies the sun in the simile, with the comparison between the sun’s exchanging its light (alternating between day and night?) and the dead man’s exchanging his. But I don’t understand the point of comparison: the dead person’s exchange is permanent – he’s giving up his own light for a higher one—whereas the sun’s exchange happens daily. Still less do I understand Don’s “change your own light as one does in heaven.”

X.56.3: The them. deriv. *vājīna-* is poorly attested and poorly defined; here it seems to be used as a pleonastic etymological qualification of the nom. *vājī* “you are a *vājīn* by your qualify of

vājina-.”

The rest of the vs. is structured by five occurrences of *suvitāḥ* ‘well gone’ (*su* √ *i*), which forms a non-etym. semantic figure with the single finite verb *gāḥ* ‘you have gone’ (to √ *gā*). This use of *suvitā-* is highly unusual. It is the only occurrence of this quite well-attested stem with an animate being; it is ordinarily neut. and a noun ‘good going, easy passage’.

The real problem in this vs. is the hapax *suvenīḥ* (see AiG II.380 “ganz unklar”), starting with its morphological identification. Sāy., Old, and Re take it as a nom. sg. (in different ways), while Ge, Don., and I take it as acc. pl. fem. Ge and Don think it refers to the heavenly mares (Ge n. 3a), the ‘well-loved’ (“zu den schönen Geliebten”) or ‘well-loving’ (Don: “who long for you”) ones, with an outmoded sense of √ *ven*. I associate it with the fem. pl. *venīḥ* ‘(female) trackers’ in VIII.41.3, which I now think refers to the dawns. (See comm. ad loc.) Here the same referent is quite possible; remember that the addressee is on a journey to merge with the distant light, and the dawns, sources of heavenly light, therefore fit the larger context. Recall that in the “light” section of the previous, thematically related hymn, X.55.4, Dawn featured prominently. As a goal in our vs., “dawns” fits well with heaven (*divām* b) and the gods (*devān* d). I would, however, slightly alter the tr., since *suvitāḥ* does not seem to be construed with *suvenīḥ*, as the publ. tr. implies. The new version would be “You have gone to the (dawns?), the good trackers, well gone to the praise, well gone to heaven ...”

X.56.4: On my general interpr. of the vs., see the publ. intro., where I suggest that the vs. describes the step-by-step mechanism whereby the recently dead regain their bodies. The last pāda is the clearest expression of this thought, with the dead entering (*ā ... nī* √ *viś*) their own bodies again. The use of √ *viś* recalls the lexeme *sām* √ *viś* ‘merge into’ (of the dead) almost confined to these two hymns (X.55.2, 56.1); see comm. above. It is used of the dead merging with light; in this pāda they (re-)merge with their own bodies.

The rest of the vs. is beset with difficulties, though the outlines of the process seem fairly clear – even though I’ve now changed my mind about some of it (see below). It involves uniting the previous mental force of the dead (*krātu-*, b) with their vibrant energy (*yāny ātviṣuḥ*, c; see below), and, with this package, entering into their own bodies again (d). What exactly is going on in pāda a is less clear.

The interpr. of pāda a depends on that of *caná*, in particular whether it is positive or negative. There is some difference of opinion here, but weighted towards a negative interpr. So, though Sāy. takes it as positive and both Old and Re consider this as a possibility, in the end Old prefers a neg. interpr. (Re does not decide), and Ge, Don, and the publ. tr. all follow the negative one, without disc. Certainly the apparent contrast between the Pitars in pāda a and the gods in b favors the negative, as Old points out. However, this interpr. collides with the usage facts of *caná* elsewhere. As disc. esp. ad X.49.5, flg. Klein (DGRV I.285–92), although *caná* overwhelmingly appears in negative contexts, the actual negative is always expressed by (an)other explicitly negative word(s) in those contexts. There are almost no clear examples of *caná* as the sole expression of the negative (though see comm. ad II.24.12); unfortunately Klein does not discuss our passage, which seems like a strong candidate – or at least it is often so interpr. On the one hand, we could assume that the negative sense had “rubbed off” on *caná* in this late passage, and it means “even ... not” as in the publ. tr. in contrast to its standard usage. As I explain in the publ. intro., this could mean that the immediate predecessors of the dead, their Pitars, do not control the “greatness” of those dead, which is in the hands of the gods and powers further above. However, given the overwhelming no. of *caná* passages that conform to the usage facts

just set out – there are nearly 100 exx. of *caná*- in the RV – I am now more reluctant to follow this path than when I made the transl. without full consideration of *caná*. But, if *caná* is positive, what then would this pāda mean? That interpr. must in turn depend on what we think *mahimán*- expresses. This well-attested word is of course an abstract meaning ‘greatness’, but that doesn’t get us very far. I would suggest, very tentatively, that the use of pl. *mahimānaḥ* in the famous cosmogonic hymn X.129.5 may help illuminate our passage. Late in the creation depicted therein, the creation becomes sexualized, with polarized male and female features: *retodhā āsan mahimāna āsan* “There existed placers of semen and there existed greatnesses,” with the “greatnesses” likely referring to pregnancies. If *mahimán*- (sg., I grant) in our passage can refer to the pregnant belly and, by extension, to sexuality, reproduction, and all the messy parts of physicality, this could be in the control of the Pitars, who are in fact vitally interested in the reproductive capacity of their descendants, while the mental power and vital energy belong to the gods. Although this suggestion is fairly fragile, given how many exx. of *mahimán*- lack this sense, it fits the context quite well, since the Pitars return in the vs. 6 to establish the continuity of generations. I would therefore now change the tr. to “Even though the forefathers are masters of their “greatness” (=procreative powers), the gods ...”

The next pāda is, by the standards of this hymn, pretty straightforward. By my interpr. the gods have control over the *krātu*- ‘mental force’ of the dead and deposit it among themselves. The mental *krātu*- contrasts with the physical procreative power (if my interpr. of *mahimán*- in a is accepted).

Pāda c presents several challenges: 1) what is *utá* doing in the middle of the pāda? 2) how should we interpr. *yāny átvīṣuḥ*? In particular, is *yāni* nom. or acc. and, related, is *átvīṣuḥ* intransitive or transitive? 3) What is the subj. of *sám avivyacuḥ*?

The question about *utá* has, I think, not previously been raised: it has simply been taken as connecting c with b, despite its mid-pāda position. See Ge’s tr., whose rendering of c begins with “Und.” Klein (DGRV I.380) is explicit that it connects the clauses across a distich boundary, despite its pāda-internal position. The publ. tr. reflects this shared view (notice my “and” beginning c). But I now think it is wrong. Instead I think it connects the unexpressed first obj. of *sám avivyacuḥ* ‘they enveloped / encompassed’ with the second, which is the relative clause that follows *utá*. In other words, it is the *utá* version of an “X and which Y” construction, usually expressed with *ca* (X *yá*- *ca* Y). The use of the preverb *sám* ‘together’ supports this view that two things are being united. The first object is, in my view, *krátum*, to be supplied from b. In other words they bring together the mental force of b and the vibrant energy expressed by *yāny átvīṣuḥ*. Once these have been combined, the crucial parts of the dead person have been reunited and are ready to be (re-)placed in the bodily envelope.

Let us now turn to the rel. cl. and specifically to its verb *átvīṣuḥ*. The first thing to note is that a different form of this root was found in the previous hymn, X.55.1 *títvīṣānāḥ* tr. there ‘sparking’, that is, energizing or vivifying. That form is a middle pf. part. and transitive, but opinions differ on the value of our act. form. For intransitive value: Sāy. (*yāni tejāṃsy atvīṣuḥ dīpyante*), Don (“all things that shine”), and apparently Ge (“Glanzleistungen”), as well as the publ. tr. (“those things that were in vibrant motion”). For transitive: Gr (“anregen ACC”), Kü (“welche sie erregten,” p. 500), and Old (“was sie aufgestürmt haben”). It is true that this is the only act. form to this root, and so an oppositional transitive might be expected (most of the middle forms, though not X.55.1, are intrans.). A trans. sense would certainly work within my scenario: “they encompassed the *krātu*- and the parts that they ‘sparked’.” But, despite the morphology, I weakly favor the intrans. version because it is more harmonious with the simple

obj. *krátum*. Putting the whole pāda together, I would now tr. “They enveloped / encompassed (the mental force) and those things that were in vibrant motion” – in other words intellect and life force. One final question about this pāda: who is the subj. of *sām avivyacuḥ*? Ge (/Don) thinks it’s the divine racehorses, which we can dismiss. It could be the gods of b, but I think it is more likely the dead themselves, who have reclaimed the various parts of themselves from the various places they ended up after death.

X.56.5: As indicated in the publ. intro., I think the first hemistich of this vs. depicts the newly reassembled dead moving about in the other, upper realm. I’m not sure exactly what their “powers” (*sāhobhiḥ*) are, but I assume that this refers generally to the powers that come from the (re-)combination of mental force, life force, and body.

As also indicated in the publ. intro., in my view the 2nd hemistich refers to a different type of life-after-death. Though each separate being is limited to and held within a single body – even if that body is in heaven, as in the last pāda of the previous vs., 4d — by producing offspring, a single being can extend himself in many different beings. This is of course a standard Vedic sentiment. On the medial reflexive form *prāsārayanta* see my -aya-book, p. 170.

X.56.6: As Ge (n. 6) says, “Schwierige Str.” The first thing to note is that the configuration of two plus a third matches vs. 1, though the referents of the numbers cannot be the same. Since the final vs. of this hymn (7) seems to be a summary vs. applicable to the poet, the matching of 1 and 6 is ring compositional. In vs. 1 we have *ēkam ... ēkam ... tṛtīyena*, whereas here we have *dvidhā ... tṛtīyena*. In 1 the third entity is light (*jyōtiṣā*), here a deed (*kārmaṇā*). Light is represented in this vs., however – by *svar(-víd)*- ‘sun(-finding)’.

The vs. concerns the same subject as vs. 5: the ways in which the dead (or to-be-dead) can assure some kind of continued existence for themselves. This is also generally Ge’s take on the vs. (see n. 6ab), though we differ sharply on details, esp. the referents of the crucial terms. The topic of continued existence is also approached from two points of view, that of the sons of the dead (ab) and that of the already dead forefathers (cd).

With Ge, I take *dvidhā* ‘in two ways’ as referring to two different locales: yonder (i.e., heaven, or whatever we want to call it) and here on earth. My important differences from Ge are that I don’t think the “sons” are the Aṅgirasas, an idea of Sāy.’s that seems a distraction in this hymn, and I think the *ásura*- is the sons’ actual father, not heaven (so Ge) nor the sun (Sāy., Don). The sons have established their father, their “lord,” as a sun-finder—that is, they have made it possible for him to merge with the light, as in 1b. Yonder in heaven this is effectuated by the sons’ performance of the proper funeral rites; on earth by their extending themselves through offspring, thus producing grandsons for their fathers, the standard three-generation model in later Hinduism. This extension is produced by “a third action” (*tṛtīyena kārmaṇā*), which, with Sāy., Ge, and Don, I interpr as procreation. Although we might think that procreation was already covered by the second category, “extending themselves through offspring,” I think the offspring and the sexual intercourse that produces them are considered separately. Sexual intercourse is definitely an “action,” requiring another person, the ambivalently viewed female, and therefore involving some danger and risk of impurity. The hoped-for result, the offspring continuing the line of the grandfather, is not a given.

This is the extension of the line from the son’s point of view. Their fathers’ is given in the second hemistich. These (now dead) Pitars established their own offspring (*svām prajāṁ*), that is, the sons whose actions we observed in ab, as their “paternal power” (*pítryaṁ sāhaḥ*). In this

context “paternal power” seems to identify the offspring as the tool, the secret weapon, that the Pitars wield to ensure their continuity into the next generation(s). The sons will have sons (and so on), and they will stretch like a thread across the generations.

X.56.7: The first hemistich of the vs. is essentially unrelated to the rest of the hymn, simply expressing metaphorically all the difficulties Bṛhaduktha has overcome – though for a possible relationship between the boat in pāda a and the journey to the next world, see comm. ad X.135.4. The real meat is in the second hemistich. There the general statement in the previous vs. (6) is applied specifically to the poet Bṛhaduktha. This application is emphasized by the exact echoes in the two second hemistichs:

6cd #svām prajāṁ ..., āvareṣv adadhuḥ ...

7cd #svām prajāṁ ..., āvareṣv adadhāt ...

Just as the Forefathers establish their own progeny to provide continuity to later generations, so has Bṛhaduktha. This would seem simply to say that Bṛhaduktha, too, has produced sons. But what about the final phrase, *ā páreṣu* “among previous (generations),” found only in the Bṛhaduktha vs.? This is the finale of the hymn (and of the hymn sequence, X.54–56), and, when given some thought, it seems like a radical statement. The Pitars can only produce forward, as it were: their offspring connect them with generations to come. But how can one’s own offspring connect to the past? I venture to suggest, quite tentatively, that this is a statement about poetry. Bṛhaduktha’s “own offspring” are also his hymns, and by producing them he has not only set about ensuring the continuity of the poetic tradition to generations in the future, but he has also provided a continued existence to previous generations by celebrating them in his poetry. He has generated backwards, as it were, and given a new life to the Pitars who preceded him. Bṛhaduktha’s special ability to connect with both past and future is enabled by *mahitvā*, his ‘greatness’.

X.57–60

On these four hymns (and their possible resolution into three) see publ. intro. to the four hymns as well as the introductions to the individual hymns.

X.57 All Gods

X.57.1: Technically speaking, *somínah* could be gen. sg., as I take it (also Ge), abl. sg. with *yajñāt*, or nom. pl. agreeing with the 1st pl. subj.

X.57.2: The “thread stretched” (*tántuḥ ... ātataḥ*) to the gods is Agni: the ppl *āhuta-* is overwhelmingly used of him. The phrase exactly matches (save for case) *tántum ātatam* in the immediately preceding hymn (X.56.6), and, though the referents and contexts are completely different, this agreement may account for the placement of this set of hymns.

X.57.3: The mention of the Pitars also connects this hymn with the end of the last: see X.56.4, 6.

X.57.5: The tr. of *pitarah* here should have been harmonized with that of *pitṛñām* in 3, hence “o forefathers.”

X.57.6: *vraté* in this vs. echoes *vrātam* in 5c, despite their different senses. Both vss. end with

sacemahi.

X.58 “Return of Mind” (*manaāvartanam*)

On the relationship between this hymn and the previous one, see publ. intro.

X.58.1 (–12): The locational adv. *dūrakām* seems almost contradictory: the base *dūrā-* means ‘distant, far away’, but the suffix *-ka-*, diminutive or deprecatory, seems to undercut its base – with an implication “a little far away, sort of far away.” This may give us some reassurance that we can succeed in calling back the *mānas-* that has gone to those not-quite-so-distant parts.

X.58.6: As was noted in the publ. intro., the “sloping paths” (*pravātaḥ*) lead to Yama in the funeral hymn X.14.1. It is not clear to me whether the preceding *mārīcīḥ* ‘light-beams’ is meant to be identical to the sloping paths or a different destination. Distinct parallel accusatives seem less likely because we might otherwise expect a double *yād* as in vss. 2 (*yād ... dívam yāt prthivīm*), 7, and 8. But I’m not sure whether the sloping paths are really conceived of as beams of light. The word *mārīci-* is found only once elsewhere in the RV, in very late X.177.1; it is more common in the AV, esp. AVP (see Griffiths 2009, ad AVP VI.7.1), but it does not seem to have a technical or particularly well-defined meaning there.

X.59 Various divinities

On the structure of this hymn, see publ. intro. In Old’s view (Noten, ad 57–60), vss. 1–7 belong together, but 8–10 belong with X.60.

X.59.1: The interpr. of b is disputed; I find both Ge’s and Old’s unsatisfactory because they miss connections between b and pādas a and c. To begin with the subjects of b, the dual *sthātārā*. With Old (also Re, but not Ge) I take the referents to be the two Aśvins; Ge (n. 1b, though see n. 1c) finds a reference to the Aśvins unnecessary (nicht notwendig), but the mention of one of the Aśvins’ clients, Cyavāna, in c, not to mention the fact that the form is dual, makes the Aśvins the prohibitive favorite. The Aśvins are addressed as *sthātārā* in I.181.3. I construe gen. *rāthasya* with the agent noun, *pace* Ge and Re, who take it with *krātumatā*. Cf. for this same phrase III.45.2 *sthātā rāthasya*.

The next question is the referent (and analysis) of *krātumatā*. Although Gr (and tentatively Lanman, Noun Infl. 516) take it as a nominative dual, such disregard for standard morphology should be avoided. Both Old and Ge (and I) take it as an instr. sg.; for them it refers to another person: Ge to another unidentified charioteer, Old to Cyavāna. But we really need no other personnel. Although a word meaning ‘possessing *krātu*’ might be expected to refer to a living being, in fact this is not necessary. In IV.41.1 *krātumān* modifies a praise song (*stómaḥ*) that is spoken by us (*asmād uktāḥ*). I therefore supply a verbal product here as well: the Aśvins did X “with their resolute (speech).”

And what is it that the Aśvins did? Here the well-known saga of Cyavāna comes into play: the Aśvins are famous for making him young again. This is where pāda a becomes relevant. There we have a passive syntagm “his lifetime has become extended” *prā tāry āyuh*, expressed with the passive aor. of the lexeme *prā √ tṛ*. The owner of this lifetime is the unnamed subject of this part of the hymn. But this extension of his lifetime is comparable to what the Aśvins did for Cyavāna, and in fact the same verbal lexeme is once used of this very deed: I.116.10 *prātiratam jahitāsyāyur dasrā* “You extended the lifetime of him who was left behind [=Cyavāna, mentioned

in the preceding pāda], wondrous ones.” I suggest that the syntactic relationship between pāda a (the frame) and pāda b (the simile) belongs to the phenomenon I’ve discussed under the rubric of “case disharmony in similes” (IJ 24 [1982]). Here pāda a is passive and the neut. *āyuh* is nominative; in b I supply a transitive form of the verbal lexeme (*prātiratam* as in I.116.10 just cited will do), with neut. *āyuh* available to serve as accusative obj. This tight and poetically ingenious connection between a and b, pivoting on a shared neut. noun but changing the voice of the shared verbal idiom, seems preferable to Ge’s invention of an obj. in the simile in b: “wie die beiden Wagenfahrer (ihre Fahrt fortsetzen),” which still requires the verb of the simile to be transitive and to be a variant of *prā* √ *tī*, at least as I understand him.

What task or goal (*ārtham*) the unnamed subject, (like) Cyavāna, sets his force to is not clear to me. Cyavāna set out to marry young women (see I.116.10d). Perhaps in the context of this revivifying hymn, the same end is in view.

Note that the adverb beginning the refrain of d, *parātarām* ‘further away’, phonetically echoes the opening of the verse, *prā tāri*.

X.59.2: As was hinted in the publ. intro., the relevance of this vs. to the life-restoring first vs. is not entirely clear. Given the presence of the *sāman* (pāda a) and of a singer (*jaritā* c), the vs. seems to concern the sacrifice and the material and non-material goods to be gained from it. Note also that there is a switch to 1st pl. reference in this and the following two vss. belonging to this section, from the unnamed 3rd sg. whose life was extended in vs. 1. Both these changes seem abrupt, despite the presence of the refrain in all the d pādas.

With Ge I take loc. *sāman* as in essence a truncated loc. absolute: “when the *sāman* (is sung),” “at the *sāman*.” A similar minimalist usage is found in VIII.89.7. With Ge, I reject Old’s ascription to a different stem built to √ *san* ‘win, gain’, represented by Gr’s “2. *sāman*” and fld. also by Re.

I do not understand the doubled *nū* in this pāda. The two other exx. of this phenomenon make rhetorical sense: in VIII.51.7 repeated *ín nū* connects two parallel adverbials (*úpopén nū ... bhūya ín nū* “over and over ... more (and more) ...”); in X.27.7 they connect two contrastive chiasmic clauses: *dārṣan nv pūrvo āparo nū darṣat*. But here there is no grammatical or thematic parallelism between the items adjacent to the two *nū*s, and the second *nū* does not signal a new clause.

The phrase *nidhimāt ... ānnam* is somewhat puzzling. A *nidhí-* is ‘a deposit, a treasure or treasury’; it is several times used with *mādhv-* ‘honey’: VII.69.3 *nidhím mádhumantam* “honeyed treasure,” I.183.4=III.58.5 *nidhāyo mádhūnām* “deposits of honey.” All three passages are in Aśvin hymns; if we assume that in this food context *nidhimánt-* has the pregnant sense “possessing treasures/deposits (of honey),” this might provide the link between this vs. and the first one, where the Aśvins are prominent though unnamed, but beyond this I can’t go.

The mid. subj. *kārāmahe* takes both *ānnam* and *śrávāmsi* as parallel and contrastive objects, with the self-beneficial sense “make one’s own” (so also Ge: “... wollen wir ... gewinnen”).

The c pādas of vss. 2 and 3 are almost identical:

2c *tā no víśvāni jaritā mamattu*

3c *tā no víśvāni jaritā ciketa*

In the first the speaker asks the “singer” to rejoice in all these things of ours (presumably the food and the fame); in the second the singer is to take note of them (there presumably our manly powers). In both cases I think the singer is not merely a human ritual participant, but must be a god – very likely Agni, who is sometimes called a *jaritār-* (e.g., III.15.5, VIII.60.19, X.100.6). In

this I differ from Ge (n. 3c), who identifies the singer as Subandhu, “der Wortführer der Gaupāyana’s.” But as disc. in the publ. intro., Subandhu is only found in the last metrically distinct part of this hymn (vs. 8), which does not seem to be a unified composition.

X.59.3: Gr and Ge take *aryāḥ* as acc. pl.; I follow Th (Fremdling, 54) in interpr. it as gen. sg., supplying a haplologized acc. pl. **paúṃsyā(ni)*. However, the Gr/Ge interpr. is certainly possible, producing an alt. “May we surmount the strangers with our manly powers.” The purport is the same.

On pāda c see disc. ad 2c immed. above.

X.59.4: Ge (fld. by Ober [Relig. II.59]) construes *dyúbhir hitāḥ* together and interpr. *dyúbhiḥ* as an agentive ‘heavenly ones’: “das von den Himmilischen bestimmte Alter.” See his n. 4c. But in all clear cases *dyúbhiḥ* has a temporal sense ‘through the days’; see esp. Old’s excursus ad IX.112.2. Re also favors ‘through the days’. Moreover, the form belongs to the noun *div/dyu* and should not have a derived adjectival sense.

X.59.5: On *ásu-* (in *ásu-nīti-*) as ‘(other) life’ see comm. ad X.12.1. The other three occurrences of the cmpd., all in the funeral hymns (X.12.4, 15.14, 16.2), refer to an object, a way or path leading to the other life. But the two vocc. here (vss. 5, 6) address a being capable of agency, perhaps just the animatized path.

Pāda c would make somewhat better sense if *rārandhī* were transitive/causative: “make us take pleasure in seeing the sun.” As it is currently tr., we must assume a certain selfless benevolence on the part of the Leader, who gets joy from the joy of others. It is hard to avoid this tr. because the other two occurrences of *rārandhī* (I.91.13 and III.41.4) unequivocally have the sense given to the form here in the publ. tr. There is, perhaps, a way around this, however. Though *rāran-* must belong to the pf. system originally (Kü 413–14), given that there is a fairly well-attested *-āya*-formation (*raṇāya-*) and given that *rāran-* has a heavy redupl., it is possible that it was reinterpr. as a redupl. aor. associated with *raṇāya-*. And *raṇāya-* has an interesting syntactic profile: most of its occurrences are intrans. (or I/T in my *-āya*-book terminology), with a complement in the loc. “take pleasure in,” but two are transitive (double I/T), with the sense “cause X to take pleasure in” (see my *-āya*-formations, pp. 75, 143). In fact one of these two shows the change in process, with the simile and the frame having different case frames: VIII.92.12 *vayām u tvā ..., gāvo ná yāvaseṣu ā/ ukthēṣu raṇayāmasi* “We will make you take pleasure in our hymns, o you of a hundred resolves, as cows do in their pastures,” with the simile a simple intransitive (I/T), the frame transitive (double I/T). (For further disc. see my 1982 “Case disharmony in RVic similes.”) If *rāran-dhī* has become associated with *raṇāya-*, the latter’s transitive potential may have been transferred to it, allowing the alt. tr. given above. See comm. ad V.54.13 for a more complex possible ex. of this same switch.

On med. caus. *vardhayasva* see comm. ad X.49.6.

X.59.6: Contra Ge I do not take *bhógam* as a parallel object to *cákṣuḥ* and *prāṇam*, partly because ‘use, enjoyment’ is a different type of entity from the first two, partly because only they are marked with *púnar*. I take *bhógam* adverbially, flg. Janert (Dhāsi, 22 n. 5).

X.59.7: The occurrence of *ásu-* here does not have the sense ‘(other) life’ that it does in the cmpd. disc. above ad vs. 5.

The three worlds, Earth, Heaven, and the Midspace, each serves as subj. to *dadātu*, each marked by its own *púnaḥ*. Given their distribution across the hemistich, Heaven (*dyaúḥ*) seems to be qualified as fem. *devī*, hence my tr. “goddess Heaven.” As is well known, *dyaúḥ*, though overwhelmingly masc., is occasionally modified by fem. adjs. and pronominal adjs. (see comm. ad I.57.5 and VIII.40.4). What is surprising about this passage is that Heaven is also called a god(dess), for Heaven is never otherwise called a *devá-*. And indeed he is not a god, but the father of gods, as the morphological derivational relationship implies. See my 2016 “The Divine Revolution of X.124,” p. 298 with n. 16. However, Heaven and Earth together, esp. under the designation *ródasī* ‘two worlds’ are sometimes modified by the dual *devī*, and that must be the source of the (apparently) sg. *devī* here. Note that dual *ródasī* is found in the next vs. (8a) and Heaven and Earth in the refrain (d pādas) of the next three vss.

X.59.8–10: The last three vss. of the hymn are unified by their meters (varieties of Pañkti) and their three-pāda refrain. Note also that vs. 8 begins with *sām*, which is echoed by the initial word of vs. 10, *sām*.

X.59.8: As Re notes, this is the first occurrence of the word *subāndhu-* in this hymn cycle – and the only one in this hymn. Though by the standard accounts a man named Subandhu is the focus of the desires for mental and physical restoration in these hymns, in fact the word need not be a personal name (though the occurrences in the next hymn, X.60.7, 10 make this more likely): it could mean ‘possessing good lineage/family’ as it can elsewhere.

Pāda b is identical to I.142.7c, where it refers to Night and Dawn. Its use in that context is responsible for Ge’s tr. “youngest daughters and mothers ...”; see comm. ad loc. I see no reason to see two distinct kinship relations in this phrase; in either passage, since there is no generational difference between the members of either pair. They would be esp. inappropriate here given the underlying gender difference between Heaven and Earth. Note that the dual fem. qualifying *ródasī* puts the apparently singular *devī* modifying *dyaúḥ* in 7b into a wider grammatical context.

X.59.9: Note the *-ká*-suffixed numbers, *dvaké*, *trikā*, and *ekakām*, each agreeing, in the appropriate number, with neut. *bheṣajá-*. Because these suffixed numbers are isolated, it’s difficult to know what semantic or stylistic sense the suffix may contribute. Edgerton (*The k-Suffixes of Indo-Iranian*, 1911: 26) suggests that the suffix forms “adjectives with a sort of distributive force” (rendering them “singly ... by twos ... by threes”). This is certainly possible, even attractive, but the addition of the suffix might just be a way to produce a morphologically parallel and phonologically unified series “two ... three ... one,” since the sequence made from the numerals directly would be more disparate: *dvé ... tríṇi ... ékam*. (And /) or the *-ka-* could convey a “popular” flavor on this popular hymn.

X.59.10: The first hemistich (that is, the non-refrain part of the vs.) is completely baffling with regard to its possible relevance to the rest of the hymn. The fem. name *Uśīnarāṇī* occurs only here. It is transparently related to the name of a people, *Uśīnara*, mentioned in the Aitareya Br and later, but that isn’t much help. Sāy. considers *uśīnarāṇī-* the name of a plant, and Old has a similar view (“Wagen der Kräuterfrau,” bringing healing plants). By contrast, Ge (n. 10b, flg. Ludwig) suggests that *Uśīnarāṇī* is the wife of Subandhu, whose name is really the ethnonym *Uśīnara*, and Indra is restoring his wife to him. This requires a longer chain of assumptions than

I'm willing to accept. But I do think that he is correct that a wedding context is implied, since *ānas-* can be for the wedding vehicle for the bride. I have nothing helpful to add, but the vs., with its hope that the ox and the cart should be whole and in good working order, reminds me of the tacked-on section of the composite hymn to Indra (etc.), III.53.17–20, which I describe (in the publ. intro. to the hymn) as “prayers to deflect various possible catastrophes that might befall a team of oxen and the vehicle they pull on a journey, and wish for safe return.” Given the outsize RVic interest in chariots and vehicles of all types, it would not be totally surprising that a hymn for the restoration of the health of a man might attract a vs. hoping for the restoration of the health of a draught animal. We can also recall that the journey of a new bride to her husband's household is considered to be fraught with perils (see, e.g., Sac Wife 222–26).

X.60 Asamāti, etc.

For the various divisions of this hymn, which probably consists of several hymns combined, see the publ. intro.

X.60.1–4: As noted in the publ. intro., these four vss. form a single sentence, the full skeleton of which is contained in vs. 1 — with the other vss. merely expanding on the recipient of the praise and his stellar qualities, by means of accusatives modifying the object of vs. 1 (vs. 2) and relative clauses dependent on that object (*yāh* vs. 3, *yásya* vs. 4).

X.60.1: I have followed the line of least resistance, encouraged by Ge and Old (see also Mayr, PN), and taken *māhīna-* as the name of a people. However it might be better, with Re, to take it as a variant of *māhina-* ‘great, might’ and tr. “of the great ones.” Re further suggests that the referent is the gods, but this is not necessary and is in fact unlikely.

X.60.2: On a literal reading, pāda b identifies, or at least implicitly compares, Asamāti to a chariot. This seems perfectly reasonable to me — the man as a juggernaut bearing down on his opponents — but the unmediated image seems to have caused consternation to some interpr. Ge alters it from chariot to chariot fighter by a strategic parenthetical addition: “dem ... Wagen(helden),” while Re considers *tveṣām ... rátham* a decomposed bahuvrīhi in tmesis, for *tveṣá-ratha-* ‘having a glittering chariot’, which does exist (V.61.13). Neither trick seems necessary to me.

Gr suggests reading *bhajā *ráthasya* “um zu gewinnen den Herrn des Wagens,” with a dat. inf. **bhajā*. See Old's disc. Since this would require emendation, and it's hard to understand why **ráthasya* would have lost its accent redactionally, I think it best, with most, to see here an otherwise unknown name of a person or place. So Ge, Mayr (PN).

X.60.4: On *marāyín-* see EWA s.v., citing Ingrid Eichner-Kühn 1976.

X.60.5: On *rátha-proṣṭha* see KH (StII 13/14 [1987]: 129–34 = Aufs. III.855–63, esp. 862), who analyzes the second member as *pra-úṣ-tha-* from the lexeme *prá√vas* ‘spend the night away from home’, with the developed meaning ‘camp bed’. Here ‘whose chariots are their camp beds’. In KH's view this identifies the Asamātis as “ein ‘reisiger’ Kreigerstamm,” and he further suggests that since the meaning of *próṣṭha-* was not previously understood, this led to the analysis of *rátha-proṣṭha-* as a PN. This seems plausible, and we might emend the tr. to “in the Asamātis, whose chariots are their camp beds” — though the density of PNs in this hymn might suggest that

we keep the tr. as given.

X.60.6: Ge (n. 6) calls this “eine kleine Dānastuti,” presumably because of the yoking of the *sāptī*. But that assumes that the subj. of *yunakṣi* is the patron, even though the most likely 2nd sg. referent is Indra, who was addressed in vs. 5. The victories attributed to the 2nd sg. referent in the 2nd half of vs. 6 also fit Indra far better than a putative patron.

X.60.7: Although this vs. is universally taken as meant to heal Subandhu and recall him to life, it presents this healing as a (second?) birth. The lexeme *nīr√i* is specialized for birth (see comm. ad I.37.9), and the presence of mother and father in pāda a reinforces this theme, with the movement expressed by *prasārpana*- ‘slithering forth’ also evoking birth.

Note the masc. *ayām* with *mātā*, this mismatch is doubtless due to the fact that the *ayām* is annunciatory: “here is ...,” though the genders match in c *idām ... prasārpaṇam*, which by my interpr. is also annunciatory.

X.60.9: Since the demonstrative is attributive, the genders match in the phrase *iyām pṛthivī*.

X.61–84

This next section of X consists of paired hymns, each pair attributed to a different poet, save for X.75–76, which clearly form a pair but are ascribed to different poets. The first three pairs (X.61–66) all consist of hymns to the All Gods, but of very different styles.

X.61–62

Acadg. to the Anukramaṇī, the poet is Nābhānediṣṭha Mānava, but see the publ. intro. of X.61 for my view of the source of the name. Both hymns are dedicated to the All Gods, but are of very different levels of complexity. Note that Re does not treat these two hymns in his Viśve Devāḥ fascicles, but provides comments (but no tr.) in EVP XVI.

X.61 All Gods

On the structure and contents of this devilish hymn, see the publ. intro., as well as the elaborate intros. by Old and Ge., though I differ from them on many points – and remain quite uncertain about many details of my own interpr.

X.61.1: This vs. sets the tone for the rest of the hymn by posing a number of puzzles that elude solution.

We can begin with the deictically announced “Rudrian formulation” (*raúdrām ... bráhma*), whose presence in the immediate circumstances is underscored by the annunciatory *idám (itthā)*. It is not obvious what is Rudrian about it (but see below), though both Old and Ge make attempts to account for it. The adj. is found also in vs. 15, there modifying the Áśvins, so one might argue that the “Rudrian formulation” here is one addressed to the Áśvins. But the Áśvins are not a presence in this part of the hymn. A more productive approach, partly flg. Ge, is to note that in the later Vedic versions of the incest myth, with Prajāpati and Uṣas as the main participants, it is Rudra who punishes the offender (see my Hyenas, pp. 288–97). The incest story occupies vss. 5–8 of our hymn, and the presence of this myth in the hymn might account for *raúdra-*. In particular, in vs. 7 the gods, concerned about the brutal rape, “begat a/the sacred formulation” (*janayan bráhma*), presumably to guard against such behavior. To me the most plausible interpr. of *raúdra-* is that, in the context of a brahmodya (signalled by *śácyām antár ājaú* in b), a “Rudrian formulation” is one that exhibits the aggressive hostility often characteristic of that god, which the poet can deploy to win the contest. The antagonistic relationship between Turvayāṇa and Cyavana is quite clear in vs. 2. Note that in 3cd Tūrvayāṇa’s verbal skill is likened to arrows that he successfully aims at a target, another war-like Rudra-type image.

The first hemistich lacks a verb – or appears to, on the assumption that the *s*-stem form *gūrtāvacāḥ* is a masculine nom. sg. and *raúdrām ... bráhma* is a neut. acc. We could avoid the need to supply a verb by taking *gūrtāvacāḥ* as a neuter; other *s*-stem cmpds modifying neuters occasionally show the apparent masc. *-āḥ* rather than neut *-aḥ*, esp. pāda-final as here (see Lanmann, Noun Infl. 599 and comm. ad VII.24.2 and II.31.5). We could then have a nominal clause “here is a ... formulation of welcome speech ...” Old considers this (and Re suggests that the cmpd modifies *bráhma*, but as a masc., puzzlingly), but Old rejects this interpr. for the same reason I do, that an unequivocal masc. splv. *gūrtāvacastamaḥ* modifies the poet in vs. 2c. (He is also concerned about the referent of *asya* in 1c.) The masc. splv. in vs. 2 may be considered an ex. of poetic repair, making the masc. gender of *gūrtāvacāḥ* explicit. Given that we need to supply a verb, I suggest a form of \sqrt{kr} , evoked by the *kr-* forms in the vs., etymologically unrelated *krátvā* (b) and etymologically related but somewhat detached adv. *krāñā* (c).

Pāda b is one of the few clear mentions (as signalled by *śācyām antār ājaú*; see above) of a poetic contest or brahmodya in the RV, an institution that other interpr. are more apt to see in RVic contexts than I am.

On *krāṇā* see comm. ad I.58.3.

The cmpd. *maṁhaneṣṭhāḥ* poses problems in both members. On the one hand, what is the case form of *maṁhane* and to what stem does it belong? On the other, what is the case and number of *-ṣṭhāḥ* and what does it modify? To begin with the 2nd member, Old, Ge, and the publ. tr. take the cmpd as modifying neut. *yád*, which picks up *bráhma* from the main clause. Ge (n. 1c) explains it as a masc. form for the neuter (with [not very strong] parallels but without exploring the morphology). Old simply says “... habe ich als Neutr. übersetzt; doch auch Mask. möglich,” without saying how he finesses the neut. or which masc. he might attach it to. By contrast Scar (652–53) suggests that it is an acc. pl. m. with the consonant-stem ending *-as* < **m̥s* added to the root-noun stem (depending on the chronological stage, presumably: **-aH-m̥s* or **ā-**as*), modifying *hótīn*. Although in this hymn with its many puzzles and blind alleys, a muddled neut. sg. form, as represented in the publ. tr., would not be surprising, I am somewhat attracted to Scar’s interpr. and suggest an alternate tr. “(a formulation) that ... will effectively guide across ... the seven Hotars (who are) standing ready for liberality.” Scar’s interpr. of the 1st member is also preferable to the standard, which takes *maṁhane* as the loc. of a putative short *-a*-stem **mámhana-*, though the only stem attested (mostly in the [admittedly ambiguous instr.] is fem. *mámhanā-*. Scar suggests rather that *maṁhane* here is a dat. infinitive, which allows a more appealing interpr. ‘standing ready for liberality’ than the loc. ‘standing in liberality’. For what this all might mean, see below.

There is also another alternative, not represented in any of the available interpr. as far as I know – that *maṁhaneṣṭhāḥ* is a nom. sg. masculine (the easiest morphological interpr.), modifying the poet referred to in ab, and that *yád* is not a neut. picking up *bráhma*, but a subordinating conj. This would yield another alternative tr. “when he, standing ready for liberality, will effectively guide ...” If the cmpd modifies either the poet (as I just suggested) or the formulation (in the standard and publ. tr. interpr.), ‘standing ready for liberality’ (with Scar’s datival 1st member) would express the poet’s / formulations’ readiness to *receive* liberality; if it modifies *hótīn*, it could refer to the Hotars’ readiness to dispense liberality, though it could also have the meaning suggested for the other two interpr.

Gr and Ge take *pakthé* as a PN, as the stem certainly is in VII.18.7, VIII.22.10, 49.10, but Old reports the suggestion of Wackernagel that it is an ordinal, ‘fifth’, here, construed with loc. *áhan*. So also KH (KZ 65 [1979] = Aufs. I.188–89). Re tentatively accepts this suggestion, though Scar’s tr. maintains the PN. Mayr (EWA, also PN, both s.v.) also accepts it. The “seven” of “seven Hotars” invites a numerical interpr. of the preceding phrase, even if the referent of “the fifth day” is obscure.

I do now wonder if the second hemistich has astronomical reference. Perhaps “two fathers / parents” here does not refer to the poet’s own parents, but, as often, to Heaven and Earth (e.g., I.159.2), and “the Seven Hotars” could be a variant of the Seven Ṛṣis (*saptarṣi*), who are later identified with the constellation Ursa Major. If *pítārā* refers to Heaven and Earth, it could set the stage for the incest episode starting in vs. 5. As for the application in this vs. the poet and/or his formulation would be assisting at an astronomical transit associated with “the fifth day.” This is all very speculative, and I can’t get any further. But it would be unusual for the human parents of the poet to be the beneficiaries of his poetic activity, esp. along with a gaggle of Hotars. Again, if the Hotars are heavenly beings, not earth-bound priests, they might be “standing ready to

(dispense) liberality,” if we accept Scar’s view of the cmpd as an acc. pl. Unfortunately, however, this speculative interpr. seems far from the poetic contest depicted in 1ab and 2.

X.61.2: As disc. in the publ. intro., in my view this vs. characterizes the verbal products of the losing (Cyavāna) and winning (Tūrvayāṇa) opponents in the brahmodya as metaphorical liquids – Cyavāna’s as mere add-ins to soma, Tūrvayāṇa’s as gushing semen (itself often a metaphor for soma). In taking *rétah* ‘semen’ as metaphorical, I part ways with Old, who thinks it’s the real substance, used in a ritual to produce offspring. And in general my interpr. of this vs. differs both from Old’s extensive analysis of it and from Ge’s tr. and notes.

To begin with, the standard interpr. is that the first hemistich has Cyavāna as subject, the second Tūrvayāṇa. But note that *cyāvānaḥ* appears only at the beginning of pāda b, while pāda a begins *sá íd*. While it is certainly not impossible that *sá íd* anticipates the mention of Cyavāna in the next pāda, the more natural way to interpr. *sá íd* in context is as a reference to the subject of the previous vs., the *gūrtavacāḥ* poet (1a), who in 2c will be further specified as *gūrtāvacastamaḥ*. This assumption underlies my interpr. of the vs., and it solves several problems in the construal of pāda a that the others must make heavy weather of.

First: in order to have the part. *vanván* ‘winning’ modify Cyavāna, other interpr. encounter difficulties of both syntax and sense. As to the latter, since Cyavāna seems actually to come out the loser in this match, any “winning” he does (by that interpr.) needs to be of a qualified or ironic type. Moreover, \sqrt{van} ‘win’ does not take the dative, except to express the beneficiary of someone else’s win; certainly the object won is not in the dative, as the standard interpr. of the syntax here requires. The supposed dat. complement leads Gr to create a unique def. of \sqrt{van} just for this passage (“11) jemandem [D.] wozu [D.] verhelfen”) and Ge also to stray far from the usual sense of \sqrt{van} (‘sich bemühen’ + DAT: “indem er sich um eine unsichere Gabe bemühte”). Note that the following two vss. each contain a verbal form of \sqrt{van} : *vanuthaḥ* (3b), *vavanvāmsaḥ* (4d), and these three forms should at least not contradict each other.

My interpr. avoids both these difficulties. Given the triumphant tone of the 2nd hemistich concerning Tūrvayāṇa, pronouncing him a winner in pāda a is unproblematic. I take *vanván* in absolute sense (“winning / a winner”) without expressed object (cf. pf. part. *vavanvāmsā* in the same usage in 4d). As for the dat. phrase *dānāya dābhyāya*, I begin with the fact that dat. *dānāya* is frequently used as an infinitive / quasi-infinitive “to give, for giving”; cf. e.g., I.180.5 *ā vām dānāya vavṛtīya ... gōḥ* “Might I turn you two here to give / for giving (of) a cow.” In fact it is several times found as the complement of $\sqrt{maṇḥ}$ ‘be ready (to give), be magnanimous’ (VIII.52.6, 61.8; including in the next hymn. X.62.8 = VI.45.32). Now recall the cmpd *maṇhane-ṣṭhāḥ* in the immed. preceding vs. and Scar’s interpr. of *maṇhane* as a dative infinitive. I tr. that cmpd. “standing ready for liberality” (see above). In our vs. here I suggest that we carry over the *-sthā-* ‘standing (ready)’ and construe it with the syntactically independent dative *dānāya*. The extra twist here is that I take the other dat., *dābhyāya* not as a deprecatory characterization of the type of gift (like Ge’s “eine unsichere Gabe” [with an unjustified extension of the sense of \sqrt{dabh}] or Re’s “mesquin”), but as characterizing an animate (‘who can be outwitted’) and the dative agent of the infin., of the familiar type (*īndrāya pātave*, etc.): “for the *dābhyā*-one to give.” The referent of *dābhyāya* is the defeated Cyavāna, and Tūrvayāṇa is waiting for the Cyavāna, whom he outwitted, to give him what is owed. The gerundive *dābhyā-* is found only twice in the RV, and in its other occurrence, X.108.4, it also has animate/personal reference, to Indra “who can (not) be outwitted.” It does not refer to things such as a paltry gift (as others take it here); it is not a synonym of *dabhrá-*, pace Re.

Pāda b describes Cyavāna's losing tactics: he measured out his vedi with *sūda*-s. In the publ. tr. I render the word as “‘sweet’ (dregs),” but see comm. ad VII.36.3, where I come around to favor Pischel's Beisatz, the ingredients added to soma. The point here would be that Cyavāna used only auxiliary materials, not the real substance itself. In terms of a verbal contest, this could mean poetry tricked out with flourishes but without true force, eloquence, or insight. I would now slightly change the tr. to “with sweet admixtures.”

By contrast, Tūrvayāṇa's product is the most forceful and vital substance of all, namely semen (*rétas*). In the metaphorical sacrifice in which he and Cyavāna are competing the *rétas* can stand for soma, as opposed to the add-ins that Cyavāna employed: for the identification of soma as *rétah*, see, e.g., I.164.35. In the verbal contest *rétas* can represent well-formulated words that reflect *ṛtá*- and produce results. And of course in the account of the divine incest myth that follows in this hymn *rétas* is actually semen.

On the problematic *itāūti*-, see comm. ad VIII.99.7.

X.61.3: This vs. enlarges on Tūrvayāṇa's verbal triumph, with his skill not only defeating Cyavāna but also attracting the Aśvins. The second hemistich uses the more familiar trope of words/praise as arrows shot at the target of the praise (see, e.g., my 2020 “The Aim of Praise”) in place of the more jarring eloquence-as-semen of 2d. This arrow image may also harken back to vs. 1 and the Rudrian formulation, which I suggested is meant to evoke the hostility inherent in a verbal contest.

My identification of the unnamed referents in this vs. follows Ge: the 2nd du. in b is addressed to the Aśvins (so also Old, flg. Pischel), who are also the addressees in the next vs. In cd Tūrvayāṇa is the referent of both the rel. *yáh* and the gen. demon. *asya*, though Pi takes Indra as the subject of cd (see Old). The loc. pl. phrase *yéṣu hávaneṣu* in pāda a is shorthand for *yásya hávaneṣu*, again with Tūrvayāṇa as referent of the gen.

With Old (but not Ge) I take the *mánaḥ* simile with *vípaḥ* ‘inspired words’, not with the Aśvins. And unlike both Old and Ge I think *śácyā* ‘with skill’ must refer to Tūrvayāṇa's skill, not the Aśvins'. The verbal contest (*ājí-*) in vs. 1 was a contest “in skill” (*śácyām*), and it was through his skill that T. won it. I would now slightly alter the tr. to better integrate this instr.: “... inspired words, like thinking sharp with skill.”

On *ásrīṇīta* see Narten, “Ved. *śrīṇāti* ...” (KZ 100 [1987]: 281–82 = KISch 351–52).

X.61.4: As indicated in the pub. intro., I consider this vs. to be a direct quote of Tūrvayāṇa's invocation of the Aśvins; note the 1st sg. verb *huve* (b) and the two forms of enclitic *me* (c). This 1st ps. reference contrasts with the 3rd ps. narration of vss. 1–3 and brings this section of the hymn to a close. As a welcome change, most of the vs. is straightforward.

The black female among the ruddy females is of course Night among the Dawn cows, at a time when the “early-coming” Aśvins are on their way to the sacrifice.

The one problem in the vs. is the final word *ásmṛta-dhrū*, specifically the root affiliation of the 2nd member and the meaning of the whole. There are two older competing views of the root affiliation. Starting with Sāy. (see also Old), *-dhrū* has been connected with *druh* ‘deceive’. Although this derivation makes (sort of) reasonable semantic sense, it encounters two formal difficulties: the initial aspirate *dh-* and the loss of the root-final consonant. To account for this, a two-step process is envisaged: the root of course has two underlying aspirates (**dhrugh-*), with the first ordinarily dissimilated by Grassmann's Law. But the nom. sg. would be, and in fact is, in this very hymn, *dhruk* (vs. 14 *ádhruk*), with the first aspirate surfacing when the second loses

its aspiration. The dual form in our verse then results from “abnormer Abfall des Endkonsonanten” (AiG II.2.33; see AiG III.326). But the loss of the root-final would be unusual indeed, and the route to getting a dual in *-ū* to an original root noun in final consonant would be quite tortuous. To start with, we should expect a dual to the unmutilated root noun to be **-druhā*. The consonant to be lost is not, in this form, an “Endkonsonant.” Moreover, in the expected dual, the root-final remains an aspirate so that the root initial is a plain *d* by Gr’s Law. The only paradigmatic form that could show aspiration on the initial and lose a final consonant, to produce an apparent stem **dhru-*, is the just-cited nom. sg. *dhruk*, but it is precisely this form that doesn’t lose its final consonant in this same hymn. But let us assume that was the immediate source: still our problems are not over. If we had a putative intermediate root noun stem ending in short *-u* *dhru-*, produced by the loss of the nom. sg. ending, it should add the empty *-t* found in other root nouns in short resonants. Only if such a stem were analyzed as containing a *suffixal -u-* could we escape the adding of the *-t* and get a dual masc. in *-ū*. If, by contrast, the result of the loss of the final consonant was (by compensatory lengthening?) **dhrū-*, we should expect a dual masc. in **-vā*. Getting the form we have from a root noun cmpd in *-druh-* thus requires considerable butchery. The alternative root affiliation is scarcely better. Wh (Rts) tentatively lists it under $\sqrt{dhvṛ}$, *dhur*, *dhru* ‘injure’, as short-vowel *dhru* (with ?); KEWA also classifies the form here (s.v. *dhvāratī*). Although the initial aspirate would no longer be a problem, the lack of appended *-t* remains an issue. A third way was suggested by KH (StII 5/6 [1980] 95 = Aufs. 757; accepted in EWA s.v. *DHVAR*), that *dhru-* (and related forms) belong to a separate root $\sqrt{*dhru}$ ‘deceive’, related to (/extended into) the more familiar \sqrt{dhru} -*gh*. This does not solve the lack of *-t*, but that turns out to be a problem with several forms in this hymn (*sabardhúm* vs. 17, *raghudrú* vs. 17). More from exhaustion than a deep conviction of its rightness, I adopt the KH solution. For further disc. on this form and related problems in this hymn, see Scar 279 and 226 n. 309.

X.61.5–8: These vss. relate (or allude) to the story of the incest of Heaven / Sūrya and his daughter, Dawn, found widely in the Brāhmaṇas with Prajāpati as the male figure (see my Hyenas pp. 289–302) and glancingly alluded to elsewhere in the RV (I.71.5, 8). No names are named in our passage, but as indicated in the publ. intro., I think the unifying topic of this hymn is Dawn, and therefore it is her story being related here – *pace* Ge (n. 5), who tentatively suggests that a different incest may be meant.

X.61.5: The cmpd *vīrákarmam* is by accent, and sense, a bahuvrīhi: ‘possessing the manly work’, a euphemism for the penis; see Gr, Old, Re. It is surely the subj. of *prāthiṣṭa*. By contrast Ge takes it, apparently, as a tatpuruṣa (“die Mannesarbeit”) and as the obj. of *iṣṇāt* (“nach der Mannesarbeit verlangend”). Note the nonce thematicization of the neut. *-an*-stem *kárman-*, presumably starting from first cmpd members in *karma-*. The thematicization in this context was surely facilitated, perhaps caused, by the fact that *-karmam* is followed by a vowel-initial word, and the *-m* avoids a hiatus between expected *-n*-stem neut. **vīrákarma* and *iṣṇāt*. The other two examples of them. 2nd member *-karma-* in the RV, both also late, are not amenable to the same interpr.: *deva-karmébhiḥ* (X.130.1) and *viśvá-karmeṇa* (X.166.4); see comm. ad locc.

With Old I supply ‘semen’ as obj. to the part. *iṣṇāt*; the same participle elsewhere takes a liquid as obj.: I.181.6 *pūrvīr iṣaḥ ... mādharma iṣṇán* ‘dispatching many refreshing drinks of honey.’ As was just noted, Ge instead takes *vīrákarmam* as its object and assigns the meaning ‘desiring’ to the participle. Acdg. to him (n. 5a) *iṣṇāti* “crosses” with other roots $\sqrt{iṣ}$, but in fact no forms with nasal have the ‘desire’ sense, only ‘send, dispatch’.

The referent of *yásya* in pāda a is *náryaḥ* in b. Although neither *vīrá-* nor *nṛ-* (and derivatives) is specialized for male-as-sexual-being, the presence of these two words so close together creates an atmosphere of sexual virility.

In b the rapist pulls out his penis, which has already ejaculated. The ppl. *ānuṣṭhitam* modifies the gapped ‘penis’. The not particularly common lexeme *ānu √sthā* generally means ‘follow, attend upon, stand beside’; for some disc. see Scar (644–45). My “attending upon” in quotation marks is meant to convey a somewhat euphemistic sense, but I now wonder if *ānu √sthā* in this context might be the equivalent of the current term ‘stalking’ for unwanted invasive attentions of a male to a female.

Note that pāda-initial *ānuṣṭhitam* somewhat echoes *práthiṣṭa* in the same position in pāda a.

The second hemistich essentially paraphrases the first, esp. pāda b. The verb *ā vrhati* ‘tears out’ doubles *āpauhat* ‘pulled out’ but in the more vivid present tense. The past part. *ānubhṛtam*, again modifying the gapped penis, echoes *ānuṣṭhitam*, but again more vividly – or more graphically: *ānu √bhr* in the RV and AV is erotic slang. See my 1981 “A Vedic Sexual Pun” (pp. 59–60) and for an unambiguous passage AV XI.5.12 *bṛhác chépo ’nu bhūmau jabhāra* “he *ānu jabhāra* his lofty penis in/on/at the earth.” The question is how to translate the idiom. In my 1981 art. I suggest ‘penetrate sexually, stick (one’s penis) in’ and tr. AV XI.5.12 “he stuck (his) great penis in the earth,” which is similar to Whitney’s somewhat more polite “has introduced in the earth a great virile member.” In Hyenas (295–96 with n. 290) I tr. the form in our passage with “what (had been) thrust in.” But I now think it is difficult to get from the literal meanings of the preverb + verb root to ‘thrust in’, and I also think that leering euphemism is more characteristic of the usage than clinical description. The rendering “brought to bear” in the publ. tr., again in quotes, seems better, as being both less literal and more menacing, though in English it has no erotic flavor that I know of.

The unextended imperfect to *√as*, *āḥ* (i.e., underlying *ās*), is notable here. Is *ā ānubhṛtam* a rough-and-ready pluperfect “had been brought to bear”? For further on this impf. form, see comm. ad X.85.6–12.

The 2nd hemistich also presents a syntactic problem. The phrase *kanāyā duhitúḥ* straddling the pāda break can be either gen. or abl., but it makes most sense as an abl. with ‘tears out’, as represented in the publ. tr. and Ge’s “Er reisst es von der jungfräulichen Tochter zurück.” But by word order it should belong in the subordinate *yád* clause, since the *yád* precedes it. Ge (n. 5cd) recognizes the problem, suggesting it’s a mixture of two constructions. It is possible to take the phrase as a genitive loosely construed with *ānubhṛtam* (something like “what had been brought to bear of [=for, with regard to] the maiden”), but an ablative with the main clause verb is far more satisfactory. It may simply be that the six-syllable phrase was too unwieldy to position it in its own clause, whereas the slight (if illicit) preposing of the neut. rel. *yád* allowed the two-word phrase to fit the metrical space. I’m not happy with this explanation, but I’m reluctant to give up the ablative.

X.61.6: This vs. is relatively easy to decode, and it is notable that the English euphemism “make love” (for sex) is closely replicated by *kāmaṃ kṛṇvāná-* in b.

The difficult word in this vs. is *manānág*. In the publ. tr. I render it as “a little,” flg. Ge’s tentative “ein wenig (?)”, which itself follows Sāy.’s *alpam* and assumes some kind of connection with Epic/Classical *manāk* ‘a little’ – a connection that is difficult to motivate in detail (though see Re’s vague sketch of an attempt). There is a competing, very different analysis, represented already in Gr: that it is a root-noun cmpd in *-naś*. This is the interpr.

favored by Old, with \sqrt{nas} ‘disappear’ (etc.), rather than \sqrt{nas} ‘reach, attain’, modifying *rétah*. (Ge [n. 6c], in recognizing the root-noun-cmpd interpr., entertains the possibility that *-nas-* belongs to ‘reach, attain’ and suggests a gloss ‘die Absicht erreichend’.) Old first suggests a sense ‘sich der Aufmerksamkeit entziehend’ (escaping attention), but produces a second, and to me more plausible, sense, that the discharge of the semen “die Erregung verschwinden lässt.” The 1st member would be *manā-*, which generally means ‘zeal’ or the like, but could certainly shade into ‘energetic excitement’ and be euphemistically applied penile erection. This would require transitive-causative semantics for the root noun *-nas* (‘cause to disappear’ rather than just ‘disappear’), but this is also necessary for what seems to be an undoubted example of such a cmpd, *jīva-nās-* ‘destroying life/living beings’, in MS I.4.13 (63: 3–4), where it characterizes an oblation (*āhuti-*) that falls in the wrong place. That passage brings up another problem, however: the form in the MS is nom. sg. with a final in retroflex *-ṭ* (*jīvanāṭ*), while our nom. sg. ends in a velar (*manānāk*). Of course root nouns in final palatals show both finals (*-ṭ*: *vīt* to *vís*; *-k*: *dīk* to *dīs*) and the data are messy. I would expect a retroflex here, as in the 3rd sg. s-aor. *avāṭ* (\sqrt{vah}) and 3rd sg. root aor. to the homonymous root \sqrt{nas} ‘reach’, *ānaṭ*. But a velar isn’t beyond the realm of possibility, nor is the interpr. of *manānāk* as containing such a noun. I therefore tentatively suggest an alt. tr. “the two left behind semen, which dissipates excitement.” For a summary of the problem see Scar (282–83), who, however, comes to no conclusions.

That *sukṛtāsya yónau* refers to the ritual ground is clear from the appearance of the same phrase in III.29.8, of the place where Agni is to situate the sacrifice. As noted there, suffix-accented *sukṛtā-* has been substantivized and the tr. here should be corrected to “in the womb of good work.”

X.61.7: Once again, part of this vs. paraphrases what went before. The sprinkling of the semen in 6cd (*rétah ... nísiktam*) is repeated in 7b *rétah ... ní śīñcat*. But the description is more violent and the agency made clear. In vs. 6 the two “going apart, left behind” the semen, as if the semen were a product of both male and female and mutually and tranquilly deposited. Here the father brutally “springs on” his own daughter, and he is the subject and agnet of the VP *rétah ... ní śīñcat*. (Because the lexeme is the same in 6d and 7b, I should have tr. it identically: I would now substitute ‘sprinkled his semen down upon the earth’).

HPS (B+I 45, see 44 and 47) takes *kṣmayā* as instr. with *saṃjagmānāḥ* (“sich mit der Erde vereinigend”), indicating that the Earth was the object of the rape. But though we lack another instr. to construe with the middle participle, this interpr. is surely wrong, on grounds both of content and of form. In the other versions of the tale, the female is Dawn; we would hardly expect Earth here, because she and Heaven are joint parents, not daughter and father. Moreover, though it does no doubt have an instr. ending, *kṣmayā* is always used adverbially.

As discussed above (ad 1ab), I consider the formulation (*bráhma*) begotten here to be the same as (or a model for) the “Rudrian formulation” (*raúdrām ... bráhma*) in vs. 1, namely a formulation with the hostile power associated with Rudra, enabling its deployer to overcome his enemy. As noted there, in the Vedic prose versions Rudra is sometimes named as the avenger of the rape depicted here. In our vs. I think the gods create the formula to be used against the violator and also create the being who is to carry out the vengeance. But I do not think this latter is Rudra (despite Ge’s n. 7d); instead I nominate Agni, who, in his guise as Svarbhānu, is the avenger in many versions of this myth (see my Hyenas, esp. 364–73). It would make sense that the gods should fashion Agni out of the semen spilled on the ritual ground since that is Agni’s domain; moreover, in the sg. the epithet *vrata-pā-* is most frequently used of Agni (see comm. ad

X.32.6), and *vāstoṣ páti*- “Lord of the Dwelling Place” can be an alternative lexical realization of Agni’s regular epithet *grhāpati*- ‘Lord of the House(hold)’. (On the use of this term [almost] exclusively for Agni, see my 2019 “The Term *grhastha* ...,” pp. 8–9.) As for the other RVic occurrences of the phrase, the identity of *vāstoṣ páti*- in V.41.8 is unclear, but could be Agni; in VIII.17.14 it is probably Indra; and in the other RVic occurrences (in adjacent vss., VII.54.1–3, 55.1) it seems to name the “personified guardian spirit” of the household. These occurrences seem irrelevant to the solemn use of the term here.

The 3rd pl. *janayan* here is one of only two such forms found in the RV, for expected *janayanta*; the other is in X.66.9 (q.v.). See my 1979 *-anta* replacement article, esp. p. 154, which treats the distribution of 3rd pl. forms to the transitive stem *janáya*-. Though the Pp. gives augmented *ajanayan*, the augment would have to be elided, and I am tolerably certain that in fact the form is underlyingly injunctive.

X.61.8: This vs. is the last one treating the incestuous rape, before the transitional vs. 9. It depicts (bc) the desperate attempts of the daughter to get away from her attacker, an episode found in some versions of the Vedic prose tale, as well as the rueful direct speech of her thwarted father in d.

In pāda a the father is compared to a bull in a contest (*ājau*, returning from vs. 1b) throwing off foam (*phénam*). In the real-world analogy, the foam presumably results from the bull’s straining hard work and the sweat thus produced, but in the frame the “foam” surely stands for the semen that the father keeps shedding.

Contra Ge, who take the subject in b to be the father, I take it to be the daughter, going in every direction to evade her rapist. The nom. sg. *dabhráčetāḥ* can be masc. or fem.; there is no other sign of the gender or identity of the subject of *ait*. The collection of preverbs with this verb, *ā parā ... āpa* “hither, thither, away,” seem to be summed up by the adv. *smát* ‘altogether’, indicating the almost random zigs and zags of her attempts to escape. Her desperate state of mind is also conveyed by *dabhráčetāḥ*, which I render ‘heedless’ – that is, ‘possessing little consciousness / attention’. In its other occurrence I tr. the cmpd. ‘small-witted’; here it does not reference stupidity but rather distraction: “out of her wits,” “not having her wits about her” would be appropriate.

The depiction of Dawn’s flight continues in c. The lexeme *pārā √ vrj*, found here in the root noun cmpd. *parāvṛj*-, needs to be distinguished from the much more common *pāri √ vrj*, lit. ‘twist around’, but regularly meaning ‘avoid’. The sense of *pārā √ vrj* is equally both additive (‘twist aside / away’) and idiomatic (‘shun’), and it does not differ substantially from *pāri √ vrj* in its idiomatic sense (‘shun’ versus ‘avoid’). The root noun cmpd elsewhere has passive semantics: ‘the outcast’, i.e., the one shunned (see I.112.8, II.13.12, 15.7), but here I see the active semantics more common with root noun cmpds, ‘turning aside, shunning’.

The two words *padā* and *dákṣiṇā* are taken together by Ge and tentatively by Re. Ge takes them as referring to the “southern direction” (zu den südlichen Orten) towards which the outcast daughter runs. Re, pointing out that ‘southern’ isn’t attested for *dákṣiṇa*- till the AV (not a particularly strong argument, given the short chronological span), renders the phrase rather “au pied droit,” with a question mark. But the two words do not have to form a phrase (as Old points out). I take *padā* as instr. sg., but *dákṣiṇā* as nom. sg., referring to the priestly gift (Dakṣiṇā), personified as a Gift Cow. Uṣas is regularly associated with the Dakṣiṇā, since the priestly gifts were distributed at the Dawn Sacrifice in RVic times. That the Gift-Dow is meant here is likely also because *adákṣiṇā*- ‘without a Dakṣiṇā’ is found two vss. later (10d). Here I think Dawn is

the personified (or bovinized) Dakṣiṇā, and, as a cow, she flees (*sārat*) on foot (*padā*). This detail plays on the fact that Dawn is elsewhere said to be ‘footless’; see VI.59.6 ... *apād iyām pūrvāgāt padvātībhyah* “This footless one has gone in front of the footed (cattle),” an esp. telling passage because it contrasts footless Dawn with the cattle, which have feet (sim. I.152.3). In her panic Dawn runs away on foot, having transformed herself into the Gift Cow that is associated with her. This transformation is perhaps the original model for the transformation of the victim into a red doe (*rohīt-*) in several of the Vedic prose versions (see my Hyenas, 290–93 with n. 276).

Pāda d contains the direct speech of the father, recognizing that his daughter has escaped his clutches. The word *prśanī-* is used of the ‘caresses’ the father wishes to bestow on his daughter also in the other RVic treatment of this incest story, I.71.5.

X.61.9–11: These next three vss. all begin with *makṣū* ‘right away’, which marks them as a unit, even though vs. 9 also tidies up (some of) the loose ends from the preceding narrative. The second pair of vss. (10–11) begin almost identically and are more closely related in content than they are with 9:

10a *makṣū kanāyāḥ sakhyām nāvagvāḥ*

11a *makṣū kanāyāḥ sakhyām nāvīyah*

The first three words and half of the fourth are the same. The close relationship of the two vss. does not make them easier to interpret.

X.61.9: This vs. depicts the birth of Agni. As noted above, ad vs. 7, I consider Agni to be the creature the gods produced after the rape, from the semen spilled on the ritual ground – Agni being suggested by the epithets *vratapā-* and *vāstoṣ pāti-*. This vs. treats the production of Agni in more detail, though without naming him: the only occurrence of the stem *agnī-* is in a simile in pāda b, referring to fire the substance.

In pāda a “trampling” (*upabdhī*) is compared directly to the chariot horse (*vāhniḥ*), though we might expect the horse to be in the gen., parallel to *prajāyāḥ*. Ge (n. 9a) attributes the nominative case of *vāhniḥ* to the reversion of nouns in similes to the nominative, a doctrine that I hope I laid to rest in 1982 (“Case Disharmony in RVic Similes,” IJ 24). I consider our passage to be simply a bold disjunction, with a quality compared directly to a possessor of that quality. Note that the simile particle is wrongly positioned, before *vāhniḥ*; it is unlikely that the preceding word *makṣū* is part of the simile, *pace* Old, since it is an adverb and, furthermore, also opens the next two vss. without involvement in a simile.

The “trampling” of the offspring=Agni probably refers to the crackling of the kindled fire.

I consider b to incorporate a pun on the homonymous stems *ūdhar-/ūdhan-*, both ‘udder’ and ‘cold’ (for the latter see comm. ad VIII.2.12 and EWA s.v. *ūdhan-* and *ūdhar*), with one stem used in the frame, one in the simile. The primary reading here is acc. ‘udder’, where Agni takes his seat – the udder presumably being the fireplace. But in the simile *agnīm ná nagnāḥ* I take it as a loc. ‘in the cold’. The simile is very close to VIII.2.12 *ūdhar ná nagnā jarante* “Like naked (ones) in the cold they stay awake.” The simile in our passage is esp. clever because it contains *agnī-* designating fire the substance in the acc., while the subject of the frame is the unnamed Fire the god.

In the second hemistich the two occurrences of the root-accented agent noun *sānitar-* with acc. objects *idhmām* and *vājam* (c) respectively are contrasted with a suffix-accented *dhartār-* without complement. Tichy (-tar-stems, 297–98) considers our passage as something of an exception to her interpr. of the accentual difference, claiming that *sānitar-* here designates a

habitual agent, but *dhartár*- an occasional one. It seems to me rather the reverse, with *dhartā* indicating the role that Agni was born to exercise, and *sānitā* incidental feats that Agni accomplishes. The rendering of *sānitā* + ACC as a straight past tense (“he gained the kindling ...”) in the publ. tr. is misleading, however. I would change to “he is one who gains the kindling wood and one who gains the prize.” This interpr. conforms to the general characterization of the two accent types by Benveniste (*Noms d’agent* ..., 11) that the root-accented type designates “l’auteur d’un acte” and the suffix-accented one “l’agent voué à une fonction.” However, the data are quite messy and, for any general characterization, require a generous, indeed over-generous, amount of special pleading.

The stable role of ‘upholder’ in d may be emphasized by the intensive (i.e., habitual or frequentative) nominal *yavīyúdh*- ‘ever battling’.

X.61.10: There is much disagreement about the referents and sense of this vs. – understandably – though there is general agreement that it has to do with the Vala myth. My own interpr. is quite tentative. The most solid identification in the vs. is that of the *kanā*- (also in 11), who is surely Dawn, since the same word was used of the incest victim in 5c. Since the Navagvas are associated with the myth of the Vala cave, it seems likely that the story has shifted from Dawn’s rape to Dawn’s imprisonment in the Vala cave, from which the Navagvas attempt to free her. Since elsewhere (see, e.g., I.62.4, V.45.7, 11) the Navagvas open the cave with sound, with song, it seems likely that “speaking the truth” (*ṛtām vādantaḥ*) refers to this activity and the “yoking of truth” (*ṛtā-yuktīm*) to their employment of this spoken truth in the opening of the cave.

The identifications become more challenging in the 2nd hemistich, esp. of *dvibárhas*-, *gopá*-, and *ácyutā*(ḥ?). As for the first, Gr takes it as a nom. pl., referring to the Navagvas; Ge as gen. sg. referring to the cave; Old as gen., tentatively supplying *rāyāḥ*. By contrast, I take it as referring to Dawn, who is called *dvibárhas*- in V.80.4. Both Ge and Old think the *gopá*- is the/a Paṇi, while I take it as the Vala cave itself. If I am correct, the phrase “protector of doubly exalted (Dawn)” is ironic, since the “protection” is actually imprisonment (consider the double usage of the root *√rakṣ* ‘protect / guard’).

The interpr. of *ácyutā* is complicated by the ambiguity of its form: out of sandhi it can either be *ácyutā* (so Pp.) or *ácyutāḥ*. The former is far more likely, and here I think Ge and Old have the right idea: that it refers to the solid rocks, the fastnesses, of the cave; cf. VI.22.6 adduced by Ge. Now, as to *adaḥśināsaḥ* ‘without Dakṣiṇā(s)’, modifying the Navagvas – Ge (n. 10cd, flg. Ludwig) thinks this refers to the Paṇi’s theft of the cows that the Navagvas brought to distribute at their sacrifice. I think rather that this refers directly back to 8c, where Dawn transformed herself into the Dakṣiṇā cow and ran away from her rapist. She has now been confined in the Vala cave and the Navagvas are “without the Dakṣiṇā” – namely without Dawn herself. They attempt to “milk” her out of the rocks that form the cave: their aim is to recover the imprisoned Dawn.

X.61.11: It gets worse! This vs. is well-nigh impenetrable, and I am fairly certain that the interpr. given in the publ. intro. and publ. tr. is wrong or at least incomplete. Nonetheless, the continuity of the vss. (if we can dignify it with that term) suggests that the milking the Navagvas attempted at the end of vs. 10 was successful, and the semen/soma/milk of vs. 11 is the tangible result.

A major clue is, or should be, that the second hemistich is identical to I.121.5cd, a hymn attributed to Kakṣivānt, who is also named in our hymn in vs. 16. But unfortunately I.121 does not give us much help, since, like much of Kakṣivānt’s oeuvre, it is bafflingly obscure. In I.121.5

the reference is to soma, the referent of *te* is Indra, but – significantly – it is in the context of the Vala myth, which is treated in the two preceding vss., I.121.3-4. Because our vs. is also found in the middle of a Vala context (vss. 10, 12–13), I now think that vs. 11 should be interpreted in that context as well and that my claim that vs. 11 concerns, at least in part, the birth of Agni (see publ. intro.) is incorrect. Instead I think that this vs., like I.121.5, concerns the soma that Indra acquired to give him the power to open the Vala cave. Although soma is not usually a necessary ingredient in the Vala myth (as opposed to the Vṛtra myth), in I.121.4 it clearly is: Indra is said to have opened the cave and freed the cows *asyá máde* “in the exhilaration of this (soma).” (Though the word *sómasya* is absent, *máde* makes the reference of *asyá* to soma inescapable.) And the following vs. (the relevant vs. 5) tells how Indra acquired this soma: brought to him by his parents, probably Heaven and Earth (ab), and acquired by sacrifice by unnamed but plural agents (cd = our cd). Other accounts of the Vala myth can also involve Indra’s possession of soma, e.g., VI.17.1–6.

Now let us examine our vs. in a bit more detail, first noting that although, unlike the second hemistich, the first is not identical to I.121.5ab, it has points of resemblance, particularly the opening of b *rādhō ná rétaḥ*, which is very like the opening of I.121.5b *rādhah surétaḥ*. In I.121.5 *surétaḥ* ‘having good semen’ modifies *páyah* in pāda a, which is also identified as a ‘bounty’. The whole phrase, “the bounty, the milk consisting of good semen,” refers to soma. This set of superimpositions allows us to identify the “semen, like a bounty” of our b with the milk, *páyah*, in d and to consider them also all to be soma. But it’s a bit more complicated, in that in pāda d the “milk” is produced by a different, and feminine, being, the “ruddy one who gives sap as milk” (*sabardúghāyāḥ ... usrīyāyāḥ*). The fem. *usrīyā-* ‘ruddy’ is always used of cows, or items conflated with cows, namely Dawns/light. So here we may be dealing both with milk=soma and milk=light, the latter produced by the Dawn confined in the Vala cave. The phrase *sabardúghāyāḥ ... usrīyāyāḥ* also has to be considered in connection with the phrase *sabardhūṃ dhenúm* in vs. 17.

However, contra the publ. tr., I no longer think that the semen is identical to the “truth” (*ṛtām íd*) that immediately follows it in pāda b. Instead I think this is a separate goal (of three) of the verb *turaṇyan*: “they hastened to the fellowship of the maiden, to the semen, (and) to truth itself.” In the immediately preceding vs. the Navagvas are speaking truth (*ṛtām vādantaḥ*) and their goal is the yoking of truth (*ṛtáyuktim*), namely (see comm. ad vs. 10 above) the use of their spoken truth to open the cave. Here they seek the imprisoned maiden, the semen = soma for Indra to use, and their own true song also to use in the opening of Vala.

The verb in this hemistich, *turaṇyan*, is generally taken as transitive (Gr, Old, Ge, HPS [B+I 46], Re), but other forms of this stem (incl. in I.121.1), as well as the derived adj. *turaṇyú-*, are intransitive (*pace* Re ad loc. and EVP XV.166), and I see no reason to impose a transitive sense here. The verb is simply a more insistent rephrasing of *agman* in the preceding vs. (10b), with the same goal, *kanāyāḥ sakhyám*.

In the second hemistich, identical to I.121.5, “your gleaming legacy” is again, surely, the soma. The introduction of a 2nd sg. *te* is surprising in our context, though it fits I.121.5 very well: there Indra is addressed in the immed. preceding vs. (I.121.4), and the first pāda of 5 begins *túbhyam*, which anticipates *te* in c. Old believes that our hemistich has been mechanically adapted from I.121.5 and implies that we need not pay attention to the *te*; HPS (46–47) by contrast thinks that the abrupt introduction of a 2nd ps. reference to Indra in the context of the Vala myth is not surprising, and I am in agreement (though not with the rest of his interpr.), esp. because it’s likely that Indra (or his alter ego Bṛhaspati) is the unnamed speaker in the next vs.,

12b.

Indra's "gleaming legacy" is, once again, the soma – and it is not, in my opinion, something Indra has left behind, but rather what was left behind for him. As I remark ad X.132.3, *rékṇas*- "is several times used of what we gain from the gods at the sacrifice (e.g., I.31.5, 121.5, VI.20.7); in keeping with its etymology (from the root *ric* 'leave'), it can be viewed as what was 'left behind' by the gods at the sacrifice." In my view, in our verse the unnamed subjects of *āyajanta* acquired the soma by their sacrifice, for the benefit of Indra. I think it likely that they are the Navagvas.

Although the vs. remains very obscure, I feel I have a better handle on it than in the publ. tr. and I would now substitute the following tr. for the one found there: "Right away they hastened anew to the fellowship of the maiden, to semen [=soma], which was like a bounty, (and) to truth itself -- / (the semen/soma), your blazing legacy, which they acquired through sacrifice, (and) the milk of the ruddy one who gives sap as milk."

X.61.12: This vs. appears to deal with the departure of the cows from the Vala cave and its aftermath, and it introduces an unnamed single speaker (b), probably either Indra or Bṛhaspati, in addition to the bards (*kārāvaḥ* c), who are surely the Navagvas we have been dealing with for several vss. and who serve as the unnamed subjects of pāda a. The vs. is hardly pellucid, however, and once again I think that the publ. tr. has gone seriously astray – with misinterpretations that I will attempt (no doubt not entirely successfully) to remedy here.

Our problems begin with the Saṃhita form *víyutā*, which is multiply ambiguous. The Pp reads *víyutā*, but *víyutāḥ* is equally possible in this sandhi context. The latter would be the nom. pl. m. of the past part. *vī-yuta*- 'separated' and agree with the subj. of injunc. *budhánta*, presumably the Navagvas. (Nom./acc. pl. fem. is also possible but probably contextually excluded.) The former, *víyutā*, has two possible morphological analyses, as neut. pl. to the same past part. (or fem. nom. sg., though this seems excluded contextually) or as loc. sg. to the *-ti*-stem abstract *víyuti*- 'separation' (as in IV.7.7). All three possibilities have entered into the discussion. In fact Old weighs all three (in order, *-tā* neut. pl. ppl., *-tāḥ* masc. pl. ppl., *-tā* loc. sg. *-ti*-stem) without making a decision. Gr. takes it as m. pl. ppl.; Lub lists it under the *-ti*-stem. But insofar as there's a standard view, it is as a neut. pl. — so Sāy., Ge, HPS (B+I 200) — an analysis that is the hardest to fit into the passage, since it requires supplying a neut. pl. referent. All three just-mentioned interpr. take the referent to be the place(s) where the cows were kept, for Ge and HPS the fastnesses of the Vala cave, with Ge adducing the neut. pl. *ácyutā* 'the immovable ones' in 10c, referring to the walls/rocks of the cave. In Schmidt's tr. "Als sie danach erkannten, dass (die Festen) vom Vieh getrennt waren." Though I originally took *víyutā* as the loc. to the *-ti*-stem (hard as that may be to get from the publ. tr.), I now think that the most likely interpr. is as the masc. nom. pl., modifying the Navagvas, subjects of *budhánta*. They become concerned that the cattle, departing from the cave, had also left them behind. The reassuring voice – and action – of Indra/Bṛhaspati intervenes at that point.

I am somewhat disturbed by the sequence of tense between pāda a, with an apparently preterital injunctive *budhánta*, and b, with present *bravīti*. I suggest that this combination of tenses is meant to remove this vs., which seems to depict the situation *after* the opening of the Vala cave, from the narrative of the besieging of the cave, which occupies vss. 10–11 and returns in vs. 13. This perturbation of chronology is also signaled by *paścā* 'afterwards' in pāda a.

Pāda b also contains the problematic form *vaktārī* (read with short *-i* in Pp). The morphological analysis of these *-tārī* forms (e.g., *kartārī* I.139.7, *etārī* V.41.10=VI.12.4) is

disputed; see also disc. ad V.41.10. Lanman (Noun infl. 426) considers them simply locatives to the *-tar*-agent noun with metrical lengthening. Old (ZDMG 55.302=KlSch 761 and Noten ad loc.) is inclined to follow the view that they are nom. sg., and he vigorously disputes the opinion that they are locatives or locatival infinitives. AiG III.205 (with considerable lit.) tentatively opts for nom./acc. sg. neuter, though allowing the possibility of locative, while AiG II.2.673 pronounces them “unerklärt ... bis jetzt.” Tichy (*-tar*- 59–60) takes them as locatives, but to verbal abstracts. She tr. our passage “So spricht (Bṛhaspati), der beim Reden freigebig schenkt.” Although in some instances her abstract value works reasonably well (see *etārī* V.41.10=VI.12.4), in others the agentive sense seems to be preserved. I would claim that for our passage. Here *vaktārī* serves almost as an improper loc. absolute with the part. *rārāṇaḥ*: “bestowing (gifts) as he talked / when talking.” As for the long final *-ī* of these forms, much as I dislike the convenient invocation of metrical lengthening, Lanman does make a good case for the metrical positions of the forms that show *-ī*, and it may be that as their morphological identity lost clarity, the integrity of their final was no longer guarded.

The *īti* in b seems to mark the following pāda(s), c and probably d, as direct speech. There Indra/Bṛhaspati speaks of himself in the 3rd ps.

The publ. tr. of pāda c suffers, I now think, from imposing a “moral” rather than material sense on *vasutvā* and *ānehāḥ*. To begin with the first, the tr. ‘goodness’ for *vasutvā* is misleading. Though this stem (*vasu-tvā-*) occurs only here, the extended stem *vasu-tvanā-* is found 4x in the RV, always in the sense of a mass of material goods. Esp. nice, because of the presence of voc. *vaso* referring to Indra, is VIII.1.6 ... *vaso, vasutvanāya rādhasē* “o you who are good for goods and largesse,” where *rādhasē* anchors the phrase in a material context. There is no moral or ethical nuance. In our passage the gen. *vāsoḥ* most likely refers to Indra/Bṛhaspati, as *vaso* in VIII.1.6 refers to Indra, and the phrase refers to Indra’s bestowal of a collection of material goods: “by the mass/collectivity of goods of the good one.”

We must also re-evaluate the sense of *anehās-*. Throughout the publ. tr. I have generally rendered this word as ‘faultless, blameless’, flg. EWA s.v. (and KEWA III.656), based on a suggestion of Hoffmann’s. Although I do not dispute KH’s etymology or assessment of the general meaning, I think that, at least in English, the glosses I’ve used are misleadingly located in the moral sphere. In a number of passages – incl., I’d claim, this one – the word falls into the physical sphere, meaning ‘without defect, without flaw, without lack, wanting nothing’. The word is seldom used of animate beings, the referents most likely to have a moral dimension – only III.9.1 (Agni), V.65.5 (we), VIII.75.10 (Heaven and Earth), VIII.18.5 (Ādityas), X.61.22 (patrons, in our hymn; see below), as well as in our vs. Instead it applies a number of times to the shelter or protection we pray the gods to extend to us (VI.50.3, VIII.18.21, prob. VIII.67.12, 31.12); what we want is shelter that is physically without gaps or weak spots, not shelter that is morally blameless. Similar are the passages referring to paths (I.129.9, VI.51.16=VIII.69.16); again a path is probably morally neutral, but it should be physically without flaw, to allow easy passage. The use of the adj. with “chariot” (VIII.22.2) falls in the same category. Verbal products like *māntra-* (I.40.6) and *stúbh-* ‘rhythm’ (III.51.3) could of course be ‘faultless’, but what is more likely meant is that they are perfectly composed, without flaw. Although the usual trajectory in semantic change is from the physical to the moral, it may be that this word went the other way, partly encouraged by the rhyme form *anenās-* ‘without offense / transgression’. When, in our passage, the bards are said to be *anehāḥ*, the point, I now think, is that they lack nothing, are in want of nothing, because Indra/Bṛhaspati bestowed gifts of goods upon them, in fact probably the cows that had left the cave. The bards were at risk of suffering a *material* lack,

but Indra/Bṛhaspati made it up to them. This statement in pāda c follows on the gifting depicted in pāda b.

Our form *anehā(h)* is problematic for another reason: morphology. The stem is otherwise an *s*-stem, but if *anehā(h)* belongs to this stem, it can only be a nom. *singular*. This is in fact how Sāy. takes it, modifying Indra, the putative subject of the next pāda. But not only does the pāda break intervene, but removing *anehā(h)* from pāda c leaves the *kārāvaḥ* with nothing to do: there is no verbal or nominal predicate available to them. I'm afraid we must take it as a nonce nom. pl. masc., as if to an *-a*-stem and chalk it up to the penchant of this poet for deforming morphology.

The subj. of d is presumably the same as that of c, Indra/Bṛhaspati, and identical to the referent of gen. *vāsoḥ* in c. I would refine my tr. of the verb *viveṣṭi* from 'exert control over', for which I now see no evidence, to 'toil/labor for', as in VIII.75.11 *kuvīt sū no gāviṣṭaye, āgne saṃvēṣiṣo rayīm* "Surely you will toil for wealth for us, for our quest for cattle, o Agni." The point in that passage and this one is that the god labors to procure material gain for his dependents.

The last major problem in the vs. is how to interpr. *ūpa kṣū*. The pāda-final monosyllable is concerning. Sāy. takes it as an abbreviation for *makṣū* and Gr as a deriv. of \sqrt{ghas} 'eat', hence 'food'. But the standard current view is that it derives from *paśū*- 'cattle'; see EWA s.v. The question is whether it should stand as an independent monosyllable. Ge considers it short for *kṣumāt* and tr. "aus Vieh bestehende," modifying *drāviṇam*. Another, and to me more persuasive, view is that it forms a cmpd with preceding *ūpa*: **upakṣū* like *purukṣū*, a view going back to Ludwig and Bloomfield, rejected by Old, positively entertained by Re. This would also take care of the problem posed by *ūpa*. The root $\sqrt{viṣ}$ does not otherwise appear with the preverb *ūpa*, though Gr creates the lexeme for just this passage, and it is positioned oddly for a preverb in tmesis, neither adjoining a metrical boundary nor right after the verb. I therefore accept the cmpd. interpr., which involves only the erasure of one accent in the Saṃhitā text.

In the first hemistich note the echoic phrases beginning both pādas: *paśvā ... paścā* and *īti bravīti*. Note also that, assuming that *kṣū* is derived from *paśū*-, the vs. begins (*paśvā*) and ends (*kṣū*) with forms of *paśū*-.

After this thoroughgoing rethinking of this vs., I would substitute the following translation:

When afterwards they became aware that they had been separated from the livestock, he [=Bṛhaspati or Indra] speaks thus, bestowing (gifts) as he talked / while talking.

"By the goods of the good one the bards are lacking nothing. He labors for all movable property, up to / including cattle."

X.61.13: This is the last vs. of this section of the hymn, and in my opinion it (still) concerns the besieging of the Vala cave – though there are some problems with this and it is not the standard view (not that there really is a "standard" view). One of the reasons I consider this vs. a continuation of the Vala narrative is the verb *agman* at the end of pāda a, which matches *agman* ending 10b, the first real vs. of the Vala narrative. The subjects in both cases are, in my view, the Navagvas, and the verb match marks an internal ring.

As is well known, in the Vala myth Indra and his helpers (generally the Aṅgirasas, of which the Daśagvas and the Navagvas [here] are subgroups) often open the cave by "sitting a 'session'" (the ritual known later [already AV] as a *sattrā*); see, e.g., III.31.9. The repetition of (-) *sad*- in a variety of forms hints at this ritual reference: *pariśādvāṇaḥ ... śādanto nārṣadām*. The first two, in the nom. pl., refer to the Navagvas. The problem is *nārṣadām*, which is, in my

opinion, a red herring that has distorted the interpr. of this vs. This vṛddhi stem is elsewhere a patronymic ('son of Nṛṣad') that seems to refer to Kaṇva in I.117.8, who is also identified as "son of Nṛṣad" (*kāṇvaṃ nṛṣadaḥ putráṃ*) in X.31.11. But Kaṇva is generally favorably viewed, and if *nārṣadám* here is the obj. of *bibhitsuṇ* 'they desired to split', he would seem to be an enemy. This apparent contradiction has generated much, mostly fruitless, discussion, which I will not reproduce here. I think a way out of the dilemma can be found if we 1) do not take *nārṣadá-* as a PN (whether of Kāṇva or someone else) and 2) do not construe this acc. as obj. of *bibhitsuṇ*. A related stem *nṛ-ṣádana-* is used of 'sitting(s) of men', that is, ritual sessions, and I now think that *nārṣadám* here falls in the same semantic sphere and that it's the cognate acc. with *sádantaḥ* 'sitting (a siege) like/related to a 'session of men'.' In other words, the tactic the Navagvas use to open the Vala cave both is and is like a (more benign) ritual session. This leaves *bibhitsuṇ* without an expressed object, but the object (Vala) is readily supplied from context. I take *purū* as I did in the publ. tr., as an acc. of extent of time, "for many (days)." In standard śrauta ritual a *sattra* is 12 days or more. I would now emend the tr. of the first hemistich to "They came just then as its besiegers; sitting (a siege) like/related to a 'session of men' for many (days), they strove to split (Vala)."

Although the Vala myth and the Śuṣṇa myth tend to be independent, the two are intertwined in I.121, the Kakṣīvant hymn that has clear connections to this one (see comm. above ad vs. 11). In I.121.10 we have Śuṣṇa associated with something *súgrathitam* 'well-knotted', like *śuṣṇasya sámgrathitam* here.

As Ge (n. 13c) (*vī*) √ *vid* is used several times of discovering and disclosing the *márman*- 'vulnerable spot' of an enemy, and that must be what's meant here. In I.121.10 it is Śuṣṇa's *ójas*- 'power' that is 'well-knotted' (*súgrathitam*).

X.61.14–15: The opening of the Vala cave and the vanquishing of Śuṣṇa having apparently been accomplished in the preceding vs., the hymn now (re)turns to the sacrifice, where the Áśvins are welcomed in vs. 15. The Áśvins are of course associated with the Dawn sacrifice, so the Dawn thread that runs through this hymn is continued.

X.61.14: With Old, I interpr. the two *utá*'s in a and c as connecting the two naming constructions in a and c, rather than seeing each as internally conjoining pieces of its pāda (as in KH Aufs. 19: "Dessen Name 'Glanz' ist und an dessen dreifachen Sitz sich die Götter ... Agni ist dessen Name und Jātavedas" [my underline]). Ge takes the first *utá* as 'auch' and the second as conjoining *agníḥ* and *jātávedāḥ*, but given that they take identical positions in their respective pādas (after #X *ha nāma*), they ought to have parallel functions. The two *utá* are oddly positioned for what I see as their function, but that seems a minor problem in this hymn.

X.61.15: The Áśvins are called *rudrá* a number of times (e.g., I.158.1); what exactly this is meant to convey I do not know. Although the presence of the rare vṛddhi stem *raúdra-* (RV 3x) twice in this hymn (also vs. 1, modifying *bráhma*) is suggestive, esp. with *gūrtáye* (b) echoing *gūrtávacā* (1a), I do not think that there is a strong conceptual link between the two occurrences. For the one in vs. 1, see disc. ad loc.

arcimántā, rendered 'who possess the chant' in the publ. tr., can also mean 'possessing rays/beams' (Ge "strahlend"), and both are probably meant. The 'ray/beam' reading would of course be appropriate to their connection with the Dawn sacrifice.

Ge supplies a nom. subj. "ich" for the infinitival *yájadhyaí* ("... will ich ... verehren"), on

the basis of parallelism with I.122.4 (adduced by Old; see Ge n. 15ab), which has a nominative subject. His parallel is drawn from the Kakṣīvant hymn immediately following Kakṣīvant's I.121, which shows important points of contact with our hymn (see above). Nonetheless I see no reason to supply an extraneous subject here, since the infinitive(s) can easily be taken as passive.

I take *gūrtāye* as a dative (pseudo-)infinitive parallel to *yājadhyai*; Ge, by contrast, takes it as a separate dative expression “um mir Beifall zu erwerben.” Although there are no other dative forms to *gūrti-* to support its infinitival status here, it appears parallel to *yajñā-* in IX.105.1 ... *yajñāth* ... *gūrtibhiḥ*, which suggests the connection. And it is worth noting that *gūrti-* in its other three occurrences is something originating from men and destined for the gods, not, as Ge has it, something a mortal might acquire for himself. The part.

rārāṇā picks up *rārāṇaḥ* in 12b, used of Indra/Bṛhaspati distributing gifts, probably cows, to the Navagvas. The myth provides the model for the ritual.

X.61.16–19: On my interpr. of these much disputed verses, which differs substantially from those of Old and Ge, see the publ. intro. I am not at all certain that I am right, but am tolerably certain that Old and Ge are not.

X.61.16: As indicated in the publ. intro., I take this vs. as relatively conventional praise of his royal patron by the poet of the hymn – praise that he will soon qualify. The near-deictic *ayām* that opens the vs. suggests that the person in question is present at the sacrifice, which favors my interpr. that it is poet's patron and the sacrificer (*yāṣṭā* 17a), the sponsor of the ritual.

Ge (n. 16b) takes pāda b as a “schönes Bild” – the subject overcomes all obstacles through his own power (‘being/creating his own bridge’: *svāsetuḥ*). Ge is no doubt correct, but I think that crossing the river is meant not only metaphorically but literally, referring to the Āryas' winning of new territory by crossing the boundary rivers, a feat also often attributed to Indra as leader. Here the king would be assimilated to Indra.

Ge (n. 16c) thinks the king makes Kakṣīvant and Agni both tremble because, as *vīpras* themselves, they fear that the king/*vīpra* will out-perform them poetically. I think the point is rather that he inspires them to create poetry praising him, and poetic inspiration as often sets the poet atremble (as the word *vīpra-* indicates). In my view Kakṣīvant is either the poet of this hymn or, perhaps more likely, the poet identifies himself with Kakṣīvant and has adopted some of his lines, as we saw above.

On *raghudrú* as probably not a root-noun cmpd see Scar 243–44, though see his somewhat different opinion p. 226 n. 309.

X.61.17: As I discussed in the publ. intro., I think that the poet follows his praise of his royal patron in vs. 16 by cutting him down to size. Specifically, he hints that the king is not producing the gifts due to the poet and ritualists, even while the poet himself is doing his job by roping in (almost literally) the gods Mitra, Varuṇa, and Aryaman. The poet's description of his successful attraction of the gods in cd is close to menacing.

As I said in the publ. intro., I think *dvibāndhu-* means that the king is related to both gods and men—or thinks he is. It is this term that set both Old and Ge to constructing an elaborate backstory and family tree, and I do not think it should bear that weight Old and Ge put on it.

The agent noun *yāṣṭar-* ‘sacrificer’ in my opinion refers to the same figure as the technical term *yājamāna-*, namely the sponsor of the sacrifice, not a priest. It is not clear that *yājamāna-* has entirely acquired its technical meaning in the RV.

The “sap-yielding milk-cow” (*sabardhúm dhenúm*) echoes the *sabardúghāyāḥ* of vs. 11, which we identified as the Dawn in the form of a cow, confined in the Vala cave. Despite her circumstances, she produced milk (*páyaḥ*). Here I think the poet is indicating that a cow (or “cow”) assimilated to the sap-yielding cow in vs. 11 is available for the sacrificer to milk. The cow may be the Dakṣiṇā cow herself, the source of the necessary priestly gifts for the poet and other ritual personnel. Though she potentially yields “sap,” she has not yet given birth (i.e., she has not produced the gifts), and it is the sacrificer/king’s job to milk her. This ritual task harkens back to the mythological depiction of the Navagvas coming to the Vala cave and, though lacking the Dakṣiṇā, seeking to milk the cave (vs. 10). They seem to have been successful (vs. 11), a good model for the king’s activity here.

In the 2nd hemistich the poet is properly performing his task. Ge (n. 17c, flg. Sāy.) takes the verb *vr̥ñjé* as a 3rd ps., but there’s no reason to impose an anomalous morphological analysis on it, when the morphologically proper 1st ps. works better in context. As I said above, there is something faintly threatening about the poet’s account of what he does: he “enmeshes” (*sám ... vr̥ñjé*) Mitra and Varuṇa with his hymns. Verbal forms of the lexeme *sám √ vr̥j* are found only twice in the RV; in the other occurrence (VII.3.4) it refers to Agni’s encircling / encompassing food with his jaws. The noun *saṃvārga-* (VIII.75.12, X.43.5) is used of booty or winnings that has been completely encompassed and acquired; the root noun *saṃvṛj-* (II.12.3.) is used of the winner who does the encompassing. In all these passages there is a sense of dominance, which I think is also found here: the gods have been captured by the poet’s hymns, perforce.

But the hymns also act as protective defenses, *várūthaiḥ*, for all those within them, including those same gods, so that the hint of menace is countered by the positive protective association of *várūtha-*, which always has the sense of a protective defense, sometimes found with *śārman-* ‘shelter’ (IV.55.4) and *chardís-* ‘id.’. For the association of *várūtha-* with verbal products, cf. VIII.101.5 *varūthyām ... chándyaṃ váca stotrám* “a speech, a pleasurable, protective praise-song” and VIII.67.3 *ukthyām várūtham* ‘protection worthy of hymns’.

I would now no longer separate Mitra-Varuṇa in c from Aryaman in d and construe each with a different instr. and would therefore emend the tr. to “when I enmesh Mitra, Varuṇa, and Aryman with hymns (that are) preeminent defenses.

X.61.18: On my general interpr. of this vs., which is taken very differently by others, see the publ. intro. As I say there, I take the subj. of this vs., the *sūrīḥ* (patron), to be the same as the king in vs. 16 and the sacrificer/sponsor in vs. 17. The adj. *tádbandhuḥ* opening the vs. aligns the subj. with the *dvibándhuḥ* of 17a. Ge (n. 18a) suggests rather that the subject here is a relative of the *yáṣtar-* in 17.

This leads us to the question of the referent of *te*. For Ge, it’s Agni—also Re, flg. Gonda; further HPS, 47–48; see also Scar 253–54. They also take *te* as an improper locative (e.g., Ge “auf dich im Himmel”). Citing the *te* in 11c and the voc. *indra* in 15b, Old tentatively suggests Indra. I suggest instead that it is the poet and that the *te* is a gen. dependent on *dhiyam* in the cmpd.: “setting your insight in heaven.” The patron is dispatching the poet’s own *dhī* to heaven as part of his sacrificial offering. My suggestion poses several problems. First, by my interpr. the poet was the 1st person speaker of the previous hemistich (17cd), and so we must switch to a 3rd ps. narrator addressing the poet. in the 2nd ps. I can point to numerous abrupt changes of person in the RV in support, but I am still uneasy with this particular one. Further, it is not usually the patron’s task (or privilege) to manipulate or physically position the verbal offerings in the sacrifice, but rather the poet-creators. The referents of this cmpd *dhiyaṃ-dhā-* in I.67.4 and

IV.45.4 appear to be the poets themselves – though as Scar points out, the referents of other occurrences are different and the meaning of the compound “schwankt je nach Kontext.” Moreover there are other passages in which the patrons do seem to provide the motive power to the poet’s productions. See, e.g., I.77.4 ... *yé maghāvānaḥ ... iṣáyanta mánma* “our benefactors who propel our prayers at length.” As many times elsewhere in the interpr. of this hymn, I am uncertain about my own choices, but fairly sure that the ones prevalent in the lit. are less justified. In any case the publ. tr. would be easier to interpr. if I had identified the referent, however.

The word *nābhānediṣṭha-* is taken by most as a PN, and that may be one of its values here. But I think its full lexical sense, ‘nearest to the navel’, is in use here – and as a pun. On the one hand, *nābhi-* ‘navel’ is often used for the physical focal point of the sacrifice, namely Agni (as in VI.7.4 *nābhiṃ yajñānām*). When the patron is described / describes himself as *nābhānediṣṭha-* he is accorded or claiming the preeminent position on the ritual ground, beside the ritual fire. On the other, as disc. in the publ. intro., *nābhi-* “is a standard metaphor for origin and close kinship (especially the point of origin of two disparate groups).” This same patron is credited in 17a with two lineages (*dvibāndhu-*), presumably both divine and human, and “nearest to the navel” would situate him high up the family tree of both, close to the point of bifurcation.

It is the latter sense of *nābhānediṣṭha-* that prompts the patron’s speech in cd, which again I interpr. quite differently from others. Ge thinks the *sā* opening the hemistich refers to Agni; it would be feminine by attraction to fem. *nābhi-*. (This exact attraction is, admittedly, found in X.10.4 [see comm. ad loc.].) I take pāda c as a disjunctive question (again unlike others): the patron is asking, in a bit of shorthand, whether his navel is higher than “his” or vice versa, that is, in my view, whether he is closer to the top of the tree of lineage than someone else. The someone else (*asyā*) is Agni; with this identification I am in agreement with HPS, though not Ge, who thinks it’s the *tād* of *tadbāndhu-* in pāda a. Note that *asyā* is accented, though pronominal. This may be because its referent is new to the discourse (which might exclude *te* as referring to Agni in pāda a) or because it is initial in the second half of the disjunctive question.

In d the patron provides the (rather flimsy) evidence for his claim to the higher position: he has a defined place (“the so-many-eth”) in the line of descent. “That one” is presumably the originator of the line.

To make the tr. more intelligible, I would now change the first hemistich to “Setting your [=poet’s] insight in heaven, the patron whose lineage this is, the one “nearest to the navel,” murmurs as he quests.”

X.61.19: In this vs., responsive to 18, Agni is the speaker (here I am happily in agreement with most interpr.), and he decisively refutes the patron’s boasts. Interestingly he does so by claiming both senses of *nābhā-* in *nābhānediṣṭha-* (see above). On the one hand, in the first pāda he emphatically gestures towards the *nābhi-* on the ritual ground: “here is my navel, here is my seat” – namely the fireplace where Agni is situated during the sacrifice. But in the rest of the vs. he claims both the first birth (*prathamajā(h)*), putting him higher than his interlocutor, and also double birth (*dvijā(h)*), responding to the other’s claim of two lineages (*dvibāndhu-* 17a). And of course Agni is both a god and thus divine by nature and kindled by men, thus, by the mechanism of his creation, part of the mortal lineage. For the former, note “these gods here are mine” (*imé me devāḥ*), which, as Ge points out (n. 19d), picks up 14a referring to Agni: *yásya devāḥ* “to whom the gods belong.”

We must assume that Agni is proclaiming all of this in the here-and-now, on the ritual

ground: the annunciatory initial near-deictics are insistent: #*iyám ... ihá ... imé ... ayám ... / ... , idám ...*

The referent of *idám*, the milk of the cow as she was being born, isn't clear. Ge tr. "dieses All"; Klein (DGRV II.118 "creation" (supplying *bhúvanam*). Similarly to Klein, I tentatively supply "world" (rather than the "earth" of the publ. tr.). I now think it probably refers both to the world and all its trappings, and also to the ritual ground right here – which, in some sense, are the same: the ritual ground as the microsmic representation of the universe. Who the cow is, in this instance, I won't venture to speculate – there have been (and will be) more than enough cows in this hymn.

X.61.20–24: The spat between the sacrificial patron and Agni having been decisively settled in Agni's favor, we now turn to the Dawn sacrifice in the five following vss. (20–24). Each begins with *ádha* and each (loosely) treats a different divine figure or figures at the sacrifice (though the patron is not absent), starting and ending with Agni (20, 24). The sacrifice in these vss. is properly conducted, in contrast to the difficulties that beset other sacrifices alluded to in the hymn.

X.61.20: I tr. *aratí-* 'spoked wheel', rather than the 'chariot' favored by Th (Unters. 35) for this passage, because Agni's circular appearance seems always a prominent feature when he is called *aratí-* elsewhere. However, since the *aratí-* is described both as 'unhitching' (*áva syati*) and 'having a double track' (*dvivartanīḥ*), it's an example of pars pro toto – wheel for chariot. The 'unhitching' presumably refers to placing the ritual fire in the hearth, in particular to conveying the fire taken out from the Gārhapatya to the Āhavanīya and settling it there. As Th already suggested (see also Scar [609 n. 873]), the "double track" refers to the course that leads to the gods in heaven and back again.

For *āsu* the publ. tr. supplies 'clans', flg. Old (flg. Ludwig) and Ge. (adopted by Scar). This interpr. can be justified with ref. to 15d *vikṣú yágyū* "the two that seek sacrifice among the clans." However, I am now not certain that it is correct; it could alternatively refer to the cows that are a constant presence in this hymn and will be the focus of the next vs.

Re appositely adduces VI.12.3 *aratír vanerāt* the spoked wheel (of the sacrifice), the ruler in the wood" as parallel to our *aratīḥ ... vaneṣāt* -- with rhyming root noun finals, though the underlying roots, *√rāj* and *√sah*, are quite differently shaped.

Re suggests that the nonce phrase *śísur dán* 'child of the house' is based on the formula *pátir dán* 'lord of the house' (5x, mostly at pāda end). The child is of course Agni, just after kindling, and pāda d depicts his mother (one of the kindling sticks, presumably) giving birth to him, "grown strong with kindness" or, after the comm. ad V.87.4, "with kind attention," probably of the maternal variety.

X.61.21: In my view this vs. concerns the distribution of the Dakṣiṇās at the Dawn sacrifice. The Dakṣiṇā, esp. the lack of one, has been a regular preoccupation of the hymn; see vss. 8 and 10 and my interpr. of 17. But here, in this well-ordered sacrifice, they are properly distributed. The "cows of the maiden" – with Ge I take *kanāyā(h)* with *gāva(h)*, not with *úpamātim* as Old does – can also refer to the light of dawn, as so often, but I think the Gift-cows are the primary referents. Contra Klein (DGRV II.118) I do not think the cows refer to the flames of Agni.

On *úpamāti-* see comm. ad VIII.40.9. The "someone swollen (with wealth)" (*śvāntásya kásya cit*) is, in my view, the patron, who is (/may be) then addressed directly in the 2nd

hemistich.

It is not entirely clear who the 2nd ps. addressee in c is. Ge seems to favor Agni, and this is possible. Re points out that *sudravīṇaḥ* is addressed to Agni in I.94.15. However, *drāvīṇa*-figured earlier in the hymn, in vs. 12. Like our vs. that vs. describes the departure of Dawn's cows, and in that vs. (at least by my interpr.) Indra has control over them, as "moveable property" (*drāvīṇam*), which – crucially – he distributes to the bards. Thus Indra serves in that vs. as the model of a patron bestowing Dakṣiṇās, and here I think the voc. *sudravīṇaḥ* is addressed to the human patron at this sacrifice, distributor of Dakṣiṇās, who has been the subject of the middle part of the hymn. The connection between them is, again in my opinion, signalled by the pāda-final *s*-aor. injunctive *yāt*, in imperatival function, which picks up the agent noun *yāṣṭā* at the end of 17a. Both of these are unusual forms: *yāṣṭar*- is found only twice in the RV, while injunc. *yāt* is found only here in all of Skt. (though the augmented *ayāt* is somewhat more common). As Narten points out (Sig-aor. 200), it substitutes here for the very common *si*-impv. *yākṣi*; it therefore seems to have been chosen to send a particular message, which, I think, is the connection with the agent noun *yāṣṭā* in vs. 17, tied together by their superficially deviant phonology.

With Ge (and tentatively Old), I take *vāṇṛdhe* as 1st ps., with the poet as subject. This is as close to a dānastuti as he is willing to come.

The name Aśvaghna, lit. 'son/descendent of a horse-slayer', is found only here and is a curious piece of nomenclature. It may refer to the performance of an Aśvamedha by an illustrious ancestor of the current patron. I also wonder if it's not a sly pun on the gambling term **śvaghna*- 'dog-killing (throw)', found in *śvaghñín*-, a term for a successful gambler. Is the poet subtly implying that his patron owes his wealth to risky speculation?

X.61.22: Both Indra, as the model of a patron, and the patrons themselves return here.

The accent on *viddhī* is unexpected. Old suggests that it might be for emphasis; Ge supplies the impv. "(komm)" before it, presumably to allow *viddhī* to open a new clause. My tr., with a dash after "Indra," is meant to suggest that *ádha tvám índra* "And now you, Indra" strongly signals a referent shift and can be taken as its own quasi-clause.

I would now render *viddhī* by "come to know, take note," rather than the misleading stative "know." The point is that we will come into Indra's ken, so he will be prompted to give us wealth.

On the phrase *mahó rāyē* see comm. ad IV.31.11. The tr. here should be modified to "greatly for wealth."

The adj. *anehásah* in d is morphologically ambiguous: it can be an acc. pl. modifying the patrons in pāda c (so Gr) or a gen. sg. modifying *te*. Although the pāda boundary separates it from the patrons and, in fact, c is a repeated pāda (=I.54.11c), I favor the acc. pl. On *anehás*- see comm. ad vs. 12 above, where I argue that the word refers to the absence of a material lack rather than a moral one. Here I think the point is that the patrons want for nothing and therefore can afford to be especially generous to us. I would therefore alter the tr. to "our blameless patrons who lack nothing ..." If the gen. sg. reading is preferred, it could indicate that Indra, the model patron, lacks nothing. In fact, both readings may be simultaneously meant.

X.61.23: Note that pāda-final *gáviṣṭau* picks up *abhíṣṭau* in the previous pāda (22d) and anticipates *puṣṭau* and *sātaú* in 24 (a and d), all also pāda-final.

The referents in this vs. are quite unclear. Let us begin with dual voc. *rājānā*. There are

two (or possibly three) candidates. Ge seems to think that it refers to earthly kings, but this seems quite unlikely, since *rājan-* is not used very often for mortal rulers. The two divine pairs in contention are Mitra and Varuṇa (so Sāy.) or the Aśvins (so Re, tentatively). Old vacillates between Mitra and Varuṇa and earthly kings. Both M+V and the Aśvins have already appeared in the hymn – the former in vs. 17, the latter in vs. 4 – and there are arguments in favor of each. The strongest support for M+V is that dual forms of *rājan-* almost invariably refer to them, with the exception (in my view) of X.39.11 (see comm. there). On the other hand, the Aśvins fit better in a Dawn sacrifice context than M+V do. Moreover, the rare adj. *saranyú-* ‘hastening’ reminds us that the fem. of this stem, *saranyũ-*, is identified as the female who bore (/carried) the Aśvins in the very obscure passage in X.17.2. The use of the adj. here might be meant to conjure up this association. In the end I find it difficult to decide, likewise in vs. 25, but am tolerably sure that a divine pair is at issue.

Then there is the question of the subject of *sárat* in b, modified by the adj. pair *saranyúh* ... *jaranyúh*, the identity of the dearest vipra (*vípraḥ prēṣṭhaḥ*) in c, and whether the referents in b and c are the same. My tentative answer is that the referents are the same and point to Agni, although this is by no means certain. In favor of this identification is the fact that in the following vs. (24cd) the same referent is characterized both as *saranyú-* and as a *vípra-*.

The pāda-initial *sárat* echoes the same form at the beginning of 8c, whose subject is Dawn. It is tempting to invoke her here as well, but the clear masc. adjectives (esp. since fem. *saranyũ-* is attested elsewhere) make that difficult. Another possibility is that the subj. of *sárat* is Soma, who is elsewhere sometimes the subj. of that verb (e.g., IX.62.16), in which case I would say that the subject switches to Agni in c – though given the evidence adduced above from vs. 24, I consider this significantly less likely. The identification is made all the more difficult because pāda b provides no clear cues. The adj. *saranyú-* essentially doubles the verb; the hapax *jaranyú-*, obviously modeled on *saranyú-*, could equally well belong to ‘age’, ‘sing’, or ‘awaken’. I have opted for the last (so also Ge, Old tentatively, JSK DGRV II.118) because of my belief that the hymn is really about the Dawn sacrifice, but ‘sing’ is represented by Sāy., Gr, and Re, inter alia, and a case could be made also for ‘age’.

There is a tendency to interpr. dat. *kāráve* as goal with *sárat* (e.g., Ge “zum Sänger eilt”), but datives should not be straight goals of motion. I think rather that *kāráve* ultimately is the beneficiary of the actions in cd – Agni’s aid and protection for the bard’s patrons, which will ultimately benefit the bard himself.

Agni as *vípra-* is well attested elsewhere.

X.61.24: This is the last of the *ádhā* verses. Several items of vocabulary get recycled here – *saranyú-* (c), *vípra-* (d) – but the vs. is confusingly structured.

No doubt the boldest part of my interpr. has to do with pāda b. In this pāda we singers explicitly “beg” (*īmahe*) for something, but the rest of the vs. is not phrased as a request (though so tr., e.g., by Ge, JSK DGRV II.118). There are no modals; the only finite verb is the indicative *así*. It is therefore hard to see cd as directly continuing b. I suggest that the request in b is postponed until the final vs. (27), with the intervening material establishing the right to have these requests fulfilled (though quite obscurely). Note that the end of our b pāda, *tád ū nú*, is matched by the beginning of 27, *tá ū śu*, which picks up 24b and provides the link to the actual request. Vs. 27 also contains the (likely) modal *bhūta* and so is phrased as a request.

As for the structure of the rest (removing b from consideration), I think it is framed by two locative phrases, joined by *ca*: ... *asya jényasya puṣṭaú* (a) ... *śrávasaś ca sātaú* (d). In

between the addressee is characterized, perhaps parenthetically, by two phrases, also conjoined by *ca*: *saranyúr asya sūnúr áśvo, vípraś cāśi*. (Note that this *ca* precedes the one that conjoins the locatives of a and d and that the two *ca*'s do not interact by my interp. [but see JSK DGRV II.116 for a contrary opinion].) The locative phrases, particularly the first, establish the setting of the request in b as the ritual. I take *asya jényasya* ("of him who is well-born") to refer to Agni: *jén-* is several times used of Agni (e.g., I.71.4) (on *jén-* in general, see comm. ad I.128.7). His "thriving" (*puṣṭau*) is the successful kindling of the ritual fire. As for the other loc., "at the winning of fame," I think this may refer to the poet's role in the production and conferral of fame on the gods, the patron, and himself.

This leaves c and the first half of d, "you, his son, are a hastening horse and an inspired poet," which I take as essentially parenthetical. What is the referent of "his" and what of "you" (implicit in *asī*)? I suggest (though tentatively) that "his" refers to Agni, also found in *asya jényasya* in pāda a, and the referent of "you" is the poet himself – with the poet addressing himself in the 2nd ps. The strongest evidence for this comes from the immed. preceding vs., 23, where, by my interpr. anyway, "the hastening one" (*saranyú-*) and the inspired poet (*vípra-*) both refer to Agni. Here we have the same two words, predicated of an unidentified 2nd sg. addressee, who is also identified as "his son" – and therefore presumably shares Agni's characteristics. This identification of Agni and the poet is the necessary preliminary to the next two vss., in which I believe that the unidentified subject is *both* Agni *and* the poet. I realize that this interpr. is quite a stretch, for it assumes that the poet is both participating in the plural "we" of the request in b and addressing himself in the 2nd sg. Such things are not impossible in RVic discourse (see my "Poetic Self Reference," Fs. Skjærvø 2005) but in a hymn this obscure it adds significant complications that can't be established with certainty.

X.61.25–26: As indicated in the publ. intro. as well as just above, I think that the unidentified subject of these vss. is Agni=poet, and the poet is establishing his noble lineage and right to the favor of the gods. The syntax of these vss. is clotted and almost impossible to follow: 25 and 26a and part of 26b form a single sentence, with the main clause in 26, which is preceded by the various dependent clauses in 25, seeming almost to constitute a series of false starts.

X.61.25: As was just noted, the syntax of this vs. is an intricate puzzle – or, to be more straightforward, a mess. I take the whole as an "if" clause, introduced by *yádi* in pāda a, which has two parallel verbs, *jujuse* in b and *dāśat* in d. Interrupting this "if" clause are two interrelated dative phrases in ab (*yuvóḥ ... sakhyāya* and *asmé śárdhāya*) and a parenthetical / embedded rel. clause (c and 1st half of d) introduced by *yásmín*, which refers to the subject of the verbs in the "if" clause. There are multiple ways to interpret the vs. (see esp. Old's disc.), which deviate markedly from mine in the overall construal, in the identification of the referents, in the analysis of the morphology, not to mention the purport of it all. I will not attempt to treat them, but concentrate on my own. I think the point of the vs. is that if Agni=poet is doing his ritual job for the sake of communion with the gods (pāda a) and the exchange of praise and material goods (d), then (in vs. 26) he is praised and seen to be "of good lineage," and he properly conducts the ritual.

The reference of dual *yuvóḥ* is much disputed. I think it must be the same two as the *rājānā* in 23 (q.v.), namely the Áśvins or Mitra and Varuṇa. See the standard treatments for other suggestions. In any case I think they are stand-ins for the gods in general, with whom we wish to establish communion by the sacrifice. As for "us, the troop" (*asmé śárdhāya*), I assume these are

the same “we” who made the request in 24b, namely the group of poets and ritual performers. I should note, though not pursue, that most interpr. take *asmé* and *śárdhāya* independently, with the latter referring to the troop of Maruts.

jujuṣé: contra Ge, but with Sāy., Gr, Old, and Re, I take this as a 3rd sg., not 1st sg. With Agni as subj., this means that he likes the praise given him; with the poet as subj., that he feels he has produced a good hymn.

The rel. cl. of c expands on the notion of the praise-hymn conferred or produced in b: in fact, it’s not a single praise-hymn, but hymns found in all places that converge on him. That is, Agni receives praises from all over; the poet is a hub of poetic inspiration. The point of the relative clause is clarified by the simile found at the beginning of d: the hymns reach their destination along many different routes.

The easiest part of the vs. is the simple second VP *dāśat sūnītāya* at the end. I take *dāśat* as a 3rd sg. injunc., which is accented because it still belongs to the “if” clause (and also because it begins a new clausette within that clause) – though others consider it a participle.

X.61.26: Here the good ritual work performed by the subject in vs. 25 is rewarded: he is “sung by the waters” and has the gods on his side. Moreover he is “of good lineage” – the *īti* seems intended to mark *subāndhuḥ* as a title bestowed on him. This is the lineage that his patron was aiming at and failed to achieve in vss. 17–19; note the term *-bandhu-* in 17–18.

I do not understand why he is hymned/sung by the waters (*gṛṇānó adbhiḥ*). It is true that waters are often considered to be noisy, but I assume there is a further ritual reference here.

With Old and Ge, I take the instr. phrase *nāmasā suktaīḥ* in b with the clause in pāda c, parallel to *ukthaīr vācobhiḥ*.

With Old and Re (but contra Ge), I supply an obj. for *vārdhat*. As Re points out, this would otherwise be the only intrans./reflex. form of the well-attested act. stem *vārdhati*.

The brief clause at the end of c, *ā hí nūnām*, lit. “for now here,” lacks both nominal and verbal forms. I think it refers to the accomplishment of the ritual. I supply “he has” and take *ā* as standing for “arrived.” This interpr. follows Ge’s, and it could refer to Agni/the poet. Or simply be the equivalent of “voilà.” In fact, given that the next vs. refers to the departing gods, the latter seems more likely – indicating that the ritual has been achieved – is at a successful end.

That clause is further amplified by d, which in my opinion simply means that the ritual, the ceremonial “course” (*ādhvan-* for *adhvarā-*) that the hymn has traversed, starts from the Dawn, from the “milk,” that is, the milky light at dawn, which is nicely contrasted with the ruddy color of Dawn herself. (See the same phrase *pāya usrīyāyāḥ* in vs. 11.)

X.61.27: With the end of the ritual proper (and the end of the tortured verbal path that led us there), the poet can now express his request with relative simplicity. (See 27b for the initiation of the request.)

The distracted phrase *mahāḥ ... ūtāye* should not have been rendered “for great help,” but, like *mahó rāyē* in 22, “greatly for help.”

X.62 All Gods

On the structure of this hymn and my disagreements with previous treatments, esp. Ge’s, see the publ. intro. For a complete tr. and disc., see also HPS, B+I 193–99. Its relative simplicity is a considerable relief after X.61. The hymn is metrically quite varied, with six different meters represented in its eleven vss.: the first four are in Jagatī, three others (5, 8, 9) in Anuṣṭubh, but

the other four meters are found once each (Bṛhatī 6, Satobṛhatī 7, Gāyatrī 10, Triṣṭubh 11).

X.62.1–4: The four Jagatī vss. are also united by a refrain in the d pādas and very parallel constructions in the c pādas.

X.62.1: The Dakṣiṇā was of course a preoccupation of X.61 as well, and the achievement of companionship / fellowship (*sakhyā-*) was the aim in X.61.25. Although the Aṅgirasas are of course gods and associates of Indra, in this vs. they seem to be acting as if in the role of mortal sacrificers vis-à-vis Indra, exchanging the sacrifice and the Dakṣiṇā for Indra's fellowship and immortality. For the Aṅgirasas' attainment of immortality see also X.92.3.

I do not know why “anointed” (*sāmaktāḥ*) is used here. Schmidt (193) suggests that it expresses the marriage-like (eheähnlich) relationship between the Aṅgirasas and Indra, based on some comments on *sām* √ *añj* in this vs. by Re , but this seems farfetched.

The c pādas of 1–4 have the structure X [ABSTRACT NOUN] *aṅgiraso vo astu* “Let there be X for you, o A's.” Our c begins with the dat. prn. *tébhyaḥ*, which ordinarily has 3rd ps. ref. Here, however, I think it doubles the *vaḥ* later in the pāda and therefore has 2nd ps. ref. – like the common nom. phrase *sá tvám* (see my 1992 “*sa* figé”). I suggest that it's used here to anchor the case value of dative for the multivalent enclitic *vaḥ*. Once the structure of this pāda was established in that way, the subsequent c pādas needed no such help.

Since Ge believes that the speaker is the Mānava named in the refrain, he supplies “me” as the primary obj. of *prāti gṛbhṇīta* (so also HPS), but since I think Mānava is related to the poet's patron (see publ. intro. and vss. 8 and 11), I do not follow him. I think rather that the poet is commending his patron to the Aṅgirasas.

X.62.2: The signature deed of the Aṅgirasas: the splitting of the Vala cave and release of the cows. The signature verb of the release is often *úd* √ *aj*, as here.

Properly speaking, *dīrghāyutvām* is an abstract meaning literally “long-life-ness,” but no non-awkward English equivalent comes to mind.

X.62.3: As noted in the publ. intro., this set of deeds is more appropriate to Indra than the Aṅgirasas.

As in 2c, we have an nominal abstract that does not go easily into English: good-offspring-ness. The form *suprajāstvá-* is somewhat oddly formed; assuming it's based on (*su*)*prajā-*, the *-s* before the abstract suffix is intrusive and seems to be based on a case form, probably nom. sg. *-prajāś*, though opinions differ. See Scar (143), who doesn't pronounce on it but gives clashing reff. to AiG. It is notable that the *s* makes an already over-heavy syllable **ā-tv-* even heavier.

X.62.4: The first three vss. of this quartet (vss. 1–4) have the same structure in the first hemistich: a relative clause introduced by *yé* treating the past deeds of the Aṅgirasas. In vs. 1 this rel. cl. has 2nd ps. ref. (2nd pl. pf. *ānaśá*) matching the 2nd pl. in cd; in the other two the 3rd ps. of the rel. cl. in ab gives way to 2nd ps. in cd with the same referents. Here in the final vs. the structure and temporal reference of ab change abruptly. The opening *ayám* ‘this one here’ signals that the time is the here-and-now, as well as switching the referent to the singular: the subject can no longer be the Aṅgirasas of long ago.

The interpr. of this vs. has been muddled by the assumption that *nābhā* is a short version

of the PN Nābhānediṣṭha, the supposed poet of X.61–62; both Ge and HPS (p. 193) tr. “in der Sippe” (in the clan) and suggest it’s a word play on the name (and therefore presumably on the lineage). But I think it simply refers to the fireplace on the ritual ground, as it does (in my view) in X.61.19 (q.v.). In this interpr. *ayám* “this one here” refers to the priest/poet, speaking at the sacrificial hearth.

What “in the house” refers to, I’m not certain – it could be a shorthand reference to the ritual ground as Agni’s house, of which he is lord (the title *grhápati*- almost exclusively refers to Agni in the RV). Or it could be referring to a more intimate sacrifice than most, performed in the family household, a grhya ritual avant la lettre, in this period that predates the Grhya / Śrauta ritual split.

Because of the voc. accent, *déva-putrāḥ* can be either a bahuvrīhi ‘having gods as sons’ (<*devá-putra*-) or tatpuruṣa ‘sons of the god(s)’ (<*deva-putrá*-). Gr assigns it to the former, though allowing the possibility of the latter. Ge and HPS take it as the latter, “Göttersöhne.” In the publ. tr. I opted for the bahuvrīhi because it is securely attested in the RV and elsewhere in Vedic, whereas the tatpuruṣa is not found in Vedic at all (unless here), as far as I can tell. However, I now feel I was wrong, on grounds of sense. The Aṅgirasas are not known as the fathers of other divinities, but are several times called “sons of heaven”: *divás putráṣaḥ* (III.53.7=nearby X.67.2, IV.2.15). Since the tatpuruṣa would have been simple to create (see *rājaputrā*-, e.g.), I would now change the tr. to “sons of the god(s).” Note that the next vs. (5) presents them as sons of Agni, the (sg.) Aṅgiras, and that vs. 6 gives both Agni and Heaven as progenitors.

X.62.5–6: These two vss. form a pair, mostly repeating the same information or variation thereon and amplifying 4b. It is not clear to me why this duplication was deemed necessary. It is almost as though the poet was considering two different versions, in different meters, and failed to prune one of them.

X.62.7: The first hemistich repeats the motif of the Aṅgirasas, here along with Indra, releasing the Vala cows. Curiously it is not only cows but horses (*vrajám gómantam ásvínam*); the latter are not ordinarily associated with the Vala myth elsewhere, and it is not immediately clear to me why they are found here (but see vs. 8 below). The same pāda is found in X.25.5, not in a Vala context, where Soma is urged to release the animals from their pen. Here I would suggest that the action portrayed provides a transition from the Vala myth to the poet’s current desire for recompense, and he wants horses as well as cows. The mixture of myth and the here-and-now is also found in the 2nd hemistich, where a generous gift to “me” (presumably this very poet) reorients the Aṅgirasas’s mythic deeds towards the present time. To make this clearer I would now substitute “have made fame” for “made fame.” Since the subjects of cd are not identified, they can represent the current patrons configured as Aṅgirasas.

The act. part. *dádataḥ* in c is interpr. by all as nom. pl., modifying the subj. of *akrata* in d, and I am certain that that is the correct analysis. However, it could instead be a gen. sg. modifying *me*, which adjoins it. Sense speaks against this analysis, but it must be admitted that word order favors it – or, better, tempts the hearer to make the gen. sg. analysis before the more likely nom. pl. one surfaces.

The first member of the adj. *aṣṭakarmīyah* is much discussed; see HPS (194) for lit. The “cut-branded” of the publ. tr. follows the etym. of Kuiper, enlarged by KH, on which see EWA s.v. *AKṢ*.

X.62.8–11: The *dānastuti* that occupies the last four vss. builds on the model of giving provided by the *Āṅgiras* in the previous vs.

X.62.8: The intrusive presence of the horses in the Vala cave in 7b finds its explanation here, where the poet praises the imminent gift not only of the thousand (cows) found in 7b and 8c, but also one consisting of a hundred horses (*śatāśvam*).

The phrase *dānāya māṁhate* picks up *māṁhate* from 6d and thus connects the patron Manu's munificence with the *Āṅgiras*; it also reminds us of *māṁhaneṣṭhāḥ* and *dānāya* in the vss. 1 and 2 of the previous hymn X.61.

X.62.10: On *smāddiṣṭi*- see comm. ad III.45.5.

X.62.11: “Aligning itself with the sun” of the *Dakṣiṇā* in c of course refers to the fact that in RVic ritual the *Dakṣiṇās* were distributed at the Dawn sacrifice.

X.63–64

The next two hymns to the All Gods are attributed to *Gaya Plāta* and appeal to a variety of gods, with the *Ādityas* esp. prominent in X.63. Neither hymn presents major challenges.

X.63 All Gods

X.63.1: As Ge points out (n. 1a), the sandhi form *dīdhiṣanta* could represent the act. part. nom. pl. *dīdhiṣantaḥ* rather than the finite med. 3rd pl. *dīdhiṣante*. The desid. stem has both act. and mid. forms. Against the participle suggestion one might object that the act. participle slot is already filled by the *u*-stem (pseudo-)participle *dīdhiṣú-*, but since that stem is specialized in the sense ‘desiring to acquire (a spouse)’, there would be room for a non-lexicalized participle stem. Still, I favor the Pp medial *-ante* analysis; among other things it avoids the need to posit a predicated pres. participle (not that I object to them).

Ge supplies the verb “kommen” in b to govern *jānimā*, but I see no reason not to construe that noun with *dīdhiṣante* in pāda a. Since the gods have been gratified by Manu (*mānuprītāsaḥ* b) and already in the RV Manu is called Manu Vivasvant and later regularly has the patronymic *Vaivasvata* (see Macd., Ved. Myth. 139), it makes sense that the gods would wish to help Manu by establishing the races associated with him.

The interest of the 2nd hemistich lies in the mention of *Yayāti Nahuṣya*, but there is no evidence in the two bare mentions of him in the RV (also I.31.17) of the dramatic episodes concerning *Yayāti Nāhuṣa* in the MBh (I.70–80); he is merely a minor ritualist in the RV.

X.63.2: Ge (n. 2cd) follows Sāy. in seeing *Aditi* here as *Heaven*, which would make sense of the rest of the trio. However, I don't know of any particular support for this identification; the next vs. is not sufficient (see comm. there).

X.63.3: Re points out the double alliteration in pāda a: *mātā mādhumat pínvate páyaḥ*, the latter continued in b by init. *pīyūṣam*. The rest of b, *dyaúr áditir ádribarhāḥ*, is also a phonetic figure with the repetitions of *d*-s and *r*-s and the initial *ádi .. ádri* echo.

Again Ge (n 3ab) considers this vs. to concern “Himmel-*Aditi*,” with *dyaúḥ* being

feminine, as it sometimes is. I find this unnecessary and also detrimental to the complexity of the thought. Aditi is instead *compared* to heaven, in an unmarked simile. The basis of comparison is twofold. On the one hand, as JPB (*Ādityas*, p. 235) points out, Aditi is like heaven in producing liquid nourishment (rain on the part of heaven, milk on hers). On the other, there is a pun on the name *āditi-* lit. ‘without bounds’; in this sense heaven is *āditi-* ‘unbounded’. JPB (pp. 235–36) rejects this pun, which is favored by Bergaigne and Hillebrandt, but I find the suggested pun persuasive.

The sense and semantic application of the cmpd *ādri-barhas-* are hard to discern, in part because *-barhas-* does not occur independently but only in two cmpds, this one (a hapax) and the considerably better-attested *dvi-bārhas-*. In all instances of the latter the publ. tr. renders the cmpd ‘doubly lofty / exalted’ in contrast to the standard rendering ‘doubly strong’ (e.g., Gr “doppelte Festigkeit, Stärke, Grösse habend”. (The publ. tr. of course presupposes a bahuvrīhi ‘having double loftiness/height’.) The sense ‘height, loftiness’ rather than ‘strength’ for the underlying *s*-stem is supported by the YAvs. correspondent *barəzah-* ‘height, mountain’ and by the existence of the extremely well-attested and inherited non-participial *-nt*-stem *brhánt-* ‘lofty’. The latter is ordinarily associated with the Caland system (among the many reff., see, e.g., Lowe, *Participles in Rigvedic Sanskrit*, pp. 284–85), and, though I am generally slow to invoke the Caland system, *bārhas-* might well be a Caland *-s*-stem. associated with *brhánt-*. The contexts of *dvibārhas-* are not diagnostic: either ‘doubly strong’ or ‘doubly lofty/exalted’ fits them all without adding much meaning in either case. There are some suggestive collocations, however; see esp. VIII.15.2 *dvibārhaso brhát*, VII.8.6 *úd ... janīṣṭha dvibārḥāḥ* (noting the *úd*), and IV.5.3 where *dvibārhas-* follows 2 occurrences of *brhánt-* in vs. 1. See also vs. 4 here.

So much for *dvibārhas-*; the form in our passage is actually the other cmpd, the hapax *ādri-barhas-*, likewise a bahuvrīhi. I render it in the publ. tr. by ‘massive as a stone’, which accords more or less with Gr, Ge ‘felsenfest’, Re ‘à la résistance de rocher’, but which attributes a different sense to *-barhas-* than the one we gave to *dvi-bārhas-*. This certainly needs to be rectified, and, assuming the correctness of ‘loftiness’ in *dvibārhas-*, our cmpd should mean ‘having the loftiness of a stone’. What would this really mean, and what would it mean in context? Now *ādri-* refers not only to stone the substance and stone(s) the object(s), but also to mountains or mountain peaks (possible exx. include III.32.16, V.87.2, VI.48.5, etc.), so *ādri-bārhas-* can have the sense ‘having the loftiness of a mountain peak’. Here the adj. would apply to heaven, and though it might seem like a comedown (literally) for the height of heaven to be compared to that of an earthly mountain, the visual effect of soaring mountain peaks actually gives a stronger impression of height than simply looking at the sky. I would now emend the tr. to “(like) unbounded heaven, which has the loftiness of a mountain peak.” Support for the ‘lofty’ rendering of *-barhas-* here comes from the next vs., with *brhát* in 4b and a different word referring to the height of heaven in 4d (*divó varṣmāṇam*). It might be tempting to consider *ādri-* here as a designation of heaven, reflecting the notion of the stony firmament that is prominent in Avestan texts, but it is a temptation that I think should be resisted. I know of no real evidence in Vedic for this concept – the passages under Gr’s def. 5) s.v. *ásman-* “der *Himmel*, der als steinernes Gewölbe gedacht ist” should all be interpr. otherwise, and in any case we would expect *ásman-*, corresponding to Aves. *asman-* (*/asan-*), in this sense, rather than *ādri-*.

The sense of the cmpd *vr̥ṣa-bhará-* is unclear. Parallel formations like *vājam-bhará-* ‘bringing prizes’, *sahasram-bhará-* ‘bringing thousands’ suggest that *vr̥ṣa-* should function as object; hence Gr’s “Männer hegend,” Ge’s “Stierlasten tragenden,” Re’s “qui portent (des charges de) taureaux,” but none of these seems satisfactory, primarily because *vr̥ṣa* has to be

attenuated or manipulated in some way. Moreover, those other cmpds have an overt acc. marker on the first member, whereas this has the stem form. I take *vr̥ṣa-* as a pseudo-adverbial ‘bullishly’. Note also that the compound seems to invite an alternative segmentation *vr̥ṣabha(-rá)-* with a different word for bull, *vr̥ṣabhá-*, though this does not yield sense. The 2nd member -*bhara-* also scrambles -*barhaḥ-* in the preceding pāda.

Pāda d contains a poetic self-address (so also Ge n. 3d).

X.63.4: For the relevance of *br̥hát* and *var̥ṣmāṇam* to the previous vs., see comm. there.

X.63.6: Unaccented *manuṣaḥ* must be a part of the vocative phrase beginning *vísve devāsaḥ*, but its role is disputed. Gr and Old take it as a voc. pl., presumably (neither translates) parallel to *devāsaḥ* – hence “o all gods (and) men.” Ge takes it as gen. sg. dependent on *vísve devāsaḥ*, and I follow him; the lack of accent on the gen. is regular in tightly constructed voc. phrases of the type *sūno* [voc.] *sahasah* [gen.] “o son of strength.” Ge points out (n. 6b) that taking it as a voc. would require it to refer to the interrog. *káḥ* in pāda a, while *vísve devāsaḥ* would double the subj. of 2nd pl. *jújoṣatha*, a complex distribution of vocc., which would also match a sg. *káḥ* to pl. *manuṣaḥ*. Re also takes it as gen. sg., but supplies additional material: “o tous dieux (et) (fils) de l’Homme,” which seems to combine the drawbacks of both interpr. with no particular benefit. The presence of sg. *mánuḥ* in the. next vs. favors Ge’s (and my) interpr.: since Manu was the first to establish sacrifice for the gods, they can legitimately be termed “the gods of Manu.” Manu is perhaps the (or an) implicit answer to the questions introduced by *káḥ* in pādas a and c, even though those questions refer to the present (*rādhati*) and future (subj. *karat*).

X.63.7: On the morphological and metrical problems of *āyejé* see comm. ad I.114.2. There is also a conceptual one, at least in the standard interpr. Both Ge and Re take *hótrām* as a common noun (Ge “das Opfer,” Re “la ... oblation”; Gr “Opferguss”), but the lexeme *ā́ yaj* means ‘attract/win by sacrifice’, not simply ‘offer/sacrifice [a substance]’ (see comm. ad IX.7.8). In this particular case the obj. *hótrām* is, in my interpr., not merely the libation, but the deified Libation, who is clearly present in the next hymn, also by Gaya, in X.64.15. The point here, as I see it, is that Manu attracted the goddess Libation to his sacrifice by his initial sacrificial performance, and she then contributed a significant element to the subsequent sacrifice, namely the libation. For a similar ambiguity between ritual element and goddess with this verbal lexeme, see I.40.4 *īlām ... ā́ yajāmahe* and comm. ad loc. Note that the goddesses Hotrā and Idā ‘Refreshment’ are found together in the Āprī hymn I.142.9; cf. also II.1.11.

This interpr. has implications for the interpr. of the rest of the hemistich: in b *mānasā* could be construed either with *sámidhāgniḥ* or with *saptá hótr̥bhiḥ*. Ge opts for the latter, Re for the former (“ayant allumé le feu avec réflexion”); I think Re is correct. If Manu initially lacked one of the crucial elements of sacrifice, namely libation/Libation, he had to institute the sacrifice, kindle the fire, mentally, before the physical element was attracted to the sacrifice by Manu’s purely mental observance.

X.63.8: This vs. modulates from 3rd ps. in the rel. cl. (*śīre*, pāda a) to 2nd ps. in the main cl. (*pip̥ṛtā* d); the modulation pivots on *té*, which opens the 2nd hemistich: *té* can of course be the 3rd ps. correlative to *yé* opening the rel. cl., but it can also have 2nd ps. ref. with the impv. in d. (See my “*sa* figé.”) The ambiguity of pāda c cannot be conveyed in tr.; it is only in pāda d that the voc. *devāsaḥ* and the 2nd pl. impv. *pip̥ṛtā* unambiguously signal the change in person.

X.63.10: The long accusative phrase in abc of this vs. at first appears to be a continuation of the accs. in 9cd, which are objects of *havāmahe* in 9a. The surfacing of a well-oared boat in 10a calls this initial interpr. into question, since we would be unlikely to invoke a boat, and in d we come upon a new verb, *ā ruhema* ‘may we mount’, which reconfigures the audience’s interpr. of the verse. Or such is my interpr. – Ge takes ab with vs. 9 and starts a new sentence with 10c. (Re’s punctuation is unclear and a bit incoherent.) Ge’s interpr. is of course possible, but since we try to preserve the integrity of verses when possible and since this poet shows some interest in syntactically misleading the audience (see vss. 8 and later 13–14, both with comm.), I prefer to take 10 as a unit. See further comm. ad vs. 14.

X.63.11: As Re points out, *ādhi vocata* reprises *ādhi bruvantu* in 1d, though with relexicalization. But this echo does not seem to signal a ring or other structural feature, and the tendency for this hymn to keep circling around the same topics makes the thematic repetition fairly unremarkable.

X.63.12: Almost predicably, Re interprets the first hemistich in a Dumézilian (though his name is not mentioned) trifunctional fashion: disease, absence of oblation, hostility (Functions 3, 1, 2, I assume). I do not see that such a formal structure is needed to appreciate the variety of threats envisioned.

X.63.13: As transmitted, pāda a is a syllable short and would have a rare break of three heavy syllables (*mārto víśv[a]*). Arnold (*Metre*, metrical comm. ad loc. and p. 101) suggests reading **mārt’yo* for transmitted *mārto*, a change endorsed by Old and reflected in the HvN edition. Bloomfield (VV ad I.41.2) rejects this emendation on what seem insufficient grounds, but he does draw attention to the fact that our imperfect pāda *āriṣṭaḥ śá mārto víśva edhate* seems based on *āriṣṭaḥ śárva edhate* in I.41.2=VIII.27.16 (in the latter case directly following our pāda b). Although I would not accept Bloomfield’s rather mechanical attempt to generate our pāda from the shorter one (*āriṣṭaḥ śá [mārto víś]va edhate*, with *śá ... va* the disjecta membra of *śárvaḥ*), it does seem as if some effort was made to replace *śárva-* with *víśva-* -- oddly, since *víśva-* is somewhat in retreat in Maṇḍala X, in favor of *śárva-*. But this is a Viśve Devāḥ hymn and forms of *víśva-* are prominent in it (vss. 2a, 6b, 8b, 11a, 13d, 17b). See also Ge’s (n. 13a) and Re’s brief comm. on *víśva-* and *śárva-* in this passage.

Pāda b is also found at VI.70.3 and VIII.27.16; as was just discussed, the latter also has a variant of our pāda a.

X.63.14: The structure of this vs. is very close to that of vs. 10, in that the first hemistich focuses on accusative referents (*yām ... yām*), which seem to continue the acc. reference of 13cd (*yām*), but which in the end can be construed with the acc. phrase in pāda c, headed by *rātham*, which is the obj. of *ā ruhema* in d. This redirection of the accusatives in ab from connection with the end of the previous vs. to what follows in their own vs., the focus on a material means of transportation (*nāvam* in 10c, *rātham* in 14c), and the presence of the same verb governing it in d (*ā ruhema*) in pādas of identical structure (negated acc. sg. pres. part. [*āsra vantīm / āriṣyantam*] *ā ruhema s^u vastaye* – all this imposes my interpr. of vs. 10, against Ge’s.

X.63.15: The rendering of *vṛjāṇa-* as ‘precinct’ rather nicely taps into their shared etymological semantics, from ‘enclosure’, then to area or district, inter alia. For more on *vṛjāṇa-* see comm. ad

X.27.2. I do not subscribe to Ge's understanding of *vrjāṇa-* as "Kampf"; better Re's tr. of the phrase "dans le district pourvu de lumière solaire."

On pl. *yóniṣu* see comm. ad X.40.11.

X.63.17: It is possible, but not necessary, to supply *devāḥ* with voc. *viśve* and take *ādityāḥ* as a separate term—"o All (Gods), Ādityas, (and) Aditi"—to signal in this last vs. that the hymn is in fact dedicated to the All Gods

The name, or nom de plume, of the poet Amartya Gaya recalls Aves. *gaiia-* *marətan-*, the (name of the) first man, and in my view is a pun based on a reminiscence of this Indo-Iranian figure. For a similar, but slightly different view, see KH "Mārtāṇḍa and Gayōmart," MSS 1957 = Aufs. 422–38, esp. 435. See also Ge's n. 4.

Ge takes *īśānāso nāraḥ ... jāno divyāḥ* as an (unsigned) conjoined NP: "Die mächtigen Herren und das himmlische Volke," both subjects of sg. *ástāvi*. Sāy., at least, considers the former to refer to rich human men; Ge does not make his view about the referent known. Although a singular verb for this conjoined NP could perhaps be justified by having it agree with the nearer member, sg. *jānaḥ*. I think it more likely that sg. *jāno divyāḥ* is an appositive to the preceding pl., which would make the sg. verb easier to account for. So, it seems, Re: "Les seigneurs puissants, la gent céleste."

X.64 All Gods

X.64.1: Note the etymological figure *sumāntu (nāma) ... manāmahe*; *sumāntu-* here does not seem to have anything to do with *māntavaḥ* 'counselors' in the previous hymn, X.63.8. With the *sumāntu nāma* here compare Yama's *durmāntu ... nāma* in X.12.6, where it is contrasted with one that is *sumāntu*; see comm. ad loc.

Ge takes *yāmani* to well-attested *yāman-* 'journey' and construes it with the gen. pl. part. *śṛṇvatām* in b ("die auf der Fahrt erhören"); this is certainly possible. He cites several supposed parallels, esp. X.92.13 *yāmani śrutam* "hear this on your journey" (addressed to the Aśvins). However, though the Aśvins are famous for their travel, the assumption of a journey for the unnamed group of gods, in the first vs. of the hymn, is perhaps less appealing. The publ. tr. "as they listen to my plea" follows Re's "qui (nous) entendent dans (notre) imploration," with *yāman-* to *√yā* 'beg, implore'. Other passages containing *yāman-* 'plea' (may) include I.25.20 (also with *√śru*; Ge 'Fahrt'), VIII.52.5 (Vāl.) *āyāman* (again generally interpr. as 'journey'), as well as the cmpd *yāma-hūti-* (X.117.3). It may of course also be a pun, also in passages like X.92.13. For a semantically similar phrase in this hymn see 4d *śṛṇotu ... hāvīmani* "let him harken to my call."

X.64.2: Note the matching etymological figures opening pādas a and b: *kratūyānti krátavaḥ ... , vénanti venāḥ*, also with matching syntax (3rd pl. act. pres. + nom pl. masc. subj.). The denom. *kratūyá-* is found only here and in IV.24.4, while the pres. *véna-* is better attested. On *vená-* and its relatives, see esp. comm. ad VIII.100.5, as well as Re's comm. to this vs. (ÉVP IV.118).

Old seems somewhat inclined to read *ādísah* here (as also at I.119.2), which would yield a tr. "(Our) aims are flying," vel sim., which would yield reasonable sense. Evidence in favor of this reading might be found in IX.21.5 *dádhātā venám ādīse* with similar lexicon. However, the *ādīse* there is infinitival and the *vená-* refers to soma, so the similarity is far less than it first appears. It is also the case that 7 of the 9 occurrences of *ādís-* (all of which are trisyllabic) occur

at the end of the pāda, as here. Nonetheless, since the transmitted text makes sense, and as an acc. pl. *dīśaḥ* provides a goal for the verb of motion *patáyanti*, I do not favor emendation. In fact given the preponderance of pāda-final *ādiśe*, etc., it would be hard to explain how an original *ādiśaḥ* acquired a second accent, since other occurrences of the root noun cmpd. in the same metrical position would favor maintaining the singly accented form.

For a somewhat similar expression of the poet's senses and sense organs flying apart widely in his inspiration, see VI.9.6.

X.64.3: The *vā* in 2nd position in the vs. is a bit surprising, and several emendations have been proposed: to the particle *vaí* (see Klein DGRV II.206), to *vah* (Old). However, the transmitted text makes fine sense: given the long list of divinity names occupying most of the four pādas of the vs., the poet chose to signal early that it was a *disjunctive* list; otherwise a *vā* would have to have been placed after every (or almost every) term (and there are 12 different entities) or would have to be postponed till the end of the last pāda. Ge's "Soll ich vielleicht ...?" and Re's "Dois je éventuellement ...?" both capture the force of *vā* nicely; Klein also slightly favors this solution, though he worries about the lack of parallel usages.

Note that the loose cmpd. *nārā-śāmsam* is split by *vā* taking Wackernagel's position.

The referent of *āgohya-* is disputed and unclear. Gr identifies it as Agni; Macdonell (Ved. Myth. 35) suggests it's an epithet of Pūṣan here, but there is no evidence for that elsewhere, and the other passages suggest that he is an independent figure. Re identifies him with Indra in this passage, but gives no evidence. Ge goes rather for Savitar, which is the default (if there is one); see the parenthetic ident. for most of Gr's entries. JPB (pub. intro. to I.161) suggests the sun, but possibly Savitar, the latter identification being the one he favors in the publ. intro. to IV.33. I do not have my own candidate, but it should be noted that the word appears generally in association with the Ṛbhus (though not here). See I.110.3, 161.11–13, V.33.7; the only passage besides ours outside of this context is VIII.98.4, where it seems to be used in adjectival sense ("who cannot be concealed") of Indra. The Ṛbhu passages concern their twelve-day sleep (IV.33.7) "in the house of Agohya" (I.161.11). This may refer to the intercalary days needed to bring the lunar calendar into synch with the solar cycle. Given some of the other potential recipients of the praise in this vs. – Sun and Moon, (New and) Full ['bright'] Moon, Dawn and Night, all entities that regulate time – I wonder if Agohya here refers to the divinity who oversees the intercalary period (who could, of course, be Savitar or the Sun).

The hapax *abhy ārcase* (1x) belongs to the class of *-se* annunciatory 1st singulars in the realm of praising, of which well-attested *stuṣé* is the standard example and presumable source.

Ge (n. 3c) suggests that the dual *candrāmasā* is a pregnant dual dvandva for "Neu- und Vollmond," though he offers as an alternative a mere pleonastic doubling of *sūryāmāśā*. I find his first alternative quite appealing. Although *candrā-mas-* is attested a number of times in the singular, where it seems simply to refer to the moon, this is the only dual form. The dual could easily refer pregnantly to two forms of the moon (Re's "des deux (formes de) Lune"), full and new, of which the "bright, gleaming" (*candrā-*) full moon would be the more conspicuous of the two and give its name to the duo.

There is some disagreement about the scope of *diví*. Ge (fld by the publ. tr.) takes it with immediately preceding *yamám* ("Yama im Himmel"), but Re with *tritám*, despite the intervening pāda boundary – presumably on the basis of Trita's association with heaven elsewhere (see the passages cited by Ge [n. 3c]: V.9.5, 41.4). To me both these interpr. seem too limited and assume that *diví* can only be construed with one immediately adjoining term. I would suggest that *diví*,

which in final position-produces a fine Jagatī cadence, is to be construed with all the elements in the pāda or, better, with the two duals referring to heavenly bodies: *sūryāmāsā candrāmasā*. Elsewhere *divī* doesn't have to immediately adjoin the entity whose position it specifies. I would now slightly alter the tr. to “or the Sun and Moon, (the new and) bright [=full] Moon in heaven, Yama, Trita ...” Note that the pāda-final loc. *sadhāstha ā* in 8c applies to all the terms in its pāda.

Re points out that this is the only passage where *aktú-* is found with *uśás-*, and the phrase *uśásam aktúm* substitutes for the dual dvandva *uśásānāktā*. Given the two dual dvandvas in c, we might expect that dvandva here as well. But that form would produce a very irregular break, as well a bad cadence and hiatus before *asvínā*. One might have expected as substitute here *uśásam *nāktam*, which would have given a somewhat better break (the standard ~ ~ –, rather than the transmitted ~ ~ ~, which, acdg. to Arnold, is considerably less common than the former, but still within his parameters). See VIII.27.2 (ad comm. ad loc.) with the hybrid pāda opening *uśásā nāktam*, with the 1st member of the dual dvandva followed by the sg. of ‘night’. I might almost speculate that a putative original *uśásam *nāktam* in our passage underwent degemination of *-m n-* and the old *nāktam* was replaced by phonetically similar *aktúm*, which lacks the nasal initial. But this probably goes too far.

X.64.4: The poet Gaya uses almost the same words to describe himself in vs. 16 that he applies to Bṛhaspati here: 4a *kathā kavís tuvīrávān ...* / 16a *evā kavís tuvīrávān ...*, ... *gáyaḥ*, thus clearly identifying himself with Bṛhaspati. I wonder if *káyā* in the instr. phrase ending pāda a here, *káyā girā*, is meant to evoke his name.

The stem *ṛkvan-* ‘chanters, versifiers’ usually refers to non-humans, several times of a group connected with Bṛhaspati (VII.10.4, X.14.3), so the instr. *ṛkvan-* here expresses accompaniment, not the agency of human poets creating the call.

X.64.5: The *vā* here seems to add further choices of goods to praise and/or pursue to the ones offered in vs. 4. However, the syntactic structure of the vs. is rather loose. The dual dvandva *mitrávaruṇā* is acc. with *ā vivāsasi*, generally replicating the syntax of vs. 2: god(s) ACC *abhy ārcase*. But M+Vs’ constant partner Aryaman appears in the 2nd hemistich as nominative, though we might expect him to be a third obj. to *ā vivāsasi*. Since there is no finite verb in cd or any obvious predicate, Aryaman simply hangs there, a notional, but not syntactic, object. I do not like the idea, sometimes floated by Ge., of simple reversion to the nominative. Here I think we must interpr. the dual *mitrávaruṇā*, ambiguous between nom. and acc., as the pivot to the nominative in cd. Re is obviously disturbed by the syntactic rupture and re-supplies *ā vivāsasi* and re-establishes the acc. pattern, in a parenthesis that supplies all relevant parts of the sentence and rests on nothing in the text: “(veux-tu le gagner à toi).”

On the first pāda, see the disc. of HPS (*Vrata* p. 74), who strongly asserts Agni as identical to Dakṣa (hesitantly so also Ge, n. 5a); so also tentatively Ge (n. 5a) and JPB (*Ādityas*, 243), as well as the publ. tr. HPS is himself hesitant about whose *vratā-* it is, but JPB argues persuasively that it is Aditi’s, and the publ. tr. follows his view by implication.

Aryaman is called *ātūrtapanthāḥ* and *pāñcahotā* in V.42.1, *purujātāḥ* in VII.35.2.

X.64.6: As discussed ad VIII.103.3, which contains an almost identical pāda, *tmānā* ‘by themselves / himself’ contrasts the individual effort that goes into the winning with the multiplicity of things won (“thousand(s)”). I do not think, with Ge, that *tmānā* should be construed in the simile with *medhāsātau* (“wie bei dem Kampf um die (Dichter)meisterschaft

selbst”). Among other things, in VIII.103 the next vs. also contains *tmānā* juxtaposed with a form containing ‘thousand’ and expressing the same contrast: *tmānā sahasrapoṣiṇam* “who fosters a thousand by himself.”

Re takes *medhāsātāv iva* as a simile with *samithēsu* in d – in his clotted tr. “... dans les compétitions, comme (d’autres font) dans les (occasions où l’on obtient un) gain (pour prix) de l’inspiration-poétique.” But this requires scooping up the simile from the main clause in c and inserting it in the relative clause in d, which would violate standard RVic syntactic practice.

X.64.7: Note the phonetic figure in d: ... *sācante sacītaḥ sácetasah*, with the last two words also an etymological figure. *sācante* also etymologically echoes *sakhyāya* in b.

Ge takes both *sacītaḥ* and *sácetasah* as nom. pl.; on poetic grounds, I prefer Re’s interpr., with one gen. sg., referring to Savitar, and the other nom. pl. Either of them would in fact fit either morphological role.

X.64.8: A somewhat maladroit phonetic and etymological figure in d, *rudrām rudreṣu rudrīyām*, which also serves as a particularly heavy final Behaghel’s Law member.

X.64.10: Ge and Re both give lexical weight to *bṛhaddivā*, both rendering it as an apparent bahuvrīhi (“die im hohen Himmel wohnt,” “celle du haut du ciel”). But it does not have bahuvrīhi accent (as opposed to *bṛhaddiva-*), and it is rather the name of a minor goddess, who appears in company with other such. See II.31.4, where she is found with Idā, Rodasī, and Puramdhi, as well as Tvaṣtar and the wives of the gods as here; V.41.19 with Idā and Urvaśī; V.42.12 with Sarasvatī and Rākā.

On *devébhir jānibhiḥ* see comm. ad II.36.5 (also VI.50.13).

On the morphologically problematic *rāthaspātīḥ* and the possibly associated metrical issue (11-syllable Jagatī) see comm. ad V.50.5.

X.64.11: The first pāda is identical to I.144.7d. I take it as a continuation of the previous vs., whose final pāda (X.64.10d) also begins with *raṇvāḥ*. Ge and Re by contrast construe it with the following pāda, b. Although we generally aim to interpr. RVic vss. as self-contained units, in this case there is a gender clash between pādas a and b, since the subj. of b is fem. *ūpastutiḥ*, which does not match the masc. *raṇvāḥ* in a. One could explain the masc. as attraction to the gender of the simile (m. *kṣāyāḥ*) or, with Bl (ad I.144.7), consider its lack of fit simply a sign that it was secondarily inserted here. But I prefer to consider it an afterthought to 10d.

X.64.12: The series of vocatives in ab, *māruta índra dévāḥ ... varuṇa mitra* displays odd accentuation: the first three are accented, though their position internal to the pāda should not trigger accentuation; the two in b are unaccented, though they occupy the same position as those in pāda a, namely after an early caesura.

Two of the three 2nd pl. act. verb forms in this vs., *ádadāta* (b) and *pīpayata* (c), are morphologically irregular. The first is surely an imperfect to the redupl. pres. *dádāti*, but we should expect a weak form in the pl.; cf. the equivalent form *ádattana* (I.139.7). (Trying to make it into a pluperfect would gain us nothing, since, as far as I can see, that form should be identical.) Unexpected full grade in the 2nd pl. act. (of all types of stems) is not altogether unusual, esp. in the imperative: see *dádāta* (VII.57.6) and *dadātana* (X.36.10) beside *datta* (2x); here it might have spread from the impv. to the impf. As for *pīpayata*, probably (but not

certainly) belonging to the perfect -- in addition to the full-grade root syllable, there is also the thematic vowel. For a 2nd pl. act. impv. to the perfect, we should probably expect **pīpita* (cf. *pīpihī* 2x); a thematized stem with full-grade root syllable should belong to the subjunctive. A subjunctive interpr. might be favored by the undoubted 2nd pl. pres. act. subjunctive *vāhātha* in the next pāda. However, the 2nd pl. act. subj. is supposed only to take the primary ending *-tha*, not *-ta* as here. (Note the undoubted 2nd pl. pf. subj. *bubódhatha* in the next vs., 13b.). Moreover, the pf. to $\sqrt{pī}$ includes a number of apparent thematic forms, though most are built to the weak stem (e.g., likewise 2nd pl. impv. *pīpyata* II.34.6, on which see comm. ad loc.). For disc. of these pseudo-thematic forms see my 2018 “The Vedic Perfect Imperative and the Status of Modal Forms to Tense-Aspect Stems” (Fs. Lubotsky). As for the full-grade root in our *pīpayata*, I think it likely that the tendency for 2nd pl. imperatives to take full grade is at work here; however, it is worth considering Kü’s compromise (p. 300 n. 495): that these impvs. with full grade are “hybride Bildungen zu einem Konjunktiv *pīpáyat*.”

X.64.13: As with 10d and 11a, our pāda a begins like the final pāda of the preceding vs. (12d), with *kuvíd*.

Ge interpr. *yáthā cid* as an indefinite “irgendwie,” followed by Re (“en quelque sorte”) and the publ. tr. (also Hettrich, *Hypotaxe* 149, though without discussion). Such an interpr. fits the context in my opinion: the poet is looking for any kind of acknowledgement of his kinship with the gods. Old argues strenuously against this interpr., on what seem to me fairly weak grounds; he thinks rather that the *yáthā* signals that there’s an intervening syntactic link (“Mittelglied”) between the *kuvíd* and the *yáthā*, which keeps its subordinating function: “Ob doch (es geschehen wird) dass ihr diese Verwandtschaft mit uns wahrnehmen werdet.” I do not see the advantage of this distancing construction, and his rendering seems to ignore the *cit*.

The navel in pāda c is surely, as Ge persuasively argues (n. 13c), a pun, referring both to the Opferaltar, where mortals and gods meet at the ritual, and to the bodily navel as a symbol of kinship, as so often in the RV.

X.64.14: This vs. seems to play on the gendering possibilities and ambiguities of the dual dvandva *dyāvāprthivī* that is its subject. In the first hemistich the cmpd not only displays the feminine grammatical gender that is appropriate to a dvandva with fem. 2nd member: so the introductory fem. du. pronominal adj. *té* and the adj. *yajñīye* (b). But it also aggressively ascribes female characteristics to the pair, identifying the two as dual mothers and great goddesses: *mātārā mahī devī*.

The third pāda is less insistently female, though still grammatically feminine (*ubhé*): the two support/carry/bear both (breeds). The redupl. pres. *bibhṛtaḥ* can express simple non-gendered support; however, it’s worth noting that it can take a mother, esp. Earth as mother, as subject (e.g., X.4.3 *mātā bibharti*; III.55.22 *prthivī bibharti*) and a child or embryo as object (e.g., III.46.5 *gārbham ná mātā bibhṛtaḥ* with both). Given the dual mothers of the 1st hemistich, a female/motherly interpr. might be the first to come to mind.

The final pāda contrastively asserts the masculinity of the same pair, Heaven and Earth. Here both together “sprinkle much seed/semen” (*purū rétāṃsi ... siñcataḥ* -- a decidedly male action and something of a shock after the pervasive motherly focus of the rest of the verse. The participation of the “fathers” (/forefathers/ancestors) is also unexpected and unexplained. I think that they appear here to balance out the “mothers” of the earlier part of the verse and to remind us that Heaven is, outside of this dvandva, both male and the Father par excellence (*dyaús pitā*).

By this interpr. the Pitars are sidekicks to the Ur-Pitar in this male activity. A possible clue to this indirect use of *pitṛbhiḥ* for contrastive purposes may be provided by the *ca* that follows it. This conjunction is oddly placed in its pāda and it seems to be doing none of its usual conjoining work. Klein (DGRV I.103) considers it a clausal *ca* but is hard-pressed to explain what it's doing and why it's so positioned. I suggest that it implicitly – and conceptually -- conjoins *pitṛbhiḥ* with *mātārā* in pāda a, to add up to a dvandva with both genders represented. Admittedly, this is a speculative explanation, but such aberrant usages invite speculation.

The phrase *devān jánman-* raises problems in its various appearances – not only here, but I.71.3 and VI.11.3. On the one hand, the existence of a parallel phrase *devānām jánman-* (I.70.6, VI.51.2 [though see comm. ad loc.], 12; not adjacent IX.81.2) supports the widespread view (Lanman, Noun Infl. 353–54, Old [for some of the passages], Ge, etc.) that *devān* is an archaic (or truncated) gen. pl. On the other, I am generally reluctant to posit such a form, if it is possible to construe the acc. pl. that *devān* appears to be. In both I.71.3 and VI.11.3 an acc. interpr. is possible, but it is very difficult in this passage. I therefore must accept the gen. pl. interpr. here, and at least as an alternate in the other two passages. Whether the form represents a deeply archaic gen. pl. *devām* < *-ōm I do not venture to say.

ubháya- ‘both’ is found fairly regularly with *jánman-* to refer to “both breeds/races [of gods and men]” (e.g., I.31.7, II.6.7, X.37.11), and I therefore “borrow” *jánman-* from pāda b to be head noun, in slightly different sense, for *ubháyam* in c. Given the emphasis on kinship, esp. the joint kinship of gods and men, in this section of the hymn, I am sure this is the primary reading. However, given also the stress on gender opposition in this vs., ‘both’ here might refer to women and men, or mothers and fathers, with an alternative tr. “... support both (males and females / mothers and fathers) ...”

X.64.15: Note the opening figure *ví śā ... víśva(m)*.

The lexeme *ví√naś* here is generally rendered ‘attains, acquires’ (Ge “erlangt,” Re “atteint”), without registering the *ví*. But in nearby X.67.7 the VP *dráviṇam vy ānaṭ* “he reached through to the treasure” is found in a Vala context, with Bṛhaspati as subject, and ‘reach *through*’ is therefore appropriate. He reaches into the Vala cave from outside to take possession of its contents. Since Bṛhaspati is one of the subjects here, I think the lexeme has its full semantic value in our passage as well. For disc. of other uses of *ví√naś* see comm. ad X.27.20.

The passive *ucyáte* (with passive accent) occurs three times with *grāvan-* ‘pressing stone’ as subj. (our passage = X.100.8, as well as V.25.8 with the same phrase in a simile, *grāve vocyate bṛhát*). This quite well-attested verb form otherwise has undoubted passive value in the sense ‘be called’ or, much less frequently, ‘is spoken’. Neither sense works here; the standard response is to tr. it as a simple intrans. ‘sounds, speaks’ (Ge “erklingt,” Re “parle,” Scar [615] “spricht”), but this ignores the unequivocal passive morphology. It almost seems like the passive to a causative, ‘is made to speak’ (though *vācayati* is not attested till Vedic prose and we would expect its passive to be **vācyáte*). I tr. ‘is given voice’ to capture the passive formation and the lack of agency of the stone, in contrast to the “inspired thinkers” (*manīṣīṇaḥ*) of the next pāda, who bellow.

The rt noun cmpd *madhu-śūd* appears to contain the root *√su* ‘press’ (-*sú-t*), and it is generally so analyzed (e.g., Gr, Scars 615) and so rendered in the publ. tr. (and in the standard tr.). Nonetheless, I wonder if there is semantic overlap with the root(s) *√svad* / *sūd* ‘sweeten, prepare’ of ritual offerings. *havya-sūd-* occurs twice, and there is a single occurrence of *saṃ-sūd-* with short root vowel (VIII.17.6), ordinarily ascribed to *√svad*, but see my doubts ad loc. As

Scar (626) says, “Die Alternation °*sūd-* ~ °*-sūd-* ist offenbar metrisch ausgenützt worden.” Since the form in our passage is nom. sg., the final *-d* in sandhi could either be the automatic voicing result of the empty *-t* added to °*su-* ‘press’, or simply reflect the voiced root final of °*sūd* ‘sweeten’. (Though there are two other occurrences of *madhu-ṣút/-d-*, none of them is in a phonologically diagnostic position.) Note that a reading with long vowel *-sūd-* here would produce a slightly better break, but not better enough to justify emendation.

It is not possible to decide whether cd form a separate sentence, with c dependent on the main clause in d – or whether they are parallel clauses and both dependent on the main clause of ab. I have opted for the latter, along with Re and HPS (B+I 127), while Ge and Scar (615) prefer the former. Fortunately almost nothing rests on the choice; I went for independent sentences because cd don’t seem integrally connected with ab semantically.

X.64.16–17: The final vs. of the hymn, 17, is identical to the final vs. of X.63, also 17. Our vs. 16 essentially doubles vs. 17, with relexification. Both begin with a hymn-summary *evā* followed by a nom. of the poet (16 *kavīḥ*, 17 *platēḥ sūnūḥ*), who is later identified as Gaya (16d, 17d). Both vss. contain an augmented redupl. aor. with the general sense ‘strengthen’ (16d *āpīpayat* ‘has swelled’, 17a *avīṛdhat* ‘has strengthened’) whose obj. is the gods or a subset thereof (16d *divyāni jānma* “the divine races,” 17ab *vo vīśva ādityā adīte* “you, o all you Ādityas and Aditi” [or “... o All (Gods), Ādityas, and Aditi”; see comm. ad 63.17]), with the *divyāni jānma* of 16d nearly matched by *jāno divyāḥ* in 17d. Vs. 16 fills out the rest of its bulk with qualifications of the poet and his aims, while the second hemistich of 17 rephrases and emphasizes the poet’s act of praising.

X.64.16: The phrase *kavīs tuvīrāvān*, used here of the poet Gaya, is repeated from vs. 4, where it qualifies Bṛhaspati; Gaya is obviously identifying himself with that eloquent god. See HPS (B+I 127) for further spec.

X.65–66 All Gods

On the poet of these two hymns, Vasukarṇa Vāsukra, and his relatives see the publ. intro. to X.65 – also for the Vasiṣṭha clan refrain that ends both hymns.

X.65 All Gods

X.65.1: This has to be the easiest RVic verse to translate of all the ca. 10,000 vss. in the text – consisting as it does of a series of divine names in the nom., along with a couple of adjectives. Happily the hymn doesn’t stay at this level of simplicity.

X.65.2: The two nom. sgs. that begin vs. 1, *agnīr indrah*, appear in reverse order in the dual dvandva that opens vs. 2, *indrāgnī*, which is to be read quadrisyllabically here—as often, but not invariably, elsewhere. In these quadrisyllabic readings, because the distracted syllable is surrounded by heavy syllables (*indr* and *agn*), its quantity cannot be definitely determined. However, almost all the distracted forms are pāda-initial (as here), and heavy 2nd syllables are favored in trimeter vs. A reading *indrā-agnī* following this pattern would contain the dual *-ā* expected in dual dvandvas (like *indrā-vāruṇā*) – but it must be noted that the other dvandva containing Indra that has only one accent, namely *indra-vāyū*, contains the stem form. So a reading *indra-agnī* is far from excluded. For further on this cmpd see comm. ad VII.35.1.

The phrase *mithó hinvánā tanvā* “spurring each other on mutually” is reminiscent of IV.56.6 *punāné tanvā mitháh* “purifying their own bodies / each other mutually,” of Heaven and Earth. See also X.28.12 *yé hinviré tanvāh* “who urged themselves / each other on,” adduced by Old -- keeping in mind that X.28 is attributed to Vasukra, and our poet has the patronymic Vāsukra.

The subject shifts abruptly from the dual of ab to pl., signaled only by the 3rd pl. verb *ā papruḥ* in c. The default 3rd pl. referent would presumably be the All Gods or else the enumerated list of gods in vs. 1. The next hymn, by the same poet, contains the same VP: X.66.9c *antárikṣam ... ā papruḥ ...* “they filled the midspace,” where the gods (*devāsaḥ* 9d) are the likely subj. However, since Soma is found independently in our pāda d, it would be possible to interpret the subj. of *ā papruḥ* as Indra+Agni plus Soma, though this seems artificial to me.

Scar (550–51) suggests a number of possible interpr. of *ghṛta-śrī-* (4x), without making a definite decision among them. I opt for the simplest, ‘glorious through ghee’, rather than, say, “durch die Schmelzbutter vollkommen [gemacht].” Two of the four occurrences of this stem modify Agni (I.128.4, V.8.3), and ghee is of course completely at home in Agni contexts. One modifies Heaven and Earth, in a passage (VI.70.4), indeed a hymn, where ghee figures prominently as an attribute of H+E – perhaps a reference to rain? But the relevance of ghee to Soma is less clear; judging from the use of the independent stem *ghṛtā-* in Maṇḍala IX, it is used there to refer to the milk with which the soma is mixed, perhaps to indicate how rich and unctuous that milk is. On *-śrī-* cmpds in general see comm. ad III.26.5 and on this cmpd in particular I.128.4.

X.65.3: My construal of the instr. *mahnā* differs from that of Ge and Re. They take it as a sort of internal instr. with gen. pl. *mahatām* “of those great by their greatness,” while I construe it with the 1st sg. verb “By [or perhaps, because of] their greatness I rouse my praises.” Although an internal reading is likely in I.166.11 *mahānto mahnā*, in the other two passages Gr ascribes this syntax to (nearby X.67.12=X.111.4) the *mahnā* also goes with the verb; the standard tr. agree (see also HPS, B+I, 227).

Note that *iyarmi* responds to the part. *īráyan* in 2d, which is built to the secondary *-áya-* stem arising from the redupl. pres. represented by *iyarmi* (weak form *īr-*).

Note the scrambled phonetic figure of *anarváṇām* (a) and (*-am arṇavám* (c); *arṇavám* also participates in a rhyme figure with immed. preceding *apsavám*.

With Ge (n. 3c) I consider *apsavá-* an irregular deriv. to the loc. pl. *apsú*, which, as Ge points out, sometimes serves as a pseudo-stem (*apsu-kṣít-*, etc.). By contrast, Gr considers it a cmpd. with *-savá-*, glossing the cmpd ‘Wasser spendend’ -- with the 2nd member *savá-* ‘impulse, stimulus’ belonging to $\sqrt{sū}$ ‘impel’. But ‘water’ does not appear to serve as an object to this verb and the semantics would have to be somewhat attenuated. It’s also worth noting that uncompounded *savá-* ‘impulse’ never appears in a context without at least one other form from $\sqrt{sū}$. Although AiG II.2.96 follows the *-savá-* interpr., Deb does point out that it would have to be a nom. agentis here, though *savá-* and its various cmpds with preverbs are nom. actionis – another argument against this interpr.

However we interpr. *apsavá-*, we must reckon with the absence of a verb in the rel. cl. of c. Ge (n. 3c) supplies the verb from the main cl. in d (*rāsantām*). But this brings the further problem of how to construe the acc. phrase *apsavám arṇavám*. The easiest solution is Ge’s, to take it as obj. of the supplied ‘give’ (“die die Wasserflut (spenden)”), but I think we are hoping the gods will give us something more appealing than water. I take the bahuvrīhi *citrá-rādhas-* lit.

‘possessing bright bounties’ as pregnantly expressing our hope: that the gods who possess these bounties will grant them to us. As for the acc. *apsavām arṇavām*, I take it as an unsigned acc. of extent: “(across) the watery flood” – the space that the gods will traverse in bringing these gifts. Cf., e.g., I.19.7 *tiráḥ samudrām arṇavām*. Re’s solution is even more radical: he seems to supply the verb ‘possess’ extracted from the bahuvrīhi *citrā-rādhās-* and construe *apsavām arṇavām* as its obj. “eux qui ... (possèdent) l’océan aux (riches) eaux,” a syntactic sleight of hand that stretches the boundaries.

Pāda d poses its own problems. Most importantly, the morphological identity and function of *mahāye* are unclear. The standard view (Gr, Ge, Re) is that it’s a dative infinitive; Gr assigns it to a hapax stem *mahí-* (different from the NA *máhi*), while in contrast Re asserts that the infinitive is built to the *-āya-* verbal stem *mahāya-*. (Ge does not pronounce on the morphology, though his tr. [“um (unseren Mut) zu erhöhen”] reflects an infinitival interpr.) Neither of the morphological analyses is appealing. Though *-ti-* stems regularly build *-taye* infinitives, dative infinitives to straight *-i-* stems are fewer and less well established, save for a few well-known exx. like *drśāye*; see Keydana’s detailed disc. (*Infinitive im Rgveda* 212–19, which concludes with an indecisive treatment of this very form and passage. But Re’s solution seems to invent a category: treating the *-āy-* of the verb stem as if it were a root noun onto which a dative *-e* could be slapped. He also fails to mention that the standard way to make an infinitive to *-āya-* stems is with *-dhyai* – e.g., *mādayádhyai*, *vartayádhyai*; we should expect **mahayádhyai* here. I propose a more radical reinterp.: to take *mahāye* as a finite verb, the 1st sg. middle of the verb stem *mahāya-* ‘magnify’, beginning a new clause and therefore accented. Though most of the forms to this stem are act., 1st sg. verbs of praising have a tendency towards middle voice, and see also the technically middle *-anta* replacement form in III.3.3. If *mahāye* is a 1st sg., it echoes the semantically similar *stómām iyarmi* in pāda b; see also *maháyantaḥ* in the next vs. (4c).

However, this reconfiguration of the syntax requires a different interpr. of following *sumitryāḥ*, which must then belong to the *mahāye* clause. This form, found only here in the RV, is standardly taken as nom. pl. masc. agreeing with the *té*, subject of *rāsantām*, but that is not possible under my new interpr. of *mahāye*. I take it as a fem. acc. pl., modifying **vísāḥ* ‘(heavenly) clans’ to be supplied. Although this might seem arbitrary, note that in nearby X.69 (not attributed to the same poet, however), vs. 1 contains the phrase *sumitrā vísāḥ* “well-allied clans,” with the base adj. *sumitrā-*. For divine clans, see, e.g., VIII.75.8 *devānām vísāḥ*.

X.65.4: The phonetic manipulation found in the last vs., with the pair *anarváṇam ... -am arṇavām*, is continued by the first word in this vs. (*s^u*)*varṇaram*. Note also the final words of c and d: *surātāyaḥ# ... sūrāyaḥ#*.

On *svārṇara-* see comm. ad IX.70.6.

The opening of b is striking for the *prthivīm* doubling the second member of the dual dvandva *dyāvābhūmī*. As Ge points out (n. 4b), a similar doubling is found in the phrase *dyāvākṣāmā prthivī* in I.102.2, III.8.8 (on which see comm. ad I.102.2). In such configurations *prthivī-* may show its origin as an epithet of the earth (‘the broad one’) rather a word for earth itself.

On *skambhuḥ* see comm. ad VI.72.2, where the competing interpr. as de-redupl. pf. or root aor. are weighed and Kü’s extensive disc. is noted. As indicated there, I do not have a strong feeling either way, but Kü’s desire to see a “generell-zeitlos” sense in the contexts of these verbs, to justify an aor. injunctive interpr., seems to me unnecessary.

On *prkṣā-* see comm. ad II.34.3.

The participle *mahāyantaḥ*, though picking up *mahāye* from 3d, has the gods as subject. This may be a playful reversal on the poet's part, since his audience would expect humans to be the subj. The last pāda also presents the gods in a role generally associated with humans, that of "(sacrificial) patron" (*sūrī-*), a role they also assume in the next hymn (X.66.2). For the object of *mahāyantaḥ* I borrow the accusatives from ab; Ge supplies "Mut," Re "l'homme," with no obvious support for either choice.

X.65.5: Ge (flg. Ludwig) and Re construe *dāśūṣe* at the end of pāda a with the rel. cl. that occupies the next pāda (e.g., Ge: "die gegen die Spender ... nie gleichgütig werden"). This is (barely) syntactically possible: the rel. pronoun *yā* would be in 2nd position flg this dative. However, I think this type of configuration is unlikely (/nonexistent?) when the rel. prn. opens a pāda. Moreover, dat. *dāśūṣe* immediately follows dative *vāruṇāya*, which adjacency suggests they belong together. Especially because the very same phrase, *vāruṇāya dāśūṣe*, occurs in the very same position in the following vs. (6c; see also X.113.5), where both Ge and Re bow to the need to construe them together (and in n. 5a Ge expresses doubts about his interpr. of the word in 5). The four-square construction of vs. 5, with a clause occupying each pāda (the last three of which are introduced by rel. prns.) also speaks against their interpr. Obviously the reason Ge/Re separated the two datives in this vs. is that *dāśvāms-* is almost exclusively applied to humans (though see comm. ad X.104.6). But we have already noted, in the previous vs. (4), this hymn's tendency to attribute human ritual roles to gods, and this would be the same phenomenon.

Pāda c is notable for containing both *dhāman-* and *dhárman-*, which, however, seem easy to separate in this context.

On *vṛt-* see comm. ad VII.98.4.

nādhasī is a hapax. See Old's disc. He flirts with the poss. of a long-īloc., but opts in the end for a dual.

X.65.6: Flg. Ge (n. 6a), I tentatively interpr. the cow as the offering ladle; there is similar phraseology in III.7.2, as he points out.

Note the echoes between *vartanīm* (a) and *vrataniḥ* (b), already pointed out by Old – to which we can add immed. flg. *avārātaḥ*. All of these prepare the way for *vāruṇāya* in c.

In the rt. noun cmpd. *vrataniḥ*, rather than taking *vrata-* as the obj. of *-niḥ* (e.g., Re: "qui conduit le vœu (divine)," I interpr. it as an instr. adverbial, "leading according to / by / at the commandment (of Varuṇa)." For a very similar configuration see X.16.2 *devānām vaśanīḥ* "leading at the will of the gods" and comm. ad loc. I supply "of Varuṇa" because he is the standard possessor of *vratas*, and he is quite prominent in this set of vss. (5–6, 8). See esp. 8c *vāruṇāya sāvrate* "(the two) obeying the same commandment to Varuṇa."

My interpr. of *avārātaḥ* roughly follows Ge's (who follows Sāy.'s), namely that it is derived from √ *vṛ-* 'choose'. Both Sāy. and Ge think it means "without seeking something for herself" (Ge: "ohne sich etwas auszubitten"), whereas my "not by choice" is in implicit contrast to *vrataniḥ* "leading by the commandment (of Varuṇa)" – that is, she does not control her own ritual movements but follows what has been established by Varuṇa. However, it is easier to get the Sāy./Ge meaning, from *vāra-* 'choice (thing), thing of value' (through accent shift in the adverbial *-taḥ* formation [see, e.g., *ubháya-* : *ubhayátaḥ*]), than from *vāra-* 'choice', so 'not because of a thing of value' is a possible alternative. It must be admitted, however, that the Sāy./Ge/SJ interpr. of this form is not the standard one, which is as a deriv. of *ávāra-* 'near (side),

with *avārātaḥ* supposedly meaning ‘from here / this side’ (e.g., Re: “de ce côté-ci”). See Gr, AiG III.591, EWA s.v. *āvara-*; although the long *ā* might seem to be a stumbling block, VS (+) has *avārā-* ‘the nearer (bank)’, *avāryā-* ‘near(er)’, matching the semantic opposite, *pārā-* ‘far bank’ beside *pāra-* ‘farther’ (see esp. AiG III.591). The problem for me is that ‘from this side’, even interpr. as ‘from this world’, doesn’t make much sense in context.

I take the middle part. *prabruvāṇā* as passive (or possibly reflexive, ‘announcing herself’); so also Re. However Ge supplies “(das Opfer)” as obj., and it is true that most of the forms of this part. take an object. Nonetheless, though the interpr. is possible, I don’t think supplying an object is necessary.

Note the allit. *dāsūṣe*, *devébhyo dāśad dhavīṣā*, with the allit. of the last word produced by sandhi.

X.65.7–8: The poet takes pleasure in mixing and contrasting forms from the two phonologically similar roots $\sqrt{kṣi}$ ‘dwell’ and $\sqrt{kṣā}$ ‘rule’: 7a *divākṣasaḥ*, 8a *parikṣitā*, 8b *kṣayataḥ*, along with, as a wildcard, *sāmokasā* to an entirely different root.

X.65.7: The adj. found here as nom. pl. *divākṣasaḥ* (also as gen. sg. in III.7.2; nom. sg. *divākṣā(s)* III.30.21) raises a number of formal and semantic questions. It is ordinarily (Gr, Ge, Re) taken to mean ‘dwelling in heaven’, even though already in AiG II.1 (1905) Wack assigned its second member to $\sqrt{kṣā}$ ‘rule’ (II.1.127, etc.), an analysis fld by EWA (I.427) and Scar (92–93). If the 1st member *divā-* stands for gen. sg. *divās* (gen. cml. to verb of ruling), as Wack. takes it, the absent final *-s* needs explanation. Wack (loc. cit.) attributes it to the loss of final *-s* before a cluster consisting of stop + sibilant (his three exx. all involve *-kṣ-*), somewhat refined by Scar to dissimilatory cluster simplification (with ? after “dissimilatorische”). If the 2nd member is a root noun, we need also to account for the 1st-member accent and, even more crucially, the apparent *s*-stem gen. sg. / nom. pl. These could be explained by positing not a root-noun 2nd member, but an *-as* stem built to the zero-grade root, as Scar suggests, which seems to me to be the best overall solution. But this makes the nom. sg. in III.30.21 problematic, because it immediately precedes *asī* in a pāda that has two many syllables. An asigmatic *divākṣā + asī*, contracted to **divākṣāsī*, would provide a metrical solution, but neither a root noun nor an *as*-stem should be asigmatic in the nom. sg. (See comm. ad loc. for the likely double-sandhi solution, provided by HvN.) For the various formal problems in these forms see Scar’s disc. (92–93). His positing of a parallel *-an*-stem to account for the nom. sg. in III.30.21 seems de trop, but the *-as*-stem he suggests instead of a root noun seems quite plausible.

On the anomalous accent of the bahuvrīhi *agni-jīhvā-* see AiG II.1.297, which, however, does not give a satisfactory account of it.

The lexeme $\sqrt{mṛś}$ is found in the RV only here and in X.88.16, in the AV at AVŚ XIII.1.8 = AVP XVIII.15.8. Although the root $\sqrt{mṛś}$ clearly means ‘touch’, often in a forthrightly physical sense (see the hyper-sexual *ūpopa me pārā mṛśa* in I.126.7 and the sad fate of the gambler’s wife in X.34.4 *anyé jāyām pári mṛśanty asya*), the standard tr. attenuate the meaning here to something like “think about” (Ge’s gloss “überdenkend” of his own tr. “beführend”; Re’s “considérant-en-leur-pensée”). These mental interpr. are probably based on the other attestation of the lexeme in X.88.16 *mānasā vímṛṣtam* “‘stroked’ by his mind,” but surely the *mānasā* there is meant to signal that the use of $\sqrt{mṛś}$ is metaphorical, rather than to indicate that the root itself has a fundamental mental rather than physical application. In the same manner that I always argue when the standard interpr. flatten or attenuate the sense of a word or

lexeme, I would point out here that the RV has numerous roots that fall squarely in the domain of thinking, considering, etc., and therefore when the poet chooses to use instead a fairly rare root with a specific, non-mental sense, he is aiming to plug that specific sense into a context that might not seem immediately receptive to it – such is the RVic poetic enterprise.

What the gods are stroking is the *ṛtasya yóni-* ‘womb of truth’, a common trope for the ritual ground (see also 8b). Here it probably refers to the part of the ground prepared as seats for the gods, where in fact they are sitting (*āsate*). Although I considered the possibility that *vimṛśanta āsate* is a periphrasis for the present progressive, with *√ās* as an auxiliary (“keep stroking” vel sim.), I think we should take *āsate* in its full lexical value here as indicating the gods’ physical location and posture at the ritual.

The 2nd hemistich contains two examples of the *-tvī* gerund, *skabhītvī*(c) and *janītvī*(d). The example in c, *dyām skabhītvī ... ójasā*, echoes 4b *dyāvābhūmī ... skambhur ójasā*, and this echo suggests that *ójasā* in our pāda should be construed with the gerund, not the finite verb, despite the word order (and *pace* Ge, Re, and the publ. tr.): “having propped up heaven with their might, they ...”

The verb in d, *māmṛjuḥ*, belongs to the root *√mṛj* ‘wipe’, which is phonologically similar to, and in some derivatives phonetically indistinguishable from, *√mṛś*, which we met in b. The roots are semantically similar as well, particularly in idioms like this. For the sense of *nī√mṛj* ‘clasp (to oneself)’, see comm. ad II.38.2, VII.26.3, X.39.14. The intimate physical relationship between the gods and the sacrifice is strongly signaled in these two pādas (b, d). The post-caesura portion of this pāda, *tanvī ní māmṛjuḥ*, is also found in the next hymn, X.66.9, though with a different object. See disc. there.

X.65.8: The rt noun cmpd *parikṣīt-* occurs 3x in the RV, always in the dual. Twice (here and III.7.1) it is used of Heaven and Earth identified as *pitārā*. (The third occurrence, in I.123.7, is usually also interpr. as H+E, but I prefer Night and Dawn there; see comm. ad loc.) How exactly it applies to H+E is a little uncertain. I take it to mean that they ‘encircle’ or ‘surround’ the space between them, that is the surface of the earth where human life takes place and the midspace, here perhaps defined more narrowly as the ritual ground that is the conceptual center of this space. It is mildly noteworthy that the occurrence of this cmpd in III.7.1 is found in a vs. immediately preceding one of the three occurrences of *divákṣas-* (III.7.2), which here is found in similar proximity, in the preceding vs., X.65.7.

Like X.64.14 in the immediately preceding hymn (attributed to a different poet), this vs. plays on the different genders of the gendered pair Heaven and Earth. Their dual designation here, *pitārā* ‘two fathers’ (for ‘(mother and) father’), of course explicitly references the masc., and the preceding dual adj. *parikṣītā* could be equally masc. or fem. But the immediately following adj. *pūrvajāvarī* is not only fem. but has the archaic, inherited, synchronically suppletive fem. *-ar(-ī)* suffix associated with *-an-*stems (type *pīvan-* / *pīvarī-*). Discomfort with the gender mismatch is perhaps conveyed by Re’s curious tr. of *pitārā* as “les deux mères” – or it may be a rare lapse.

The finite verb in b, *kṣayataḥ*, is perfectly ambiguous: it can be the pres. indicative of *√kṣā* ‘rule’, as the publ. tr. takes it, or the pres. subjunctive of *√kṣi* ‘dwell’: ‘they two will dwell’. Opinions are divided: Ge, HPS (Vrata 97), and Scar (92) opt for “herrschen” (though Ge allows for either in n. 8b); Re and JPB (Ādityas 110–11) for ‘rule’ (though Re doesn’t tr. as subjunctive). I now think that choosing one is unduly restrictive, given the apparently deliberate fluidity of the *-kṣ-* forms in these two vss., and would now slightly emend the tr. to “rule / will

dwelling.”

The final word of the pāda b, *sāmokasā* ‘having the same house’, appears to echo the first word of vs. 7, *divākṣasaḥ*, esp. for those who interpret the latter as ‘dwelling in heaven’ (rather than ‘ruling over heaven’, as is now the norm; see above). But even though *ókas* contributes to the -kṣ- play in this sequence as well as to the semantic play, it is of course etymologically unrelated to $\sqrt{kṣi}$.

I construe *vāruṇāya* with *sávrata* since vratas are Varuṇa’s special province. The question then is whether the dat. *mahiṣāya* in the next pāda is coreferential with *vāruṇāya*, as in the publ. tr. (as well as explicitly Gr, Re, JPB [Ādit. 110–11]). If, as Ge and JPB assert, the “ghee-filled milk” is really rain, a substance that H+E do indeed have in their control, then the identification makes sense, esp. given Varuṇa’s growing association with the waters. (That the next vs. begins with the dvandva *parjanya-vātā*, two divinities associated with storm and the atmosphere may support the ‘rain’ interpr.) But if the *ghṛtāvat páyaḥ* is more closely tied to the ritual, a different referent might be more appropriate, esp. since, as far as I know, this would be the only passage in which Varuṇa is identified as a *mahiṣā*-. Indra and Soma are both regularly called *mahiṣā*- and both would be likely beneficiaries of the swelling of milk on the ritual ground. It is, of course, quite possible, that *mahiṣāya* is meant to be ambiguous here.

X.65.9: This enumerative vs. seems to return us to vs. 1, though the syntactic frame changes in midstream: ab are presumably in the nominative (though this is signalled only by the last three words, the singulars *vāruṇo mitró aryamā* – the rest is in the dual and could just as well be acc.), but the divinities in c are in the acc. and the objects of *havāmahe*.

As was just noted, the dvandva *parjanya-vātā* seems to pick up the theme of rain from 8d, esp. given the adj. *purīṣiṇā* ‘overflowing’. Ge also appositely cites VI.49.6 on this quality.

The final pāda is an expansion of the enumeration in a relative clause – a variant of the “X and which Y” type, without overt conjunction. It is oddly framed by a rel. prn. at the beginning and the end: #*yé* ... *yé*#. All three terms in between are locational, but the first two are adjectives in the nom. pl., the last a locative. A slightly more faithful tr. might be “(those) who are earthly (and) heavenly (and) who are in the waters,” with the two *yé*’s associated with the two different constructions.

X.65.10: Another enumerative vs., this time couched entirely in the acc. These accusatives are presumably governed by *īmahe* ‘we beseech’, which is the absolute final word of the vs., though it’s possible instead to carry over *havāmahe* ‘we summon’ from the previous vs. (9c); it hardly matters.

The rel. prn. *yá* in the Saṃhitā text could reflect either sg. *yáḥ* or pl. *yé*. Either would be possible in context, since there are potential antecedents in both sg. (Tvaṣṭar, Vāyu) and pl. (Ṛbhus) and the verb in the rel. cl., *óhate*, can also be sg. or pl. (see below). Most tr. and interpr. (incl. the publ. tr.) opt for the sg. *yáḥ*, flg. the Pp as well as Sāy., with Vāyu as the likely antecedent (and voc. *ṛbhavaḥ* interposed). I would not rule out a pl. interpr. with *ṛbhavaḥ* as antecedent, since a rel. cl. dependent on a voc., even a rel. cl. in the 3rd ps., does not seem wildly outlandish to me. This would produce an alt. tr. “... o (you) Ṛbhus, who vaunt themselves.” Since the rel. cl. has no specific content – every god is always available for praise or self-praise – there are no contextual clues that favor one interpr. over the other. I favor the sg. interpr., since it avoids the implicit change of person. It is also possible that the rel. cl. identifies another individual who vaunts himself or who (per Ge, Re, JSK [Part. u 162]) considers himself

an Rbhu, but this seems to introduce further syntactic complications without much gain in content.

The verb *óhate* and its relatives are slippery both morphologically and functionally, as was disc. esp. ad V.52.10. A number of its occurrences belong to a root present; see the athematic participle, *óhāna-* ~ *ohāná-* and the clear (II.23.16, V.52.10, 11) or likely (VII.66.12) 3rd pl. *óhate*. However, most of the occurrences of *óhate* are singular (as is 2nd sg. *ohase* VIII.80.9; on *ohase* in I.30.4, see comm. ad loc.). These presumably began life as subjunctives to the root present, but subjunctive value is not prominent or necessary in a number of passages (like this one), and it seems likely that the stem *óha-* was reinterpr. as a 1st class present. On the morphology see Narten (Fs. Kuiper 10–12 = KISch 98–100) and Gotō (1st Kl. 81). As for semantics, see comm. ad V.52.10. Although a few forms appear to be transitive with the sense ‘solemnly proclaim’ (esp. I.30.4) like some forms of the corresponding Aves. verb *√aog*, most are either reflexive ‘proclaim oneself (as), vaunt oneself’ or passive ‘are praised (as)’. (Most of the passages Gr identifies as having an acc. obj. should be otherwise interpr; see the publ. tr. of and comm. on the particular passages.) Verbs of praising have a tendency to slip into reflexive and then passive value.

The epithet *vṛtrakhādā-* ‘gnawer of Vṛtra’ occurs 3x in the RV, twice clearly of Indra (as we might expect) (III.45.2, 51.9). Here it appears to modify Bṛhaspati, since it is placed between the name Bṛhaspati and an epithet that is more appropriate to that god, *sumedhás-* ‘of good wisdom’. Since gnawing Vṛtra is distant from Bṛhaspati’s usual sphere of operations, we might interpr. the epithet here as indirectly inserting Indra in the list of invoked deities; or we can simply take the assignment of the epithet to Bṛhaspati at face value. Certainly HPS (B+I 32) takes it as modifying B.

Although *dhanasā(h)* is simply a nom. pl. modifier of the unexpressed subj. (“we”) of *īmahe*, it may implicitly express purpose (“so that / such that we win the stakes”).

I do not understand the position and function of *u*. JSK (Part. *u* 162) suggests that it’s conjoining *havāmahe* (9c) and *īmahe* (10d). I would almost prefer to claim that it connects the morphologically non-parallel purpose expressions *svastáye* (b) and *dhanasā(h)* (d).

X.65.11: This vs. contains three predicated pres. participles (a: *janáyanta(h)*, c: *roháyantaḥ*, d: *visṛjántaḥ*) in the nom. plural and no finite verb. This structure is particularly clear because the vs. cannot be taken as syntactically dependent on the previous vs., whose 1st pl. subj. “we” cannot perform the cosmogonic deeds described in this vs., or as anticipating the next vs., whose subj. is the Aśvins in the 2nd dual. The plural subject in our vs. is not identified, but presumably it’s the gods in general or some subset of them, perhaps the ones invoked in the previous vs(s).

X.65.12: Four of the Aśvins’ good deeds, briskly summarized one per pāda. The tenses are oddly varied: a: pres. *pīpṛthaḥ*; b: aug. impf. *ajīnvatam*; c: pf. *ūhathuḥ*; d: pres. *sṛjathaḥ*. I have no explanation for this temporal grab bag.

On Viṣṇāpū see Remmer (Frauennamen 39–40) and comm. ad X.39.7.

X.65.13: And now we have a nomenclatural grab bag. On Pāvīravī see Remmer (96), though there is little to say. The name is also found in VI.49.7, which also contains Sarasvatī; the previous vs. in that hymn, VI.49.6, also has the dual dvandva *parjányāvātā* found in our vs. 9, in similar context.

X.65.14: Pāda a condenses the second hemistich of vs. 13, though eliminating Sarasvatī; the second pāda simply expands on *vísve devāh*.

On the *rātiṣāc*- see comm. ad VIII.28.2; on *abhiṣāc*- see Scar (587–88). It's worth noting that in III.51.2 *abhiṣāc*- is immediately followed by *svarvíd*-, as it is here.

Ge takes *svâr* in d as part of the subject, rather than part of the object as I (and Scar do [Re has a more complex take]). Although removing *svâr* from the object phrase produces a more thematically unified object (songs, formulation, and hymn – all verbal products), the pāda break speaks for the acc. interpr., as does the fact that the subjects are “sun-finders” and so should not include the sun him/itself.

X.65.15: The 2nd hemistich is identical to VII.35.15 (likewise a hymn-final vs.), whose pāda b is identical to our 14b. The final pāda of our vs. and of VII.35.15 is of course the Vasiṣṭha clan refrain, and it is therefore at home in VII.35 in the Vasiṣṭha maṇḍala. VII.35 is an enumerative hymn, like this one, and includes some of the same minor divinities: the Escorts and Gift-escorts (VII.35.11c), Sarasvatī along with insights (11b), and Aja Ekapad (13a). The first pāda of our vs. also identifies Vasiṣṭha as the praiser in our hymn. It is not possible to say whether our poet is borrowing the mantle of Vasiṣṭha or belongs to Vasiṣṭha's poetic lineage, or perhaps just plundered VII.35. See the publ. intro. for indecisive disc.

X.66 All Gods

This hymn is even more focused on divine enumeration than the last one and contains a capacious catalogue, including many minor divinities. In this it is even closer to the spirit of VII.35 than X.65 is. Its final vs. is identical to the immed. preceding hymn, X.65.15, and thus also links the hymn to Vasiṣṭha. In fact the penultimate vs. (X.66.14) makes a strong claim to the poetic lineage of the Vasiṣṭhas and their eponymous ancestor.

X.66.2: Since the *yé* at the beginning of the second pāda follows an opening pāda containing only a single constituent, I consider it to have domain over the whole hemistich, which provides a more satisfactory structure.

On *mánma dhīmahi* see comm. ad X.36.5.

With Ge and Re (also AiG II.2.132) I take *māghone* as an abstract, ‘generosity’. It is tempting, however, to interpret this vṛddhi deriv. of *maghávan*- as more directly related to the usual referent of that epithet, i.e., as meaning ‘associated with the Maghavan=Indra’, and construe it with *vṛjáne* in c, as a parallel to *marudgaṇe*: “... on the community having the Maruts as their troop and associated with Indra.” This is exactly what Sāy. does (*māghone maghavata indrasya sambandhini*). Given the pāda break I think the Ge/Re/publ.tr. interpr. is probably better, but the other is at least lurking.

As in its companion hymn X.65, pāda d attributes ritual roles to the gods that are usually filled by mortals; see comm. ad X.65.4.

X.66.4: The first hemistich is couched in the nominative, although only the first term, *áditiḥ*, is unequivocally nom.; the others could alternatively be acc., because they are dual dvandvas, neuters, or, in the case of *marútaḥ*, a consonant stem identical in nom./acc. pl. The second half-verse is entirely and unequivocally in the acc., to be construed with *havāmahe*.

X.66.5: *sárasvān dhībhiḥ* is a variant of *sárasvatī sahá dhībhiḥ* in the preceding hymn (X.65.13; cf. also VII.35.11). The masc. figure *sárasvant-* is of course far less prominent than the goddess/river *Sarasvatī*. I do not now why he was introduced here as a substitute for the feminine.

The abstract *mahimā* ‘Greatness’ is an anomaly in the list of gods’ names in b, though of course English speakers would have no trouble interpreting (His/Your) Highness or (His/Your) Majesty in such a list. Re’s suggestion that it is the Greatness of Indra seems plausible; see the passages cited by Ge (n. 5b) where *mahimán-* stands in for Indra.

Ge’s suggestion (n. 5c) that the Maruts are the formulation-makers (*brahmakṛtaḥ*) also seems plausible. As we see in passages like V.52.1, 5 the Maruts are praisers as well as recipients of praise.

X.66.6: It is unclear how large the domain of the impv. *santu* is. I take it as extending through the whole vs., or at least the first hemistich (with appropriate adjustment in number), while Ge’s tr. implies that only the 2nd part of pāda a falls under its sway. In a verse of this banality it scarcely matters.

The unbroken predication of *vṛṣan-* in a series is strongly reminiscent of the first part of the Atri hymn V.40, esp. vss. 1–3.

X.66.7: The bulls continue in this vs., but at least they have a little more to do.

X.66.8: The hapax root noun cmpd. *yajñā-niṣkṛt-* is unusual in apparently cmpding a root noun both with a nominal and with a preverb; this type (NOMINAL–PREVERB √ROOT) is rare to non-existent. See Scar (649 and n. 921) and my 2020 *iṣudhyā-* (Fs. Lamberterie): 486–87, as well as my forthcoming “Limits on Root-noun Compounds in Indo-Iranian.” In fact, the next phrase, *adhvarāṇām abhiśrī-*, may illustrate the point (see below). As for this cmpd., see Scar (78–79), who suggests that it results from confusion between synonymous *nīṣ* √ *kṛ* and *iṣ* √ *kṛ*, the latter an idiom with a synchronically unanalyzable pseudo-preverb. He even suggests an underlying form **yajñam-iṣkṛt-*, with an accusative, which was reanalyzed as *yajñā-niṣkṛt-*. Although this last suggestion seems fanciful (or desperate), a confusion between the two idioms may have led to the creation of this anomalous form.

The cmpd *abhiśríyaḥ* is of course plural, but “full glories” does not go well in English; *adhvarāṇām* is also plural, despite the singular rendering in the publ. tr. (a lapse). For this phrase GEN *abhiśrī-* I would now substitute “excelling in glory over the ceremonies,” parallel to VI.70.1 *bhúvanānām abhiśríyā* “excelling in glory over the creatures.” The root noun *abhiśrī-* is generally construed with a genitive, and the *abhi-* suggests the notion of superiority or dominance over. This interpr. differs somewhat from that given by Scar (547–48) and the lit. cited there. It is striking that, beside our phrase *adhvarāṇām abhiśrī-* (here and VIII.44.7), there exists a cmpd *adhvara-śrī-* (5x). Scar (545–46) is hard pressed to account for the construction and interpr. of the cmpd, but I wonder if it represents an underlying **adhvara-abhi-śrī-*, with both nominal and preverb. The cmpd. has expelled the preverb because root noun cmpds can have only two members (see immed. above, on *yajñā-niṣkṛt-*). This would be exactly parallel to the expulsion I hypothesize in an original **iṣu-prati-dhādh-* ‘arrow-aiming’, resulting in **iṣu-dh-*, in my 2020 article cited above. The full phrase *adhvarā+abhi-śrī-* would be preserved with the gen. pl. of the nominal and the preverb+root noun, as here.

X.66.9: The injunctive *janayan* is one of only two 3rd pl. active injunctives to this stem, where we expect instead the likewise transitive *janayanta* with *-anta* replacement. The other is in nearby X.61.7; see disc. there and my 1979 *-anta* replacement article (IJ 21), esp. p. 154.

The phrase *abhí vratā* is difficult to parse. Most tr. take it as a separate prep. phrase, loosely construed: So Ge “für die heiligen Werke,” Re “selon les vœux (divins)” (commenting that the phrase “resolves” a compd. **abhivratam* [no accent given]), HPS (Vrata 63) “um der Gelübde willen.” The publ. tr., “to their commandments,” is of this type, though it might be easier to interpr. as “according to their commandments” or, with a looser gloss of *vratā*-, “to their standards.” I think some version of this interpr. is probably correct, but it is possible that *vratā* is simply another object to *janayan*; cf. VII.75.3 *janáyanto daívyāni vratāni*. This, however, would leave *abhí* stranded; it’s difficult, though perhaps not impossible, to take it as a preverb in tmesis with *janayan*. For another problematic ex. of *abhí vratā*, see VIII.32.28 and comm. thereon.

Note that *āpah* in b shows the occasional substitution of nom. pl. for acc. pl. in this stem. It is noteworthy here because in the previous vs. the last pāda begins with a correct acc. pl. *apāḥ* (X.66.8d); however, the c pāda of the next vs. (X.66.10c) begins exactly like our pāda, *āpa śadhīḥ*, where the nominative is correct. Cf. also other exx. of this pāda opening (V.41.11, VII.34.25 with expected nom. – though cf. also the acc. *apā śadhīḥ* in VI.39.5). It is possible that the redactors altered our phrase to match the nearly identical expression in the following verse; since sandhi across the pāda boundary would have amalgamated the final and initial vowels to *vratāpa śadhīḥ*, the only change would have been the erasure of the accent on the putative acc. **apāḥ* (that is, **vratāpā*).

In c the form *svāra* raises questions. Ge (n. 9c) simply pronounces it an honorary instr. and tr. “mit Sonnenlicht” (sim. HPS, Vrata 63). Re attenuates the sense but leaves the grammar intact, tr. “le ciel” as a second obj. to “fill.” I am reluctant to tamper with either morphology or sense, though I’m not sure what filling the sun would actually mean. Kü (372) also takes this austere road.

The last part of d, *tanvī ní māmṛjuḥ*, is found identically in the companion hymn, X.65.7d. There the gods clasped to themselves the sacrifice they had just created; here the object is both more intangible and more comprehensive: their “will” (*vāśa*-). I take this to mean that they have fully appropriated and deployed the motivation and ability to effect the actions described in the earlier parts of the vs.

X.66.10: With the gen. phrase *mahiśāsya tanyatōḥ* both Ge and Re supply a head noun ‘master’, modifying the dual dvandva *vātāparjanyaś*. This is certainly possible, but I think it is also possible that the relationship between Wind + Thunderstorm and thunder is meant to be more open-ended. Unfortunately the publ. tr., which reflects this idea, is hard to interpr.

X.66.11: The formation of *tanayitnú-* here differs from *tanyatú-* in the preceeding vs. (10b) as well as in the preceding hymn (X.65.13), and I’m not sure what, if any, distinction is meant to be drawn. I tr. *tanyatú-* as “Thunder” and *tanayitnú-* as “Thundering,” but this is simply to register the difference in formation. Note esp. that X.65.13 contains the sequence *tanyatúr ékapād ajāḥ*, which seems a minimal reverse reordering of our *ajā ékpāt tanayitnúḥ*—which might suggest that *tanyatú-* and *tanayitnú-* refer to the same entity. Since sorting out these minor divinities is difficult anyway, I won’t speculate further.

In d we may have two different groups – the All Gods *and* my patrons – or the gods may be identified as my patrons, with patrons an appositive. The position of *utá* could be compatible

with either reading, conjoining all of d with the list in abc or conjoining the two terms of d. The standard interpr. (Ge, Re; also JSK, DGRV I.335) opt for the former, but it's worth noting (as Ge does, n. 11d) that the gods were identified as patrons (same word *sūrāyaḥ*) and creators of the sacrifice in vs. 2, and so the second possibility is a strong one.

X.66.12: Ge/Re take *mānavah* as 'humans' and as modifying the 1st pl. subject of *syāma* ("may we humans be ..."). The publ. tr. "might we be Manu-s," with the more specific interpr. of the stem *mānu-*, which then is predicated of the subject, comes from a suggestion of JPB. The idea is that we all want to enact the role of Manu as first sacrificer at the first instantiation of the sacrifice, which would then be a joint venture between Manu (/us Manus) and the gods, who, as we saw in 2d (and X.65.7d), begot the sacrifice. In b it is surely the gods who are urged to lead the sacrifice east. Re cites Bergaigne as having an interpr. similar to the publ. tr. ("puissions-nous être à vos yeux des Manus ...").

X.66.13: The divine model for the current sacrifice is further set forth here.

See extensive disc. of *prātiveśa-* (only here in the RV, but common later) and related words ad X.49.5. The literal gloss in AiG II.1.284, 'die Wohnung gegenüber habend', and its suggested meaning 'neighbor' seem reasonable.

X.66.14: This vs. makes a strong claim on the part of the poet(s) to belong to the poetic lineage of Vasiṣṭha, who is surely the referent of *pitṛvāt* 'like/in the manner of (their) father'. I think it quite likely that the seer embedded in *ṛṣivāt* 'like/in the manner of the/[a] seer' is also Vasiṣṭha, rather than a generic figure.

The close partnership between us humans and the gods in the sacrificial enterprise is also depicted here, where the gods are referred to as prized and pleased 'kinsmen' (*jñātāyaḥ*).

X.66.15: This vs., identical to the final vs. of X.65, also asserts the Vasiṣṭha connection.

X.67–68 Bṛhaspati

Two hymns dedicated to Bṛhaspati. In addition to the usual treatments, see HPS's detailed discussions in B+I; Re treats the Bṛhaspati hymns in ÉVP XV. On the supposed poet Ayāsyā see comm. ad X.67.1.

X.67 Bṛhaspati

X.67.1: The first word of the hymn, *imām*, is a near-deictic "this ... here" and implicitly locates us on the ritual ground, with this hymn (*dhî-* 'insightful thought') being recited now. In this particular case, the speaker credits "our father" (*pitā nah*), by implication Bṛhaspati, with finding (that is, composing) the hymn, with an augmented imperfect *avindat*. This is unlike the usual RVic situation, in which the poet claims to be himself composing the hymn, though "in the manner" of a father or ancestor – e.g., in the immediately preceding hymn, X.66.14 *vāsiṣṭhāsaḥ pitṛvād vācam akratai* "like their father(s) the Vasiṣṭhas have made speech"; instead it seems to depict something closer to the later śrauta ritual situation in which already existing ritual texts are recited in a fixed liturgy.

On the various possible referents of "seven-headed" (*saptāśṛṅgīm*) see Ge (n. 1a), HPS (228).

The adj. *br̥hatīm* ‘lofty’ evokes the dedicand’s name, Bṛha(spa)ti; we might also see the anagram in *pitā* (←) -*pāti*-.

The “fourth one” (*turīyam*) in c cannot be directly coreferential with *imām dhīyam* in pāda a because of the gender difference. It could, however, match *ukthām* in d. As noted in the publ. intro., it is strongly reminiscent of the fourth part of speech or the fourth formulation often prominent in Vedic discussions of the nature and powers of speech. Indeed, HPS takes it as the fourth formulation (*brāhmaṇa*)-(224).

The adj. *ayāsyā*- ‘irrepressible’ is used of various gods (Indra, Soma) and surely here refers to “our father,” that is, Bṛhaspati, as HPS (227–28) argues. The Anukramaṇī has probably extracted it from this first vs. as the name of the poet, to whom not only these two hymns (X.67–68) but also IX.44–46 are attributed, and who becomes an independent figure in the later tradition. On the reinterpretation of the adjective as a PN, see HPS (165–66, 227–28), citing Pischel; Mayr (PN s.v.); and comm. ad I.62.7; and for Ayāsyā’s later existence, see Macdonell-Keith, Vedic Index s.v.

X.67.2: This vs. is lexically chained to vs. 1 (see HPS 228): 1d *sām̐san*: 2a *sām̐santaḥ* (both pres. participles, in adjacent pādas); 1a *dhīyam*: 2a *dīdhyānāḥ*; 1b *ṛta(-prajātām)*: 2a *ṛtām*; note also *pitā* (1a) contrasted with *putrāsaḥ* (2b). This chaining superimposes the pl. Aṅgirasas (vs. 2) on the sg. Bṛhaspati (vs. 1) as the original joint devisers of the verbal portion of the primal sacrifice. The important connection between *dhī-* (1a) and *dīdhyāna-* (2a) is not signalled in the publ. tr. due to the difficulty of coming up with a non-awkward English verb. Perhaps “seeing insights straightaway” in 2a.

The agreement of the participles *sām̐san* and *sām̐santaḥ* also suggests that their objects, *ukthām* (1d) and *ṛtām* (2a), can be superimposed and identified with each other (see Lü 421, Re comm. ad loc.). There is also verse-internal lexical and morphological play: the pres. mid. participles ending pādas a and c, *dīdhyānāḥ* and *dādhyānāḥ*, share not only a suffix and ending (-*ānāḥ*), but also a reduplicative skeleton, *d_dh*. And *dhāma* in d picks up *dādhyānāḥ* in c.

The meaning and referent of *vīpram padām* are disputed, as instances of *padā-* often are. Ge takes the phrase as a double acc., with *padām* predicated of *vīpram* and meaning ‘track’: “den Redekundigen zu ihrer Wegspur machend”; he explains (n. 2c) that they follow in their speech the tracks/traces of Bṛhaspati. But most interpr. take *vīpram* as a modifier of *padām*, meaning “inspired word/speech.” See Lü (522 n. 6), Re (ad loc.), HPS (225). I do not see why it cannot be a pun, as the publ. tr. presents it (though perhaps it should be better phrased in the manner of Ge: “laying their inspired word as their track,” in this case the track of the ritual cursus.

Most interpr. take *mananta* to mean “they thought up / devised” the *dhāma* of the sacrifice: Ge “haben ... ersonnen,” HPS (225) “haben ... erdacht,” Re “ont inventé.” Certainly the *prathamām* ‘first’ qualifying *dhāma* supports this view. However, the occurrence of the VP *dhāma māna-* in X.97.1 *mānai ... dhāma*,” where it refers to the various forms of plants, favors a more neutral “think about / bring to mind,” with no sense of creation or invention. Hence my “pondered” – though I do not entirely reject the standard view.

X.67.3–8: The narration of the Vala myth begins here and continues through vs. 8. As noted in the publ. intro., the pattern associated with the name Bṛhaspati in this sequence is significant. The name first appears in vs. 3 at the beginning of pāda c, and this nom. *bṛhaspātīḥ* occupies the same position in 4c and 5c, as well as 8c, with acc. *bṛhaspātīm* beginning 9c and 10c after the recital of the myth proper. Bṛhaspati’s variant *brāhmaṇaspātīḥ* opens the c pāda of 7. But in the

center of this sequence, vs. 6, we find instead *índrah* at the beginning of the vs., a vs. with no occurrence of Bṛhaspati – structurally imposing, as I suggest in the publ. intro., the superimposition and identification of Bṛhaspati and Indra.

The preverb *ví* figures prominently in this account (3b, 4d, 6b, 7b, 7d).

X.67.3: This vs. is esp. focused on the soundscape of the myth. On the one hand, the two intensive participles, *vāvadadbhiḥ* (a) and *abhikānikradat* (c), both of sounds associated with animals, convey a sense of the constant cacophony in the background of the mythic actions: the Aṅgirasas' constant vocalizations compared to the disordered honking of geese, Bṛhaspati's continual roaring at the cows like a bovine himself. On the other hand, the final pāda depicts the ritually regulated starting up of the praise song and its hymn tune, the province of the priestly figures the Prastotar and the Udgātar, an oasis of sonic order in the midst of an uproar of voices.

The presence of both *utá* and *ca* in pāda d is curious, esp. since they seem to form a “both ... and” structure, conjoining the two verbs *prāstaut* and *úd ... agāyat*. This kind of subclausal usage is rare with *utá*, as is the mixed construction with *ca*. See JSK (DGRV I.357) for disc. Of course, in pāda-initial position *ca* could not be used, but there doesn't seem any reason why *prāstaut* could not have been separated through tmesis by *ca* (**#prācāstaut ...*), like *úc ca ... agāyat*. Because these finite verb forms are preceded only by participles (*vyāsyan ... abhikānikradat*) modifying the subject, we cannot interpr. the *utá* as a clause connector.

X.67.4: The three feminine entities, divided into two and one in pāda a, but aggregated as three in d, are universally interpreted as “doors” (for which I substituted “gates” as slight more suitable to a cave). As Ge points out (n. 4d), the ‘doors’ (*dúras*) are found in this Vala context in VI.18.5 and X.120.8. Re cleverly suggests that there may have been a (notional) haplology from the sequence *dvā(bhyām) *dvārbhyām* that resulted in the gapping of the ‘door’ word here.

Note the echo of the first word of the vs., *avāḥ* (*lavó*) ‘below’, and the last, *āvaḥ* ‘opened up’ (underlying *āvar*).

X.67.5: Here we meet another “three,” but neut. (*trīṇi*), not the fem. of 4d (*tisráḥ*).

Pāda a contains the problematic *śayáthem* (Pp *śayáthā īm*), which has received a variety of interpr., none of them satisfactory. The publ. tr. follows Old (as does Re) in taking *śayáthā* as a neut. acc. pl. (Old “Lagerstätten,” publ. tr. “lair”) as parallel obj. beside *purám*. The stem is otherwise only found in two passages in adjacent hymns, dat. *śayáthāya* (VI.18.8) and loc. *śayáthe* (VI.17.9). Both those forms appear to have (quasi-)infinitival value ‘to lie’, although only the dative fits this function well morphologically (see comm. ad VI.17.9). Gr suggests we should read *śayáthe* here as well (with no explan. of the *-m*); Ge (n. 5a) reads *śayáthā* (with the Pp, the likely analysis), but claims that the form is an infinitive (with no explan. of the morphology). HPS (B+I 225–26) takes it as an instr. (flg. a correction by Thieme [IIJ 3.15] of HPS's tr. in Vrata 47 n. 84), attributing the sense ‘riverbed’ to the stem: “Nachdem er den zurückgebeugten Wall durch ein Flussbett zerspalten hatte.” I have no idea what this is meant to mean; how can a fortress be split by a riverbed, and how did Bṛhaspati get hold of such an instrument in the first place? In his tr. in Vrata, *śayátha-* is also ‘riverbed’, but (I think) as an acc. pl., expressing what parts the fortress separated into after Bṛhaspati split it (“Die ... Burg ... zerspaltete er in (Fluss-)betten”), which are then the referents of the “three” in pāda b; this interpr. basically follows Ge's alternative, given in n. 5a. Given that the various tricky manipulations of morphology or meaning don't yield plausible sense, Old's acc. pl. seems the

simplest and the least harmful. But I am still disturbed by several features. First, at least in my interpr. the fem. sg. *āpacīm* modifies *pūram*, but is separated from it by *śayāthem*. However, this word order might be iconic for splitting *apart* the fortress. More serious is the position of the particle *īm* (assuming that's what's lurking in *śayāthem*). In my treatment of this particle ("Rigvedic *sīm* and *īm*," Fs. Cardona 2002) I point out (pp. 303–4 and n. 23) that *īm* is almost always found either in second, or modified second, position (as in 7a) or directly before the verb. Of the 208 instances of *īm* (per Lubotsky), only nine fail to conform – including this one. After reconsidering the problems posed by *śayāthem* I now find I cannot accept the neut. acc. pl. + *īm* interpr. found in the publ. tr. The need to posit an out-of-place *īm* seems close to fatal, esp. because the acc. pl. 'lair' doesn't fit the passage all that well, and further the other two occurrences of the stem *śayātha-* are (quasi-)verbal usage, not concrete. I now find myself sympathetic to Gr's suggestion that we read **śayāthe*. This entails assuming that the *-m* was originally a hiatus breaker (notionally *-m̃*) that was reinterpreted as a real *m* – even though (and this is a major problem) this is not a sequence (*-e a-) where a hiatus-breaking *-m̃* would be introduced. If this dubious analysis is accepted, *śayāthe* would have the same quasi-infinitival use as in VI.17.9 and depict the collapse of the *pūr-* and its subsequent position. I would now tr. "Having split apart the stronghold to lie facing backwards," eliminating "(from front) to back, (having split apart) the lairs" and picking up with "at one blow." The use of a form of 'lie' would thematically connect this account of the Vala myth with the Vṛtra myth, where *√śi* is a signature word (see esp. I.32).

The next problem is the identity of the three (neut. *trīṇi*) in pāda b, which in part depends on the sense of the lexeme *nīṣ √kṛt*. In its only other RVic occurrence, in IX.108.6, the object is something desirable (cows) that one cuts out from its surroundings (stone) (... *āśmano nīr gā ākṛntat*), i.e., essentially the same context as here. Our *nīṣ √kṛt* seems parallel also to *nīṣ √bhṛ* in a similar context in the next, paired hymn (X.68.8). With Ge (n. 5b) (and Sāy., sim. Re) I identify the three as the dawn, the sun, and the cow found in pāda c (*uśāsaṃ sūryaṃ gāṃ*), despite the gender mismatch between neut. *trīṇi* and the assorted fem. and masc. items in c; the neut. may be a cover term for "three (things)," esp. since neither masc. nor fem. would encompass all three. (Re supplies "trésors" with *trīṇi*.) Although together pādas cd name four things (including *arkām*), this last term is in a separate pāda and, as Ge points out (n. 5b), Bṛhaspati had already found it (see 1ab *dhīyam ... avindat*). Moreover, in the parallel in the next vs., X.68.9, the verb 'find' (*avindat*) has three objects, and though *arkā-* also occurs in that vs., in a separate pāda as here, it is in the instr., not the acc. of the other three.

"Water-holder, reservoir" (*udadhī-*) is a slightly odd way to refer to the Vala cave, but it can hardly have any other referent. The usage is similar to that of "well" in English, which can be used metaphorically as a container for substances other than water (e.g., "well of loneliness"); in fact, we also have metaphorical expressions with this very word – e.g., "reservoir of goodwill," "reservoir of infection" (apparently a technical term in epidemiology), etc.

X.67.6: On the significance of the vs.-initial placement of *īndraḥ* here, see comm. above ad vss. 3–8 and the publ. intro. Not only is Indra superimposed on Bṛhaspati here, but he has access to the same verb: (*vī*) *cakarta*, like Bṛhaspati's (*nīḥ* ...) *ākṛntat* in 5b.

As noted in the publ. intro. *rakṣitār-* 'guard' is an ambiguous and potentially menacing term. See Re's comm.

Gr, Ge, and HPS (226) render *karā-* as 'hand', a sense well established in the epics and later, but, as Re points out, this is likely the only example in Vedic. (The other RVic

occurrence of the stem, in I.116.13, refers to the Aśvins. Ge and the publ. tr. [JPB] take it as ‘hand’, but a more generic ‘doer’ seems more likely. The occurrence in AVŚ XII.2.2 likewise fits its context better with such a sense.) A meaning ‘hand’ here would seem distinctly odd, since the action of ‘cutting apart’ (*ví√kṛt*) is not something a hand by itself can manage (outside of Kung Fu movies) – better a physical ‘doer’, concretized as ‘tool’ or, with Re, “un instrument (à découper)” like a knife.

On sweat as a sign of ritual activity, see my 2015 “Avestan *xšuuīd*.” A more literal tr. of this bahuvr. would be ‘whose ointment/unguent is sweat’. The theme returns in the next vs., 7d.

X.67.7: Note the allit. in *sá ... satyébhiḥ sákhībhiḥ śucádbhiḥ* (also unified by instr. pl. ending) and (*gó*)*dhāyasam ... dhanasaír (a)dardah*.

The cmpd *gó-dhāyas*- ‘cow-nurturing’ is presumably meant ironically, continuing the ambiguity of *rakṣitāraṃ dúghānām*. It has an Old Avestan cognate *gaodāīah*- (Y 29.2). Perhaps it is not an accident that the Avestan occurrence is in the famous Lament of the Soul of the Cow, when the Cow is complaining that the cow-tending is not entirely satisfactory. The Aves. correspondent supports a rendering ‘nurturing cows’, ‘having the nurturing of cows’ (so Gr). However, most tr. interpr. *gó*- not as an obj. of the 2nd member, but rather as the source of nourishment – Ge “der von den Rindern sich nährte”; Re. “qui tétait [le lait] des vaches”; HPS “dessen Nahrung die Kühe sind.” I assume that all these interpr. are trying to capture the fact that the Vala cave is a sinister, not a nurturing figure towards the captive cows. But this seems to me sufficiently covered by an ironic interpr. of the cmpd. (like *gópati*- in the next vs.). Against the “source” interpr. is the fact that several of the host of X-*dhāyas*- cmpds – *arí-dhāyas*-, *kārú-dhāyas*-, *bhūri-dhāyas*- -- clearly have 1st member objects (‘nourishing the stranger’, etc.). *viśvā-dhāyas*- is ambiguous: either ‘nourishing all’ (with obj.) or ‘having all nourishments’, but it certainly doesn’t mean *‘deriving nourishment from all’; by my interpr. *hári-dhāyas*- means ‘having golden nourishment’, not ‘nourishing the golden’, but again certainly not *‘deriving nourishment from the golden’ (see comm. ad III.44.3).

The root-noun cmpd *dhana-sā*- is found 6x in the RV, including in nearby X.65.10; *dhana-sā*- here is a nonce thematization. See Scar 581.

The *gharmā*- in *gharmā-sveda*- may well refer to the gharma pot at the Pravargya ritual; cf., in the frog hymn, VII.103.8 *adhvaryávo gharmīṇaḥ siṣvidānāḥ* and comm. thereon.

For the sense of *ví√naś* here, see comm. ad X.64.15.

X.67.8: *iyānā*- ‘begging’ may be used sarcastically here. They used verbal means, which is like begging, but the words in fact ‘compelled’.

iṣanayanta – This hapax, which belongs in the hazy group of *iṣaṇa*-, *iṣanya*- and the nominals *iṣāṇi*- and *iṣanyā*-, is rendered by Re and HPS as intrans./reflex. But it is surely an *-anta* replacement and so is trans., as Ge (and I) take it.

mithó-avadya-pa- is one of the few three-member cmpds in the RV; I have found fewer than 20 (not counting negated two-member cmpds, cmpds with *su*- and *dus*-, and cmpds. with a lexicalized member [like *gopa*-]). This rarity adds to the difficulty of interpreting it. It seems to have been rather casually assembled. The final member *-pa*- is, like *-sa*- in 7 above, thematized from the root noun *-pā*- ‘protect’ (see Scar 308). For *avadya-pa*-, Renou cites the syntagm I.185.10 *pātām avadyāt*. To this “protecting from fault,” the adverb *mithāḥ* ‘alternately, mutually’ would be loosely joined. If ‘protecting each other from fault’ (e.g., Old “einander wechselseitig als Abwehrer von Schande habend”) vel sim. is really the sense of the cmpd., its

application to the Aṅgirasas is somewhat puzzling. But there is an alternative. In my copy of HPS's B+I, which belonged to Stanley Insler, he penciled in the margin "protecting from falsity and disgrace = dvandva." This seems eminently worth considering, esp. if *mitháḥ* here has a sense closer to that found in Iranian, where it refers to wrong or falsehood. For the Old Persian evidence see R. Schmitt, *Wörterbuch der altpersischen Königsinschriften*, p. 215 with lit. In Avestan the adverb is esp. associated with false speech: Old Avestan *miṭah-uuacah-* 'having false speech', YA *miṭaoxta-* 'falsely spoken', *miṭō.aog-* 'falsely speaking'. Here it would be paired with *avadya-*, whose literal meaning is of course 'not to be spoken'. I now suggest an alternate interpr., based on Insler's dvandva analysis: "protecting from the false and the unspeakable" – an appropriate description of the Aṅgirasas, whose realm is true and effective speech. Alternatively, it is possible that we are dealing with two words here, with *mitháḥ* a separate adverb (as in the next hymn, X.68.10, where it means 'alternately') and a standard two-member cmpd. that should be accented **avadya-pébhiḥ* (cf. *dhana-saḥ* in 7b), with the accent having been erased redactionally. The problem then would be: what does *mitháḥ* mean in that context? It seems unlikely that Bṛhaspati and the Aṅgirasas alternated in releasing the cows or did so rivalrously. I therefore prefer the dvandva analysis.

úd usriyā asṛjata reprises 4d *úd usrā ākar*.

X.67.9: This is the transition vs. back to the present time and the 1st ps. poets – but we don't find that out till the 1st pl. *madema* in d. Till then it could the subject could be the Aṅgirasas.

Note that Bṛhaspati here is credited with martial, more-Indra-like skills.

X.67.10: With Old, I attach ab to the previous vs. because it seems to continue the victory narrative from there, but this is not necessary. The second hemistich lacks a finite verb; I supply *ānu madema* from 9d.

Pāda c is a mash-up of 9a *vardháyantaḥ* and 9c *bṛhaspátim vṛṣaṇam*.

My interpr. of d differs from the standard ones, and infuses it with more content – perhaps going beyond the evidence. It is dependent on the interpr. of *nānā*. Ge (n. 10c) follows Sāy. (*nānā dikṣu santaḥ*) in taking it locationally ("da und dort weilend"), while Re seems to project this onto conceptual social location ("bien qu'étant diversement (situés sur le plan social)"). I suggest that the *nānā* refers to the varying capacities of the poets, who each "bring light with their mouth" (*bībhṛato jyótir āsā*), but in different ways according to their particular verbal skills.

X.67.11: On the formation of the infinitival *vayodhaí* (also X.55.1), see Scar 261.

X.67.12: The intrusion of the Vṛtra myth (pāda c) and other violent Indraic exploits is surprising in this insistently Bṛhaspati/Vala-oriented hymn. The vs. seems tacked on; on the other hand, the invocation of Heaven and Earth duplicates that of the two world halves in 11d. More to the point, there is some ring composition: *saptá* in 1a and 12c, *mūrdhán-* in 12b recalling *sṛṣan-* in 1a.

X.68 Bṛhaspati

On the complex style of this hymn see publ. intro.

Like X.67, this hymn has its share of verse-, hemistich-, and pāda-initial occurrences of *bṛhaspāti-*: 1d, 2d, 3c, 4c, 5c, 6b, 7a, 8d, 9c, 10b, 11d, 12c. There is one, and only one, per verse.

As discussed below ad vs. 7, it is likely that all these occurrences are extra-clausal and topicalized.

X.68.1: This vs. has three marked similes (a, b, c), each of which presents difficulties of interpretation. In all three cases the comparandum is the chants (*arká-*) directed towards Br̥haspati in d.

In the first simile the point of comparison is noisy water birds “constantly gabbling” (the intens. part. *vāvadataḥ*; see in the previous hymn X.67.3 where the Āṅgirasas are modified by the same participle). There is some unhappiness among interpreters about the other participle in this simile, *rākṣamāṇa-*. Gr suggests reading *yākṣamāṇa-* (‘appearing, displaying’?); Old favors Brunnhofer’s suggestion *krākṣamāṇa-* ‘howling’ (vel sim.), which is associated with *udaprūt-* in IX.108.7. However, as Ge points out (n. 1ab), this would involve adjusting the sandhi of transmitted *vāyo*. And I for one see no semantic problem with *rākṣamāṇa-*. Flocks of birds on water are often found in fairly tight, noisy groups, which can be seen as (and probably are) mutually protective. I take the middle participle as reciprocal; Re interpr. it as passive (“qu’on tenait enfermés”), but the middle of *√rakṣ* is never passive.

Note that the part. *vāvadataḥ* occurs across the pāda boundary from the birds and sits exactly between the first and second similes. This allows it to be construed with both, as, e.g., HPS (218) sees. With the first it is a nom. pl. masc., with the second it is the homonymous gen. sg., modifying *abhríyasya*: “of the ever-speaking (lit.) X of the cloud.” Although most interpr. *abhríya-* as the cloud itself, I prefer to see it as the adj. it is formally, modifying a gapped “thunder.”

The difficulty of c lies in the hapax *giribhráj-* and within this cmpd there are several problems: 1) what is the second member? and 2) what is the relation of the first member to the second? For a detailed disc. see Scar (373–74). A number of possibilities have been suggested for the etymology of *-bhráj-*, of which the strongest competitors are **bhlegʷ* ‘swell’ (also possibly in the root noun *bhráj-* AV VII.90.2, possibly meaning ‘penis’) and **bhreg* ‘break’ (for a recently suggested alternative root see below). The ‘break’ interpr. is the one favored by most tr. and comm.: Gr, Ge, Re, HPS (218), Mau (155) [Pokorny IEW also includes it there] and generally involves a direct-object function for the 1st member, or at least a goal, though an ablatival source is also sometimes considered: e.g., Re “brisant la montagne” (direct obj.) versus Mau “as they break upon the rocks” (goal) versus Gr (alt. gloss; sim. Re’s alt. in n.) “aus ihnen [=mountains] hervorbrechend” (source). For “waves” in a similar direct object context, see VI.61.2 *iyám ... arujat, sānu girīṇām taviṣébhīr ūrmíbhīḥ* “She [=the river Sarasvatī] broke the back of the mountains with her powerful waves.” The problem is that there are no other certain (and few if any possible) traces of **bhreg* in Indo-Aryan. Mayrhofer (EWA s.v. *bhráj-*) considers it “willkürlich” to involve the ‘break’ root here.

The ‘swell, be erect’ interpr. has the merit of an at least tenuous connection with another Vedic word, the aforementioned root noun *bhráj-* ‘penis’(?). The publ. tr. follows this interpr. and the exact wording, “stiff-peaked (like) mountains,” was adapted from a suggestion of Darms, reproduced in EWA (“Steifheit wie Berge habend”). Scar also favors ‘swell’, but points out that *giri-* as first compound member often has a locatival sense (e.g., *giri-kṣīt-* ‘dwelling in the mountains’; Scar’s suggested gloss, ‘im Gebirge schwellend,’ is more plausible, if less poetic, than the one based on Darms.

Recently (WECIEC 28, 2016; Proceedings publ. 2018: 79–81), R. Ginevra suggested a different interp. of both parts of the cmpd and a diff. meaning for the whole. He glosses it “loud-

roaring.” The 2nd member belongs to a root **bhr(h₂)g* ‘roar’, of his manufacture, whose nearest Vedic relative is, by his account, *bhūrjáyant-* in X.46.4 – but see comm. ad loc.: it is not at all clear that this stem even exists. As for the first member, he takes it as a reduced form of **g^herh₂* ‘heavy’. This is of course a particularly bold interpr., since ‘heavy’ has *u*-vocalism in Skt. (*gur-ū-*); Ginevra has a complex and ultimately unconvincing way to get to *giri-*, but the real problem is that it’s hard to imagine a **giri-* ‘heavy’ surviving the competition not only of the well-attested *giri-* ‘mountain’, but the even better attested *gír-* ‘song’. That a cmpd ‘loud-roaring’ would have survived with that meaning in Vedic when neither of its members has any support in the attested language, beggars belief.

But Ginevra’s alternative interpr. has the merit of reminding us that the cmpd. should somehow fit the simile in which it’s embedded, and that simile concerns noise. Wave(s) are at least marginally associated with sound elsewhere in the RV: see I.44.12 *sínthor íva prásvanitāsa ūrmáyah* “like the clamorous waves of a river”; IX.50.1 *sínthor ūrmér íva svanáḥ* “like the roar of the wave of a river,” and so perhaps the cmpd *giriḥhráj-* does not have to contribute semantically to the simile; on the other hand, deploying a hapax cmpd that is irrelevant to the content of the passage seems an unlikely move on the part of a skilled RVic poet. Assuming that it does contribute to the noise simile, I now think that “breaking the mountains” is more compatible with the simile than “stiff-peaked (like) mountains,” since breaking or pounding the rocks is going to produce a certain amount of noise. At least as an alternative, I would therefore now change the publ. tr. to “breaking the mountains” (see VI.61.2 cited above), despite the problematic absence of other reflexes of **bhreg*.

The collocation of *ūrmí-* and *√mad* ‘be/make exhilarated’ found here (*ūrmáyo mādantaḥ*) is also found elsewhere: VI.44.20, VIII.14.10, passages laconically cited by Ge (n. 1c; see also HPS). The association presumably arose because *ūrmí-* is often used metaphorically of “wave(s)” of soma, whose signature verb is *√mad*.

X.68.2: On the interrelated and developing similes in this vs., see the publ. intro. as well as Ge’s n. 2ab.

The opening phrase *sám góbhiḥ* participates in two different images in the first hemistich. The first, unrecognized by other tr./comm., is triggered by the end of the preceding vs., (*abhí ...*) *anāvan* “they bellowed.” In the Aṅgiras context *góbhiḥ* can be associated with the root *√nu* ‘bellow’. See, e.g., IV.3.11 *sám áṅgirasō navanta góbhiḥ* “The Aṅgirasas roared along with the cows” (also V.45.8), with both *sám* and *góbhiḥ*. The joint bellowing refers to the mutual recognition-by-sound that allowed the Aṅgirasas to free the cows penned up in the Vala cave. (Note also that Bṛhaspati roared at the cows in the previous hymn. [X.67.3], though with a different root: *bṛhaspátir abhikánikradad gāḥ*.)

But *sám góbhiḥ √nī* also exists independently; see V.42.4 *sám indra ṇo mánasā neṣi góbhiḥ* “Through your thought, Indra, lead us together with cows,” and the final word of the hemistich, *nināya*, is thus also to be construed with the opening. The object of the frame construction is gapped, but with Ge and Re (and HPS in n.) we can supply. the Aṅgirasas, whom Bṛhaspati reunites with the (freed) cows. In the simile Bhaga leads Aryaman (*bhága ivéd aryamāṇam*); as I explained in the publ. intro. “Bhaga (Fortune or Good Fortune) leads Aryaman, the “civilizing” god of custom, one of whose roles is patron of marriage, to the marriage ceremony in order to preside.” The ceremony itself is found in the next pāda. That the simile in b relates to the marriage is the view of Ge, Re, and Mau (156 n. 2), though HPS explicitly disavows this interpr. (219 n.).

In my opinion, the verse-initial *sám góbhiḥ* that we've already used twice in the first hemistich gets reused in pāda c, as Ge also suggests (n. 2c, tentatively also Re n.). The simile, which dominates the pāda, is of the marriage ceremony, with the officiant (*jāne mitráḥ*) in the nom. "anointing" the married couple in the acc. (*dāmpatī*). As Ge points out, this step in the ceremony is ordinarily expressed with the lexeme *sám √ añj* (e.g., in the final vs. of the wedding hymn, X.85.47 *sám añjantu víśve devāḥ*; see also Ge's other citations). It is rather nice that *sám* 'together' unites the various pieces of this vs.

Two questions remain about the verse. First, who is the referent of *jāne mitráḥ*? second, how does the frame, which must be entirely supplied, match the simile? As for the first, most take the *mitrá-* to be an actual friend or close associate of the couple (so Ge, Re, Mau), while HPS, with a different arrangement of simile and frame, opts for Mitra. I think instead that it is Agni, who is elsewhere called *jāne mitráḥ* (II.4.1, VIII.23.8; for disc. see my "Rigvedic Svayamvara?" Fs. Parpola [2001]: 312). Agni officiates at the wedding by virtue of the centrality of the ritual fire at the wedding ceremony.

My answer to the second question is given in the publ. intro.: "Just as Agni anoints the marrying couple with milk, so Bṛhaspati "anoints" the Aṅgirasas (compared to the couple) with cows." Alternatively, Ge and Re take the Aṅgirasas and the cows as the two parties to the ceremony representing the dual *dāmpatī* 'married couple'; this is also one of the possibilities that HPS entertains. This is possible, but it fails to make use of the instr. *góbhiḥ* as the anointing medium. And the image of the Aṅgirasas and the cows pairing off in marriage might be a bit extreme.

Pāda d breaks this mood, with competition substituting for union. Again, the identity of the object in the frame, to which the swift horses are compared, is unspecified and somewhat unclear; I assume the Aṅgirasas, who are spurred to action to open the cave. (This action is, of course, out of order, since the rest of the vs. assumes the cows have already been freed, but chronological scrambling is scarcely unknown in the RV.)

Another question about d: who is addressing Bṛhaspati? I assume that the abrupt departure from the topic of abc also returns us to the larger context of the hymn, and the poet is the speaker, but both Ge and Re take the address to be internal to the scenario of pāda c and spoken by the officiant (*jāne mitráḥ*). In this case it could not be urging the Aṅgirasas to open the cave, since the cave is already open. If we interpret the impv. clause internally (which, as I said, I am not inclined to do), we might compare Agastya's address to his wife Lopāmudrā in I.179.3 *jáyāvéd átra śatánītham ājīm* "let us two win here the contest of a hundred strategems," as a programmatic blueprint for marriage. It too contains the word *ājí-* 'contest'. However, I think this is farfetched.

X.68.3: The first hemistich consists entirely of fem. pl. adjs. with no referent specified until pāda d *gāḥ*, but of course the cows are in the discourse and were mentioned in the instr. in 2a.

There is no agreement on the sense or even the formation of the hapax cmpd *sādhv-aryāḥ*. Glosses range widely: Sāy. *sādhūnām kalyāṇām payasām netrīḥ*, Gr "gerade aus, vorwärts strebend," Old "bei denen die Arier ihr Ziel erreichen," Ge "die einem trefflichen Herrn gehören," Re "très amicales," Th (Fremdl. 87) "in guter Weise (schönstens) fremdenfreundlich (gastlich)," HPS "die gut gastlich sind," Mau "dear to the pious," JPB (Ādityas 162 n. 23) "correctly civilized." Several of these (notably Old and Ge) assume that the cmpd is a bahuvrīhi, but the accent is an obstacle. Old refers laconically to AiG I.2.296(d), treating bahuvrīhis with 2nd-member accent whose 1st member ends in *-i-* or *-u-*. But even if this rule worked better than

it does, all of the cases listed there have 1st members with light initial syllables (*purú-*, etc.), and *sādhú-* decidedly does not (cf. also the bahuvrīhi *sādhú-karman-* X.81.7 with expected accent). Moreover, the simplex *aryá-* is an adjective and should not therefore be the head of a bahuvrīhi unless the adjective has been substantivized (as Ge's Herr and Old die Arier implicitly assume). The publ. tr. follows JPB's interpr. of the adj. *aryá-* as 'civilized/civilizing' (discussed at length in Ādityas, 155–62), that is, "adhering to or upholding to (*sic*) the rites and customs of the Vedic peoples" (155), who are the others (*arí-*) who belong to the larger Ārya community (on which see comm. ad IX.79.3). The term is used here of cows in the context of hospitality (see immed. flg. *atithínīḥ* and Thieme, *Fremdl.* 86–87), a cardinal Ārya principle, but I do not think it necessarily has the narrow meaning "fremdenfreundlich" that Th gives it. It could simply emphasize the cows' status as domestic animals that ordinarily form part of the social group (see JPB's "they are domesticated and hence a part of the community," 162 n. 23) and have been reintegrated into it after their abduction and imprisonment outside of it. With Th I. take *sādhú-* as adverbial here, rather than as referring to a group of particularly worthy people (e.g., Mau's "the pious").

The final word of pāda a, *iśirāḥ*, makes a bad Triṣṭubh cadence. In fact, though the stem *iśirá-* generally behaves well metrically when internal, often occurring right after the caesura where two light syllables are at home, there are several pāda-final occurrences like this one, making a bad Triṣṭubh cadence: in addition to this one, II.29.1, V.37.3, IX.96.15, X.98.3 (see also, in dimeter VIII.46.29). In all these cases a heavy second syllable (**iśīrā-*) would be preferable, but precisely this shape would be anomalous in the post-caesura occurrences.

X.68.4: Judging from the 2nd hemistich, this vs. returns us to the moment of the opening of the Vala cave and the release of the cows. Bṛhaspati split open the enclosure ("the skin of the earth") so easily that his tool for splitting is compared to water in pāda d; see a similar characterization of the ease of this deed in the next vs., 5d. It is harder, though not impossible, to fit the first hemistich into this picture. I take ab as referring to the ritual preliminaries to the assault on the cave. The phrase *ṛtasya yóni-* is quite common in the RV, used for the ritual ground and esp. for the place where the ritual fire is installed (III.62.13, etc. etc.; see comm. ad X.65.7). The "honey" with which Bṛhaspati is sprinkling it may be milk or soma or even water. Despite Ge (n. 4a) and others (Mau, esp.) I don't think the liquid is rain, because Bṛhaspati isn't particularly associated with rain elsewhere.

Pāda b is the real problem, in part because of the ambiguous sandhi form *arká*. The Pp takes this as nom. sg. *arkáḥ*, and this is followed by most interpr. Before assessing that interpr., we should investigate what its referent might be. The stem *arká-* means both 'chant' and 'ray/flame'. Its proximity to *ulkā-* 'firebrand' in this pāda has led a number of interpr. to favor the latter identification (e.g., Ge "Wetterstrahl"; also Re, Mau). However in a Bṛhaspati context the word should mean 'chant' – as it in fact does elsewhere in the hymn: 1d, 6b, 9b; see also in the previous hymn X.67.5. The chant is the means by which the Vala cave is opened. Old and HPS both recognize that *arká-* must mean 'chant' here; they both decide that Bṛhaspati is the personified *arká-* and therefore accept the nom. interpr. of the Pp. This is possible, but I prefer interpr. the sandhi form as loc. *arké*, as a minimal loc. absolute: "when the chant (was chanted)," referring to the moment when the cave is opened. That the chant can be secondarily associated with fire, and so the juxtaposition of *arka* and *ulkām* here is probably not accidental, is shown by 6b *agnitāpobhir arkaīḥ* "with his fire-hot changes."

The problem that I can't solve is what is the object of *avakṣipán* in the frame, compared to the "firebrand of heaven" (*ulkām ... dyóḥ*) in the simile. In the publ. tr. I tentatively supply

‘honey’ from the first pāda, and in the absence of anything better I will stick with it – but it would depict a fairly aggressive sprinkling of the ritual ground, and I also don’t see what it represents mythologically. Ge gets out of the problem by making the whole of b the simile (violating ordinary simile structuring principles by assuming a different verb in the simile from the frame, which for him is pāda a). Re, HPS, and Mau make the *iva* weakly adverbial (“pour ainsi dire,” “gleichsam,” “as it were”). This is tempting as an easy way to avoid the problem, but I am reluctant to do this because of the prominence of *iva* and the quite specific similes in this part of the hymn (3d, 4b, 4d, 5b, 5d).

X.68.5: The similes continue. In the first hemistich a four-element frame (gapped subject Bṛhaspati, object *tāmaḥ* ‘darkness’, instr. ‘with light’, abl. ‘from the midspace’) is more or less matched by a three-element simile (subj. ‘wind’, object ‘Śīpāla plant’, abl. ‘from the water’), with only the instr. missing: ‘wind’ can stand in for it as well.

The purport of the simile in the 2nd hemistich is not as clear – or rather, my interpr. differs from the general consensus. The standard interpr. is that the simile goes with the main verb: “brought the cows here like the wind a cloud.” But to me this doesn’t make sense: the wind doesn’t bring clouds *here*; they stay in the midspace, wherever the wind pushes them. I think that the simile instead belongs with the gerund *anumṛśyā*. The lexeme *ānu* √ *mṛś* occurs only here in the RV, and the tr. universally render it as ‘lay hold of, seize’ vel sim. — but √ *mṛś* generally depicts a less aggressive action, ‘touch, stroke, fondle’. In KS XXV.9 (116: 6) the causative *anumarśaya-* is used of healers touching a sick man, where ‘seize’ seems out of place. There is also a brief narrative in TS VI.1.3.6, where Indra seeks to prevent anyone else from being born from the womb from which he has just emerged. He *ānu* √ *mṛś* the womb and splits it: *tāsyā anumṛśya yónim āchinat*. Keith tr. ‘stroking her womb he split it.’ Although “seizing” isn’t ruled out here, the context invites a more intimate, if no less devastating, action. In our passage the object of *anumṛśyā* is generally taken to be “the cows of Vala,” but esp. given the TS passage I think it better to supply ‘skin’ (*tvācam* from the immed. preceding vs. 4d) or even ‘womb’ (for the Vala cave as a womb, see IV.50.2; *yónim* is also found in the preceding vs., 4a, though with a different referent). Note that, like the womb in the TS passage, the “skin” was split in 4d (though with a different root), and Bṛhaspati splits something of Vala’s in the next vs. (6ab) and, by my interpr., splits the *gārbha-* of the mountain in 7c. What does this have to do with the simile “like the wind a cloud”? I think the point is that the wind needs merely to “stroke” a cloud to move it, and this emphasizes how light and minimal a touch Bṛhaspati needed to open the Vala cave, a point also made in 4d.

With the simile of d associated with the gerund in c, the rest of d contains the main VP, whose meaning is straightforward: *ā* √ *kṛ* in the middle means ‘bring here, make one’s own’. What I don’t understand is the doubling of *ā*. Old (Noten ad I.3.7) says it’s not uncommon and lists some passages, but I would still like an explanation. Perhaps the two *ā*’s convey different senses: ‘make one’s own’ and ‘bring here’; this is what I meant to imply in the publ. tr.

X.68.6: The abstract noun *jāsu-* ‘feebleness’ may seem an odd object for the verb *bhed* ‘split’, which seems to call for a concrete object. However, it neatly summarizes the point of the similes in vss. 4 and 5, that Vala was easily breached. Ge unaccountably renders *jāsu-* here by “das Gefängnis” (prison) without comment, though in its other occurrence (X.33.2) as “Verschmachten.” Perhaps he was swayed by Sāy.’s concrete gloss *āyudham* ‘weapon’ in our passage.

On the pun that structures the 2nd hemistich see publ. intro. As discussed there, the pun is enabled by two ambiguous forms: *páriveriṣṭam* and *ādat*. The former can be the ppl. to either \sqrt{vis} or $\sqrt{viṣ}$. In the former case, it means ‘surrounded’, in the latter ‘served’. As for *ādat*, it can be the (remarked medial) 3rd sg. root aor. to $\tilde{a}\sqrt{dā}$ ‘take’ ($\tilde{a} + (a)da-t$) or a pseudo-thematic imperfect to the root pres. of \sqrt{ad} ‘eat’ ($a-ad-a-t$): the expected athematic form would have been **āt* (< **a-ad-t*), which cries out for remodeling. At least with regard to the publ. tr., only the former would be strictly correct, since the imperfect of \sqrt{ad} , without preverb, should not be accented in a main clause (see also Ge n. 6c). But secondary readings in puns can be lax about accentuation, and in any case nothing forbids *c* from being still in the domain of *yadā* in pāda a, in which case both of the proposed verb forms would be accented in the subordinate cl. I therefore offer an alternative translation “When Bṛhaspati split the feebleness of taunting Vala with his fire-hot chants / (and) he took / ate (the cows) ...,” with the main clause represented only by *d*. Only Mau of the standard tr. takes this option.

As for the pun itself, taking *páriveriṣṭa-* to \sqrt{vis} with the sense ‘surrounded, trapped’, the ppl. can be construed with the instr. *dadbhīḥ* as the agent/instrument; the more appropriate main verb would be $\tilde{a}\sqrt{dā}$ ‘take’ (though ‘eat’ is also possible). The image is the familiar and slightly unpleasant one of using the tongue to worry tiny particles of food stuck between the teeth and suggests that Bṛhaspati scoured all the nooks and crannies of the Vala cave for stray cattle. If *páriveriṣṭa-* is taken to $\sqrt{viṣ}$ in the lexeme ‘serve’, the more appropriate main verb would be ‘eat’ (though ‘take’ is not excluded), and the tongue and teeth together do the eating. HPS objects to Ge’s supplying the cows as obj. of ‘eat’ because Bṛhaspati doesn’t eat the cows – but supplying Vala as object, as he, Re, and Mau do, is subject to the same objection: Bṛhaspati doesn’t eat the cave either. Surely “eat” is a metaphor and, in my opinion, works better with cows as object: Bṛhaspati sucks them all out of the cave at one time.

X.68.7: The position of *hí* is at first surprising, coming superficially in 3rd position: *bṛhaspátir ámata hí* ..., but is easily explained if we take *bṛhaspátīḥ* as extraclausal and topicalized, as I suggested above (intro. to hymn comm.) for all occurrences of the name in this hymn. Under this analysis *hí* would be in its standard 2nd position; see the same configuration in 12c *bṛhaspátīḥ sá hí* ..., where the coreferential pronoun *sá* underlines the extraclausality of the immediately preceding name in the same case. Further, in 11d *bṛhaspátir bhínát* ... it is easiest to explain the accent on the verb *bhínát* if it is actually first in its clause (same explanation for the repeated pāda in I.62.3) – the accent on *ámata* in our vs. can be ascribed to the presence of *hí*, though under the extraclausal analysis it would also be clause initial. Finally, in 1d the apparent second position of the preverb *abhí* in tmesis – *bṛhaspátim abhy àrkā anāvan* makes better sense if it is notionally initial after extraclausal *bṛhaspátim*, since preverbs in tmesis ordinarily move to first position (though the position after the caesura, as here, is not infrequent). In the publ. tr. I did not mark off the occurrences of *bṛhaspátī-* typographically (with dash or sim.) because I think it would be distracting.

All the standard interpr. construe *sádane* with *gúhā yát* (e.g., Ge “der an de Orte verborgen war”). I do not, because *gúhā yát* is a pāda-final formulaic tag, at most preceded by *paramám*, which does not further participate in the clause to which it’s attached beyond modifying a neuter noun earlier in its clause (*nāma* in this case). Interestingly the tag is only found in the RV in Maṇḍala X, though *gúhā* and *gúhya-* are common throughout. The occurrences: X.45.2, 61.13, 68.7, 85.16 (=AV XIV.1.6) [*yád gúhā*], 181.2; AV I.13.3, II.1.1, 2.

The simile in c has tied interpr. in knots, primarily because they want to make some bird or other the agent of *bhittvā*, either the baby birds inside the eggs (Ge, HPS, Lu 522) or the mother bird (Re), all these birds being in fact invented. See Mau's useful n. on the passage, though his English deserts him in his own unparsable tr. In addition to the invented birds, some of these interpr. seem to assume that acc. *gárbham* is the agent of *bhittvā* in the simile, which is syntactically impossible. As Ge says somewhat despairingly (n. 7cd), the simile "ist etwas schief geraten." The problem is that they all assume that *gárbham* in c must be part of the simile; the difficulty disappears if we take *gárbham* with the frame, with *párvatasya* in d dependent on it. *gárbham* is then the object of *bhittvā*, parallel to *āṇḍā* in the simile: "having split the *gárbha* of the mountain like the eggs of a bird." Although *gárbham* is somewhat more distant from its genitive than I would like, the phrase exists; see V.45.3 *párvatasya gárbhaḥ* adduced by Old and see also Ge's n. 7d. And the "womb of the mountain" is a fine description of the Vala cave with the cows inside.

X.68.8: The simile in c is a bit slippery. From ab, where the cows are simply enclosed by the stone, we expect *nīḥ ... jabhāra* in c to depict a simple removal. But the simile "like a cup from a tree" assumes the shaping and crafting of what was removed into an object of artifice: a cup, not just a block of wood.

X.68.9: Most of the first hemistich is a near variant of X.67.5cd in the immediately preceding hymn: *bṛhaspátir uśasaṃ sūryaṃ gām, arkám viveda ...* versus our *sóṣām avindat sá svàḥ só agnīm, só arkéṇa ...* This close agreement is all the more surprising since there are very few verbal echoes between the two hymns, despite their kinship and shared subject matter. In our passage "fire" substitutes for "cow," as the third object of 'find', but "cows" should be supplied as the obj. of *nīḥ ... jabhāra* in the second hemistich.

The second simile with *nīḥ ... jabhāra*, flg. directly on the one in 8c, is less daring, though still striking.

X.68.10: The simile in ab is neatly structured: both simile and frame are tripartite, with nom. subj. (woods / Vala), acc. object (leaves / cows), instr. agent of stealing (cold / Bṛhaspati). Connecting the subject and the object is the verb *akṛpayat* 'lamented', found overtly only in the frame but shared by simile and frame; connecting the object and the agent is the ppl. *muṣitā* 'stolen', found overtly only in the simile but shared by simile and frame.

X.68.11: The first three pādas of this vs. seem at best loosely connected with the Bṛhaspati / Vala theme. Although, as Mau (n.) suggests, Bṛhaspati's freeing of the cows from Vala can be seen as an act of creation, with the Pitars joining in the cosmogonic fun, the specificity of the decorating of the night sky and the day sky seems different from the usual blaze of dawn after the opening of the cave. It seems possible that the alternate rising of sun and moon in 10d suggested this particular treatment.

The ornamenting of the dusky horse in pāda a is reminiscent of the Aśvamedha when the Wives of the king/sacrificer weave jewels into the hair of the horse just before it is sacrificed (see SW/SW 99–100 with reff.).

Pāda c is a perfect syntactic palindrome: LOC₁ ACC₁ VERB ACC₂ LOC₂, with the verb equally applicable to both VPs. Or, as Re says dismissively, "chiasme banal."

The last pāda, which is the final pāda of the hymn before the summary vs., briskly summarizes Bṛhaspati's accomplishment: "he split the rock; he found the cows," an abrupt and terse end to an elaborate hymn. For the accent on *bhinát* see comm. ad vs. 7 above and I.62.3, where the pāda is also found.

X.68.12: As indicated just above, this is clearly a summary vs. standing outside the hymn proper, whose content was just boiled down in the last pāda of the preceding vs. (11d). The near-deictic *idám* and the aorist *akarma* at the beginning of 12 locate the vs. in the ritual here-and-now, referring to the hymn, called an "(act of) reverence" (*námah*), that was just recited.

The vs. also forms a ring with the first vs. of the hymn: the fairly rare word *abhríya-* 'belonging to a cloud' is found in both (1b, 12a), and the verb *ānónavīti* (12b) echoes two verbal forms in vs. 1: *anāvan* (1d) by root ($\sqrt{nū}$), *vāvadataḥ* (1b) by morphology (both intensives), as well, of course, as semantics. Interestingly, the referent of *abhríya-* / subject of *ānónavīti* in 12 is Bṛhaspati, but that is not the case in vs. 1.

Pāda b has only 10 syllables, and there is no obvious fix. HvN suggest a rest at syllable 4, which seems the best solution: *ānu ānónavīti* handily fills the post-caesura slot.

The referent of *pūrvīḥ* is unclear, at least to me. The standard tr. supply voices or the sounds of thunder vel sim., which Bṛhaspati is imitating; see, e.g., HPS (222) "der viele (Stimmen dem Donner) nachbrüllt." (Similarly, but not identically, Mau sees the "many" as our praise hymns.) This strikes me as a rather distant notion to attach to the unspecified "many" and not in accord with the use of *ānu* $\sqrt{nū}$ elsewhere. It is possible that *pūrvīḥ* signals a time period, as often (e.g., IV.19.8 *pūrvīr uśásaḥ śarádaś ca* ... "for many dawns and autumns"). However, I think this less likely than that *pūrvīḥ* refers to the feminine beings after which Bṛhaspati bellows. The lexeme *ānu* $\sqrt{nū}$ takes an acc. of the longed-for object in both I.80.9 and VIII.82.33, and it is not difficult to supply the likely fem. acc. here: "cows" (also secondarily suggested by Re in his n.). Surely his freeing of the cows did not end Bṛhaspati's fond engagement with them: he yearned for them still.

On the opening of c, *bṛhaspátīḥ sá*, see disc. ad vs. 7.

The lack of accent on the verb *dhāt* is surprising to me, since it must still be part of the *hí* clause begun in c, given the sequence of *sá* + instr. that unifies cd. Also surprising is the fact that no one comments on the absence (not even Old!). I would explain it by the fact that *váyo dhāḥ* (/ *dhāt*) is a common hemistich ending (II.4.9; III.29.8, 51.6; IV.17.18; VI.40.1, 4; IX.90.6; X.46.10 [also pāda final in X.30.12]), where the verb is never accented. Either the poet simply reverted to this formulaic usage or the redactors adjusted it to that usage.

X.69–70

One hymn addressed to Agni, the other an Āprī hymn. The Anukr. ascribes them both to Sumitra B/Vādhryaśva, both names extracted from X.69. Although Vadhryaśva and the associated vṛddhied patronymic do appear to be PNs, *sumitrá-*, which occurs 5x in X.69, is best taken in its literal sense 'good ally, having good allies'. As for *vadhryaśvá-*, that an original bahuvrīhi 'having gelded horses' was reinterpr as a PN may be shown by the final accent (*vadhri-aśvá-*); we would otherwise expect **vādhri-aśva-*, with standard b-v accent like *vādhri-vāc-* (VII.18.9).

X.69 Agni

On the subject matter of the hymn, see publ. intro. The language is for the most part straightforward, at least superficially, but there are some twists. For much of the hymn the verses proceed in pairs; they are not technically Pragāthas, but they mirror and complete each other thematically and often share phraseology.

X.69.1–2: The first two vss. are not tightly bound, but they share the phrase *ghṛténāhutaḥ* (1d, 2c).

X.69.1: The two supposed PN *vadhryaśvá-* and *sumitrá-* that provide the poet's name in the Anukr. are both found in this 1st vs. As noted above (intro. to X.69–70), *sumitrá-* is better taken in its literal sense.

X.69.3–4: On the shared features of this pair, see disc. ad 4.

X.69.3: The double *yád* phrases, sharing the same verb *samīdhé* but paired with two different nominatives, clearly refer to two occasions in the past when the ritual fire was kindled, starting with the primordial institution of the sacrifice by Manu. The main clause *tád idám nāvīyaḥ* then points to the ritual fire right here and emphasizes both its identity with those previous fires and its novelty. None of the standard renderings (Ge, Re, Proferes) fully registers the repeated *yád*'s; Re, esp., seems to have missed the point.

The 2nd hemistich has four occurrences of *sá* with 2nd ps. reference, each matched with an imperative (or imperative substitute like injunc. *dhāh*) by (my) rule.

X.69.4: The first hemistich is modeled on 3ab:

yát te, samīdhé agne tád idám ...

yám tvā, samīdhé agne sá idám ...

4a adds another previous (*pūrvam*) kindling of the fire to those in 3ab, but this one is temporally close, since the kindler is Vadhryaśva, whose fire is the focus of this hymn. He is thus associated, in his first kindling, with the primal sacrificer Manu, but he is also responsible for a new kindling, in *pāda* b.

The referent of neut. *idám* in b is not specified. In the paired expression in 3b, it is Agni's *ánīkam*, and I supply that here as well. Ge suggests rather the hymn and the sacrifice, perhaps basing himself partly on *sá gíro juṣasva* in c, matching 4b *sá idám juṣasva* save for the object. Re supplies "sacrifice," though in his n. he says that *idám* stands for the *gírah* in the phrase in 3c; Proferes just "this." The parallelism of 3ab and 4ab seems to me to impose the *ánīkam* interpr.

Vadhryaśva is "solemnly invoked" (*īlītá-*) at the first kindling in 4a. This ppl. ordinarily characterizes Agni, but Agni esp. in his role as Hotar (see, e.g., VII.7.3 *agnír īlító ná hótā*). The use of this term suggests that Vadhryaśva must have served as Hotar on that occasion and also implicitly identifies him with Agni, that is, with his own ritual fire.

X.69.5–6: Like vss. 3 and 4, this pair should be read together. It is the near repetition of 5c by 6c that allows us to identify "the son of Vadhryaśva" with Agni, on which see Proferes (40–41).

X.69.5: Note the solemn and ceremonial *prá nú vocam* "I shall now proclaim," which links the announcement to others like it (e.g., I.32.1) and establishes the importance of the *name* of

Vadhryaśva's son. The name is presumably "Agni," given in the next, paired vs., but not till pāda.

X.69.6: The first hemistich flirts with another contender for the name of V's son, namely Indra, who is the usual conquerer of obstacles (*vr̥trāṇi*). And of course Indra is the target of *prá vocam* in I.32.1 just alluded to.

On the phrase *dāsā vr̥trāṇi āryā* see comm. ad VI.22.10.

X.69.7–8: The second hemistichs of both vss. are paired: the instr. pl. + pass. phrase in 7c *nṛbhīḥ mr̥jyāmānaḥ* is expanded in 8cd to *nṛbhīr dākṣiṇāvadbhīḥ ... sumitrébhir idhyase devayádbhīḥ*, with the last two instr. also matching the loc. pl. of 7d *sumitrēṣu ... devayátsu* in the same metrical position. The close pairing of the 2nd halves of these vss. draws attention to the sharp thematic contrast between the barren cows (*-starī-*) in 7b and the milch-cow (*dhenú-*) of 8ab.

X.69.7: Once again the phrase *ayám agnīḥ* "this fire here" emphasizes the immediacy of the new fire. This suggests that *dīrghá-tantu-*, lit. 'having a long thread', should be interpr. with Proferes as referring to the "long line (of ancestors)," some of which we have met in vss. 3–4. The fire in front of us may be new, but it has deep roots.

The lofty bulls (*bṛhád-ukṣan-*) by contrast are probably his flames, as Ge suggests.

The puzzling descriptor is *sahásra-starī-* 'having a thousand barren cows', esp. since the barren cows seem to substitute for the harmless and well-integrated *-cetas-* found in the otherwise identical pāda I.100.12 *sahásracetāḥ śatānītha ṛbhvā* "of a thousand insights and a hundred counsels, skillful." (Curiously, Bl [RVReps] finds our version "insipid," an adj. I'd be more likely to apply to I.100.12.) Ge finds no clear reason for the barren cows (n. 7b), while Re and Old are silent on them. The impetus for their appearance here is, I think, to be found in the name of the fire's owner and producer, Vadhryaśva. Since his name literally means 'having gelded horses', his clan fire matches the nomenclatural model with "having a thousand sterile cows", with equally deficient livestock – a deprecatory model that reaches back into prehistory, most famously in Zarathustra 'having old camels' (by most interpr.). Happily we need not worry too much about the reality of this description, since in the next vs. Agni is credited with a 'milch-cow' (*dhenú-*), whose fecund productivity is described at length.

X.69.8: On the *dhenú-* see comm. just above.

With Ge and Re (contra Gr, Old, who interpr. it as an instr. sg.), I take *asaścatā* as a dual fem. referring to Heaven and Earth. The same form is used of them in I.160.2 and *ásaścantī* of the same in VI.70.2.

Ge takes *dākṣiṇāvant-* as referring to the dispensers of Dakṣiṇās, namely, the Sūris or patrons, who, in his view, are the referents of *nṛbhīḥ* in 7c, 8c, 9d, and 11b. Since in all these occurrences but 9d (which is non-diagnostic) these men are ritual officiants, kindling (8c) and tending (7c) the fire and providing pressed soma (11b), they should be receiving the Dakṣiṇā, at least by later custom.

X.69.9–10: This pair of vss. don't share much phraseology or syntactic structure, but they are thematically (and partly lexically) connected. In both, Agni is identified as the son of Vadhryaśva and the beneficiary of his service, which enables Agni to overcome opponents. The patronymic voc. *vādhryaśva* takes the same position in 9b as the name *vadhryaśvāḥ* in 10b. And

the nearly synonymous 2nd sg. imperfects *ajayaḥ* and *avanoḥ* take the same positions in 9d and 10d. We can also note two different words that play off the PN. Vadhryaśva: (*tvā*)*vṛdhebbhiḥ* (9d) and *vṛādhataḥ* (10d).

X.69.9: As disc. in IV.18.2, I would now tr. *sampṛcham* as ‘to consult’. As Proferes (41) points out, the *mānuṣīr víśaḥ* “clans of the sons of Manu” are Agni’s (and Vadhryaśva’s) own people, come to take counsel about an external threat (c), and it is with these men that Agni conquers in d. The publ. tr. makes the clans sound as if they’re the enemy.

I would now slightly emend the tr. of d to “whose strengthener is you,” to match *vṛdhāḥ* in 11d, if that analysis is correct.

X.69.10: In pāda a *abibhar* is better read *abibharr* (< *-rt). See comm. ad VII.75.1 and Old.

The identity of those whom Agni vanquishes in d is not made explicit, and contextual clues pull in two different directions. On the one hand, the next vs. (11a) proclaims the victory of Vadhryaśva’s fire over rivals (*śatrūn*); the default interpr. would probably be of human rivals, enemies outside the domain of Vadhryaśva. This seems to be the Ge/Proferes interpr. On the other, *pūrvān* ‘previous, former’ echoes *pūrvam* in 4a, where it referred to a fire that Vadhryaśva had kindled previously, to which the current one is superior. This accounts for my tr. “the former (fires),” as also Re “(les Agni) antérieurs,” sim. JSK (DGRV I.381). I think both might be meant (as Re rather awkwardly seems to indicate in his n.).

The position of *utá* is somewhat odd, but acdg. to JSK (same ref.) it joins the second hemistich with the first, despite appearing at the beginning of d. He adduces several similar exx.

On the formation and sense of *vṛādhant-* see comm. ad X.49.8. We already noted the phonological similarity between this stem and the name *vadhryaśvá-*.

X.69.11–12: These two vss. do not seem twinned. Rather, vs. 11 gathers up a number of the elements of the immediately preceding vss., while vs. 12 is a hymn-summary vs.

X.69.11: In b *nṛbhir jigāya* matches 9d ... *nṛbhir ajayaḥ*, with both instr. *nṛbbhiḥ* modified by a pāda-final instr. In d there reappear both *vṛādhantam* (see 10d) and *vṛdhá-*, reinforcing the play with Vadhryaśva’s name noted above.

The publ. tr., along with Ge and Proferes, tr. *sutásomavant-* as if it were synonymous with the well-attested bahuvrīhi *sutásoma-*, with a pleonastic possessive suffix *-vant-*. However, Re (and in fact Gr) must be correct that *-vant-* here signals accompaniment (like *índra-marútvant-* “Indra along with the Maruts”). I would now alter the tr. to “by means of the (aforementioned) men along with those who have pressed soma.” The men (*nṛbbhiḥ*) are the same as those in 9d.

There is disagreement about the identity of *vṛdhāḥ* in d. The publ. tr. follows Sāy., Gr, and Proferes in taking it as the nom. sg. of the thematic stem *vṛdhá-*, found also in the cmpd *tvā-vṛdha-* in 9d. Ge and Re take it rather as the abl. of the root noun *vṛdh-* and construe it with *vṛādhantam*, which functions (for them) as a quasi-comparative: Ge “... die stärker fühlte als selbst der Starke” (see his n. 11d and Re’s n.). This would cleverly bring *vṛādhant-* and *vṛdh-* into conjunction and would also account for the position of *cíd*. But this otherwise has little to recommend it, since *vṛādhant-* is not a comparative, and Ge’s supplying of extra material verges on the reckless. True – a nom. sg. *vṛdhāḥ* is rhetorically a little flat, and the *cíd* has nothing to do,

but that hardly disqualifies it. The *cid* may have the position it does to emulate the vs.-final *cid* in 10d.

X.69.12: This summary vs. begins with the annunciatory *ayám agníh* “here is Agni,” found also, less prominently, in 7a.

Another phonological play on Vadhryaśva: *vṛtra(-hán-)*. This sonic link may help account for the application of this Indraic epithet to Agni (though this is not the only such occasion), but the emphatic militancy of Vadhryaśva’s fire provides another reason. It might be better rendered ‘smasher of obstacles’, although this would lose the phonological echo.

vījāmi-, clearly playing off *ājāmi-*, is a hapax and has been variously rendered. The publ. tr. ‘estranged kin’ (with *vī* ‘apart’) is due to JPB and seems the most persuasive of the possibilities.

X.70 Āprī

One of the two Āprī hymns in Maṇḍala X (the other being X.110). Re tr. in EVP XIV.47ff. There are connections esp. with the Āprī hymn VII.2.

X.70.1: For reasons unclear to me both Ge and Re tr. the instr. *devayajyā* as a dative.

X.70.2: I take *ṛtasya pathā* in c with ab, as more appropriate with a verb of motion (*yātu* in a) than with *√sūd* in d; cf. I.129.9 *yāhī pathān̄ anehāsā* “drive along a faultless path” as well as exx. with other verbs of motion. However, the existence of other exx. of the sequence *ṛtasya pathā nāmasā* (I.128.2, X.31.2) does give me pause. Ge and Re take the hemistich break as the syntactic break, in contrast to my enjambment, which I still weakly prefer.

With Ge, Old, and Re, I take *miyédhaḥ* as belonging to a neut. *s*-stem, not the thematic *miyédha-* found elsewhere. As Old points out, in other Āprī hymns at the corresponding point we find an obj. *havyám*, *yajñām* et sim.

X.70.4–6: The part. *uśánt-* ‘(being) eager’ figures prominently in these vss. (4d, 5c, 6c [2x]); see also 9d.

X.70.4: Note the pleasing etymological and phonetic figure *dīrghám drāghmā*. On the instr. sg. *drāghmā* (only here) to *drāgh(i)mán-* see AiG III.268. It is striking that the following vs. contains another instr. to a *-mán*-stem, *mahinā* (5c) with a different shape. We might have expected **drāgh(i)nā* here.

X.70.5: Ge (n. 5a and see Re’s tr.) is quite insistent that *vārīyaḥ* is adverbial and does not modify *sānu*, as I take it. This is possible, but I don’t know what “touch more widely” means, and both Ge and Re have to introduce some extra verbiage to make it make sense. See also 8a.

Contra Pp. but with all standard interpr., gen. *prthivyāḥ*, not instr. *prthivyā*.

The apparent nom. sg. *rathayúḥ* is the problem in b, as also in the very similar Āprī vs. VII.2.5. We should expect a fem. nom. pl. here and a fem. acc. pl. in VII.2.5. Old (ad VII.2.5) simply suggests sg. for pl. (accepted by Wack., AiG III.159). But surely this substitution was occasioned by uncertainty on the part of the poet, or the redactors, as to what the fem. pl. form to such a stem should be. I therefore am sympathetic to Gr’s *-yús* for **-yūs*. In any case I don’t know what the chariot is doing here.

X.70.7: Given the position of adverbial neut. *bṛhāt*, it could go with both NPs. I suggest a minor adjustment to the tr.: “the pressing stone is loftily upright; the fire has been loftily kindled.”

The phrasing of pāda b may seem somewhat opaque, but its purport seems clear. The “lap of Aditi” (e.g., IX.26.1, 71.5, 74.5; X.5.7) is generally a kenning for the ritual ground. The point here is that the ritual fire and the pressing stone both have their places there. (Somewhat different, Ge and Re.) For the kindling of the fire in the lap of Aditi, see X.5.7. In the publ. tr. I would erase the ? after “ground.”

The keyword in this vs. is *ṛtvijā*, substituting for the standard *daívyā hótārā* at this point in Āprī hymns.

X.70.8: As in 5a, *vārīyaḥ* is placed pāda-final, following a neut. noun (*barhīḥ* in this case). I take it as modifying this noun; Ge and Re as adverbial. I doubt that the goddesses are urged to sit as far apart as possible, as a species of social distancing; rather, that the barhis has been widely spread. See, e.g., I.85.6 *sīdatā barhūr urū vaḥ sādās kṛtām* “Sit on the barhis; a wide seat has been made for you.”

X.70.9: In the Āprī hymns Tvaṣṭar, as shaper of creatures and releaser of the semen that produces them, is also called on, conversely, to start the journey of one of his created creatures, the sacrificial animal, to its death, a task continued by Vanaspati “Lord of the Forest” (=sacrificial post), who occupies the next vs. in the litany. Because of the taint of death, both the Tvaṣṭar and Vanaspati vss. in Āprī hymns are often euphemistic and/or underdeveloped, and our vs. is no exception. (For further on Tvaṣṭar and Vanaspati and their occasional conflation, see comm. ad II.3.9.) In pāda a “has attained/achieved loveliness” (*cārutvām ānaḥ*) is a reference to Tvaṣṭar’s role as the shaper of creatures, as Ge (n. 9a) points out. Re suggests that the phrase has a loose connection to the epithet *viśvá-rūpa-* ‘having/providing all forms’ that is used of Tvaṣṭar in other Āprī hymns. I do not understand the connection of the Aṅgirasas in pāda b.

Pāda c is almost identical to 10b, addressed to Vanaspati, and so Tvaṣṭar is essentially identified with Vanaspati here, as sending the sacrificial animal “into the fold of the gods.” However, because of its inauspicious nature it contains neither verb nor object. The verb can be supplied from *vakṣī* (‘convey’) in 10b, but the victim is never directly expressed in the Āprī hymns. The object is either gapped or the anodyne ‘oblation’ (*havís-*) is substituted; see *havīṃṣi* in the second hemistich of 10.

X.70.10: The gerund phrase in pāda a, *raśanáyā niyūyā* “harnessing with a halter” comes closer than other Āprī hymns to acknowledging the animal victim. The object is still gapped, but one doesn’t harness a generic *havís-* with a halter.

[X.71–72 JPB]

X.73–74

Two hymns to Indra attributed to Gaurivīti Śāktya. The Anukr. also attributes to him V.29, another Indra hymn, where the poet names himself in vs. 11, and the first two vss. of IX.108. On possible thematic connections between V.29 and IX.108.1–2 see comm. ad IX.108.1–2; for possible thematic connections between V.29 and X.73 see comm. ad X.73.8.

X.73 Indra

On the structure and contents of this difficult hymn, see the publ. intro. Caland-Henry give a complete (though very loose) translation, pp. 301ff., and HPS treats the hymn in a 2002 article, “R̥gveda 10.73” (StII 23).

X.73.1: Note the rhyming forms at the beginning and end of the vs.: # *jāniṣṭhā(h)* ... (*d*)*hāniṣṭhā*, though they are morphologically distinct: 2nd sg. mid. injunctive and fem. superlative respectively.

The adj. *ugrá-* in pāda a is matched by its superlative *ōjīṣṭha-* in b, whose etymological identity would have been clear to Vedic speakers despite their phonological divergence.

On the various meanings of *abhí√man* see comm. ad X.27.11. Here I think the sense is ‘designs on / intentions towards’, i.e., ‘plans’. I don’t know where Ge gets his “von reichlichem Selbstgefühl.”

The pf. subj. *dadhánat* is anomalous in two ways: 1) it appears to be transitive, though most of the other forms of the pf. of *√dhan* are intransitive (incl. *dadhanvān* in X.113.2; see comm. ad loc.) (see Kü 255–56); 2) it does not have the usual value of the perfect subjunctive. As I established in my article on the perfect subjunctive (García Ramón Fs.), the vast majority of these forms supply the only subjunctives to their roots and have simple subjunctive value (“will/shall X”) without any “perfect” nuance at all. However, such an interpr. does not work here: the form is in a subordinate clause, whose main clause has an imperfect (*āvardhan*), and the whole refers to the mythic past, the birth of Indra. As far as I can see, it is not possible to avoid interpr. *dadhánat* as a past prospective (Kü 156: “Prospektiv der Vergangenheit”) “was going to set to running / moving.” Whether the two anomalous features are related is not clear.

We might, however, try to figure out the mythological situation being depicted. And in my view this requires taking a closer look at the superlative that ends the vs.: *dhāniṣṭhā*. On the surface, we have a straightforward, somewhat banal, etymological figure *dadhánad dhāniṣṭhā* “(she), the best runner, was going to set (him) to running.” However, in this sandhi position, the superlative could also stand for *hāniṣṭhā* to *√han* ‘smite’. Recall that Indra’s birth was a troubled one, at least as depicted in the famous hymn IV.18, where Indra in utero declines to be born vaginally and instead comes out of his mother’s side (IV.18.1–2). I wonder if *√han* in a birthing context could refer to what is called “pushing” in modern English: the movements the mother makes to expel the fetus from the birth canal: “slamming” might be what *√han* expresses. Thus “best at pushing/slamming” would identify Indra’s mother as possessing the skill and strength to give birth even to Indra, despite his prodigious qualities. I also wonder if *dadhánat* refers to the movement of the baby through the birth canal: “she, best at pushing, was going to set him in motion.” The perfect subjunctive here might express a potential thwarted: she was going to make him move through the birth canal, but he went out her side instead.

Alternatively, we might consider the rather confused situation depicted later in IV.18. At various points in that hymn it seems that his mother abandons him and goes away (IV.18.3, also 4, 8), which could fit with the reading *dhāniṣṭhā* “(she) best at running (away).” But closest to our phrase is the sequence in IV.18.10–11, in which (in my interpr.) his mother “impelled her calf to wander” (10a, c ... *sasūva* ... *vatsān carāthāya mātā*) and then followed after him (11a *utā mātā mahiṣām ānv avenat*). Our *dadhánat* could correspond to vs. 10 and *dhāniṣṭhā* to 11a – though I prefer my birth interpr. A final alternative interpr. of *dadhánat* could take it as intransitive, referring to the mother’s own running, following after her son, as in IV.18.11a.

So, to summarize, I have suggested three different interpr. of the obscure pāda d, one depicting the birth itself, two soon after the birth:

1) When the mother, best at pushing/slamming, was going to set the hero in motion [=expel him from the birth canal].

2) When the mother, best at running [/smiting], was going to set the hero to run [=send him away from her].

3) When the mother, best at running, was going to run after the hero [after she had sent him away].

I prefer no. 1.

Any of these interpr. rests on taking IV.18 as a widespread, fairly standard depiction of Indra's birth – an assumption that we can, of course, not count on. One thing that calls into question my use of IV.18 as background for our vs. is the fact that the Maruts do not figure in IV.18, though in X.73.1 they occupy the main clause (c) on which our *yád* clause is dependent. I do not know other references to Indra's birth that involve the Maruts.

X.73.2: This vs. is considerably more baffling than even the one before. But we do have one thing to hang onto: pāda b ... *vāṽrdhuṣ tā índram* echoes 1c *āvardhann índram* ... Since the Maruts are the subject in 1c, they are likely the referents of *té* in 2b. This further suggests that the female in 2a is identical to the mother in 1d. The pādas in the two hemistichs are simply flipped: 1cd: Maruts / Indra's mother; 2ab Indra's mother / Maruts. This is essentially Ge's view of the structure too (n. 2a), though I don't quite understand his view of the sense of pāda a.

It further seems that the fine plans that Indra's mother had in 1d have not come to pass, and she is considerably chastened (*nīṣattā* 'sunk down'). I agree with Ge that what has reduced her to this state are the "ways of deceit / the activities of the Lie," referring to harm intended for her infant Indra by enemies, not any hostile actions against him on her part. But the enemy/enemies is/are not identified. Old is in general agreement, though he considers the possibility that it is the mother whose hostility against her son is at issue. He also toys with the female as the Maruts' mother, on the basis of the similarity between the word *prśanī* and the Maruts' mother *Prśni*, but though a phonological play is surely intended, the structure of the passages imposes Indra's mother.

Despite her demoralized state, she still expresses affection for the newborn – or so I interpr. *prśanī*. On the fem. stem *prśanī* as well as related forms, see comm. ad IX.97.54. The two fem. pl. forms *prśanyàs* (I.71.5, IX.97.54) seem to mean 'caresses' (Re EVP XVI.137: "gestes d'amour pour attirer"), but our nom. sg. occurrence must refer to a person and hence an agent: caresser, one who caresses. I do not, with Ge and Re (loc. cit.), think it has developed here to mean 'courtesan' or the like: Ge Buhlerin, EWA Liebeslockung, Buhlerin, Kurtisane. Rather, Indra's mother is bestowing affection on her newborn, despite the circumstances.

Starting with the 2nd hemistich of this vs. through the first one of vs. 5, the contents become extremely obscure, though much of it seems to concern prodigious births and Indra's part in them. For my quite speculative interpr. see publ. intro.

With most others I take *tā* as neut. pl. referring to the worlds or beings (see Ge n. 2cd). They are "covered over" (*abhīṽṛtā*) by a great footprint (*mahāpadéna*) that seems to obstruct light and movement, but the same covering seems to have sexual overtones (as in a cow "covered" by a bull), given the immediate production of *gárbhas* in the next pāda. It seems likely that the footprint is Indra's, since his feet feature in the next vs., 3a.

Ge (n. 2d) takes the embryos as everything that comes out of the darkness, esp. rivers and the lights of heaven – which makes it sound like a mash-up of the Vṛtra and Vala myths. Old suggests d depicts the Maruts’ birth, but gives no evidence. I’m more inclined to see the referents as generic living beings, which could be generated by a sexual encounter – since it seems likely that Indra impregnated the worlds when he covered them with his big “foot.” But since I really don’t know what’s going on in these vss., I am not insistent.

X.73.3: As was just noted, Indra’s “lofty feet” (*ṛṣvā ... pādā*) here suggest that the big foot of 2a is also Indra’s.

In b Indra is once again strengthened (*āvardhan*), but his strengtheners are no longer the Maruts as in 1c and probably 2d), but the Vājas and unspecified others who were on the scene (*utá yé cid átra*). Caland-Henry (302) think these latter are the Maruts, and the repetition of *cid átra* from 1c might support this identification. As for the Vājas, Ge, flg. Sāy., takes them to be the Ṛbhus. It is certainly the case that plural *vāja*- is used of, or at least adjacent to, the Ṛbhus (e.g., IV.36.2–4, 7), but the Ṛbhus aren’t, as far as I know, ordinarily implicated in Indra’s birth or strengthening.

Pāda c brings the surprising intrusion of the hyenas (*sālāvṛkân*), a thousand of which Indra takes into his mouth. Ge (n. 3c) thinks this is a measure of the great size of Indra’s mouth, esp. given the fearsomeness of the jaws of the hyenas. He explicitly denies that the mention here has anything to do with the “bekannte Sage,” in which Indra feeds a group of priests to hyenas. As I discuss in my extensive treatment of this “well-known saga” (*Ravenous Hyenas*, 1991), I think Ge is wrong here. The word *sālāvṛká*- and its relatives are rare in Vedic; it only occurs twice in the RV, and only once in connection with Indra. It seems extremely unlikely that the widespread Brāhmaṇa story (already in Saṃhitā prose) of Indra and the hyenas isn’t in the poet’s mind. I treat this RVic passage in *Hyenas* pp. 78–79 and argue that our RVic passage depicts a scene of parental tenderness: adult hyenas carry their young in their mouths like cats. Here I think the *gārbhas* that Indra generated in 2cd are now being carted around in his mouth.

But the scene shifts abruptly to current-day ritual, and Indra is urged to turn the Aśvins our way, presumably to the early morning sacrifice that they are esp. associated with.

X.73.4: The journey of Indra and the Aśvins continues in 4ab, with 4b a slightly elaborated version of the last two words of 3cd (*aśvínā vavṛtyāḥ*). But in the second half of the vs. we return to matters of procreation in the past.

The adv. *samanā* ‘in the same way’ must refer to Indra’s repetition of his habitual journey to the sacrifice. It may also be meant to play off *sānāmānā* in 6a, likewise vs.-initial. Gr suggests that in this passage *samanā* introduces the first clause in a coordinated structure “sowohl ... als auch,” and a similar interpr. seems to underlie Caland-Henry’s “En même temps que ...” (302), but this adverb is not otherwise so used, and in any case I think we’d expect the first verb to be accented.

I would now change “—swiftly—” to “advancing, you drive to the sacrifice,” with a more apt sense of *tūrṇi*-. For the meaning and root affiliation of this stem, see comm. ad III.11.5.

The rendering of *sakhyāya* as ‘fellowship’ in the publ. tr. would be better as “for comradeship” to harmonize with *sākhibhiḥ* in 5b.

The difficult 2nd hemistich is parallel to the difficult 2nd hemistich of 3:

3cd *tvám indra sālāvṛkân sahásram, āsán dadhiṣe (I) aśvínā ...*

4cd *vasāvyām indra dhārayaḥ sahásrā, (I) aśvínā ...*

The points of contact include the direct object ‘thousand(s)’ (*sahásram, sahásrā*), a 2nd sg. verb ‘take, hold, make fast’ (*dadhiṣe, dhārayaḥ*), a loc. indicating where the thousand(s) are held (*āsán, vasāvyām*), and an abrupt shift to a new clause beginning *aśvínā* -- as well as a voc. *indra* (the least important point of contact). Though both half-verses are difficult to interpr., they should be interpreted in tandem, or at least as deliberately contrastive. As indicated in the publ. intro., I think 4cd is another depiction of prodigious birth, with Indra engendering thousands of offspring in a single female. I don’t think that these thousands are the same ones Indra was carrying in his mouth in the previous vs. – though that is far from excluded, esp. if we take 3cd as chronologically later than 4cd (as often in RVic recountings of myth). But whether they are narratively connected or not, the point is that Indra is responsible for massive fertility.

The otherwise unknown female *vasāvī* can be either the wife of a/the good one (*vāsu-*) or of someone named Vasu (see Mayr. PN s.v.). I favor the former, since Indra’s fecundity is clearly viewed favorably.

X.73.5: In my view, the first hemistich summarizes the accounts in the last few vss. of Indra’s generative powers: Indra achieved his goal (*ártham, b*), which was to produce progeny (*prajāyai, a*; on *prajāyai* as a quasi-infinitive see also VII.36.9 and possibly the preceding hymn, X.72.9). He did so “from truth” (*ṛtād ádhi*), that is (probably), from his adherence to the sacrificial model and to proper procedures. See I.36.11 where Agni is kindled *ṛtād ádhi*. My interpr. of the sense would be clearer with some rearrangement: “... with his vigorous comrades Indra (went) to his goal, to produce progeny from truth.”

Indra reached his goal along with, or with the help of, his comrades (*sákhībhiḥ*). Although Indra has been prominently associated with the Aśvins in the last few vss. (3d, 4b, d) and indeed he conveyed them “for comradeship” (*sakhyāya*) in 4b, the plural of *sákhībhiḥ* cannot be exclusively identified with the two Aśvins. Perhaps, with Sāy., the Maruts (see Ge n. 5b), who figured in vss. 1–2, or all the sidekicks previously named: the Maruts, the Vājas (/Ṛbhus?) and the others there at the time (3b), as well as the Aśvins.

The topic of procreation is now at an end, and the poet turns to more usual Indraic fare, his great victories over enemies. The first up is a *dasyú-* who may well be Vṛtra, since the foe has *māyās* (see I.32.4 *māyínām ... māyāḥ* “the wiles of the wily one [=Vṛtra]”) and the battle takes place amid mists (*míhaḥ*) and darkness that have been scattered (see I.32.13), both passages in the great Indra-Vṛtra hymn I.32. I do have to note that Namuci is rendered “without wiles” (*vímāya-*) in 7b, so it is possible that Namuci is the referent here.

Essentially all comm. and tr. supply *māyābhiḥ* with *ābhiḥ* in c, for good reason.

Again with all comm. and tr. (Ge, C-H 302, Lü 180, HPS), I take the *hí* cl. of c with the main cl. of d.

X.73.6: The action and personnel (besides Indra) in the first hemistich are not clear. As for personnel, there are two “of the same name” (*sánāmanā*) as well as a singleton in the dative. If we start with the latter, we can begin to unravel the passage, for the dative is the unaccented *asmai*, which must refer to a referent already in the discourse. In my view, this can only be the *dasyú-* of 5c – though Ge (n. 6a) suggests rather Namuci, who figures in vs. 7, and HPS also considers this possibility. However, unaccented *asmai* speaks against this (unless Namuci is the *dasyú* in 5c, which is possible but less likely than Vṛtra, in my opinion – despite *vímāya-* in 7b; see disc. just above).

To get closer to an identification of the two “of the same name,” we must first tackle the verb *ní dhvasayaḥ*. The stem *dhvasáya-* (3x) belongs to the root \sqrt{dhvam} s ‘smoke’ (in my view), and as I discussed in my *-áya-Formations* monograph (54–55), I consider all three occurrences intransitive, in the sense ‘smoke, produce smoke’. The two occurrences of the participle in I.140.3, 5 refer to Agni and his flames respectively, and an intransitive sense seems to me clear, though those who wish to impose a transitive interpr. (like Ge) supply objects. The occurrence here is generally taken as transitive; see not only Ge, but Gotō (1st Class, 60 and 190, with lit. in n. 351). The object is taken to be the dual *sánāmānā*, and the referents are then identified as the two wives of Namuci, who are supposed to be hostilely dealt with in I.104.3 and V.30.9. All of this turns out to be a tissue of speculation, which evaporates on examination. In V.30.9 women are mentioned in the context of Namuci, but these women are *plural* (*stríyaḥ*). Moreover, Indra does them no damage. In I.104.3 there are indeed *two* females, but there is no mention of Namuci in this hymn; in fact they are called “the two maidens of Kuyava” (*kúyavasya yóṣe*). Though a bad end is wished for them, they have nothing to do with Namuci. (For further on these passages, see comm. ad locc. and publ. intros. to both hymns; in both cases I think we’re dealing with rivers.) Thus, not only is *asmai* unlikely to refer to Namuci on syntactic grounds, but Namuci is not elsewhere associated with a pair of females.

Moreover, *sánāmānā* need not be – and in fact is unlikely to be – feminine. The number of feminines built to *n*-stems is quite limited; see Lanman (Noun Inflection, 528). However, Lanman cites a number of fem. bahuvrīhis built to *-nāman-* in the AV, which are suffixed with *-ī*, e.g., *durnāmnī-*, *pāñcanāmnī-*, etc. Though no such forms are found in the RV, in this late hymn it is likely that the AV practice would have been followed (expect **sánāmnī-*). Therefore *sánāmānā* is probably masc. What then are its referents? Old suggests dual body parts of the Dasyu or Indra’s two *hárī*, neither of which is terribly plausible. Ge (n. 6a) reports Fay as suggesting Vṛtra and Dānu. (Sāy. is silent on referents.) We need to ask: in the context of this hymn who would be “the two with the same name”? This produces an obvious answer: the Aśvins ([Nāsatyas]), who have been insistently mentioned by name in the dual in 3d, 4b, 4d. What has impeded accepting this obvious answer has been the assumption that the two of the same name must be enemies of Indra subjected to a hostile action expressed by the verb *ní dhvasayaḥ*, and the Aśvins would not fit. But if the verb is neither transitive nor necessarily hostile, the way is cleared. In my view *ní dhvasayaḥ* continues the picture of the immediately preceding pāda, 5d, where Indra scatters mist and darkness to obfuscate the place of battle. Here he sends down smoke for the same purpose; the smoke is “for” the Dasyu (*asmai*), a dative of malefit. But it also beclouds his companions, the Aśvins. Note that the Aśvins are called *dhvasrā* in X.40.3, and since they travel in the early morning, it is not surprising that they become obscured by morning mist and, here, by Indra’s smokescreen.

In c *ṛṣvā-* ‘lofty’, which characterized Indra’s feet in 3a, returns to modify his comrades (*sákhībhiḥ*) of 5b.

Opinion is divided on the morphological identity of *pratiṣṭhā hṛdyā*. The Pp. reads both words with final *-ā*, hence as instr. sgs. Old accepts the Pp. reading, as does Scar (651–52), supplying the enemy as object of *jaghantha*. Gr reads underlying *pratiṣṭhās hṛdyās*, fem. acc. pls., perfectly possible in this sandhi context. In this he is followed by Ge, C-H, HPS, and the published tr. Although either is technically possible, I find it harder to imagine how Indra would wield “firm standing / foundation” as a weapon, so I prefer the acc. interpr.

X.73.7: On Namuci as *vīmāya*- see disc. ad 5c. On the connection of Manu's path with Namuci, see V.30.7.

The identity of the "seer" in b, for whose benefit Namuci was rendered wileless is not entirely certain. It most likely refers to Manu, also benefited in pāda c. But Ge (n. 7b) alternatively suggests Namī Sāpya, who is associated with Indra in the Namuci battle in I.53.7 (see comm. ad loc.) and VI.20.6 (see also X.48.9).

X.73.8: The expression *nāmāni* √*prā* "fulfill (your) names" is found also in the next hymn (by the same poet), X.74.6. It must refer to Indra's performing the deeds encapsulated in his epithets (so also Ge, n. 8a) and gestures towards the complex interrelationship between words and actions in Vedic India. For a similar exploration of this theme, see VIII.80.

The object of *dadhiṣe* in b is most likely the names of pāda a, producing a strikingly physical image of Indra holding his names in his fist.

Pāda c is almost identical to I.102.1, but in scrambled order. As I did there, I take *śávasā* as referring to Indra's power, which incites the gods' acclaim. Ge (and others) take it as semi-adverbial (Ge "mächtig"), referring to the energy with which the gods cheer Indra on.

The puzzling pāda is d, and my interpr. is quite different from the standard, in two ways. The standard assumes that *vanínaḥ* must refer to trees, but, though *vanín*- often has that referent, it literally just means 'wooden, having wood' and, in my view, could refer to any wooden object. My second deviation from the standard is more controversial: I suggest that d should be read with the first pāda of the next vs. (9a), with 9b beginning a new clause. I do not make these departures lightly, but the standard interpr. seems to me to lead to very unlikely scenarios and also produces syntactic problems in 9ab. Ge (n. 8d) suggests that turning the trees upside down, with roots facing up, is just a metaphorical expression "für die umwälzenden Taten des Indra," but the image seems too precise to serve vague metaphorical ends. HPS tr. "You have made the trees aboveground," suggesting that Indra's separation of the two world halves allowed the trees to grow (not a standard result of this standard cosmogonic deed). I think rather that the 'wooden' things are chariots or pieces of chariots, including the wheel in 9a, and that this is another obscure reference to the chariot race between Indra and the Sun, in which Indra tears the wheel off the Sun's chariot and also reverses the position of the chariots (a topsy-turvy image). See the tantalizing hints in the Indra hymns of the Vth Maṇḍala, esp. V.29.5, 9–10 and V.31.11). I unfortunately don't have a precise image in mind, but the sudden reversals in the passages in V and the prominence of the wheel there suggests that this is a promising direction to explore – esp. since the poet of our hymn is also the poet of V.29, per the Anukramaṇī. (One can also think of Karṇa's wheel stuck in the earth in the climactic MBh battle.) Given the uncertainties of the situation depicted, the referent of *asya* is not clear to me, but see below.

X.73.9: For my suggestion that 8d and 9a form a sentence, see immediately preceding disc. One of the further advantages of this interpr. is that, if the *yád* clause of 9a leans backwards, this configuration avoids the awkwardness of trying to make 9b, with its initial *utá*, into its main clause. Both Ge and JSK (DGRV I.453) give *utá* the sense 'also' here, but *utá* is of course a coordinating conjunction and should not connect subordinate and main clauses. (However, see the disc. of problematic *utá* in 10b.) Moreover, the sense Ge and JSK give the whole – that Indra can find the good in any situation, even one like 9a – seems foreign to Indra's character; he is no Pollyanna-esque optimistic stoic.

Note that *nīṣattam* reprises *nīṣattā* in 2a, of Indra's mother.

In the 2nd hemistich Ge (et al.) once again tries to impose a subordinate clause (c) / main clause (d) structure, but once again runs into textual difficulties, because the verb in d (*ádadhā(h)*) is accented. Ge suggests, rather weakly, that it's accented because it's between two vocatives (n. 9cd); Old's account is similarly unsatisfactory. The syntactic solution seems to me obvious – to take d as part of the *yád* clause begun in c, with both of them subordinated to b. I further take *yád* as a neut. rel. prn. (not a subord. conjunction), with *tád* in b as its antecedent. The *yád* agrees with both *ūdhaḥ* and *páyah*.

With the syntax sorted out, we can turn to the sense. The assumption of Ge et al. seems to be that c depicts a bad situation that Indra remedies in d. Exactly what is supposed to be bad in c is not clear, and the fact that the lexeme *áti* √ *sā* is otherwise unattested doesn't help (see Ge n. 9cd). I think rather that c and d are benefits conferred by Indra: he positioned the udder, presumably abounding in good things, on the earth and put milk in the cows and plants. All of this seemed should/would seem good (“seem honey”) “to him” (*asmai*), who must be a beneficiary of Indra's positive actions. The referent of *asmai* is probably the same as that of *asya* in pāda. It could perhaps be Manu (see ad 7), though this is less likely for a than for b.

X.73.10: Note that Old makes no comment on this vs. – surely not because he found it crystal clear!

Leaving aside the content, the structure of this vs. is very challenging and may undercut my argument about *utá* in 9b, as it is difficult to interpret *utá* as a coordinating conjunction in pāda b (though see an attempt below). The most natural way to interpr. ab is with pāda a as a subordinate clause whose main clause is b, expressing two contrastive views of the source of Indra's birth, one held by unidentified 3rd pl. ‘they’, the other by me. This interpr. is reflected in the publ. tr., with *utá* arbitrarily rendered as ‘rather’. In a similar vein, JSK (DGRV I.447–48) suggests that here and in a few other passages “the scope of *utá* is limited to some constituent of its clause,” here the person of the verb: 1st sg. *manyē* versus 3rd pl. *vádanti*. He tr. “When they say, ‘he has gone (forth) from the horse,’ (then) I also (i.e. for my part) think him to be born from strength.” The problem is that there are 752 occurrences of *utá* (per Lubotsky), and at best not even a handful of them need this “scope” interpr. This interpr. also leaves pāda c somewhat hanging: who holds that Indra came from battle-fervor – the “they” of a, the “I” of b, or some other entity or entities? Is c the *real* story of Indra's birth? Probably not, since d indicates that no one know that but Indra. But the close parallelism between the expressions in a and c, ABL *iyāya*, carries no rhetorical weight in this interpr.

My tentative – and quite arbitrary – attempt to account for the *utá* and for the floating pāda c involves taking b as a parenthetical aside; c then is either what “they” really mean when they say he comes from a horse, or else an alternative, possibly the dominant view. In either case the obvious contrast between the phrases in a and c is properly exploited. I therefore suggest the alternative translations: “When they say ‘he came from a horse’ – and I think of him as born from strength – (they mean) ‘he came from battle-fervor ...’” Or “While they say ‘he came from a horse’ – and I think of him as born from strength – he (really) came from battle-fervor ...”

The sense of *harmyéṣu tasthau* is also unclear. Ge (n. 10c) thinks that the jealous gods imprisoned Indra after his birth, but I see no evidence for this. I think rather that *harmyá-* refers to the womb. It is even possible that the beginning of d should be construed with this VP: “he stayed in a secure house (=womb), from which he came forth,” with “Indra knows this” a separate clause.

In any case this vs. returns us to the 1st vs. of the hymn, indeed the first word: *jāniṣṭhāḥ* ‘you were born’. Since the final vs. (11) is a summary vs. detailing the requests of the poets, vss. 1 and 10 are conceptually ring compositional, but contrastively. It is striking that the beginning of the hymn focuses on Indra’s *mother’s* role in his birth, whereas the various suggestions for Indra’s origin in vs. 10 are either masc. (‘horse’, ‘battle-fervor’) or neut. (‘strength’). There is also more certainty about the facts of the birth at the beginning than in this vs.

X.73.11: As just noted, this is a summary vs., unrelated in content to the rest of the hymn. This is also the only appearance of the Priyamedhas in X; they are more at home in VIII.

ūrṇuhí is accented because of its contrastive proximity to *pūrdhí*.

X.74 Indra

Although Ge suggests that the theme of the hymn is a plea for the dakṣiṇā, I see no evidence for this – nor for his previous view (registered and rejected by Old) that it celebrates a victory in racing.

X.74.1: This vs. provides an unusual number of disjunctive possibilities for objects and instruments of celebration: the vs. contains 5 occurrences of *vā* ‘or’. Perhaps this wide range at the beginning makes the narrowing focus on Indra in the 2nd half of the hymn more pointed.

With Old (implicitly), I supply *sumnām* ‘favor’ as obj. of the part. *īyakṣan*, as in I.153.2, II.20.1, X.50.3. Ge (also Scar 557) instead makes the objects of praise (Vasus, world-halves, etc.) the objects of *īyakṣan* as well as of *carkṛṣe*. This is not impossible, but does require doubling the genitives with *carkṛṣe* with supplied accusatives to serve as objects of *īyakṣan*, which does not take the gen.

As Ge points out (n. 1b), *dhiyā vā yajñāir vā* is reprised in 3c by *dhīyaṃ ca yajñāṃ ca*.

The two pādas in the second hemistich are syntactically parallel: both contain *yé* rel. clauses with the genitive antecedent (complement of *carkṛṣe*) gapped and the nominal expression of it found as nom. pl. in the rel. clause “... pay tribute to (those), which steeds ...,” etc. Needless to say, a literal rendering of these constructions produces non-parsable English.

(*su*)*śrúṇa-* is a hapax; such a *na*-stem is not otherwise found to *√śru*. It may have been created to split the difference between *vanúm* and *suśrútaḥ*.

X.74.2: With Ge I interpr. *háva* as loc. *háve*, against the Pp and Old. In favor of Old’s analysis (“asurischer Ruf den Himmel erreichte”) is 3a *īyám eṣām ... gīḥ*, with a nom. sg. of a verbal product plus dependent gen. *eṣām*. But I find *ásura-* as a qualifier of ‘call’ unlikely; it is the only such passage registered by Gr. The more likely subj. is Agni; see Ge’s n. 2a for *dyām √naś nakṣ* with Agni as subject and WE Hale (68–69) for Agni as *ásura-*. It is characteristic of Agni that his smoke (and flames) reach heaven while he spreads across the earth.

Of the three finite verbs in this vs., *nakṣata*, *nīṃsata*, and *kṛnávanta*, the last one is an unambiguous subjunctive, and the second one is most likely subj. as well: though Gr classifies it under a them. *nīṃsa-*, the few other forms to this (secondary) root are all athematic (as Gr recognizes): 3rd pl. *nīṃsate*, part. *nīṃsāna-*. (Wh Rts gives only a Class 2 pres.) By contrast *nakṣata* looks like the injunc. to the well-attested thematic stem *nákṣa-*, and this may well be so, since injunctives can mix with modal forms – though an *s*-aor. subjunctive to *√naś* can’t be formally excluded.

On the semantics of *√nīṃs* see comm. ad VIII.43.10.

Ge (fld by WE Hale, p. 69) takes *cākṣāṇā(h)* as intrans. ‘appearing’, but med. *cāṣṭe* (etc.) overwhelmingly has the sense ‘see’, even when used absolutely without expressed object. In the publ. tr. I take the dat. *suvitāya* as what the gods are looking out for; it would also be possible to supply an acc. obj. like *vīśvā*, as in IX.57.2 *vīśvā cākṣāṇaḥ* “observing all,” with the dat. serving as goal: “surveying (all things) for easy passage.”

Ge’s (and Hale’s) interpr. are also unpersuasive because the simile in d is left hanging: “während die Götter ... es sich nach ihren eigenen Wünschen einrichten sollen wie der Himmel”; “while the gods ... will act by their own desires like the sky.” Doing whatever it feels like is not a quality I associate with heaven; instead I think we have an incomplete simile, which lacks an instr. parallel to *vārebhiḥ* ... *svaīḥ*, which, however, is easily supplied: *stṛbhiḥ* ‘with stars’ (cf. for the full simile II.2.5, 34.2, IV.7.3). The use of the medial *kṛṇávanta* is idiomatic: ‘make oneself (to be) with, provide oneself with’. The idea is that before their journey to the earth, the gods provide themselves with desirable things proper to themselves to distribute in return for sacrifice. The ritual reciprocity is described in the following vs. (3).

X.74.3: *kṛpánanta* echoes *kṛṇávanta* in 2d; it’s worth noting that this is the only form built to this stem.

X.74.4: The verbal echoes continue, with *pananta* (pāda a) reading like a truncated form of *kṛpánanta* in 3b.

The vs. is notable for containing two desideratives in parallel rel. clauses with the same subject, one subjunctive (*títṛtsān* b) and one injunc. (*dudukṣan* d). It is not clear to me what the functional difference is between the two, and unfortunately Heenen (Le désidératif en védique) does not discuss the functions of modal forms to the desiderative or even list the relevant forms. (For the latter see Avery, Verb Forms of the Rig-Veda 1268–70, and Lanman, Vedic Gr. 389. Unfortunately both omit the injunc. *dudukṣan*.) Of *títṛtsān* Heenen says (149) that the verb “fait référence à un effort intense de volonté, suscité par l’émerveillement pour la récompense,” but this reflects his usual ad hoc imposition of context on morphology. I do think that we must take the modal difference between the two verbs seriously: although, being pāda-final, there is no metrical difference between subj. *-ān* and injunc. *-an*, it is highly unlikely that redactors would have introduced the difference – much more likely that the two endings would have been secondarily harmonized. In trying to figure out what’s going on, we are hampered by the fact that the role of the plural *Āyus* is not well defined. Gr considers the pl. to refer to men who are active in the service of the gods. Certainly almost all of the plural occurrences are found in specifically ritual situations, esp. the preparation of soma. Note in particular IX.62.20 *páyo duhanty āyávaḥ* “The *Āyus* milk the milk [=soma],” with the same root as here -- though this may be a red herring (see below).

My suggestions in what follows are extremely tentative. I start with the assumption that the desiderative subjunctive *títṛtsān* expresses an action that the *Āyus* desire to perform that temporally and logically follows the action of the desiderative injunctive *dudukṣan*, even though the rel. clauses are in the opposite order. I further assume that this logically sequential action is drilling into the Vala cave, “the enclosure full of cows” (*ūrvám gómantam*), to reach and acquire/free the cows. The logically prior *dudukṣan* must be what might enable them to do this: the milking of the great lofty (cow) with a thousand streams. As it happens, this cow is found elsewhere in the RV, esp. in two identical hemistichs: IV.41.5cd = X.101.9cd *sā no duhīyād yāvaseva gatvī, sahásradhārā páyasā mahī gauḥ* “She should yield her milk to us like a great cow

with her milk in a thousand streams who has gone to the pastures.” (See also X.133.7d, which is identical to the other d pādas.) Who is this prodigious cow? In IV.41.5=X.101.9 it is quite clearly identified as the *dhî-*, the inspired or visionary thought (IV.41.5b, X.101.9a)(in X.133.7 there is no referent, but *dhî-* is certainly not excluded). I suggest that the milking of the *dhî-* is at issue here as well: the Āyus must milk all the good out of their *dhî-* in order to penetrate the Vala cave and reach the real (or at least real-er) cows. Note that *dhî-* has occurred twice already in this hymn (1b, 3c); further the Āyus are elsewhere associated with ritual speech (I.117.25, 130.6, 131.2, 139.3; II.31.7; VIII.3.7–8). And of course the opening of the Vala cave was effected by speech and song, not by brute force. It is a nice touch that to reach the real cows the Āyus have to milk a metaphorical cow. For clarity I would now slightly rephrase the last three pādas of this vs. to “... -- they who will intend to drill through to the enclosure full of cows, who strive to milk the great (cow [= visionary thought]) ...”

It should be noted that the only other occurrence of *dudukṣan* (there unaccented) is in the devilish hymn X.61.10 also in a Vala context, where I take it to refer to the milking of the Vala cave itself (see comm. ad loc.), but not much can be made dependent on the interpr. of that hymn.

X.74.5: With Old (et al.), it is best to take *śácīva(h)* as displaced from a voc. phrase *śácīva indra*, as in I.53.3. This voc. is overwhelming applied to Indra.

On *suvṛktī-* as a secondary bahuvr. applicable to gods who receive hymns, see comm. ad II.4.1. It modifies Indra in X.104.7.

X.74.6: There is some disagreement about several words in pāda a: the verb *vāvāna* and the root-noun cmpd. *purāṣāt*. To start with the latter, though the standard view is that the cmpd. consists of adverbial *purā* ‘earlier, previously’ (e.g., Gr, Scar 604), with the cmpd meaning ‘previously victorious’ vel sim., Ge, flg. Sāy., renders it ‘Burgenzwinger’, without providing a morphological analysis. Such an interpr. would require that the 2nd member be a preverb-verb combination *ā√sah*, which does not occur, with the root noun *pūr-* ‘fortress’ as first member. Even if *ā√sah* did occur, root-noun cmpds don’t contain both a nominal 1st member and a preverb, as I’ve discussed elsewhere (Lamberterie Fs.). If the 2nd member is only *śāh-*, then the 1st member would have to be a case form of *pūr-*, but the instr. doesn’t work semantically and there are no other possibilities. I like ‘previous victor’ vel sim. for another reason: it contrasts nicely with *purutāmam*. Although most interpr. take the latter as adverbial (Ge, Scar “am häufigsten”), if we take the *-tama*-suffix as expressing not a superlative but the last of a series (as is common), Indra is identified as a victor both long ago and right this minute.

As for *vāvāna*, in contrast to the near-universal interpr. as the pf. to *√van* ‘win’, Kü (448–49) assigns it instead to *√vanī* ‘love’, for complex reasons that I will not rehearse because I find them implausible.

Note the return of the expression “fulfill his names,” as in the previous hymn X.73.8.

X.75–76: The Anukramaṇī attributes these two hymns to different poets, Sindhuṣṭit Praiyamedha and Jaratkarna Airāvata respectively. The contents of the two hymns are also quite distinct. Nonetheless, it is best to follow Old (Prol. 236 n. 3) in assuming the two hymns belong together, since they are found in the midst of the series of dyads (X.61–84).

X.75 Rivers

The first few vss. are dominated by the preverb *prá* ‘forth’: pāda-initial in 1a, c, d, 2a, internal in 2c, 3c).

X.75.1: There is much disc. of the numerical phrase *saptá-sapta tredhā*. In addition to Ge and Re, see Lü (684–86), Mau (203–4), also Kü (146). Mau’s disc. seems the most sensible: he thinks we’re dealing with three geographical groupings consisting of (roughly) seven rivers apiece, rather than a straight multiplicative 3 x 7. The number of rivers named in vss. 5–6 is eighteen (by my count) – close enough to seven groups of three. For a similar expression used of the river Sarasvatī see VI.61.12 *triśadhāsthā saptādhātuḥ*.

I do not understand the placement of *hí* in c.

Ge (n. 1d) suggests supplying *sasre* in d. Given the repetition of *prá*, I prefer to continue with a form of \sqrt{kram} as in c (*prá ... cakramúḥ*).

X.75.2: The gen. pl. phrase *eṣām ... jágatām* is interpr. by all as referring to the rivers (e.g., Re “... de ces (rivières) mobiles”), and this is quite plausible, esp. given 1d. However, ‘river’ is of course fem., and adjectives modifying the rivers should be fem. too (like *sītvarīṇām* in 1d). But *eṣām* identifies the phrase as masc.; the contrast between *eṣām ágram* here and fem. *āsām ágram* in 4d is quite pointed. I’m afraid we must take *jágat-* as a quasi-masc. substantive here, though it does presumably refer to the rivers.

X.75.3: On *bhūmyā* as instr., pace Pp., Gr, see Old.

Apropos of *śúśmam* in b, In VI.61.2 the river Sarasvatī is compared to “a root-grubbing (boar) with its snortings” (*śúśmebhir bisakhā iva*); see comm. ad loc.

I read *vṛṣṭāyaḥ* both with the simile, as “real” rain, and with the frame, as the spray from the rushing river. “The rains thunder” is a type of synaesthesia or, at any rate, the conflation of two separate phenomena related to a single event: rain and thunder associated with a storm. Re’s “Les pluies (pleuvent) comme (les tonnerres) tonnent” sorts the two phenomena into separate, more logical categories – losing the concentrated poetic focus. Moreover, his rendering is grammatically impossible, as RVic similes always share the same verb.

X.75.4: Note that vs.-initial *#abhí tvā* slightly echoes 3c *#abhrād iva*

The first hemistich presents Sindhu as a helpless calf to whom the motherly cows flock. This might seem like a reversal of the depiction of the power and dominance of Sindhu over the other rivers (1d, 2d), but of course the other rivers are bringing their “milk” to contribute to her strengthening stream.

If there was even a moment of doubt about her dominance, it is dispelled by the second hemistich, with Sindhu as a “battling king” (*rājeva yúdhvā*).

X.75.5–6: These vss. enumerate the names of rivers. As indicated in the publ. intro., much has been made of this list for the geography of NW India, and I refer the reader to such discussions, e.g., that of Mau.

X.75.8: The two hapaxes *sīlāmā(-vatī)* and *madhuvṛdh-* are plausibly taken as plant names. (For the latter see Scar 521.)

X.75.9: The referent of the genitive phrase in cd, *asya ... ádabdhasya sváyaśaso virapśínah*, is unclear, but the most obvious and desirable referent, Sindhu herself, is excluded by the gender, which must be masc. or neut. This leaves the chariot (*rátha-*), the prize (*vāja-*), or the contest (*āji-*). Ge, Re, and Mau opt for the chariot, though in his n. Re allows the possibility that it is Sindhu “concu(e) comme masc.” Old is of the same opinion, based on the implicit comparison of Sindhu to a Wettfahrer in ab. I am reluctant to go this direction because of the stress laid on the grammatical gender of ‘river’ words, esp. emphasized for Sindhu in vss. 7–8.

X.76 Pressing Stones

It is totally unclear to me why this hymn is attributed to a snake (*sarpa*), much less why this snake is called “Having old ears.” As MM (PN s.v. *járatkarṇa-*) points out, the phrase *járataḥ kárṇa-* is found in nearby X.80.3 as a personal name, but the connection is not straightforward.

X.76.1: On *ṛñjase* see comm. ad IV.8.1. The form expresses an act of reverence, several times in the form of a hymn (*girā* IV.8.1, VI.15.1).

The expression *ūrjāṃ vyùṣṭisu*, assuming the two words go together (as most do, incl. Caland-Henry p. 271, but notably not Ge), is at first glance somewhat bizarre: “at the first dawn flushes of nourishment(s)” (in the publ. tr. I suppressed the pl. of *ūrjāṃ*). But I think it economically combines two different concepts. On the one hand, like “the milk of the dawn cows,” it refers to the visual effect of dawn: the milky white sky at the horizon just before sunrise. On the other hand, the appearance of the dawn inaugurates the soma pressing, that is, the production of nourishment, and so the pressing stones need to be deployed. Ge prefers to construe *ūrjāṃ* with (*ā ...*) *ṛñjase*, (“ich begehre eurer Kräfte”), but *ṛñjase* does not take a genitive elsewhere (and it does not mean ‘desire’).

I take *udbhídā* as referring to what in English is also called day-*break*.

It’s not entirely clear what “make every seat spacious” is meant to convey, but I assume that, with the coming of daylight, places appear larger. The particular seats in question may be the ritual ground and its parts.

X.76.2: This vs. provides ample puzzles, though the straightforward first pāda gives no hint of what is to come.

The first issue is *sotári* in b. This appears to be the loc. sg. of the well-attested agent noun *sotár-* ‘(soma-)presser’, and that is how I take it (also in its other occurrence in X.100.9). But this is a minority view, at least as to function. Ge (n. 2b) cites Ludwig’s view that it is a nom. sg., while Ge himself suggests it might be an infinitive (which he glosses as a functional imperative/modal “soll pressen”); Re follows suit by pronouncing it a hortatory infinitive. Tichy, by contrast, considers the locc. in *-tári* as verbal abstracts, here “beim Somapressen.” My interpr. starts with the simile *átyo ná hástayataḥ* “like a steed controlled by the hands.” The stone (*ádriḥ*) is compared to the steed, and, in my opinion, the soma-presser is compared to the hand(s), the first member of the cmpd., the controller of the steed – as often, we have a cmpd. corresponding to a free syntagm. Caland-Henry’s rendering, “comme un cheval tenu en main [est] le Pierre pour le pressureur,” is closest to mine.

One of the questions posed by the 2nd hemistich is the identity/-ties of the subjects of *vidát* (c) and *tarute* (d), but before tackling that we must figure out how to construe d. Despite the glaring absence of accent on *tarute*, the standard tr. take d as a subord. clause controlled by *yád*. The accent problem is rather casually waved away, even by Old. I am quite unwilling to ignore

the lack of accent, and therefore interpr. *yád árvataḥ* as a nominal rel. cl. of the type frequent at the ends of sentences/verse lines (see my Fs. Hale paper). The antecedent of *yád* is *paúmsyam*, the obj. of *vidát* and gapped obj. of *taruṣe*. The subj. of *vidát* is the stone, that of *tarute* the presser, who attains the power that the stone found by virtue of his (presser's) wielding of the stone. Figuring out what to do with *tarute* is complicated by the fact that it is the only form to this stem (anywhere) and the only middle form of $\sqrt{tṛ}$ without a preverb (save for *taruṣanta* in I.132.5, which is an *-anta* replacement).

On *mahó rāyē* see comm. ad IV.31.11.

The publ. tr. misleadingly renders both *átya-* (b) and *árvant-* (d) as 'steed', implying that the same word is used in both places. Both are marked words, in contrast to *ásva-* -- as 'steed' is in English -- but I would now substitute 'charger' (another marked word) for the second.

X.76.3: The opening of this vs., *tád íd dhy àsya sávanam* ..., is a kind of mash-up of the 2a *tád u x x x sávanam* ... and 2c *vidád dhí* with flip of vowels in the latter. These echoes may underline the fact that 3 continues the theme of 2.

Pāda a presents several problems. One is accentual: *apáh*, so accented, should be the acc. pl. of *áp-* 'water(s)'; the same phrase, *vivér apáh*, is also found in X.147.1. In both cases, the form is better taken as the wrongly accented neut. sg. **ápah* 'work'; so interpr. by Sāy (with gloss *karma*), Ge, and Old. This interpr. is supported by the same phrase with neut. pl. *vivér ápāmsi* (I.69.8 and VI.31.3) showing the expected accent. By contrast, Caland-Henry (271) tr. *apáh* as 'waters', and Lub seems to accept 'waters' not only for this passage and X.147.1 but also for I.69.8 and VI.31.3, judging from the ! that he uses to mark those occurrences of *ápāmsi*.

Another question is the morphological identity and syntactic function of *sávanam*. With Sāy. and Old, I take it as acc., a parallel object to **ápah*; the subject is then the stone. As Old points out, the spressing stones are associated with *apas-* in vss. 5 and 8. However, Ge takes *sávanam* as the subject, referring not to the action of pressing but its result, the Trankspende; this doesn't make a lot of sense to me: in what way has the oblation accomplished its work?

Finally, what is the referent of *asya*? For Ge (n. 3a) it is Indra, who was indeed mentioned in 1b; I think rather the stone, with (explicitly) Sāy. and (implicitly) Old. Although by this interpr. *asya* is coreferential with the subject, a reflexive is not required under these circumstances -- anymore than in the Engl. tr. "it has labored ... at its task." As this tr. shows, I think *asya* is actually dependent on **ápah*, not adjacent *sávanam*; the enclitic *asya* is taking modified 2nd position after *tád* plus the complex of particles *íd dhí*.

Having dealt with pāda a, we must determine how the rest of the vs. fits together, and once again there are competing views. Ge (n. 3c) takes b as a parenthetical intrusion, with c continuing pāda a and d a separate sentence. Caland-Henry take b with a, with cd belonging together; this seems to be the implicit assumption of Kü (527), in that he tr. cd as a single clause and ignores the first hemistich. My interpr. departs from all these and begins with the fact that the *yáthā* clause of b contains the root aor. *ásret*, which is echoed by the main verb in d, the pf. *asísrayuh*. Although Re explicit states that the two verbs have entirely different senses (without saying what he thinks they are), the root agreement between the two verbs strongly invites an interpr. with *yáthā purā* "just as previously ..." serving as long-ago model and exemplar for the main clause, which expresses action of the more recent past.

The phrase *mánave gātúm* VERB several times has Indra as subj. (V.30.7, X.49.9; once Aśvins I.112.16), and so it seems reasonable to supply Indra as the mythological subject here. It also seems reasonable to attach c to the subordinate clauses in b, with the main clause

constituting d. Not only does the mention of Tvaṣṭar in c locate it in the realm of mythology, but syntactically d “presents” as a new clause, with the preverb *prá* in tmesis, followed by an enclitic particle/pronoun *īm*, doubling the obj. *adhvarān*.

What then does pāda c add to the mythological picture begun in c? Here we need to determine whether the vṛddhi derivative *tvāṣṭrá-* refers to anything associated with the god Tvaṣṭar or specifically to Tvaṣṭar’s son, Viśvarūpa. The other occurrences of this stem can refer to either one, but with a decided preference for the latter: in I.117.22 it’s Tvaṣṭar’s honey (*mádhu*), possibly soma, but in the remaining clear passages, II.11.19, X.8.8, 9 [that is, leaving aside III.7.4], Viśvarūpa is the referent and his defeat and the loss of his cows the topic. In our passage I now think either is possible – and neither is particularly compelling. In the publ. tr. I supply ‘wealth’ as the referent of *tvāṣṭré*, in part because one of the other adjectives in this NP, *góarṇas-* modifies *rayí-* in X.38.2. In this interpr. the loc. phrase serves as the goal of Manu’s course in b. It could also be a loc. absolute: “when Tvaṣṭar’s (wealth) (was at issue).” If *tvāṣṭré* here refers specifically to Tvaṣṭar’s hapless son, the phrase again could either be a goal or a locative absolute: “... course to Tvaṣṭar’s son, who had a flood of cows and a raiment of horses” or “when T’s son ... (was at issue).” Unfortunately I know of no tale involving Manu and Tvaṣṭar’s wealth or son, and so there is no easy (or indeed hard) way to make a decision – except in one particular: the loc. goal is somewhat favored over the loc. absol., because the main clause verb (*prá ...*) *ásíśrayuḥ* also takes a loc., which is unlikely to be in absolute function.

It also has to be admitted that the main clause of d provides no help at all. Though I stand by the argument that the two verbal forms of \sqrt{sri} in b and d impose the structure laid out above, it is difficult to see how bc provides a model or comparandum for d. The problem is exacerbated by the fact that the main clause verb seems to be construed with *prá* in tmesis, but there are no other exx. of *prá* \sqrt{sri} in the RV [in I.149.2, cited by VB, the *prá* belongs rather with the participle to \sqrt{sri}], and the only one anywhere else in Vedic is found in a single passage in KS (XXVI.3), which contributes nothing. My feeling is that in our passage *prá* doesn’t do much work, though perhaps a tr. “set forth ceremonies upon ceremonies” would at least register its presence. Another issue about the perfect is that it’s plural, but there’s no likely plural subject in the immediate vicinity. I think it likely that it’s the pressing stones, who get directly addressed, in the plural, in the next vs. Perhaps the point of all of this is that just as Indra set Manu on the course to acquire Tvaṣṭar’s wealth or Tvaṣṭar’s son, so it’s the pressing stones that set the ritual cursus at sacrifice after sacrifice. The exhortations to the stones in the next vs. may delineate what their relevant actions should be. But this is all very tentative and unsatisfactory.

X.76.4: On *bhaṅgurāvant-* see comm. ad VII.104.7.

In c *sunotana* reprises the same impv. in 2a.

“Carry a tune” for *bharata ślókam* is my playful and not entirely literal rendering, which I found impossible to resist. For the sense of *ślókam* see comm. ad I.51.12, IX.92.1 (the latter with regard to the pressing stones’ role). The point here is that the stones are so noisy that the sound will reach heaven as a signal to the gods that the soma is ready.

X.76.5: The rigid, four-square pāda structure with a pāda-final comparative in the dat. pl. and a pāda-initial standard of comparison in the ablative (a, c, d), made by *cīd* (*ā*), should impose an ablative interpretation on *vibhvánā*, and indeed a number of comm. (see Old) suggest emending to **vibhvánaś*. However, as Old asks, how would such a corruption have arisen? He opts for taking it as a “comparative instrumental,” which is a fine description but is not a standard

syntactic category as far as I know. I do not have a better solution, however. It is worth noting that the stem to which it belongs is somewhat problematic. It has two different accents: initial *vībhvan-* in well-attested nom. sg. *vībhvā* and suffix accent only in this form and the (infinitival?) dat. *vībhvāne* (VI.61.13, where, it might be noted, it's found in the same vs. as the superlative *apāstama-* 'busiest'). The stem is also used in two different senses, as an adj. 'wide-ranging' and/or 'distinguished' and as the PN of one of the Ṛbhus. In this passage the latter seems the default interpr. (see the standard tr., incl. Caland-Henry and the publ. tr.), given the names in the other three pādas and the fact that *apās-* 'industrious' several times modifies the craftsmen Ṛbhus (III.60.3, IV.33.1, maybe V.42.12). It is possible, however, that *vībhvánā* here should also be read in its general sense and with an instr. function "by (your) distinction." But I suggest this only very tentatively.

Another way in which b deviates from the surrounding pādas is the apparent lack of *ā̃*: both a and c begin ABL *cīd ā̃*, but though b has a long *ā* flg. *cīd*, it is unaccented and belongs to the 1st cmpd member *āśú-*. It would be possible to argue that the accent was removed redactionally, but I think it more likely that it's another way in which b is marked out as different. The *ā̃* is also missing from d, where an *a*-vowel follows *cīd*, but a short one: *agnés cīd a[rca]*.

arca is also somewhat problematic. It is, of course, on the surface a straightforward 2nd sg. impv. However, it coexists, a bit uneasily, with the 2nd pl. enclitic *vaḥ* in pāda a, referring to the pressing stones -- giving two 2nd ps. with different referents in a single sentence. Therefore a number of interpr. (Ge, Caland-Henry, etc.) silently or explicitly emend to 1st sg. subj. **arcā* "I shall sing / let me sing." Metrically this would be acceptable, and the mechanism is easy to see: since 2nd sg. impvs. frequently lengthen their final *-a*, coinciding with the 1st sg. subj. ending *-ā*, a backformation of the latter to short *-a* would be unexceptionable. However, this reanalysis is unnecessary: poets frequently exhort themselves, in the 2nd sg., to praise or perform other ritual acts, and these exhortations can co-occur with 2nd plurals referring to others, often the poet's ritual colleagues -- as the pressing stones are here. See my 2005 "Poetic Self-reference" (Fs. Skjaervø). Old also resists the 1st sg. interpr.

X.76.6: Yet again, this vs. poses some niggling grammatical problems, the most serious of which is *sótu* in pāda a. This appears to be a 3rd singular root aor. impv. to *√su* 'press', which is how Gr classifies it (though with an alternative suggested; see below) and the publ. tr. renders it. However, it follows a 3rd plural impv. (*bhurantu*), whose subj. (*grāvāṇaḥ*) is continued in b. In other words, if *sótu* is a singular impv. it has to be parenthetical (as in the publ. tr.). I still subscribe to this interpr. In its favor I will point out two factors: 1) references to plural stones alternate with singular ones in this hymn; see esp. 2a with pl. impv. *sunotana*, fld. by 2b with a single stone (*ādriḥ*) (and if I'm right, also 2cd and 3a; then 3d, 4 with pl. stones). 2) the 3rd plural impv. of the root aor., to correspond to preceding 3rd pl. *bhurantu*, would be **svāntu*, almost surely undistracted (cf. the overwhelmingly undistracted med. root aor. part. *svāná-*), which is unattested and, if found, would lose the distinctive root syllable of this root. I think this form would be avoided, and the 3rd sg. would provide a robust substitute (with root syll. *so-*).

However, I seem to be alone in this interpr., so I will briefly consider the alternatives that have been suggested. Old's is the one that requires the least machinery, but it is unlikely for two reasons. After flirting with *sótu* as a loc. he takes it as a neut. acc. *-tu-* stem (presumably meaning 'soma-pressing'), which serves as obj. to *bhurantu* (apparently partially fld. by Scar 44–45, 186). However, as Re also points out, *bhurá-* (and related stems) is otherwise intrans. Moreover, a

masc. acc. *sótum* is attested (VIII.19.18) with the same apparent meaning, and it is not exactly parsimonious to posit an identical stem but two different genders, each attested only once – esp. since masc. acc. **sótum* would neatly avoid hiatus here. Gr in fact suggests emending to **sótum*, and Ge seems to follow this suggestion (without explicit note), but rendering it as an infinitive “um uns Saft auszuschlagen.” This infinitival stem is attested elsewhere, as dat. *sótave* (I.28.1) and abl. *sótos* (X.86.1). The *-tum* infinitive, so characteristic of later Skt., is of course quite rare in the RV, but in this relatively late portion of the text it is certainly thinkable. If the 3rd sg. impv. interpr. is rejected, I would favor the infinitive above the others, tr. “Let the glorious ones clatter for us, to press (soma) out of the stalk.” But this still requires emendation, whereas the impv. interpr. does not.

I take *ándhasaḥ* as an abl. of source (“out of the stalk”) rather than partitive gen. obj. (“press of the sap/soma”). On the meaning of *ándhas-* see comm. ad IV.1.19.

On *divít(mant)-* see comm. ad IV.31.11; unsuffixed *divít-* occurs only here, *divít-mant-* only 4x. The *-mant-* suffix seems pleonastic, so a satisfactory and semi-literal tr. is hard to achieve – perhaps “with their heaven-bound voice going to heaven.”

As noted in the publ. intro., I take *náraḥ* in c (and in 7d) to refer to the pressing stones, not human ritualists, since the voc. *náraḥ* in 8a must be addressed to the stones. Among other things, this saves us from taking c here as parenthetical, as Ge does, since he recognizes that d must have the stones as subj. (n. 6d).

I supply “heaven and earth” as obj. to *āghoṣáyantaḥ* ‘causing to heed’, on the basis of passages in the other principal pressing stone hymn: X.94.4 *āghoṣáyantaḥ pṛthivīm* “making earth heed,” as well X.94.12 *ā dyām ráveṇa pṛthivīm aśúśravuḥ* “they have made Heaven and Earth listen by their bellowing.”

On *mithas-túr-* see Scar (186).

X.76.7: The stem *rathirá-* ordinarily modifies gods, and the usual gloss ‘charioteer’ (Gr Wagenlenker) fits those contexts. However, in VIII.50.8 (Vālakh.) it qualifies horses (*hárayaḥ*), and ‘fit for the chariot’ or sim. seems a better rendering. In our passage, too, I would now substitute ‘fit for the chariot, chariot-broken’ for ‘charioteers’, on the basis of 2b, where the stone is compared to the steed controlled by the hand of the charioteer.

With Ge (and Re, Scar 55) I take *gavíṣaḥ* as gen. sg. (with *asya*), not nom. pl. (with Sāy., Gr, Caland-Henry, Ob II.46). The referent of the gen. phrase in b, *asya ... gavíṣaḥ* “of him/the one seeking the cows,” is of course soma, which always seeks mixture with cows’ milk. It is possible, however, that *gavíṣaḥ* could also be read as nom. pl., modifying the stones that are “milking” out the juice.

The simile in d is puzzling. Given the position of *ná*, it should signal that the simile is limited to *havyā* (so “the men groom [X] like oblations”), but this doesn’t make a lot of sense: the milked-out soma *is* the oblation. Nonetheless, this is the interpr. in the publ. tr. Ge silently flips the *ná*, taking it with *náraḥ* (and does not include *havyā* in the simile): “Wie die Herren machen sie das Opfer mit ihren Mäulen sauber.” So also Scar (55), though with a long, puzzled note (n. 68) on the problems with the simile. Although this is an easy solution, I don’t think it is the correct one. For one thing, the stones have already been identified as *náraḥ* (6c) and will almost immediately be addressed as such (8a); they are not like men, but men. For another, there is no metrical or other barrier to the proper positioning of *ná* for such a meaning: *náro* **ná havyā* is, if anything, metrically better than the transmitted text (see Arnold’s statistics on the rhythm of

the opening, p. 188). I reluctantly conclude that this may be one of the few occasions in the RV where the simile particle should be taken with the verb: “they, as it were, groom ...”

X.76.8: The publ. tr. takes the two parallel nominal clauses in the 2nd hemistich as statements of fact; Ge by contrast supplies a modal “sei.” This is possible but not necessary.

X.77–78: These two hymns are attributed to Syūmaraśmi Bhārgava and dedicated to the Maruts. They are also unified by an unusual metrical scheme and a tightly controlled stylistic reliance on similes. For both of these features see the publ. intros. to the two hymns; for the meter esp. see Old, Prol. 92ff., as well as the intro. to X.77 in the Noten.

X.77 Maruts

X.77.1: A dense vs. We can start with the root noun cmpd *abhraprūṣaḥ* and its etymologically twinned verb *pruṣā*. Both of these forms are morphologically ambiguous: the former can be nom. pl., acc. pl., or abl.-gen. sg., the latter 2nd sg. impv. or 1st sg. subjunctive. On the basis of *astoṣi* in d I opt for the subjunctive, and for the cmpd. the nom. pl., to allow the referents of the cmpd. to be directly compared with the subject of *pruṣā*. (These are generally the choices made by other interpr., though the Pp. reads short-vowel *pruṣa*, hence the impv.)

The next question is the relation between the cmpd members in *abhra-prūṣ-*. (For disc. see Scar 342.) An acc. relation is possible; so Re “... qui font-fuser la nuée.” But I favor an ablative, like *abhrāt* in c and, closer in sense, the phrase in nearby X.75.3 *abhrād iva ... vṛṣṭáyāḥ* ‘like rains from the clouds.’ Here as well I supply ‘rain’ as the suppressed object of *-prūṣa-*, parallel to the ‘goods’ (*vásu*) that I, the poet, shower down. The referents of *abhraprūṣaḥ* are surely the Maruts, the dedicands of this hymn, who thus appear, disguised, in its first word. It is a nice touch that the poet compares himself with the very gods he is also praising.

I read *vācā* with both simile and frame. In the frame, of course, it refers to the poet’s speech, but in the simile it can refer to thunder, the Maruts’ speech (cf. I.168.8 [Maruts] *abhríyām vācam* “speech stemming from a cloud”). Scar (342 n. 481) also mentions the ‘thunder’ possibility but stops short of reading *vācā* twice.

Pāda b contains the morphologically aberrant gen. sg. *viṣṇūṣaḥ*. The standard explan. of this form (see, e.g., Old with reff., AiG II.2.910, more recently Kü 203–4, Lowe [Part. 25, 252]) must be correct: that it is a contamination/blend of the pf. participle of *√jñā* (expected weak form **jājñ-úṣ-*) and the 9th cl. pres.part. (expected weak form **jān-át-*). The reason for this blend is not apparent, since the gen. sg. of either stem would fit metrically and should have been morphologically transparent.

The poet is the referent of this gen., and the point of the pāda is that *his* sacrifices, which consist of well-wrought words are just as good as those that consist of physical oblations. There may be a slight asymmetry of expression here. On the surface *haviṣmantaḥ* in the simile of course modifies *yajñāḥ*, which participates in both simile and frame, with the meaning “(like)sacrifices consisting of oblations,” but in fact well-attested *haviṣmant-* generally modifies the ritualists who provide oblations, rather than the sacrifice that consists of them. We might almost have expected gen. **haviṣmataḥ*, parallel to *viṣṇūṣaḥ*, with the sense “The sacrifices of a discerning one are like (those)*of one who provides oblations.” I do not suggest emendation; instead I think the poet is keeping his audience off balance and confounding their expectations.

The syntax and constituency of cd are multiply ambiguous and interpr. in multiple ways: see the very different treatments of Old (at some length), Ge, and Re. I will not examine their versions in detail. As for mine, there are several structural clues that may help to sort out the competing possibilities. First, the dat. *-āse* forms that end each pāda (c *arhāse*, d *śobhāse*) seem meant to be parallel, though a number of interpr. deploy them differently. Second, given their localization in different pādas, the accusatives of c (*sumārutam (ná) brahmāṇam*) and d (*gānam*) should be kept separate, with the phrase in c being compared to that in d. Again, this is not the universal view.

Pāda d is straightforward, with the 1st sg. *astoṣi* “I have praised,” with *gānam ... eṣām* “the flock of them,” referring to the Maruts, as obj. The dat. *śobhāse* ‘for beauty’ belongs to a root, *√śubh*, that is characteristic of the Maruts. See esp. the similar use of the root noun dat. *śubhé* in Śyāvāśva’s Marut hymns (V.52.8, 57.3, 63.5,6), also *śubhamyú-* in the next hymn, X.78.7. Despite the position of *ná*, I think it marks *śobhāse* as the simile, compared to *arhāse* in c. As discussed elsewhere (see, e.g., comm. ad X.21.1), simile-marking *ná* is blocked from pāda-final position and flips with its target if it would take that position.

This now leaves pāda c. Since, per my structural analysis, the acc. phrase in this pāda cannot be identical to that in d (pace Re) and it should not be the obj. of *arhāse* (pace Ge), we need to identify a referent for *sumārutam ... brahmāṇam* different from the Marut flock in d. Taking *sumāruta-* as adj. with *brahmān-* (pace Old, who claims it has to be a noun) points to an obvious referent: Indra, who is, of course, often accompanied by the Maruts (*marútvant-* being one of his standing epithets). And Indra, in his role as *bṛhaspáti-*, is closely associated with the formulation and indeed called *brahmān-* directly (e.g., VIII.16.7).

Now *arhāse* – who is deserving, and deserving of what? Re takes it as passive; Ge’s interpr. I don’t understand, and it is informed by his somewhat peculiar view that this is all about weather; Old takes *sumārutam* as its obj. (“damit er Anspruch habe auf schöne Marutgnade”) and *brahmāṇam* as its subj. I supply soma as the obj., because the soma drink is the most common obj. of *√arh* (see comm. ad VIII.20.18). I am not entirely happy with this intrusion, but it might make sense of comparing the Marut flock with Indra: they both deserve the soma, but Indra especially.

X.77.2: The dat. *śrīyé* that opens the vs. picks up the *śobhāse* that ends vs. 1. Both are common elements in the Marut lexicon; for *śrīyé* see, e.g., V.55.3, 60.4.

The problematic pāda is b, which contains *sumārutam* like 1c. There is no consensus about its usage here, or even its case form. Re takes it as a neut. nom., collectively referring to the pl. subject *máryāsah* (“en tant que bonne troupe mārutiennne”), while Ge takes it as acc. referring to “ihr schönes Marutwetter.” My interpr. differs significantly from these, and depends on three factors: I take *sumārutam* as acc. and supply *brahmāṇam* from the phrase in 1c *sumārutam ná brahmāṇam*; I take the verb *akṛṇvata* in pāda a as controlling a kind of śleṣa, where *sumārutam ná* is structurally compared to *añjīn*, though they have somewhat different relationships to the verb; I take *pūrvīr āti kṣāpaḥ* with the phrase in c, not the simile in d. In c the obj. *añjīn* denotes what the Maruts made/provided for themselves – ornaments -- appropriate to the middle voice of *akṛṇvata*. The phrase *pūrvīr āti kṣāpaḥ* “across the many nights” is also appropriate here, because the ‘ornaments, unguents’ they make for themselves are elsewhere compared to stars. See, e.g. I.87.1 1 ... *añjībhir, vyānājre ké cid usrā iva tṛbhīḥ* “with their unguents [the Maruts] have anointed themselves ... like the ruddy (dawns) with stars,” In the simile in d *sumārutam* is a predicate adj. modifying the gapped *brahmāṇam*: “(as) they have

made (the formulator) well-provided with Maruts.” This latter usage is rather like III.11 4 *agnīm ... váhniṃ devā akṛnvata* “The gods made Agni their oblation-conveyor.” My interpr. of this hemistich is not particularly secure, but I think it is better than the other ones available.

On the curious intrusion of the Ādityas, see the publ. intro. I have no explanation; I am somewhat dubious about Th’s view (Fremd. 158) that what the Maruts and the Ādityas have in common is their care for the stranger (expressed by the epithet *riśādas-* of disputed meaning [see comm. ad I.2.7, V.60.7] in 3d and 5c). In any case, the word order, with *té*, ordinarily a first-position pronoun, following *ādityāsaḥ*, seems to me to signal that *ādityāsaḥ* is an unmarked simile.

On *akrá-* see comm. ad I.189.7.

X.77.3: The first pāda of this vs. departs from the already aberrant meter of this part of the hymn: rather than having an opening of 5 ending with a light syllable, followed by a heavy syllable that can count as two lights (see disc. in publ. intro.) allowing a Jagatī cadence, this has an opening of 4. However, the 5th syllable is light and the heavy 6th syllable can “count” as two lights, as elsewhere in this little group. The other 3 pādas conform to the meter elsewhere in these vss., with an opening of 5.

The *ná* in pāda a does not seem to be doing real simile work, since it seems unlikely that earth is being compared to heaven: they usually form a pair. My “as beyond earth” renders the *ná* unobtrusively and not very convincingly. It is possible that it’s marking pāda-final *barhāṇā* as the simile, with the same flip as in 1d, but “as if by might” seems to belittle the Maruts’ power.

In c #*pājasvanto ... panasyávo*# echo each other, further taken up by #*práyasvanto* in 4d.

X.77.4: The first two pādas diverge from the metrical template of this part of the hymn in a different way from 3a: they have light 6th syllables. It is also a challenging vs. in structure and content.

In pāda a I take the gen. *yuṣmākam* with *yāmani* and the gen. *apām* with *budhné*, with Old and Re (though not, with the latter, introducing Ahi Budhnya into an already crowded vs.). I also take the simile as consisting of *budhné apām ná* despite the position of *ná*. (As we have seen and will see, the position of *ná* in this hymn can be all over the map.) The point of this first hemistich is that the earth (*māhī*) trembles at the Maruts’ journey, a common image in Marut hymns. In my interpr. the simile in the first pāda compares the earth to something based on water – that is, without a solid base.

Pāda b contains two verbs of parallel formation and near-identical sense, #*vithuryāti* ‘wavers, falters’ and *śratharyāti*# ‘slackens’. Both are hapaxes, but the former is clearly based on the reasonably well-attested adj. *vithurá-* ‘wavering’, while *śratharyá-* has no associated *r*-form, **śrathara-* or the like, and must be directly based on *vithuryāti*. So also Re, though he cleverly also adduces *śithirá-*, also with *-r-*, as a near-relative. I assume that the accent of *śratharyāti* was also adapted from *vithuryāti*, as there is no syntactic reason for this verb to be accented. For *vithurá-* in this exact context, see I.87.3 [Maruts] *praiśām ájmeṣu vithuréva rejate, bhūmir yāmeṣu ...* “At their drives, their journeys the earth trembles like one with faltering step” (sim. I.168.6, also Maruts).

The second hemistich is oddly constructed. In c we find a pāda-internal deictic pronoun followed by a Wackernagel particle chain: ... *ayám sú vaḥ*##. This is unprecedented as far as I can tell: *ayám* (etc.) is overwhelmingly pāda (/clause) initial; the few non-initial forms are generally preceded by at most one item, and I have found no other exx. where a mid-pāda *ayám* supports a

clitic chain. The referent of *ayám* here is clearly the nom. phrase that precedes it: *viśvāpsur yajñó arvāk*. Because of the unusual configuration of *ayám*, in the publ. tr. I took it as introducing a new clause, which continues into d. I now think this is wrong; certainly my English tr. is scarcely parsable. I now think that c is a self-contained nominal cl. with a heavy left-dislocated NP: “the sacrifice close by consisting of all good things -- this is for you.” The simile that opens d, *prāyasvanto ná*, then qualifies the unexpressed subj. of the impv. *ā gata*, the Maruts: “Like dispensers of ritual delight, come here to those who are concentrated (on you).”

On the adj. *viśvāpsu-* see comm. ad I.148.1. Th’s ‘breath’ interpr. (see KISch 74f.) “ganz aus Atemhauch bestehend,” which is also responsible for Re’s “consistant entièrement en souffle,” does not make sense in most contexts, as Th’s special pleading for it in this passage demonstrates.

Re pronounces that *satrāca(h)* is for **satrāñcaḥ* [he omits accent] by fiat; Ge (n. 4cd) would like to do the same. But I see no reason why we, the goal of their journey, would not be focused on the arrivals, with the form therefore the acc. pl. it appears to be.

X.77.5: Acdg. to the Anukramaṇī, this vs. is in Jagatī, against the rest of the hymn, which the Anukr. labels Triṣṭubh. For vs. 5 the Anukr. is half right: the first two pādas again have a Jagatī cadence but 11 syllables and do not fit the template of what emerged as the standard such pattern earlier in the hymn. But the 2nd hemistich consists of two entirely well-behaved Jagatī pādas.

This is the last of the simile-laden vss., a structure signaled by ring composition: the last word of 5 is (*pari-*)*prūṣaḥ* ‘showering (all around)’, which matches the first word of the hymn, (*abhra-*)*prūṣaḥ* ‘showering (from a cloud)’ (see also the impv. *pruṣā* also in 1a).

In b it is unclear what ‘light-possessors’ (*jyótiṣmant-*) the Maruts are being compared to. Both Ge and Re fail to provide a referent, while Scar (343) supplies ‘dawns’, which would be difficult, since *jyótiṣmantaḥ* is masc. I suggest rather ‘fires’, on the basis of X.35.1 ... *agnáyo, jyótir bhāranta uṣáso vyūṣṭiṣu* “... fires bringing light at the early brightenings of the dawn,” with the same *vyūṣṭiṣu* as here.

In d *prava-* belongs to the root \sqrt{pru} / *plu* ‘float’; the *r*-form here allows the phonetic figure *pravāsaḥ ... prāsītāsaḥ pariprūṣaḥ*.

X.77.6–8: The last three vss. are conventional in content and have proper Triṣṭubh cadences throughout.

X.77.6: The structure of the vs. is somewhat unclear. Both Ge and Re take bc as qualifying the subj. of the *yád* clause in pāda a, with d as the corresponding main clause. I find this unlikely: pāda d is a repeated pāda (=VI.47.13, X.131.7, save for *yuyota* for *yuyotu*; cf. also VII.58.6), and repeated pādas are less likely to be integrated into a subord. cl. / main cl. diptych. Moreover, d has no logical connection with the rest. I instead think bc is itself the main clause, though it lacks a finite verb. We can either supply a verb of motion, as in the publ. tr., or take the participle *vidānāsaḥ* as the predicate of the main cl.

However we choose to take bc, the structure of these two pādas is itself noteworthy. What governs the gen. phrase *mahāḥ saṃvāraṇasya vāsvaḥ* in b must be the participle *vidānāsaḥ* in c, which contains another gen., *rādhyasya*, to be construed with the genitives in b. The postponement of the governing verb across the half-vs. boundary strikes me as somewhat unusual, though far from excluded. Note the play on *vāsu-*, which knits the pādas together.

Pace Gr, *vidānā-* must belong to √ *vid* ‘know’, not ‘find’, since, as Re points out, only ‘know’ takes genitive complements.

X.77.7: The *ná* in b seems unnecessary, or at least displaced, since it would be odd to compare some entity to the Maruts in their own hymn. (Ge supplies “[to the singers], as to the Maruts,” since he thinks that b concerns the distribution of the Dakṣiṇā. But this would be an odd use of *ná*, and further I see no evidence of the Dakṣiṇā. Re vaguely adds “pour ainsi dire.”) In a hymn with so many *ná*-s, often in the “wrong” place, a pleonastic *ná* should not surprise us, but in fact I think we can justify it. In my interpr. two factors are at work. On the one hand, it may be playing off 8b:

7b xxxx *ná mān(uṣo)* xxx

8b xxxx *nām̐n(ā)* xxxx

[On the reading of ‘name’ in 8b, see comm. ad loc.] On the other hand, I think there is a suppressed comparison in pāda a. The human priest, descendant of Manu (*mānuṣaḥ*), in b is implicitly compared to the figure who is often “standing up at the ceremony” (*adhvareṣṭhā-*), namely Agni. See Scar’s phraseological parallels (643–44) VI.63.4 *ūrdhvó vām agnír adhvarēṣu asthāt* and X.20.5 *ūrdhvas tasthāv íbhvā yajñé*, both of Agni.

X.77.8: As noted ad vs. 7, I read distracted *nām̐nā* (with Gr and, tentatively, Old), which, in my interpr., allows a phonetic play with 7b. Distracting *ādit’yéna* as HvN do seems far less plausible: this stem is almost never distracted, and in this case it would produce a highly unusual rhythm for the opening, with light syllables in the 2nd and 3rd positions, and for a late break, with two heavy syllables.

Note the etymological play between *ūmāḥ* (a) and *avantu* (c).

As disc. above, ad 2d, the connection with the Ādityas is puzzling.

The rt-noun cmpd *rathatūr* in c raises several questions: it is a singular used of plural subjects and it doesn’t seem to have any bearing semantically on the Maruts’ activity here: aiding our inspired thought. In my view it must be an unmarked simile, with a horse as underlying referent (see I.88.2 *rathatūrbhir áśvaiḥ*) and generally refer to the Maruts’ swiftness and victoriousness, qualities that might help produce a swift and victorious inspired thought for us. On the pl. Maruts compared to a singular entity, see the next hymn, X.78.2 *agnír ná*. Contra JSK I do not think *rathatūr* is conjoined with pāda d: “overtaking the chariots [*rathatūḥ* for **rathatúraḥ*] and finding pleasure in the ceremony in their great course” (DGRV I.95) (sim. Ge). Among other things, the Maruts can hardly enjoy the ceremony if they’re on the road.

As for d and the *ca* therein, I take it as conjoining the two locc., (*mahás ca*) *yāman* and *adhvaré*, in a modified X *ca* Y construction (with the *ca* following the first word of the first loc. phrase. The standard X Y *ca* construction was avoided here to forestall the double *ca* that would have arisen because of the flg. pf. part. *cakānāḥ*: **mahó yāman adhvaré ca cakānāḥ*.

Finally, what is the referent of *maháḥ*? I suggest that it is the Maruts’ “great host”; cf. in the next hymn X.78.6 *mahāgrāmó ná yāman* “like a great host on their journey.”

X.78 Maruts

On the tight structure of this hymn, see publ. intro.

Though the Anukr. identifies vss. 1, 3, 4, 8 as Triṣṭubhs and 2, 5–7 as Jagatīs, in fact 1, 3, and 4, like many of the “Triṣṭubhs” in the previous hymn, mostly consist of 11-syllable pādas with Jagatī cadences, and though the vss. identified as Jagatīs have Jagatī cadences, at least 6c has only 11 syllables. By contrast, the final vs., 8, begins with a pāda containing 12 syllables but a Triṣṭubh cadence, but then provides three conventional Triṣṭubh pādas to bring the hymn to a settled and metrically safe conclusion.

X.78.1: Pāda c has 10 syllables but a Jagatī cadence.

The first three pādas end in an adj. in *su-*, which furnishes the point of comparison. The first two seem to sketch a ritual progression: the poets (*vīprāsaḥ*) of pāda a have good intention or purpose, are attentive in their ritual activity. Elsewhere such ritualists are depicted as “seeking the gods”: cf. III.8.4 *svādhyò mānasā devayántaḥ*, VII.2.5 *svādhyàḥ ... devayántaḥ*. This is the next step in our vs., with *devāvyàḥ* ‘pursuing the gods’ (with root \sqrt{v} *vī*, not *-ya*-denom.) opening pāda b. And the happy result is found at the end of b, *svāpnasaḥ* ‘having good profit’; as we all know, successful ritualist get well rewarded.

Re sees the vs. as embodying the three functions, which seems a stretch to me.

As Ge points out (n. 1d), the Maruts are described as *māryā arepāsaḥ* in V.53.3.

X.78.2: In this supposedly Jagatī vs., d contains only 11 syllables; the other pādas conform. This pāda is also structurally aberrant, in that the shared property, *suśármanah* ‘providing good shelter’, occurs first in the pāda, not last. (Pāda a also deviates in this regard: the shared property is *bhrājas-* ‘flash’ in mid-pāda.)

For the possible senses of *svayúj-* see Scar 433–35. I favor ‘own yokemates’ rather than ‘self-yoking’: the winds and the Maruts can be yoked together because they are equally speedy. (This sense of *svayúj-* also works well in the other two occurrences: X.67.8, 89.7.) This swiftness is underlined by the shared property, ‘bringing immediate aid’ (*sadyáūtayaḥ*): they appear as soon as needed.

In c I would slightly alter the tr. of *prajñātāraḥ* to “who know the way forward.”

I do not know why soma drinks are esp. associated with good shelter. In the IXth Maṇḍala Soma occasionally provides or is asked for shelter (e.g., IX.86.15; see passages in Lub s.v. *śárman-*), but not so often as other gods in other maṇḍalas. The bahuvr. *suśárman-* once modifies Agni and Soma in the dual (I.93.7), but this is surely because of Agni, who is the usual referent of this adj. (e.g., V.8.2).

X.78.2–3: As noted in the publ. intro., “winds” are the comparanda in these two adjacent vss., 2b and 3a.

X.78.3: *dhúnayaḥ* can belong either with the simile (so Ge, publ. tr.) or the frame (so Re). The structure of the hymn, with, usually, a single shared property per simile, favors the former, but the fact that *dhūni-* regularly modifies the Maruts (I.64.5, 87.3, etc.) the latter. A possible alternative tr. would be “The boisterous ones who, like the winds, are always on the move.”

Given the metrical patterns established, we should expect pāda c to have a Jagatī cadence despite its 11 syllables. But in fact it has a cadence that fits neither Jagatī nor Triṣṭubh: L H H x (*śímīvantaḥ*). Elsewhere this stem sometimes has to be read **śímīvant-* with light 2nd syllable (see comm. ad X.8.2), but that wouldn’t help here. Best would be **śímīvataḥ*, but we need the nom. pl. *-vantaḥ*.

In d we see the same ritual cause-and-effect as in 1ab: the “lauds of the ancestors” (*pitṛñām ... śāmsāḥ*) result in lovely gifts, as the proper reciprocal response to praise.

X.78.4: *sānābhayaḥ* is a pun, in that *nābhi-* refers both to the nave of a wheel into which the spokes are fitted and the navel of the human body. The Maruts “have the same navel,” because they are the sons of the same mother, Pr̥śni (also the same father, Rudra, but it’s motherhood that’s relevant to the navel).

In c the *māryāḥ* reappear from 1d (also X.77.3). The common property shared by the Maruts and the “young bloods gone awooing” is *ghṛtaprūṣ-* ‘sprinkling ghee’, which is not directly appropriate for either party – although more for the Maruts than the wooers. The root $\sqrt{pruṣ}$ is very prominent in the immediately preceding Marut hymn (X.77), with the rt noun cmpds *abhra-prūṣ-* (1a) and *pari-prūṣ-* (5d), as well as impv. *pruṣā* (1a), so the act of showering/sprinkling is characteristic of them. The ghee that they are showering here must be metaphorical, representing rain (so also, e.g., Scar 343); the same act is attributed to them in I.168.8 *yādī ghṛtām marútaḥ pruṣṇuvánti*, where it clearly refers to rain. Moreover, two other occurrences of *ghṛta-prūṣ-* (VI.44.20, VII.47.1) modify *ūrmí-* ‘wave’ and presumably refer to water as well. But it is hard to envision *māryāḥ* showering either real or metaphorical ghee. Ge’s tr. indicates that in the simile he takes the cmpd to mean “verschwenderisch” (prodigal), and this is possible; Re bleaches it to mean simply “zélé au rite.” I would alternatively point to III.13.4 ... *pruṣṇavad vāsu* “he will shower goods” and suggest that we supply “goods” as the gapped obj. of *-prūṣ-* in the simile; “goods” would be the potential bridal gifts.

X.78.5: I render *jyēṣṭha-* differently here and in 2c, because neither ‘elder’ nor ‘superior’ easily fits both contexts.

Pāda b can be variously interpr., depending on the sense attributed to the desid. part. *didhiṣú-*. As discussed elsewhere (comm. ad I.71.3, X.26.6 and see my Bühler lecture), *didhiṣú-* can have the developed sense ‘desiring to acquire (a wife)’ = ‘suitor, wooer’. Ge takes it thus (“wie freierende Ritter,” though see his cautious n. 5b), as does the publ. tr. This interpr. has the merit of making sense of *sudānavah* ‘having good gifts’, i.e., providing good bridal gifts, and it also thematically matches 4c *vareyávo ná māryāḥ* “like young bloods gone awooing” in the immediately preceding vs. The charioteers on this bridal errand are (somewhat) reminiscent of the bride-seeking journey in Kakṣivānt’s dānastuti, I.126.3, 5, esp. 3b *vadhūmanto dāśa ráthāsaḥ* “ten chariots carrying brides.” However, it would be possible to interpr. *didhiṣú-* literally as ‘desiring to acquire’, without a marital context. In this case, *sudānavah* would be proleptic, expressing the gifts they will acquire. Re’s tr. uses the non-technical sense of the participle, but considers its gapped object to be victory, not gifts: “qui (reçoivent) de beaux dons comme des conducteurs-de-char cherchant à obtenir (la victoire).” I prefer the Ge/publ. tr. version but an alternative would be “who (will) possess good gifts like charioteers seeking to acquire (them).”

Note that *jigatnāvaḥ* returns fro 3a.

The question in c is what to do with *udābhiḥ*, and this question can be divided into two: 1) should it be construed with *nimnāḥ*, likewise instr. pl.? 2) does it belong in the simile or the frame? The first is easily answered: though Re takes the two together (“avec les eaux déclives”), *nimná-* is always elsewhere a noun (‘depth, the deep’) and so the two instr. pl.s must be taken separately. The second is more difficult. Ge (as well as Re) takes *udābhiḥ* with the simile (“wie die Flüsse ... mit ihren Gewässern”), and this is certainly possible: though there are two words for ‘water’ in the phrase (Ge’s “Flüsse” is misleading for *āpaḥ*), *āpaḥ* are of course animate and

agentive, while *udān-* is neuter and an inert substance. Nonetheless, I think *udābhiḥ* must be at least partially part of the frame, referring to the water the Maruts produce as rain (just referred to in *ghṛtaprūṣaḥ* in 4c), hence my “always on the move with their moisture.” However, I am now willing to entertain the possibility that *udābhiḥ* is shared by simile and frame and suggest the alternative translation “always on the move with their waters [=rain] like the Waters with their waters (moving) through the depths.”

The exact point of d is unclear, though I don’t think Ge helps by making *viśvārūpāḥ* a proper noun qualifier of the Aṅgirasas. I see *viśvārūpa-* as the shared property, placed unusually in initial position (but see *suśārmāṇaḥ* in 2c). I think the idea here must be that the Maruts are inventive and skilled singers like the Aṅgirasas and their *sāmans* are thus ornamented with every possible variation. The Maruts’ “*sāmans*” are quite possibly the sounds of the thunderstorm: the thunder itself and the howling of the wind, often highlighted in Marut hymns.

X.78.6: Once again Re considers this vs. to express the three functions (First Function in ab, Third (?) in c, Second in d – he is only explicit about ab). This seems to me to be in the realm of fantasy.

Pāda a is difficult to interpr. because it is not clear what is the shared property and what belongs to the simile. Ge (at least in his tr., but see his n. 6a) takes *sūrī-* as the shared property, which he tr. as an adj. “freigebig”: the Maruts give abundant rain, the pressing stones abundant soma. In his interpr. *sīndhumātaraḥ* exclusively modifies the stones (“wie die sindhugéborenen Presssteine,” though again see his n. 6a). Re also takes *sūrī-* as the shared property (though he properly tr. as a noun, with a certain amount of extra machinery), with *sīndhumātaraḥ* exclusively modifying the Maruts: “(Eux qui jouent le rôle de) patrons comme les pierres-presseuses, (ces dieux) dont la Sindhu est la mère.” Klein’s tr. (DGRV I.350) seems to contain no shared property, but identifies the Maruts as *sūrī-* and the pressing stones as Sindhu-mothered: “The lords, like pressing-stones whose mother is the Indus.” In contrast to all of these, the publ. tr. takes *sīndhumātaraḥ* as the shared property, with the Maruts identified as *sūrī-* (as in V.52.16). As to *sīndhumātaraḥ*, I see the stones as having a river as mother because they have been smoothed as they tumble in the river (though I have no textual evidence for this) and the Maruts are said to have a heavenly river as mother, who would produce the water they distribute as rain. See nearby X.75.3, which establishes a heavenly (3a *divī*), rain-producing (3c... *prā stanayanti vṛṣṭāyaḥ*) Sindhu (3d *sīndhur yād éti* ...), and note that this would continue the watery theme of our vs. 5c. Although I think this interpr. is more than defensible, I would also consider an alternate more like Ge/Re, though I then don’t know who to identify as *sīndhumātaraḥ*: “Patrons, like the pressing stones whose mother is a river” or “Having a river as mother, they are patrons like the pressing stones” (slight preference for the first).

In b the shared property occupies most of the pāda: #*ādardirāsaḥ* ... *viśvāhāḥ*#. The word *ādri-* can also be used to refer to the pressing stones (like *grāvan-* in a), and the image is of their constantly pounding the soma plant, as the Maruts-as-storm pound the earth. Note the phonetic figure *ādardirāso ādrayo*. The use of *ādri-* as subj. of *√dr* is rather cute, because on several occasions it is the object, when it refers to the Vala cave: see IV.16.8 ... *yād* ... *ādrim dārdar*, IV.1.14 ... *dadr̥vāṃso ādrim*.

In c the hapax *śīsūla-* seems to be an affectionate, colloquial diminutive (note the *l*-form), though AiG II.2 862–63 doesn’t explicitly recognize such a function for the *-la*-suffix. Note that pāda-final *sumātaraḥ* exactly echoes *s(indh)umātaraḥ*, which ends pāda a.

There is no agreement on the position and function of *utá* in d. Ge seems to take it as introducing the shared property (which he takes as *tviṣā*) and therefore connecting d with the rest of the vs., though displaced: “und mit ihren Funkeln wie ein grosser Klan auf dem Kriegszug.” Klein (DGRV I.350) also thinks *utá* is conjoining pāda d with the rest of the vs., but without flg. Ge’s linkage of the two words in the phrase *utá tviṣā*, he therefore offers no explanation for the late position of *utá* if it is conjoining pādas. Re and the publ. tr. take *utá* as (unusually) conjoining nouns, in the case-mismatched phrase *yāmann utá tviṣā*. I still think this is the best explan., with *utá* used instead of *ca* perhaps because of the case disharmony. But a tr. like Ge’s “And with their turbulence (they are) like a great host (of warriors) on their journey” would be possible and would offer a different explanation for the unusual position of *utá*.

The use of *mahāgrāmā*- here certainly fits Rau’s interp. of the term *grāma*- as, in the first instance, “a roving band”; see comm. ad X.27.19, though as disc. there I think it has already developed the sense ‘village’ in some occurrences in the RV.

For *tviṣā* here I’d now substitute “turbulence” or “agitation” for “turmoil.”

X.78.7: My rendering of *adhvaraśrīyaḥ* as “providing splendour to the ceremony” is nextdoor to transitive. On the interpretational problems of *-śrī*-cmpds in general see comm. ad III.26.5 and for this compd I.44.3. I’d now consider a more overt transitive rendering “completing/perfecting the ceremony” as alternative here.

As disc. in the publ. intro., this vs. introduces the first finite verbs in this hymn: *vy āśvitan* (b) and *mamire* (d).

I also think that the vs. has loosened up in another way: the rigid independence of pādas found through the rest of the hymn is broken in the second hemistich, by my interpr. (and Re’s). By this interpr. the simile of c consists only of *sindhavo ná yayyāḥ*, with the last word in this pāda, *bhrājadṛṣṭayaḥ*, belonging with d; it does not fit easily with the simile in c. Ge takes it with the rest of c, but not, it seems, as the shared property: “Wie die Ströme eilend mit blinkenden Speeren.” In either type of interpr. the problem is *yayyāḥ*, which ought to be fem. and therefore not applicable to the Maruts. Re suggests it’s been attracted to *sindhavaḥ* and, more to the point, adduces II.37.5 *yayyām ... rātham*, where the adj. modifies a masc. I think it likely that it matches / assimilates to masc. *vrkī*-inflected stems like *rathī*- ‘charioteer’, with nom. pl. *rathyāḥ*.

The last question in this vs. concerns the simile in d, and how we interpr. it depends on the morphological identity of *parāvataḥ*. Usually this form is an ablative “from the/a distance,” but in a minority of cases it is the homonymous acc. pl. This morphological identity is clearest when it is construed with *tisrās* “the three distant realms” (I.34.7, VIII.5.8, 32.22), though it is found elsewhere. I think this is one of those places: acc. pl. *parāvataḥ* is the comparandum (*ná*) for acc. pl. *yójanāni*, hence my tr. “the stages of their journey (*yójanāni*) like distant realms” – indicating how vast a distance the Maruts can cover in a single stage. If I am correct, this is also the first and only simile in this hymn that is not in the nom. pl. I seem to be alone in this interpr., however: both Ge and Re (in different ways) take *parāvataḥ* as ablative and the simile is quite recessive.

X.78.8: As disc. in the publ. intro., this vs. entirely departs from the style and structure of the rest of the hymn, both in content and in meter. It is a conventional hymn-final vs. begging for rewards for the praise conferred. It also contains the only occurrence of the word Marut in the hymn – solving the implicit riddles posed by the torrent of similes. Metrically it is the only standard Triṣṭubh – *except* for the 1st pāda, which has a Triṣṭubh cadence but twelve syllables

(the opposite of much of the rest of the hymn with Jagatī cadences and eleven syllables). One of these syllables is entirely unnecessary: the *no* in 4th position, which doubles the *asmān* opening b. But, as sketched in the publ. intro., the *no* is the punning link between this vs. and the rest of the hymn. Almost every previous pāda has the simile particle *ná* in 2nd position, usually in syllable 4 (sometimes 5, occasionally elsewhere). The enclitic *no* in 8a deliberately (in my view) echoes this pattern of *ná*-s, and the fact that it disturbs the meter draws attention to it.

The part. *vāṇrdhānāḥ* is rendered as reflexive/passive by Ge and Re. This is the usual function of this form, but it can also be (self-beneficial) transitive. I read it as both; see VIII.96.8, where it is transitive in the frame and intransitive in the simile.

On the slightly awkward phrase *ratnadhéyāni sánti*, see VII.53.3 *utó hí vāṇ ratnadhéyāni sánti* and (with $\sqrt{bhū}$) IV.34.4 *ābhūd u vo vidhaté ratnadhéyam*.

X.79–80

Two hymns to Agni, both attributed to Agni Saucīka or Agni Vaiśvānara, with Sapti Vājambhara listed as an alternate poet for X.79. This last name is obviously extracted from X.80.1 *sāptim vājambharām*.

X.79 Agni

On the (pseudo-?)omphalos structure of this hymn, see publ. intro.

X.79.1: Unaccented *asya* should not be a demonstr. adj. with *mahatāḥ* (pace Re “de ce grand (dieu)” and probably Ge), and it should refer to something already in the discourse, despite being only the 2nd word in the hymn. The ritual fire beside which the poet is reciting the hymn fits the bill – the “discourse” must include the shared ritual situation.

The sense of *nānā* ‘each for itself’ (see comm. ad II.12.8) is rather attenuated here, to ‘alternately’ vel sim. It is notable that *nānā* appears often with duals: II.12.8, III.54.5, 55.11, V.73.4.

With Re, I take *ásinvant-* (and the adj. *asinvá-*) to mean ‘insatiable’, contra Ge (and EWA s.v. *asinvá-*) ‘without chewing/biting’. ‘Insatiable’ fits the contexts better, as well as the derivation from **seh₂* ‘sate, satisfy’ (EWA ibid.). Esp. in this context, ‘not biting’ would be directly contradicted by the flg. word *bápsatī* ‘chewing’.

X.79.2: This vs. focuses on body parts – of the fire (head [*śírah*], eyes [*akṣī*], tongue [*jihváyā*]) and of the priests (feet [*padbhīḥ*], hands [*-hasta-*]). The image of the fire must be standing on its head, with the (top of the) head on or in the ground, where the flames originate and differentiate, and the flames above this source being his tongues. What exactly his eyes are and where they are are unclear to me – much less why Agni has two (and only two?) eyes, but *akṣī* must be dual and is so interpr. by the Pp. This puzzle has elicited little or no comment from moderns; Sāy.’s interpr., that Agni’s two eyes are the sun and the moon, may be correct. They are light sources comparable to Agni and roughly eye-shaped. This certainly accounts for the dual, which needs to be accounted for, and they are spatially ‘separate, apart’ (*śdhak*) from the rest of the scene. If this is correct, the visual image conjured up is a kind of Vedic proto-cubism, with the eyes removed from the upside-down face and stuck into the sky, rather than between the top of the head and the mouth/tongue, where they ordinarily are found. So be it – it wouldn’t be the strangest RVic image ever!

And it is already challenged by pāda c. The priests collecting foodstuffs for Agni “with their feet” (*padbhīḥ*) makes them sound as if they have prehensile monkey-like toes, but surely it just refers to the priests’ walking in the brushland to collect firewood (though I’m quite sure the poet was well aware of the bizarre image he was creating).

Note that the pāda-final verb *sām bharanti* matches *sām bharete* in the same position in 1d.

X.79.3: With the standard tr. going back to antiquity, I interpr. “the hidden place of the mother” (*mātūḥ ... gūhyam*) to be her breast, which the child /young fire is seeking.

Also with the standard tr., I assume an unsignaled change of subject in cd. Agni must be the one “gleaming” in the acc. (*śucāntam*) in c, so the subj. of *avidat* is the priest or another mortal. His “finding” of Agni may depict the moment when the fire-kindling priest perceives the first glimmer of flame in the dried vegetation assembled for the kindling.

There is some difference of opinion (see Ge n. 3c) as to whether *sasām ... pakvām* refers to “cooked food” or “ripe grain(field),” with the former mostly favored (Sāy., Ge, Re), though Old and Kü (429) opt for the latter, as do I. I take *śucāntam* as the shared property; most take the simile just with *avidat* (“found him like cooked food”). The image in my view is that of the sun gleaming on the golden heads of ripe grain (see the photos in Google Images of ripe barley).

ripāḥ is a problem. With most, I take it as belonging with the phrase *ripó ágram* in III.5.5, which is a variant of the likewise problematic *ágre rupāḥ* in IV.5.7 (see comm. ad loc.). Here *upásthē antāḥ* substitutes for *ágra-* as the location of the mysterious *ri/up-*.

X.79.4: As noted in the publ. intro., this vs. structurally functions as an omphalos vs. and is introduced as if with a revelation: *tád ṛtām ... prā bravīmi* “I proclaim this truth” – though the truth is fairly humdrum. Note also that though the poet began the hymn with *ápaśyam* “I saw,” in this vs. he asserts that he, as a mortal, does not perceive (*nāham ... mārtyaś ciketa*); only Agni does.

X.79.5: This vs. accomplishes a tricky switch of referents: pāda a contains a dat. sg. m. pronominal *asmai*, c the same, but *tasmai*. The first is a 3rd ps. ref. to Agni, the second a 3rd ps. ref. to the sacrificer, who is represented in ab by *yāḥ* as subject of the three verbs in that hemistich. Meanwhile, Agni resurfaces as subj. of cd but in the 2nd ps. (*vī cakṣe ..., ágne ... asi tvám*).

There is a possible alternative interpr. of ab, which does not actually change much. In both the publ. tr. and the standard tr., *púṣyati* at the end of b has the sacrificer as subj. and a (semi-)transitive sense, ‘prosper s.o.’ It owes its accent to being in the relative clause. However, it’s possible to read it as the verb of the main clause to which *yāḥ ... juhóti* is subordinated. It would then owe its accent to being 1st in its clause, and would express the happy result for the hard-working sacrificer: “Whoever sets out dry food for him, pours oblations with melted butter and ghee for him, he [=sacrificer] prospers.” The verb would have the less common intrans. sense. The second hemistich would begin a new sentence. I do not favor this alternative, however.

The puzzling “two eyes” of Agni in 2a are here replaced (/repaired) by a thousand eyes (*sahásram akṣábhiḥ*) more appropriate to a multiply glittering god.

X.79.6: This vs. turns on the pun between the perfects *cakartha* (√*kṛ*) in pāda a and *cakarta* (√*kṛt* ‘cut’) in d. The first thing to say is that the publ. tr. contains an outright error: *cakarta* is of course a 3rd sg. (‘he cut’) not a 2nd sg. (‘you cut’), however tempting the latter is. The pāda should read “he cut apart (the wood) piece by piece, as a knife does a cow joint by joint.”

The vs. also presents itself in the fashion of an omphalos hymn, with the speaker, confessing ignorance, asking the god for enlightenment (b: *ágne pṛchāmi nú tvāṁ ávidvān* “Agne, unknowing I ask you now”) about a grave offense to the gods (pāda a). This is highly reminiscent of the anguished questioning of Varuṇa by the poet in the famous dialogue hymn VII.86 (esp. vs. 3). But here it’s actually a joke! The poet isn’t asking about his own faults, but Agni’s – and the only evidence that Agni has committed a transgression is that he “eats without teeth,” a natural fact that never slows down Agni’s consumption, as d demonstrates.

As Re points out, *áttave ‘dán* is a pun on √*ad* ‘eat’ (*át-tave*) and *dánt-* ‘tooth’ (*a-dánt-*), which, if we backproject it far enough, becomes an etymological figure.

X.79.7: The tr. ‘that face in all directions’ is misleading for *vīśūcaḥ*, since it sounds as if *vīśva-* were involved. Better ‘facing in diverse/multiple directions’; see comm. ad VI.59.5. These horses are of course his flames.

Although Gr glosses *ījīti-* as ‘glühend, strahlend’, most modern comm. and tr. take it rather to mean ‘of straight course’ vel sim; see the tr. of the various passages by Ge, Re, as well as EWA s.v. – though see Kü’s tr. of the phrase in this passage (149) “mit glühenden (?) Zügeln.” Although *ījī-* ‘shining’ could easily be a Caland form to *ījrá-* in the part of the latter’s range that means ‘silvery, shining’, a relationship to *ījū-* ‘straight’ is also probable. The formation of *ījīti-* is not clear: though AiG II.2.628 seems to favor a suffixal form, comparable to *dabhīti-* ‘harmful’, it also mentions the possibility of a cmpd with *īti-* to √*i* ‘go’, which I would favor. See EWA, which mentions both. The stem occurs 4x in the RV; the passage that most clearly supports ‘having a straight course, going straight’ is VI.75.12, where it qualifies an arrow. In our passage, ‘straight’ is better than ‘shining’, though since Agni is involved, ‘shining’ isn’t excluded. X.21.2 of an oblation and X.75.7 of a river are friendlier to ‘shining’, but ‘straight’ works well in both.

With Ge and Re, I take *mitrá-* as a qualifier of Agni (my ‘ally’; their ‘friend’), in contrast to Kü (107, 149), who takes it as a ref. to Mitra. Agni as distributor of the oblation to the gods makes better sense than Mitra as subj. of *caḥṣadé*. The adj. *sújāta-* is also more appropriate for Agni, esp. since his birth featured earlier in the hymn: most of the singular forms of (differently accented) *sujātá-* qualify Agni, as well as the majority of the same to *sújāta-*.

X.80 Agni

On the insistent repetitive structure of this hymn, see publ. intro. Because of the relentless fronting of Agni in the original, I have tried to keep Agni close to the front in the tr., even when it is awkward.

X.80.1: The cmpd. *karmaniṣṭhā-* is variously rendered (see the standard tr. as well as Scar 648–49); on my understanding of *niṣṭhā-*, which matches Scar’s, see comm. ad III.31.10 and of further cmpds using *niṣṭhā-* VIII.2.9; as for root noun cmpds of the type NOUN – PREV.+ROOT (and their avoidance) see comm. ad I.124.7.

As I have argued elsewhere (see now comm. ad X.28.2, inter alia), *kukṣí-* originally, and in most of its Vedic occurrences, meant ‘cheek’; however, here it shows the transferred sense

‘belly’ in the cmpd *vīrā-kukṣi-* ‘having a hero in her belly’ (< ‘having a belly with a hero [in it]’). It is surely no accident that this is a pregnant belly, which physically resembles a puffed-out cheek.

X.80.2: The form of Agni that opens pāda a, gen. *agnéḥ*, is the only interruption of the string of nom. sg. *agnīḥ*-s that open every pāda (14 in all) until *agnéḥ* reappears in 4d. Despite the grammatical difference, note that it involves only the change of one vowel.

The problem in pāda a is the gen./abl. *āpnasaḥ*, about which there are many and diverse opinions (see esp. Old). As a neut. noun it cannot modify the other gen., *agnéḥ*. Old and Ge, in different ways, take *āpnasaḥ* as directly dependent on *samīdh-* “the kindling of *āpnas-*” – e.g., Old “Das Holzschait der Gabe des Agni sei herrlich.” Re takes it rather as semantically parallel to *bhadrā* despite the case difference: “... soit réjouissante, (soit signe) de bénéfice.” I’m inclined in the Re direction because (as Ge [n. 2a] and Old point out) *bhadrā-* and *āpnas-* are parallel in I.133.9, 20. Here the adj. *bhadrā-* modifies *samīdh-* directly, but the noun *āpnas-* must be in an oblique case: “of/for profit.”

Agni “enters” the two world-halves by being kindled and spreading his light between them.

Pādas c and d are obviously contrasted, through the polarized terms *ékam ... purūṇi*. The sense in the publ. tr. would be clearer if I had fld. Ge and Re in tr. *ékam* as ‘alone’. In other words, Agni gives aid to the warrior fighting alone and against odds, as well as having the power to take on many opponents.

X.80.3: As noted in the publ. intro., this vs. is reminiscent of the brisk catalogues of the Aśvins’ deeds (so also Re), particularly those found in Kakṣīvant hymns (I.116–20). The similarity extends to the fact that most of the deeds (in pādas a, b, and d) are unknown or barely so. Only the Atri episode (c) is familiar, on which see my Hyenas 228–29; it is worth noting that it’s usually the Aśvins who rescue Atri, which supports the notion that this vs. is based on Aśvin models. The destruction of Jarūtha is mentioned twice elsewhere (VII.1.7, 9.6), but with no further details: in VII.1.7 Agni burns him up, but in VII.9.6 it is Vasiṣṭha who smites him (though with Agni apparently present). Nṛmedha figures briefly in X.132.7, but as a rescuer, not a beneficiary. Nṛmedha Āṅgīrasa is also a poet to whom the Anukr. attributes VIII.89-90 and 98-99 (all Indra hymns), as well as IX.27 and 29; see also Śakapūta Nārmedha, the supposed poet of X.132. None of these hymns gives any clue to the role of Nṛmedha here.

As noted in the opening comm. to X.76, the Anukr. attributes that hymn to a snake Jaratkarṇa. The relationship is clear, the reason for it is not.

In b *adbhyāḥ* could be either dat. or abl.; the standard tr. (incl. the publ. tr.) take it as abl., presumably because ‘for the waters’ makes little sense, and in any case Agni would probably need to get his victim out of the water before burning him. But in the absence of more information about the story, we can’t be certain.

X.80.4: On the NP *dráviṇam vīrapeśā(ḥ)* and the gender (dis)agreement therein, see comm. ad IV.11.3. Although in our passage, *vīrapeśā(ḥ)* could be nom. sg. m. and modify Agni, in IV.11.3 Agni is in the ablative: *tvád eti dráviṇam vīrapeśā(ḥ)* and so neut. *dráviṇam* must be the target noun.

X.80.5: Ge (n. 5c) thinks the birds call on Agni “aus Angst”; I’m not sure that this limitation is necessary, esp. since it’s not clear to me what Agni could do for flying birds-in-need.

X.80.6: As Ge points out (n. 6a), pāda a is almost identical to nearby X.83.2, except that Manyu (battle fury) is the addressee there. Although I usually render the vṛddhi deriv. *mānuṣa-* as ‘stemming from Manu’ or the like (so persuaded by JPB), here the more standard ‘human’ might be better, given *mānuṣaḥ ... jātāḥ* in the next pāda, which would otherwise seem to double *mānuṣa-*.

On *vī* in b see Old.

Acdg. to Ge (n. 6b; see also Macdonell/Keith, Vedic Index s.v.), Manu and Nahus are two clan ancestors of the Ārya, which seems approximately correct, though Manu is obviously more prominent.

The interpr. of c is hampered by the absence of a verb and by the unclarity of the phrase “the Gandharvan path of truth” (*gāndharvīm pathyām ṛtasya*). Ge supplies ‘knows’ and thinks the phrase refers to the right way to sing; Lü (540 n. 2) agrees. Re is rather vague about the purport of the pāda but supplies ‘finds’ on the basis of III.31.5 *viśvām avindan pathyām ṛtasya*. Although this parallel lacks the Gandharva connection (Gandharvas in the RV tend to spread obscurity), it otherwise seems close enough to favor supplying ‘find’ here too. The path Agni finds is presumably connected with the ritual process, perhaps, with Ge, the sung or at least verbal portion of the ritual.

The word *gāvyūti-* is regularly associated with ghee, though the ghee is metaphorical for rain, in the phrase “sprinkle the pastureland with ghee” (*ghṛtēna/ghṛtaír gāvyūtim √ ukṣ*): III.62.16=VIII.5.6, VII.62.5, 65.4. Here I think this metaphorical phrase is given a literal spin: Agni’s pastureland – the place he forages for food – is in the actual ghee of the poured oblation. (I owe this explanation to JPB.)

X.80.7: As pointed out in the publ. intro., this vs. breaks the rigid structural pattern of the rest of the hymn – first by beginning the vs. with a trisyllabic form of Agni, dat. *agnāye*, and then by addressing him directly in the 2nd hemistich, with two vocc. *ágne*, thus introducing the 2nd ps. for the first time in the hymn.

[X.81–82 Viśvakarman JPB]

X.83–84 Battle Fury

The next two hymns to “Battle Fury” (Manyu) are attributed to a poet Manyu Tāpasa, whose name is transparently derived from the dedicand of the hymn; for the patronymic see *tāpasā* in X.83.2, 3. Although not as rigidly structured as X.80 with its relentlessly fronted *agní-*, both of these hymns are quite insistent on the name: *manyú-* appears at least once in every vs. in both hymns and once considerably more (4x in X.83.2) -- except for the last vs. in X.83 (in a different meter). The diction and contents are fairly straightforward, but there is considerable sharing of vocabulary both within and across the hymns. Both hymns are found, in opposite order, in AVŚ IV.32–33; also in AVP IV.32 [=RV X.83] and IV.12 [=RV X.84] but not adjacent.

X.83 Battle Fury

X.83.1: On the voc. phrase *manyo ... vajra sāyaka* see comm. ad X.96.3.

An etymological figure involving \sqrt{sah} ‘be victorious’, beginning in b, continued in c, and exploding in d. For other forms of \sqrt{sah} see below.

X.83.2: I don’t understand the pf. *āsa*; these identifications would be more powerful if they were not set in the past.

As indicated above, c is almost identical to nearby X.80.6a, though with Agni as the addressee.

X.83.4: Note ... *abhībḥūṭy-ojāḥ* and *abhimāti-ṣāhāḥ* ending the two pādas of the first hemistich.

Another flurry of \sqrt{sah} forms, beginning at the end of b and continuing in c.

X.83.5: It is difficult to ascribe to the nom. part. *sān* its usual concessive force.

For ease of tr. I render the gen. *taviṣāsyā* as a voc. beside *pracetaḥ*.

Note the phonetic figure *tāva krātvā taviṣasya*.

Note also the contrastive *krātvā* (b) and *akratūḥ* (c).

On nonce act. transitive *jihīḍa* as generated to medial *jihīḍe* ‘is angry’ (as also suggested by the vocalism), see Kü 610–11.

X.83.5–6: Note the repetition of *mēhi* (5d, 6a), reminiscent of the more ubiquitous and regimented concatenations in X.84.

X.83.6: Another \sqrt{sah} form, *sāhuri-*, a Lieblingswort of these two hymns: X.83.4, 6; 84.2, 5.

‘Suckling all’ (*viśvādhāyas-*) seems an incongruous epithet for Battle Fury; it usually characterizes more benign subjects, esp. Agni, but also wealth, the earth, etc. I don’t know what it is meant to convey here—perhaps that the Manyu that sweeps us to victory provides us with the spoils we need to thrive.

With JSK (DGRV I.371–72), I take *utā* as conjoining the two imperatival clauses ... *ā vavartsva* (c) and *utā bodhi āpēḥ* (d), with the first dual subjunctive clause *hānāva dāsyūn* parenthetically inserted.

The impv. clause *bodhi āpēḥ* raises the question: which root does *bodhi* belong to -- $\sqrt{bhū}$ or \sqrt{budh} ? Re opts for the former, on the basis of VIII.3.1 *āpīr no bodhi* “become our friend” and of the impv. *bhavā* in the next vs. (7a). However, this leaves him floundering in attempting to explain the clear gen.(/abl.) *āpēḥ*. Much better to follow Old, Ge, and Klein (inter alia) and take it to \sqrt{budh} ‘be aware’, which takes a gen. complement by rule.

X.83.7: This vs., particularly the 1st hemistich, is apparently modeled on VIII.100.2, in a brief dialogue between Vāyu (VIII.100.1) and Indra (vs. 2): the even pādas (100.2d, 83.7b) are identical and the preceding odd pādas very similar: VIII.100.2c *āsaś ca tvām dakṣiṇatāḥ sakhā me* “and you will be my comrade on my right side” v. our *dakṣiṇatō bhavā me* “be on my right side” (with *āpi-* ‘friend’ in 6d). Indra’s offer to Vāyu of the first drink of soma in VIII.100.2ab is similar to our cd, where the poet offers Manyu the best of the soma and suggests they two will drink it together silently. The ritual tech. term *upāṃśú* is found only here in the RV; on its sense see Re (Vocab. rit. véd.), Sen (Dict. of Vedic Rituals) both s.v. It refers to a kind of near-silent recitation; the first drawing of soma at the Morning Pressing is done this way. And of course Vāyu gets the first drink of soma.

X.84 Battle Fury

As noted in the publ. intro., this hymn is characterized by verbal concatenation, with the final word of one vs. picked up at the beginning of the next: *agní-* ‘fire’ in 1d/2a, *éka-* ‘alone’ 3d/4a, *ví√ji* ‘be victorious’ + *√kṛ* ‘make’ 4d/5a, *ā√bhū* ‘(come) into existence, be at hand’ 5d/6a, (*dhana-*) *sám√sṛj* ‘pour in spoils’ 6d/7a; only 2d/3a lacks this type of concatenation (but see below). In fact, the concatenation carries over the hymn boundary: in vs. 1d *abhí prá yantu* “let them go forth on attack” echoes X.83.7a *abhí préhi* “go forth on attack” in the last vs. of the preceding hymn.

X.84.1: On the verbal concatenation with the last vs. of the previous hymn, see immed. above.

The adverbial phrase *tváyā ... sarátham* “on the same chariot with you” is a variant of *tváyā yujā* “with you as yokemate” in the 1st vs. of the preceding hymn as well as 4c in this hymn.

X.84.3: Although, as noted above, the final/initial concatenation that prevails in the rest of the hymn does not link vs. 3 with vs. 2, vs. 3 is nonetheless tightly bound to the two preceding vss. Initial *sáhasva* repeats pāda-final *sahasva* in 2a, and vs.-final *śátrūn* repeats *śátrūn* in 2c. Moreover, *ruján* (3b) echoes *ārujántaḥ* (1a) and *préhi* (3b) *abhí prá yantu* (1d).

The VP *sáhasva ... abhimātim* corresponds to the cmpd *abhimātiṣāhā-* in the preceding hymn, X.83.4.

In d both Ge and Re supply a second object in the phrase *vásam nayase*, namely “them” presumably picking up *śátrūn* in b and the subj. of *ā rurudhre* in c: “bringst du ... (sie) in deine Macht”; “tu (les) mènes à (la) volonté,” with *vásam* an acc. of goal. I instead take *vásam* as adverbial “at will,” as I do also in the rt-noun cmpd. *vaśa-nī-* in X.16.2. See comm. ad loc. and Scar (290). I do not supply an acc. ‘them’.

X.84.4: Note the juxtaposition of the semantically polarized terms *éko bahūnām* “one/many.” The function of the gen. *bahūnām* is disputed. With Ge I take it as (an irreg.) gen. agent with *īḍitāḥ*; Ge (n. 4a with suppl. n. 1) cites X.93.4 *nṛnām stutāḥ* as parallel. Re explicitly rejects an agentive reading and tr. “Tu es seul parmi beaucoup ...” (so also Proferes, Sovereignty, p. 18) with a more orthodox use of the genitive. Because of the āmreḍita *viśam-viśam* in the next pāda, I nonetheless favor the agentive interpr.: Manyu performs various services for the many who invoke him. I also can’t imagine who “the many” would be who are not being called upon – gods like Indra? other emotional states?

sām śísādhi echoes *saṃśísānāḥ* in 1a. There the participle took *āyudhā* as object, while here the impv. has *yudhāye* as dative of purpose.

On the voc. bahuvrīhi *ākṛtta-ruk*, see, briefly, Scar (459).

On *tváyā yujā* see comm. ad vs. 1.

On *kṛṇmahe* see comm. ad X.51.7.

X.84.4–5: The final two words of vs. 4 *vijayāya kṛṇmahe* are matched by the rt. noun cmpd. *vijeṣa-kṛt*, which opens vs. 5. Several remarks about this pairing are in order. First, *vijayāya kṛṇmahe* is not a tight syntagm: *kṛṇmahe* has its own direct object (*ghóṣam* ‘cry’) and *vijayāya* is a dative of purpose with the whole predicate. Second, as Scar (80) points out, *vijeṣa-* is not otherwise found in the RV (though it is found non-compounded in AVP V.23.1), though *jeṣā-* is

found a couple of times – and, I’d point out, there are *s*-aor. forms *jéṣ(a)-*. Scar considers various possibilities for its formation in this cmpd. (see also Re), but does not mention the clear impetus for its creation: the chaining between 4 and 5. Clearly a nominal form of *vi√ji* was wanted as first member of the *-kṛ-t* cmpd, but simply repeating *vijayá-* is not possible for metrical reasons: **vijaya-kṛt* would produce an opening of 4 light syllables (since *-kṛd* is followed by a vowel), whereas *vijeṣa-* provides the very desirable heavy second syllable and breaks up the unacceptable sequence of light syllables.

X.84.5: The hapax *anavabravá-* is very difficult to interpr. because the lexeme *áva√brū* does not seem otherwise to exist, nor in fact does *áva* plus a verb-of-speaking, like *áva√vac* or *áva√vad*, in early Vedic. (In the Brāh. *ava√vad* is found [e.g., AB V.22] in the apparent sense ‘speak ill’; one could also point to *ava√man* ‘despise’, although this lexeme doesn’t really show up till Epic/Classical.) Both the context and the preverb *áva* ‘down’ suggest that the lexeme has a negative value, lit. ‘talk/speak down’ – with this negative sense reversed by the privative *an-*. The range of available tr. reflects this assumption, but there is otherwise little or no agreement: Gr “von dem man nichts übles sagen kann,” Ge “keine Absage [refusal] geben,” Re “sans dédire (la promesse),” Scar (80) “untadelig,” Wh (AVŚ IV.31.5) “not to be talked down.” There are no grounds on which to choose among these. The publ. tr. sticks close to the additive/literal, but assumes that the form is active (so Ge, Re), not passive (so Gr, Scar, Wh). In the publ. tr. the unexpressed assumption is that Manyu can become our overlord (*adhipā-*) without verbally demeaning us.

X.84.5–6: The formal concatenation between *ābabhūtha* (5d) and *ābhūti-* (6a) is undeniable; their semantic connection is a different matter. Re explicitly asserts that they have different meanings, and the standard tr. render the verb and the noun differently: Ge “... du entstammst” v. “mit dem Erfolg”; Re “... tu as pris naissance” v. “avec le succès”; Wh (AVŚ IV.31.5–6) “thou camest” v. “with efficacy.” Since *ābhūti-* is found only here in the RV (and very seldom elsewhere), it is embarrassing to attribute to it a sense different from the juxtaposed verb. Consequently the publ. tr. attempts to unify them: “you came to be ready to hand” and “with readiness.” One of the usual senses of verb forms of *ā√bhū* is ‘come into being’, as in the repeated *yāta ābabhūva* “... from where [this creation] came to be” in the famous creation hymn (X.129.6–7). Our clause, *yāta ābabhūtha*, matches the X.129 usage exactly, and I would now emend the tr. to “... whence you came into existence.” Another sense of *ā√bhū* is ‘be at hand, be ready’, and this is the usual meaning of the rt noun cmpd *ābhū-* ‘standing by, ready at hand, available’; see Scar 359–61. Our isolated *ābhūti-* seems to be the abstract ‘readiness’ corresponding to this rt noun adj.; so approx. also Scar. In this instance the concatenation implicitly contrasts two somewhat different senses of the same lexeme.

X.84.6: On *ābhūti-* see immed. above; note that the voc. of another such *-ti*-stem cmpd., *abhibhūte*, is found in the next pāda. The latter is also found in the cmpd. *abhibhūty-ojas-* in the preceding hymn, X.83.4.

On *sahajā-* see Scar 148. The first member is presumably the adv. *sahá* ‘together with’, and this first cmpd member is construed with the instr. *ābhutyā*. However, as Scar points out, a connection with *√sah* ‘be victorious’ is also thinkable, esp. since forms of this root are all over these two hymns, incl. *sāhaḥ* in the next pāda. However, the phrase *krátvā ... sahá* “together with your resolve” in c seems to stabilize *saha-* in *sahajā-* as the adv.

The sequence *vajra sāyaka, sāhaḥ* is found also in X.83.1, likewise split across a pāda boundary.

The rhyming phrase *med'y edhi* is phonologically catchy and recalls the repeated *méhi* of the previous hymn (X.83.5, 6). On the meaning of *medín-* see comm. ad X.38.2.

X.84.6–7: The concatenation of these two vss. is phrasal: *(mahā)dhanásya ... saṃsṛjī* in 6d matches *sāṃsṛṣṭam dhānam* in 7a.

X.84.7: On *sām √ sṛj* see comm. ad X.27.10 and Scar 627–28. My rendering ‘pour in’ may be a bit over-literal. In 7a spoils that are *sāṃsṛṣṭa-* are contrasted with those that are *samākṛta-*. Ge suggests (n. 7a) inanimate and animate respectively; Re’s interpr. is more elaborate (see below). Although both *sām √ kṛ* and *ā √ kṛ* are common, *sam-ā √ kṛ* is quite rare. I take the preverbs as additive – ‘bring here [=make (to be) here] together’ – and assume that it involves actual collection, whereas *sām √ sṛj* may refer to things that have accumulated on their own. This is somewhat like Re’s “celui qui s’est déversé (de soi-même) et celui qu’on a poussé (devant soi pour le faire aller) ensemble” – which seems to be the exact opposite of Ge’s suggestion. I can’t get any further, but I favor something like Re’s solution (without the excess verbiage).

I do not understand why the peaceable Varuṇa is brought in at the last minute, to pair with Battle Fury.

X.85–191 From here on till the end of the maṇḍala, the hymns are discrete, arranged (roughly and with a number of exceptions) by decreasing number of verses. See Old, Prol. 228, 237, 240–49.

X.85 Wedding

This long and complex hymn is clearly a composite, as suggested by its length (one of the longest hymns in the RV), the abrupt changes in its tone and subject matter, and its metrical variety. It has been treated by a range of scholars too numerous to mention. Most of its vss. are found in the AV (AVŚ XIV.1–2; AVP XVIII), though not in the same order and with many additional vss. interspersed: the RV version has 47 vss., the Śaunaka AV a total of 139. For my overview of the structure and contents of the RV version see publ. intro.

X.85.1–19: This long preamble treats the mythical wedding of Sūryā, daughter of the Sun, and Soma, who here is identified with the Moon, as in later texts but very rarely in the RV. The structure of this hymn-within-a-hymn is

vss. 1–5 Soma’s astronomical qualifications

vss. 6–12 identification of items associated with the wedding with astronomical and other phenomena

vss. 13–16 the pre-wedding: the “wooing”

vss. 17–19 blessings and more astronomy

On the various possible boundaries of this Sūryā hymn, see Old.

X.85.1: This vs. is notable for the parallel hemistich-initial instr. *satyéna* (1a) and *ṛténa* (1c). In keeping with my (perhaps overscrupulous) insistence that *ṛtá-* means ‘truth’ in the RV (flg. Lüders), not ‘cosmic order’, ‘law’, or the like, I tr. *ṛténa* here as ‘by truth’ and *satyéna* as ‘by reality’: in much of the RV the adj. *satyá-* means ‘real, actual, actually present’. However, I now

realize that I must reckon with changing semantics in the late RV, and just as Soma here assumes his later role as the Moon, *satyá-* may here have acquired its later meaning of ‘truth’, impinging on the semantic domain of *ṛtá-*, while *ṛtá-* may have narrowed its usage to the principle of truth associated with the Ādityas, as is suggested by their presence in pāda c. (See Re’s remark, EVP XVI.144, that in Maṇḍala X *ṛtá* “coincides” with *satyá-*.) I would now change the tr. to “By (realized) truth ..., by (immanent) truth ...” – or, more simply, “by truth ... by truth,” however against my principles that is.

The next question is why the earth needs to be propped up (*úd*). I have no answer, and it’s not a question that seems to have exercised other commentators.

Though underlyingly and overwhelmingly masc., *dyaúḥ* is fem. here (adj. *úttabhītā*), as it tends to be when associated with reliably fem. ‘earth’.

The nuance of *tiṣṭhanti* isn’t entirely clear to me – perhaps ‘take their stand’ or ‘stand firm’; the other three pādas in the vs. concern the stable position of the entity in question.

Pāda d establishes Soma in heaven and implicitly as a heavenly body.

X.85.2: A major lapse in the publ. tr.: in pāda b “by Soma” should be substituted for “by truth”!

X.85.3: Having established the celestial and cosmic bona fides of Soma, the poet now distinguishes this Soma from the ritual drink.

On the knowledge possessed by ‘formulators’ (*brahmāṇaḥ*) see comm. ad vs. 16.

X.85.4: This vs. develops the thought of vs. 3: that the Soma under discussion here is not the ritual drink, and he therefore can listen to the sound of the pressing stones with equanimity, since he will not be smashed by the stones and consumed.

So much is clear from the 2nd hemistich; the first one presents interpretational difficulties in the two instr. pls., *āchádvidhānaiḥ* (a) and *bārhataiḥ* (b) – in both cases the protectors of Soma. The first is a hapax, the second occurs only once in the RV (though it is common elsewhere in Vedic), but their formations are fairly clear: *bārhata-* is a vṛddhi deriv. of *brhánt-* ‘lofty’, and the two members of the cmpd. *āchád-vidhāna-* are both found elsewhere. But this doesn’t get us very far, nor do the various tr. offered of the cmpd., including the unobtrusive one in the publ. tr. “whose regulation is sheltering.” Perhaps the closest to the mark is Doniger’s non-literal “by those charged with veiling you.” I think this has to do with the phases of the moon. *ví√dhā* can refer to temporal regulation, indeed of the moon. Cf. X.138.6 *vidhānaṃ māsām* “the apportioner of the months”; and in our hymn vs. 18 *ṛtūṃ anyó vidádhaḥ jāyate púnaḥ* “The other [=the moon] is born again as he portions out the seasons.” The cmpd. should be a bahuvrīhi, and I suggest something like “those who have [=oversee] the regulation of (your) covering” or, a bit less awkwardly, “those who regulate your covering” – i.e., whatever forces control the regular covering and uncovering of the moon in its monthly phases. For further on the cmpd. see Scar 129–30.

As for *bārhata-* ‘those belonging to the heights’, this could refer to heaven-dwellers (cf. *brhád-diva-*, etc.) or, since the earthly plant soma grows in the mountains, to mountain-dwellers (hapax voc. *brhad-giri-*). Since the focus in this hymn is on heavenly Soma, the former is more likely.

In c it is possible that *tiṣṭhasi* + PRES PART is a periphrastic constr., “keep X-ing,” though in the standard tr. *tiṣṭhasi* is rendered with its lexical value “you stand, listening ...” The *tiṣṭhanti*

in 1c without participle might support the lexical reading, though I am attracted to the periphrasis.

X.85.5: Since the last pāda of the preceding vs. (4d) proclaimed that no earthling consumes Soma, the subject of *prapībanti* must be other – presumably the gods and, in particular, Vāyu, mentioned in c, who receives the first drink at the Soma Sacrifice.

I take “you swell up again” as a reference to the moon’s phases, as I do in 4a.

X.85.6–12: These vss. consist for the most part of bandhus equating parts of Sūryā’s wedding chariot and equipage with astronomical phenomena, inter alia. In several instances identification is difficult because of the specialized lexicon. I also think it likely that we are missing a number of astronomical references.

It is a little surprising how many overt copulas are found in these equational clauses. True, they are all preterital, and technically only present-tense copulas are ordinarily gapped. But still I would have thought that once the temporal situation had been established, the preterital copulas could have been dispensed with. The examples are all impf.: sg. *āsīt* (6a, 7c, 8d, 10a, 10b), du. *āstām* (9b, 10c, 11c), pl. *āsan* (8a), and notably the unextended impf. *ā(s)* (7a, 7b). We (linguists) tend to view this form as a precious relic, the expected 3rd sg. impf. to \sqrt{as} (*a+as+t*), which is almost universally replaced by remarking it with the 3rd sg. sec. ending to set roots (*-īt*, as in *ābravīt*). But the RV distribution of *ās* gives me pause: there are 5 exx., all in (late) X and all appearing before vowels, so they appear in sandhi as minimalist *ā* (accented *ā̃* once in X.61.5). These seem to me signs of artificiality, and I suggest that *ā(s)* was reverse-engineered as a kind of parlor trick by linguistically savvy poets. This isn’t to say that *ās* / *ās* never existed – it must have, on system-internal grounds and to provide the foundation for *āsīt* – just that it had disappeared by the time of the RV but could be recreated as a pseudo-archaism.

A number of pādas in this sequence are semi-duplicates. I don’t know the reason for this – it might just be a taste for repetition, but (more likely in my view) it may be that in various circles there were alternative phrasings of the same general vs. for various stages of the wedding enterprise, and when the hymn was assembled, the assemblers kept the alternative versions. These semi-duplicates include

7d *yád áyāt sūryā́ pátim*
10d *yád áyāt sūryā́ gṛhám*
12cd ... *sūryā́, ... prayatī́ pátim*

8c *sūryā́yā aśvínā́ varā́*
9b *aśvínā́stām ubhā́ varā́*

10a *māno asyā́ ána āsīt*
12c *áno manasmáyam sūryā́ ...*

as well as other, less precise, echoes. There are other such semi-duplications in other sections of the hymn; see below *passim*.

X.85.6: Raibhī and Nārāsaṃsī are names of particular gāthās that were presumably sung on (or before and after) the wedding journey. The two feminines with which they’re equated, *anudéyī*

and *nyócanī*, are difficult to identify because of limited attestation: the latter is a hapax and the former almost so. (Fortunately their verbal lexemes, *ānu √dā* and *nī √uc*, are a bit more secure.) There is a wide range of interpr. of these two terms, which I will not rehearse. On *anudēyī* see my “Inborn Debts of a Brahmin” (JA 302.2 [2014], esp. 248). In my opinion the two feminines refer to servants/attendants of the bride: the *anudēyī* is one from her natal place, lit. ‘to be given along with/following (the bride)’. I interpr. *nyócanī* in light of *nyòkas-* ‘(being) at home’ (*nī √uc* ‘be at home, at ease’) and suggest that she is a female servant at the husband’s home, who will become the bride’s attendant when she comes into the household. This is somewhat similar to Re’s suggestions (EVP XVI.144, not Hymnes Spec.) that *anudēyī* is “qqch. qui est à mettre en place” and *nyócanī* “qqch. qui est d’ores et déjà en place” – though he then immediately claims that they are doubtless parts of the chariot. It is impossible to prove my conjectures (or any of the other suggestions floating out there), but the two suggested meanings are compatible with the verbal lexemes, and they also make the two terms explicitly contrastive, which many of the other suggestions do not.

The standard tr. (Ge, Re [HySpec], WD) take *cd* as a single clause and as if the verb were a copula. E.g., Ge “Das gute Kleid der Sūryā ist mit der Gāthā ausgeputzt.” But *d* clearly contains *eti*, a verb of motion, which is represented in the publ. tr. (“... goes adorned ...”). Although garments don’t ordinarily move on their own, the focus on the wedding journey in this section justifies a verb of motion. The standard rendering seems to be the result of a collective Homeric nod.

X.85.7: The logical connections between the terms in each pair elude me (save for *b*), though *c* would make more sense if I interpr. *kóśa-* with most, incl. Gr, Ge, and Wh (AVŚ XIV.1.6), as a traveling chest, cask, or coffer, since the cosmic spaces can be seen as hollow containers, which could be compared to a traveling chest mounted on the wagen and containing the bride’s possessions brought from her natal family. I would therefore emend the pub. tr. to ‘coffer’.

Pāda *d* depicts a somewhat different model of the wedding from the one we find later (both later in Vedic and later in the hymn), since the bride Sūryā seems to be traveling by herself to her new husband. Ordinarily the bride’s wedding journey is taken in company with her husband after the ceremony, to her new home with his extended family. (See my Sac. Wife 125–26, 223–26.)

X.85.8: As generally rendered, the first pāda refers to parts of the chariot, the second to bridal finery. Because of this mismatch Wh (ad AVŚ XIV.1.8) reasonably suggests the *pratidhāyaḥ* “must rather be some article of a woman’s dress.” None of this can be further determined.

X.85.8–9: As disc. in my Sacrificed Wife (221–24), “wooer” (*varā-*) refers not to a hopeful suitor, the future bridegroom, but to his sidekicks, who accompany him to the bride’s house to ask her male relatives for her hand and conduct some of the negotiations.

X.85.10: On the *ānas-* ‘cart’ as the proper vehicle for a bride, see comm. ad I.126.5 and my 2003 “Vedic *vrā*” (Fs. H-P Schmidt).

Pace Re (HymSpec, fld by Don), the two *śukraú* are far more likely to be the Sun and Moon than the two summer months Śukra and Śuci.

Pāda *d* is almost identical to 7*d*.

X.85.11: On the disputed sense of *sāmanā-* see comm. ad III.30.9. Here its usage is complicated by the fact that there is a play on *-sāmābhyām* in the preceding pāda. A rendering like “of one accord” fits well here, though it’s rather different from what I suggest in III.30.9.

What *c* is meant to convey baffles me, esp. because of the number disagreement between ‘ear’ (or perhaps ‘hearing’) and ‘two wheels’. The ear/hearing part fits well with the *īc-* and *sāman-* in pāda *a*, but the wheels are puzzling – though it is the case that wheels can creak in Vedic. Or perhaps ears are here conceived of as circular, with the various articulations of the outer ear seen as the axle and spokes. Given the shape of most ears, they wouldn’t provide a smooth ride!

X.85.12: Here at least a dual is equated with the two wheels, but what exactly *śúcī* refers to is unclear. Since an etymologically related dual *śukraú* occurs two vss. previously (10c), they might refer to the same entities. Indeed, Re (HymSpec, + Don) identify them again as the two summer months. However, perhaps the two oxen and the two wheels ought to be identified with two different pairs — though not necessarily, if these vss. are variants of the type disc. ad 6–12. Re (EVP XVI) points out that *śúcī* is used of Heaven and Earth in X.56.5, and this informed my tentative choice of referents in the publ. tr. However, H+E are not very wheel-like (not that superficial resemblance is guiding the bandhus in this section), so we are back to Sun and Moon, which at least are circular (more so than ears). Ge (n. 12ab) also suggests ‘eyes’, which would fit the surrounding context better, but I don’t think *śūci-* is otherwise so used. On the basis of Sūryā’s two wheels in 16 and the regular succession of sun and moon in vss. 18–19, I would now change the bracketed ident. in the publ. tr. to “[=Sun and Moon].” On the genders of *śukraú* and *śúcī* with further disc. of these passages, see comm. ad X.26.6.

X.85.13: *vahatú-* can mean both ‘wedding’ and ‘wedding procession / journey’, in keeping with its etymology (√*vah* ‘convey’) and with the emphasis on the wedding journey in traditional treatments of ancient Indian marriage; see the reff. given above ad vs. 7. Here either would work.

The locc. *aghāsu* and *árjunyoh* refer to nakṣatras; for further see, e.g., Ge n. 13c, Wh (n. to AVŚ XIV.1.13). The “cows are killed” presumably for the wedding feast.

X.85.14: On the Aśvins as wooers and the use of the mid. part. *prchāmāna-* see Sac.Wife p. 222.

Pūṣan’s appearance and role in *d* are puzzling. The med. verb *vr̥ṇīte* in a wedding context is specialized for the bride’s choice in a svayaṃvara ‘self-choice’ marriage. See my 2001 “Rigvedic svayaṃvara” (Fs. Parpola), and for this particular passage p. 306. Elsewhere there are hints that Pūṣan was considered, in certain circles, the husband of Sūryā (see VI.58.4 and comm. ad X.26.6), but even so he should not be the “chooser” (though see the reversal in VI.58.4) and in any case he is choosing his *fathers*, not a spouse. As disc. in the Fs. Parpola art., I think we are dealing with “formulaic slippage”: though *avṛṇīta* has the wrong subject and the wrong object, it covertly signals that we’re dealing with a self-choice marriage, as Sūryā’s marriage is depicted elsewhere in the RV (see Parpola Fs. art. for the evidence).

X.85.14–15: Another semi-duplication: 14ab *yád aśvinā ... áyātam, ... vahatúm sūryāyāḥ* // 15ab *yád áyātam śubhas patī, vareyām sūryām úpa*.

On the relevance of the questions in *cd* to the “wooing,” see SacWife 222–23.

X.85.16: The question of enigmas and who understands them has been ratcheted up a notch. In vs. 3 the ‘formulators’ (*brahmāṇaḥ*) possessed the esoteric knowledge about the real nature of Soma (*sómaṃ yám brahmāṇo vidúḥ*), but here they know only about Sūryā’s two wheels, but not the hidden third (*ékaṃ cakráṃ yád guhā*) – knowledge of which is limited to the *addhātí*-, clearly a more intellectually elite group than mere *brahmán*. The stem *addhātí*-, found only here in the RV though slightly more commonly in the AV, is a *-tí*-stem built to the adverb *addhā* ‘certainly’. As Old points out, the adverb *addhā* appears several times with forms of *√vid*, so its derivative fits the context here well. Though, per vs. 12, the two wheels are most likely the Sun and Moon, I have no idea what the third wheel is meant to be; Sāy. suggests it’s the year (see Ge n. 16). Because of the identification of the two wheels as the Sun and the Moon, since vss. 18–19 portray the regular alternation of sun and moon I would now change the tr. of *ṛtuthā* in our pāda b to “in their succession.”

In order to make the connection between this vs. and vs. 3 clearer, I would now also match the translations of *brahmāṇaḥ* in the two vss. The emended tr. of ab should now read “Your two wheels [=Sun and Moon], o Sūryā -- the formulators know them in their succession.”

X.85.17: This vs. seems the rough equivalent of a maṅgala vs. and interrupts the semantic connection I see between 16 and 18–19. In a RVic context it reads like a final summary vs., which in this case might bring the first section of the hymn, the mythical marriage of Sūryā, to a close; in that case vss. 18–19 would seem to constitute a loose appendix. AVŚ separates both our 17 and our 18–19 from the other Sūryā materials, which are transmitted together as XIV.1.1–16. Our X.85.17 is the far distant AVŚ XIV.2.46; our 18–19 less distant, but still separated from the Sūryā vss., as AVŚ XIV.1.23–24.

X.85.18–19: As noted above, these two vss. concern the regular alternation of sun and moon.

X.85.18: The first hemistich treats the two heavenly bodies together, the second contrasts them as separate entities.

In d the participle *vidádhat* is picked up by *ví dadhāti* in the next vs. (19c), as well as echoing the cmpd *āchād-vidhāna-* in 4a, which in my view concerns the phases of the moon (see disc. there), as it does here.

X.85.19: The subject of this vs. is universally considered to be only the moon. I disagree: I think ab concerns the sun, cd the moon. To begin with, it is difficult to apply b to the moon: both “beacon of the days” and “forefront of the dawns” bring to mind not the retreating moon, but the daylight produced by the rising sun. As Ge points out (n. 19b), *āhnāṃ ketú-* is otherwise used of the sun (III.34.4, VI.7.5) or the dawn fire, not the moon. Pāda a is more easily attributed to the moon, esp. since *návo-navah* ... *jāyamānaḥ* seems a variant of the last words of the preceding vs., *jāyate púnaḥ*, which do describe the moon. But “becomes ever new as he is born” can just as well characterize the sun rising anew every day: both sun and moon are cyclically renewed, just on different timetables.

With cd we return to the moon and its signature verb *ví√dhā*.

X.85.20–27: On the somewhat various contents of these vss., see publ. intro. It’s worth noting that 20–23 are found scattered in the AVŚ wedding hymns, but 24–27 occur together (in slightly jumbled order) in AVŚ XIV.1.18–21.

X.85.20: As noted in the publ. intro., this vs. may be placed here because Sūryā is addressed in it. It also reprises the mounting (*ā roha sūrye*; cf. *sūryārohat* 12cd), the *vahātu-* (13a, 14b), the dat. *pātye* (9c; also acc. *pātim* 7d, 12d), and Sūryā's journey in general, as depicted in the Sūryā portion of the hymn.

X.85.21–22: These two vss. are variants of each other in lexicon and content, but in different meters (Triṣṭubh and Anuṣṭubh respectively). The first is found in AVŚ XIV.2.33 (more or less), but the second is not part of the AV marriage suite.

X.85.21: Viśvāvasu is the name of a Gandharva; on the Gandharva as the bride's second supernatural husband (after Soma), see vs.. 40–41.

In c *vyāktām* is usually interpr. as indicating that the girl is post-menarche – though with delicate euphemisms (e.g., Re “pubère,” Don “ripe”), but the use of *vī√āñj* in vs. 28 invites a more literal interpr. I also think it's a pun: she is not only ‘smeared (with menstrual blood)’ but also ‘adorned’, that is, in bridal finery.

In d *sā te bhāgāḥ* looks literally to mean “this [masc.] is your portion,” but the preferable “*she* is your portion” is syntactically possible – on the basis of the syntactic rule, esp. well represented in the Brāh., that in equational sentences pronominal forms are attracted into the gender of the equated noun.

X.85.22: On *prapharvī-* see Narten, “Vedisch *prapharvī-*” (Die Sprache 32 [1986] = KISch 330–39). Acdg. to her it means ‘young, unmarried maiden’ – referring to a short time-period after puberty but before marriage. She plausibly suggests that it's related to / derived from *phāla-* ‘fruit’.

X.85.23: The universal interpr. of *anṛkṣarā-* is ‘thornless’, based on a supposed *ṛkṣarā-* ‘thorn’. As I have argued at length elsewhere (“Thornless Paths and Others: Vedic *anṛkṣara-* : Greek φθεῖρω,” Fx. Rix 1993), there is little or no support for an independent *ṛkṣara-* ‘thorn’, and I suggested an alternative segmentation *a-nṛ-kṣarā-* and an alternative interpr. ‘not sweeping men away’ (*√kṣar*), ‘harmless to men’.

Note the archaic nom. plural of *pānthā-*; the AV version (Ś XIV.1.34, P XVIII.4.3) already substitutes the newer form *pānthānas*, which disturbs the meter.

In d I failed to tr. *naḥ*; I would now substitute the tr. “by which our comrades go to woo (her),” with *vareyām* matching the same word in vs. 15.

Aryaman, patron god of marriage, and Bhaga, who represents good fortune, are appropriate deities for the occasion.

X.85.24–27: These vss. treat the wedding ceremony itself, rather cursorily (24–25), the journey to the new home (26), and blessings bestowed on the bride on her arrival (27). This last vs. has the feel of a final vs., and though nearly half the hymn follows, there is an abrupt change of tone and subject after it. These four vss. are also found together in AVŚ (XIV.1.18–21).

X.85.24–25: Another pair of vss. saying much the same thing but in different meters (24 Triṣṭubh, 25 Anuṣṭubh). They are found together in AVŚ (XIV.1.18–19), but in opposite order. The other salient difference between the vss. is that 24 addresses the bride in the 2nd ps., while

25 describes her in the 3rd. On the binding of the bride and her release, see my Sac.Wife 42–48. This action is the equivalent of the Upanayana for women, as Manu says (MDŚ II.67).

X.85.24: As disc. ad III.29.8, suffix-accented *sukṛtā-* has been substantivized and the tr. here should be corrected to “in the world of good work.”

X.85.25:

X.85.25: The locational designations “from here” (*itáh*) and “from yonder” (*amútaḥ*) show that the wedding ceremony is being performed at the bride’s natal place (from which she will be “released”) before she journeys to her husband’s family place, where she will be forever bound. This squares with the treatment of the wedding in the later ṛghya sūtras.

X.85.26–27: The setting of vs. 26 is still the bride’s natal place, as shown by *itáh* ‘from here’ in pāda a, but the scene has changed in vs. 27: the 1st word, *ihá* ‘here’, reinforced by *asmín ṛghé* “in this house,” now refers to the husband’s domicile. The wedding journey has been accomplished in the meantime. The near and far deictics in this sequence of vss. (25–27) do a lot of the work.

Note also the repetition of the ‘house’ words and their derivatives in 26c and 27b, each in an alliterative VP: 26c *ṛghān gacha ṛghápatnī* (with etym. unrelated [*hasta-*]*ṛghya* in 26a) and 27b *ṛghé gārhapatyāya jāṛghī*.

X.85.26: As pointed out by many, Pūṣan is appropriate here because he knows the paths. We saw his association with the Aśvins also in the enigmatic vs. 14.

X.85.28–35: As I say in the publ. intro., “Verses 28-35 are a strange, sinister, and menacing interlude between the generally happy tone of the first part of the hymn and the blessings with which it closes. These, especially vss. 28-30 and 34-35, are also the most discussed and disputed verses in the hymn.” As I see it, they treat, in somewhat jumbled order,

vss. 28–30 the deflowering of the bride

vss. 31–33 the wedding journey (which logically precedes the deflowering)

vss. 34–35 the wedding feast (?)

There are many areas of disagreement among the standard tr. and comm.; I will not treat them in detail, but give my own interpr. An outlier among modern interpr. is that of Falk (Fs. Risch), which is imaginative though not ultimately convincing -- but still well worth reading.

X.85.28–30: These are the most challenging vss. in the hymn and, in my opinion, display a very astute sense of the psychological effects of sex -- here presented from the groom’s point of view. The three vss. are found together in AVŚ XIV.1.25–27 (in slightly different order).

X.85.28: The bride’s garment is stained with blood, as the first word, *nīlaloḥitām* ‘dark red’, announces. Although this word is ordinarily taken as a dvandva ‘blue (and) red’, I think *nīla-* here simply means ‘dark’ and modifies *-lohitā-*; cf. the bahuvrīhi *nīla-ṛṣṭha-* ‘dark-backed’. The stained garment is of course a sign that the bride was a virgin. This is good news for her relatives (c), since the marriage is proved valid, but by the same token it makes it impossible for the husband to legally escape it: he is “bound in bonds” (d).

This background ambivalence is what I think underlies pāda b, whose subject is, in my view, the bride, not the garment. (See more explicitly in the next vs., 29c *kṛtyaiśā ... jāyā*.) As a (newly) sexual being and the husband's sexual partner, she becomes the embodiment of the dark magical hold that sex will exert over him: in the publ. intro. I quote the old American song lyrics "that old black magic" describing women's sexual power, corresponding to *kṛtyā*- 'witchcraft' in b. This word is found in the RV only in this pair of vss. (28–29), but is quite common in the AV. It's worth noting that in one of the AVŚ hymns against witchcraft, *kṛtyā*- is compared to "a bride at her wedding" (AVŚ X.1.1 *vahataū vadhūm iva*).

The other noun in this pāda, *āsakti*-, is variously rendered: e.g., Gr Verfolgung (pursuit), Ge Ansteckung (contagion), Re (HymSpec) empreinte (impression, imprint), Wh (AVŚ XIV.1.26) infection, Falk Anhaftung (attachment); see also EWA s.v. *sañj*, etc. Of these, only Falk's seems to reflect the presumed derivation from *ā*√*sañj* 'hang, fasten on', as in I.191.10 (the venom hymn): *sūrye viśām ā sajāmi* "I hang the poison on the sun." I take *āsakti*- (only in this passage in RV and AV) as an abstract 'hanging' developed into the means of hanging, a noose. Like the bonds in which the husband is bound in d, the wife-as-noose symbolizes the emotional and legal ties in which the husband is now trapped. In the publ. intro. I compare another American English (outdated, one hopes) slang expression, "the old ball-and-chain" for a wife.

The last word in this short pāda, *vy ājyate*, also requires comment, since it can be derived either from √*aj* 'drive' or √*añj* 'anoint'. With most (but see Wh 'is driven away (?)') I strongly favor the latter. The bride is smeared / adorned with the blood of her deflowering; recall the young girl, just past menarche, in vs. 21, *vyāktā*-.

X.85.29: In the first half of this vs. the stained garment, now called a *śāmulyā*m, is disposed of; however useful it was as a sign of the bride's virginity, the blood stains surely make it inauspicious. In b (other) goods are distributed to brahmins, perhaps those who officiated at the wedding or simply bystanders who lend their own auspiciousness to the scene.

The word *śāmulyā*- (or -ī-), occurring only in this wedding passage, is obviously related to / derived from JB *śāmūla*- 'garment', but there is no good etym.

The second hemistich takes up the plight of the groom again, picking up esp. from 28b. Here (in my view) it is once more said that the bride has become witchcraft -- witchcraft with feet (*padvātī*), i.e., in human form. In d it is paradoxically said that the wife "enters" (*viśate*) the husband, reversing the actual facts of sexual intercourse. But once again this is a psychological, not physical state, and once again American pop culture of a certain vintage offers the perfect correspondence: the 1936 Cole Porter song "I've got you under my skin," which became a signature song for Frank Sinatra. The bride has penetrated the groom's defenses and become part of him, possessed him.

X.85.30: Opinions diverge even further about what's going on this bizarre vs. The crux is found in cd, where the groom seems to be intending to clothe his member in the bride's garment—an act of apparent cross-dressing of stunning oddness, which has provoked interpr. of even more oddness. But I think I have solved the problem: the garment of the bride (*vadhvò vāsasā*) is not an actual piece of clothing -- rather it stands for the body of the bride herself. A standard act of sexual intercourse is envisioned (unlike the reversal in 29b). When he puts his penis into her, it is enveloped, enwrapped, by her flesh as if by a tight-fitting piece of clothing -- clothing that reminds us of the stained garment with which this section began.

As for the first hemistich, with his body “glistening in that evil way” (*rúṣatī pāpāyāmuyā*) -- I suggest that the glistening refers to sexual fluids, or perhaps even just sweat produced by energetic intercourse. His loss of splendour (*ásrīrā*) and the evil glistening simply once more refer to his loss of control and autonomy in a sexual relationship. It is good to remember that throughout ancient Indian culture, giving in to sex entails weakness and loss of power for men, while withholding sex builds power -- all those filmily clad Apsarases seducing great ascetics in the Mahābhārata come to mind.

X.85.31–33: A relatively benign interlude (save for the diseases and the highwaymen) about the wedding journey again. This is out of place, since the deflowering must chronologically follow the trip to the husband’s house. These three vss. are not grouped with the equivalent of 28–30 in AVŚ. Instead the equivalent of 31–32 are AVŚ XIV.2.10–11 and 33 = XIV.2.28.

X.85.32: The most natural reading of the first hemistich, followed by all tr. including the publ. tr., takes *dāmpatī* in b as the obj. of *vidan* in a. This makes *yé āśīdanti* an unabashed embedded relative clause with finite verb. In a late hymn like this we can expect some loosening of syntactic restrictions, but it is also possible to produce an unembedded reading. The lexeme *āśīd* essentially always has an acc. complement, including occasional personal acc., as in X.142.4 *āśītvā ... vāsavaḥ śadantu* “Let all the Vasus attend upon you.” It is therefore possible to take *dāmpatī* primarily with *āśīdanti* and supply it with *vidan*: “Let the highwaymen who beset the married couple not find (them).”

X.85.34–35: In AVŚ the equivalents of these two vss. (AVŚ XIV.1.28–29 [in opposite order]) follow immed. on the equivalents of our 28–30 (AVŚ XIV.1.25–27). This is a more satisfactory arrangement, since the two sets of vss. share a tone of menace and seem to take place in the same general setting (as opposed to the intervening journey vss.). The AVŚ ordering certainly supports the notion that our 31–33 are an intrusion.

Most tr. and comm. consider these vss. to refer still to the stained bridal garment, and the fact that the vss. most likely immediately followed vss. 28–30 strengthens that interpr. The idea is that the inauspicious aspects of the garment are treated and neutralized, and it is then purified and given to a learned brahmin. However, the actions performed on the referent -- eating (or non-eating) in 34b, various types of carving in 35ab -- are hard to square with the interpr. that they are performed on a piece of cloth. I suggest rather that the focus has now shifted to the wedding feast, in particular to the cow(s) killed for this purpose (remember 13c *aghāsu hanyante gāvaḥ*). True, the referent must be neut., which eliminates ‘cow’, but *māṃsā-* ‘flesh, meat’ or *krūrā-* ‘bloody (flesh)’ would work fine, or even just *ānna-* ‘food’ (I favor the first). The point is that eating meat unsanctioned by ritual makes it distasteful, even dangerous, esp. for brahmins -- a sentiment we should not find surprising in such a late hymn, as restrictions on meat-eating begin to develop.

What renders the meat fit to consume is “knowing Sūryā” (34c *sūryām ... vidyāt*); this is taken by many to refer to the Sūryā hymn (e.g., Ge “das Sūryā-lied”), that is, as a meta-reference to the hymn we’re in the middle of. I find this unlikely, esp. because *sūryāyāḥ* in the next, paired vs. cannot have such a reference. I think the referential domain is broader -- it’s knowing the cosmic significance of the goddess Sūryā and her mythical relation to marriage.

X.85.35: In my view the first hemistich is a graphic depiction of the carving up of the wedding-feast cow, but this violent dismemberment is, in some sense, the public display of the private (sexual) violence just enacted in the bridal chamber (in vss. 28–30). This accounts for pāda c, “behold the forms of Sūryā!” (*sūryāyāḥ paśya rūpāṇi*) -- in other words, “marriage,” as represented by Sūryā, is not only the joyful, festive occasion everyone is celebrating, but has its dark and brutal side. Happily it only takes a brahmin (or a learned brahmin) to neutralize the latter. (See comm. ad X.26.6 for speculation that the garments may be included in this purification -- though I am not particularly convinced by my own tentative suggestion there.)

X.85.36ff.: From here until the end of the hymn, the interpr. is fairly straightforward and the tone generally sunny.

X.85.36–41: The speech of the husband, followed by the famous sequence about the previous divine husbands of the bride.

X.85.36: The 1st ps. / 2nd ps. cast of this vs. and the following one seems to connect them with the set of vss. that preceded the dark interlude, esp. 23–27. But it is striking that in the same formula “grasp the hand,” the 1st ps. declaration in our vs., *grbhṇāmi te ... hāstam*, has the older *bh* form of ‘grasp’ (√*grabh*), while the compounded gerund *hasta-gīhya* in 26a has the newfangled √*grah* that is only just beginning to creep into usage in the late RV. This suggests that *grbhṇāmi te hāstam* is the quotation of a traditional formula, which would not be surprising.

There are other lexical connections between this vs. and 23–27 just mentioned: *saubhagatvāya* (a) echoes *subhāgā* (25d; also *saubhāgyam* 33c), *māyā pātyā* (b) *sahā pātyā* (24d), *yāthāsah* (b) *yāthā ... āsati* (25cd); *gārhapatyāya* is repeated from 27b. ‘Reaching old age’ (*jarādaṣṭi-*) is lexically different but semantically similar to *jīvrī* ‘elderly couple’ (27d). And the divine actors, Bhaga, Aryaman, Savitar, Puramdhi (36c, with Pūṣan in 37a), are mostly the same: Bhaga and Aryaman in 23c, Savitar 24d, Pūṣan 26a; only Puramdhi is absent from the earlier section.

X.85.37: Don renders *śívātamām* proleptically as “rouse her to be most eager to please,” which is appealing.

Given the context, my “humans” for *manuṣyāḥ* in b might seem jarring, and inferior to the “men” of the standard tr. (save for Re’s lapsus [HymSpec] “les dieux,” which indirectly supports my “humans”). But *manuṣyā-* and related forms are never gender-focused: the contrast is humans/men v. gods, not men v. women. Taking it in its standard sense (“humans”) works here because the next vss. concern the previous *non*-human husbands; see *manuṣya-jāḥ* in 40d, of the fourth, human, husband after the first three.

In cd “eagerly” might be better than “willingly.”

X.85.39: This vs. presents a minor syntactic problem, which has led to divergence of interpr. By my interpr, cd is a rel. clause hanging off ab, which lacks an overt antecedent to *yāḥ*. It seems to me an easy matter to supply *tasmai* in ab “has given (to him), who ...” -- not an unusual phenomenon in the sometimes loose world of Rigvedic relativization. Other tr. separate ab and cd syntactically. As far as I can see, Ge’s interpr. “Langes Leben werde dem, der ihre Gatte ist” is syntactically impossible because it requires taking unaccented *asyāḥ* as the first word of the relative clause. He also appears to be taking *dīrghāyuh* as a karmadhāraya ‘long life’, rather than

a bahuvrīhi ‘having long life’, as does Re (fld. by Don). However, the latter two split the hemistich differently, with *dirghāyur asyāḥ* being the first clause and the second beginning with *yāḥ* (Re: “Longue durée de vie soit à elle! Et l’époux, puisse t-il vivre cent automnes!” He simply suppresses the rel. prn.) By this interpr. the long life is the wife’s. It is not possible to determine the nature of the cmpd *dirghāyus-* by accentuation: because *dirghá-* and *āyus-* are accented on the final and initial respectively, *dirghāyus-* can have either underlying karmadhār. *dirgha-āyus-* or bahuvr. *dirghá-āyus-* accent. However it’s worth noting that essentially all the other *dirgha-* cmpds in the RV (rt. noun *dirgha-śrūt-* is a bit of an outlier) are bahuvr. and that both the other two occurrences of *dirghāyus-* (IV.15.9–10) and the lone voc. *dirghāyo* (stem - *āyu-*) (VIII.70.7) are bahuvrīhis. I thus favor the bahuvr. analysis, which is reflected in the publ. tr.

X.85.41: The contrast between *dadat* (a, b) and *adāt* (c) is noteworthy and the reason not clear to me -- though the augm. aor. may cast this action as the recent past (see also the near deictic *imām* referring to the wife) as opposed to the further past of ab. The publ. tr. reflects this. Redupl. *dadat* itself is something of a mystery: though it should belong to the redupl. pres. *dādāti*, it can’t be a straightforward injunctive, which should of course be **dadāt*. Interestingly, injunctives to the redupl. stem with long root vowel (i.e., the type **dadāt*) are not attested, though imperfects of the type *adadāt* are. The slot is filled by forms like this, which look like thematizations, but which are probably old short-vowel subjunctives, reinterpr. as injunctives. Hoffmann (Injunc. 134 n. 53) tries to claim that the type *dadat* is always subjunctive, but that’s not possible here, since the sequence ends with the augmented *adāt* in c.

X.85.42–47: Generalized blessings and good wishes posing no rhetorical challenges.

X.85.43: The almost featureless god Prajāpati, who has a great future ahead in Middle Vedic, only begins to make his appearance in the late RV. Here he enables an etymological figure: *prajāṁ janayatu prajāpatiḥ*.

Pl. *naḥ* ‘for us’ presumably refers to the whole extended family, not to the dual married couple.

ādurmaṅgalīḥ picks up *sumaṅgalīḥ* in 33a.

X.85.44: *devākāma-*: a bahuvr. that can mean either ‘loving the gods’ < ‘having love for the gods’ (approx., objective genitive) or ‘having the love of the gods’ (i.e., loved by the gods) (subjective genitive). Renou does it the latter way: “aimée des dieux,” though most, incl. the publ. tr., go for the former. But given the fact that the gods are asked to provide blessings – and the fact that god-loving piety (in the mode of later bhakti) isn’t particularly characteristic of Vedic religion, perhaps Renou is right.

X.85.45: The first hemistich ends with *kṛṇu*, the second with *kṛdhi*. Although ingenious arguments could be constructed to explain the use of metrically equivalent 2nd sg. act impvs. to the pres. and aor. stems respectively, I think this would be taking ingenuity too far.

The phrase “her husband the eleventh” is probably not an indication that her immature husband is going to behave for the rest of his life like an overgrown teenager, lounging around playing video games and eating pizza while she indulges him. Rather it probably reflects the

notion, commonly expressed later, that the husband enters his wife's womb and is reborn as a son.

X.85.47: The actors in the last hemistich, Mātariśvan, Dhātār, and (fem.) Deṣṭrī, do not figure in the standard wedding line-up. Mātariśvan is ordinarily the fire-bringer or fire itself, later wind. None of these roles overlaps significantly with the wedding. Dhātār “the Placer / Disposer” is at least in early Vedic an abstract sum of his derivation: agent noun to $\sqrt{dhā}$. Deṣṭrī occurs only in this context.

X.86 Vṛṣākapi

This justly famous hymn consists of a sometimes raunchy dialogue between Indra, his wife Indrāṇī, and a monkey (Vṛṣākapi). It has received a vast range of interpr.; besides the standard, see Re, Hymnes spec.; Don; Schnaus, Dialoglieder. I tr. and discussed it at length in SacWife (74–88), where I introduced my own interpr. of the hymn as reflecting a mock-Aśvamedha (see also publ. intro.). I will not reproduce all this disc. here, though I still strongly believe it, nor engage in detail with other interpr.

X.86.1–23: All 23 vss. of this hymn end with the refrain *viśvasmād indra úttaraḥ* “Above all Indra!” Since there are many places in this hymn in which Indra's fortunes seem to be at a low ebb (starting with vs. 1), the refrain can sometimes seem out of place. But if the hymn depicts an Aśvamedha for Indra, all actions would ultimately glorify him.

X.86.1–2: In SacWife (p. 76) I suggest that these first two vss. represent the year-long journey of the Aśvamedha horse before it returns to be sacrificed.

X.86.1: The standard interpr. ascribe this vs. to Indrāṇī, but I think it makes more sense in the mouth of Indra, esp. the ref. to *mātsakhā* ‘my comrade’ identifying Vṛṣākapi.

Because *āsṛksata* (a) is accented and *amaṁsata* (b) is not, the domain of *hī* is only pāda a, with b the main clause, a syntactic distinction that is elided in some tr.

In *vṛṣākapi*- both the accent and the length of the stem vowel of the 1st member are anomalous. Assuming the 1st member is *vṛṣan*- ‘bull(ish)’, the 2nd-syllable accentuation deviates from its base form (rather like the troublesome simplex *viśva*- versus cmpd *viśvá*-), and 1st-member accentuation for a tatpuruṣa is also unusual. For description / recognition of these issues, without real explanation, see, e.g., AiG II.1.42, 251 (with Nachtr. 73), 266 and KH, Aufs. 356.

The thieving, intoxicated Vṛṣākapi is reminiscent of the monkeys drunkenly wrecking the grove in Rāmāyaṇa V.59–61.

X.86.2: Here I follow the general view that Indrāṇī speaks this vs. She is trying to match Indra's rhetoric, which may account for the unusual use of *hī* in the first hemistich, matching his *hī* in 1a. Her *anyātra* also echoes his *yātra* in 1c.

X.86.3: There are various ways to construe the parts of this vs., esp. pāda d. I (and others) take d as an afterthought disjunctive object to *cakāra*, parallel to the more important *tvām* in pāda a. Positioning it as a sort of appendix to the rest of the sentence not only downplays its importance (as I just suggested), but also reinforces the structural parallelism of this dialogue: 1d *aryāḥ*

puṣṭéṣu mátsakhā is partly matched by 3d *aryó vā puṣṭi-mát vásu*. JC pointed out the *mát* immediately following *puṣṭi-* in both pādas but with quite different grammatical identities.

The pāda-final sequence *u nú* in c is a close mirror-image of pāda-initial *ná ū* in 2c.

X.86.3–4: The rhetorical matching is esp. tight at the beginning of these two vss.:

3a. *kím ayám tvám vṛṣākapiḥ*

4a. *yám imám tvám vṛṣākapim*

Note also that forms of *vṛṣākapi-* are found in all 4 vss. so far, 3x at the end of an odd pāda (1c, 3a, 4a), once at the beg. of an even one (2b).

X.86.5: The rhetorical echoes continue, linking 4 and 5: the first word *priyā* picks up *priyám* at the beginning of 4b; pāda-final *kapiḥ* (a) matches the three previous pāda-final (*vṛṣā-*)*kapi-* (1c, 3a, 4a); the c pādas are structurally the same:

4c. *s^{ai} vā n^u asya jambhīṣat*

6c. *síro n^u asya rāviṣam*

This rhetorical template may explain why the sigmatic aor. of \sqrt{ru} , an apparent aniṭ root (ppl. *rutá-*; see EWA s.v. *RAV²*), shows up here as an *-iṣ-*aor. This is the only verb form to the root in the RV; however, it must be admitted that there are other *seṭ* forms, including aor. *rāviṣta* in a widespread mantra in Vedic prose. See Narten 225.

The root $\sqrt{duṣ}$ ‘spoil’ can be used elsewhere in Vedic and later for specifically sexual misbehavior.

X.86.6: Indrāṇī’s boasting about her sexual prowess may seem jarring; in fact scholars like Thieme (see SacWife p. 278 n. 156) deny that Indrāṇī, the wife of the great god Indra, could speak like this and assign the vs. elsewhere. But there is a precise analogue in the Aśvamedha -- when the chief wife lies down with the dead horse and speaks a verse that contains the complaint *ná mā yabhati kás cana* “no one at all is fucking me,” while her female entourage is engaging in sexual banter with the priests (see SacWife 78–79 for the comparison with our vss. here; 66–72 for the fuller Aśvamedha script).

On the style of Indrāṇī’s speech, see comm. ad vs. 7.

On *-yāśu-* see comm. ad I.126.6.

X.86.7: This is the first vs. spoken by Vṛṣākapi, and it is in a markedly lower register than the dialogue so far -- even vs. 6, which, though vulgar in content, is morphologically and syntactically elevated: Indrāṇī punctiliously distinguishes between the primary and secondary comparative and uses the injunctive (/subjunctive *bhuvat*) against Vṛṣākapi’s finite future *bhaviṣyāti*.

In addition to this verb form (finite futures being relatively rare and late-ish in the RV), other signs of the register difference are the intimate and informal voc. *amba* (twice), the popular/diminutivized voc. *sulābhike* to the *I*-form of \sqrt{rabh} (\sqrt{labh} being late and rare in the RV), and the use of *iva* to qualify a verb, not mark a simile -- also surely the initial *uvé*, whatever it may be (see below). My tr. tries to represent the abrupt register shift; in most of the standard tr. Vṛṣākapi might as well be speaking like an Oxbridge don.

The initial word of the vs. *uvé*, found only here in Skt., is disputed: the leading contenders are the older one, that it is an exclamation/interjection, or what is probably the current one, that it is the 1st sg. of a verb \sqrt{u} ‘see’ (= Hittite *au-/u-* ‘see’). I share the latter view. See

EWA s.v. *uvé* (with lit.) and LIV s.v. **h₁ey*. However Kloekhorst in his 2008 *Hittite Inherited Lexicon* (p. 229) disputes this connection, in part because the meaning of the hapax *uvé* cannot be independently verified, and revives the exclamatory explanation. He fails to cite the Pkt. (Ardhamāgadhī) *ua(ha)* ‘see!’ adduced by W. P. Schmid, whose sense is pretty clear and which supports the interpr. of *uvé* here as a verb ‘I see’. On the Pkt. form, esp. the apparent thematic -a-, see v. Hinüber *Überblick* §430. That the only Indic correspondent to RV *uvé* is found in Pkt. is another indication that Vṛṣākapi’s speech is low register.

X.86.8: Indra, the speaker, seems to be trying to wrench the discourse back up to a higher level. Though Indrāṇī’s physical charms continue to be praised, the adjectives are quite decorous -- see Thieme’s demonstration (1985: 244) that they correspond almost uncannily to descriptors of Greek goddesses. Closer to home, the phrase *subāhūḥ svaṅgurīḥ* modifies the minor goddess Sinīvalī in II.32.7, who appears with Indrāṇī in the last vs. of that hymn (II.32.8). Note the *r*-form of the ‘finger’ word, *aṅgūri-*, against parallel *aṅgūla-* — perhaps an indication of the elevating of the discourse; stronger evidence is the cmpd *pṛthu-ṣtu-* ‘broad-braided’, a truncated form of *pṛthu-ṣtuka-*, which characterizes Sinīvalī in the hymn just cited (II.32.6). The word for ‘braid’ is simply *stūkā-*; there is no evidence that it’s a diminutive or popularly suffixed form, but Indra seems to be reacting to Vṛṣākapi’s *sulābhike* by lopping off what he may have perceived as the “low” suffix -ka-. EWA calls *pṛthu-ṣtu-* a false archaism.

X.86.9: On the suffix -*āru-* in *śarāru-* see comm. ad III.30.8. As for the word itself, JC (Diss.) cleverly suggests that the word means ‘horny’ (in the English sexual slang sense) and is yet another deriv. of the IE stem **Ker-h₂-* ‘head, horn’, extensively disc. by Nussbaum 1986. For derivational details, see JC’s diss. s.v. I would now emend the tr. to “this horny creature ...”

On the possible double sense of *abhī√man*, both ‘have designs on’ and ‘disrespect’, see comm. ad X.27.11.

X.86.10–11: Most tr. and comm. assign these next two vss. to Vṛṣākapi and his supposed wife Vṛṣākāpāyī respectively. I very much doubt the existence of a separate figure Vṛṣākāpāyī, as I discuss in *SacWife* (pp. 81–82); for my interpr. of the voc. *vṛṣākāpāyī* in 13a, see comm. below. And I find it difficult to believe that after his slangy informal speech in vs. 7, Vṛṣākapi could so easily code-switch to the solemn hieratic diction of vs. 10. Instead, as disc. in the publ. intro., I think 10–11 are spoken by the narrator, who affirms Indrāṇī’s exalted status -- not only as Indra’s wife, but as the central figure of the ritual, the Aśvamedha, that will ensure Indra’s prosperity and long, indeed unbounded, life. In other words, after the vulgar and unseemly sexual squabbling between Indrāṇī and Vṛṣākapi (the “sacrificed horse” figure), we are reminded that it was all in service of the greater good and that we should glorify Indrāṇī for her (selfless) act.

X.86.10: The standard tr. and comm. take this vs. as temporally unified: the glorification of Indrāṇī (cd) happens/happened at the gatherings depicted in ab. I instead think her habitual past behavior (ab) is contrasted with her exaltation now (cd). In the past she went to and participated, as Patnī, in the normal recurrent rituals (perhaps the Patnīsaṃyajas), but at the Aśvamedha she has taken on a much more central role, allowing her to be magnified (*mahīyate*) not only as the possessor of a hero (*vīrīṇī*) and one whose husband is Indra (*īndrapatnī*), but as the “Adept of Truth” (*vedhā rtāsya*), an august Indo-Iranian title, here surprisingly applied to a female. (For further disc. see *SacWife* p. 80 and nn. 160, 161.)

X.86.11: The tone of solemn celebration continues here. Note the fronted name *indrāṇīm* and the 1st person aorist *aśravam* “I have heard of Indrāṇī (as) ...,” which has an archaic and ceremonial air. The 1st ps. speaker is the poet/narrator, by my interpr. For similar phraseology, cf. IV.39.6 *dadhikrāvṇo akāriṣam* “I have celebrated Dadhikrāvan.” Or, for that matter, I.32.1 *indrasya nū vīryāṇi prā vocam*, etc.

I do not understand who “these women” (*āsú nārīṣu*) are. Perhaps Indrāṇī’s female attendants at the Aśvamedha, or -- more likely -- (all) women here on earth?

X.86.12–14: In my view, all three of these vss. are spoken by Indra. (The standard view assigns 13 to Vṛṣākapi.) In 12 Indra laments the loss of his friend -- who (again in my view) has now been sacrificed and is going, in the form of an oblation, to the gods. But the happy result of this sacrifice is indicated in 13–14: Indra is once again receiving abundant offerings, after the hiatus noted in the first hemistich of the first vs. of this hymn. I take this to be the direct result of the successful Aśvamedha. On these vss. see SacWife (81–82).

X.86.12: Note that two of the words used to describe Vṛṣākapi in the opening of the hymn, -*sākhi*- (1b) and *prīyá*- (4b) recur here.

The pronom. adj. *idám* qualifying *havīḥ* suggests that the sacrifice is happening here and now.

On “watery” (*ápya*-) see disc. in SacWife (pp. 278–79 n. 165).

X.86.13: The voc. *vṛṣākāpāyi* that opens this vs. is singlehandedly responsible for sending so many interpr. off the rails. A figure, Mrs. Vṛṣākapi, has to be invented for it, and she then needs to have things to do and vss. assigned to her to speak -- even though there is otherwise no evidence for her existence, her actions, or her words. Within my Aśvamedha model there is a simple explanation that avoids these unconvincing excursions: because Indrāṇī has copulated with the (now dead) monkey, Indra can address her as “wife of Vṛṣākapi,” right after he addressed her as Indrāṇī in 12a. Ritually she fills both roles, and it is in her role as (temporary) wife of Vṛṣākapi that she has brought about the rich feast of oxen on which Indra will gorge himself, as well as providing herself with good progeny.

X.86.14: On *kukṣī* as ‘cheeks’, see comm. ad X.28.2, etc.

X.86.15: This vs. reaffirms that soma is being offered to Indra again, in implicit answer to 1a *vī ... sotór āśrkṣata* “they have left off pressing (soma).” For the evidence that soma is referred to here (*pace* most interpr., who seem willfully to misinterpr. the words), see SacWife (82–83). Most assign this vs. to the wife of Vṛṣākapi. I am inclined to think that it belongs to the narrator, but if the 2nd ps. address to Indra calls that into question, I would suggest Indrāṇī as alternative.

X.86.16–17: These two verbally responsive and sexually explicit vss. carry the message of the hymn, in my view. See disc. in the publ. intro. and SacWife (83–84). The first of them expresses what might seem to be a self-evident statement: the sexually successful male dominates (“is master” *īśe*). This is what in later Sanskrit might be called the *pūrvapakṣa*. The following vs. exactly reverses the statements of the first: all the words in the same order are found in both; only *ná sēśe* “he is not master” and *séd īśe* “just he is master” are flipped, each acting as main

clause to the other relative clause. This second statement is counterintuitive: the sexually *unsuccessful* male is the one who dominates. We can see this as the *siddhānta*, in later terms. And it is fitting and perfectly appropriate exactly in the Aśvamedha: the king and sacrificer stands aside, impotently, while his wife copulates with another (a horse, as it happens). But the horse is killed: sacrificed and offered to the gods -- much good its sexual “success” did it! And the sexually inactive king receives all the benefits of the sacrifice and his power and dominance significantly increase after an Aśvamedha.

This pair of vss. is the climax of the hymn; the remaining vss. seem like an appendix, with 19–22 forming a little group that treats the year-long travels of the animal-to-be-sacrificed that chronologically precedes the action of the rest of the hymn.

X.86.18: On this vs. see my disc. in *SacWife* (84–85). Flg. Old (somewhat contra v. Schroeder), I interpr. it with ref. to charm for virility in AVŚ (VI.72) in which a *párasvant-* with an esp. big penis serves as model. In a sense this vs. summarizes the ritual in advance: Vṛṣākapi finds ritual paraphernalia and a slaughtered animal that represents virility, just as he will, likewise slaughtered, at the end of the ritual involving him. This vs. introduces the journey vss. 19–24.

X.86.19–24: As indicated above, I believe these vss. describe Vṛṣākapi traversing the year-long circuit prescribed for the horse in the Aśvamedha. This journey was briefly alluded to in vss. 1–2. Vṛṣākapi (vs. 19) embarks on his journey with a noble purpose: to distinguish between Ārya and Dāsa, between wise and foolish -- establishing the boundaries, as the Aśvamedha horse does in the later ritual, between “our” domain and that of outsiders. In the succeeding vss. Indra and Indrāṇī attempt to lure him back to his fate.

X.86.19: Most assign this vs. to Indra, but it then has little or no narrative connection with what follows. See disc. *SacWife* (85 and n. 175).

X.86.20: Pāda a contains an “X and which Y” construction, which I have not represented in tr. As JSK points out (DGRV I.135), we should have expected the order ... *yác *ca kṛntátram*. On *kṛntátra-* see comm. ad X.27.23, where I suggest ‘cleft’ would be better than ‘chasm’ here.

Since the pl. of *grhá-* is often used to refer to a single homestead (presumably consisting of a number of buildings), this could also be tr. “to the nearer house.”

X.86.21: With most I assign this vs. to Indrāṇī, adding her encouragement to the preceding vs. (20), which I think Indra speaks. There is sinister ambiguity in everything she says. Although superficially it sounds like an enthusiastic “welcome home,” promising delights on Vṛṣākapi’s return, under the surface it alludes to Vṛṣākapi’s impending sacrifice and death.

To begin with, the 1st du subjunctive *kalpayāvahai* can be either inclusive (I and you = Vṛṣākapi) or exclusive. In the former case she’s suggesting that she and Vṛṣākapi can together arrange pleasures for each other. In the latter case, the other subject would obviously be Indra, her husband and, perhaps more important, the Yajamāna of this Aśvamedha. The obj., *suvitá-* ‘easy going, easy passage’, is reminiscent of *sugá-*, which we met in 5d. And more to the point the same *sugá-* is found in a telling passage in the RV Aśvamedha hymn, at the moment when the horse is put to death, with the death and the subsequent journey to the gods euphemistically expressed: I.162.21 *ná vā u etán mriyase ná riṣyasi, devāṃś íd eṣi pathíbhiḥ sugébbhiḥ* “You do not die nor are you harmed. You go to the gods along easygoing paths.” In our pāda b it certainly

sounds as if Indra and Indrāṇī would arrange similar paths for Vṛṣākapi. This impression is strengthened by the last pāda, *ástam eṣi pathā púnaḥ* “you go home again along the path” -- *eṣi path* [INSTR] being exactly the expression in I.162.21. Here ‘home’ can stand for ‘heaven / the gods’.

Even the cmpd *svapna-nāṃśana-* can be read doubly. If *nāṃśana-* belongs to \sqrt{nas} ‘disappear / perish, (transitive) destroy’, ‘sleep-destroying’ could be read as Indrāṇī’s invitation to Vṛṣākapi to continue their sexual relationship, but if to \sqrt{nas} ‘attain’, with ‘sleep’ = ‘death’, it can identify Vṛṣākapi as one about to attain his final “sleep.”

X.86.22: The last of the journey vs. The grammatical puzzle it poses, not evident in tr., is that, though only two entities are addressed, Vṛṣākapi and Indra, the 2nd ps. verb (*ajagantana*) is plural, as is the adj. modifying the subjects, *údañcaḥ*. I discuss this in *SacWife* (86 and n. 178) without finding a satisfactory answer. Perhaps, Indrāṇī is an unexpressed third, or perhaps all the victims of the Aśvamedha are included.

I do think the vs. refers both to the sacrificial procedure and to the death journey. The directional adj. *údañc-* can mean both ‘northward’ and ‘upward’: the latter can refer to the same journey to the gods in heaven as I suggest for vs. 21. As for the former, as I point out in *SacWife*, the place where the horse is killed in the Aśvamedha is north of the Mahāvedi, and it is led there just before the killing. The same double sense may be found in *-yopana-*. It can be a pun on *yūpa-*, the post to which sacrificial animals are tied. But a form of \sqrt{yup} is found in one of the funeral hymns, X.18.2, where the living turn away from the dead and take up their lives again: *mṛtyóḥ padám yopáyantaḥ* “effacing the footprint of death.”

I don’t quite know why the last hemistich is framed as questions, but perhaps the uncertainty created by the double reading is the reason.

Note the *I*-form *pulu-* for standard *puru-*. It may be telling that the only other occurrence of *pulu-* is at the end of another dialogue hymn, I.179 (Agastya and Lopāmudrā), whose vs. 5 contains the cmpd *pulu-kāma-* ‘having many desires’.

X.86.23: This vs. notoriously has no obvious connection to the rest of the hymn. However, there are some verbals echoes with other parts of the hymn (see *SacWife* 86–87). More important, the prodigious fertility of Manu’s wife in this vs. resonates with at least one of the aims of the later Aśvamedha, namely to remedy childlessness and produce sons (as at the beginning of the Rāmāyaṇa).

For disc. of the larger Indo-European context of this vs., see Watkins (*Dragon*, p. 53).

X.87 Agni Demon-smiter

Not surprisingly given the subject matter, both recensions of the AV contain versions of this hymn: AVŚ VIII.3 and AVP XVI.6, with somewhat different vs. orders.

X.87.1: The hymn opens with the word ‘demon-smiter’ (*#rakṣohāṇam*), setting the tone for what follows. As if to contrast Agni’s roles, or to soften the effect of that first word, the second pāda opens with the oppositional *mitráṃ* ‘ally (→ friend)’.

Re rejects ‘sprinkle’ for *ā jigharmi* in favor of his ‘attirer à soi’—on which see my objections ad X.6.4. He claims that the context doesn’t favor ‘sprinkle’ here, but rousing Agni to smite demons requires kindling him and, indeed, producing a roaring fire. The ritual sprinkling (with ghee) in this first vs. readies Agni for his aggressive actions in the rest of the hymn.

On *mūra-deva*- see comm. ad VII.104.24. I realize that the alternative interpr. ‘having roots as gods’ is given some support in this hymn by the occurrence of *mūla*- ‘root’ in 10d (and possibly *sahāmūra*- in 19c), but I still find this alternative unlikely.

X.87.2: This vs. nicely depicts a sequence of actions involving Agni’s mouth. The sequence is set up by the first word in the vs., *áyo-daṁṣtraḥ* ‘having metal jaws’: first he “brushes / touches” the foes with his flame (ab), his flame often being likened to his tongue; then he “seizes” them with his tongue (c), and finally puts them in his mouth (d).

The root affiliation of *vr̥ktvī* is disputed: Old and Wack favor $\sqrt{vraśc}$ ‘hew’, while most (incl. the publ. tr.) opt for \sqrt{vij} ‘twist, wrench’. Because of the mouth imagery, I find ‘hew’ unlikely.

X.87.3: Given the continuing focus on Agni’s mouth, Sāy’s equation of *ubhayāvin*- as *ubhayā-dant*-, reflected in all the standard tr., seems correct, even though in its other occurrence in VIII.1.2 it has a more general sense. The point here is to contrast Agni as predator animal with peaceable ruminant *paśu*-s like cows that have teeth in only one jaw.

X.87.4: As Lub convincingly argues ad AVP V.8.4, the evidence of the Paippalāda demonstrates that *śalyā*- means ‘tip, point’ of an arrow, not the shaft. Given this, *asāni*- in the same pāda should not also mean ‘(arrow) point’. Ge takes *asāni*- as whetstone here: “die Pfeilspitzen (wie) an Schleifsteinen streichend.” But \sqrt{dih} ‘smear’ is an odd action to perform with a whetstone, esp. if poison is what is being smeared. Better to take *asānibhiḥ* as an instr. of accompaniment, indicating a different if similar weapon -- quite likely slingstones for a slingshot. I would now emend the tr. to “smearing their tips, along with slingstones ...” Both sharp projectiles would “pierce” their targets and introduce poison into their bodies.

X.87.5: Notice *bhindhi* in pāda a, echoing *bhañdhi* in 4d.

If *asāni*- is ‘slingstone’ in 4, it must be here as well: I emend the tr. to “Let the murderous slingstone smite him ...” Although “with its blaze” (*hārasā*) might seem inappropriate to a slingstone (or an arrow point), we should keep in mind that it is Agni / fire that lies behind all these weapons. *hāras*- is quite common in this hymn: vss. 5, 10=14, 16, 25. For further on this word, see comm. ad X.16.7.

In the special register of this hymn, it can be hard to determine the particular nuances of lexemes found elsewhere, and \sqrt{vici} is no exception. Ge “verstreuen,” Re “sépare (ses membres) déchiré(s).” Although I think Re is in some ways closer to the mark, the problem with his rendering is signalled by the final parenthesis “(s),” sneakily making the singular obj. *vr̥knām* into a plural that can be separated into parts. My own “open up” is based on the use of \sqrt{vici} for clearing / opening up paths. See comm. ad I.90.4. After hewing apart the body, the aggressor pulls it apart to get to the bloody flesh.

X.87.6: The *yād* opening c is pleonastic, functionally doubling the *yātra* that opens the vs.; it also provides a useful prop for enclitic *vā*.

X.87.7: Whether what is recovered is inanimate (my “what was seized”) or animate (most other tr., e.g., Klein [DGRV I.390] “... the one seized ... from the sorcerer seizing (him)”) cannot be determined from *ālabdham* -- nor does it really matter.

As Re points out, the *l*-forms *ālabdha*- and *ālebhānā*- contrast with the *r*-forms of the same lexeme in vss. 2 and 8: *ā*(...) *rabhasva*. Besides the two forms in this vs., there is only one other occurrence of *√labh* in the RV, also in the late Xth Maṇḍala (X.130.7).

The phonologically marked animal name *kṣvīṅka*- occurs only here in the RV, though it is marginally attested in the BYV Saṃhitās as well as in the AV versions of our hymn. A carrion-eating bird of some sort makes contextual sense.

X.87.8: Unlike the rest of the hymn, where Agni is urged to perform direct violent actions, here in the first hemistich he is asked to “proclaim” (*prā brūhi*) who the sorcerer is, in a quasi-legalistic way -- though direct action returns in the 2nd hemistich. This brief switch to the verbal may prefigure the emphasis on the deceptive, untruthful qualities of the foe in some of the following vss.: 9d, 11b, 12d, 13ab, 15.

The theme of true and false speech may also be indirectly reflected in the use of the epithet *nṛcākṣas*- ‘having his eye on men’ in this section: 8d, 9d, 10a (and 17b), since this cmpd is often used of gods, esp. Sūrya, witnessing (and then judging) the behavior of mortals. Because the other three occurrences of *nṛcākṣas*- in this hymn clearly modify Agni, the genitive in the phrase in d, *nṛcākṣasaś cākṣuṣe* most likely refers to Agni too (so explicitly Ge and Re), even though it would be awkwardly coreferential with the implicit 2nd sg. subj. of the impv. *randhaya*: “(O Agni,) make him subject to the eye/gaze of the one [=you] with his eye on men.” However, it is possible that this instance actually refers to the Sun, with whom Agni is then conflated in the next vss.

X.87.9: The re-use of *cākṣus*- from 8d, clearly identifying Agni’s eye, supports the standard view that the *cākṣus*- in 8d is also Agni’s, despite my comm. above.

The ambiguity of value of the root *√rakṣ* is on full display in this vs. On the one hand Agni is urged to *rakṣ* the sacrifice (pāda a), but his enemies are identified as *rākṣas*- in c (and 10a).

X.87.10: Ge (n. 10b, fld by Re) plausibly suggests that the phrase “three points” (or “tops”) *trīṇi ... agrā* actually represents “top, middle, and root,” as in III.30.17 *úd vṛha rākṣaḥ sahāmūlam indra, vṛścā mādhyam prāty agrām śṛṇīhi* “Tear out the demonic power, root and all, Indra; cleave its middle; shatter its top.” Note that our passage contains two of the three verbs in III.30.17: *śṛṇīhi* (2x) and *vṛśca*.

X.87.11: *sphūrjāyan* is the only form of this root in the RV, though it occurs later. Here it phonologically anticipates *śaphārújam* in 12b and *dhūrvantam* in 12d. For a recent etymological proposal see comm. ad X.46.5.

X.87.12: On the formation of *śaphārúj*- see comm. ad X.44.9. As there, I would here consider an alternative tr. ‘breaking with the hoof/hooves’.

X.87.13: Pādas a through c each identify a different kind of speech that Agni can weaponize in d. The coreferential pronoun *táyā* in d simply picks up the last of these, fem. *yā* in c.

The *vācās tṛṣṭám* “harshness of speech” uttered by the *rebhāḥ* supports my interpr. of *rebhā*- as ‘hoarse-voiced’, against the standard anodyne ‘singer’. See comm. ad VI.3.6, etc.

X.87.14–15: All four pādas of 14 and the first of 15 begin *pārā*, which is echoed by the first word of 15b *pratyág*. The 1st three pādas of 14 also have the same verb, 2nd sg. impv. *śṛṇīhi* (which should also be supplied in d), and the first pāda of 15 has the 3rd pl. equivalent *śṛṇantu*.

On *mūra-deva*- see vs. 2 above.

X.87.15: As noted in the publ. intro., this is one of two vss. that lack direct address to Agni and grant other gods a piece of the action.

Both $\sqrt{\text{śap}}$ ‘curse’ and *ṛṣṭá-* ‘harsh’ are reprised from 13ab, here construed together.

X.87.16: The standard tr. take *ásvyena páśunā* as referring to two entities: “horse (flesh) and cow(’s flesh),” while I take it as single, with *ásvya-* modifying *páśu-*.

X.87.17: The root affiliation and meaning of the desid. *títṛpsa-* are unclear. On the one hand, the only root $\sqrt{\text{tṛp}}$ with a full repertoire of forms, including verbal forms, is $\sqrt{\text{tṛp}}$ ‘be satisfied / satiated’; $\sqrt{\text{tṛp}}$ ‘steal’ is confined to the root noun, found in cmpds like *páśu-tṛp-* ‘cattle-stealing’, *asu-tṛp-* ‘life-stealing’. On the other hand, an instance of the latter cmpd is found in our 14d, which sets up the presumption that a verb form containing this root syllable three vss. later should belong to the same root. Moreover, Ge (n. 17c) points out that $\sqrt{\text{tṛp}}$ ‘be satisfied’ generally takes a gen. complement, not the acc. found here. And indeed Ge and Re, as well as Heenen (p. 150), interpr. *títṛpsāt* as ‘seeks to steal’, in contrast to Wh (AV VIII.3.16 “would fain enjoy”). The publ. tr. takes it as a pun, an interpr. I still think is correct.

X.87.18: The second hemistich brings another pair of pāda-initial *pārā*, like vss. 14–15.

X.87.19: The cmpd *sahámūra-* potentially connects with two different pieces of this hymn. The 2nd member *-mūra-* is phonologically identical to the 1st member of *mūra-deva-* in 2c (on which see comm. ad loc.). As noted there, I take the *mūra-* in *mūra-deva-* with *mūrā-* ‘dumb, doltish’; others, however, consider it an *r*-form of *mūla-* ‘root’. At least with regard to the cmpd in this vs., that is a reasonable hypothesis, for *sahá-mūra-* has a doublet *sahá-mūla-* in III.30.17, a passage quoted above ad vs. 10. Vs. 10 contains simplex *mūla-*, referring to the base or foundation of the sorcerer, which should be ripped out (“rooted out,” in the English phrase). I think that is the primary sense of the cmpd *sahámūra-* in our vs.: Agni is supposed to destroy the sorcerers entirely, “root and all.” But I also think that the use of the *r*-form deliberately evokes *mūra-deva-* in 2c: destroy the sorcerers along with their foolish (gods). Note that *sahámūrān kravyādaḥ* in our vs. echoes *mūradevān ... kravyādaḥ* in 2cd.

X.87.21: After pāda a, which is an abbreviation of 20ab, this vs. is structured by a series of etymological dyads: *kavīḥ kavyena* (b), *sákhe sákḥāyam* and *ajāro jarimṇé* (both c), *mártāṃś ámartyaḥ* (d).

The verse is characterized by the absence of the imaginative violence urged on Agni in the rest of the hymn. In particular, “as a poet with your poetic skill” is a far cry from the hewing apart, burning up, and eviscerating that Agni has engaged in earlier in the hymn (and later).

X.87.22: As in 21b, we find Agni in his role of poet (here *vípra-*). In both passages Agni-the-poet is conceived of as a protective enclosure (*pári*).

On *bhaṅgurā-vant-* see comm. ad VII.104.7.

X.87.24: On *kimīdīn*- see comm. ad VII.104.2.

Once again Agni as poet (*vīpra*), and in this vs. “we” also figure in that role.

X.88 Sūrya and Vaiśvānara

On the structure and contents of the hymn see publ. intro.

X.88.1: The first hemistich of this vs. is straightforward syntactically and semantically, but the elements in the second hemistich can (and have been) construed in a variety of different ways. Among the questions are 1) are *bhármaṇe* and *dhármaṇe* syntactically parallel, and if so are they infinitives? 2) if either or both is/are infinitives, is *tásya* to be taken as subj. or obj. of one or both? 3) what is the syntactic function of dat. *bhúvanāya*? 4) whose *svadhā-* is in question? 5) is *paprathanta* injunctive or subjunctive, and in either case is it transitive (with *-anta* replacment) or a medial intransitive contrasting with the well-established transitive active? 6) If transitive, what is its object? The answers to these questions crucially affect what cosmic situation we think is depicted. I will not explore the various, quite distinct, answers that have been given (besides Ge, Re [EVP XIV], Old, see also, for ex., Kü 320 and Köhler [RV *kavi* 117, 131–32]), but will simply detail my own interpr. -- which does not agree in its entirety with any other, though it does agree with some on a number of points.

In my interpr. the two *-maṇe* forms are parallel infinitives, whose logical subject is *tásya*, referring to Agni. Their object is *bhúvanāya* ‘world’, which has been attracted into the dative by its governing infinitives. The *svadhā* is the gods’, since it’s closer to their verb *paprathanta* than to words relating to Agni. The verb is an injunctive, referring to cosmic origins; it is transitive and takes a gapped acc. *bhúvanam* as object (i.e., the same word that has been attracted into the dative [see above]). As I interpret it, the point is that in the beginning the gods spread out the world by their inherent power, but it is now Agni’s responsibility to maintain it (through the ritual associated with him).

X.88.2: The second hemistich begins with *tásya* and ends with *asya*, both with the same referent, namely Agni. Re takes them as contrastive: “de cet (Agni) là, de cet (Agni) ci,” But this seems unlikely: if the first form were meant to refer to the celestial, distant Agni, we should expect a form of *asaú*, viz. gen. *amúśya*. Ge’s (n. 2cd) explanation of the doubling as tautological is more persuasive. In fact *tásya* is in the standard position for an anaphoric *sá/ tām* form, and it is doubled by *asya* adjacent to the noun on which it’s dependent (*sakhyé*). This doubling might be an argument against taking *tásya* in 1c with *svadhāyā* in 1d, since, to match 2cd, we might have expected an *asya* in 1d close to its noun.

X.88.3: On the clash of gender and deixis in *prthivīm dyām utémām*, see comm. ad VIII.40.8d. The phrase is repeated in vs. 9.

X.88.4: I take the subj. of *samāñjan* in d to be the gods at the primal installation of the ritual fire, when they chose (*vṛṇānāḥ*) Agni as their Hotar -- pace Re, who supplies “prêtres,” presumably referring to human priests. This action of the gods is in harmony with my interpr. of 1cd, where I suggest that the gods, having spread out the world in the beginning, left it in Agni’s charge.

X.88.5–6: In these vss. Agni first *stands* “at/on the head of the world” (*bhúvanasya mūrdhán* 5a) and then “*becomes* the head of the world” (*mūrdhā bhavaḥ* 6a). I take the first to refer to the location of the fire on the ritual ground and the second, of course, to the fire itself. Agni is elsewhere referred to as “the head of heaven”; see disc. ad X.125.7. That Agni becomes the head of the world “by night” (*náktram*) in vs. 6 results from the lack of competition from the sun during the night; the sun’s appearance in the early morning presumably dethrones Agni from his exclusive position.

X.88.5: The two clauses of the 2nd hemistich imply that our ritual praise of Agni was necessary to enable him to become *yajñíyaḥ*.

X.88.6: The standard tr. (see also Köhler, Kavi 118) take *tátaḥ* as “from him [=Agni]”; though Ge’s parallel (n. 6b) from AB VIII.28.13 *agner vā ādityo jāyate* is telling, I think the source here is left vaguer.

The acc. phrase in c, *māyām* ..., needs a governing verb; “behold, see” seems reasonable on the basis of passages like X.55.5 *devāsya paśya kāvyam* ... See Ge n. 6c.

The referent of d is not specified, and as far as I can see, it could be Agni or Sūrya -- or both, though some identify it specifically as Agni (Gr s.v. *tūrṇi*-, Re; neither Ge nor Old weighs in). Although I think both are probably meant, the description fits Sūrya somewhat better. As disc. ad III.11.3, 5, I now think that *tūrṇi*- is a synonym of *tarāṇi*- and derived from √*tṛ*. The basic meaning of *tarāṇi*- seems to be ‘transiting’ (e.g., I.50.4), used of the sun journeying across the sky. The same sense fits nicely here, and I would replace the publ. tr. with “that he pursues his work as he transits, knowing the way.” This can secondarily be applied to Agni, who is qualified as *tūrṇi*- (III.11.5) and *tarāṇi*- (I.128.6, etc.) ‘advancing’.

X.88.7: “Whose womb is in heaven” (*divíyoni*-) of Agni seems a mirror image to the birth of Sūrya from Agni or his general environs in the immed. preceding vs. (6b).

The morphological identity and referent of *tanūpāḥ* have elicited more dissension than seems warranted. The question is whether it modifies the gods (*devāḥ*) or the oblation (*havíḥ*), with the former position taken by Sāy., Gr, Re, and the publ. tr., the latter by Ge and Köhler (Kavi 118, 333), while Old and Scar (305) consider both options, though Old leans towards *havíḥ*. The ending *-āḥ* speaks strongly for nom. pl. m.; it is difficult to see how it could be straightforwardly a neut. sg. Ge’s (n. 7d) invocation of X.61.1 is no support: his attempt to make *maṃhaneṣṭhāḥ* in that passage a neut. sg. is quite dubious; see comm. ad loc. The contextual argument for taking *tanūpāḥ* as modifying *havíḥ* rests on the next vs., which contains a masc. sg. phrase *yajñāḥ ... tanūpāḥ* -- the thought being that if the sacrifice in that vs. is *tanūpā-*, then the oblation in the previous vs. must be too. But I see no problem with a conceptual evolution: the gods being *tanūpā-* transfer this quality to the sacrifice that they create. In fact the evolution is expressed by the first hemistich of the next vs., 8ab.

X.88.8–10: The impfs. *ajanayanta* (8b), *ājanayanta* (9a) and aor. *ājījanan* (10b) have the same subject (gods) and object (Agni) and appear to refer to the same long-past event; there is no “aoristic” coloring of the third verb. The only syntactic difference is that *ājanayanta* in 9 is in a rel. cl., but this should not condition a difference in tense/aspect stem (and doesn’t in 8b). In this particular case, the two forms seem to be interchangeable. The medial ending *-anta* is of course

an *-anta* replacement (see my 1979 IJ article), functionally equivalent to an active. Cf. act. *ajanayan* in 13b, again with the same subj. and obj. referring to the same event.

X.88.8: In c Ge (n. 8c) takes sg. *sá* as attraction to the number of the predicate *yajñáh* but representing a plural -- so notionally “*these* became their sacrifice” -- a construction that would follow the practice of Vedic prose in nominal clauses. Although I think the three elements that the gods created in ab do go into making the sacrifice of c, I’m not sure we need to invoke this syntactic rule, since a summary “this” would work as well. By contrast Re takes *sá* as referring to Agni: “C’est (Agni) protecteur de nos corps qui est devenu pour eux le sacrifice (même).” Since Agni is only one of the elements that the gods create in ab, this seems to violate the logical structure of the vs.

Note that the last phrase in the vs., *tám āpah*, somewhat echoes *tanūpāh* closing pāda c, as well as 7d.

X.88.9: *bhúvana-*, which earlier in the hymn is sg. and means ‘world’ (vss. 1, 2, 5; see also 12a), here transitions to pl. ‘beings, creatures’ (also vss. 11, 16).

On *pr̥thivīm dyām utémām*, see above ad vs. 3.

X.88.10: Köhler (35) identifies this vs. as an omphalos vs., referring back to the 1st vs. and forward to the end of the hymn, vss. 18–19.

There are a few points of difference between the various interpr. of ab. Ge (fld by Scar 334) construes *diví devāsaḥ* (a) together as “die Götter im Himmel,” whereas I (with Re and Köhler 334) construe *diví* with *ājījanan*, referring to the location where the gods created Agni. That *diví devāsaḥ* is found in the next vs. (10d), where it must refer to the gods’ placemenet (*ádadhuh*) of Agni in heaven (so also Ge), supports my (/ Re’s / Kö’s) interpr., as does the cmpd. *divíyoni-* ‘whose womb is in heaven’ used of Agni in 7b.

Another question of deployment of an adjunct involves *śaktibhiḥ*. Ge construes it with *rodasiprām* “der mit seinen Kräften die Welt erfüllt,” while Re, Scar, Kö, and I assign the powers to the gods. Since *rodasiprā-* is found in 5d without an instr., it seems likely that the same usage of this root noun cmpd is found here, and their powers are what the gods use to create Agni.

Gr, Ge, and Re take *bhuvé* in the phrase *bhuvé kām* as an infinitive: more or less “made him to become threefold.” But “to become” seems pleonastic; I prefer (with Kö) to interpr. “for the world,” which anticipates the fuller *vísvasmai ... bhúvanāya* “for the sake of the whole world” in 12a. I do acknowledge, however, that *kām* appears twice elsewhere in the hymn with an infinitival dative: 1d *dhármaṇe kām* “to support” and 18d *vidmāne kām* ‘to know’.

The threefold nature of fire encompasses the sun, lightning, and the earthly fire, acdg. to Ge (n. 10c), but it could in addition (or even instead) refer to the three ritual fires.

X.88.11–14: The phrases *bhúvanāni vísvā* “all living beings” (11d) and *vísvasmai ... bhúvanāya* “for the whole world” (12a) trigger the suite of repetitions of Agni’s *vaiśvānara-* in 12b, 13a, 14a.

X.88.13: The negated pres. part. *áminant-* occurs here without expressed object. I supply *daívyāni vratāni* “divine commandments,” on the basis of I.92.12=I.124.2 (both of Dawn), where the neut. acc. pl. phrase is object of *áminatī*. Ge (n. 13c) supplies *dísaḥ* ‘directions’ as object on the basis of I.124.3, while noting *vratá-* as a possible alternative. Both possible objects are found

frequently with $\sqrt{m\bar{r}}$ and both here would indicate that Agni Vaiśvānara moves unerringly. With *vratā-* as object, the expression would indicate that though he wanders (*carīṣṇū*), he moves the way he's supposed to, not contrary to the cosmic order. Supplying *dīśaḥ* produces much the same result: he doesn't confuse the direction he's supposed to go in.

X.88.15: This vs. has been much discussed, seeming as it does (perhaps misleadingly) to refer to the *devayāna* and *pitryāna*, already found in the RV and important conceptually later. One of the problems confronting such an interpretation for this passage is that in this vs. there are two routes (*dvé sruṭī*) but three genitives: *pitṛñām* (a), *devānām utá mártvyanām* (b). Given the formulaic nature of “gods and mortals” and the separation of this phrase from the gen. of ‘forefathers’, it is hard to match the Pitars and the gods with the two paths and sideline the mortals. The disposition of the three genitives and its theological implications are much discussed (see Ge's long n. 15, Old, etc.). I follow Ge (and Kö 335) in construing *pitṛñām* with *aśṇavam*, as the source of my information, not as owners of either path. Since the Pitars are explicitly asked for esoteric cosmic knowledge in 18c, this seems reasonable. I have no particular views on the nature or ownership of the paths.

X.88.16: Vs.-initial *dvé*, matching *dvé* opening vs. 15, invites the identification of the two entities, with the two routes of 15a referred to here as well. But this is not the standard view: Ge takes *dvé* as Heaven and Earth, Re, similarly, the two cosmic masses, and it is the case that the du. adj. *samīcī* can have such a reference; see, e.g., III.30.11, VIII.6.17. Moreover, since H+E appear in the last pāda of the preceding vs. (as Father and Mother) and since the vs. seems to concern Agni as the Sun making his daily transit (cf. *tarāṇīḥ* in d), the two world halves make sense as defining the space through which he journeys. But I would not rule out a reference to the routes of vs. 14, esp. since one can conceive of the Sun traveling along a fixed route. Perhaps the two routes in this vs. are the (visible) one from east to west and the opposite, unseen one from west to east that brings the Sun back to his starting point.

Pāda b seems deliberately obscure. The root affiliation of the 2nd ppl., *vīmṛṣta-*, is uncertain: it could belong to either $\sqrt{mṛś}$ ‘touch’ or $\sqrt{mṛj}$ ‘wipe’, which in this lexeme are in fact semantically quite close. With Gr, Ge, Re, etc., I take it to $\sqrt{mṛś}$. However, unlike them I would insist on the literal meaning of the root, not a watered-down mental equivalent (e.g., Re's “scruté-distinctivement”). On this lexeme and its literal interpr., see disc. ad X.65.7.

Pāda c is almost identical to II.3.1, of Agni, as Ge points out (n. 16c), while *tarāṇīr bhrājamānaḥ* is found in VII.63.4b of Sūrya (Ge's n. 16d). The hemistich thus captures the dual identity of Agni in this hymn.

X.88.17–19: On these vss. and esp. the participants in the dialogue, see publ. intro. As disc. there, I consider the dialogue to be at first between Heaven and Earth, who have figured prominently in the past few vss. and who are spatially identified by *āvaraḥ páraś ca* “the lower and the higher” (17a). The standard view (in addition to Ge, Re, Old, see Scar 289 n. 408, Kö 336) is that the participants are two priests on the ritual ground, on the basis esp. of 19cd. Although these interpr. discount the implicit vertical axis of *āvaraḥ páraś ca* in favor of “nearer and further,” the vertical orientation is clear in the related phrase *avástāt ... parástāt* in 14d; see also *āvaram páram ca* in the immed. preceding hymn (X.87.3). As indicated in the publ. intro., I think the participants silently morph into the priests found in 19cd. This would fit the oscillation

between the divine primordial instantiation of the sacrifice and its present-day performance of it that structures the rest of the hymn.

X.88.17: My interpr. of this vs. differs significantly from the standard in another respect: I consider the two clauses in cd between the *kātarah* question in b and the *kāḥ* question in d also to be questions. In other words, everything from 17b through 18b belongs to the question sequence, even though the *ā śekur* clause in 17c and the *nákṣanta* clause in 17d do not contain explicit interrogatives. These two questions, with the subject *sákhayaḥ* ‘comrades’, concern the success both of the gods in their original creation of the sacrifice and the priests who perform it now.

X.88.18: As Sāy. already pointed out (see Ge n. 18ab), the answer to these *kāti* questions -- “one” -- is given in the Vāl. hymn VIII.58.2.

The impossible hapax *upaspíj-* has received more than its share of attention. Its general sense and tone are clear: it refers to a frivolous or insulting question. Its phonological similarity to *sphíj-* / *sphigť-* ‘buttocks’ suggests something in the latter, rude or contemptuous, realm. In addition to the lit. cited in EWA s.v., see Scar (664–65) and most recently J. T. Katz, “The Riddle of the *sp(h)ij-*: The Greek Sphinx and Her Indic and Indo-European Background” (in Pinault and Petit, eds., *La langue poétique indo-européenne*, 2006). Katz takes it as a dvandva “lap-buttock” (*upa(s)-sp(h)ij-*) referring to a trick or double-sided question. Like most attempts at etymologizing this word, it is more clever than persuasive.

X.88.19: As indicated in the publ. tr., I think this vs. asserts that the (daily) performance of sacrifice will continue as long as the cycles of the natural world do -- an assertion that may be esp. important to establish the neologistic *brāhmaṇa* priest as an eternal figure.

Ge somewhat perversely takes *ná* as the negative here despite being in a position strongly associated with the simile particle and in fact in the same phrase in VI.50.8 *uśáso ná prátikam*, where Ge does take it as a simile marker. No other interpr. follow his lead.

The fem. pl. adj. *suparnyàḥ* surely refers to Agni’s flames, as is generally agreed. The question is why it is feminine. I think the ref. is to metaphorical mares, as in IX.86.36 *harítaḥ suparnyàḥ* “fine-feathered golden mares,” there used of soma drops.

The flames “clothe themselves as if in the face of Dawn” because flames are red-gold like the dawn sky.

X.89 Indra

As noted in the publ. intro., this is an old-fashioned well-made hymn, making use of familiar rhetorical devices like patterned repetition: e.g., the negatives in 6ab, the pāda-initial perfects in 7, the preverb *prá* in 8cd–9ab and again in 11, *índrah* + GENITIVES in 10, *ánu* in 13.

X.89.1: Instead of *stavā* the Pp reads *stava*, which Old pronounces (persuasively) “wahrscheinlich falsch.” As disc. in the publ. intro. this hymn almost self-consciously locates itself in the IIr. praise-hymn tradition and would follow the convention of the annunciatory 1st ps. at the beginning of a hymn (as in I.32.1a *índrasya nú vīryāṇi prá vocam*) – here 1st sg. subj. *stavā*. Note that, as in I.32.1, Indra is the first word of the hymn: *índram stavā*.

Pādas a and d end with the alternative instr. *mahnā* and *mahitvā*; I render them both as ‘greatness’, as I don’t think the poet is attempting to draw a semantic distinction, but simply

reacting to different metrical circumstances (disyllabic v. trisyllabic cadence end) and perhaps aiming for variety.

With Ge (n. 1c) I take *várobbhiḥ* as referring to the dimensions of the worlds, not of Indra; see IV.21.8 *vārāṃsi párvatasya*. As Ge points out, 2a supports this interpr.

X.89.2: At first glance the sun (in pāda a) and Indra (b) appear to be identified, since both appear in the nom. and there is only one overt verb – so Old (flg. Bergaigne). However, this makes for both syntactic and conceptual problems in the rest of the vs. My interpr. is similar to Ge’s: I take a and b as separate clauses, and supply an intrans. form of \sqrt{vrt} with *pári* in a, partly matching the trans. idiom $\tilde{a}\sqrt{vrt}$ in b. The object of this transitive verb is then found in c, which describes, without naming, the sun of a in the acc. In other words, the sun is doing its daily circuit in pāda a, and Indra is urged to turn the sun more in our direction in bc. The simile of Indra’s turning chariot wheels is, of course, quite apt, given the sun’s circular shape.

X.89.3: Old suggests that *arca* is a misunderstanding for **arcā*, matching *stavā* in 1a, and Ge tr. as a 1st sg. subj. without comment. So also Scar (508 with n. 708). Yet I see no reason not to take it as the 2nd sg. impv. it appears to be, as an ex. of poetic self-address.

Although *samānām* can modify *bráhma* in the following pāda (and is so taken by Gr, Ge, and Scar), I do not see why a formulation chanted by a single person and directed at a single god would be ‘common’ or ‘joint’ (e.g., Ge “das gemeinsame Erbauungswort”; he thinks it’s held in common by the group of singers [n. 3a]). I prefer to take it as a neut. adv. ‘in the same way’, contrasting with *návyam* ‘new’, in the usual Rigvedic productive paradox concerning praise poetry, that it is both traditional and new. The word also phonologically resembles, and so contrasts with, negated *ásamam* ‘without equal’.

The root noun cmpd *ānapāvrt* is potentially multivalent syntactically: it can be an adv. (as the other occurrence in V.32.5 is, in my view; see comm. ad loc.), or it can modify either the subj., i.e., the chanter, or the formulation. With Ge and Scar (508), I take it with the last: the formulation that goes directly, without swerving, to its goal, the god Indra, but the other possibilities cannot be ruled out.

The expression *kṣmayā divāḥ* seems to show the same case disharmony as is found in paired temporal expressions like *divā náktam* “by day and by night.” Scar (508 n. 708) tentatively suggests rather that it is underlyingly *kṣmayā *divā u*, with matching instrumentals, and means “mit der Erde und mit dem Himmel nicht zu vergleichen.” But this seems overfussy; moreover it unnecessarily deprecates the formulation in question: that is, it implies that the formulation cannot be compared to H+E and is therefore not as good – but why would it be compared to them in the first place?

Our *ví yāḥ prṣthéva jānimāni aryāḥ ... cikāya ...* is very like IV.2.11 ... *cinavad ví ..., prṣthéva vītā vṛjinā ca mártān* “he will distinguish ... like backs, straight and crooked, (like) mortals” (a parallel that is generally remarked). Although the owners of the backs under comparison are not identified, I assume that they are horses (so also Ge) and that Indra is being presented as, in the first instance, a judge of horseflesh. Note that though our passage lacks “straight and crooked,” *vṛjinā* ‘crooked’ appears in 8b. Th. (Fremdling 64–68) disputes this interpr. of *prṣthā-* and derives it instead from \sqrt{pras} ‘ask’, with the meaning Rätselfrage, for both our passage and IV.2.11: “Welcher Indra gesondert hat (=auseinander kennt) wie Rätselfragen die Ursprünge des Fremdlings, keinen Freund sich wünscht.” Although this is clever and the

morphological derivation itself is unimpeachable, it is unnecessary, and he still must reckon with numerous undoubted exx. of *pr̥sthá-* ‘back’.

X.89.4: The bahuvrīhi *ánisīta-sarga-* ‘having restless surges’ echoes the phrase *átis̥thantam apasyāṃ ná sárgam* “like a busy surge that never stands still” in 2c. I consider *ánisītasargā apāḥ* in our vs. to be an unmarked simile (so also Ge) matching the explicit simile in 2a.

There is phonetic play between *-sargā(h)* (a) and *ságarasya* (b).

As Ge points out (n. 4ab), “the depths of the sea” can refer to the heart, the source of poetic inspiration, as in IV.58.5 (cf. 11) *h̥r̥dyāt samudrāt*, etc.

The wheels in c (*cakríyā*) pick up those in 2b *cakrá*. I suggest that the pf. *cikāya* in 3d phonologically mediates between these two, esp. resembling *cakríyā* with flips of vowel quality and quantity.

X.89.5: As disc. in the publ. intro., this vs. seems intentionally designed to mislead. The subj. of the hymn is of course Indra, whose name has appeared in all four of the previous vss. in prominent pāda-initial position (1a #*índram*, 2b #*índrah*, 3d #*índrah*, 4a #*índrāya*). The string of nom. sg. masc. descriptors in 5ab invites the audience to assume the same referent, esp. since 4cd has Indra (though unnamed) in the nom. as well. But when we reach the beginning of the 2nd hemistich we find instead #*sómah*, and we must scramble to shift the adjectives of the 1st hemistich to this new referent. The adjectives are in fact applicable to both referents, though with slight adjustments of sense. For ex., the hapax bv *āpānta-manyu-* if applied to Indra would mean ‘deriving battle-fury from the drink’, whereas Soma ‘provides battle-fury in/from his drink’.

The first member of the next hapax cmpd *tṛpāla-prabharman-*, *tṛpāla-*, is found independently in IX.97.8, modifying *manyú-* (which precedes it here). See comm. ad loc., where I accept Mayr’s tentative connection to *tṛprá-*, found only once in RV (VIII.2.5; see comm. ad loc.), characterizing soma, but also occasionally later. With Mayr I tentatively take *tṛprá-* to mean ‘sharp’, a well-known quality of soma (though usually expressed by *tivrá-*), an interpr. supported by some later Iranian evidence. The second member, *prábharmān-*, is found independently (along with other nominal derivatives and numerous exx. of the verbal lexeme *prá √ bhṛ*), referring to the presentation of ritual offerings. My “first impression” is a bit loose; Ge’s “Anstich” (first draught) is better, capturing the *pra* while maintaining the physical quality of the soma offering.

The adjectives in b are less rarified than those in pāda a, and the first and last (*dhúni-* ‘bositerous’ and *ṛjīśín-* ‘possessing the silvery drink’) are frequently applied to Indra. In fact *ṛjīśín-* is overwhelmingly an Indra word – applied to soma only once elsewhere (VIII.79.4). So just before introducing Soma as the subject, we get a qualifier that seems to clinch the Indra reference.

The construction of the second hemistich is unclear. Ge takes c as an independent clause, which requires him to supply, indeed invent, a verb (wiegt ... auf ‘outweigh’). Not only is there no support for this verb, but having *sómah* lean forward into a new clause diminishes the drama of the surprise introduction of this subject for the expected Indra. I therefore take *sómah* as the enjambed final word of the nominal clause of ab, with a new clause (comprising the rest of c along with d) starting immediately after. The syntactic isolation of *sómah* allows the referent switch to reverberate. This suggested disposition of the hemistich is essentially that of Ludwig’s (see Old’s disc. and partial endorsement). The neut. pl. phrase *vis̥vāny atasā vānāni* “all the [other] bushes and trees,” subject of *debhuḥ*, is picked up by *pratimānāni* ‘counterparts,

equivalents' in d as a sort of secondary predicate. Although Old hesitates somewhat to accept Ludwig's interpr. because of the "etwas harte Satzteilung," note that there has to be a pāda-internal clause break in the next vs., 6b.

As Ge points out (n. 5d), this indicates that already in the (late) RV there may have been ritual substitutes for the soma plant – however we interpr. the syntax of cd.

There is some debate about the meaning and function of *arvāk*. Ge (flg. Ludwig) interprets it first as locational 'below' and then by metaphorical extension 'lesser'; Old in addition suggests temporal 'until now'. I take it in its standard sense 'nearby', here characterizing *pratimānāni*.

My only hesitation about the interpretation of the hemistich championed here is that it involves a "all ... did not" construction (*viśvāni ... nā debhuḥ* "they all did not deceive ..."). Some time ago I made a study of the interaction of quantifiers and negatives in Vedic (which I thought I had published long ago but evidently did not) in order to assess the scope of the quantifier in such contexts (total "all do not" versus partial "not all do"). In the RV there are essentially no examples of *viśva-* / *sārva-* plus *nā*; the only apparent exceptions involve the All Gods (*viśve devāḥ*) (see, e.g., III.32.8), where the total interpr. is the only one possible, since the All Gods are a corporate entity and could not participate in a "not all do" construction. In the AV the apparent restriction against such constructions is slightly loosened, but they are still quite rare; early Vedic prose has a few more, but it still seems to be avoided. In positing an "all do not" reading here, I would point out that this is a late hymn; moreover the sequestering of the "all" phrase in pāda c, taken up by a non-quantified *pratimānāni* in d and with the neg. opening d, may have made the construction acceptable: "All the bushes and trees – (as) near counterparts, they do not deceive ..."

X.89.6: The first hemistich consists of a rel. clause (*nā yāsya ...*) that lacks not only a finite verb but any predicate at all, followed by brief main clause: *sómo akṣāḥ*. These two words cannot belong to the rel. cl. because the verb is unaccented. As was just noted, the mid-pāda clause break here supports the similar interpr. of 5cd.

As to the predicate in the rel. cl., Ge supplies a verb "gewachsen sind," with no justification given; in fact in n. 6ab he suggests importing *pratimānāni* from 5d, as does Old --- and the publ. tr. concurs. There is a subtle shift in sense, however: in 5cd the bushes and trees were not quite counterparts / equivalents of soma; here no cosmic geographical features are counterparts / equivalents of Indra.

I am taking *yāsya* as referring to Indra; though both Old and Ge consider soma another possible referent, they both seem to opt for Indra, and he seems the only possible one to me. To knit the two clauses together we should expect *tásmāi* or *indrāya* to begin the main clause.

Ge (see also Kulikov 142) takes cd as a single cl. dependent on the main cl. of b. This is certainly possible but it requires seeing *manyúḥ* as the subj. of the two verbs in d, *śṛṇāti* and *rujāti*. I prefer to interpr. cd as another depend. cl. (c) / main clause (d) dyad, with Indra as the subj. of the two main cl. verbs, which are accented because each is initial in its claus(ette) and *śṛṇāti* is also init. in its pāda. This interpr. means that the pres. part. *adhinīyāmānaḥ* is predicated in the c-clause. Kulikov (142) tr. the part. "being enhanced," Ge "gesteigert." The lexeme *ádhi* √ *nī* is found only once elsewhere in the RV (VIII.30.3) and, acdg. to MonWms, nowhere else in Skt. In VIII.30.3 it means 'lead /from out of' (though it is likely that *ádhi* there, flg. an abl. and not in a normal preverb position, is actually simply a postposition). I think the same sense may

be found here: the *manyú-* is being drawn out of Indra, enabling him to perform the violent deeds in d and the following vs. (8).

Note that the two verbs in d are reprised in the next two vss.: *rurója* (7b), *śṛṇāsi* (8b).

X.89.7: The first three pādas begin with fronted perfects *jaghāna*, *rurója*, *bibhēda*.

X.89.8ff.: As disc. in the publ. intro. and see also Ge n. 8, the focus of the hymn shifts to the punishment of those who break alliances (*mitrá-*) or have no alliances at all – a theme with deep Indo-Iranian roots, as Ge also points out.

X.89.8: On the strongly emphatic use of *ha tyád* with 2nd sg. prn. see I.63.4–7, VI.18.3, VIII.96.16–18 and comm. ad locc.

In d I take the object *yújam ... mitráṃ* as inanimate: “a bound alliance” (see also JPB, *Ādityas* 30: “a union (or) an alliance”), while for Ge it’s animate: “einen verbündeten Freund” (which in my terms would be “yokemate (and) ally”). In favor of the JPB/SJ interpr., *prá√mī* almost always takes an inanimate obj. (though this argument may be undercut by the following vs. [however see below]), and, as the obj. in this simile, the phrase is parallel to inanimate *dhāma* ‘ordinances’ in the frame. In favor of Ge’s rendering, the root noun *yúj-* is otherwise overwhelmingly animate. I would consider an alt. tr. “yokemate (and) ally” here, but see comm. on 9 immed. below.

X.89.9: As was just noted, *prá√mī* almost always takes an inanimate obj. Here the verb has four distinct objects, each marked out by the repetition of the preverb *prá* immediately before. One of these, *saṃgírah* ‘agreements’, is definitely inanim. (and in its other occurrence is also the obj. of *prá√mī* [IX.86.16]), while *mitrá-* can, of course, be either the divine name or the common noun ‘alliance’. Thieme (M+A 62–63) takes all four objects as inanimate nouns: “... who deceive/betray ... a contract (*mitrá*), a [*sic*] hospitality (*aryamán*), [friendly] agreements (*saṃgír*), true speech (*váruṇa*).” JPB (*Ādityas* 86–87) follows Th in taking all four nominals in an appellative sense, though with different renderings of *aryamāṇam* (“custom”) and, esp., *váruṇam* (“commandment”). His argument for the appellative sense in part rests on an observation similar to that made above, that “the object of *prá mī* is never a god or a man, but rather a principle” (87). Although I’m not sure I want to go so far as to eliminate the gods from this passage entirely, esp. given the undoubted presence of Mitra and Varuṇa in the preceding vs. (8c), I now see that the presence of clear inanimate *saṃgírah* and ambiguous *mitráṃ* invites or requires at least a secondary inanimate reading for *aryamāṇam* and *váruṇam* too and I would now tr. the VP “... who transgress against Mitra [/alliance] and against Aryaman [/custom], against agreements and against Varuṇa [/commandment].” In other words, to transgress against the god is to transgress against the principle he embodies – or, perhaps better, vice versa.

The rel. cl. in ab is either dependent on *amítreṣu* in the main clause (c) (“on those without alliance who ...”) or covertly conjoined with it (“on those without alliance (and those) who ...”).

Note the acc. *vīṣāṇam*, with vṛddhi in the suffix, against the overwhelming number of forms to this stem with guṇa in the suffixal strong forms (acc. *vīṣaṇam*, etc.). There is only one other such form (in IX.34.3; see comm. ad loc.). It is not surprising that such *n*-stems would be attracted into the dominant vṛddhi type; what is a bit surprising in this passage is that it’s in the same vs. with *aryamāṇam* which maintains guṇa in its suffix.

X.89.10: Acdg. to Schindler (Root noun s.v. p. 45), the root noun *vṛdh-* is only a Nom. act. “Vermehrung” (etc.): “An keiner Stelle ist *vṛdh-* Adj. oder Nag.” Although this statement is accurate for the numerous singular occurrences of the stem, it cannot apply to this gen. pl., parallel to the gen. pl. *médhirāṇām* “of the wise (ones)”; it must mean “strong (ones).” Perhaps the presence of them. adj. *vṛdhā-* in the next vs. influenced the usage, though this is not much of a hypothesis.

Pāda d has both a rare break (—) and a bad cadence (◡ ◡ — ×) (see, e.g., HvN metr. comm.). Arnold (322) suggests flipping *yóge háv'ya* — × to *háv'yo yóge* — ×, which would fix both problems — and would also distribute the paired terms *kṣéme yóge* in a way more in keeping with the other three pādas, where the pairs are broken up. Although Arnold’s suggestion neatly solves two problems, my hesitation is that it is difficult to see why the word order would have been disturbed redactionally. Old also is not convinced.

X.89.11: This vs. contains 8 occurrences of the preverb *prá*, each with an associated ablative. The verb with which they are construed and which provides the idiom that controls the abl. (“project beyond”) is *ririce*, which is found only in the break of the last pāda. Note also that *prá* is teasingly doubled by the *s*-stem abl. *práthasaḥ* in c.

X.89.12: The preverb *prá*, so prominent in 11, has one last gasp at the beginning of 12, but in a different verbal lexeme (*prá √ vṛt*), a small ex. of the poet’s sly misdirections.

The simile in c, *ásmeva ... divá ā srjānāḥ* “like a stone being launched from heaven,” seems at first to connect with the last word of b, *hetīḥ* (“... missile like a stone”), but the 2nd sg. impv. *vidhya* in c redirects the comparison: it’s Indra, the implicit subject of the impv., who’s being compared to the stone, not his missile — yet another ex. of the subtle shifts and red herrings that this poet cleverly indulges in.

The cmpd *drógha-mitra-* is generally taken as a tatp., e.g., “ein arglistiger, falscher Freund” (Gr), with unexpected accent (AiG II.1.266), or, with Ge (n. 12d), as a cmpd with a governing 1st member (“die Freundbetrüger”). Old sensibly wants it to be a bahuvr. and suggests the somewhat less sensible gloss “den Trug zum Freund habend.” Given the abstract use of *mitrá-* elsewhere in this hymn, I suggest rather the bv ‘whose alliances are deceitful’.

X.89.13: Like vs. 11, in which the repeated *prá*-s culminate in the last pāda with the withheld verb *ririce*, here repeated *ānu*-s (6, this time) find their verb in *ajihata* in d. The obj. of this verb is also withheld till the 2nd hemistich: *īndram* in c.

Gr, Lub, and the publ. tr. take *āha* as the particle *āha* (of unclear function), but Ge (see n. 13a) as the neut. pl. of ‘days’. An argument against Ge’s interpr. would be that in the rest of the vs. each *ānu* is associated with only a single element, whereas here there would be two: “days (and) months” — and a similar one-to-one relationship is found in vss. 8cd-9ab and 11 with repeated *prá*. However, in this vs. the various nominals associated with the preverb are ill-assorted: “months” is the only temporal designation, with the others being features of geography/landscape: trees (a), plants (b), mountains (b), world-halves (c), waters (d). If the first *ānu* syntagm contains both days and months, the conceptual imbalance would be considerably lessened. I therefore would now substitute the tr. “The days (and) months gave way ...” For another short-vowel pl. *āha* see I.92.3.

X.89.14: The root affiliation of the hapax *cetyā-* is disputed: to $\sqrt{cr^3}$ ‘avenge, requite’ or to \sqrt{cit} ‘perceive’ (Gr); see Old, EWA s.v. The tone of the hymn certainly favors the former, and this is reflected in most tr. (Ge, Scar 88, publ. tr.).

Ge construes *aghāsyā* with *cetyā*, but the pāda boundary is (weakly) against that, and it works perfectly well with *rākṣaḥ*.

Although Gr assigns *éṣat* to a separate root $\sqrt{eṣ}$ ‘gleiten, schleichen’, it is better analyzed as *īṣat* + *ā* to the them. pres. *īṣa-* (so Old, Ge, Gotō [1st Cl, 109 n. 84]).

The cmpd *mitra-krū-* (Gr. *-krū-*) and esp. its 2nd member are much discussed; see esp. Scar 88–89, EWA I.414–15. The word is obviously related to *krūrā-* ‘bloody’ (AV+), *kravís-* ‘bloody flesh’; the question is whether *krū* is a verbal root or pseudo-verb root or is simply a nominal ‘blood’ (vel sim.). In my view, whether or not there was a “real” root $\sqrt{krū}$ ‘be/make bloody’, in this hapax cmpd the second member is treated as such. Only this interpr. accounts for the accent and the likely meaning.

As disc. in the publ. intro., I consider pāda d an intertextual reference to two famous phrases in the great Indra-Vṛtra hymn I.32, both describing the slain Vṛtra: I.32.5 ... *śayata upapṛk prthivyāḥ* “... will lie as the embracer of the earth” (like our *prthivyā āpṛk ... śayante*) and I.32.8 ... *amuyā śayānam* “... lying in that way” (like our *amuyā śayante*). (Both passages are also adduced by Ge, n. 14d.) Because of the strong similarities between I.32 and our passage I think it likely that our *āpṛk* is a simple substitution under different metrical conditions for *upapṛk* in I.32.5 and it is therefore unnec. to seek a special sense of the root noun cmpd here – as in Ge’s “... nur so platt auf die Erde liegen werden” [I’m not sure how he gets that] or Scar’s “als ein die Erde anfüllender Haufen derart daliegen.”

X.89.15: The hapax *ogaṇá-* is taken by Gr (etc.) as derived from **avagaṇa-* lit. ‘von seiner Schar verstossen’. Both the deriv. and the proposed sense were vigorously disputed by Old, with ample ref. to previous lit. Old suggests a connection with SV *úgaṇa-* and the sense ‘strong’, which is reflected in current tr. (Ge, Kü 205, publ. tr.). The likely deriv. was sketched by KH (Aufs. 397–98 [MSS 8 (1956)]); see also EWA s.v.), from a putative **ogṛ-ná-* with MIA dev. of syllabic **ṛ*; cf. Aves. *r-stem aogaṛə* ‘power’. This is very likely and is reflected in the publ. tr., but it should be pointed out that these enemies should not *be* powerful, but think themselves so – the word must somehow fall under the domain of *vrādhanta(h)*. See KH’s tr. (397) “die sich als Machtvolle sehr hochgemut fühlenden.”

Pādas c and d present contrastive images: the unallianced associated with “blind darkness” in contrast to “the nights with their good lights” (*suṣyotíṣo aktávaḥ*) that overcome the enemies. But why are the nights the agents here? Old suggests that the nights stand for our allies, who prevail over the darkness of the foe. Possibly, but a more standard RVic image would be for the day (/dawn/sun) to prevail over the darkness of night – not to compare the victorious side with the only comparatively brighter night. In fact Ge (n. 15d) asserts that the sense is “Das Licht soll über die Finsternis triumphieren,” so the emphasis in d is on the *lights* of the nights. This still doesn’t seem to me entirely satisfactory.

X.89.16–18: Starting with vs. 16 the hymn winds down with standard hymn-ending clichés: urging Indra to come to *our* sacrifice (16) and expressing the hope that we may reap the benefits of his presence (17). There here-and-now of the ritual is expressed by *imām ... śáhūtim* “this common call here” (16c) and *nūnām* “now,” the final word of 17. The *evá* opening 17 is a common way to introduce the final summary vs. of a hymn. And as often in final verses, the poet

explicitly identifies himself and his lineage with “(we) Viśvāmitras” in 17d. In fact 17 is the real final vs.: vs. 18 is borrowed from III.30.22, the final vs. of an Indra hymn in the Viśvāmitra maṇḍala -- another way of stamping the Viśvāmitra signature on this Xth Maṇḍala hymn attributed to a Viśvāmitra descendent, Reṇu Vaiśvāmitra.

X.89.17: The poet’s presentation of the Viśvāmitra signature just discussed is somewhat complicated by this vs. As just noted, he borrows a final vs. (18) from the Viśvāmitra mantra (though it does not mention the Viśvāmitras directly), and he associates himself explicitly with the Viśvāmitras in 17d. But 17cd is a direct borrowing of (or, to be more circumspect, is identical with) VI.25.9, another hymn-final vs., *except* that for *viśvāmitrā(h)* in d, VI.25.9 has *bharādvājā(h)*. In other words, our crafty poet’s most direct claim for his Viśvāmitra identity is made by boldly manipulating (/stealing) the signature vs. of a different poetic lineage – another sign of the intertextuality disc. ad vs. 14.

On the syntactic issues in cd, see comm. ad VI.25.9. As I suggest there, the problematic *utā* may be connecting the two temporal expressions *vāstoḥ* and *nūnām*, and the tr. could be altered to “as we sing at dawn and also now.”

[X.90 Puruṣa JPB]

X.91 Agni

As noted in the publ. intro., this hymn resembles X.89, as a well-crafted consciously traditional poetic product, even though the poet to whom it is ascribed is not the same as that of X.89 and the starkly innovative X.90 intervenes between them. The composition is nicely balanced with pleasingly intricate patterns of repetition and variation.

X.91.1: This vs. is crammed with both etymological figures and figures of sense (that is, synonyms or near-synonyms that are not etymologically related). The former include *dāme dāmūnā(h)* (b), *suśākhā sakhīyaté* (d), and possibly *hótā havīṣaḥ* (c) [it’s hard to know whether a Rigvedic audience would perceive an etymological relation between the two]. Figures of sense – in many ways more interesting – are *jāgrvādbhīr jāramāṇa(h)* (a) and *iṣáyann iḷāḥ* (b) (on the assumption that to the Vedic Sprachgefühl the root nouns *íḍ-* and *ís-* [with its verbal form *iṣáya-*] were etymologically unconnected). A third type is exemplified by *vibhúr vibhāvā* (d), in which the near phonological identity overcomes lack of etymological or semantic identity.

X.91.2: The dominant stylistic feature in this vs. is the āmreḍita, with one per pāda: *grhé-grhe* (a), *vāne-vane* (b), *jānaṃ-janam* (c), *viśaṃ-viśam* (d), which are tightly patterned. Those in the first hemistich are both in the loc. and are adjacent to each other, at the end of a and the beginning of b. Those in the 2nd hemistich are in the acc. and maximally distant, at the beginning of c and end of d.

The āmreḍita is not the only stylistic feature. The first hemistich contains two nom. sg. rt-noun cmpds in *-īr* (in sandhi), *darśataśrīr ... takvavīr*, with nom. sg. *ātithir* also participating in this phonetic figure. The 2nd member *-śrīr* (a) is echoed by *śísīriye* (b), though they are etymologically and semantically unrelated (so also Ge n. 2ab). The second hemistich goes in for etymological figures connected to the āmreḍitas: c *jānaṃ-janam jānīyaḥ* and d *viśaḥ ... viśyo viśaṃ-viśam*. And we might note that *jānīya-* and *viśya-* are similarly formed and similarly related to the root syllable of their respective āmreḍitas.

On *darsāta-śrīṭ-* see Scar 552 and for the general challenges of interpr. *-śrīṭ-* cmpds 546.

On *takva-vīṭ-* see comm. ad I.151.5, 134.5, also Scar 497–98. Note that *vāne-vane* is read differently in simile and frame.

X.91.2–3: Almost like a textbook demonstration, these two vss. showcase the contrasting presents to the roots $\sqrt{kṣi}$ ‘dwell’ and $\sqrt{kṣā}$, *kṣi* ‘rule, own’, both in the active indic. sg. for convenient comparison: 2d *kṣeti*, 3c *kṣayasi*.

X.91.3: The first three pādas are defined by etymological figures of a straightforward sort: *sudākṣo dākṣaiḥ* (a), *krātunā ... sukrātuḥ* (a), *kaviḥ kāvyaena* (c), *vāsur vāsūnām* (c). Again there is internal patterning. All three pairs in the first hemistich have a nom. / instr. pairing; the nominatives in pāda a are compds with *su-* and the pairs in a are chiastically arranged. In c the 2nd term is gen., not instr. All three pairs in ab have parallels elsewhere (see Ge’s nn.), though not all together or so densely arranged.

In c (*ék*)a *íd* provides a rhyme for b (*visv*)*avíṭ*, which make help to account for the unusual, though by no means unprecedented, position of *íd*.

X.91.4: *īlāyās padé* picks up *ilās padé* in 1b. Note the close sandhi in both phrases.

On the sandhi of *ivétayaḥ* (prob. *iva étayaḥ*) see Old with further lit.

X.91.5: In pāda a *śríyaḥ* picks up (*darsāta-*)*śrīṭ* of 2a.

The phrase *cikitra uśāsām* recurs in 5b from 4c; in both cases of course *uśāsām* is not directly construed with the verb. In 5b the verb also enters into an etymological and phonological figure: *citrās cikitra* (in sandhi).

X.91.6: After Agni’s attack on the plants in 5c and his consumption of them as his food in 5d, this vs. depicts the temporally / logically prior actions whereby the plants, with the help of the waters (here probably the rains that foster plant growth or the water [=sap/juice] internal to the plants), conceive Agni/fire and give birth to him.

Pāda-final *ṛtvīyam* is repeated from 4a; see also 10a below.

The second hemistich contains three instances of *ca*. The one in c is an inverse *ca* connecting the nominals *vanínaḥ* and *vīrúdhāḥ*. The second pair, in d, conjoin the two predicates *antárvatīḥ* and *súvate*. As JSK (DGRV I.172) points out, we should supply a finite form of $\sqrt{bhū}$ vel sim. with the adjective *antárvatīḥ* (though correct his sg. [*bhavati*] to [*bhavanti*]). *súvate* is presumably accented because it is a contrastive predicate (see Old as well as Re’s n. on the passage).

Ge (n. 6d) adduces as parallel III.55.5c, which in fact adds a new wrinkle in the form of a paradox. It too concerns the birth of fire from plants: *antárvatīḥ suvate ápravītāḥ* “Having (him) within, (though) unimpregnated they give birth to (him).” In that passage *antárvatīḥ* contrasts with *ápravītāḥ* -- the presumable difference is that though the plants have embryonic fire within and are in that sense pregnant, they are not so because of sexual activity.

I consider *samānām* (c) and *visvāhā* (d) as conceptually contrastive, despite their distance from each other. Hence my tr. “who is just the same everywhere.” This is not the standard interpr.: JSK (172) takes *samānām* as an acc. sg. m. emphasizing the identity of the preceding *tām* with the two *tām*-s opening pādas a and b; Ge and Re take it as an adv. (gleichmässig / en commun) loosely applied to the woody plants and sprouts. I think my interpr. yields richer

semantics and reflects the standard trope that there are many fires, which are also the same fire. However, the repetition of *samānām íd* in 8c may lend some support to JSK's interpr.

X.91.7: This vs. returns to the theme of 5cd, with the mature Agni consuming the plants (that gave birth to him in 6).

The position of *yád* is at least a minor violation of the usual rules; see also vs. 12 below.

X.91.8: In Engl. the vs. seems to veer abruptly from the 3rd ps. to the 2nd at the very end (see also Old, who remarks on the switch), but the Skt. of the first 3½ pādas does not *have* to be read as 3rd ps. It consists of a string of acc. singulars, so there is no obligatory ps. marking, and could simply take up the 2nd ps. ref. to Agni in vs. 7. However, the repeated *tām*-s in cd, as well as the acc. *agním* in b, would incline the audience to a 3rd ps. reading. See also comm. on the next vs., 9.

I do not understand the case mismatch between the contrastive pair *árbhe* (loc., c) and *mahé* (dat., d). Perhaps the surface identity of the case endings in *-e* outweighs their grammatical disharmony.

X.91.9: The first hemistich of this vs. closely tracks vs. 8, with the differences between them seeming to force a 3rd ps. interpr. on most of vs. 8 (see disc. just above) contrasting with the overt 2nd ps. of 9ab: instead of *tām íd ... vṛṇate* (8cd) we have *tvām íd ... vṛṇate tvāyávaḥ* (9a); instead of *agním hótāram* (8b) *hótāram agne* (9b) – both with explicit 2nd ps. readings.

X.91.10: This vs. is identical to II.1.2. In his usual quest to identify the original locus of repeated vss. (a quest we would not undertake in this post-Parry-Lord era), Bloomfield (RR, ad 2.12) suggests that ours is the original: “The stanza is rather abrupt in 2.1, whereas in 10.91 its sequence is peculiarly fit.” Presumably he is referring to the three mentions of Agni as Hotar in the two preceding vss. (8b, 9b) and the following vs. (11c) and the occurrence of the rare denom. *adhvarīyási* in 11d – but one could argue in reverse that these occurrences invited the insertion of a stock vs. containing *hotrām* and *adhvarīyási* on the principle of concatenation. Note also that pāda-final *ṛtvíyam* (a) matches those in 4a and 6a.

X.91.11: Re suggest that this vs. is a gloss of 10; as I just indicated, I would argue in the opposite direction, that 10 is a ready-made vs. that was inserted between 9 and 11 on the basis of lexical and conceptual similarities.

X.91.12–13: The vs.-initial *imāḥ*, *imām* usher in the last section of the hymn, in which the poet announces the here-and-now of the current ritual and esp. the praise the poet himself is offering to Agni. To emphasize the parallelism of the two vss., the tr. of 13 should begin “this good praise here would I proclaim ...”

X.91.12: The first hemistich piles up an impressive array of ritual speech types.

The second hemistich returns to the etymological figures that were prominent in the early vss.: *vasūyávo vásave* (c), recalling *vásur vásūnām* in 3c, and *vṛddhāsu ... vārdhanaḥ* (d). The position of *yāsu* in d is a more egregious violation of the usual placement of relatives than the one noted in 7. It may have been displaced to the right in order to accommodate the etym. figure that opens the pāda.

Re claims that *vārdhana-* must be intrans. here, contrary to its other occurrences (and, I'd add, to the standard trans./caus. function of *-ana-*nominals), but there is no necessity for this view. *vārdhana-* responds implicitly to *vasūyávaḥ*: Agni strengthens the already strong ritual praises he receives by awarding them goods.

X.91.14: The extravagant list of domestic animals in ab is structurally parallel to the list of ritual speech types in 12ab. However, I don't understand what actually happens to these beasts. With Ge and Re, the publ. tr. takes *āhutāḥ* to be the equivalent of 'offered' (/ 'sacrificed'), but these are not standard Vedic sacrificial animals – even the horse, whose sacrifice is rare and special. Although it might be possible to interpret the animals as standing for sacrificial substances they produce – like “cows” for “milk” – none of them is associated in that way with an offering substance. Moreover the juxtaposed ppl. *avasṛṣṭāsa āhutāḥ* seem self-contradictory, since *áva* √*srj* means 'release'; cf. the internal contradictions of Ge's "... freigelassen geopfert werden" and Re's "... sont offerts après avoir été mis en liberté" (though see Scar's tr. [311], which harmonizes them: "... [zum Opfer] losgelassen, geopfert werden"). I now think that *āhuta-* must be used as it is when Agni is the referent – that it means, literally and actually, 'bepoured, besprinkled' (see the same usage of *prāhuta-* in the next hymn, X.92.3). If *avasṛṣṭā-* 'released' refers to a situation like that in the Aśvamedha in later śrauta ritual where multiple *wild* animals are tied to yūpas as if to be sacrificed but then released, perhaps our passage alludes to a similar situation but with domestic animals. Perhaps at their release they were sprinkled with a token portion of ghee that sacralized them. I would feel more comfortable about this hypothesis if there were any other evidence for it that I am aware of. It also makes some trouble with *yāsmīn*: *yāsmīn ... āhutāḥ* can most easily be interpr. as "into which/whom (they are) offered." But perhaps it refers to the animals' proximity to the ritual fire: "at which ..." In any case, I would now change the tr. to "at whom/which horses, bulls, oxen, mated cows, rams are released (and) anointed (with ghee)," though without a lot of confidence in its correctness.

It is possible that this parade of domestic animals is related to the hapax epithet of Agni in c, *kīlāla-pā-* 'k.-drinking' (on which see Scar's minimal disc., 311). Although *kīlāla-* is found only here in the RV, it is common in AV (both Ś and P) +. As its phonology also suggests, this drink seems to belong to a lower-register domestic sphere and is sometimes associated with farm animals. See, e.g., AVŚ VII.60.5 (≅ AVP III.26.5) *úpahūtā ihá gāva úpahūtā ajāváyah | átho ánnasya kīlāla úpahūto grhēsu naḥ* "Called on here are the cows, called on the goats and sheep; then called on is the *kīlāla* of food in our houses." In Ś IV.11.10 (/P III.25.12) the draft-ox (*anadvāh-*) and plowmen "go to" *kīlāla-*, while in P VIII.11.3 two draught-oxen are involved. Although I can't (yet) construct a scenario that provides a function for the list of animals in ab, I now think this unusual ritual assemblage must be connected to the unusual *kīlāla*-drink – though I don't know why this association is found in the penultimate vs. of an otherwise traditional Agni hymn.

X.91.15: *āsyè* returns from 5d.

X.92 All Gods

On the (lack of) organization of this hymn, see publ. intro. Ge suggests that it is not correctly transmitted.

X.92.1: With Ge and Re, I supply a 1st ps. verb of speech to govern the acc. phrase of ab. This phrase has a stately traditional feel. Though Agni is not named, the descriptors unambiguously identify him: *yajñāsya* .. *rathyām* closely resembles *rathîr adhvarāṇām* “charioteer of the ceremonies” used of Agni in I.44.2=VIII.11.2 and VI.7.2; *viśpāti- viśām* is a standard epithet of Agni (e.g., III.2.10, V.4.3). Hotar is of course his regular role (and is heavily present in the preceding hymn; see comm. ad X.91.10); *âtithi-* ‘guest’ is also standard for Agni and appears in the preceding hymn (X.91.2). *vibhā-vasu-* is only used of Agni, and cf. *vibhāvā* in X.91.1.

The description of Agni switches to the nom. in the 2nd hemistich, capped by the finite injunc. *asāyata* of which Agni is the subj. On this stem see comm. ad VI.33.2. IH suggests that this injunc. should have presential value, and an alt. “reaches heaven” is certainly possible; so KH (Injunk. 119).

The two word pairs in c, *śocañ chūṣkāsu* and *hāriṇīṣu jārbbhurad*, are syntactically parallel though chiasitic: nom. sg. m. pres. part. / loc. pl. f. // loc. pl. f. / nom. sg. m. pres. part. They also have a pseudo-etymological feel enabled by phonology: *śoc* and *sūṣk* / *hār* and *jārbbhur*.

X.92.2: Both Ge and Re construe *akṛṇvata* with two acc.: “make Agni (into) X.” Although this is certainly possible, I prefer to take this mid. verb in the meaning ‘make (their) own’, a meaning found elsewhere, with the other acc.s further descriptors.

The 2nd member of the rt noun cmpd. *añjas-pā-* is variously interpr. Old and Re take it to $\sqrt{pā}$ ‘protect’, Scar (317) to a third (and in my opinion unnec.) root $\sqrt{pā}$ ‘gehen, sich bewegen’. With Gr and Ge, I assign it to $\sqrt{pā}$ ‘drink’. The point, as Ge notes (n. 2a), is that Agni consumes the oblation without intermediary, unlike the (other) gods, who have Agni as their mediating mouth. In its other occurrence, in nearby X.94.13, the cmpd modifies the pressing stones, who get the (literally) first crack at the soma.

Agni’s role as supporter (*dharmān-*) reminds us of nearby X.88.1, where, at least in my interpr., Agni is charged to “support the world” (*bhūvanāya ... dhārmane*). In the publ. tr. I implicitly construe *dharmāṇam* with *vidāthasya* (also dependent on *sādhana*), but in light of X.89.1 an alt. might be “supporter (of the world), furtherer of the rite.” This alternative might be favored by the appearance of the parallel phrase *vidāthasya prasādhana* in the preceding hymn (X.91.8), suggesting that it is a (semi-)fixed phrase with the gen. locked in. And indeed most occurrences of *sādhana-* have a gen. sg. of the sacrifice / rite, etc.

For my defiant maintaining of the sense ‘kiss’ for \sqrt{nims} , see comm. ad VIII.43.10. What does it mean for the dawns to “kiss” Agni like night? The simile is easier to decode: as dawn breaks at the horizon, it is in intimate physical/visual contact with the dark sky, contact that could be likened to kissing. Dawn’s kissing of the ritual fire is more conceptual and temporal: the moment of dawn’s appearance is when the fire is roused: this can count as contact. It is also possible, if the fire in question is the offering fire (as *puróhitam* implies), that the light of dawn spreading from the east first encounters and, as it were, touches that fire, which is of course stationed at the east end of the ritual ground.

The phrase *tánūnápātam aruśāsya* is, in my interpr., a piece of tricky syntax. The stem *tánū-nápāt-* is otherwise used as an epithet for Agni, almost always in the 2nd vs. of Āprī hymns, where the figure has taken on a (quasi-)independent existence. Here I think we should read it literally, with the sense ‘descendant of (him)self / his own body’. In conjunction with immediately preceding *puróhitam* ‘set in front / to the east’, this is a designation of the offering fire, which has been *taken out* of the household fire to the west and carried eastward to be established there – it is a descendant of itself. I take gen. *aruśāsya* as doubling the cmpd’s 1st

member, *tánū-*: *aruṣá-* ‘ruddy’ frequently modifies Agni. Here it is an independent case form that has the same referent as the cmpd member *tánū-*.

X.92.3: The first two vss. having been conceptually consistent and well-crafted, we now encounter the non sequitur quality that will characterize much of the rest of the hymn. The exclamation *bád* that opens the vs. may signal this change of direction.

I am utterly baffled by the first pāda: I don’t understand what the Paṇi / niggard is doing here. Who would ever think that we would confuse the *nīthā* of wise Agni with those of a Paṇi, and what is the point of contact between Agni and this figure, who belongs to a different mythic complex? The Paṇi finds a phonological near-match in *pānīyasī* ‘more/very admirable’ in the next vs. (4b), but this gets us nowhere.

Never mind – this theme disappears; the rest of the vs., incl. the next pāda, is unrelated. Pāda b concerns the pouring (of ghee) onto the wood for kindling. The pāda is notable for a periphrasis with an overt copula, *práhutā āsuḥ*, which is quite unusual esp. in a main clause (see my Predicated Past Participle); we would expect the bare ppl. What the ppl. + perfect is meant to express is unclear to me; one could speculate that it aims at a plupf. “had been bepourd,” but there’s no contextual support for this. Perhaps the publ. tr. (“have been bepourd”) is correct, and the *āsuḥ* is meant to guard against both “are” and “were” and enforce an immediate past reading (with a perfect because *√as* lacks an aor.).

There is some uncertainty about *vayā(h)*, my “twigs.” Gr splits the stem into two (unnecessarily), with our form belonging to his “Opferspeise”; Ge (n. 3b) asserts that *vayā-* are otherwise not used as Brennholz, and we should perhaps read *avayāh* “Sühnopfer.” Since *vayā-* is not particularly frequent, I do not see the lack of other attestations in the sense of Brennholz as an impediment. Moreover, anyone who’s ever tried to build a fire knows that twigs are far more useful in the early stages than logs. Perhaps Ge is reluctant to accept that *práhuta-* can modify the goal or target upon which something is poured rather than the substance poured, but Agni himself is often so designated (though usually with *āhuta-*); see disc. above ad X.91.14.

But never mind again – the second hemistich appears to be entirely unrelated to either a or b; instead we have unnamed fearsome ones (*ghorāsaḥ*) reaching immortality and praising the gods. Old (fld. by Ge n. 3c and Re) identifies the subj. as the Aṅgirasas, with good parallels, but the connection of cd with pādas a and b escapes me. On the A’s reaching immortality see also X.62.1. As I comment there, the Aṅgirasas “seem to be acting as if in the role of mortal sacrificers vis-à-vis Indra,” and a similar situation may be depicted here, which would at least connect pāda c with the ritual fire kindling in b. For possible connections to 4a see comm. immed. below. I would make a small change in the tr. of c, to “they attained immortality,” to better match 7a below.

X.92.4–5: Several phrasal (near-)repetitions knit these two vss. together, without giving significant help in the unraveling of the puzzles: *urú vyācaḥ* (4a) is a near-equivalent to *urú jráyaḥ* (5c), both pāda-final, and *mahy ārámatih* (4b) appears as *mahīm arāmatīm* in 5b.

X.92.4: Ge and Re both take the whole vs. as a single sentence with *sām cikitrire* (c) as the main verb and a miscellaneous list of subjects. This is syntactically impossible for the transmitted text, since *cikitrire* is unaccented and pāda a contains *hí*, which conditions verbal accent. Since 10d also contains *sām cikitrire*, it could be argued that the verb here has lost its accent redactionally,

to match 10d. But there is little to be gained by taking all of vs. 4 as a unit and perhaps a bit to be gained by imposing some internal structure.

The *hí* in pāda a could look either back (to the preceding vs.) or forward (to the rest of 4). I will tentatively and speculatively try the former. Since in 3cd the Āṅgirasas attained immortality, which may have involved their moving to heaven, and they praised the divine race (*jānasya daívyasya*), I suggest that heaven in 4a picks up this theme, and I take pāda as an equational nominal sentence: Heaven (is) the *ṛtasya prāsitiḥ*.

And what is this? Ge (n. 4a) claims that it is only a poetic paraphrase for *ṛtām*, but it seems unlikely that the poet would use a highly specific and fairly uncommon word like *prāsiti-* in an essentially empty locution. On *prāsiti-* and the two separate words it may represent, see comm. ad IV.4.1. As I say there, the dominant meaning is ‘onslaught’ derived from PIE **seh₁(i)* ‘loslassen’, but it seems in some contexts to mean ‘(hunting) net’ (< *√sā*, *sí* ‘bind’). IV.4.1 contains two occurrences of *prāsiti-*; the first is qualified as ‘broad’ (*prthvīm*) and is the comparandum to *pājah* ‘leading edge’, and I take it in the “net” meaning, with the net spread as wide as possible to catch as much as possible. Here too broadness is at issue: the *prāsiti-* is equated with heaven “the broad expanse” (*urú vyācaḥ* [pace Re, I don’t think the latter phrase evokes the earth]). I therefore suggest that Heaven is “the (hunting) net of truth” (Ge also “das Netz des Gesetzes”) – what this means (in my view) is that Heaven captures and keeps the “truths,” the true formulations and praise hymns directed its way. I would now therefore change the tr. to “For Heaven, the broad expanse, is the (hunting) net (/snare) of truth.”

This interpr. leaves pāda b at loose ends. The two entities in it, Reverence and Devotion, could be lumped in with the gods listed in c and d, but these pious abstractions are of a different type from the well-known gods in cd. In the publ. tr. I take the pāda as locating the two in heaven, and I have nothing better to offer here. Reverence and Devotion certainly have more in common with truth than with the embodied gods of cd, and the location of Devotion in heaven may be at issue in 5b (q.v.).

The comparative *pānīyasī* echoes the mysterious *pañés* in 3a, but I can’t do anything with this fact.

The verb *sām cikitrīre* could be interpr. either as passive/intransitive “they are jointly perceived” or transitive in absolute usage “they jointly perceive.” The former is adopted by Re (“... se sont signalés de concert”) and JSK (DGRV II.86: “have shown themselves (to be) together”), against the publ. tr. and, probably, Ge (“sind eines Sinnes”). The latter sense is favored also by X.30.6 *sām jānate mānasā sām cikitre* “They are agreed in mind and they perceive alike.” Although the middle pf. of *√cit* often has pass./intrans. sense, the preverb *sām* probably conditioned the middle voice of *cikitrīre* despite its “active” semantics.

X.92.5: Although I usually disdain Lü’s celestial rivers, in this case the *sīndhavaḥ* seem to be located in heaven / the midspace. If (as I suggest) Aramati in 4b is located in heaven, that’s where the rivers need to be to run over her in 5b. And in cd they seem to be the source of the water with which the Earth-circling one besprinkles everything.

In pāda a the appearance of “journeying Rudra” (*rudréṇa yayínā*) associated with the rivers is a bit unexpected, but if it is (as I think) a reference to the Maruts, it fits the general sense of the verse better. Note first that “the Rudras, the Maruts” (*rudrā marútaḥ*) appear in the next vs. (6a). Note also a phrase in X.78.7 with rivers and an adj. ‘coursing’ (*yayī-*) formed very like *yayín-*, but with the Maruts as referents, *sīndhavo ná yayyàḥ* “(the Maruts) coursing like rivers.” Although a grammatically singular *rudrá-* standing for the Maruts would be unusual, it would, I

think, be interpretable (esp. since the Maruts are often referred to in the sg., as a *gaṇá-* ‘flock, throng’ or *śardha(s)-* ‘troop’) – and in the rainstorm context of the 2nd hemistich the Maruts make sense.

I don’t know why the rivers “run across” (*tiráḥ ... dadhanvire*) Aramati; it sounds disturbingly as if they run her over. But perhaps the idea is that they go beyond the boundaries of heaven (where I’ve located Aramati in vs. 5) and into the midspace to become rain.

The choice of possible referents for *párijman-* is fairly wide: Ge favors Vāta (on the basis of VII.40.6), Sāy. Indra, but Ge (n. 5c) also suggest Parjanya, which I prefer. The phrase *párijmā pariyān* is almost an anagram of his name, and the description *róruvaj jātharé* “constantly rumbling in his belly” is more characteristic of a thunder god than a wind god.

X.92.6: Pace Old and Ge (n. 6a), I separate *krāṇā* here from the adv. (old instr.) *krāṇā* ‘successfully’ (see comm. ad I.58.3) and follow the Pp. reading *krāṇāḥ* as a nom. pl. m. root aor. middle part.

With Gr (apparently) and Ge, I take the referent of *ásurasya* to be Heaven, contra W.E. Hale (78), who suggests Rudra.

Most take *caṣṭe* as pass./intrans. ‘is seen, appears’ (Gr, Ge, Re, Hale), but as argued in comm. ad X.74.2 (see also VIII.19.16), med. forms of *√cakṣ* are overwhelmingly transitive ‘see’, even when used without expressed obj. Forms of this root without preverb (as here) are quite rare, but are standardly transitive. Taking *caṣṭe* as ‘sees’ harmonizes it with (my interpr. of) med. *sām cikitrīre* (4c, 10d), to a different root but having the same general semantics. As for the sense here, I interpr. it as an interesting variant of the common trope that Varuṇa + Mitra (etc.) see the activities of men through the eye of the sun, who travels the sky as their spy looking down. Here the Maruts, who journey through the midspace, serve as alternative eyes of the Ādityan trio. As for the singular number of the verb, the RV allows either a plural or a singular verb for multiple singular subjects.

The stem(s) *árvaśa-* / *arvaśá-* is found only here. It is ordinarily taken as a deriv. of *árvan(t)-* ‘steed’ (see, e.g., AiG II.2.919–20, EWA s.v. *árvan-*). I don’t understand the reason for the accent difference, and the sec. lit. (incl. AiG) offers no explanations.

X.92.7: The publ. tr. interpr. the loc. phrases in a and b as parallel, contra Ge and Re. I now think they are correct to separate them. Pāda b is identical to IV.41.6b, where it forms part of a series listing the elements at stake in a battle. I would now substitute “... they obtained their benefit in Indra, when the sight of the sun and the masculine nature of the bull (were at stake).”

The larger question is – who are the subjects of this vs.? There is a curious silence on this in all the sec. sources, save for Sāy., who identifies them as *stotārah*. I suggest rather the Aṅgirasas for several reasons. First, in 3c they obtained immortality (*amṛtatvām āśata*), with the same verb as here. Although “benefit” and “immortality” are obviously different, the phraseology is structurally the same. Furthermore, assuming that *nṛśádana-* refers to the multiday ritual type known later as *sattra* (‘sitting’), in the Vala myth the Aṅgirasas participate in *sattras* that lead to the opening of the Vala cave. Against this identification is the fact that they are credited here with fashioning Indra’s vajra; this is not otherwise a deed of the Aṅgirasas, as far as I know – and in fact no other pl. entities perform this action that I know of.

X.92.8: Ge and Re interpr. *sūrah* as nom. sg. to *sūra-* and subj. of *rīramat*, Old (also Lub) instead as gen. or abl. to *svār-*. Ge allows possibility of gen. in n. 8a; Gr seems not to register the form at

all. Scar (559) allows both interpr. I take it as gen. to *svâr-*, with Indra the unnamed subj. Not only does it immediately follow a vs. with that same form (*sūrah* 7b), but the 2nd sg. subj. in the parallel I.121.13 *tvām sūro harīto rāmayah* ... “you brought to a halt the tawny mares of the Sun” clearly slots *sūrah* into the gen. Cf. also *sūryasya harītaḥ* (V.29.5, etc.) with unambig. gen. In our passage gen. *sūrah* is somewhat inelegantly picked up by coreferential *asya*, but this can’t be helped.

In c my distribution of the ablatives and genitives in a chain of dependencies follows Scar (559).

In d *stan* is good candidate for a general pres. reading of the injunc. (see KH 137).

X.92.9: For “show forth (praise)” for \sqrt{dis} see A. Nikolaev, “Showing Praise in Greek Choral Lyric and Beyond” (AJP 133 [2012]: 543–72), where he argues persuasively that this is an IE poetic idiom, found also in Greek, Latin, and possibly Hittite.

In the main clause in ab a dat. *tébhyaḥ* needs to be supplied, parallel to *rudrāya*, as antecedent to *yébhiḥ* in c. The referents are of course the Maruts, the sons/associates of Rudra. The adj. *evayāvabhiḥ* also picks them out exclusively: the pl. forms of the rare stem(s) *evayā(van)-* only characterize the Maruts, and see also the curiously formed *evayā-marut-* in the refrain of V.87 (1–9); see also V.41.16.

The adj. *śívāḥ* here implicitly modifies Rudra – the only such occurrence in the RV, though it is used of other gods. The exclusive application of this adj. to Rudra and its transfer from epithet to god’s name are post-RVic developments.

With Old I take *divāḥ* as a gen. characterizing the Maruts (see his parallels), rather than as an abl. specifying where Rudra is coming from (Ge, Re).

X.92.10: I take the point of this opaque vs. to be that because Bṛhaspati and his associates pass their fame on to their progeny (ab), the primal priest can perform the next step (c) – leading to the situation in d, where the gods and the Bṛḡus, legendary fire-priests, think and perceive alike. They are, as it were, on the same page because of the transfer of sacrificial know-how from the gods to mortals (or semi-mortals). But I am by no means certain of this interpr. In any case note the parallel verb forms in a *ābharanta ví* and c *ví dhārayat*, which suggest similar sequential actions. HPS (B+I 55–57) has a rather different interpr., though also generally centered on the primal priesthood.

With Old (and apparently HPS 55], in pāda a I read dat. *prajāyāi* against Pp. gen. *prajāyāḥ*.

‘Fame’ (*śrávas-*) seems to have an extended meaning here – perhaps the knowledge/actions they are famous for.

‘Those akin to soma / having soma as their relative’ (*sómajāmayah*, a hapax) are universally (Ge, Re, HPS) identified as the Āṅgirasas (Sāy. as the All Gods); I have nothing better to offer, though the link between soma and the Āṅgirasas does not seem to me to be strong. It is clearly the presence of Bṛhaspati that undergirds the identification.

The verb *ví dhārayat* in c lacks an overt object. I supply *śrávaḥ* from pāda a; as just indicated, I think the verbs signal sequential actions of the same type. Ge supplies “die Ordnung” (presumably an underlying cognate acc. **dhārmā(ni)*), though the passages he cites (n. 10c) provide no support (and do not contain *dhārman-*); Re “les arrangements diverses (du monde),” without argument; HPS (55) “(die Welthälften).” All of these possibilities seem to me plucked from thin air, and I prefer to stick with an object that can be supplied from context.

As indicated above, I think that *d* expresses the harmony of mind and perception between gods and the mortal or semi-mortal Bhṛguṣ, but it would help if I were surer what exactly the Bhṛguṣ are doing here. Their standard role is as primal installers of the ritual fire (e.g., I.58.3, II.4.2, VI.15.2), but this signature action is not in evidence here. However, they do seem to be associated with the Atharvan and the first institution of the sacrifice in *c* and to share their sacrificial skill with the gods.

On *sám cikitrīre* see comm. ad vs. 4.

X.92.11: This vs. presents us with the same syntactic problem as vs. 4: a first pāda containing *hí*, a long list of ill-assorted divinities in the nominative, and a single finite verb (*arhire* in *d*) that lacks an accent. Once again most tr. take the vs. as a single sentence, despite the disharmony between the particle *hí* and the unaccented verb, and in this case the publ. tr. succumbed to the same temptation. Unfortunately it is more difficult to impose internal structure than it was in vs. 4 (see comm. there). The vs. also seems an intrusion between 10 and 12, which both, however obscurely, seem to concern priests and sacrifice. Because of the jumble of divine names and the lack of any connection to the surrounding context, I am therefore more willing to assume that the vs. is a haphazard assemblage of gods inserted into an All God hymn, where it would find a natural home, and that syntactic niceties were not honored. The fact that the verb *arhire* is morphologically anomalous – a perfect apparently without redupl. and medial to a root otherwise active – contributes to the sense that the vs. was carelessly produced. On this verb form see Kü (108); though he entertains the possibility that it might exhibit archaic reduplication, in the end he favors an analysis as an ad hoc formation, possibly influenced by neighboring forms in *-ire* (by which he presumably means *cikitrīre* in 10d [/ 4c]). The presence of *hí* in pāda a may result from simple repetition of the opening of vs. 10 (*té hí*), which is reproduced at the beginning of 11. There is also a little formula *#té hí dyāvāprthivī* ... (I.160.1, X.64.14), which may have contributed.

The b.v. *bhūri-retas-* ‘having abundant semen’ occurs 3x in the RV, always modifying *dyāvāprthivī*. As Re implies by his parenthetical tr. “(divinités féminines),” the application of this epithet to a grammatical feminine is a nice paradox.

The identity / application of *cāturaṅgaḥ* ‘four-square’ is unclear: Gr implies that it modifies *nārāśaṃsaḥ*; Sāy and Bergaigne in different ways apply it to fire (see Ge n. 11b), while Ge himself expresses no opinion. Re claims that it’s Varuṇa, because he has the epithet *cāturanīka-* ‘four-faced’. However, this word occurs only once, in V.48.5, where it in fact characterizes Agni (Varuṇa appears in a different pāda), so that the Sāy. / Bergaigne intuition seems closer to the mark. But in a list like this, the referent scarcely matters.

I tr. Rodasī (contra Ge and Re: Heaven and Earth / the two Worlds) because of the accent (*rodasī*, not *rōdasī*) and because Heaven and Earth are already represented in this list. Rodasī is also the consort of the Maruts, who are adjacent to her here – but in a list of such chaos their adjacency is almost an argument against!

X.92.12: A different priestly title, Uśij, appears here, identified with “us.” If, as I suggest ad vs. 11, this vs. should follow directly on 10, the transfer of priestly skill and knowledge has passed from gods to legendary priestly figures (in vs. 10) to us of the present day. The *utā* opening this vs. would signal this chaining with vs. 10, and the *syá* may suggest that the referent is current.

All the standard renderings take pāda a with b and c, all loosely construed with the sg. verb *śṛṇotu*. By contrast I separate pāda a as a nominal clause – for several reasons. For one

thing, b is identical to X.64.4d, which speaks against integrating our pāda a into it, with Ahi Budhnya identified as the *kavī*. Moreover the adv. *urviyā* in pāda a hints at internal structure. I take the *kavīh* to be Agni (as so often) and *urviyā* as signaling an unexpressed verb. Cf. *urviyā vy ādyaut* of Agni in III.1.18, X.45.8; *urviyā ví paprathe* of him in X.69.2. In the publ. tr. I supply “is widely perceptible,” but, on the basis of those passages, “has shown widely” or “has spread widely” is also possible. The gen. *nah usījām* marks Agni as our own sacrificial fire.

In the publ. tr. I take the call (*hāvīman-*) in b to be Agni’s; I now think it’s quite possibly that of us, the Uśij priests (so explicitly Re), since the Uśij priests are elsewhere associated with the production of a *śāmsa-* ‘laud’, incl. in the related vs. II.31.6 (see below); see comm. ad II.31.6. I suggest a marginally altered alternative “listen to (our) call.”

With most tr., I take the dual phrase in c as an expansion of b, with Sun and Moon the afterthought subjects of the 3rd ps. impv. *śṛnotu* in b, with number mismatch. Alternatively the pāda could connect with d, which has a dual verb that fits the number of *sūryāmāsā* better, but in that case we would prefer a voc. Sun and Moon. (Of course, a simple erasure of the accent on -*māsā* would produce a voc.)

In d *śamīnahusī* is a problem. At least since Roth, the verse has been compared with II.31.6 and the opening of this pāda compared with the phrase in II.31.6d *dhīyā śāmī*#, a phrase that also occurs in X.40.1 (also pāda-final) and pāda-initial with non-shortened final vowel in IX.74.7 #*dhīyā śāmī*. Roth’s invocation of II.31.6 is esp. apposite because the vs. contains other elements found in our vs. (as he notes) – particularly the Uśij priests (a) and Ahi Budhnya (b). It is therefore tempting (and, I think, correct) to read *dhīyā *śāmī nahusī* ..., with word boundary and accentuation of *śāmī*, tr. the first two words as “with visionary thought and ritual labor.” (In the publ. tr. an asterisk should be inserted before “ritual labor.”) The alternative is to take *śamī-nahusī* as a voc. dvandva “o Śamī (and) Nahusī” (so Ge and Re) – but though Nahus at least is a PN elsewhere (though not Nahusī), Śamī is not. Ge (n. 12d) suggests that it’s personified Ritual Labor, but given the existence of the bipartite instr. formulaic phrase *dhīyā śāmī*, this seems unnec. and farfetched. What then to do with *nahusī* – if that’s the correct form (Roth emends to *nāhuṣo*)? I would like to (and in fact do in the publ. tr.) interpret it as an elliptical dual dvandva in the voc. to the stem *nāhus-*. The problem is the gender: we should expect masc. du. voc. **nahuṣā*. The only explanation I can offer for the -ī is perseveration from *śamī* in an unclear context, which I realize is weak. (Ge and Re simply assume a name Nahusī; I suppose this is possible, but it simply multiplies elements and also assumes a feminine addressee, which is unlikely if not impossible.) If, as I think, *nahusī* is an elliptical dual, what is the other member? In the publ. tr. I suggest Manu, on the basis of X.80.6, where people born from Manu and Nahus (*mānuṣo nāhuṣo ví jātāh*) invoke Agni (cf. also X.99.7). Here they would be legendary performers, who both engage in ritual activity (through their *dhī-* and *śāmī-*) and take cognizance of the ritual of today.

The referent of accented *asyā* is not clear. I’m now somewhat inclined to accept Ge’s suggestion (Nachtr.. ad loc.) that it is the singer (sim. Re), who has not yet been mentioned in the discourse. However, given the relatively frequency of expressions like I.147.2 *bódhā me asyā vācasah* “take heed of this speech of mine,” with gapping of the noun in, e.g., the refrain of I.105 *vittām me asyā* “take heed of this (speech) of mine,” it may instead be a reference to the speech/poem itself.

X.92.13: In the first hemistich I take *carātham* (a) as obj. of the inf. *iṣṭāye* (b) (“to seek our movable goods”), despite their distance, because *carātha-* in the acc. is generally used of

“moveable (goods)” → “livestock.” This is contrary to the Ge/Re interpr., both of whom take *carátham* and *iṣṭáye* as separate complements of *prá ... avatu*, with *carátha-* an abstract meaning something like “movement.” Although I recognize that the two words I construe together are far apart, my interpr. avoids the problem that Ge/Re face: to supply something else as complement of the inf. *iṣṭáye* (“dass wir rasch (zum Ziele) kommen”; “pour (faire réussir notre) quête (de biens)”).

The stem *ātmán-* here has its original (?) meaning ‘breath’ (see EWA s.v.), appropriate to its identification with Vāta ‘Wind’, as is agreed by all standard tr.

Although the neut. of the comparative *váśyaḥ* ordinarily means ‘better state’, the machinery that Ge and (esp.) Re (“pour (qu’il nous obtienne) un (sort) meilleur” – a lot of words to tr. one) require to employ that sense here makes me prefer my economical adverbial interpr. “all the more.”

X.92.14: As is generally agreed, the main object of praise in this vs. is Agni, save for pāda c, where we find Aditi and the Wives (of the gods).

On *adhikṣīt-* see esp. Ge (n. 14) and Scar (94). Although I agree that this rt noun cmpd belongs primarily to *√kṣi* ‘dwell’, I think there is some crossover with *√kṣā* ‘rule’ – hence my tr. ‘preside over’ (borrowed from Re), which splits the semantic difference. Although verb forms of this lexeme sometimes just mean ‘dwell’ (I.126.1, 154.2), ‘preside over’ works better for VII.96.2 and VIII.40.2, 41.9.

On *anarváṇam*, see esp. comm. ad VIII.31.12 as well as other loci noted in the lexical commentary. The problem is that this adj. several times modifies, or seems to modify, feminines despite its masc. appearance. Although in these cases ad hoc fixes can be contrived by finding (or inventing) a masc. for it to modify, the fact that there is a group of such passages strongly suggests that the adjectives in each case are actually fem. On this passage esp., see JPB (Ādityas 218–19), where he convincingly argues that acc. *anarváṇam* is built to a fem. **e*-grade *n*-stem like *yósan-* ‘young woman’, whose nom. pl. is *yóṣaṇaḥ*. Our *anarváṇam* would be the correct acc. sg. to such a stem, next to nom. sg. fem. *anarvā* (II.40.6, VII.40.4).

áktoḥ is formally a genitive, and it is universally (incl. in the publ. tr.) taken as dependent on *yúvānam ... pátim* here. However, the form is often used adverbially (“by night”), as in our own 1b, and I think that usage is possible here.

nṛmánā(h) is most likely a nom. sg. (but see Old for other poss.) and is taken by most as the name of the poet, while I (and Scar [94]) prefer to take it in its usual adjectival sense (‘of manly mind’). By either interpr. we must reckon with an unsignaled change in number from 1st pl. *gṛṇīmasi* in b, either to 1st sg. or 3rd sg., and must supply the appropriate verb (“I/he hymn(s)”). With Scar, I prefer the first alt., because it involves changing only one grammatical category (number), not two (number + person), but Ge and Re opt for 3rd sg.

On *ádha* conjoining two nominals (here *áditim* and *yúvānam ... pátim*), see JSK (DGRV II.128–29).

X.92.15: On my interpr. of the meaning of *√ribh*, see the various reff. listed in the lexical comm.

Both Ge and Re consider the *pūrvō āṅgirā(h)* to be Bṛhaspati, but in the sg. *āṅgiras-* is almost always Agni, who is also the subject of the previous vs. (14) and so the default referent in context. The identification with Bṛhaspati is vigorously disputed by HPS (B+I 38, 56), who favors Agni or possibly Soma.

In c, because of the agency of the stones and because of the insistence on *vī* (*vīhāyā(h)* ... *vicakṣaṇāḥ*), I render *vīhāyā ābhavat* as “became widely extended,” flg. Re’s “à pris toute son extension” rather than my usual tr. of *vīhāyas-* as ‘of extensive power’. The point is surely that when pounded by the stones, the soma plant and its juices spread out physically, just as its power more extensive because it has been transformed into the deified ritual drink.

The final pāda of this hymn is, as Re says, “finale mystérieuse.” Syntactically it must consist of two nominal sentences of two words each. Ge (n. 15d) plausibly suggests that it has to do with an animal sacrifice. As he points out, *pāthaḥ* ‘fold’ (as in ‘sheepfold’), ‘pen’ is associated with the animal sacrifice in the horse sacrifice hymn (I.162.2) and in the Āprī hymns, where after being sacrificed the animal victim “goes to the pen of the gods” (*āthā devānām āpy etu pāthaḥ* II.3.9, et sim.) The second clause, *svādhitir vānanvati*, is the positive equivalent of the negative *nā svādhitir vānanvati* in VIII.102.19 (as is generally remarked). In that context it seemed simply to indicate that the speaker did not have firewood for kindling the ritual fire; whether the axe here has more sinister associations (with the killing of the animal) isn’t clear.

X.93 All Gods

On the manifold difficulties in this hymn and the universal near-contempt for it (which I’m afraid I share), see publ. intro. I will not engage with the numerous metrical problems, and will scant many of the morphological and syntactic issues.

X.93.1: On the problematic *māhi*, see esp. Old, Ge (n. 1a).

The instr. pls. *tébhiḥ* ... *ebhiḥ* most likely refer to the gods; see Ge (n. 1c).

The hapax *sūśāni* is unclear. Ge takes it as a loc. inf. to $\sqrt{sū}$ (flg. Gr), tr. “... schützt uns, um überlegen zu sein” (cf. Keydana, *Inf* 111: “damit wir gedeihen”). But can loc. infinitives express purpose, and, if we are its subj. (most clearly in Keydana’s tr.), why do we need protection? Re’s interpr. is quite similar (“pour que (nous soyons) gonflés (de biens)”), though he analyses it as “une variante inorganique de *sūśa*” (whatever that means) rather than an inf. By contrast, Th (see EWA s.v. *sūśā-*) derives it from $<*(p)sū-śa = \text{YAvs. } fšū-śa-$ ‘winning cattle’. Clever – but again, why would we need protection in those circumstances. I (tentatively) suggest that the referent is the same as that of *sāhyas-* ‘one more powerful’, the person from whom we needed protection in the preceding pāda, and it’s a loc. absol. referring to circumstances (“when he [=the more powerful one] is swollen with strength”). Ge suggests a similar alt. in his n. 1d.

X.93.2: This vs. is syntactically and morphologically well-behaved; not so its meter.

X.93.3: Although the default assumption would be that the two pāda-initial gen. pl. #*viśveṣām* ... #*devānām* should be construed together, esp. in an All God hymn, the parallel in VIII.46.16 *viśveṣām irajyāntam vāsūnām* (pace Ge’s “nur zufällig”) suggests a different configuration, with *viśveṣām* dependent on the voc. *irajyavaḥ* and *devānām* on *vār* (as in the publ. tr). Very little is at issue, however, if the two are taken together and construed with *vār* as in Ge’s “Aller Götter Schutz is grossartig, ihr Gebieter.” I do not see how Re gets a voc. “o tous dieux” out of this gen. phrase; he clearly thinks it’s coreferential with *irajyavaḥ*, which he tr. “O vous qui commandez,” but how?

Note the four occurrences of *viśva-* (*/viśvá-X*) in the vs.

X.93.4: Pāda b is identical with I.79.3c. The referent of *párijmā* is unclear. It could be an epithet of Varuṇa, but in I.79.3 I take it as Wind on the basis of VII.40.6 (see comm. ad loc.). But here the word needs to be evaluated in the context of the preceding hymn (X.92.5), which contains an occurrence of *párijmā*. As disc. in the comm. on that vs. above, I identify that occurrence with Parjanya, but other referents have been suggested. Since it is found in a god list here, there's nothing that depends on a precise identification.

It is not clear whether the scope of the question particle *kád* extends over all the gods listed in the 2nd hemistich (Ge, Re) or only Rudra (publ. tr.) – nor is it clear why there is any question about him/them. Perhaps Rudra is singled out because his nature is not completely benevolent, as opposed to the others on the list; c could be a parenthetical “Is Rudra praised of men?” Such special treatment of Rudra may be supported by 7a below.

The form *pūśanaḥ* is of course surprising: formally it could be nom. pl. (so Re: “Pūśan-et-autres”), but is far more likely (so Old, citing Lanman; see Ge n. 4d) to be a nom. sg., backformed from the acc. *pūśanam*; see esp. the matching expression *pūśanam bhágam* in X.125.2 cited by Old.

X.93.5–7: These three vss. begin *utá no* and appear to form a tṛca. All three also concern the Aśvins (at least by my interpr.).

X.93.5: Ge calls this a “fast unverstandlichen Str.,” and it has received a wide variety of interpr. (see esp. Old's multiple alternatives). I will primarily deal with my own, by no means certain, account.

Let us begin with the voc. *vṛṣaṇvasū*. This fairly common form, always in the dual, is overwhelmingly used of the Aśvins. Given the Aśvin theme of the following two vss, which are linked to this one by their opening (see immed. above), that is surely the referent here, despite the dual dvandva *sūryāmāsā* that opens the next pāda.

The two words in the middle of this 1st pāda, *náktam apām*, give trouble. Ge's interpr. (n. 5) is the most radical: noting that Apām Napāt is found often (his term; the occurrences don't seem that numerous to me) in conjunction with Ahi Budhnya, he suggests emending *náktam* to **náptam*, yielding the acc. phrase **náptam apām*. The problem (or one of them) is that **náptam* is not the acc. to *nápāt-*, which is always (20x) *nápātam*. Although it is true that nom. *apām nápāt* is found in the preceding hymn (X.92.13), directly after a vs. containing Ahi Budhnya (X.92.12), this does not seem sufficient reason to make a radical emendation yielding a non-existent form. I take *náktam* as an adverbial acc. ‘by night’, as so often, and supply its formulaic partner ‘by day’, to match up with the Sun-and-Moon dvandva in b.

As for *apām* Old construes it with the voc. *vṛṣaṇvasū*, on what seem to me weak grounds. Re, while not accepting Ge's emendation, nonetheless sneaks in *nápāt-* in parentheses: “... la Nuit, (le Fils) des eaux ...” Flg. Gr's laconic indication, I take this gen. instead with *sádanāya* in the next pāda (so also Scar 29), though this connection is explicitly rejected by Old). For a similar phrase, see *apām sadhásthe* (I.149.4, II.4.2 = X.46.2, VI.52.15). The gen. *apām* may have been moved from the immed. vicinity of its head noun to enable the phonetic figure *sádanāya sadhanyā* (/ ... *sádi*) in b (/c).

Now, what is the overall structure of the hemistich? Most interpr. supply a verb: “bring” (Ge, JSK [DGRV I.426]) or “protect” (Old tentatively, Re), with Sun and Moon (+/- other acc.s) as acc. obj. By contrast but with Scar (291), I take the hemistich as a nominal clause, with *sūryāmāsā* as subj. and *sadhanyā* ‘joint guides’ predicated of them. There are problems with this:

first, it requires separating *sadhanyā* here from forms like *sadhanitvá-* (see comm. ad IV.1.9, VI.51.3, also X.50.3), which I now take as deriv. from *sa-dhána-* (flg. Scar), and maintaining the root noun cmpd analysis *sadha-nī-* ‘leading jointly’; it also assumes a dat. (*sádanāya*) goal with this cmpd, which is syntactically shaky; and it posits an unusual configuration: Sun and Moon leading us to the seat of the waters. I am not certain what this refers to – but Agni is elsewhere associated with the seat of the waters, and so perhaps this describes the daily ritual round as defined by the alternation of Sun (day) and Moon (night).

The referent of *eṣām* is undetermined; it cannot be the waters, the only plural entity in the 1st hemistich, because of gender mismatch. Old and Ge suggest the gods, which is a reasonable default.

X.93.6: A relaxingly straightforward vs. The only real question is what is the referent of *sá* in c. The pāda is identical to I.149.1 (or, rather, is the dimeter version of a Virāj pāda there). The standard, and most likely, view of our pāda is that the (or a) (mortal) whom the gods protect in ab is the referent of *sá* (Ge, Re, Bl [ad I.149.1]), but in I.149.1 the referent is most likely Agni, who is not excluded here.

X.93.7: The agglomeration of gods in this vs. becomes more random. The first puzzle is found in pāda a, where the Aśvins are called on for mercy, “even though (*cīd*) [they are] Rudras.” The Aśvins are called Rudras a number of other passages (e.g., I.158.1, II.41.7), as Ge points out (n. 7a), but without the deprecatory concessive of this passage. This (positive/neutral) identification must be via the Maruts, who as Rudra’s sons are also called Rudras (pl.). The Aśvins share the midspace with the Maruts and on several occasions (e.g., VIII.22.1, 14) are called *rudrá-vartanī* ‘following the course of the Rudras [=Maruts]’. Since the Rudra=Aśvins identification is mediated through the positively viewed Maruts, there are no bad associations. Here, by contrast, the ambivalence about the Aśvins as Rudras seems to connect with 4c, where I suggest there is some question about whether Rudra is/should be praised, given his often hostile spirit and behavior. See comm. above. With regard to this vs. one might note that Rudra is not known for his mercy.

On *ráthaspati-* see comm. ad V.50.5.

The Earth-encircler (*párijmā*) recurs from 4b (q.v.), as well as X.92.5.

The voc. *viśvavedasaḥ* in d is a semi-scrambling of *viśve devāsaḥ* in b.

X.93.7–8: There is chaining between 7c *ṛbhúr vāja ṛbhukṣaṇaḥ* and 8a *ṛbhúr ṛbhukṣā ṛbhúḥ*.

X.93.8: The standard tr. take *te* [=Indra] in b as the antecedent of the rel. *yásya* introducing cd. Although this is the most straightforward analysis, I disfavor it because the clauses in cd seem to characterize a ritual performer, not Indra. I therefore take b as a parenthetical interjection, supplying an impv. “(let ... come),” with Ge and Re. The *yásya* then is coreferential or parallel to the gen. *vidhatāḥ* in pāda a: “of the one who does honor (and) of whom ...” In d the sacrifice and its accoutrements of the present sacrificer are compared to those of the first sacrificer, Manu.

X.93.9: Another fairly hopeless vs., of which I’ve made what sense I can.

In pāda a, with Old, Ge, and apparently Re, I take *áhrayaḥ* as a negated neut. *s*-stem, next to the them. adj. *áhraya-* (11x, not counting this one) ‘immoderate, unabashed’. This *s*-stem is also probably found in IX.54.1 (q.v), though there it is usually taken as a nom. pl. m. to a hapax

stem *āhri-*. Here *āhrayaḥ* would have to be a nom. sg. if to the them. adj.; it would then have to modify the addressee, Savitar, and would deprive *kṛdhī* of an obj. As an *s*-stem deriv., it could be either a noun ‘immoderation’ or a bahuvrīhi adj., as Ge points out (n. 9a). (The occurrence in IX.54.1 is an adj. modifying *pāyas-*.) In either case it is likely to reference n. *rādhās-* ‘wealth, largesse’, which is modified by *āhraya-* 5x (though in our passage Ge, Re, and JSK [DGRV I.228] take it simply as the abstract ‘lack of shame’). As a minor alt. to the publ. tr. “immoderation (of wealth)” with *āhrayaḥ* as noun, we could have “immoderate (wealth)” with an adjectival form. For the accent, cf. the b.v. *ān-āgas-* ‘without offense’.

In b the grammatical identity and function of *stuṣe* are in question. Ge, Re (explicitly), and JSK take it as a 3rd sg. passive ‘is/should be praised’ (or [JSK 229] possibly a “falsely unaccented infinitive”). The subj. would be *sá*, but its referent is unclear: the consensus is that he is one from among the (gen. pl.) *maghónām* ‘patrons’. I prefer to take *stuṣe* as the form it usually is, one of the well-known group of *-se* 1st sg.s with “active” sense in the domain of praising (*grñīṣe*, etc.). See comm. ad I.122.7–8, X.22.1.

The *sá* could be one of the extremely rare RVic examples of the *sál tām* pronoun doubling the 1st ps., rather than the far more common 2nd (see my 1992 [HS 105] “*sá figé*” article, esp. pp. 217, 230–31). However, given that the function of *ca* in this pāda is uncertain (see JSK 229) and further that JSK (272 n. 110) lists this as one of only four passages in the RV containing the sequence *sá/tá- ca*, I suggest that instead of *sá ca* we read **sácā* ‘along with, in company with’, here to be construed with the gen. *maghónām*. See *sácā ... eṣām* in 5c. The emendation is slight: the erasure of the notional word boundary of course means nothing in the Saṃhitā text, and since the 2nd vowel precedes a cluster (*st-*), a redactional shortening would be easy and have no metrical consequences. In the publ. tr. there should be an asterisk before “in company with.” A **sácā* here could parallel the *sahá + u* that opens the next pāda (as *sahó*) and indeed give the *u* there something to do. In fact, JSK (Part. u, 169 n. 3) classifies our *sahó* among forms where the existence of an *u* is unlikely because it is found in a passage lacking a proper syntactic environment for *u*; however, if it links *sácā* and *sahá*, it belongs with JSK’s *u* linking a series of adverbs (his Chap. 7) and the *u* has much better contextual support.

The second hemistich is fairly impenetrable; Ge says of his tr. (n. 9cd) “Nur versuchsweise übersetzt.” My tr. rests on a double interpr. of the lexeme *ní√yu*. On the one hand, it can be used with the object ‘wealth’ (*ráyim* vel sim.) in the sense “hitch up wealth (like a team)” – see VII.92.3 (*niyúdbhiḥ ...*) *ní no rayím ... yuvasva* “with your teams, hitch up wealth for us” (sim. VII.5.9, also VII.40.2). On the other hand, *ní√yu* can mean ‘rein in, control’, as in X.42.5, where “rivals” (*śátrūn*) are the obj.; see also *úd√yu*, with the oppositional preverb to *ní*, in the opposing sense ‘give free rein to’ (VI.57.6). Both the positive and the negative semantic extensions of *ní√yu* start from the etymological figure *niyútaḥ ní√yu* ‘team/hitch up teams’, as in VII.91.5 *niyuvānāṁ niyútaḥ*. My “Indra keeps hitching up (wealth) for these (patrons) of ours and keeps hold of “the wheel of the domains” like a rein” represents both idioms. Unfortunately in the “wealth” idiom the object has to be supplied; in my view the gen. pl. *eṣām* refers to the patrons from b (so also Ge, n. 9c) and is distinct from the gen. pl. *carṣaṇīnām* immed. flg. the pāda break. As for “the wheel of the domains” (*carṣaṇīnām cakrām*) Ge (n. 9d) takes the wheel as “das Symbol der Herrschaft,” as in later Indic. Although the first idiom is minimally represented here, I find it difficult to render the whole hemistich without incorporating it.

X.93.10: Again with Ge (n. 9c), I take *eṣu* as referring to the patrons; however, I do not consider it coreferential with *vīreṣu* as Ge and Re do, but as identifying two distinct groups. I also take

asmé not as another term in that series (like Re’s “en ces hommes-d’élite, en nous-mêmes”), but as defining the larger group in which the *vīrá-* are found. However, little rides on this distinction.

The position of *utá* in d is somewhat disquieting. It conjoins the two bipartite dative purpose NPs *vājasya sātāye* (c) and *rāyā ... turváne* (d), but takes second position in the second phrase, as if it were *ca*. JSK (DGRV I.301) simply says it “takes enclitic position within its phrase,” which is a description, not an explanation. However, I don’t see any other way to construe it, and in the context of this hymn it’s a minor issue. (On instr. *rāyā* see Old.)

X.93.11: The first hemistich lacks a verb. It’s possible to borrow *pāhi* from c, as Re does. But I prefer to supply a verb of motion, probably **yāhi*, rhyming with *pāhi* – both because *asmayú-* is several times found with this impv. (I.135.2 (2x), IX.14.8, 64.18; also (dual) VII.74.4, VIII.26.14) and because *kūcīt sántam* “wherever it may be” invites a verb of motion.

Pāda d can be (and has been) variously interpreted. The standard view (so Ge, Re) sees *medátām* as a 3rd sg. mid. impv. to a hapax 6th cl. pres. with anomalous full-grade root vocalism (or else what should be a 1st cl. pres. with anomalous suffixal accent – see Ge’s n. 11d, where he suggests *medátām* is an error for **medatām*), beside the *ya*-pres. *médyaṭi*, which has a broader attestation (on which see Kulikov, *ya*-pres. 599). By contrast, Old suggests that it’s a *tā*-abstract and hesitates whether it belongs with *medín-* ‘pal’ (not his gloss!) or *médas-* ‘fat’, tr. “beschütze unser Genossentumswesen (unser fettes Gedeihen?) entsprechend unserm Weisheitswese.” The nominal interpr. has been widely accepted; see EWA s.v. *médas-*, Lub. In *-āya*-Formations (142 n. 78) I accept Old’s interpr. and tr. “For (our) superiority do thou always protect our prosperity with wisdom” (in both tr. the verb *pāhi* of c reapplies). In the publ. tr. I revert to the older view of *medátām* as a verb, but interpr. *vedátā* as a nom. sg., not the instr. sg. others take it to be, belonging to *√vid* ‘find, acquire’ rather than *√vid* ‘know’. (Note that, like *medátām*, *vedátā* is a hapax: the forms seem to have been created to mutually interact with each other.) My reversion was in great part caused by the position of the 2nd *abhīṣṭaye* at the end of c (the first ending b). This “final” dative seems to me to be rhetorical final, and a new clause should begin in d. Nonetheless I have had partial second thoughts about positing a hapax pres. stem beside an already existent one, and so I now suggest as alt. the tr. cited above from my *-āya*-book (with “dominance” substituted for “superiority”).

X.93.12: Another challenging vs. Its opening, *etām me stómam*, echoes that of the previous vs. (11a), *etām sámśam*. This parallelism was not, regrettably, signaled in the publ. tr.

The rest of the hemistich is disputed. Ge (n. 12a, fld. without remark by Re) takes *tanā* as a nom. sg. fem., which in the phrase *tanā ... sūrye*, is the Daughter of the Sun (equivalent to *sūre duhitā*, acdg. to him). This seems extraordinarily bold, in fact reckless. There exists no *tanā* ‘daughter’ (or other such female figure); *sūrye* has no claim to a genitive interpr., unlike *sūre*; and the Daughter of the Sun has no obvious role in this vs. (though Ge claims she has a relationship to poetry). There has to be a better way, although I admit that mine has its share of awkwardness. I take the simile *tanā ná sūrye* as an unusually constructed comparandum to the b.v. *dyutád-yāman-* ‘whose course is dazzling’. I take *tanā* as the instr. of the rt noun *tán-* ‘extension’. Although the instr. sg. of this stem generally has root accent (*tánā*) and an adverbial sense (“in full measure,” “at length,” etc.), I suggest that the form here retains the expected ending accent because it has the full nominal sense “by stretching.” In this reading, *sūrye* is the goal, and the point is that as the praise-song is sent towards heaven, its trajectory is as bright as a sunbeam or a flame of the fire reaching aloft.

The subj. of *vāṇṛdhanta* is unexpressed. Because this vs. contains the poet's praise of his own composition (in my view) and because it provides the transition to the *dānastuti*, I suggest it is the patrons, who have been gestured to in recent vss. (9–10) and return (in 13, as well as 14–15). They “strengthen” the poet's praise hymn by their material gifts to him.

Despite the two simile particles (*nāc*, *iva* d), the 2nd hemistich must be a single simile, as Old points out. *saṃvānana-* is generally (and surely correctly) understood as a piece of horse or wagon tackle; its literal sense, ‘harmonizer, conciliator’, is probably euphemistic for something that keeps horses under control.

X.93.13: With Ge (see n. 13ab), fld. by Re (Old's speculations seem off the mark), I take the unidentified gen. pl.s *yēsām* and *eṣām* as referring to the patrons and the unidentified nom. sg. f. (on the basis of the f. adj. *yuktā* and *hiraṇyāyī*) as the Dakṣiṇā. This vs. thus introduces the *dānastuti*, which becomes more explicit in the flg. vs. Both *vāvārta* and *yuktā* suggest that the Dakṣiṇā here is conceived of as a chariot or wagon.

It is the second hemistich that provides the problems in this vs. It consists of two (or possibly one: see comm. ad 12cd) similes, to which the fem. entity in the 1st hemistich is presumably compared, but everything else is up for grabs. See the despairing flounderings of Old, Ge (n. 13cd), and Re, to which I have nothing particularly useful to add. The general impression I get from the two similes is that the feminine subj. of ab is being deliberately compared (and thus contrasted) with hypermasc., aggressive, and successful entities, esp. in c with *paūṃsyā* ‘manly, masculine’. As with *paūṃsyāni* in I.169.6 I take this as referring to manly forces, i.e., troops. Here the ending *-ā* can be either a fem. sg. or the short neut. pl. On *nemā-dhiti-*, here in the loc. as in its other 3 occurrences, see comm. ad I.72.4. It is used of battle arrays drawn up against the enemy. In other words, the Dakṣiṇā of ab seems to be compared to troops in a state of combat readiness – I have no idea why.

The sense of d is even harder to fathom because the b.v. *viṣṭā-anta-* is multiply ambiguous and the morphological identity and meaning of *viṭhā* are disputed. As for the former, *viṣṭā-* can of course be the ppl. either of *√viś* ‘enter’ or *√viṣ* ‘toil, accomplish’. Gr takes it to *√viś*, glosses ‘hindurchgehende Enden habend’, and applies it to an axle, presumably qualifying the chariot that is the hidden metaphor in ab. This doesn't get us very far, esp. since it leaves *viṭhā* dangling. Old tries out several possibilities but doesn't settle on one. Ge refuses to tr. My rendering is closest to Re's (for the whole pāda) “semblable à des choses accomplies de bon gré,” but I think both of our interpr. rest on a dubious cross-linguistic slippage: the assumption that ‘end’ (*ānta-*) can also mean ‘goal’. Nonetheless this is reflected in the publ. tr. “whose ends have been accomplished” (with *viṣṭā-* from *√viṣ*). However dubiously achieved, this interpr. makes more sense than introducing an axle, and it fits fairly well with c, in comparing the Dakṣiṇā to something successful. It also allows *viṭhā* to have its usual adverbial sense ‘at will’, rather than taking it (with Sāy. and Ge; see Ge's n. 13cd) as a separate fem. noun, which Ge renders as “Schöpfrad” (whatever that may be).

Thus, piece by piece the 2nd hemistich can be tentatively teased out, but the point of the two similes still escapes me.

X.93.14: The first hemistich consists of a list of patrons' names in the loc., summed up by *maghāvatsu*. This stem first appeared in gen. pl. *maghónām* in 8d; in between the patrons have been regularly alluded to, but not overtly identified. The reappearance of *maghāvan(t)-* here almost defines a ring.

The syntax of *cd* is problematic. It should consist of a rel. cl. introduced by *yé* picked up by a main cl containing the referent of *yé*, namely *eṣām* (both referring to the patrons) (see the similar configuration in 13ab). The problem (or one of them) is that the “main” clause in which *eṣām* finds itself has an accented verb, *viśrāvi*. The various treatments attempt various makeshifts. In mine, I supply a transitive verb of motion in the rel. cl. (“send”), because *yuktvāya* ‘having yoked’ assumes a subsequent journey, as does *pathā* (if it belongs in this clause), and *asmayú* also favors a verb of motion (see comm. ad 11).

As I just implied, I am inclined to breach the pāda boundary (not much of a problem in this metrical messy hymn) and include *pathā* in the rel. cl., though it could belong to my second clause (“... widely famed along the path”).

I take the subj. of *viśrāvi* to be the Dakṣiṇā (so also Re): for the patrons the point of all this giving is for it to be noisily celebrated by the poet-recipient. What I would like is for this to be a straightforward main clause: “of them (the Dakṣiṇā) is widely famed.” But no such luck in *this* hymn. Barring an emendation to **vī śrāvi*, this little clause must also be subordinate. I have adopted the trick used by Ge and Re and made it an unsigned purpose clause, on no better basis than desperation.

X.94 Pressing Stones

On the supposed authorship of “the snake Arbuda Kādraveya” see Ge’s headnote.

X.94.1: Note the four verb forms of √*vad* in the 1st hemistich, with their initial *va*’s reinforced by *vayām* and *vācam* (and indeed [*grā*]va[*bhyo*]). The addressees of the 2nd pl. *vadatā* in b are presumably the priests (so also Ge), while those of *bhāratha* in d are the stones.

On the meaning of *ślōka*- see comm. ad I.51.12.

X.94.2: I take *śatāvat sahāsravat* as indicating that the (limited number of) stones make as much noise as hundreds and thousands of them -- not that they speak in a hundred or thousand different ways (as it is generally interpr.) or a hundred or thousand separate utterances. The emphasis in this hymn is on how much noise they make.

As Ge points out (n. 2b), they have golden mouths because they are stained with the golden soma.

Note hemistich-final *āsābhiḥ* (b) / *āsata* (d).

Pāda c is almost identical to III.60.3 (R̥bhus), with *sāmībhiḥ* there substituting for our *grāvāṇaḥ*. Though they are rendered differently in the publ. tr. (III.60.3 [JPB] “... by applying themselves to their labors, ritually acting well by good ritual action”), the divergence seems justified by the lack of agreement on the 2nd word in the pāda.

The Hotar in d is surely Agni (as so often). The point is that even before the oblation is poured into the ritual fire, the stones have tasted it because they are pressing it.

X.94.3–4: The repeated phrase *āvidann anā mādhu* (3a, 4b) could also be rendered with an aoristic immediate past “they have found,” which would fit with the generally presential context.

The sense and/or function of adverbial *anā* is difficult to determine. It occurs four times (counting this duplicate phrase only once): here, IV.30.3, VIII.21.13, 47.6. In none of these passages (incl. the phrase here) does “in this way / because of this” fit particularly well (despite the publ. tr. here). In this passage the stones do not find the honey *because* they speak; rather the reverse: their speaking (in both 3 and 4) signals that they have found the honey. I now think that

anā means something like ‘evidently, clearly’, deriving ultimately from ‘by this’ (=previous action) the actuality of the current action/state can be inferred. I would now alter the tr. to “evidently they have found the honey.” That is, we hear them and figure they must have found it. For the other passages see comm. ad locc.

X.94.3: In the sequence *vadanti ávidann* the two verbs have a quasi-palindromic relationship.

In later Vedic, *nyūñkha-* (and associated denom. forms) refers to a particular alteration in the recitation of the Hotar, whereby an *o* is substituted for the 2nd vowel of each hemistich (see, e.g., Re’s Vocabulaire du rituel védique s.v.). This is the only attestation of this lexeme in early Vedic, and it is hard to imagine that the exact later technical sense is meant here (though see G. Thompson’s tr. [unpubl. handout, Leiden Vedic Workshop, 2002] “they chant ‘O’ over the well-cooked delicacy”). Given the content of the 2nd hemistich as well as the obj. of the verb here (“cooked flesh”), the context seems to involve powerful animals devouring meat. Since later *nyūñkha-* has to do with sound, our *ny ũñkhayante* should express some sort of vocalization appropriate to such a scene. I’ve chosen ‘growl’ (like dogs [vel sim.] jealously guarding their piece of meat), but I wish I knew why this oddly formed, very precise technical term was imported into this context. (Perhaps *o* as a mid back vowel sounds most like threatening animal noises from the throat?) Re seems (rightly) not to have taken his own definition of the ritual term into account in *Hymnes spéculatifs*, where he tr. “mordent en grondant” (bite while growling: why use one verb when two will do?); Ge “schlampfen” (slurp), Gr “gierig brummen oder grunzen” (roar or grunt greedily).

It is noteworthy that soma, or rather the soma plant, is conceived of as *cooked* (*pakvá-*) flesh; *pakvá-* can’t have its other sense, ‘ripe’, because *āmiṣ-* is unambiguously an animal product (‘raw flesh’), not a vegetable one. Ch. Malamoud in his *Cuire le monde* (1989) claimed that every Vedic sacrifice involves the offering of cooked food, but he had to make soma a special case, since it is not cooked in any conventional sense. In my review of the 1996 English tr. of this collection (Hist. of Religions 39 [2000]: 384–86), I drew attention to this problem. But as it turns out, at least on the basis of this passage we were both wrong about soma: soma does count as “cooked” to the ritualists themselves, presumably because of the elaborate nature of its preparation. And this makes Malamoud righter about the larger principle than I was willing to allow at the time.

The “branch of the reddish tree” (*vr̥kṣásya śákham aruṇásya*) must again be the soma stalk, but this time in more natural guise as a member of the vegetable kingdom.

In IX.79.4 the stones gnaw (*bapsati*) the soma, as here. The part. *bápsat-* modifies a dog in VII.55.2, which might support my conjecture that dogs are growling over meat in pāda b. In fact, nothing forbids taking *c* with *b* rather than *d*.

On *sūbharva-* see EWA s.v. *BHARV*, with lit.

X.94.4: The participles *krósantaḥ* (b) and *āghoṣáyantaḥ* (d) are partial rhymes, and *āghoṣáyantaḥ* picks up *ghóṣam* in 1d.

Note the repetition of *ávidann anā mádhu* here. On this phrase and esp. *anā* see comm. ad vss. 3–4 above, where I suggest an altered tr. for both occurrences of the phrase. Here the shrieking to Indra signals that they have found the honey.

Contrary to standard gr. and tr., I take *saṃrābhyā* not as a gerund but as a gerundive (pausal form *saṃrābhyāḥ*) because of the instr. case of the agent *svásṛbhiḥ*. Although in later Sanskrit gerunds can take instr. agents, the conditions for this are clear: the matrix clause in

which the gerund is found is passive (see, e.g., Speyer, Skt. Syn. p. 297, Wh Gr. §994c), and *anartīṣuḥ* “they have danced,” though intrans., is not passive. Moreover, it’s not clear to me that the instr. agent with a passive matrix clause is found at all in Vedic: a quick look through Delbrück (AIS) and Speijer (Ved. u. sansk. Syn.) didn’t turn up any; Wh. (§994c) only provides Classical examples; Macdonell (VGS pp. 332–33) doesn’t mention this usage.

X.94.5: The first hemistich compares the stones to two very different animals: the eagle because their noise soars upward; the antelope because of their trampling of the plant on the ground. The root accent of *kṛṣṇa*- identifies it as the animal (the black antelope) as opposed to the suffixally accented color term *kṛṣṇā*- ‘black’.

Phonetic figure, *n’yañ ní yanti* in c.

On neut. singular *purī* see comm. ad V.33.4. As I say there, all of the supposed occurrences of this form can be otherwise interpr. (as neut. pls.) – except for this one: it is difficult to find any other function for it here except as a modifier of *rētaḥ*. In this late hymn, the fact that both *-u* and *-ū* can be used for neut. plural may have allowed a nonce spread of *-ū* to the singular, where *-u* is the only regular form. I also wonder if the immed. flg. *r*- had anything to do with it – as if though a degeneration and compensatory lengthening of **-ur r*-, though it’s hard to see how this would have come about.

In d *sūrya-śvītaḥ* could be either nom./acc. pl. or abl./gen. sg. Both have their advocates: Old favors nom. pl.; Scar (560) allows either; most others (incl. the publ. tr.) prefer the sg., though even there there is disagreement about whether it’s gen. or abl. (the latter, acdg. to the publ. tr.). I favor the sg. because the source of the semen should be indicated.

X.94.6: I don’t understand the usage of *samāyamuḥ*. Act. forms of the fairly rare lexeme *sám / ā √yam* are otherwise transitive, in the meaning ‘hold fast (reins, vel sim.), guide’, but this form appears to have no obj. I take it as absolutive or reflexive ‘hold (themselves?) fast’, despite the act. voice. It’s also possible that *dhúraḥ* ‘chariot poles’ is the obj. not only of part. *bībhṛataḥ* but also of this verb.

X.94.7: Both Ge and Re (Hymnes spec.) refuse to tr. *dásāvani*-, a failure that seems over-scrupulous. The simplex *avāni*- means ‘stream’ or ‘streambed’; from the latter one can generalize to ‘course, track’. Gr renders the cmpd “zehn Bahnen durchlaufend.” Although the following four b.v.s with *dása*- refer to particular pieces of horse tackle (also *dásayantra*-in 8a), it would not be surprising for the first in the series to refer to something more general, namely the track that the harnessed stones (/horses) will follow. The “ten” of course refers to the fingers in all instances.

X.94.8: Apropos *ādhānam*, for *ā √ dhā* used of hitching up horses see VII.34.4.

It’s a bit of a challenge to distribute the five gen. sg.s in cd: *sutásya somyásya ándhaso, amśóḥ ... prathamásya*. I have grouped the three in c and the two in d together, with the latter two dependent on the former three. On the distinction between *ándhas*- and *amśú*- see comm. ad IV.1.19. The problem is the “first” – and as Ge points out (n. 8d), it would better if it modified *pīyūṣam* ‘beestings’, i.e., first milk – as in II.13.1 *amśóḥ pīyūṣam prathamám*; our variant shows a displaced modifier, of the “cold glass of milk” (for **“glass of cold milk”*) type. It should be “the first beestings of the pressed somyan stalk of the plant.”

X.94.9: On my view of \sqrt{nims} (contra Gotō, etc.) see comm. ad VIII.43.10. Although it might seem odd to assert that the pressing stones “kiss” the two horses of Indra, as Ge points out (n. 9a) Indra’s horses are given the soma dregs, the pressed-out soma-plants, as fodder. “Diese fressen also Mund an Mund mit den Steinen” – an appropriate image of kissing.

Ge (n. 9b) calls b a śleṣa: the stones sit on the cow(hide), as milkers sit by a cow.

X.94.10: The $\sqrt{rṣāyāte}$ that ends the previous vs. is picked up by the first word of this vs.: $\sqrt{rṣā}$, which is predicated of $\sqrt{amśúh}$ ‘plant’.

There is also a referent shift, which is not entirely clear in the publ. tr. Indra was the 3rd ps. subj. of the previous hemistich (9cd), and we might expect that the “your / you” of vs. 10 refers to Indra, with the very common switch from 3rd to 2nd ps. However, all the 2nd ps. forms in 10 (4 finite verbs, plus enclitic \sqrt{vah}) are plural and must refer to the pressing stones, which were also in the 3rd ps. in the previous vs. This identification is made clear only in 10d by the voc. $\sqrt{grāvāṇah}$.

It’s worth noting (though I don’t know quite what to do with this observation) the concentration of 2nd pl. act. endings enlarged by *-na*: $\sqrt{rṣāthana}$ (a), \sqrt{sthana} (b and c).

I’m not sure why the stones need to be reassured that they won’t be harmed. Perhaps the point is that their plant is a powerful bull and can therefore protect them. The similar reassurance in VII.33.4, given to the Vasiṣṭhas, rests on the protective power of Indra.

The problem in the 2nd hemistich is $\sqrt{raivatyéva}$ — starting with the grammatical identity of the form. Gr sets up a stem $\sqrt{raivatyá}$ - “Reichtum,” to which this would be the neut. pl., an analysis fld by Caland-Henry and Delbrück, acdg. to Old. The only other such $\sqrt{vṛddhi}$ form in the RV is masc. $\sqrt{raivatá}$ - in V.60.4, to which this could, alternatively (and I think correctly), be a fem. $\sqrt{raivatī}$ -. Both Ge and Re accept the fem. interpr. (Ge: “die Tochter eines Reichen”; Re [Hymnes spéc] as a plural: “comme les filles du Riche”), but they both seem to take it as a nom., without indicating how they arrive at their grammatical identifications. (Ge’s n. 10c on possible irregular sandhi just throws more sand into the gears.) I am fully sympathetic to this tactic, because a nom. works better in context, but feel that I must agree with Old that it is most likely instr. ($\sqrt{raivatyā}$). The masc. $\sqrt{vṛddhi}$ form in V.60.4ab throws some light on our passage, in that it establishes a marital wooing context: $\sqrt{varā} \sqrt{ivéd} \sqrt{raivatāso} \sqrt{hiraṇyair}$, $\sqrt{abhí} \dots \sqrt{tanvāḥ} \sqrt{pipísre}$ “Just like wealthy wooers, with golden (ornaments) they have emblazoned their bodies.” The referents are the Maruts, compared to richly ornamented suitors; later in the same vs. (d) they put “marks of greatness” ($\sqrt{māhāmsi}$) on their bodies – cf. our $\sqrt{māhasā}$. In V.60.4 the $\sqrt{raivant}$ - are the wooers come to seek a bride. In our passage the $\sqrt{raivatī}$ belongs presumably to the other side of the negotiations: the daughter of a rich man (per Ge, Re) on offer to a suitor or suitors. This casts the pressing stones in the role of the father (/male relatives) of this girl, who pleases the suitor by bestowing his daughter who comes with a rich dowry. The well-pleased suitor is not overtly present in the main clause, but must be supplied as antecedent to $\sqrt{yásya}$ in d — or such is my interpr. Re (fld. by Don.) takes the referent of $\sqrt{yásya}$ to be the rich man; Ge seems to take $\sqrt{yásya}$ as standing for $\sqrt{yád}$ (“wann”) with the gen. expressing an indefinite (“an de Opfer jemandes”).

As for the ceremony the stones have enjoyed, this may refer to pāda b, where the stones are well-fed and satiated.

X.94.11: Ge couches the first hemistich in the 3rd ps. (“... sind die Steine”), presumably because of accented $\sqrt{ádrayah}$, which cannot be voc; he then switches to 2nd ps. (“... seid ihr”) because of 2nd pl. pres. \sqrt{stha} in c. Re (fld. by Don.) simply uses the 3rd ps. throughout, ignoring the \sqrt{stha} .

Because the stones are insistently addressed in the 2nd ps. throughout the immediately preceding vs. and this 2nd ps. is again overt in our pāda c, I take it all as 2nd ps. I see no problem with a nom. *ádrayaḥ* in a 2nd ps. context.

The pair *ṛḍilā áṛḍilāsaḥ* have been variously interpr. Because the only difference between the two is the privative *á* (and consequent accent shift), I think these refer neutrally to different shaped stones, both of which types are equally good at the work required.

X.94.12: Acdg. to Ge (nn. 12a, 12cd), the first hemistich concerns the (stony) mountains, conceptualized as the fathers of their miniature versions, the pressing stones, while the second half of the verse returns to the pressing stones. The publ. tr. accepts this interpr., but I now think that pāda c is an ambiguous transition, which can be applied both to the mountains and the stones. The reason for the identification of mountains and stones is pretty clear. The willed immobility of the mountains is implicitly contrasted with the dynamism of the pressing stones. Since we are nearing the end of the hymn, when the stones will be unhitched and return to immobility, the mountains provide a sort of grand model for this state.

As I just said, pāda c seems applicable to both mountains and stones: *ajuryá-* ‘unaging, undecaying’ in fact fits the mountains better than the stones. Both mountains and stones can be “companions of the golden (soma)” – the mountains because soma famously grows in the mountains, the stones because they press the plant (see their “golden mouths” *hárítebhīr āsábhiḥ* in 2d).

The next word, *harídrava(h)*, is glossed by Gr “den gelben Rossen nachrennend,” but the standard interpr. now (e.g., Old, Ge, Re, Don, Scar [295 and n. 845], EWA s.v. [though with a diff. botanical ident.]) is that this refers to the Haridru tree (*Adina cordifolia*), a tree with yellow-colored wood and yellow flowers (per internet), much used later in Āyurveda. Why either mountains or stones would be compared to this tree isn’t clear to me, but the *hari-* of course carries it a long way.

Pāda d definitely applies to the stones. The use of the redupl. aor. *aśuśravuḥ* ‘made listen’ with an acc. of the listener and an instr. of the sound reprises the same construction, with different verb *āghoṣáyantaḥ*, in 4b.

X.94.13: The locc. *vimócane yáman*, adjacent across the pāda boundary, must be contrastive: “on their unhitching and/or on their course.” Given that rhetorical structure and given that *añjaspā(h)* doesn’t work well as a simile, I have interpr. *iva* as a sort of hypercorrection for **vā* ‘or’. Since *iva* sometimes needs to be read ’*va* in late RV (including nearby X.97.10), the poet thinks *vā* can be optionally realized as *iva*. The verbal complex *vā ghā* is fairly common in the RV (I.161.8, 162.8; III.28.2; V.85.8 [=X.139.5]; VIII.12.16, 21.17, 44.23, 47.15; X.61.18), while I find *iva gha* (as *iva ghéd*) only in VIII.43.3. The publ. tr., complete with asterisk, reflects this emendation. I am concerned about the location of the phrase, which should be in 2nd position; however, this is a problem also if we read *iva*, since *ghā* is overwhelmingly a 2nd-position (or after *vā*, etc., a modified 2nd-position) particle. (Ge [n. 13b] is also disturbed by the particle placement.)

On *añjas-pā-* see comm. ad X.92.2. Here the point is that the stones have the first direct contact with the soma; they do not drink an already prepared beverage.

upabdíbhīḥ is repeated from 4d.

The standard tr. effectively take *vápantaḥ* as belonging only to the simile (despite the position of *iva* after *bījam*); that is, the simile is “like grain-producers scattering seed.” But it

seems as if this action should correspond to something performed by the stones as well – in other words, it should express the shared characteristic. I therefore take *bījam* as a pun, to be construed with both simile and frame. In the simile it is grain-seed, but in the simile it is (metaphorical) semen. For *bīja-* as semen, see, e.g., X.85.37 (the wedding hymn) *yāsyām bījam manuṣyā vāpanti* “in whom [=the bride] men scatter their seed.” As for the metaphor, see 5d *purū réto dadhire* “they [=stones] have themselves produced much semen.” That “semen” is of course the liquid pressed out from the plant, but it can be configured as the semen of the stones themselves, which in our vs. is then reinfused into the soma (*prīcānti sómam*). This idea is then restated in another image in the post-caesura portion of d: the stones do not make the soma smaller by eating it.

Gr analyzes *dhāñyākṛt-* as *dhāñya-* + *ākṛt-*, but this is impossible, since root noun cmpds can have as prior member a nominal or a preverb, but not both. (See disc. in my 2020 “*iṣudhya-*” [Fs. Lamberterie]: 486 with n. 5.) Better, with Scar. (74–75), to take *dhānyā-* as a collective pl. or as. metrical lengthening in the cadence.

X.94.14: The stones are unhitched and return to their desacralized inanimate state as mere stones. The vs. has several puns that have not been previously recognized.

vācam akrata is found also in 5a; nonetheless I tr. them slightly differently, preferring ‘speech’ in 5 and ‘voice’ here. (There is of course no difference in the Skt.)

As Re points out (EVP XVI ad loc.), soma is *tunná-* by the pressing stone in IX.67.19–20 – hence the simile here in b.

In c *vī ... muñcā* reprises *vimócane* in 13a.

The pf. part. *suṣuvúṣaḥ* is taken by the standard tr. as gen. sg., referring to the priest who has produced the *manīṣām* (‘inspired thought’). But it can equally well be acc. pl. m., referring to the stones, and I think both are meant. This double interpr. entails a double interpr. of *vī ... muñcā*: with the stones as obj. it means ‘unhitch’ (or horses; see, e.g., V.53.7), but with the thought as obj. it means rather ‘release (into the world), set free’.

In V.53.7 *vī √ muc* is followed immed. by *vī √ vṛt*, as here. In that passage it seems to refer to turning aside from the road to rest, after unhitching. That sense works here as well.

The last pāda has been various interpr., esp. because the sense of *cāyamānāḥ* is not agreed upon. On this participle, see comm. ad VII.18.8. In our passage I find Ge’s interpr. the most compelling: that it is intrans./pass. ‘appearing (as), being perceived (as)’, indicating that the dynamic protagonists of our hymn are now just seen as inert stones. But I also think *cāyamānāḥ* is a pun: it could also be interpr. as *ca āyamānāḥ*, that is, with a negated mid. part. to the root aorist of *√yam* (see act. *samāyamuh* in 6a), ‘not being harnessed (anymore)’. The *ca* would of course be oddly placed, but I would not be surprised at such a manipulation to enable the pun.

Commentary X.95–191

X.95 Purūravas and Urvaśī

On this famous hymn and the later Sanskrit versions of this story, see publ. intro. The general approach to the RVic hymn has been to retroject the narrative found in the Śatapatha Brāh. version onto the RVic hymn, interpreting all enigmatic details in the light of that later version. As I said in the publ. intro., I think the ŚB version misunderstood or deliberately reconfigured the RV one. Similes and other images were taken literally – e.g., the lambs tied to the bedpost in the ŚB were invented out of a simile in vs. 3; there are no real lambs in the RVic hymn. If we approach the RVic version directly, without invoking the ŚB, a very different picture emerges. To readers used to the standard take on this hymn, my interpr. may seem radical and disconcerting. This way of reading the hymn dates back, for me, to an intense exploration of it with Stanley Insler and Joel Brereton sometime in the early 1970s (1973 or 1974?), perhaps the first time that I saw the exhilarating possibilities of close reading of the RV. Some of the ideas in the current tr. and comm. date back to those sessions of 50 years ago and emerged from our joint discussions then.

Needless to say, numerous others have tr. and commented on the hymn, and I cannot consider them all in detail. A recent one is found in Susanne Schnaus’s 2008 *Die Dialoglieder im altindischen Rigveda*, 355–404, and Elizabeth Thornton provides a detailed formal and rhetorical analysis in her 2015 (unpublished) UCLA dissertation “The Double-Voiced Rig Veda: Poetics and Power Dynamics of Formal Structuring Devices.”

The pattern of this dialogue is that P speaks and U responds, generally taking up and, indeed, upending his words. Most of the verses are paired, and it is illuminating to read them against each other, but this pattern does not establish itself until vs. 4. In vss. 1–3 P speaks 1 and U responds with 2, but then P completes her vs. with 3. Following this we get

P:	4	U:	5
	6		7
	8		9
	10		11
	12		13
	14		15

The last three vss. break this pattern: the speakers have changed places -- U speaks 16, P 17 – and the two vss. are not responsive. The final vs., 18, seems to be in the mouth of a narrator speaking for the gods.

X.95.1: The first two words of this hymn provide one of the most striking openings of any RVic hymn: *hayé jāye* “Woe, wife!” with its in-your-face jingly rhyme (rhyme in general being rare in the RV). On a technical note, it’s somewhat surprising that voc. *jāye* is accented here in apparent 2nd position. The other RVic occurrence of *hayé* is also followed by a voc. but an unaccented one: II.29.4 *hayé devāḥ*. The disorganized, staccato-like nature of Purūravas’s speech, esp. initially (note the parenthetic command inserted after the next word in this pāda), may account for the accent, with voc. “wife!” effectively starting a new detached utterance.

The function of *mānasā* and its syntactic status are disputed. Some (e.g., Re, Hymnes spéc.) take it as an independent clause, but most construe it with the clause in pāda b, with *tīṣṭha ghore* an interjection. This latter view is more satisfyingly dramatic: having got her attention with *hayé jāye*, P starts his plea – but after the first word has to try to arrest her in her flight, with

an imperative and another voc. Moreover, I don't see how *mānasā* can be an independent utterance; Re's "sois sage!" is a very loose rendering of the instr. Assuming that *mānasā* belongs with pāda b, what is its function there? With most (Ge, etc.) I take it as a semi-adverb, "with thought, thoughtfully," but Hoffmann (in his complete tr. of and comm. on this hymn, *Injunk.* 198–208) provides parallels for construing it with *mīśrā* (199 n. 179). Again for me the drama is enhanced by having *mānasā* a separate constituent rather than subordinate to a flg. NP (*mānasā ... vācāmsi ... mīśrā*).

Note the phonetic figure over the hemistich boundary: ... *nú / ná nau*.

Note the pres. subj./impv. *kṛṇavāvahai* (b) contrasting with the aor. subj. *karan* (d) to the same root.

As noted by many, P's use of two deriv. of \sqrt{man} 'think', *mānas-* and *māntra-*, situates (or attempts to situate) his approach in the rational, perhaps even coolly logical, realm – an attempt that fails before it even begins.

X.95.2: Urvaśī ignores his gesture towards the rational, but picks up his *vācāmsi* \sqrt{kr} (1b), though with an idiom (INSTR. + \sqrt{kr}) entirely different from his (even though her subj. *kṛṇavā* matches his *kṛṇavāvahai*): *vācā* \sqrt{kr} 'do with speech'. Her emphasis is on action—an emphasis reinforced by the next pāda, where she announces her (already accomplished) departure.

By comparing herself to "the foremost of dawns" (*uśāsām agriyā*), she makes her departure inevitable and irrevocable, since nothing can stop the foreordained journey of each day's dawn. I don't know why the simile particle *iva* is placed after the 2nd word in the simile -- perhaps because the NP *uśāsām agriyā* is felt to be a unit.

It is worthy of note that she twice uses the (syntactically unnec.) nom. prn. *ahām* with a 1st sg. verb (a: *kṛṇavā ... ahām*, d: *ahām asmi*), presumably emphatically and contrastively, to distinguish and separate herself from P.

X.95.3: By most accounts, this vs. is spoken by P, though Old suggests rather U. In the vs. P nostalgically reminisces about U's untameable and tumultuous beauty. The vs. certainly bears the hallmarks of P's disordered speech, being both metrically and syntactically jagged, and this has given rise to uncertainty of interpretation. In fact, the difficulties of the 2nd hemistich are responsible for the implausible Gandharvas-sheep-and-bedposts of the ŚB version.

There is some disagreement about the position of the pāda break in the first hemistich: either after *iśudhēr*, producing an 8-syl. pāda a and a conventional Triṣṭubh in b; or after *asanā*, with pāda a 11 syllables, though without a Triṣṭubh cadence, and b 8 syllables. I strongly favor the former: the hemistich trails off U's statement in the preceding vs., 2d, with P adding other similes describing U's fleet beauty. A truncated first pāda calls attention to the fact that it is just finishing a thought already articulated. Moreover, the shared quality of all the similes is U's word (*dur*)*āpanā* '(difficult) to attain', the unspoken beginning of P's speech, and it would rhyme with *asanā* beginning pāda b. Most interpr. construe *asanā* with pāda a, however (e.g. Ge "Pfeilschuss" somehow combining the two nominatives *iśuḥ ... asanā*, KH "ein Geschoss aus dem Köcher," with *iśudhēr asanā* a separate NP), which would favor a pāda break after *asanā*. I instead take *asanā* with the flg. *goṣāḥ*, parallel to the next, overt, simile *śatasā ná rāṃhiḥ*, supporting the pāda break after *iśudhēr*.

On the phraseology in b, cf. X.178.3 *sahasrasāḥ śatasā asya rāṃhiḥ* "his charge that wins thousands, that wins hundreds" of the mythical racehorse Tārksya. See also *rāṃhi-* in the next hymn, X.96.4.

Against the Pp. and essentially all other tr./comm., I take *śriyā* in sandhi as standing for gen. sg. *śriyās* (a paradigmatic form not certainly found in the RV to this stem, but cf. *dhiyās* to *dhī-*, as well as possible abl. *śriyās* in IX.94.4 [see comm. ad loc.]). The “quiver of beauty” adds a metaphor to the simile.

I will not engage with the numerous variant interpretations of cd, all heavily influenced (not to say misled) by the ŚB version, but simply attempt to justify my own. In pāda c there are two grammatical issues on which one must take a stand before attempting to interpret the pāda further: 1) does the sandhi form *davidyutan* represent a 3rd sg. in *-at* (so Pp.) before *n-* or a real 3rd pl. in *-an*? 2) is *nā* the negative or the simile particle? I opt for 3rd sg. and simile particle respectively. I take U as the subject of *davidyutat* and interpr. the verb as an irregular subjunctive (for **davidyotat*); cf. the injunc. in 10 *dāvidyot*. In fact the occurrence in 10 provides the clue for the interpr. of our pāda here. In 10 P compares U to lightning, with an overt simile: *vidyūn nā yā ... dāvidyot* “She who kept flashing like lightning ...” I think the same simile is covert here, conveyed by the preverb+verb *vī davidyutat*; the noun “lightning,” which should be the grammatical focus of the simile, does not have to be expressed because it is embedded in the verb, and so the simile particle dangles rather uselessly right after the verb and at the end of the pāda. Though I have elsewhere (see comm. ad X.21.1) argued that simile-marking *nā* is blocked from pāda-final position, I take its position here, as well as the absence of an overt nominal simile, to be another symptom of P’s emotionally distorted speech. The explicit simile in 10b, also applied to U, seems designed to repair the truncated one here.

As to what the pāda is conveying -- P is saying that she is dazzling and that she cannot be mastered (“under no man’s will”), with the suggestion that even in her sexual transports she is not subject to male control.

Given the use of *vīra* in 5d, where I tr. ‘hero’, *avīre* here might be alternatively tr. ‘no hero’s’.

Pāda d is also tricky syntactically, with the verb *citayanta* furnishing the trick. As I long ago argued (“Case Disharmony in R̥gvedic Similes,” IJ 24 [1982] 258–59 with n. 25), *citayanta* here shows two different constructions, one with the simile, one with the frame, both supported by independent occurrences of this stem elsewhere. In the simile the verb is transitive “manifest/display X” (lamb its bleating) with overt acc. obj., while in the frame it is intransitive “be manifest/displayed” ([her] noisy [cries] / tumultuous [tempests]). This image is the third in a series depicting U. as a thunderstorm: the wind (2b), the lightning (3c), and the thunder (3d).

Though this interpr. of vs. 3 is radically at odds with all the standard ones, I think it is rhetorically truer to the rest of the hymn and more powerful emotionally than those that introduce the Gandharvas (unnamed anywhere in this hymn) and pet lambs (extracted from an overt simile).

X.95.4–5: Here P and U present wildly incompatible visions of their previous married life.

X.95.4: In my opinion, in this vs. P. continues his nostalgic reverie, here focusing on U’s seamless fit into family life -- until his crude depiction of their sex life in the final pāda. But there are multiple interpr. of all parts of the vs., starting with the identity of the speaker. Both Ge and Re assign the vs. to a narrator, perhaps because U. is described in the 3rd person, even though P. is supposedly conversing with her directly. But his dreamy reversion to a happier time, narrated as if she weren’t there in front of him, makes psychological sense. And her sarcastic

citation of his final phrase in this vs. (4d) in her response to him in the next (5a) makes it clear that she was the audience for this speech.

The meter of the first three pādas is disturbed and cannot easily be fixed -- nor, given P's disordered state, should it be. With KH, I read *vāya(h)* at the end of pāda a, rather than initial in b, because it should be read with the participle *dādhatī*. Moreover, the position of *yādi* in b is better if only one item precedes it in its pāda/clause.

How to construe pāda b and what relation, if any, it has to cd are matters of dispute. The first question involves the word *uśaḥ*, interpr. by Gr and Ge (apparently also Re, Hymnes spec., Don) as a nom. sg. m. to a hapax thematic stem *uśa-* 'lover' (see Ge's n. 4b). By this interpr., U, having been kind to her father-in-law in pāda a, is at the beck and call of her lover, namely P, whenever he wants her (*yādi vāṣṭi*) for sex. Even leaving aside the precarious status of the supposed hapax noun *uśa-*, I find that pāda b works better as a continuation of U's attention to her father-in-law, because of the word *ántigrha-* 'house opposite' (vel sim.). Although we know nothing about the housing arrangements of the RVic joint family and *ántigrha-* is a hapax, it still seems more likely that her in-laws would inhabit a separate but nearby dwelling than that she and her husband lived in separate houses and she had to go to his whenever he wanted sex. Instead, I take the subject of *vāṣṭi* to be the father-in-law (so also KH, as I read his tr.), whom she dutifully served (not sexually) whenever he asked her to. (Schnaus takes U to be the subject, on the assumption that U was in fact not a dutiful woman, but did what she pleased. I take the point, but P's musings here focus on his [false] memory of her agreeable subservience.)

What then is *uśaḥ*? With Old (also KH, Schnaus), an acc. pl. to *uśás-* 'dawn'. Old himself takes it as a third object to *dādhatī*, "dawns"; that is, U. bestows three boons on her father-in-law -- goods, energy, and "dawns," standing for day upon day added to his lifespan. But it's better as a temporal adv.: "mornings, (all) mornings" (so KH, also Schnaus). See AiG III.282 and for the accent III.26.

The subordinator *yādi* should be read *yád *ī* 'when it' rather than 'if'.

The next pāda (c), again in my opinion, contrasts the home (*ástam*) that was U's own with the one opposite (*ántigrha-*) that belonged to her in-laws. She obtained it and took pleasure in this dwelling of hers, or thus do I interpr. the reference of *yásmin*. Others (Ge, Re, Don) take the referent of the relative to be rather P (e.g., Ge "(zu ihm), an den sie Gefallen hatte"; Don "and took her pleasure in him"). I find it easier to believe that U was house-proud than that even P could delude himself that she was madly eager for his sexual assaults -- esp. given his *avīre krátau* "under no man's will" in the preceding vs. (3c).

X.95.5: Note the typo in the publ. tr., "used to pierced" → "used to pierce."

As noted above, in pāda a U picks up the final words of the previous vs. (4d), good evidence that P spoke vs. 4 and U was there listening. She now expresses her distaste for his relentless sexual demands in the first hemistich, while, in the second, indicating that she behaved as a dutiful and submissive wife at that time.

The words *kétam* (c) and *vīra* (d) implicitly contrast with the phrase *avīre krátau* in 3c. Though I tr. both *krātu-* and *kéta-* as 'will' in these two vss., I am playing on the ambiguity of the English word 'will'. In 3c 'will' refers to the power to control: U was under the control of no man. Whereas in this vs. 'will' refers to P's desire, which U went along with -- until she didn't. I think she is using the voc. *vīra* ironically; see vs. 11 with vs. 7 below. It would in fact be possible in this sandhi context to read (*me*)'vīra 'o non-hero', but I think the ironic insult is truer to U's rhetoric. Moreover, in pāda b of this same vs. the transmitted *mé 'vyatyai* has to be read with

restored initial *á*-; it seems unlikely (though not impossible) that a putative **me* 'vīra would be treated differently.

X.95.6–7: Here P reminisces about the sensuous beauty of U's companions, the Apsarases, while U points out that the Apsarases were not there to delight P's senses but to assist her when she gave birth.

X.95.6: Once again P conjures images from his memory's eye – here of alluring but elusive Apsarases, who, as we learn in the next vs., were attending on the birth of U's child. (I do not follow the view that the Apsarases are currently running away.)

Many tr. (e.g., Ge, Re [Hspec], Don) take the first hemistich as a list of personal names, but interpreting the words as descriptors of the Apsarases provides a richer semantics.

The vs. is structured by a clever grammatical mismatch: it begins with a rel. prn. *yā*, which is fem. *singular*, with the collective sg. noun *śréṇīḥ* 'rank, row'; *yā* is picked up by matching *tā*, which opens pāda c – but this is *tā(h)* in sandhi and a fem. *plural*: the implicit plurality of the collective sg. here takes grammatical form. The difference in number is subtly emphasized by rhyming final *caranyúḥ* (singular adj.) in b with final *sasruḥ* (pf. plural.) in c.

For *sumnāāpi*- see VIII.13.3 *sumné ... sákḥā*. Our form is of course a bahuvrīhi, but I have suppressed the possessive aspect, since 'consisting of friends in good favor' is too clunky.

Most tr. take *añjāyaḥ* as an adjective characterizing the subject, with just *aruṇāyaḥ* in the simile, evoking the dawns – e.g., KH "diese schmucken (?) (Frauen) ... wie die rötlichen (Morgenröten)." This is not impossible, and I admit that the placement of *ná* favors taking *aruṇāyaḥ* as the first (and only) word in the simile. (However, recall the misplaced *iva* in 2b.) But *añjī-* is otherwise only a noun 'salve, ointment' and turning it into an adjective is not trivial. I think (the motion of) the Apsarases is here compared to the fluidity of such semi-liquid substances, which are also appropriate in this context since they could serve as cosmetics for the Apsarases.

The verb *sasruḥ* phonologically evokes *apsarás-*, a word not found in this hymn, though U is an Apsaras and these center vss. (6–9) concern a troop of them.

X.95.7: The depiction of the Apsarases and the rivers assisting at the birth of U's son reminds us of the waters at Indra's birth (IV.18.6–8), though their role there is somewhat equivocal.

Schnaus points out a syntactic problem with this vs.: *asmin* in pāda a, presumably referring to the child of U+P, is unaccented, but the referent is not yet in the discourse, though such an unaccented form should have a prior referent. I don't have an answer for this – but making P. the referent (as the only masc. sg. in the discourse) is too radical, giving grammar more power over sense than even I would favor. The lack of accent may in part signal U's lack of interest in her son (see esp. vs. 13) – making a truly unidentified and unemphatic 'him'. Moreover, in this vs. U seems to adopt some of the careless speech habits of P: her pāda a has an opening of 3; there's the just mentioned problem with accentless *asmin*; and the segue between pādas b and c is a non sequitur.

With regard to this last, U jumps from the birth of her child and the motherly nurturing of the rivers (*avardhan*, b) to the gods' strengthening of P (*ávardhayan*, d) and their purpose in doing so: for great battle and Dasyu-smiting. Though the same (or almost the same) transitive verb is used for both actions, they otherwise have little in common. Instead, U is preparing to make her case for P.'s generally unheroic behavior and his evasion of his god-destined role, and

so she slips this remark in here, pendant to the description of the birth of her son. The use of the son's birth as contrast to P's is found also in vss. 10–11. As for the construction, Ge (n. 7cd) suggests that *yád* is short for **yáthā yád* "just as when ..."

X.95.8–9: In this pair of vss., spoken by P. and U. respectively, she turns his whole vs. against him (see below). Again, he sees the Apsarases as females susceptible to his seductive advances, while she tartly declares their indifference to him. The vs. pairing is signalled by slightly slant repetition: 8a X *yád āsu* ... / 9a *yád āsu*.

X.95.8: On *sácā* as a pleonastic marker of an abl. absolute, see comm. ad IV.31.5. Here as sometimes elsewhere it seems to signal that the action of the loc. absol. is temporally the same as that of the main verb.

The pres. part. *tarásantī* and the impf. *atrasan* belong to the same pres. stem *trāsati* to the root \sqrt{tras} ; the distraction of the initial cluster in the participle is unprecedented. KH (Injunk. 203 n. 185) cleverly – if, in my view, implausibly – suggests that it's the reflex of Sievers-Edgerton Law after a heavy syllable, from underlying *mát* **trāsantī*, while the cluster remains after the light syllable in *atrasan*. Even if we were inclined still to believe in the Edgerton portion of S-E Law (distraction of initial clusters after heavy syllable), it seems unlikely to have been preserved only here, in this very late hymn. I suggest instead that it's another symptom of P's lack of control over his speech, here manifesting as stuttering. (That the first simile [the one in c] has a singular, but the frame a plural may be another symptom.)

X.95.9: U uses P's vs. 8 against him, matching him point by point. His *āsu* ... *āmānuṣṭṣu mānuṣaḥ* is taken up by her *āsu mārto amṛtāsu* with a synonym pair; his *ratha-spṛś-* by her *niṣpṛś-*; his double similes about animals in the 2nd hemistich matching hers in the same place, with the 2nd simile in both involving horses. In the course of this she turns his point upside down. In vs. 8 he depicts the Apsarases as timid (cd) but potentially eager for his advances (shown by their removing their garments [a]). Her depiction is quite different: her Apsarases may participate in sex with him, even demonstratively ("with their cries" *kṣonṭbhiḥ*), but it is on their own terms. The male is fooling himself if he thinks it was "by his intentions" (*krátubhir nā*); see *avīre krátau* in 3c indicating the U's sexual life is "under no man's will." The two animal similes in cd show the Apsarases, indifferent to the male, absorbed in preening themselves and playing among themselves – a far cry from the bashful creatures of P's 8cd. Note the reflexive expression *tanvāḥ śumbhata svāḥ* (on *śumbhata* see below) and the middle part. *dándaśānāḥ*, both suggesting the Apsarases' focus on themselves and exclusion of the male.

Though belonging to different roots ($\sqrt{spṛś}$ and $\sqrt{pṛc}$), *niṣpṛk* at the end of pāda a and *pṛikté* at the end of b echo each other, rather like *tarásantī* and *atrasan* in 8ab, even as *niṣpṛś-* also picks up *ratha-spṛś-* in 8d. For the sensual nuance of *ní* $\sqrt{spṛś}$, see the same root noun cmpd. in nearby X.91.13, where it refers to a wife caressing her husband.

Gr and Ge (fld. by Re [Hspec], Don) take *śumbhata* as 2nd pl. impv. act. to the common thematized pres. *śumbhāti*. However, Old clearly sets out the arguments for taking it as a medial 3rd pl. nasal-infix pres., an analysis supported by the existence of the athem. mid. part. *śumbhāná-* (/*śumbhāna-*). The early thematization of such a 7th cl. pres. isn't surprising when one contemplates putative forms like 3rd sg. mid. **śu-m-bdhé*, but the 3rd pl. keeps the root form reasonably intact. Flg. Old's analysis are KH, Schnaus, and the publ. tr.

X.95.10–11: Like vss. 8–9, these two vss. are paired, with P’s speech (10) taken up and twisted by U (11). Here the lexical pivot is *√jan* ‘be born’.

X.95.10: Another of P’s rosy recollections of U’s beauty and sexual compliance. His speech is also marked by metrical disturbance (pāda a) and syntactic disjunction: a relative clause describing U (ab) trails off, to be followed by an unconnected clause about the birth of the child (c) and ending with another clause with U as subject.

As discussed above, pāda a “repairs” the ill-formed simile in 3c, with both passages comparing U to flashing lightning. But it requires some repair of its own: the missing syllable in pāda a could be repaired by the preverb *vī* in tmesis, that is, **vī vidyūt ... dávidyot*, cf. 3c *vī dāvidyutat*. The repeated **vī vi(dyūt)* would have undergone haplology – or, perhaps better expressed, the missing syllable gestures towards a preverb that ought to be there but isn’t.

In b the adj. *ápyā* is grammatically ambiguous: it can be nom. sg. fem. referring to U or acc. pl. neut. modifying *kāmyāni*. With most (but not Schnaus), I take it as the former. The phrases *ápyā yóṣā* (X.10.4) and *ápyā yóṣaṇā* (X.11.2) support this interpr., as Old points out.

By most interpr., in b P is reminiscing about the joys of love that U brought to him. KH suggests instead that she is taking them away, depriving him of them, as she leaves, but this doesn’t fit his nostalgic tone.

The son is born in pāda c. KH notes the etymological figure *jāniṣṭaḥ ... sújātaḥ*. The form *apāḥ* is one of the few exx. of a singular form, in this case ablative, of *áp-* ‘water’. This source of his birth identifies him with his mother, who was just called *ápyā* in b, as well as with the birth as depicted in 7ab, with the participation of the rivers. In my view *náryaḥ* ‘belonging to men’ connects him with his father, the human P – though this argument is weakened by the fact that *nárya-* can be applied to gods as well as humans.

The standard interpr. of d is that it is U’s life that is lengthened (e.g., Ge “Urvaśī soll langes Leben haben”), with the only disagreement being about the modality of the injunctive (*prā*) ... *tirata*. But as an Apsaras, U is surely immortal – note they are called *amṛta-* in 9 a -- and so it makes little sense that she would lengthen her own lifetime. Instead I think the life in question is the son’s and that this is a pun. The name of U’s (and P’s) son is Āyu; see, e.g., IV.2.18, V.41.19, and Macd. Ved. Myth 135 n. 9. The obj. phrase *dirghám āyuh* “long lifetime” in d therefore plays off his name. Since the son has a mortal father, he is limited to a mortal lifespan, but his mother does what she can to make it a long one. (Of the comm. and tr. I’ve consulted, only Don interprets it this way: “Let Urvaśī lengthen the span of his life.”)

It is striking that this is the first occurrence of the name Urvaśī in this hymn, found also in vs. 17. By contrast, U addresses P in the vocative in vss. 2, 5, 7, 11, 15, that is, in most of the vss. she speaks (but not 9, 13, or 16).

X.95.11: U matches P’s *jāniṣṭa* (10c) with *jajñiṣé* (11a), both pāda-initial, but she’s pivoting to P’s own birth: the purpose for which he was born and his failure to fulfill that purpose – a more explicit follow-up to 7cd. Though as king and warrior he was born to provide protection to his kingdom and subjects, instead he has exerted his force (*ójas-*) only on her.

I do not entirely understand the function or position of *hí* in 11a, but I assume that it is meant to mark the preceding purpose dative *gopṭhyāya* as a separate small clause, much like purpose datives in Brāhmaṇa prose.

It is not made clear in c on what precise day (*sásmin áhan*) she issued her warning, but the general view (e.g., Ge n. 11c) that it was the day they first came together seems reasonable.

X.95.12–13: Another pair of vss., this time devoted to the fate of the child. P (12) tries to play the family harmony card, but U (13) shows herself quite willing to abandon the child to his father.

X.95.12: As just noted, P tries to persuade her to return on the basis of family ties, three generations of them: the sorrow of a single-parent child (ab), the indissoluble bond between the joint ‘masters of the house’ (*dāmpatī*) (c), and the parents-in-law (d). The in-law relation thus returns from 4ab. Although *śvāśureṣu* is plural here, it presumably only names the parents of the husband, with the plural appropriate to a general statement about the relationships in a joint family.

In b the identity of *cakrān* has long been disputed (see Old, Ge n. 12b), though has generally been assigned to \sqrt{krand} ‘roar, cry out’. However, KH’s ingenious interpr. of *cakrān nā* as *cakrām nā* “like a wheel” (already MSS 8, 1956, but repeated in Injunk. 205 n. 190 and repr. in Aufs. II) has won general acceptance (e.g., Re HSpec, Schnaus, publ. tr.).]

Most interpr. assume the child is crying because he (now) knows he’s separated from his father, but why would this recognition (*viñānān*) come to the child only now. I think it’s instead possible that these are tears of joy at seeing his father (again). Although I recognize that this doesn’t seem to work well with 13a, I think P is imagining a sentimental little scenario of tender reconciliation, which U then cruelly twists in the next vs.

X.95.13: U’s curt dismissal of the child and his feelings (or the feelings invented for him by P) is shockingly harsh.

The sequence *vartáyate áśru*, *cakrān nā* almost replicates, in mirror image, 12b *cakrān nā áśru vartayat*, though split across the pāda boundary. But, though it thus begs to be interpr. as a unit, this is not possible because of the unaccented *krandat* that immediately follows: *cakrān nā* must be part of the *krandat* clause, while it is very difficult to fit *vartáyate áśru* into the same clause. KH’s solution seems the correct one. The wheel is no longer the comparandum for the tear (sharing roundness), but for the child, who screeches like an unoiled wheel – as in the English saying “the squeaky wheel gets the grease.” U has transferred the simile from one target to another, and the picture is distinctly less attractive: a noisy crybaby, not a sad child silently releasing a single tear.

Her distaste for her child comes through even more strongly in c, where she refers to him with neuter pronouns (*tát ... yát*). Although Ge (n. 13c) suggests that the neuter refers to everything U still has from P, including the child, such an interpr. dilutes the power of her statement – and seems a modern version of the later Indian attempts to soften U into a more conventional female.

In d she tries to wrap up their conversation ring-compositionally, echoing phrases from the vs. containing her first speech: *párehi ástam* repeats 2c (*púnar*) *ástam párehi* and *nahí ... māpāḥ* “you will not attain me” is more or less equivalent to 2d *durāpanā ... ahám asmi* “I am hard to attain.” But P ignores the closure generated by the rhetorical structure. For a similar attempt to close a dialogue ring-compositionally, see Yama’s words in X.10.2 and 12; as with U, his efforts are unavailing.

X.95.14–15: The last pair of responsive vss.: P’s over-the-top self-dramatizing (14) is met by U’s weary pacifying.

X.95.14: P responds with maudlin, self-pitying threats to do himself in. All three verbs in this vs., *prapátet*, *śáyīta*, and *adyúh*, all in the optative, are accented, though there's no overt mark of subordination. Old (ZDMG 60: 735 = KISch 210; fld by KH and Schnaus) suggests the accent is emphatic, but this is not terribly satisfactory. (Everything P says is emphatic.) I suggest they are unsignaled “what if” clauses. The publ. tr. represents this for *prapátet*, but in the 2nd hemistich the verbs should rather be tr. “(Of) if he should lie ... or if the wolves should eat ...” This interpr. essentially follows Re's tr. (HSpec, fld. also by Don), though he doesn't discuss the accent. The implied main clause in all instances is “wouldn't you be sorry?!”

X.95.15: U's first hemistich echoes P's three clauses, but in *mā* prohibitives with expected adjustment of aspect stem and/or root: her redupl. aor. *prá paptah* picks up his pres. *prapátet*; her aor. *akṣan* (√*ghas*) his pres. *adyuh* (√*ad*, which lacks an aor.). Her *mṛthāh* “(don't) die” paraphrases his more elaborate *śáyīta nīṛteḥ upásthē* “should lie in the lap of Dissolution” – and of course an aor. to √*śi* barely exists at this period.

Her deprecatory remark about women in the 2nd hemistich seems to me not the result of self-hating misogyny on her part but rather an attempt to deflect him into the general: all women are bad — stop ranting at me.

X.95.16: This remark of U's seems like a non sequitur (see Old's similar puzzlement). It is also difficult for those with even a passing familiarity with Greek mythology to avoid interference from the Persephone story. But it *should* be avoided: this verse is surely not indicating that U, having consumed some mortal food, is now stuck living at least part of the time with mortals, but the reverse – that she's tasted quite enough mortal food, however tiny her portions, and she's taking off. As KH says, the verse provides the reason “warum Urvaśī persönlich vom irdischen Leben ‘genug hat’.” Unfortunately the reason is expressed obliquely. Don suggests that butter (i.e., ghee) may stand in for semen, and U is saying that she's had more than enough sex with P. A clever suggestion, but somehow it doesn't ring true to me.

Pādas a and b can form one subordinate clause, or b can be a main clause, since the accented verb *āvasam* opens the pāda. With most others, I favor the first option.

I take the 1st ps. sg. forms *acaram* (a) and *carāmi* (d) as functionally contrastive: *acaram* has full lexical sense (“I roam”) and *carāmi* is an auxiliary with *tātṛpāñā* “I continue to be sated.” Most interpr. treat the two thus (see, e.g., Ge n. 16d), but not Kü (216–17: “... wandle ich hier befriedigt”) or probably Schnaus (“... lebe ich hier als Gesättigte”).

X.95.12: P makes one last-ditch effort to persuade her, but she has already departed – as the impv. *nī vartasva* “turn back” (d) shows. The high-style descriptors of U in pāda a, “she who fills the midspace, who is the measurer of the dusky realm,” may suggest that she is literally, before his eyes, traversing the midspace on her way to heaven (so approx. Ge n. 17). In V.41.19 U is described as *bṛhaddivā* ‘of lofty heaven’, so her ordinary dwelling may be there.

On *ūpa śikṣa-* with acc. complement see comm. ad I.112.19, 173.10.

P's characterization of himself as *vásiṣṭhaḥ* is puzzling, esp. since the generic superlative sense is vanishingly rare, as against the PN of the poet of Maṇḍala VII; once again Old is similarly puzzled. In VII.33.11 it is said that Vasiṣṭha Maitrāvaruṇa was “born from Urvaśī” or “born from the mind of U” (*urvāśyāḥ ... mānasō 'dhi jātāḥ* (cf. also VII.33.13 *apsarāsaḥ pári jajñe vásiṣṭhaḥ*). But P is hardly representing himself as U's son, and the possibility (which Old

entertains) that we are now dealing with that Vasiṣṭha rather than P as speaker is strongly countered by P's usual tone of desperate longing (esp. pāda d). I have no answer.

The verb in c, (*úpa ...*) *tīṣṭhāt*, is accented, with no sign of subordination. As in vs. 14 I think the accent indicates that this is an unmarked subordinate clause, in this case giving the grounds for the action he hopes she will perform: doing a good deed — that is, returning to him — will bring her a reward.

X.95.18: The dialogue is at an end, and the last vs. seems to be spoken by the poet or by a disembodied heavenly voice – at least acdg. to most interpr: KH puts it in the mouth of U (as she flies up through the midspace?). In any case, whoever the speaker is, there is another layer of quotation, since the speaker ventriloquizes what the gods said to P.

The syntax and sense of b are unclear. The most straightforward way to take it is with *bhāvasi* as the verb in the *yáthā* clause (so Old, Ge, Re, Don). But the sense is not entirely satisfactory, since it takes P's bond with death as a given, not the result of some (recent) action – as the change-of-state verb *bhāvasi* implies. I therefore follow KH's more complex split into two clauses, with *bhāvasi* starting the main clause and owing its accent to its position. (Acdg. to Old, this is the interpr. in Ge's Komm., which he abandoned in the tr.) The point is that though P has a divine (/semidivine?) mother, Iḍā (hence the voc. in pāda a, *aīḷa*), he remains bound to mortality because U did not snatch him up and make him immortal (unlike Tithonus, made immortal by Eos in Greek mythology). Nor did she make their child immortal, so he will sacrifice to the gods (c), rather than himself receiving sacrifice.

But it seems that, nonetheless, P may receive special treatment after death, in heaven (*svargé*, d). It is difficult to interpr. this last statement, however. For one thing, this is the only occurrence of the word *svargá-* in the RV. For another, the root \sqrt{mad} is used of the exhilaration enjoyed by the Pitars (/forefathers) after death in the funeral hymn X.14 (see esp. vs. 10, where it is clear that the subject of *mādanti* is the Pitars) – and so the verb in d, *mādayāse*, which declares to P that he will reach exhilaration in heaven, may not be promising more than the usual postmortem joys that all humans receive.

X.96 Indra's horses

On the extended puns in this hymn, see publ. intro. Almost every pāda contains a form of *hári-/hárita-* or *harya-*, sometimes more than one. Outside of vs. 13, the final summary vs., only 6a and 12c lack such forms.

X.96.1: The lexeme *prá ... śaṃsiṣam* here substitutes $\sqrt{śaṃs}$ in the more standard formula *prá vocam*.

Although *prá* is rare with \sqrt{van} , I do not think, *pace* Re, that it is found here only to match the *prá* beginning pāda a. Cf. the inf. *právantave* in I.131.5.

The tr. of the subject of pāda c should be emended to “the delightful (drink) ...” As for the verb, Wh (Rts) registers one occurrence of a 1st class pres. *sécate*, namely this one. It should probably be interpr. instead as the subjunctive to the root aor. marginally found in the Br and tr. “will drip” here. However, note that Gotō (327) argues for its identity as a 1st class indic. present.

X.96.2: The syntax of this vs. is surprisingly clotted, and there are several possible ways to interpr. the overall structure. I take the two hemistichs as syntactically separate; in the first

hemistich, pāda a is a preposed rel. cl. and pāda b is the main cl., with the pres. part. *hinvántaḥ* functioning as main verb, whose subject is the same as the *yé* of a. This rel. cl. / main cl. structure begins with an acc. phrase *hárim ... yónim* “the golden womb,” presumably referring to the soma cup (vel sim.). It functions as the goal for both verbs in this complex: *abhí ... samásvaran* “they have cried out together towards” and *hinvántaḥ* “spurring [horses]” towards” and should be taken as fronted around the whole structure, not merely from the rel. cl. The acc. simile ending b, *divyám yáthā sádaḥ* “like a heavenly seat,” is to be matched with the golden womb opening the hemistich; it can be read with both a and b or only with b. The polarization of these two heavy acc. phrases accounts for much of the apparent awkwardness of the phrasing.

The subjects are presumably the priestly officiants.

The second hemistich also consists of a rel. cl. followed by a main cl., whose structure is more pellucid than ab. Indra is the referent of the rel. *yám* in c and is named in the main cl. of d. In the simile in c, *háribhir ná dhenávaḥ*, *háribhiḥ* is the shared property: the priests fill Indra with golden soma as the cows do with golden ghee. The only slight syntactic problem in the hemistich is that the verb of the rel. cl. is 3rd pl. *prṇánti* while that in the main cl. is 2nd pl. *arcata*. We can either assume that the impv. *arcata* is addressed to a different set of officiants than those in abc, or that a switch to direct address has happened in midsentence, which would not be unusual.

The use of the adj. *hárivantam* in d to modify the fortifying hymn (*sūśám*) is cute: this stem, usually in voc. *harivas*, is of course almost entirely used of Indra “accompanied by his fallow bays.” Here, though Indra is explicitly present in the pāda, it does not modify him but rather than hymn, and it refers not to his horses but to the soma. See vs. 8 below for another ex.

X.96.3: It is quite possible that the *vájra* is the only referent of the two forms of *háriḥ* in b. The mace is described as *níkāma-* in VI.17.10, and the location of the *vájra* in Indra’s two fists is widespread (I.130.4, VI.45.18, VIII.12.7; cf. with sg. fist VI.20.9, X.44.2). However, there is no reason why soma should not be eager for Indra, and the fists are associated with the pressing and purification of soma (e.g., IX.71.3 and a number of repetitions of *mṛjyámāna- gábhastyoḥ* (IX.20.6, etc.).

hári-manyu-sāyaka- is one of the very few multimember compounds in the RV. (I count no more than 15 exx.) It has received a surprising number of alternative translations. Gr takes it as ‘dessen Zorneswaffe [= *manyusāyaka*] (Blitz) goldfarben ist’, with Zorneswaffe standing for *vájra*. Ge, flg. Sāy. (n. 3c), sees the 2nd and 3rd members as a dvandva, with both equated with *hári-*, standing for soma: “sein Ingrimme [= *manyu*] und sein Geschoss [= *sāyaka*] ist der goldgelbe (Soma).” Re appositely cites the voc. phrase in the Battle Fury hymn X.83.1 *manyo ... vājra sāyaka* and on this basis seems to consider the middle member *manyu* to be predicated of both the 1st and the 3rd members: “qui a pour arme-de-jet la Fureur, pour (foudre [*vájra*]) doré (la Fureur).” But this would be an oddly constructed compound indeed. My interpr. differs from all three, though is perhaps closest to Gr’s: I consider *manyu-sāyaka-* a determinative compd with *manyu-* in genitival relationship with *sāyaka-*; this compd in turn is equated with *hári-*, which stands for both *vájra-* and soma, which are, of course, both necessary for Indra’s successful fighting.

X.96.4: The mace undergoes a series of metaphorical transformations in this vs. – from the static sun (a), to a racehorse (b), to Indra himself (c), before becoming a weapon again (d). The first three pādas also trace the trajectory of the mace’s use in the Vṛtra battle. It is first put in Indra’s hand; Indra then swings it energetically and (likely) in a wide arc; it then hits the serpent.

As Ge points out, the beacon placed in heaven must be the sun; this is a disguised instantiation of the formula “place the sun” that I discussed in the Melchert Fs. (“Sūre Duhitār’s Brother, the ‘Placer of the Sun’,” 2010). The location where the mace has been set in place is not specified, but it is either Indra’s fist (as in 3b) or, less likely, Indra himself (3d).

In b the mace seems to be compared to a racehorse “with its charge” (*rāmhyā*); see the “charge” in the preceding hymn X.95.3 as well as that of the mythical racehorse Tārṣya in X.178.3 *sahasrasāḥ śatasā asya rāmhiḥ* “his charge that wins thousands, that wins hundreds.” As noted just above, I think this pāda depicts Indra’s energetic swinging of the *vájra*. This movement would be the *vájra*’s “charge.” The verb in the pāda, *vivyácat*, is ambig. in both form and function. The publ. tr. follows Kü’s (505) interpr. as a perfect subjunctive, but given the injunctives in the neighboring pādas (*dhāyī* a, *tudát* c), I might be inclined towards Old’s interpr. as thematic pluperfect (injunctive). As for meaning, *vyac* ordinarily means ‘contain, envelop, encompass’, with object. But given *vyacas-* ‘expanse’, the nuance seems to be that the space that is encompassed is extensive. Here without object the idea seems to be that the racehorse gobbles up the distance of the course it runs on, and so encompasses it. In the same way the *vájra* encompasses the space that it swings through.

The poet plays tricks with reference in pāda c, which harks back to two different phrases in the preceding vs., which point to two different referents. The first we encounter is *hārisīpraḥ* ‘golden-lipped’, which echoes *susīpraḥ* in 3c, referring to Indra. But the next phrase, *yá āyasāḥ* “which is made of metal,” found in 3a, seems to swing the interpr. definitively to the mace (but see 8a below). Why/how is the mace golden-lipped? It may simply mean that it is golden, as has been repeatedly emphasized. Or perhaps it is now closely identified with Indra, whose lips are dripping with soma. In any case the *vájra* has agency here, as the one who thrusts/pushes the serpent, in effect *vṛtra-hán-*.

In d *harimbhará-* must be Indra, so that the *vájra* (identified as *hari-*) has been demoted to a material object again. I do not understand why Indra becomes ‘thousand-flamed’ under these circumstances.

X.96.4–5: Note that initial *tudád* is echoed by *tuvaṃ(-tuvam)* opening 5a and c.

X.96.6: The stem *mandín-* ordinarily modifies soma and means ‘exhilarating’, and I have followed that path here, though a passive ‘exhilarated’ of course fits Indra better.

X.96.7: As in vs. 2, *hārivant-* modifies not its usual referent, Indra, but, here, *kāma-* ‘desire’.

X.96.8: The poet returns to the conundrum of vss. 3–4. In 4c we were whiplashed by the incompatible phraseology, which first suggested that Indra as the referent, but then seemed to decisively identify the *vájra* because of the izafe-type rel. *yá āyasāḥ* “which is made of metal.” But here the referent can hardly be anyone but Indra: all the rest of the phraseology in the vs. points to him. But he is called *āyasāḥ*. Is this simply a metaphorical application of this adj. to mean especially strong and invulnerable, like the superhero Iron Man? or is Indra now identified with his mace, as his mace is transformed into him? If so, it’s a mace that can drink (see b).

X.96.9: As Ge suggests (n. 9b) *vājāya* is probably an abbreviation for *vājapēyāya-* ‘drink of victory’ vel sim. Although the cmpd is not attested until the AV and already there is the name of a particular ritual (parallel to the Rājāsūya, Áśvamedha, etc. [e.g., AVŚ XI.7.7]) not a drink, the

ritual must have been named after a ritual drink, and in our passage *turaspéya-* ‘drink of overcoming’ (?) in the preceding vs. (8b) would have conjured it up. I offer an alternative tr. “sets his two lips to twitching for (the drink) of victory.” The vs. is stuffed with reff. to drinking.

With Ge (also Kü 294) I take *dávidhvataḥ* as the gen. sg. of the intens. part. agreeing with *yásya* in pāda a, *pace* Sāy., Gr, who take it as 3rd du. Schaf. identifies it as a 3rd du., but then says *śípre* is its object, which sounds like the Ge interpr., since there are no other duals that could serve as subj.

X.96.10: “Both dwelling places” are presumably Heaven and Earth; see *ródasī* in 11a.

The epithet *hárivant-* now finally has its proper referent, Indra (see above vss. 2 and 7).

X.96.11: With Ge, I supply ‘fill(ed)’ with *ā* in pāda a, on the basis of the stereotyped expression “fill the two worlds with greatness.” Cf., e.g., III.54.15 *ubhé ā paprau ródasī mahitvā* (repeated twice elsewhere).

X.96.12: On *prayúj-* see comm. ad X.33.1. I would now change the awkward “advance teams of the peoples” just to “teams of the peoples.”

Contra Pp (and Lub), the sandhi form *pībā* must be an underlying subjunctive *pībās* in the *yáthā* purpose clause, not an impv. *pība*. So Old.

On the problematic *dásoni-* see comm. ad VI.20.4. Here it is supposed to refer to the “10-armed sacrifice,” i.e., one conducted by 5 priests.

X.96.13: The second hemistich of this summary vs. is found elsewhere (cd = X.116.4; d also = I.104.9). As pointed out above, the key words of this hymn are almost lacking in this vs. (save for *harivaḥ* in pāda a), a sign that it is extra-hymnic.

X.97 Plants

As Ge points out, the hymn is entirely Atharvan in character. It corresponds roughly to AVŚ VIII.7 and AVP XVI.12–14, with very different orders and selections of vss., as well as various YV versions. The variety and lack of overlap gives a free and somewhat improvisational feel to the healing herbs verses.

X.97.1–2: In 2ab *dhāmāni* contrasts with *rúhaḥ*, which I render ‘shoots’, and it is therefore tempting to tr. it as ‘roots’ – the emplaced part of the plant, the foundation – or the body or stem of the plant, but that works less well in 1d. In 2ab Ge (n. 2b) suggests rather than the *rúhaḥ* are the individual plants and the *dhāmāni* their types (/species) (Arten); the difference in numbers (100 versus 1000) could support his view.

X.97.2: The adj. *agadā-* appears twice in the RV (here and X.16.6); it is probably also related to *vigadā-* in X.116.5 (q.v.). It is usually etymologically connected with *√gad* ‘say’, whose verb forms are first attested considerably later. (Note also that the root violates IE root-structure constraints, beginning and ending with a plain voiced stop.) The chronological gap in attestation is not as troubling as it might be, given that the RVic occurrences of *-gadā-* are in the Xth Maṇḍala in non-hieratic contexts. The sense ascribed to it here – ‘without disease’ – (as well as Cl Skt. *gada-* ‘disease’) is explained by Th as a dev. from *‘curse, spell’. See EWA s.v. *GAD* for

disc. The speech component of the underlying root may be found in the other occurrence of *agadā-* as well as *vigadā-*.

X.97.4: This vs. is structurally complex, in that its first hemistich contains fem. pl. vocatives (*mātarah ... devīḥ*) and a 2nd pl. enclitic prn. (*vaḥ*) and its second a masc. sg. voc. *pūruṣa* and a 2nd sg. prn. (*tāva*). The second half must be the direct speech of the poet-healer, signaled by pāda b *tād ... ūpa bruve* “I say this to you / I implore you in this way” and probably also by the *īti* in pāda a, though that also marks *ōṣadhīḥ* as a quoted name. The speech in cd seems to be addressed by the poet-healer to his sick client. As Ge cleverly suggests (n. 4c) the three acc. in c *āsvaṃ gāṃ vāsaḥ* indicate what the healer hopes to get for his fee, while *ātmānaṃ tāva* refers to the self of the person being healed. (That d is repeated in 8d in a different context supports the notion that it can be separately interpreted here.) The sense might be clearer if it were rendered “Might I gain a horse, a cow, a garment – and for you your very self, o man.”

X.97.5: One might ask what earthly good getting a cow would do the plants, but (more or less with Old) the idea must be that the plants are the poet-healer’s helpers and will technically have a share in the cow he hopes to get for himself (4c).

X.97.6: Again the aid of the plants makes the poet successful at healing: poet + plants → healer.

X.97.7: I take the acc. sg.s in ab to be plant names (see Ge n. 7ab), an interpr. supported by 9ab.

X.97.8: As in 5c, in pāda c here the poet uses the conceit that the plants desire a material fee for healing the client. Again as in 5, the difference between the two objects of \sqrt{san} would be clearer with the tr. “... as they seek to gain the stake -- and for you your very self, o man.”

X.97.9: The stem *sīrā-* in most of its RVic occurrences (I.174.9, etc.; see EWA s.v.) appears with a form of \sqrt{sru} ‘flow’ and seems to mean ‘stream’, a sense acknowledged by Mayr (EWA), though he finds the word “problematisch.” Ge (n. 9c) thinks that meaning is excluded here, but he does not sufficiently explore the metaphorical possibilities. The phrase *sīrāḥ patatrīṇīḥ*, lit. “winged stream(bed)s” describes plants; the wings can be leaves, while the stream(bed) can be the stem/stalk, a hollow tubelike shape with liquid running through it like a streambed

The primary 2nd pl. ending *-tha* of (*nīs*) *kṛtha* is surprising, since the verb must belong to the root aorist stem. KH (Injunk. 111) plausibly explains this (and similar formations) as an attempt to make clear that the form is being used as an injunctive, not an imperative, as the imperative use of morphologically ambiguous forms like *kṛta* is the prevailing one.

X.97.10: I don’t understand the image of ab: what are the plants actually doing? Are they growing riotously over the fence (in their garden, as it were), or are they breaching the body’s envelope to heal from within? I favor the latter; I find it hard to imagine Rigvedic settlements as having fenced-in gardens.

X.97.11: Ge takes *vājāyan* as the denom. “nach dem Siegerpreis (Gewinn) verlangend,” but it’s best to take it to the other stem *vājāya-*, inherited transitive ‘invigorate, incite’; see my *-āya-* book (89); so Re as well as Forssman 1987.

The real puzzle in the vs. is pāda d, esp. the rt.noun cmpd *jīva-gṛbh-*. Scar (113–14) discusses the phrase at length, following Forssman’s 1987 (Fs. Rau) treatment. Forssman interpr. *purā* as “temporal-präventive” (“zum Schutze vor, zur Vermeidung von”) and the cmpd as an abstract (since only abstracts are construed with *purā* in that sense). The point here seems to be that the mere act of the healer’s picking up the healing plants causes the sickness to die, so as to avoid being “captured alive” – that is, having the remedy directly applied to it. I would now alter the tr. to “as if against [=to prevent] being captured alive.” I think we can safely dismiss Macdonell-Keith’s (Vedic Index, s.v.) reproduction of Roth’s view that it refers to a police officer in the RV.

X.97.12: The voc. *oṣadhīh* was omitted from the tr. Alter to “O plants, him ...”

A different rt. noun cmpd. causes trouble here, *madhyama-sīt-*, lit. ‘lying in the middle’. Given the context, it refers to someone who is powerful (*ugrāh*) and successful drives away enemies like illnesses. The word is discussed at some length by Ge, Old, and Scar (535), as well as Macdonell-Keith (Vedic Index, s.v.) Whitney (ad AVŚ IV.9.4), and Jeong-Su Kim (2014, ad AVP IX.8.9 [p. 276]). It seems to refer to a king, or similar figure, whose position in the center gives him particular power or authority – perhaps the positional version of “primus inter pares.” It seems quite unlikely to be, *pace* Old, a person in the middle of a bed, who pushes his companions to the right and the left edges of the bed. The sense might be clearer as “situated in the middle,” rather than “lying ...”

X.97.13: *nihākā-* is another puzzling word. Re (Fs. Turner, cited EWA s.v.) interpr. it as ‘blizzard’, hence a derivative of \sqrt{snih} , the IE ‘snow’ word.

X.97.14: The unidentified fem. pl. referents are of course the plants, again as helpers of the poet-healer.

X.97.18: Although the publ. tr. does not make this clear, the “you” of c is sg. and fem. It presumably refers to the particular medical plant singled out in 19d and 21d.

X.97.22: The *pārayāmasi* in d should be considered beside *pārayiṣṇvāh* in 3d. In both cases the verb means “deliver (to the far shore) / deliver (from evil/illness).”

X.98 Rain

On the structure and backstory of this hymn, see publ. intro., as well as the extensive intros of Old and Ge, and HPS’s extensive treatment (B+I 89–92). The hymn provides a basis for an elaborate itihāsa (Nir. 2.10, BṛhDev. 7.155ff.), which, however, does not seem to be reflected in the RVic hymn.

X.98.1: This vs. has received a wide variety of interpr., depending in great part on the interpr.’s notion of the nature of Bṛhaspati. Ge (n. 1a), for ex., takes Bṛhaspati as a protean god, able to take form as any of the gods mentioned. However, as HPS points out, there is no parallel for this. Moreover, in the RV *prāti* \sqrt{i} does not mean ‘take form as’ (vel sim.), but ‘go up against, confront’. (For other interpr. of the vs., see esp. HPS’s disc. pp. 90–91.) My interpr. rests on an alternative suggested by Ge (also n. 1a), that bcd are the direct speech of Bṛhaspati to the gods in question, seeking one who can exert influence on Parjanya.

The impv. *vr̥ṣāya* is somewhat problematic. It must be trans./caus. ‘make rain’; see Sāy.’s gloss *varṣaya* – in which case, why not just use that causative stem (*varṣāya*)? The obvious answer is meter: *varṣaya* would not fit the cadence – though meter is never an entirely satisfactory answer. Two homonymous verb stems are joined in *vr̥ṣāyā*:- the more common us the denom. ‘act the bull’, always middle; the less common one found twice in the middle (IX.71.3, X.44.4), with the intrans. meaning ‘rain’. In both these passages there is also a likely pun on ‘act the bull’ (for disc. see comm. ad locc). The sole act. form is here, and it has developed a contractive trans./caus. value. It is possible that there’s a buried pun on the ‘bull’ sense, but I don’t see any positive evidence for this.

X.98.2: The god Agni, one of the only prominent gods not mentioned in vs. 1, appears here—having apparently taken Devāpi’s message in vs. 1 (delivered in front of the ritual fire?) to Bṛhaspati. Rather than serving as Devāpi’s intermediary with the other gods, Bṛhaspati offers to place effective speech in Devāpi’s mouth, presumably so he can approach the gods directly.

Note the insistent *praticīnāḥ prāti* (... *vavṛtsva*) in c, picking up *prāti* (... *ihi*) in 1a.

X.98.3: Devāpi happily accepts Bṛhaspati’s offer, as is seen in his near word-for-word repetition in pāda a of B’s speech in 2d.

On metrically bad *iśirām* see comm. ad X.68.3.

Pāda d plays on multiple senses of *drapsá*- ‘drop’. Ge and HPS think the primary referent here is ‘soma’; however, although both *drapsá*- and *mādhumant*- are commonly used of soma in Maṇḍala IX, I think this referent is a distant third here. Since Bṛhaspati has just offered to put speech in Devāpi’s mouth and Devāpi has accepted, I think it likely that the honeyed *drapsá* is this very speech, which Devāpi is consuming by mouth. And it is hard not to see a reference to rain in a word ‘drop’ (as pointed out by many).

X.98.4: There is disagreement about the speaker of this vs.: Ge opts for Bṛhaspati, while Old (hymn intro.) prefers Śaṃtanu. Although Bṛhaspati would make the four-vs. sequence more symmetrical, and 4a answers 3d, as 3a did 2d, I find it unlikely that Bṛhaspati would have to say “*let the drops enter...*,” since, as a god, he presumably has some control. Moreover, the orders given to Devāpi to sacrifice in cd seem likely to have been issued by his patron, not the god.

The drops in pāda a are (in my view) most likely the rain for which Śaṃtanu was eager (see esp. 1d, 3c).

As Old and HPS suggest, the thousand cows and a chariot in b sound like a Dakṣiṇā, but (*pace* both), I don’t think this means that Śaṃtanu has to be identified with Indra – rather Indra has to give these items first, before they can be redistributed to Devāpi.

The middle voice of *yajasva* in c does not conform to its canonical later usage, since it here seems to be addressed to Devāpi, the officiating priest (who should be the subject of active forms of √*yaj*): *yajasva* would properly be addressed to the patron, i.e., Śaṃtanu.

X.98.5–6: The second half of 5 and all of 6 provide a textbook example of Lüders’s heavenly ocean – which all too frequently otherwise seems to rest on flimsy evidence.

X.98.6: The waters confined in the higher sea sound very much like the waters confined by Vṛtra. Cf. I.32.11 ... *atiṣṭhan, níruddhā āpaḥ* “The waters stood still, hemmed in” and our pāda b *āpo devébhir nírvtā atiṣṭhan* “The waters stood still, confined by the gods.”

The hapax *mṛkṣīnī-* is of unclear sense and etymology. I opt for a connection with *√mṛj* ‘wipe, groom, curry’ and, more narrowly, with *mṛkṣā-* in VIII.66.3 meaning (in my view) ‘currycomb’ (see comm. ad loc.). The tracks left by the rains gushing over the land in rivulets would resemble the tracks of a currycomb.

X.98.9: The bahuvrīhi *rohīdaśva-* is otherwise only used of Agni, so the reference to Agni must persist in this vs., though he is unnamed.

X.98.11: The vṛddhi form *aulānā-* in d is utterly opaque; it is even unclear whether it is a personal name (most likely) or, as Gr would have it, the designation of an offering.

X.99 Indra

The Anukr. attributes this hymn to Vamra “Ant,” and in a playful spirit in the final summary vs. (12) the poet names himself as *vamrakā-* ‘little ant’. There is no clear connection between this humorous self-deprecatory nickname and the often puzzling contents of the hymn, though an “ant couple” (*vamrāsya ... mithunā* appears in vs. 5).

On the pronominal skeleton that structures the hymn, see publ. intro. The lack of divine names in the hymn, noted in the publ. intro., invites the audience to try out multiple referents, and in fact a number of the vss., esp. in the early parts of the hymn, are ambiguous. In my view previous interpr. have been too quick to assume that Indra is the exclusive referent throughout the hymn.

The hymn has some striking similarities to I.51, an Indra hymn attributed to Savya Āṅgīrasa. These include the “hundred-doored” vs. 3 : I.51.3 / ants vss. 5/12 : I.51.9 / Pipru vs. 11 : I.51.5 / Rjīśvan vs. 11 : I.51.5 / Kutsa+Śuṣṇa vs. 9 : I.51.6, 11 / Dasyus vss. 7–8 : I.51.6, 8.

X.99.1: As noted in the publ. intro., the hymn begins with maximal referential uncertainty: the first vs. contains two questions about identity, with the two interrogatives *kām* and *kād*, opening the two hemistichs. Moreover, there is 2nd sg. address, via the verb *iṣanyasi*, with the 2nd sg. subject unidentified. And the pronominal gen. *tāsya*, assuming (as most do) that it has personal reference (“of his/its”), is also unspecified. In fact, the only semantic anchor is the *vājra-* in d, further identified as *vṛtra-tūr-* ‘obstacle/Vṛtra-overcoming’, which situates the verse in the larger Indra narrative.

In addition to the referential problems, there are a number of uncertainties in the syntax. These include – 1) do *citrām* and *vāśrām* belong together, as obj. of *iṣanyasi*, or is *vāśrām* separate and the obj. of *vāvṛdhādhyai*? 2) is *pr̥thugmānam* a bahuvrīhi or a karmadhāraya? 3) is *śāvasaḥ* (+/- *tāsya*) to be construed with *dātu* or *vyùṣṭau*? 4) Is cd one clause or two? With regard to all these questions the publ. tr. takes a different stand from most other tr., views that I will in part now defend. I will also try to impose a bit more interpretive sense than the often vague publ. tr. did – though the hymn remains maddeningly opaque.

Let us begin with the 2nd ps. subject to the verb *iṣanyasi* in pāda a. The only thing we know about him is that he’s capable of setting in motion something bright (*citrām*) and he’s *cikītvān* (cognizant, observant, attentive). This pf. part. may be the clue: it is esp. common as a modifier of Agni, and since at the beginning of any RVic hymn a reference to the ritual fire would not be amiss, Agni is a reasonable suggestion. Here Agni could be sending out his bright beam (vel sim.). On the other hand, if we follow Ge (n. 1a) in supplying ‘song, praise’ with *citrām*, the addressee could be the poet, urged by his fellow officiants to send out his hymn on

our behalf. I think either of these (or a combination of both – e.g., Agni acting in lieu of the poet) is plausible here.

As for *vāśrā-*, the evidence goes in several directions. The distance between the two words *citrām* and *vāśrām* (in separate pādas) and their proximity to two different verbal forms (*iṣanyasi* and *vāvṛdhādhyai*) disfavor construing them together. However, *vāśrā-* is often used of cows and the stem *iṣanya-* several times takes cows as obj. (III.50.3, IX.96.8); moreover, *vāśrā-* also modifies *gīrah* ‘songs’ in VIII.44.25 and so would still work if we think ‘song, praise’ is the object of *iṣanyasi*. The publ. tr. “bright bellower” does construe the two together, with the object of *vāvṛdhādhyai* left unspecified. However, I would entertain the alternative, “Which bright (hymn?) did you send ... to strengthen the bellower” – the interpr. of Ge (also Scar 190). In that case the referent of *vāśrām* is in question; Ge (n. 1b) suggests Indra. This is also plausible, though it should be noted that *vāśrā-* is never used of him.

As for *prthu-gmānam*, it is generally taken as a bahuvrīhi (so, e.g., Gr ‘breite Bahn habend’, Gr ‘breitspurigen’), modifying *vāśrām*. Its second-member accent would be paralleled by some (though not all) bahuvrīhis with 1st-member *prthu-* (e.g., *prthu-pājas-* ‘of broad dimension’). However, the b.-v. interpr. goes back to the period in which the 2nd-member -*gmān-* was taken as a form of \sqrt{gam} ‘go’ (see the glosses given above and Gr s.v. “(*gmān*)”). It is now clear that it belongs to the ‘earth’ word (*kṣām-*), with a zero-grade *ghm-* parallel to *jm-*. The apparent -*n*-stem we have here was backformed to the loc. **gm-án* (cf. loc. *jmán* and EWA s.v. *kṣām*). With 2nd-member -*gmān-* meaning ‘earth’, a b.-v. interpr., i.e., ‘having the broad earth’, no longer fits the context; see Scar’s awkward and semantically stretched “den auf der weiten Erde {bekanntesten} Brüller.” Instead, it must simply be a karmadhāraya meaning ‘broad earth’, here as an acc. extent of space with *iṣanyasi*. Old appositely compares voc. *prthu-jman* in AVŚ V.1.5, also showing a backformed -*an-* stem extracted from the loc.; again it must mean ‘o broad earth’, not *‘o (one) having (a) broad earth’. Note also that in our vs. 2b the phrase *prthúm yónim* ‘broad womb’ is found in the same metrical position and refers to the same space, in my opinion.

The second hemistich brings a new set of problems. First, Ge takes cd as a single clause through *vájram* in d, with *vṛtratúram ápinvat* an unsigned dependent clause [“(wenn)”], making *kát ... dātu* the subj. of *tákṣat* (“Welche Gabe wird ... die Keule zimmern”), an expression that seems strange even in the context of the general strangeness of RVic discourse. It seems more natural to take c as an independent nominal cl. (so also Scar). See below.

The next question is whether *dātu* belongs to $\sqrt{dā}$ ‘give’ or $\sqrt{dā}$ ‘divide’ (EWA’s *DĀ⁴*): Ge opts for the former, Gr, Old, publ. tr. the latter, Scar either one. The decision rests in part on what *śávasaḥ* is construed with. Save for the publ. tr., it is universally taken with *vyùṣtau* (e.g., Ge “im Erwachen seiner Kraft”; Scar “beim Aufflammen seiner ... Kraft”). But *vyùṣti-* is never construed with a genitive of anything but Uṣas -- except X.76.1 with *ūrjām* “at the first dawn flushes of nourishment,” a passage that Ge. (n. 1c) adduces. But I take the expression there as referring to “the milk of the dawn cows”; see comm. ad loc. I prefer to take *śávasaḥ* here with *kát ... dātu* “what is his share/portion of strength?” This question would follow naturally upon the *vāvṛdhādhyai* that ends the preceding pāda: if either Indra or the hymn is what is to be strengthened in ab, then it makes sense to inquire how much strength he/it has received. I tr. *tásya* as “his,” but if the question is about the hymn (as Scar tentatively suggests), “its” could be substituted. (Since Ge and Scar both take *tásya* as an independent genitive, as do I, there is no point in exploring the possibility of its modifying *śávasaḥ*.)

This brings us to pāda d. Here the problem is that it's too easy to fill in the blanks. There are two good possibilities for the subject of *takṣat*. As Ge points out (1d), Tvaṣṭar is quite frequently the subject of *tákṣad vájram* and related expressions (esp., in the great Indra-Vṛtra hymn, I.32.2 *tváṣṭā ... vájram ... tatakṣa*). It is difficult to believe that the audience wouldn't immediately think of Tvaṣṭar when confronted with *tákṣad vájram*, esp. with that noun qualified as *vṛtra-tuṣam*. Although Tvaṣṭar might be thought of as the default here, I actually favor Uśanā Kāvya, who also several times fashions the mace: see, e.g., I.121.12 ... *kāvyā uśānā ... vṛtrahānam ... tatakṣa vájram* and comm. ad X.49.2. In my view is also found in this hymn in vs. 9, and so introducing him here would provide some continuity, whereas Tvaṣṭar has no further role here. Ge rejects Tvaṣṭar in favor of Soma, the referent (in his view) of *dātu* in c. I see his point: Tvaṣṭar seems like a red herring – too obvious in the otherwise hazy rhetoric of the hymn. But it may be that the poet wants to throw his audience a belated lifeline: nothing so far in the hymn gives any indication that Indra is the dedicand, so in the last pāda of the 1st vs. he sets up a situation that refers uniquely to Indra: the *vāja* and its unnamed, but easily supplied fashioner, and Indra's standard target *vṛtrá* (whether the personal Vṛtra or the generic 'obstacle') – without having to mention Indra's name or any of his epithets. In other words, pāda d is the semi-riddling answer to a riddle that hasn't been directly posed.

The last word *ápinvat* provides a last difficulty. It is accented; if it belongs with the apparent main clause introduced by *tákṣat*, it must begin a new asyndetic clause. This is how the publ. tr. takes it. One problem is that that interpr. assumes that the obj. is the *vāja* and the subj. the unnamed Tvaṣṭar. Each of these assumptions is less than ideal: the *vāja* doesn't "swell," at least literally, and Tvaṣṭar is not the most likely agent of such an action. We could supply "waters" as the obj. of *ápinvat*, which is a more natural VP, but Tvaṣṭar remains a less likely agent. By contrast, if we take *ápinvat* as part of an unmarked dependent cl., owing its accent to this subordination, it doesn't need to be initial in its cl. Its obj. can then be *vṛtratúram*, which need not be coreferential with *vájram* but instead refer to Indra (as in IV.42.8). This little clause could then depict Tvaṣṭar's supplying soma to Indra to swell him up. The drawbacks: 1) soma-supplying is not usually Tvaṣṭar's role either; 2) the (pseudo-)root *√pinv* is not used elsewhere of Indra's reaction to soma-drinking. Nonetheless, *pinv* and soma both inhabit the realm of the liquid, which is more than the *vāja* does, and so I propose an alternative tr. "(Tvaṣṭar) fashioned the mace, (when) he made swell the Vṛtra/obstacle-overcomer."

X.99.2: The long portion of the hymn with anaphoric *sá* as subject of every vs. (2–9) begins here, but this pronominal expression of the subject doesn't help as much as it might. We still lack explicit referent(s).

At least in the first hemistich the referent is, in my view, open. Although Indra is for most interpr. the default, Agni seems to me a distinct, indeed the likely, possibility for various reasons. To begin with, the other occurrence of instr. *dyutā* in VI.2.6 is in a comparison of Agni's flashing with that of the sun, and it is overwhelmingly Agni who takes a seat on the ritual ground, here characterized as "the broad womb" (*prthúṃ yónim*) – though Ge (n. 2b) conjures up a few passages with Indra as subj. In favor of Agni see esp. VIII.29.2 with similar phraseology (*yóni-*, *√sad*, and *dyut-/dyot-*): *yónim éka ā sasāda dyótanaḥ*.

The second hemistich, with its own initial *sá* (therefore opening the [to me unlikely] possibility of different referents for ab and cd), likewise seems applicable to Agni or Indra (or neither). The unidentified subject has both nestmates (*sániḥbhiḥ*) and a brother as helpers in his action. Ge (n. 2cd), who takes the subj. as Indra, identifies the nestmates as the Maruts,

reasonably enough, and the brother as Viṣṇu, with less justification. The only passage I know of that names a brother of Indra is VII.55.5, where the brother is (oddly) Pūṣan. If the referent is Agni, the nestmates can be his flames; for this possibility see (admittedly obscure) X.31.6 *asyā sánílā ásurasya yónau* “in the womb of this lord are those of the same nest,” where “this lord” is most likely Agni (so also Ge). The lexical similarity to our passage (*ásura-*, *yóni-*, and *sáníla-*) is striking. Moreover, Agni’s brothers are well known (cf. I.164.1, maybe X.11.2, and the story of the flight of Agni, with his brothers mentioned in X.51.6), and in IV.1.2 Varuṇa is named as his brother. The curiously indirect expression “not without his brother” (*bhrátur ná ṛté*) could reflect the story of Agni’s failed attempt to escape his ritual role and the fate of his brothers. Contra most interpr., Old considers the *ná* here to be the simile particle; he suggests it means “as if without a brother,” and indicates that the subject used the help of the *sáníḍa-* because he lacked a brother or his brother was somehow absent. This is an alternative worth considering, whoever the subject is meant to be.

The VP *prasahānāḥ ... māyāḥ* “overcoming *māyās* is equally applicable to Agni and Indra. In V.2.9 Agni *prādevīr māyāḥ sahate* “overcomes ungodly *māyāḥ*, while in VII.98.5 it is Indra: *yadéd ádevīr ásaḥiṣṭa māyāḥ* in almost identical words.

The identity of “the seventh” (*saptáthasya*) is unclear. Ge (n. 2cd) considers it to be one, or the first, of a group of seven well-known demons, possibly Vṛtra. (The passages Ge cites for the existence of this group are suggestive but not utterly convincing.) Old instead weakly endorses Bergaigne’s view that it’s Varuṇa, on the basis of vs. 10, but gives no reason why he’d be “seventh.” With Ge (n. 2cd) I tentatively adduce X.49.8, where Indra claims to be *saptahán* ‘the smasher of the seven’; that same vs. is connected with our vs. 7, and our vs. 9 has thematic and verbal parallels in X.49.3.

Note the predicated participle *prasahānāḥ*, the only verbal form in this hemistich; the opening *sá* makes it likely that cd is a clause independent of ab. Ge also takes it as separate.

X.99.3: Another obscure verse with obscure referents. Once again both Agni and Indra seem to me reasonable possibilities, though different pieces of the vs. fit one or the other better. Indeed at this point in the hymn Indra begins to outweigh Agni, who seems to me the more plausible referent of the first two vss., but who is being increasingly elbowed out as the hymn proceeds.

As for this vs., Indra is more generally associated with the winning of the sun, the topic of pāda b, than Agni. See, e.g., VI.17.8 *svaṛṣātā vṛṇata índram átra* “They choose Indra here at the winning of the sun,” though Agni also participates in this activity. For example, in X.8.6 Agni’s head is *svaṛṣā-* ‘sun-winning’. Indra’s signature verb *√han* is found in the pres. part. *ghnán* (d), and in general the aggressiveness of the vs. and even the drive to the prize in pāda a seem more characteristic of Indra. However, the phrase *abhí várpasā bhūt* “prevailed with his form” exactly matches the phrase in X.3.2 *kṛṣṇám yád énīm abhí várpasā bhūt* “when with his form he has prevailed over black, mottled (Night)” of Agni, and *várpas-*, a term that seems to refer to an often indistinctly defined form or shape laid on top of another, is esp. associated with Agni (e.g., I.140.5, 7, 141.3; VI.3.4) and with the smoke that envelops him. (The same phrase *abhí várpasā bhūt* also of course occurs near the end of this hymn in 11d.)

Ge interpr. the hapax instr. *ápa-duṣpādā* as ‘not lame’ (“mit einem Nichtlahmen”), with *ápa* functioning as a sort of privative to *duṣpād-* ‘lame’, lit. ‘having a bad foot’ (I.53.9). But *ápa-* isn’t a privative prefix in the RV; the closest would be *ápa-vrata-* ‘(one) contrary to commandment’, which is, however, distinct from *a-vratá-* ‘without commandment’ (see disc. ad I.51.9). Moreover, the context here favors a negative notion: the idea seems to be that the subject

succeeds despite having bad equipment, not because his equipment is good (as “not lame” would indicate). See the next vs., 4c, with *apādaḥ ... arathāḥ* “(they, though) lacking feet and chariots ...” The interpr. of the cmpd by (Gr /) Old, “auf einem Weg, dem Schlimmfüssiges fern ist,” better accounts for the *āpa*, but still errs by inserting a positive value in a context that invites a negative one. Old seems to mean that the subject is following a path that a lame person couldn’t, and so it is a good one. This actually doesn’t follow logically, but see Gr’s paraphrase as “sichern Ganges.” In contrast, I suggest that *āpa*- here has the same sense as archaic English “off” as in “off ox,” the one further from the driver. So here the horse (if that’s what the referent is) is lame, but since it’s the off foot that’s lame the driver (*yātar*-) may not have noticed this defect.

I have no idea what the “hundred-doored” (*śatādura*-) refers to; the same descriptor is found in I.51.3, associated with Atri, but otherwise unclear.

X.99.3–4: The negated nom. sg. *anarvā* begins 3c, while 4a ends with *ārvā*. The propinquity of these two forms highlights their semantic divergence: *ārvan(t)*- refers to a horse, specifically a ‘charger, steed’, while the adj. *an-arván*- (etc.) means something like ‘without assault / unassailing / unassailable’. Most of the philological energy has been expended upon accounting for the protean stem of the negated form (see the reff. in the lexical comm., inter alia), but I know of no real attempt (incl. by me) to reconcile the meanings. In RV the unnegated form refers only to a horse (real or metaphorical), but since *auruua(ṇt)*- is found as an adj. in Aves., incl. in the bahuvr. *auruuaḥ.aspa*- ‘having *auruuant* horses’, a meaning like ‘headlong, breakneck, precipitous’ could underlie the semantic development of RVic *anarván*-.

X.99.4: The vs. begins promisingly with an apparent Indraic theme: the youthfully exuberant streams (*yahvyò ’vánīḥ*) that the subject pours out (*ā juhōti*) could be the waters released by Indra after smashing Vṛtra. Both these fem. plurals are used in such a context (e.g., *avānīḥ* I.61.10, *yahvīḥ* V.29.2). However, the verb *ā√hu* introduces at least the metaphor of ritual oblation, and a different metaphor, that of a horse racing for the prize, is represented by *gōṣu ārvā ... pradhanyāsu sasrīḥ* “as a charger running for the cows that are at stake.” By sheer number of words, this last image, of the racehorse, dominates the first hemistich. However, that image feeds back into the ritual one, since soma is regularly compared to a horse (e.g., IX.10.1=66.10 *ārvanto ná śravyāvaḥ / sōmāso rāyē akramuḥ*) running towards the cows, that is, the milk with which the soma will be mixed.

It is this ritual image that takes over the second hemistich – until the end. As Ge points out (n. 4cd), in IX.97.20 the soma-drinks are described as running, though “without reins, without chariots (*arathāḥ*, as here), unyoked,” while the subjects of cd are “without feet ... without chariots.” (Though the subjects here *are* yoked [*yújyāsaḥ*], this hardly matters: the drops are moving like teams of horses despite lacking horse tackle.) The bahuvr. in d, *droṇy-āśva*- ‘having wooden (cups) as horses’, clinches the soma context, since *drōṇa*- is used only of the wooden cups into which soma is poured (see comm. ad VI.2.8). However, although *droṇī*- confirms the soma-ritual context, it creates an awkward image. Soma cups aren’t mobile, much less swift like horses; they are instead the stationary goal towards which the soma-horses are racing. And ‘having wooden cups as horses’ conjures up the comic image of the soma drinks clumping around in cartoon versions of Dutch wooden shoes. The ineptness of the image makes me wonder if we’re once again changing imagery in midstream, as it were – though I don’t have a good suggestion for what it might be. Gr paraphrases *droṇy-āśva*- as “Regenwolken als Rosse

habend,” and the apparent goal of the verb *īrate*, *ghṛtām vāḥ* “ghee (and?) water,” does not fit in a soma context. This phrase is also found in X.12.3 *duhé yád éñī divyām ghṛtām vāḥ* “when the speckled (cow) gives as her milk the heavenly ghee, the water” – an apparent reference to rain (see publ. intro.). I there suggest that the speckled cow might be a rain cloud, but, *pace* Gr, I do not see how *droṇy-āśva-* could refer to the same. I confess myself baffled.

Ge takes *īrate* as transitive “strömen lassen,” but med. forms of *īrte* are always intrans. and furthermore ‘stream’ is not one of the meanings of this stem. He recognizes the intrans. possibility in n. 4d.

X.99.5: For a change, the referent, at least of the first hemistich, is tolerably clear. The stem *ībhvan-* ‘craftsman(?)’ is used primarily of Indra, though, it must be admitted, several times of Agni. The association of the subject with the Rudra – in the plural almost always a designation of the Maruts – tips the balance towards Indra. See esp. the almost identical phrase adduced by Ge (n. 5a) describing Indra in I.100.5 *rudrébhir ībhvā*. The puzzle here comes from how the subject is described – as one “whose wish is unpraiseworthy” (*āsasta-vāra-*) but “who keeps disrepute at a distance” (*āré-avadya-*). It is striking that, in his first undoubted appearance in this hymn, Indra should enter under an ethical cloud, as it were. Now Indra in his long career does many disreputable things, but which one this is, and why it’s brought up here, are questions to which I don’t have answers. I seem to be alone in this uncertainty. Other interpr. (notably Ge, but also Old), try to connect the first hemistich with the second, in which the ant couple (*vamrásya ... mithunā*) figures. This impulse is understandable but I don’t think successful. It requires Indra, as supposed subj. of the verbs in d, to steal the food (of the ant couple or of unspecified other(s)) and make them cry. Indra’s “unpraiseworthy wish” is, acdg. to Ge (n. 5a), to steal – in this case, to steal food. For Ge (n. 5c) this further entails (though I don’t see the logical connection) that Indra turned into an ant in order to commit the theft, and his taking the ant-form from the ants that used to possess it left them uncovered (*vívavṛī*). For Indra as thieving ant does Ge have in mind ants at a picnic (vel sim. – it’s rather nice to imagine Ge picnicking in the German countryside)? I frankly find this ludicrous – I don’t see the great god Indra having the ambition to become an ant and steal a crumb, nor do I imagine the victim of the theft of a crumb weeping over it.

I instead think that cd is a separate incident. In fact I take it as an animal fable in embryo, like those I identify in X.28 (q.v). The *manye* in c, “I think of,” “this puts me in mind of,” seems like a casual introduction to such a tale. And in fact a similar tale, though with a different ending, is familiar to all of us – the Ant(s) and the Grasshopper, attributed to Aesop. There the ants diligently store up food for the winter during the delightful summer, while the grasshopper mocks their toil while taking his pleasure. When winter comes and he is unprepared, he begs food from the ants, who refuse, and he starves. Here we might be confronting an alternative version, in which the ants’ stockpiled food is plundered while they are out of their lair. Not surprisingly this theft makes them cry when they discover it. My interpr. leaves the subject of *arodayat* and *muṣāyán* unspecified (certainly *not* Indra, in my view), but if the story was well known, the identity of the thief would be too.

What then would be the connection between ab and cd. In my opinion, it’s not the unpraiseworthy wish and the evaded disrepute, but rather leaving one’s home. Indra came here *hitvī gáyam* “having left behind / abandoned his home”; the ant couple are *vívavṛī* ‘without/outside their covering/lair.’ Notably *vavṛīm* serves as object to *√hā* ‘leave’ twice: IX.69.9 *hitvī vavṛīm ...* / IX.71.2 *jāhāti vavṛīm*. Although my interpr. of the vs. leaves several

loose ends – why did Indra abandon his home? (a question not addressed by Ge either), what was his unpraiseworthy wish? who stole the food? – the answers previously provided to these questions seem unsatisfactory to me.

X.99.6: The referential whiplash continues here. Having just learned in the last vs. that Indra left his home behind, the subject of this vs. is identified with the archaic phrase *pátir dán* ‘lord of the house’ – a phrase more appropriate for Agni, so often identified as *grhapati-*, *dāmūnas-*, and similar designations, than Indra and used of Agni in I.149.1, probably I.153.4, and in a variant (*śísūr dán*) in X.61.20; it is applied to Indra (somewhat oddly) only in X.105.2. But the actions recounted in our vs. belong to Indra, or to his older alloform Trita Āptya. As Ge (n. 6) points out, this vs. concerns the same deed(s) as are found in X.8.7–8. There, curiously, a muddling of the identities of Agni and Indra, not to mention Trita, is also found. As discussed in the publ. intro. as well as in the comm. to X.8, the three vss. concerning the slaying of Viśvarūpa (X.8.7–9) are appended to an Agni hymn (X.8) at the end of an Agni cycle (X.1–8). This myth goes back to Indo-Iranian times, with an Avestan version where figures corresponding to Trita Āptya, namely Ōrita and Āθβiia, are found. In RV X.8.7–9 the hero who slays Viśvarūpa morphs before our eyes. In vs. 7 the subject is *tritá-*, which can be read simultaneously as Trita and as “the third (fire),” namely Agni. In the next vs. (8) Trita Āptya is named as the slayer of “the three-headed, seven-reined” (*triśīrṣāṇam saptárāsmim*) enemy, like the “six-eyed, three-headed” (*ṣaḷakṣām triśīrṣāṇam*) Dāsa here, but he was urged on by Indra (*índreṣita-*). But in the final vs. (9) Indra has supplanted Trita Āptya as the slayer of the three-headed Viśvarūpa; he is not just an enthusiastic bystander. The same blurring of identities seems to be found in this vs.: as just noted, the phrase *pátir dán* suggests Agni; the default referent is Indra; and Trita (otherwise unknown in this hymn) is explicitly named as the slayer in c. The phrase *asyá ... ójasā vṛdhānāḥ* “grown strong through his might” is in fact ambiguous as to the referent of *asyá*. Although we might expect *asyá* to refer to Trita, the subject, it is possible that *asyá* is Indra, referring to the same invigoration of Trita by Indra that is found in X.8.8 *índreṣita-*.

The last pāda tosses in further confusion. Here the victim is specified as a boar (*varāhá-*), a rare word and one that doesn’t occur in this myth elsewhere. And the weapon is “metal-tipped poetic inspiration” (*vipā ... áyoagrayā*), a curious and clashing phrase, both internally and externally. (I suppose we might paraphrase it as “weaponized rhetoric.”) But this discordant element can also be interpr. in the context of the version in X.8.7–9. As I argue there (see comm. ad loc.), the weapons that Trita uses there are words, and the myth is assimilated to the Vala myth, in which the cave is opened by verbal means. The same explanation can account for the much abbreviated expression here as well.

Note the rhyming pāda-final monosyllables *dán* (a) and *han* (d) of the first and last pādas. There is also internal near-rhyme in pāda d: (*var*)*āhām* immediately precedes the caesura, while (*áyoagray*)*ā han* ends the pāda, with *-āhaN* positioned before the two metrical breaks. Verse-final *han* is also picked up by the verse finals of 7 and 8; see below.

With *áyo-agra-* here compare *áyo-apāṣṭi-* ‘having metal claws’ in 8d.

X.99.7–8: The last word of 7, *dasyuhátye*, is expanded into the last phrase of 8, *hanti dásyūn*. This word order is somewhat anticipated by the full phrase following the caesura in 7d, (*ar*)*han dasyuhátye*. And recall the *han* that ends vs. 6.

X.99.7: At least we can be tolerably certain that Indra is the referent of this vs. The stem *arśasānā-* (on which see further below) in b is elsewhere used of an enemy of Indra's; Indra is associated elsewhere with Nahus (e.g., X.49.8)(c); and he is of course a master splitter of fortresses and smasher of Dasyus (d).

The stem *arśasānā-* is generally taken as a PN for a demonic enemy of Indra's – throughout the publ. tr. and in the standard tr., as well as Mayr PN. It may indeed be a PN, but I now consider its formation to be contextually driven. The form appears three times independently in the RV (I.130.8=VIII.12.9, II.20.6, and here). In two of these three occurrences it is found in conjunction with a participle or pseudo-participle in *-(a)sāna-*. The clearest ex. is I.130.8fg in Atyaṣṭi meter, where it is part of the rhyme pāda: ... *tatrśānām oṣati, nī arśasānām oṣati* “... scorches the thirsty, scorches the *arśasānā-*,” where the two forms are near phonological matches. (VIII.12.9 repeats the g pāda but lacks the f pāda.) The occurrence in our vs. immediately follows one ending in *ūrdhvasānā-*, a patently artificial *-(a)sānā-* form. Note that one of the best established of these forms is found in vs. 9, *śavasānā-*. (Both parallels pointed out already by Old.) On the type see comm. ad IV.3.6 and AiG II.2.236–37. The only independent occurrence of *arśasānā-* that lacks an *-(a)sānā-* form in its context is II.20.6, but this passage in fact is verbally connected with this one (as Old and Ge [n. 7a] point out): the pāda preceding the form of *arśasānā-* contains the phrase *ūrdhvō bhuvan mānuṣe*, a paraphrase (or at least equivalent) of our *mānuṣa ūrdhvasānāḥ*. I'm therefore inclined to take *arśasānā-* as belonging to the shadowy root *√ṛś* ‘harm’ (so Wh. Roots), built to the *s*-stem *árśas-* ‘harm’ (supposedly VS+), as suggested in EWA s.v. *arśasānā-* (and adumbrated by Gr s.v. *arś*); many of the *-asānā-* formations of course sit next to *s*-stems (like *śavasānā-* : *śavas-*). The form may still be a PN, but perhaps it would be better to tr. “Harmer.”

In c Ge takes the superlative *nītama-* as standing for a comparative and the phrase *nītamo náhuṣaḥ* as equivalent to Indra's boast in X.49.8 *náhuṣo náhuṣtarah* “(I am) more Nahus than Nahus.” (For another passage with *náhuṣaḥ* + COMP, see I.122.10 *náhuṣaḥ ... śárdhastarah* “more forceful than N.,” there of a human patron.) In the publ. tr. I rejected this interpr. and instead construed *náhuṣaḥ* with what follows: *náhuṣo 'smát sújātaḥ* on the basis of X.80.6 *mānuṣo náhuṣo ví jātāḥ* “those born variously from Manu and from Nahus” and IX.88.2 *vísṣvā nahuṣyāṇi jātā* “all creatures stemming from Nahus,” with *-jāta-* as here — tr. “well born from Nahus and from us.” I now think this was wrong, because Nahus is the progenitor of humans, of Ārya (see comm. ad VI.26.7, etc.), and Indra decidedly does not fit this category. I would now emend the tr. to something closer to Ge's: “He, more manly than Nahus, because of us split the fortresses ...” I'm following Ge in taking *asmát* as an abl. of cause, though an alt. might be to take it parallel to or dependent on *náhuṣaḥ* “more manly than Nahus, than us” or “more manly than Nahus from among us.”

X.99.8: In b the Pp reads *vidát*, a 3rd sg. injunc., and the publ. tr. accepts this analysis. However, there is no good reason for the accent; although Old endorses the Pp reading, he lumps this passage with others for which he can find no explanation (ZDMG 60: 736 [=KISch p. 211]), and in fact in n. 5 on that page he considers the masc. pres. part. *vidán* to be a possible alternative. Against the part. interpr. are two facts: the part. stem *vidánt-* is otherwise unattested (though there is no obstacle to such a form existing), and the main clause of the first hemistich would lack a finite verb. Still, I now prefer to take it as a predicated pres. part. rather than a finite verb with unmotivated accent and would change the tr. to “He ... is the one finding a way ...” For another pred. tense-stem part. in this hymn, see vs. 2.

Note the pronominal doubling in b: *no asmé*. It's possible that the two are not doubled but are meant to be construed separately: "finding for us a way to peaceful dwelling for us" or even "... for us to dwell peacefully." Ge (n. 8b) adduces the identical pronominal sequence, but split over the pāda boundary, in VI.50.3 ... *no, asmé kṣáyāya*, a phrase that also includes the same dative goal. The publ. tr. of that passage interpr. the sequence as doubling, but it's possible there too that the pronouns should be construed separately. See comm. ad loc.

The publ. tr. renders pl. *śārīraiḥ* as "with his limbs," but this sounds awkward, to say the least. I would now, with Ge, substitute "with his body."

āyo-apāṣṭi- 'metal-clawed' of d echoes *āyo-agra-* 'metal-tipped' in 6d.

X.99.9: The pronominal structure that dominates the hymn changes mid-verse: the first hemistich begins with *sá*, the second with *ayám*. This may signal Indra's approaching epiphany. Because of the prominence of the pronominal skeleton, I would slightly alter the tr. of the first pāda to "He, along with ...," rather than having the subject pronoun parenthetical and deep in the clause.

With Ge I supply a verb in pāda a, rather than construing *vrādhataḥ* with *pārādat* at the end of b. It is easy to borrow *√han* from 8d. Cf. IV.32.3 *hāmsi vrādhantam ójasā* with the same VP.

I dealt with this vs. extensively in my 2009 "An Indo-Iranian Priestly Title Lurking in the Rig Veda?" (Fs. Salomon), esp. 114–16, apropos of the hapax *kṛpāṇe* (and the similar hapax *kārpāṇé* in X.22.10 (see comm. ad loc.)). I argue there that these two words are deformations of an Indo-Iranian priestly title, found in Avestan as *karapan* (always disyllabic, i.e., **karpan-*). Part of my argument rests on the association in this passage of the equivalents of the Aves. priestly trio, *kauui-*, *usij-*, and *karapan-*, namely *kaví-* (pāda c) and *auśijá-* (11a), the vṛddhi deriv. of *uśij-*. For further disc. of this apparent mythic complex, incl. its association in various parts of the RV with the Śuṣṇa / Kutsa myth, see the art. cit., esp. pp. 112–16 and nn. 12–13.

As indicated in that art., I consider the Kavi in c to be a reference to Uśanā Kāvya, who figures prominently in the Śuṣṇa / Kutsa story (see n. 12 in art. cit.). The mysterious cloak in pāda d is also found in a Śuṣṇa / Kutsa / (Uśanā) Kavi passage in X.49.3; see the extensive disc. there. In that passage Indra does some sort of harm to a cloak "for the poet" (i.e., for Uśanā Kāvya in my opinion); in our passage it is unclear what happens to the cloak. Ge thinks the poet wore / put on the cloak (cf. also JSK DGRV I.367 "who (put on) his (i.e. Indra's) cloak," supplying *avasta*). This is not impossible, but a more economical solution is to construe *átkam* with the only verbal form in the rel. cl., the agent noun *sánitā* (so, actually, Gr). Besides avoiding the need to supply a verb out of nowhere, this can also explain the position of *utá*, which causes JSK some distress because, if the syntagm is *sánitotá nṛṇām*, *utá* is in "enclitic" position. If, however, we read *sánitā* with what proceeds as well as what follows, *utá* can connect the constructions that share *sánitā*. In my view, the cloak originally belonged to Śuṣṇa (contra Ge n. 3a [though he considers this as an alternative in n. 3a] and JSK) and was awarded to Uśanā Kāvya, probably because of the help he provided Indra in the Śuṣṇa fight, as I suggest ad X.49.3. I also suggest there that Śuṣṇa's cloak may have consisted of *māyāḥ*; note *māyī* in the next vs. (10b), as well as in 2d.

For another connection between our hymn and X.49, see vs. 7 and X.49.8.

X.99.10: In pāda a *náryebhir asya* echoes *śavasānébhir asya* in 9a, and the *nárya-* picks up the *nṛṇām* that ends vs. 9. It is not clear whether *náryebhiḥ* should be construed with *devébhiḥ* in b

as a single constituent (so Ge) or the two instr. refer to different groups (so, implicitly, the publ. tr.).

In c *avedi* could belong either to $\sqrt{\text{vid}}$ ‘know’ or $\sqrt{\text{vid}}$ ‘find’. The publ. tr. takes it to the latter, Ge (and Scar 310) to the former. I am now inclined to change my allegiance to ‘know’, with some slight rearrangements of the rest of the pāda. Flg. Scar, I would supply ‘already’ with *kanīnaḥ*, referring to Indra’s early forays into soma-drinking. The qualifier *ṛtupāḥ* ‘drinking acdg. to ritual sequence’ may be euphemistically polite here, if the reference is to Indra’s commandeering Tvaṣṭar’s soma right after his birth (e.g., IV.18.3). My revised tr.: “This one here, (even) as a lad, became known as drinking according to the ritual sequence.”

The verb of d, *āmimīta*, is taken to mean “changed into” (verwandelte) by Ge, who suggests that the form is an “entgleiste” form of **aminīta* (to $\sqrt{\text{mī}}$ ‘(ex)change’). This root affiliation is also held by Sāy., Gr, Thieme (see Kü 370), Kü 369–70, and Lub, but I see no reason not to assign it to $\sqrt{\text{mā}}$ ‘measure’, where it would be the correct 3rd sg. mid. impf. There is no evidence that Indra was transformed into Araru – though Indra’s shape-shifting seems to be a bit of an idée fixe of Ge’s for this hymn: see his peculiar view that Indra turned into an ant in 5c. Rather, the default scenario would be that Araru is yet another enemy that Indra handily dispatched. I take *āmimīta* to mean ‘measured himself against, gave his (full) measure against,’ an abbreviated form of a phrase like V.31.7 *ójaḥ...āmimīthāḥ* “you measured out your strength against ...”

X.99.11: Verse-init. *asyá* is the last of the initial deictics in this part of the hymn; it would be better to give it a more prominent position in the tr.: “Through praises to him, AṚ ...”

On *ausījá-* see comm. above ad vs. 9.

In c Ge (n. 11c) emends *yajataḥ* to **yājataḥ* gen. sg. of the pres. act. part., construing it with *gīḥ* (“die Lobrede des Opfernden”), while Old takes *gīḥ* as a masc. ‘singer’ (see Noten ad I.37.10 n. 1, with several other such occurrences suggested, none of them convincing). Neither of these makeshifts seems necessary. The publ. tr. instead takes c as containing two parallel subord. clauses: the nominals *sútvā yád yajataḥ* “when the one worthy of the sacrifice possesses the soma-pressing” and (*yád*) *dīdáyad gīḥ* “(and when) the song will shine.” For the synaesthesia of the latter, see VI.16.36 *bráhma ... yád dīdáyat*.

X.99.12: This summary vs. contains a pun on the poet’s name (or at least the poet as identified by the Anukramaṇī), Vamra ‘Ant’. Here he identifies himself as ‘Little Ant’ (*vamraká*); the presence of the pl. *paḍbhír* ‘with feet’ indicates that the subject is not conceived of as a two-footed human. The ant of course also occurs in vs. 5.

X.100 All Gods

On the structure of the hymn and on the refrain, see publ. intro.

X.100.1: Old considers *tvāvat* adverbial, leading to a convoluted rendering “Indra, sei fest, Gabenreicher, in der dir eignen Weise, damit man (dich) geniesse” (with a slightly less convoluted, but still unconvincing paraphrase offered immed. after). The interpr. as a neut., the subj. of *bhujé*, is snappier and conforms better to the sense of pāda b.

A nice rhyming figure in b: *stutáḥ suta(pāḥ)*, which is echoed by *śrutám* in c.

With Ge I supply ‘speech, word’ vel sim. with *śrutām*, but take the latter as proleptic: “help (the speech) (such that it is) heard,” rather than attributive like Ge’s “dem gehörten (Worte).” I do not, with Old, consider it an early ex. of *śrutá-* meaning ‘learning’.

X.100.2: The publ. tr.’s “bring forward for the taking” loses the etymological figure in *bhārāya ... bharata*, but something like “bring forward for bearing away,” which better captures it, is less idiomatic.

As Ge points out, *bhāgām ṛtvīyam* is found also in I.135.3 (in the nom.), also of Vāyu.

There is no agreement on the meaning or structure of the hapax *krandád-iṣṭi-*, with both the cmpd type and the root affiliation of the 2nd member variably interpr.: Gr “mit Brausen dahineilend,” Ge “der den brausenden (Soma) wünscht” (sim. Re “qui aime (le *soma*) hurlant”), Old (ZDMG 61: 474) “unter Gebrüll sein Suchen betreibend,” Burrow (see Lowe, Part. 272 n. 75) “conquering riches,” Scar (314) “wenn er brausend daherkommt.” It surely should be interpr. in conjunction with the rhyming cmpd *bhandád-iṣṭi-*, likewise a hapax (V.87.1). In both cases I take *-iṣṭi-* to \sqrt{is} ‘desire, seek’ and the cmpd. as a bahuvrīhi with an intrans. (pseudo-)participial 1st member. Here ‘having a roaring quest’ (vel sim.), whose English has been somewhat adjusted for parsability. My interpr. is closest to Old’s quoted above. On these two *-ad-iṣṭaye* cmpds, see comm. ad V.87.1 and Lowe (Part., 270–72, esp. 272 with n. 75). Curiously Lowe does not treat *bhandád-iṣṭi-* and *krandád-iṣṭi-* as parallel and does not commit to a semantic or functional interpr. of either, though his diachronic account of the dev. of non-governing pseudo-participial cmpds is persuasive.

This is the only occurrence of *gaurá-* in the RV that Gr identifies as meaning ‘white’ (as opposed to ‘buffalo’), and his assessment appears to be correct. Although it’s tempting to unify all the RVic occurrences and therefore translate “of the buffalo milk” vel sim. here, EWA (s.v.) indicates that the color term is well represented across both Middle Indic and Middle Iranian languages.

X.100.3: The publ. tr. renders the subjunctive *sāviṣat* with modal “may he impel”; I would now change to “he will impel.” The point is that we can count on Savitar to provide us with the requisite energy to do our ritual duty.

Note the etym. figure *savitā sāviṣat*, Savitar often participates in such figures.

The adverbial *pākavāt* ‘guilelessly’ connects semantically with the refrain for the first time.

X.100.4: As in vs. 3, pāda c begins with *yáthā* (actually the āmreḍita *yáthā-yathā*), but the *yáthā*’s have different functions in the two vss. In vs. 3 it introduces a purpose clause, while here it provides a clausal comparison.

The sense and syntactic configuration of c are not agreed upon. Brereton (Ādityas 35, fld. more or less by Klein, Āmreḍitas; see also Ober. Relig. II.183) takes the gods of ab as the subject of *saṃdadhūḥ*: “according to the terms of the alliance they agreed to” (Klein: “precisely as (if) they had made friendship-pacts with us”). However, these interpr. can’t work because the verb is not dual, but the first hemistich only mentions Indra and Soma. Both Ge and Re supply dummy subjects (“man,” “les hommes”) for *saṃdadhūḥ*, with *mitrádhītāni* as obj. I think they are closer to the correct interpr., but I prefer to take *mitrádhītāni* as the subject. From this cmpd I pull *mitrá-* out to serve both as the noun modified by *mitrádhītāni* and as the object, but using different senses of *mitrá-*. As the subj. it means ‘pact, alliance’, as the object ‘ally’ (as it does as

the 1st cmpd member, in my view), yielding “(alliances) concluded by allies bind (them [=allies]) together.” This may seem overly tricky, but it allows the crucial word *mitrá-* to dominate. As for the connection of c to the first hemistich, the idea seems to be that we’re trying to forge the same kind of relationship with the gods as we do with each other.

X.100.5: I take *párus-* as referring to the articulations or joints of the sacrifice, on the basis of X.53.1 *yajñásya vidvān páruṣaś cikitvān* “knowing the sacrifice, attentive to its articulation.” On *párus-* in general see comm. ad IX.15.6. For similar phraseology, but with ‘sacrifice’ as obj., see I.3.11 *yajñam dadhe sárasvatī* “Sarasvatī has received our sacrifice.” That the sacrifice is at issue is suggested by pāda c. Alternatively *párus-* could refer to the joint of the soma plant and thence to soma itself (so Gr); for a parallel see III.22.1 *sutām dadhé*. (I favor the first suggestion.) Others (Old, Ge, Re, HPS [119]) take *párus-* as referring to an actual limb or joint, which produces a grotesque image—Indra (or us) with a super-bendable arm or with three arms?!—leading in turn to a watered-down interpr.: that Indra grows strong (Ge n. 5a) or (Old) acquires or grants “Fähigkeit gelenkiger Bewegung.”

X.100.6: Both Ge and Re take *súkṛtam* as the predicate: “Indra’s divine might is well made.” This is of course possible, but the pāda-initial position of *índrasya* and its parallelism with *agnīḥ* in the same position in b support my interpr.

My interpr.—that the sacrifice is *our* dear intimate—may seem somewhat strange, but it should be judged in conjunction with 5c, where the sacrifice is our father. Moreover, *ántama-* overwhelmingly refers to intimacy or nearness to *us*. Both Ge and Re take the more conventional route, assuming that the sacrifice should be dear to the gods (Re: “aux dieux” supplied) or (Ge) “der Kennerschaft genehm,” with an unsupported interpr. of *vidátha-* (found also in his tr. of VII.84.3, adduced as parallel, n. 6c). Both also render the injunc. *bhūt* as a modal, though that is certainly not necessary, and I prefer a preterital interpr.

X.100.7: *duṣkṛtām* plays against *súkṛtam* of 6a, though the accent difference distinguishes the adj. *súkṛta-* (versus *sukṛtá-* ‘good work’) from the nominal *duṣkṛtá-* ‘ill-doing’. As indicated in the publ. intro., in this vs. the refrain becomes an integral part of the vs. as we disavow bad behavior and untruth and lay claim to wholeness and innocence. Tge vs. serves as a rough omphalos, though it is not in the exact center of the hymn. However, the *duṣkṛtām* (6a) : *súkṛtam* (7a) contrast may link vss. 6 and 7, and the two vss. could form an omphalos in the exact center.

Both Ge and Re take the pāda boundary between a and b more seriously than I do: in their interpr. the ill-doing would have been committed in secret, and the god-angering in the open. This seems peculiar to me, as if doing ill in the open would have been ok. Surely what is meant is a categorical denial of ill-doing under any circumstances, in a standard disjunctive merism of the type “neither by day nor by night.”

My rendering of pāda c differs significantly from the standard. Most (Old, Ge, Re, KH [102: reproducing Ge’s tr.]) take the gods, present as voc. *devāḥ*, as 2nd ps. subj. and supply a verb like ‘punish’ (e.g., Ge “Nicht (sollt ihr) Götter uns ... (bestrafen)”). Although this makes reasonable sense after the first hemistich, it still requires supplying a verb out of thin air. It also requires *mā́kis* to have 2nd ps. reference (lit. “let no one (of you gods) ...”) or to function simply as a prohibitive negative. (That KH cites it in a set of passages with unadorned *mā́* would indicate that he takes no account of the *-kis*.) But *mā́kis* (and *ná́kis*) have only 3rd ps. reference

and are overwhelmingly nominative (for potential counterexx. and their explanations, see comm. ad X.11.9 and I.147.5). The phrase *ánrtasya vápasah* also does not fit easily into such an interpr.: *vápas-* must be taken as ‘mere/false appearance’, which might lead the gods to punish us wrongly. But though *vápas-* may be an indistinct shape (see comm. ad X.99.3 above), it does not seem to be a false one. My tr. avoids supplying a verb and ascribing 2nd ps. value to *mākis*; we (or rather “no one of us”) remain the subject, and *ánrtasya vápasah* is a genitive of quality.

X.100.8: The phrase *savitā sāviṣat* repeats the same phrase in vs. 3 – a responson that might support the omphalos-structure interpr. (see immed. above). In vs. 3 Savitar impels good things towards the sacrifice and sacrificer; here by contrast he impels bad things away from it.

Both Ge and Re take *ádrayaḥ* as “mountains” (die Berge, les montagnes), an interpr. I find puzzling. The stem *ádri-* is extremely common as a designation for the pressing stones (see, e.g., X.76.2 cited for other reasons below); the alternate term *grāvan-* is found in the next pāda (and in 9a); and the context is entirely a ritual one.

On the unusual usage of the explicit passive *ucyāte* see comm. ad X.64.15, which contains the identical pāda.

X.100.9: The form *sotári* has caused no end of problems, though it seems uncomplicated to me. I take it as the loc. sg. of the well-attested *-tár-*stem *sotár-* ‘presser’, with standard agent-noun value. Here I think it’s a single-word loc. absol.: “when the presser (is there)” / “the presser being (present).” But I seem to be alone in this: see comm. ad X.76.2, which contains the identical form. Here Ge takes it as a nom. sg. modifying *grāvan-*, Re sim., both flg. Old (ZDMG 55), who endorses the Ludwig/Neisser theory that there are nom. sg.’s in *-tari*, which I find implausible; Tichy (*-tar-* p. 60) considers forms in *-tári* to be locatives to verbal abstracts, here “beim Somapressen.” I do not see the need for these evasions of a morphologically straightforward form to a stem whose other 12 occurrences all mean ‘presser’.

X.100.10: As Ge points out (n. 10b), the cows stand for the milk to be mixed with soma.

Ge (n. 10c) flg. Sāy. suggests that the cows’ milk is “medicine” for the soma, presumably because without the milk mixture the soma is intolerably sharp to drink. But the failure to identify which bodies are referred to seems deliberate, and I wonder if the soma+milk is (also?) medicine for our bodies.

X.100.11: The “singer” (*jaritā*) in pāda a is almost surely Agni, not an indefinite mortal ritual officiant (“ein Sänger”: Ge, Scar [332]). Agni was so identified in 6b: *agnír gr̥hé jaritā médhiraḥ kavíḥ*, and in that hemistich Indra was his foil (6a), as he is here (11b).

The referent of *yásya* in c is unclear: *whose* heavenly udder is full for pouring? The only referent in the vicinity is Indra in b, but this doesn’t make much sense. I think it must refer to soma, even though soma is only obliquely referred to, as *suta-* in the gen. pl. *sutāvatām* in b.

X.100.12: The final vs. lacks the refrain pāda and is in Triṣṭubh, not the Jagatī of the rest of the hymn. Nonetheless its connection with the preceding vs. is affirmed by the root-noun cmpd *kratu-prā-*, which picks up *kratu-prāvan-* in 11a – and contrasts with *jaraṇi-prā-* in the next pāda, 12b. As the publ. intro. points out, neither the internal structure of the vs. nor its conceptual connection with the rest of the hymn is clear. The first pāda happily celebrates an unidentified

referent, but the second introduces rivals who seem to pose a threat. The second hemistich could be a fragment of a dānastuti -- or not.

Although the referent of *te* in pāda a is not specified, it must be Agni. The bahuvrīhi *citrā-bhānu-*, matched here in the syntagm *citrās te bhānūḥ*, almost always modifies Agni. Moreover *kratuprāḥ* is a variant of *kratuprāvān* in 11a, which, as we just saw, refers to Agni.

The sense of pāda b turns on the meaning of the hapax *jaraṇi-prā-*, obviously coined in opposition to *kratu-prā-*. The pāda sets up a set of rivals (*spṛdhah*), who may (or may not) be menacing (to you, Agni, or to us). The adj. *ādhr̥ṣṭa-* ‘unassailable’ might indicate that they do pose a threat, but *jaraṇi-prā-* has been taken in two opposing senses—though there is general agreement that *jaraṇi-* belongs with *jaraṇā-* ‘old’, *jaraṇā-* ‘old age’, etc. For some (notably Gr, Re, and Scar [332 and 333]), the force of the compound is essentially negative: those qualified by it suffer from the frailty and decrepitude of old age (e.g., Re “qui parachèvent (leur propre) décrépitude”) and therefore are no longer a threat. The problem with this interpr. is that it has to be squared with *ādhr̥ṣṭa-*, and it takes all of Re’s characteristic parenthetical sleight of hand to do so – via the parenthetical “(tout en passant à tort pour) inexpugnables,” an addition for which there is no textual support. With Old and Ge (in somewhat different ways), I think that the cmpd is essentially positive: they “fulfill their old age,” that is, they live a successful life, to full term (escaping early death at our hands or Indra’s) (see Ge’s n. 12b). For the desire to secure old age, see V.41.15, 17 and X.59.4, as well as VII.61.2 (cited by Scar [333]). What is positive for the rivals is of course negative for us. On this interpr., pāda b is a reminder that threats remain, despite the generally sunny outlook of the last few vss.

As for the second hemistich, we can start with the fact that the last word, *duvasyūḥ*, is also, acdg. to the Anukr., the name of the poet (Duvasyu Vāndana). However, this supposed poet is found nowhere else, and it seems best to take the word in the usual sense of its stem (and its variant *duvoyú-*) and related denom. *duvasyá-* ‘offers friendship / friendly service [to a god or gods]’. On this stem, see comm. ad IX.65.3.

Acdg. to Ge (n. 12cd), the subject of the clause is the poet, who is seeking a dakṣiṇā, in an image drawn from racing for the prize of cows or tracking cows. This seems reasonable, though some of the details are hazy.

The verb *tūtūr̥ṣati* is the only attestation of this desid. stem (on which see Heenen [Desid. 154–55], with a fanciful explan. of the long reduplication). It could belong to $\sqrt{tṛ}$ or \sqrt{tvar} , though it is usually ascribed to the former (or a development thereof). Morphologically it seems akin to the perfect optative stem *tuturyā-* (4x), though there is no special connection between their usages. In the publ. tr. I render it “seeks to rush,” though this is not altogether satisfactory. The problem is compounded by immed. flg. *pāri*, which does not appear as a preverb with either $\sqrt{tṛ}$ or \sqrt{tvar} . I now think that *pāri* has to be considered in conjunction with the heavy opening phrase *rājīṣṭhayā rājyā* “with/in the straightest line”: *pāri* ‘around’ provides a strong semantic contrast. My “to round up” attempts to express the contrast, and I think it is fundamentally correct, though I wish there were a better way to integrate the verb and the preverb in Engl. I have no view on the long redupl.

I take the obj. of the round up to be *paśvá ā góḥ ... ágram* “the foremost of bovine stock,” but the supposed gen. phrase is problematic both because of *paśváḥ* and of *ā*. To take the latter first, the pāda-final phrase *ā góḥ* occurs three times elsewhere, all in Maṇḍala IV (IV.3.9, 22.4, 23.6). In none of these passages is its function or even the case form of *góḥ* clear (see comm. ad locc.); at least twice it may be an abl., which would make better sense of *ā*. However, here I think the phrase should be gen. with *ágram*. As for *paśváḥ*, is it being used to generalize the *góḥ*, as in

my tr. “bovine *stock*” (cf. Ge “der Rinderherde”; Re “bétail (consistant en) vache(s)”) – or does it refer to a distinct animal, as in Watkins’ (1979 Folk Taxonomy of Wealth,” 278 = 1994 Sel.Wr. II, 653) “sheep (and) cow,” metonymically “flock (and) herd” (for disc. see Sojkova, 2022, *Animals in Vedic Prose*, DPhil. diss. Oxford Univ., pp. 31–32)?

The noun *rāji-* ‘line’ is found only here, with differently accented *rajī-* occurring in X.105.2 (see comm. ad loc.). On the accentuation see Lub. (Nominal Acc. 30), who considers the form here the accentually innovating one, perhaps because of its occurrence in a phrase containing *rājiṣṭha-*.

X.101 All Gods or Priest(s)

X.101.1–2: The first two vss. contain seven straight 2nd pl. mid. impvs in *-dhvam*, five of them in vs. 2. Of those in vs. 2, four are identical (or almost): *kṛṇudhvam* (a, b, c) ~ *īṣkṛṇudhvam* (c). The repetition of this heavy clump of morphology makes a marked impression, quite distinct from the usual fleet and quicksilver RVic style. It may be meant to imitate the rhythmic predictability of a work song. In any case it gives a more demotic impression.

The last pāda of vs. 2 breaks the string of middle impvs. with an active 2nd pl. impv., *prā nayatā*, followed by one opening vs. 3, *yunākta*. But there’s a last gasp of *-dhvam* in (vī) ... *tanudhvam* closing 3a, replicating (ā) *tanudhvam* at the end of 2a. Another clutch of *kṛṇudhvam*-s is found in vss. 7–8 and some more *-dhvam*-s in vss. 10–11.

X.101.1: The first verb of the hymn *úd budhyadhvam* may be responsible for the name of the poet in the Anukramaṇī, Budha. On the name see Ge’s n. 2 (bottom of page).

Agni and Uṣas are of course associated with Dawn and the early morning sacrifice. The presence of Dadhikrā, the deified racehorse, is somewhat puzzling. Re (Hymnes spéc.) says he is the/a “symbole du lever du jour,” though without specifying on what basis he claims this. It’s true that Dadhikrā is compared to the sun at the end of the first hymn dedicated to him, IV.38.10, but that’s not quite the same thing. Our pāda is also found in III.20.5, but as part of a longer list of divinities. For one possible reason for the inclusion of Dadhikrā here, see below ad vs. 11.

X.101.2: This vs. produces a plethora of images drawn from ordinary life as comparanda for the priests’ work. This skipping from image to image is anchored by the repetition of *-dhvam* noted above.

Ge (fld. by Re, HySpéc [but not EVP XVI], Don.) takes *dhíyaḥ* with the first verb: “Machet die Gedanken wohlgefällig.” But this is grammatically impossible: *dhíyaḥ* is fem. acc. pl., and so neut. acc. pl. *mandrá* cannot modify it (would need to be *mandráḥ* in sandhi). I gather from his n. 2a that he takes *mandrá kṛ* as a phrasal verb, but positing such a construction requires more argumentation. Old points out that *mandrá-* and *dhī-* are associated in IX.86.17, but I don’t see that as a sufficient reason to contravene the syntax.

X.101.3–6: These four vss. fall into two pairs, with 4 essentially repeating 3(ab) and 6 repeating 5.

X.101.3: There’s a common metaphorical connection in Vedic (and later) between sowing seed for crops and semen to impregnate a woman, but the metaphor usually goes the other way: the

furrow is the metaphor for the vagina. Here it's the vagina that's a metaphor for the furrow in an agricultural context. (Of course the whole thing is metaphorical for the priests' work.)

The second hemistich indirectly expresses the reciprocity that underlies the RVic ritual system: that the response to a praise hymn should be equal to it, though in material form.

The accent on *ásat* suggests that *ca* is subordinating; so the standard tr.

X.101.5: Note the rhyming heavy 2nd pl. active impvs. ending the first two pādas: *kṛṇotana ... dadhātana*.

As Ge (n. 5b) points out, these must be the cords attached to the buckets.

X.101.6: As was noted above, 6 is a version of 5, with the same lexical materials, scrambled and recombined.

X.101.7: The reason for the stress on the well in vss. 5–6 becomes clear here in the 2nd hemistich, where the features of the well are identified with parts of the soma apparatus in equational bahuvrīhis.

X.101.8: I don't quite understand why we should make a "pen" (*vrajám*) for soma: perhaps because if it provides drink, it must be like a cow and need a pen.

In d *vaḥ* was omitted from the tr. Correct to "your beaker."

X.101.9: The standard tr. (Ge, Re, Don, though see Ge n. 9 for possible alternative) are agreed that *dhíyam* here refers to the gods' thought. I think it must rather refer to *our* thought. The position of *vaḥ* immediately before *dhíyam* is of course not probative, since *vaḥ* is in standard Wackernagel's Position and can be construed with anything in the clause (including *ūtáye*, as Ge suggests in n. 9). The plural *dhíyaḥ* in 2a clearly referred to our thoughts. The image of the *dhī-* as a milk-yielding cow does not require her to be a creature from the gods. Instead she represents the usual reciprocity relationship (as seen also in 3cd): if our thought=cow pleases you gods, she will yield milk in the shape of material rewards from you.

On *duhīyāt* see comm. ad IV.41.5.

X.101.10: These images of the soma pressing need decoding. The "lap of wood" in pāda a is presumably the wooden cup. In b the publ. tr. takes the object also as the wooden cup, in part flg. an unpubl. paper by HPS. However, I now think (with Old) that the "axes of stone" (*vāśībhiḥ ... aśmanváyībhiḥ*) are the pressing stones, based esp. on 7c *ásma-cakra-* 'whose wheel is the (pressing) stone'. Soma is then the object, and I would emend the tr. to "Fashion (it [=soma]) with axes made of stone."

The 10 girthbands are the fingers (so Old, Ge, Re [HSpéc]); cf. X.94.7 *dásakakṣyebhyaḥ*, modifying the pressing stones. The object here should therefore also be the stones and not soma. So I would emend to "Embrace (them [=stones]) with ten girthbands." The two chariot poles in pāda are the hands and the draught horse the soma (so Old, Ge, Don for both identifications). I think this is probably right, but if *vāhni-* is soma, it must be the soma *plant*, not the pressed juice, for the image to work, since juice can't be yoked to the implements that pressed it – even though the pressed juice is already referred to in pāda a. It is also possible that the two are the pressing stones.

X.101.11: As noted in the publ. intro., the hymn takes a surprisingly erotic turn at this point. Pāda a essentially repeats 10d, with *ubhé dhúrau váhniḥ* “the two chariot poles ... the draught horse”; again, I think the horse must be the soma plant and the chariot poles may be either the hands or the pressing stones. But an erotic simile is applied to this trio: a man, comparable to the draught horse, with two wives, comparable to the two chariot poles.

On *pībd-* see comm. ad VI.46.6 and EWA s.v. *PAD*: ‘sich hin und her [auf den einen und anderen Fuss] fallen lassend, stampfend’ citing Strunk and Gotō for this interpr. as an iterative. A stronger iterative sense would fit this sexual passage well, esp. give the two wives.

The *vānaspati-* is presumably soma, placed in the cup, but given the simile of b probably also the penis in the *yóni*.

The final pāda has two competing syntactic interpr. One, which is essentially universal in the standard tr., is that *útsam* is the obj. both of *ní ... dadhidhvam* and of the negated pres. part. *ákhanantaḥ* -- e.g., Don “sink the well deep without digging.” The other, found in the publ. tr., is that the obj. of pāda c, *vānaspátim*, is the obj. of the main verb, with *útsam* obj. only of the participle. The reason for my interpr. is that *ní ... dadhidhvam* seems the logically next action after *áststhāpayadhvam* and should take the same object (see the next vs. for syntactic continuity), and the deeper foundation of the soma / deeper penetration of the penis is what is demanded. This can be effected without digging a well/spring. But since I don’t really understand the image of the spring/well (and none of the tr. attempts to explain it), the standard view is not excluded.

Note that *dadhidhvam* is a near-rhyme with *dadhikráṁ* in the first vs. (1c), providing a sort of phonological ring composition, which might help account for the presence of that racehorse in this hymn.

X.101.12: Since the penis is the overt object of a set of 2nd pl. movement verbs, my interpr. of it as the object of *ní ... dadhidhvam* in 11d seems to gain some support.

It is hard not to be reminded here of the Sappho fragment “raise high the roofbeam, carpenters” (here filtered through the J. D. Salinger) in a wedding context.

The feminine name (or nickname) *niṣṭigrī* is found only here. In context it is a designation of Indra’s mother. The word is treated by Scar (112) and, at greater length, Remmer (*Frauennamen* 63–64), but the disc. doesn’t get us very far.

X.102 Mudgala and Mudgalānī

For my general interpr. of this famous hymn, see the publ. intro. As I say there, I consider the hymn to be part of the under-the-surface debate in the late RV about the introduction of the ritual Patnī – in this case, very much in favor of this introduction, as she leads to victory and fertility. For disc. of this hymn in that context, see my 2018 “‘Sacrificer’s Wife’ in the *Rgveda*: Ritual Innovation?” (*Creating the Veda, Living the Veda*, papers from 13th World Skt. Conf., ed. Brereton and Proferes, 19–30, esp. 23–25), also “The Secret Lives of Texts” (JAOS Pres. Address, JAOS 131 [2011], esp. 5–6) and, in earlier form, *SW/SW*(1996): 108–10.

It is striking that this hymn immediately follows the final, explicitly sexual vs. of the preceding hymn, X.101.12. In addition the “chariot pole” that figures in X.101.10, 11 is found here in vs. 10.

X.102.1: The speaker of the first vs. is taken by Ge (fld. by Don) as Mudgala; this seems reasonable. But this identification has further implications, given the enclitic pronouns *te* (a) and *naḥ* (d). Since Indra is in the 3rd ps. in this vs. (b *índro avatu*), the *te* can only refer to Mudgalānī,

and it must identify the chariot as “yours” (namely, hers). The *naḥ* (Saṃhitā *no*) would then refer to the two of them or, perhaps, to their general household. If the former, the number is wrong – *unless* the form should really be dual **nau*, i.e., *nāv* in sandhi. As HvN point out in their metrical comm., “Exceptionally, -o in no should be scanned as long before a following vowel to avoid the uncommon cadence ~~~~.” If the original enclitic was dual *nau*, however, this metrical license isn’t necessary, since it would scan as *nāv* before vowel – and the sense is better as well. The tr. could be changed to “help *us two.”

Most tr. render *mīthūkṛtam* as ‘wrongly made’ vel sim.: e.g., Brereton 2002: 227 ‘wrongly used’, Scarlatta (78) ‘auf falsche Weise gefertigt, unbrauchbar’, Ge ‘vertauschten’ (the lexeme *mīthū kṛ* further glossed in n. 1ab as ‘verwechseln, vertauschen, falsch, verkehrt machen’), Don ‘perversely transformed’ (resting, I think, on Ge). But the second member is not ppl. *kṛtā-* but the root noun *kṛt-*, and X-*kṛt-* compounds are always transitive or, at least, active in sense – not passive, as most tr. assume for this one. Scar indeed asserts that -*kṛt-* is passive here, and Ge clearly favors the passive interpr., though in the n. he allows for an active sense “Fehler machend, umschmeissend.” In the publ. tr. I go with the passive interp. ‘wrongly made’ as one reading, but I would now substitute an active ‘wrongly functioning’. In addition, and more important, I think this word is a pun, with *mīthū* referencing *mīthunā-* ‘(sexual) pair’: “forming a sexual pair” looks forward to the successful sexual pairing effected by the chariot race.

Vs. 3 of the Agastya–Lopāmudrā hymn, which also treats fraught gender relations, also contains both *mīthunā-* and *ājī-*.

X.102.2: In her first appearance in the hymn (save for, probably, the ungendered *te* in 1a), Mudgalānī appears both as a victorious charioteer and as a highly sexualized female. The wind whipping up her dress in pāda a reminds us of the many Apsarases in the epic who seduce ascetics through the judicious application of a breeze to their filmy garments.

At least in this hymn *sma* + present seems to have the function of a past iterative/durative; see also 4b *sma ... eti* and 6d *ṛchānti sma*.

On the dicing idiom *kṛtām ví√ci*, see comm. ad X.42.9.

X.102.3: This vs. is in Bṛhatī, like the first and final (12) vss. of the hymn, unlike the Triṣṭubh of the rest. It also has nothing to do with the specifics of the hymn, being a conventional plea to Indra for help in combat. (Vss. 1 and 12 are also somewhat distant from the hymn in sense, but closer than this one.) I do not know why this intrusive vs. is found here; it actually disrupts the depiction of the race and introduces an incongruous scene of general warfare.

On *abhi√dās*, see Narten (Sig. Aor. 140; also KZ 78: 56ff.). She considers it a secondary root, based on an *s*-aor. subjunctive.

It is worth noting (but probably not pursuing) that Indra is asked to parry his own signature weapon, the *vajra*, presumably in the hands of another; the *vadhā-* in d that he is asked to keep away is also often his. (This issue is also raised by Don, n. 6.)

X.102.4: The bull that is one of the yoked team that Mudgalānī controls makes its appearance.

The stem *kūṭa-* is rare to non-existent in Skt. outside of this passage (see Ge n. 4b, EWA s.v.; the interpr. owing to Neisser), but is found in Pāli as a word for ‘hammer’ (*kūṭa*³ in Cone, Dict. of Pāli; see also *aya-kūṭa-*). It seems likely (to me) to be a specialization of *kūṭa*¹ ‘a prominence or projection; a horn; a summit, a peak’. Here it seems to be used as a nickname for the bull, characterizing its assaultive intensity and persistence. For a similar nickname, cf. Matt

“the Hammer” Hamill, a “mixed marital artist and wrestler,” whose profile is available on the web.

Ge suggests (n. 4b) that *ṭṛṃhát ... eti* is almost a periphrastic. Although I am generally sympathetic to periphrastic analyses, in this case I think *eti* should be interpr. as a full lexical verb, with *sma* (on which see comm. ad vs. 2), meaning “kept going” – that is, nothing kept him from running the full race.

ṭṛṃhát is the only form of the nasal infix pres. in RV, but it is robustly attested in the AV (both Ś and P). Pace Gr, the expected form here is not **ṭṛṃhán*, since neut. *kūṭam* is the subject.

X.102.5: The first hemistich describes how the efforts of the opponents/competitors to check the progress of the bull – against which, as we saw in 4b, he “kept going.” As Ge (n. 5ab) and Don (n. 8) point out, the animal would be forced to stop either to roar or to piss.

X.102.6: The form *kakárdave* is a hapax and has received a variety of interpr. Gr takes it as dat. to a *-u*-stem meaning “der Knurren in den Eingeweiden” (rumbling in the guts), Ge as loc. to an *-a*-stem, an onomatopoetic word for the cart or its shaft. Old dithers around these various possibilities, but suggests that it is best to leave the word unerklärt, an opinion apparently shared by EWA (s.v.). (Don tr. it as a verb [“rumbled”], with Gr’s semantics, but no indication of how she sees the morphology.) I am strongly drawn to, and in fact persuaded by, a suggestion of Dumézil’s (*Nouvelle Clio*, 1953: 261–62; repeated and rediscussed in *Mariages indo-européens* 1979: 282ff., esp. 288–89), reported by Re (ÉVP XVI ad loc.). Dumézil suggests that the word contains the cross-linguistically common nursery word *kaka* for excrement. As for the rest of the form, he half-heartedly suggests that roots or enlargements containing the phonological sequence *-ard* are “fréquents dans cette zone sémantique” (1953: 262 = 1979: 289 n. 1), a rather hazy explanation. I suggest rather that it contains a form of the root \sqrt{rd} ‘shake (out), scatter, spray’. As Dumézil points out, this interpr. of a dat. *kakárdave* as “ut stercus faceret” fits well not only with the companion verb *ameháyan* ‘made piss’ in 5b but also with the droppings that hit Mudgalānī in 6d. I construe this dative with *yuktáḥ* ‘yoked’ in the sense of ‘employed, set to the task’, since I see this startling image – of the bull droppings hitting Mudgalānī as she drives – in this middle vs. of the hymn as establishing a perverse type of sexual contact between bull and woman, which sets up her gaining of fertility at the end of the hymn.

The apparent intensive *āvāvacīt* is found only here, and is ordinarily assigned to the root \sqrt{vac} ‘speak’, but I think it makes much more sense to assign it to $\sqrt{vañc}$ ‘move crookedly’. Ge (n. 6b) explicitly rejects Roth’s suggestion to this effect, as does Schaeffer (Intens. 176–77; she tr. “redete unaufhörlich,” which at least fits the context better than Ge’s simple “schrie”). Schaeffer asserts that roots of the shape *KeRK* always have the R represented in intensive redupl., and we should therefore expect ***vaṃvañc-*, which could later be replaced by the grammarians’ *vanīvañc-*. I don’t consider intensive redupl. to be as well regulated as she claims, and in particular the ambiguity of long-redupl. perfects like *rārandh-* (with impv. *rārandhī* VI.25.9), interpr. by many as an intens., would allow the nonce creation of an intens. stem *vāvac-* to $\sqrt{vañc}$ here. Such a root assignment fits the context much better: Mudgalānī keeps dodging the bull’s turds, but unsuccessfully. Rendering it as crying out or speaking incessantly adds nothing to the passage.

The nom. phrase *sāraṭhiḥ ... keśī* “long-haired charioteer” should be masc. In its other occurrences *sāraṭhi-* has masc. reference, and feminines to *-īn*-stems are in *īn-ī* (see, in fact, fem. pl. *keśīnīḥ* 2x), not *-ī*. However, the gender-ambiguous *vṛkī*-form *rathīḥ* in 2c, used of

Mudgalānī, has prepared the way for a fem. interpr. of *sāraṭhiḥ* here, and of course the nom. sg. *keśī* looks like a nom. sg. to a *devī*-type fem. Ge (n. 6b) and Don (n. 10) claim that the long hair identifies the subject as a woman, but since masc. *keśīn-* is used a number of times of male munis (ascetics) in X.136, this claim is not straightforward.

In c “bull” should be in parens, since it doesn’t appear in the Skt.

The adjacency of *niṣpādo mudgalānīm* “the droppings Mudgalānī” is nicely iconic, since the droppings do in fact touch the woman.

X.102.7–8: These vss. depict the yoking of the ill-assorted pair, the bull (vs. 7) and the piece of wood (vs. 8), as the team for the race. It is not initially clear if this yoking actually precedes the headlong race described in vss. 4–5 or whether this represents a new stage in the proceedings. My surmise is the former – that is, as in other RVic narratives the events have been scrambled and some episodes are duplicated. The first description of the race in vss. 4–5 simply omits mention of the piece of wood, while in vss. 7–10 the full measure of the accomplishment – a victory despite a faulty team – is emphasized. One of my reasons for thinking this is that Mudgala’s win is described in almost identical terms in 5cd and 9cd:

5cd *téna ... śatāvata sahasraṃ, gāvāṃ mūdgalah ... jigāya*

9cd *yéna jigāya śatāvata sahasraṃ, gāvāṃ mūdgalah ...*

This near-identity suggests that the two statements are summarizing the same event.

X.102.7: The word *pradhī-* seems to refer to a part of a wheel that can come in segments (see I.164.48, IV.30.5 for explicitly numbered *pradhī-* and II.39.4 for dual *pradhī*). Scar (267) lists it with other *-dhī-* compounds but makes no further remarks. Ge (n. 7a) thinks it refers the wheel-rim (Radkranz, like “later” *nemī-* [though *nemī-* is well attested already in the core RV]), constructed of boards/planks (Brettern). This doesn’t seem like it would produce a smoothly running and swift chariot, but I don’t know enough about archaic wheel construction to judge. Nonetheless, I would think it referred to some part of the wheel that didn’t have contact with the ground.

The publ. tr. contains an awkward doubling of the word ‘bull’ – representing both *vāṃsaga-* in b and *kakúdmant-* in d. The rendering of the latter should be corrected to “humpbacked (bull),” with bull in parens. The full phrase is found in X.8.2 *vṛṣabhāḥ kakúdmān*. The prior term *vāṃsaga-* is more problematic. Don tr. ‘steer’ and (n. 13) identifies it as “the castrated bull” as a metaphor for the wooden club yoked and contrasted with the virile bull, the “husband of the cows” in pāda c. I think she may have been hastily misled by German “Stier” (Gr’s gloss and Ge’s tr. of *vāṃsaga-*), which is not the direct semantic equivalent of English steer, but refers more generally to bulls. And certainly elsewhere *vāṃsaga-* is compared to a *vṛṣan-* (I.7.8). Moreover, Indra himself is compared to a *vāṃsaga-* (e.g., I.55.1, 130.2, VIII.33.2), and it seems unlikely that the super-virile Indra would regularly be compared to a castrated animal. The virility of the animal is suggested by, e.g., X.144.3, where it is found “among his own females” (*āsú svāsu*). I tr. the word as ‘buffalo’ sometimes elsewhere, in part following EWA’s gloss ‘Stier, Büffelbulle’ and in part because some of the behavior of the *vāṃsaga* seems like that of a wild animal: sharpening its horns (I.55.1, VI.16.39) and thirstily approaching to drink (I.130.2, V.36.1, VIII.33.2). Esp. telling are V.36.1, where the thirsty animal is *dhanvacará-* ‘roaming the wastelands’, and VIII.33.2, where the thirsty animal is ‘following its own track’ (*svabdīn-*, on which see comm. ad loc.). In any case in our vs. I think there is only one male bovine at issue – the virile bull, yoked by Indra.

X.102.8: To harmonize with the other occurrences of *áṣṭrā-* (IV.57.4, VI.53.9, 57.2), I would change the tr. of *aṣṭrāvín-* to ‘goad in hand’. The subject is probably Mudgala, though the goad and the *kaparda-* hairstyle are also characteristic of Pūṣan, as Old points out (see also Ge n. 8ab and Don n. 14).

The goad and strap also appear in the agricultural hymn IV.57.4 in conjunction with *śunām*: *śunām varatrā badhyantām, śunām áṣṭrām úd ingaya* “For prosperity let the straps be bound; for prosperity brandish the goad.” In that vs. I take *śunām* as an adverbial acc.; here I construe it with *acarat* “achieved prosperity,” more lit. “practiced / proceeded to.” It would be possible to take *acarat* as a (quasi-)aux. with *ānāhyamānaḥ* “continued to / kept binding,” but I think the point here is that the binding needs to be done quickly and efficiently.

As for *varatrā-* ‘strap’, see X.60.8, where a yoke is tied with a *varatrā-*.

In IV.22.9 I tr. *kṛṇuhi ... nṛmṇāni* as “activate your manly powers,” arguing (comm. ad loc.) that *nṛmṇā-* does not refer to manly deeds but the abstract powers that allow these deeds to be performed. Such an interpr. works better here as well, since the yoking just performed makes it possible for the chariot victory to be achieved. This is directly expressed by the end of d *táviṣṭr adhatta* “he assumed his powers.” I would therefore emend the tr. to “activating his manly abilities.”

I am not sure who the “many folk” (*bahú-jāna-*) are or why they are the beneficiaries of this action. Quite possibly the spectators, who will speak the next vss. (9–10).

I am in agreement with Ge (n. 8cd) and Don that the subject in the 2nd hemistich changes to the bull.

X.102.9–10: These two vss. are the direct speech of the spectators watching the unexpected victory. So also, e.g., Ge and Don. They in fact include vs. 11 in this direct speech section, but I consider it a summary vs. and the “moral” of the hymn.

X.102.9: On the root noun *yúj-* and the “strong” forms *yúnjam* (here) and du. *yúnjā* (I.162.21) see Schindler (Rt noun s.v.), who takes these forms as secondarily strengthened on the model of paradigms like *sánt-/sát-*, with the weak pres. stem *yuñj-* as the basis. Our form occurs at the end of a Triṣṭubh line, where the ordinary acc. sg. *yújam* wouldn’t fit; *yújam* is fairly common in the iambic cadence of dimeter lines. As for dual *yúnjam*, its metrical position also favors a heavy syllable; see comm. ad loc.

The position of the wooden club is expressed in phraseology very similar to that of Vṛtra after his smiting in the famous Indra-Vṛtra hymn, I.32.10: *kāṣṭhānām mādhye níhitam śārīram* “his body sunk down in the middle of the race courses” versus our *kāṣṭhāyā mādhye drughaṇām śáyānam*. Although that particular pāda in I.32 does not have a form of *√sí* ‘lie’, it is the signature verb of that section of the hymn and our *śáyānam* may be meant to recall the larger context. I find it hard not to interpret the expression here as a direct echo of that well-known hymn.

On the second hemistich, see comm. ad 7–8 above.

X.102.10: With others, I consider this vs. to concern the wooden club, which was also the focus of attention in vs. 9. However, I think the club is assimilated to Mudgala, who (in my view) has been impotent and inert like a piece of wood. But just as the club has pulled off an improbable victory in the race, so Mudgala has (re)gained his potency. The key to this interpr. is pāda b, with

the verb *ā sthāpayanti* “they make mount.” On the one hand, as Ge (n. 10) suggests, after the race the bystanders just pick up the club and put it on the cart – as opposed to its yokemate, the bull, who will be fed, watered, and possibly allowed access to the waiting cows. On the other hand, ‘mount’ can be meant sexually (see the use of *āsthāpayadhvam* in the immed. preceding hymn, X.101.11), and so we can infer that Mudgala has recovered his sexual powers and can mount his wife. The negatively viewed excreta of vss. 5–6 have been, in some sense, transformed into positive sexuality, as is even clearer in vs. 11.

The apparent nonsequitur of the last pāda, with “the higher end of the chariot pole” (*úttaro dhurāḥ*), is, again in my view, a reference to the new ritual model with the Sacrificer’s Patnī. As disc. in my 2018 art. cited above (22–25), the chariot pole, with one side slightly higher, is a metaphor for the new ritual pairing, with husband and wife both yoked to the same pole, but his side somewhat higher. In our vs. the husband’s (/wooden club’s) side is given a slight edge, but an almost equal yoking is necessary for the chariot to go forward.

X.102.11: As noted above, although Ge (/Don) consider this vs. part of the spectators’ reactive direct speech, I take it instead as a summary of the successful outcome of the race: the recovery of the fertility of both Mudgala and Mudgalānī (and, by extension, the success of the new ritual model). It is in essence the last vs. of the hymn narrative, since vs. 12 is in a different meter and celebrates Indra. The 1st person speakers of the second hemistich of vs. 11 are not the narrative-internal spectators but the ritual officiants who have recited the hymn and express their hope for similar success from their ritual performance. The “charioteer” (*rathī-*) in c is a metaphorical reference to the ritual Patnī, identified with Mudgalānī the charioteer(ess) in the narrative just recounted.

On the “Avoided Wife” (*parivṛktā*) esp. in the later ritual lit. (there usually *parivṛktī*), see my *SW/SW* 99–110. One likely reason she is “avoided” is that she has failed to have children (/sons), and here she recovers her husband by “swelling” – that is, lactating as a consequence of birth -- itself a consequence of his “dripping” with semen, as a sign of the recovery of his potency. The dripping is in turn a sort of transformation of the bull’s pissing in vs. 4. Ge (n. 11b, with his tr. fld. by Don) considers masculine *siñcān* as a substitute for fem. *siñcāntī* at pāda-end, so that she would be both swelling and dripping. But the image of both members of the married couple exuding fertile fluid is surely stronger than assigning it only to her, and a poet capable of composing this complex hymn could surely have found a way to incorporate the fem. part. *siñcāntī* had he intended that form.

The “poor (water) wheel” is presumably a little deprecatory joke.

The hapax *eṣaiṣī-* has been variously analyzed; see some of the possibilities laid out by Old. I follow Old and Ge (n. 11c) in taking it as built to an adj. **eṣā-* ‘swift’, which has been doubled to produce a colloquial emphatic: ‘super-swift, swifter than swift’. A very similar formation is found in the next hymn, X.103.1 *ghanāghanā-* ‘smiting again and again’. The *-ī-* fem. is due to matching that of *rathī-* (so Old).

On *sīna-* see comm. ad II.30.2, where I suggest ‘gear’ as a gloss. In *sīnavant-* here I think it refers to material winnings, in contrast to non-material *sumanḡāla-* ‘bringing good luck’.

X.102.12: As noted previously, this vs. is in Bṛhatī, like the 1st vs. and vs. 3. It celebrates Indra, who engineered the victory of Mudgala and Mudgalānī. The first hemistich is generic – and somewhat off-kilter -- praise of the god: why is Indra called “the eye of the world”? The second half briskly summarizes the point of the hymn narrative – particularly the yoking of a virile bull

with a impotent castrate – though without the telling details. Although Ge (fld. by Don) takes Mudgala to be the speaker, I see no reason for this assignment.

I follow Old and Ge (12cd) in taking *vṛṣṇā* as an irregularly distracted instr. sg. (beside *vṛṣṇā* 2x), not a dual. One of the two occurrences of *vṛṣṇā* is in fact in the next hymn, X.103.2, and (faulty) distraction is possible there too. Though most of X.103 is in Triṣṭubh and the form is in a good Triṣṭubhs cadence (... *-hastena vṛṣṇā*), two of the three other pāda in this vs. are actually Jagatīs with the cadences *jīṣṇúnā* (a) and *dhṛṣṇúnā* (b), so **vṛṣṇā* (d) would be possible (though producing a light penult); a similar faulty distraction would also be possible in c: *sahadh^(u)vam*.

X.103 Indra

As noted in the publ. intro., there is considerable lexical chaining in the hymn.

This hymn has several features reminiscent of the previous one; see comments esp. to vss. 1 and 2.

X.103.1: The passages collected by Ge (n. 1a) make it clear that “horns” should be supplied in the simile. Ge also supplies “weapons” as object in the frame, while I take the participle simply as reflexive. Ge’s addition is certainly possible.

As noted ad X.102.11, the hapax double cmpd here *ghanāghanā-* ‘smiting and smiting, smiting again and again’ is constructed like *eṣaiṣṭ-* in X.102.11, if the latter’s analysis as *eṣa-eṣā-* / *-ṭ-* is correct. Note also that the base *ghanā-* is found in the unique cmpd *dru-ghanā-* ‘wooden club’, which in X.102.9 is yoked with the bull for Mudgalānī’s chariot race.

Although *saṃkrāndana-* is glossed as intrans. (Gr ‘brüllend’; Ge’s “Heerrufer” is ambig.), *-ana-*nominals ordinarily pattern with *-āya-*verbs and have transitive value; see in fact *kṣóbhana-* in the preceding pāda. Here I supply as its obj. the *carṣaṇí-* that is construed with *kṣóbhana-* in b.

X.103.2: The already heavy phrase *saṃkrāndano ’nimiṣāḥ* of 1b becomes even more so in its instr. transformation *saṃkrāndanenānīmīṣēṇa* in 2a. The lexical chaining is initiated with a bang! Note that this transformation eliminates the caesura in this pāda (as HvN point out), a lack that would focus even more attention on the heavy phrase.

Note the rhyming and morphologically parallel finals of the first two pādas: ... *jīṣṇúnā* # (a), ... *dhṛṣṇúnā* # (b). This figure would draw attention to the fact that these two pādas are Jagatīs in an otherwise Triṣṭubh hymn (save for the final vs. 13: Anuṣṭubh). As noted ad X.102.12, one of the two occurrences of instr. sg. *vṛṣṇā* is found at the end of our d, in contrast to distracted *vṛṣṇā* in X.102.12. I suggest there that the *vṛṣṇā* here could possibly be read distracted, given the Jagatī cadences of the first two pādas of the vs. Of course, this would produce a bad cadence, with light penult, but I think it’s possible that the distraction possibility was lurking in the background – esp. since the final of c, *sahadhvam*, could also be read *sahadh^uvam*, with the same light penult, but a match to the Jagatī cadence of a and b.

The string of *-ana-*forms continues with *duś-cyavana-*. The transitive value of *cyavana-* is maintained, but with the modified nominal as obj. not subj.

X.103.3: The most salient ex. of lexical chaining is *īṣuhastaiḥ* picking up *īṣuhastena* in 2d, but *yúdhaḥ* in b matches *yúdhaḥ* in 2d (and *yut-* in *yutkārēṇa* in 2b). There is internal chaining between the forms of *sám* √ *srj* in b and c: agent noun *sámsraṣṭā* and ppl. *sámsrṣṭa-jít-*.

The tr. of *vas̥tā* as ‘willful’ is misleading; I’d now substitute ‘exerting his will / who exerts his will’.

X.103.4: No chaining between 3 and 4, save for *yudhā* in c picking up the various *yudh*- forms in 2 and 3. The intrusion of Bṛhaspati is surprising; even as an alloform of Indra, he is not usually excessively martial, but he certainly is here. HPS (B+I 100) suggests that Bṛhaspati is here Indra’s Hauptpriester and his charioteer, reciting Zaubersprüche. But the vs. shows him in a more physically active role than that of priest; vs. 8 ties him more directly to ritual activity.

The phrase in pāda a *pāri dīyā rāthena* is addressed to Parjanya in V.83.7, where it makes more sense. As Ge (n. 4d) points out, pāda d is almost identical to VII.32.11c, addressed to Indra. This Bṛhaspati vs. seems to have been assembled from spare parts.

X.103.5: This vs. returns to Indra and modulates through a series of phonological and etymological figures: *sthāvīraḥ prāvīraḥ ... / abhīvīraḥ → abhīvīro abhīsatvā, sāhasvān ... sāhamāna(h) ... / ... sahojā.*

prāvīra-, *abhīvīra-*, *abhīsatvan-* are found only here in the RV and so their preverbal prefixes must meaningfully contrast.

X.103.6: After a few vss. without chaining, this vs. has numerous echoes in what precedes: *gotrabhīdam govīdam* opening pāda a pick up the *go-* of *govīt*, which ends 5d: in fact, of course, *govīt* and *govīdam* belong to the same stem, and *gotrabhīdam govīdam* also rhyme. Still in a, *vājrabāhum* picks up *bāhuśardhī* in 3c; *jāyantam* in b *jāyan* in 4c; *pramṛṇāntam* in b *pramṛṇāḥ* in 4c; and in c *vīrayadhvam* echoes *prāvīraḥ ... abhīvīraḥ* in 5a, c.

In d “Indra” should be substituted for “him,” an oversight in the publ. tr.

X.103.7: This vs. is a veritable “greatest hits” of the hymns so far: *gotrā-* (see *gotra-bhīd-* 6a); *sāhasā* and (*prtanā-*)*śāt* (see *√ sah* forms in 5, also 2c); *vīrāḥ* (see 5 and 6); *duścyavanā-* (2b); *ayudhyāḥ* and *yutsū* (various *yudh* forms: 2b, 2d, 3b, 4c, *sénā-* (1d, 4c), *avatu* (4d).

X.103.8: As noted above ad vs. 4, Bṛhaspati is here in a priestly (as well as martial) context.

In c *√ bhañj* (*abhibhañjatīnām*), *sénā-* (*devasenānām*), and *√ ji* (*jāyantīnām*) recur from 4c *prabhañján sénāḥ ... jāyan*, but in vs. 4 the *sénāḥ* were objects of *√ bhañj* and *√ ji*, whereas here it is the armies themselves that do the shattering and conquering. This is typical of the shifting use of the repeated lexical items in this hymn.

The Maruts make their first appearance here.

X.103.9: The Maruts recur here, and Varuṇa and the Ādityas are introduced. The pres. part. *jāyant-* is found again (see vss. 4 and 8).

The cmpd. *bhuvana-cyavānām* echoes *duś-cyavanā-* (2b, 7c), but the echo *-ānām / -aná-* is morphologically misleading, since *-cyavānām* is the gen. pl. of *-cyavā-*.

X.103.10: The vs. is structured by the *úd* opening all four pādas. The first is construed with the 2nd sg. impv. (*(d)harṣaya* (*√ hr̥ṣ*) in pāda a, the last with the 3rd pl. impv. *yantu*. Since the nouns in b and c are neut. pl., they can either be objects of the verb in pāda a or subjects of the verb in d. I chose the former (as did Ge), but the latter is not impossible.

More repetitions: *sátvan-* (5c *abhí-satvan-*), *mānas-* (9c *mahā-manasām*, which partly overlaps with *māmakānām* preceding *mānāṃsi* here); *rátha-* (4a, 4d, 5d), *jáyant-* (4b, 8d, 9d), *ghósa-* (9d).

The peculiar deriv. *māmakā-* of the gen. sg. 1st ps. pronoun *māma* is striking. It is curious to find this diminutive/deprecatory type of formation in this highly martial context. Perhaps the tone is one of proprietary affection.

X.103.11: Like vs. 10, this vs. has identical openings to all four pādas, the emphatic 1st pl. pronoun, with a slight variation in the final pāda: acc. *asmān* instead of gen. *asmākam*.

With Gr (and implicitly Ge) I take *úttare* as a nom. pl. with pronominal inflection (as elsewhere).

The *úttara-* chains with the pāda-opening *ud-*s of vs. 10, while the pāda-openings ‘(of) us’ can be seen as chaining semantically with *māmakānām* of 10b.

X.103.12: On *apvā-* see EWA s.v. and esp. KH (Aufs. 52–57). It is found also in AVŚ IX.8.9, as well as AVŚ III.2.5 = AVP III.5.5, which are variants of our vs.

X.104 Indra

As indicated in the publ. intro., this hymn, attributed to a Vaiśvāmitra, ends with the Vaiśvāmitra refrain common in Maṇḍala III, and it has an almost self-consciously old-fashioned well-made air. Like the preceding hymn (X.103) there is a fair amount of chaining between vss.

X.104.1: The dat. prn. *túbhyam* both ends pāda a and begins pāda c; in between pāda b ends with the rhyme form *tūyam*. Pāda-final *túbhyam* recurs in 2c and 3b.

On the curious bahuv. *vīpra-vīra-* see comm. ad IX.44.5. The sense presumably is that the creators of ritual speech are just as heroic as more martial men.

X.104.2: Ge construes gen. *sutásya* with *jathāram pr̥ṇasva* “fill your belly with the pressed (soma),” and it is conceivable that *√pr̥* ‘fill’ could take a partitive genitive. However it ordinarily takes the instr., and it seems better here to take *n̥bhīḥ sutásya* in b as parallel with *apsú dhūtásya* in pāda a. That in IX.62.5 (cited by Ge n. 2ab) *apsú dhūtó n̥bhīḥ sutáḥ* is a single phrase supports this analysis. Another passage containing *jathāram √pr̥* with a potential gen. is found in VI.69.7 *sómasya ... jathāram pr̥ṇethām*, where Gr and Ge both construe the gen. with *pr̥ṇethām*. However there as well the gen. is better taken with the preceding verb: *píbatam mádhvo asyá, sómasya ...*, like our *píba*. The fact that the preceding vs. in this hymn ends with the short exhortative clause *píbā sutásya* provides addition support for a syntagm *píba ... sūtasya* here.

I take *jathāram pr̥ṇasva* as a brief parenthetic clause, rather like the *píbā sutásya* that ends the previous vs. (1d). The rel. clause in c then hangs off the genitive complements of *píba* in pāda a.

The root affiliation of the verb *mimikṣúḥ* in c is unclear. Gr takes it as the pf. to the desid. of *√mih* ‘ausgiessen, pissen’, with the developed sense ‘reichlich zuströmen’. Ge tr. “schmackhaft gemacht haben” (root affiliation?). Kü (387) takes it to *√myakṣ* ‘attach, be attached’ but in an unusual constr., tr. “Den bei sich halten die Presssteine, Indra für dich ...,” which satisfies neither syntactically nor semantically, though it accounts for the -ṣ. Somewhat daringly, I take it as belonging semantically to *√mih* ‘piss’, but after the roots *mih*, *myakṣ*, and **miś* (‘mix’) had become hopelessly confused. My ‘trickle’ is a semantic development of ‘piss’.

The pl. *tébhiḥ* in d has no clear referent, but it probably refers to plural soma drinks; as Old points out, the soma described in pādas a, b, and c could almost be taken as three different somas.

X.104.3: On *prayaí*, see Keydana (Inf. 201–2), who denies that it’s, technically, a real infinitive. Nonetheless, it might as well be. Moreover, he bases his decision on the fact that the subject of the putative inf. would fill the recipient role in the matrix clause, but I think it’s possible, and so tr., that the expression of the recipient is limited to *vīṣṇe* in pāda a, with *túbhyam* in b reserved as subj. of *prayaí*.

On *dhénā-* as ‘nourishing stream’, see comm. ad I.2.3. Ge’s “an den Reden” relies on an out-of-date interpr. of the word. Instead, cd indicates that Indra is receiving both soma and verbal praise.

The tr. of *śácyā* as ‘ably’ in d was conditioned by its chaining with *śacīvaḥ* in the next pāda, 4b. Another ex. of chaining: *suásya* in b repeats the same in 2b (and 1d).

X.104.4: The phrase “in the house/dwelling of Manu” (*mānuṣo duroṇé*) is found four times elsewhere (VII.70.2, VIII.87.2=X.40.13, X.110.1), three times in Aśvin hymns, once in an Āprī hymn in a Jātavedas vs. (X.110.1), and here in an Indra hymn. It is always in a ritual context and presumably refers to the ritual ground.

Act. *gr̥nántaḥ* contrasts with passive *gr̥nānāḥ* in the previous vs., 3d; as just noted *śacīvaḥ* (a) chains with *śácyā* in 3d.

X.104.5: This vs. is essentially a continuation of vs. 4, with Indra’s praisers as subject, achieving their goals through Indra’s aid. The vs. lacks a finite verb; I take the participle *dádhanāḥ* as predicated.

The participial phrase *ūtīm ... dádhanāḥ* echoes *váyo dádhanāḥ* in 4b. Another echo is furnished by the vs. opening *prāṇītibhiḥ te haryaśva* (5a), which matches 4a *ūtī śacīvas táva* in structure: INSTR *te* VOC (5a) : INSTR VOC *táva* (4a). Here the *te* is expanded with a series of genitives, *suṣṭóḥ ... suṣumnásya pururúcaḥ*. The opening instr. is matched by *sūnītābhiḥ* at the end of the vs. And *ūtī* of 4a is repeated as *ūtīm* in c.

The form *suṣṭóḥ* has caused much consternation, summarized in brief by Scar (637). Since a root noun cmpd *suṣṭú-* would be ill-formed, lacking the stem-final *-t* expected for roots in short resonants (like *-stú-t-* itself), another analysis is required. Re’s 1937 suggestion (reported by Scar) that it belongs to a stem **su-ṣṭótu-* ‘praiseworthy’, whose gen. **suṣṭotoḥ* underwent haplology, is appealing, if not definitive.

X.104.6: The banal first hemistich packs in a lot of echoes from earlier in the hymn: *harivo hárībhyām* picks up *hárībhyām* (1b) and *harivaḥ* (2a), not to mention *haryaśva* (3b, 5a); *sutásya* is also found in 1d, 2b, 3b; *úpa ... yāhi = úpa yāhi* (1b) as well as *prayaí* (3b); *pītāye* recalls *pītīm* (3a); *sómasya = sómaḥ* (1). Only *bráhmāṇi* is new.

The second hemistich shakes things up a bit. In pāda c it is striking that the sacrifice goes to Indra, not vice versa (as in 1a *yajñám úpa yāhi*), and that (at least in my interpr.) Indra has been patiently waiting for it (*kṣámamāṇam*) – not a characteristic Indraic trait! (Ge’s der Nachsichtigen [“indulgent, forgiving”] is hardly more Indraic.)

Then in d Indra is called both “pious” (*dāśvān*) and “the visible sign of the rite” (*adhvarásya praketāḥ*). To treat the second anomaly first: this description is far better suited to

Agni, and is in fact applied to him in a pāda almost identical to this one: VII.11.1 *mahāṁ asy adhvarāsyā praketaḥ* (cf. also III.8.8 ... *adhvarāsyā ketúm* also of Agni, and other similar expressions). It is of course possible to construct a rationale for using this phrase of Indra: his presence at the sacrifice is the sign that it is actually proceeding. But the change of referent is jarring nonetheless.

As for *dāśvāms-*, this very well-attested stem is used overwhelmingly of mortal worshipers, but here it must modify Indra. Gr gives a handful of passages where it modifies divinities: gods I.3.7, Savitar I.110.5, and esp. Varuṇa X.65.5, 6, X.113.5 in the pāda-final formula *vāruṇāya dāśúṣe*. Given Varuṇa's ethical proclivities, "pious" fits him rather better than the freewheeling Indra, and in X.65.5–6, as I say there (comm. ad loc.), the hymn has a tendency to attribute human ritual roles to gods. For I.3.7 and I.110.5 see comm. ad locc. Ge simply ignores the usual sense of *dāśvāms-* and tr. "der Freigebiges." There is no note on the passage, so I don't know if he thought that this sense was possible for *dāśvāms-* or if he misread the word as *dāśvān* 'rich in gifts' (or thought a pun on that form was intended).

The cluster of un-Indra-like characteristics in this hemistich seems intended to jar the audience out of the complacency fostered by the standard tropes that have dominated the hymn so far (and will return).

X.104.7: As in a few other places, *svrktī-* is a secondary bahuvr. referring to the recipient of "well-twisted" hymns, not the hymns themselves. See comm. ad II.4.1. It is used of Indra in X.74.5. For an exactly similar usage, see *suśastī-* in 10a.

In the face of near-universal agreement that *namasyā* is underlyingly *namasyāḥ* and a nom. pl. (Pp., Gr, Ge), Old points out that desid. substantives in *-yā* do not form plurals and are normally adverbial frozen instr. sg. -- though he allows as how the instr. sg. would produce a less natural ("minder natürliche") construction here. Nonetheless, I find an instr. perfectly acceptable semantically and much more likely morphologically: the singer produces the songs with a desire to do homage.

X.104.8–10: After seven relatively banal vss. about Indra's journey to the sacrifice and the predictable delights that await him there, the last three vss. (before the Viśvāmitra clan refrain, vs. 11) concern Indra's exploits, esp. the Vṛtra battle.

X.104.8: An unobtrusive chaining connects this narrative vs. with the ritual one(s) preceding: 7b *suté-ṛaṇam* : 8a *su-rāṇā(h)*.

I am puzzled by the instr. *yābhiḥ* in b, referring to the seven divine waters of pāda a. In Ge's tr. and in the publ. tr., it seems to portray the seven divine waters as the instruments by which Indra crossed the *síndhu*, but this makes no sense. Lü (132–34) shares my puzzlement, but I do not find his solution any more satisfactory than Ge's: he (re-)interpr. *síndhu-* as 'Meere' and $\sqrt{tṛ}$ as 'durchdringen', with the seven waters of pāda a the waters freed in the Vṛtra battle. (Pāda c then gets construed with d, with the 99 streams constituting the *gātú-* that Indra produced for the gods and Manu.) There is a simpler solution: to take *yābhiḥ* as an instr. of accompaniment, to be construed with *síndhum*. In other words, Indra crossed the *síndhu* along with / in addition to the seven divine waters (presumably, indeed, the *saptá síndhavaḥ*). This goes somewhat awkwardly into English, but is perfectly compatible with the Sanskrit. I would now emend the tr. to "Seven are the divine waters ... along with / in addition to them you ... crossed the boundary river ..." The 99 streams in c are then additional riverine barriers to cross.

X.104.9: Ge takes *cakārtha* in c as a gaming term and tr. “Die du ... gewonnen hast.” But though terms like *kṛtá* and *kārā* (see his n. 9c) do have such senses, I do not know of other exx. of the bare finite verb being so used. I take the verb in its standard sense, and think it probably means that in freeing the waters he actualized them, as it were – made them really exist. It’s also possible that \sqrt{kr} is a dummy verb or with a gapped infinitive, in the sense ‘made/let flow’, but in the absence of anything in the context that encourages this interpr. and of any parallel expressions elsewhere, this seems less likely.

X.104.10: The first word of the vs., *vīrénya-*, has attracted more disc. than I think it deserves; see Old’s and Ge’s (n.10a) treatments, both referring to Bloomfield, who thinks that the phrase *vīrényaḥ krātuḥ* stands for the cmpd *vāreṇya-krātuḥ* (RV 2x). Although the influence of this cmpd, not to mention the much better attested simplex *vāreṇya-*, on the hapax *vīrénya-* is likely, I see no reason to emend the text. Moreover, I find overfastidious the concern expressed by all that *vīrá-* is not a verb and does not deserve a gerundive suffix, producing a “monstrous” (Old) form. On the one hand, as Ge points out, there is a denom. *vīraya-*; however, Ge also argues that the denom. is intrans. and for *that* reason doesn’t deserve a gerundive. So he constructs a possible transitive sense “desire to have X as hero/master,” which – finally – deserves a gerundive. His tr. of the relevant bits is “Indra muss man also seinem Meister wünschen” (fld. by JSK, DGRV II.212 “Indra, the one to be desired as a hero (by men)”). All of this seems to demand too much machinery for what appears to be a playful riff on *vāreṇya-*, hence my “proper to [/worthy of] a hero.”

In any case, unless one emends to a bahuvr. *vāreṇya-krātuḥ* “whose resolve is worthy to be chosen,” it’s still necessary to take *krātuḥ* as identified with Indra, as Ge/JSK in fact do (e.g., JSK “(is) determination (incarnate),” as does the publ. tr.

I take *suśastīḥ* as a secondary bahuvr., like *suṽṛktīm* in vs. 7 (see comm. there), though it’s possible that it’s an identification like *krātuḥ* earlier in the pāda: “Indra is resolve (and) good praise.”

On *dhénā* see comm. ad vs. 3. In context Ge’s “Reden” fits better here (with the verb *īṭe*), but if good contextual fit were our highest interpretational criterion, the RV would look very different. As in vs. 3 the point here is that Indra receives both praise and soma. I consider this to be signaled by *utāpi* opening b. In my opinion there’s a tricky shift of function in *suśastīḥ* at the end of the preceding pāda. In pāda a it is a secondary bahuvrīhi ‘receiving good praise’ modifying Indra, but it reverts to a karmadhārayā ‘good praise’ in order to serve as conjoined subject of *īṭe* in b, where *dhénā* is either a conjoined nominative – a series of singular subjects can take a singular verb – or an instr. “along with the (soma-)stream.”

Pāda d contains another identification of Indra with an abstract entity – here “superiority” (*abhiṣṭīḥ*).

This last vs. before the clan refrain exhibits some ring-like behavior with the beginning of the hymn: *puruhūtá-* (1a, 10b), (*vípra-*)*vīrāḥ* (1c): *vīrénya-* (10a), *dhénā-* (3a, 10b).

X.105 Indra

On the extreme metrical and textual problems in this hymn, see publ. intro. (in addition to detailed discussions below). I will not engage further with the meter.

The hymn also acts like a dress rehearsal for the impossible X.106 that follows immediately – still within the realm of possible decoding, if barely, but pushing the envelope.

X.105.1: The meter of this 1st vs. is esp. aberrant. See Old.

The publ. tr. follows Old's alternative word division *áva śmasāru dhad vāḥ*, which requires no change to the Saṃhitā text and has the merit of providing a full form of the 'beard' word: *-śmasāru-* is found also in the cmpd *hāri-śmasāru* in X.96.8. (It is likely not an accident that *hāryate* is found shortly before the 'beard word' here.) Ge (n. 1b) suggests rather a haplology **śmasā(ru) rudhad*, which is also possible. But I find his suggested meaning less likely than the one associated with the Old reading. Ge thinks Indra's beard will dam up the water=soma and keep Indra from drinking; Old that the beard (which surrounds Indra's mouth after all) will descend into the water=soma to drink. Since I prefer Old's reading, the publ. tr. should have an asterisk before "descend."

On *vātāpya-* see comm. ad IX.93.5.

X.105.1–2: Note that 1b, 2a, and 2c all end with monosyllables (*vāḥ*, *véḥ*, and *dán*) respectively

X.105.2: As Old points out, *yāsya* stands in effect for **yó asya* – or perhaps better **yó yāsya*.

There is some disagreement over the grammatical identity of *véḥ*. Gr takes it as the gen. sg. of *vī-* 'bird'; he is followed by Lub (who does not, however, discriminate between nom. and gen. *véḥ*). By contrast Ge considers it the 2nd sg. to the root pres. of *√vī* 'pursue', and I concur: the parallel I.63.2 *ā yád dhārī indra vívratā véḥ* seems to me decisive.

In b *ārvantānu* (i.e., Pp. *ārvantā ānu śépā*) Old suggests a haplology from *ārvantā *tānu-śépā*, a reading that also requires erasure of the accent on *śépā*. Given the difficulties in construing *ānu śépā*, I have accepted his haplology.

Flg. Lub (Nominal Acc., 30), I take *rajī-* here as equivalent to *rājī-* 'line' (X.100.12) (*rajī-* in VI.26.6 is a PN.) Lub considers our form accentually older. See comm. ad X.100.12.

As noted ad X.99.6, *pátir dán* "lord of the household" is a somewhat incongruous designation for Indra, and it hardly fits the context here, with its emphasis on the speed of Indra's horses: he's unlikely to be sitting at home.

X.105.2–4: At least acdg. to my interpr. the two relative clause of 2 (*yāsya*) and 3ab (*yóḥ*), with two different referents, are never resolved. Instead 3cd begins a new subord. cl. (*yád*), whose main cl. is (sort of) found in 4. The syntax thus adds to the general shiftiness of the hymn.

X.105.3: The apparent mockery of Indra begins here.

Another monosyllable, *yóḥ*, though not in final position. Assuming that the standard identification of this form as gen.-loc. du. of the rel. prn. is correct, it is the only instance of this in the RV; the ordinary form is disyllabic *yáyoḥ*. The pāda-opening sequence *āpa yóḥ* plays off *sácāyóḥ* opening 4a.

The verb *pāpaja* is the only verb form attested to a putative root *√pāj* in Sanskrit (though it has abundant cognates across IE). On the grounds of accent and heavy redupl., Sch (Intens. 151–52) takes it as an intensive (so already Old, contra Wh), though with *t*-less perfect-like 3rd sg. ending. Kü tacitly accepts this non-perfect interpr., since he does not discuss the form; his tr. of the passage (336, 525) follow Sch's. As an intens., the verb matches *cárkṛṣe* in the same position in 4a. Note the distant phonetic figure with the preverb in tmesis: *āpa ... pāpaja*.

On the position of *ná* in Lub's pāda division, see comm. ad X.111.7: *pace* Lub, *ná* is not pāda-final, but internal in the next cl.

Note rhyming *bibhīvān* # / *tāvisīvān* # at the ends of pādas b and c, anticipating *śiprīṇīvān* at the end of 5c.

Although Ge takes c with ab, and of course the verse boundary favors this, the *yád* clause of pāda c does not belong logically with ab: if Indra is apart from his horses, he hasn't yoked them. Pāda c makes more sense with the contrastive 4a.

X.105.4: The sequence *sácāyóḥ* (also in 9c) can be resolved in several different ways. The Pp. takes the second word to be *āyóḥ*, presumably gen./abl. of *āyú-* 'lively', while Gr (fld. by Lub) prefers *ayóḥ* (gen./loc. du. of *ayám*) and Old and Ge *yóḥ* (gen./loc. du. of rel., as in 3a; so apparently also Sch [Intens. 108]). The first is unlikely; the other two have complementary merits and demerits. The rel. prn. would account for the accent on *cárkṛṣe*, but would leave us without a main cl.; the demonstr. has the exact opposite qualities. I weakly favor the demonstr. *ayóḥ*, despite the verb accent. The identical sequence in 9c appears to have the demonstr., as do those in I.174.6, III.54.2, and I also feel that a main cl. works better in context. I do not have an explanation for the accent; we could ascribe it to the supposed corruption of this particular hymn, which seems facile, or to the parallelism of the intens. *pāpaja* in 3a (though the forms are not phonologically or morphologically similar), but I do not find that satisfactory either. Perhaps because it implicitly contrasts with the same verb to be supplied in c, it has contrastive accent.

The form *upānasáḥ* has been much discussed: see esp. Old and Ge. I follow Ge's suggestion (n. 4b) that it is a Beiwagen, an auxiliary vehicle of some sort – as a metaphorical measure of Indra's relative unimportance in comparison to his horses (in the teasing vein found in this hymn).

The opening of the vs. *sácāyóḥ* is paralleled by the opening of the hemistich *nadáyor vívratayoḥ*. Note that *vívrata-* was also found in 2a; the term associated with it there, *suyújā*, has already been actualized in 3c *yád yuyujé* "when he has yoked (the two)."

X.105.5: The ref. of the dual *vyācasvantā* in the simile is unclear. Ge takes it as modifying the horses and meaning "die gleichsam Platz haben," which is unsatisfying on several counts; it's not really a simile and *vyācas-* doesn't mean simply 'place' but 'expanse'. The identical form *vyācasvantā* is found in VI.25.6, referring to the two opposing martial forces, which is no help here. The fem. pl. *vyācasvatīḥ* is used twice of the Divine Doors, again no help. I think the most likely referent is Heaven and Earth, which individually or jointly serve as both subj. and obj. of *√ vyac* (in different passages), e.g., X.112.4 *yásya tyát te mahimānam ..., imé mahī ródasī nāviviktām* "you whose greatness these two great world-halves did not encompass." The point of such expressions is to indicate that even very expansive entities, like H+E, cannot contain Indra; they are themselves therefore implicitly *vyācas-vant*. The problem is that H+E / world-halves expressions are generally feminine. Here, I would attribute the non-fem. -*vantā* form to agreement with the simile frame *késasvantā* immediately preceding it across the pāda boundary. The use of *ádhi √ sthā* for 'mounting' heaven is found in IX.83.2, 85.9, 86.8.

The adj. *śiprīṇīvān* is way overdetermined, with both an *-in-* suffix and a *-vant-* suffix. The latter appears to be attached to a fem. *śiprīṇī-*. This reminds us of the unexpected fem. for masc. gen. pl. *śiprīṇīnām* in I.30.11 (see comm. ad loc.). However, here I think the impetus to create this nonce form came from the desire to rhyme with *babhīvān* (3b) and esp. *tāvisīvān* (3c).

X.105.6: With Ge, I take *ṛṣvébhiḥ* as a ref. to the Maruts.

Also with Ge, I would supply *vájram* as the obj. of *tatákṣa* in b, even though it seems somewhat odd for Indra to fashion his own mace, rather than Tvaṣṭar (though see I.121.3 adduced by Ge [n. 6b], not to mention the next vs., 7a, where the middle voice of *cakré* supports the interpr.). (The designation *śūrah* seems to guarantee that the subj. is Indra: see 4c *śūra indrah*.)

I have no idea what to do with Mātariśvan here, nor does anyone else. See comm. on the next vs., however.

X.105.7: Vss. 6 and 7 seem intertwined. As was just noted, 7a supplements or indeed repairs 6b, and I will now suggest that Mātariśvan at the end of 6 should be construed with the orphaned simile at the end of 7.

The two words that form pāda b, *hirīmaśó hirīmān*, most likely display a playful riff on *hári-* ‘golden’ (see EWA II.806). In particular, *hirīmaśáh* echoes the likewise phonologically deformed (*háryate...*) *śmaśá (ru-)* in 1b, itself built on *hári-śmaśāru* in X.96.8, as well as *híri-śmaśru-* ‘having a golden beard’, an epithet of Agni (V.7.7, X.46.5) with the same *hírī-* as here. The word ‘beard’ seems to attract word play. Given this web of verbal associations, I’d now emend the tr. to “gold*bearded, golden,” in an attempt to capture the phonological manipulation in *hirīmaśó*. See Old on this word, though he rejects the association with ‘beard’.

The word play continues in c: *-hanu-* ‘jaw’ plays on *-hánāya* ‘to smash’. Ge (n. 7c) is somewhat puzzled about why Indra is described as ‘having an unbroken jaw’. As he points out, there is a surprising amount of attention paid, here and there, to Indra smashing Vṛtra’s jaws, so perhaps the description here of Indra’s intact jaw is a counterweight to Vṛtra’s jaw injury – but the pun it allows with *-hánāya* also has to be taken into account, and that pun becomes cuter when a different word for ‘break, smash’ is used in *áruta-* ‘unbroken’.

The simile *ádbhutam ná rájaḥ* poses yet another puzzle, and the publ. tr.’s “(Indra) is like the infallible airy realm (?)” is worse than useless. (Ge [n. 7c] at least tries to make sense of it.) I don’t have a simple solution, but I can at least now offer something potentially better than what I produced in the publ. tr. We can start with the fact that *rájas-* is regularly a vast expanse to be crossed or measured out, mostly located in or around the midspace, since birds are among its traversers. It could then be used here as a measure of Indra’s own vastness – hence a simile in the nom., as both Ge and the publ. tr. take it. However, I will tentatively suggest a bold alternative – desperate situations call for desperate measures. As noted just above, Mātariśvan hangs at the end of vs. 6 with nothing to do, unintegrated into the rest of the vs.; *ádbhutam ná rájaḥ* is similarly positioned and similarly unintegrated in this vs. It might be possible to read them together, as a disjunctive simile, with an indirect connection to the Vṛtra myth. Recall that in the archetypal Indra–Vṛtra hymn I.32, after killing Vṛtra, Indra, like a frightened falcon, flees across the *rájāmsi* (I.32.14 *śyenó ná bhītó átaro rájāmsi*). Recall also that Mātariśvan is the fire-stealer, who brings fire from heaven (*diváh* I.93.6), from afar / a great distance (*parāvatáh* I.128.2, III.9.5, VI.8.4). I suggest that in 6c/7c Indra’s flight across the *rájas-* is compared to Mātariśvan’s, if we construct the simile from the undigested pieces that end those two vss. – however hard this is to convey in translation. I’d suggest something like the following as revision for both vss.

6. He of lofty might has struck up the praise song with the lofty ones. The champion fashioned it with his swelling strength,

like an artisan (R̥bhu) in accord with his intentions. (Like) Mātariśvan ...

7. Who made his own mace, to smash the barbarian easily -- he, golden-colored, golden, with unbroken jaw -- (fleeing) like (Mātariśvan) across the *ādbhutam* realm.”

This leaves us with the always difficult *ādbhutam*: the standard ‘unerring, infallible’ does not fit well here (nor does it always elsewhere; see, e.g., comm. ad V.87.7). Perhaps, with semantic bleaching in this late hymn, ‘ineffable’.

X.105.8: I take *yajñā ṛdhak* as referring to a sacrifice undertaken by a particular, individual sacrificer -- a sense that seems to be supported by X.93.8. It could also be a sacrifice destined for an individual god (here Indra), an interpr. that is supported by VI.49.10.

The problem in c is *joṣati*. Ge takes it as the 3rd sg. finite verb it appears to be, but this comes at a high cost: he must assign it a meaning ‘please, give pleasure’ (“dass es dir gefalle”) contrary to the sense of the overwhelming number of attestations of this very common root, which consistently mean ‘enjoy, take pleasure’. (Ge [n. 8c] cites only two parallels, which can both be interpr. otherwise.) One could attribute this unexpected meaning to the act. voice, as opposed to med. *juṣáte*, etc., but other active forms have the ‘enjoy’ sense (e.g., *joṣat* in X.81.7). I prefer Old’s suggestion (explicitly rejected by Ge) that *joṣati* is a loc. of a pres. act. part., forming a loc. absol. with *tvé*. Unfortunately this is not morphologically unproblematic: no such part. is attested, and the status of the thematic *jōsa-* stem with full-grade accented root isn’t clear to me. It’s possible that this restrained set of forms are subjunctives built somehow to *juṣá-*, or to a root aor. distinct from that stem (so Wh. Roots and Macd. VGS; see now comm. ad X.158.2) and then misinterpr. -- though both the voice and the accent would have to shift. Nonetheless, the loc. absol. interpr. causes fewer problems than Ge’s finite form.

X.105.9: Verse-final *sácāyóḥ* matches the same form opening vs. 4 (q.v.); I take then both as containing the loc. du. demonstr. *ayóḥ*. Although one might hypothesize that these two identical forms demarcate a section of the hymn ring-compositionally, the contents of these vss. seems too various to admit this explanation. I do think the dual referent should be the same as in vs. 4, namely Indra’s two horses – though the boat makes difficulties.

With Gr and Ge, I take *tretínī* as referring to the totality of the three ritual fires, but the feminine is puzzling. For this reason Old suggests that it might instead refer to fem. entities that might be ‘aloft, upright’ (*ūrdhvā*), like Dawns or prayers, but neither of those comes in a standard triad. The sequence *-ínī bhūt* may anticipate *upasécanī bhūt* in the next vs. (10a), which might account for the unusual fem. I would make a small alteration in the publ. tr., from “threefold one” to “triad.”

The acc. phrase *nāvam svāyaśasam* “boat having its own glory” is left hanging in c, with nothing to govern it; a verb needs to be supplied. Ge goes with “board” reasonably enough, on the basis of *ā√ruh / sthā* passages (e.g., VII.88.3); “make” would be possible on the basis of nearby X.101.2 *nāvam ... kṛṇudhvam*, and “launch/send forth” is also possible (e.g., X.116.9 *prérayam nāvam*). In any case the boat is metaphorical; the question is what it stands for – the sacrifice or a hymn/sacred formulation are the most likely candidates. Cf., e.g., II.42.1=IX.95.2 *íyarti vācam aritéva nāvam*.

X.105.10: Ge (n. 10a and tr.) interpr. *pṛśnir upasécanī* somewhat oddly as a dappled cow that pours (“die bunte Kuh, die zugiesst”), but the same fem. *upasécanī* in X.21.2 he takes as a ladle

(appropriately). I think it must be a ritual instr. here as well, qualified as ‘dappled’ because the substance it contains (melted butter?) has that appearance.

It seems a little odd that Indra should be pouring his own drink, but perhaps it’s of a piece with his making his own mace in vss. 6 and 7.

X.105.11: The first pāda is puzzling. Ge supplies both another measuring unit, to account for the *vā*, and a verb, producing “Wenn dich auch Hundert oder (mehr) dagegen (preisen).” This yields sense: even if 100 or more other poets praise you, Sumitra [the poet of the hymn] has praised you -- presumably better or more effectively. Unfortunately it also requires supplying a lot of material, and it also does not account well for the *prāti* (his “dagegen”): *√stu* does not occur with *prāti*. Old toys with this interpr. among others, incl. the possibility that *prāti* expresses equivalence, as in II.1.8 *tvām sahasrāṇi śatā dāśa prāti* “you are the counter(-part) to thousands, hundreds, tens” (cf. also II.1.15). The publ. tr. adopts this interpr., as it requires supplying no additional material. I now realize that at least as it appears in the publ. tr. it also doesn’t make a lot of sense. The point as I see it is that even if there were a hundred Indras, or heroes like Indra, Sumitra’s praise would be sufficient to include them all. It might be a little clearer if the tr. were altered to “Even if a hundred are counter(part) to you, Sumitra has praised (you) to just such an extent.”

The echo clause with Durmitra is obviously some sort of joke, but of what sort escapes me. These two oppositional clauses with Su/Dur-mitra are matched by the last two clauses of the hymn. The second one, with lower-register *kutsa-vatsām* “Kutsa’s kid [lit. calf]” substituting for the more formal *kutsa-putrām* “Kutsa’s son,” has something of the same jokey feel as the Durmitra clause.

X.106 Aśvins

As discussed in the publ. intro., this hymn has an impenetrable center, and verses 5–8 therefore remain untranslated and will be furnished with minimal commentary here. For the simile as structural principle, the omphalos shape, and the parallelism with the Aśvin hymn II.39 see the publ. intro.

X.106.1: As noted in the publ. intro., the opening of this vs. (and hymn) ... *tād id arthayete* “you two have just this as your aim” is reminiscent of II.39.1 ... *tād id ārtham jarethe* “you two awaken to just this aim,” with the denom. *arthaya-* substituting for the acc. *ārtham* in II.39.1. The finite verb ‘awaken’ in that vs. is postponed to our pāda c: transitive *ajīgaḥ* corresponding to intrans. *jarethe* in II.39.1.

Various suggestions have been made for the (unexpressed) subject of *ajīgaḥ* (see Ge n. 1c, Old) – perhaps most likely is the hymn (or its singer) or Dawn. Properly speaking “you” should be in parens., since the dual obj. is expressed only by *sadhrīcīnā*.

As goal of *yāṭave*, Re suggests supplying *ārtham*, extracted from the verb in pāda a, and cf. X.143.1 (also an Aśvin hymn) *ārtham ... yāṭave*.

What to supply with *sudīnā* is the next question; as Old points out, *sudīnā* can be either masc. du. or neut. pl. He favors the former, and since most of the similes in this hymn refer to the Aśvins, this might seem the better choice. But Ge’s clumsy tr. as a dual (in n. 1d he claims it can only be a dual) characterizing the Aśvins, “die guter Wetter haben,” shows the drawback to this morphological analysis. Moreover, the stem *sudīna-* is generally a neut. pl. and modifies ‘days’

(*áhāni*, etc.). Such an interpr. fits the context better: the point of the simile is that the Áśvins, who are early-morning visitors to the sacrifice, “bring” the days.

The VP *pṛkṣa ā tamsayethe* is a more vivid version of, e.g., I.47.6 *pṛkṣo vahatam aśvinā* “convey nourishments [/provisions], o Áśvins.” As disc. in my *-āya-* book (p. 93), the sense of \sqrt{tams} is difficult to circumscribe, given its rarity and (contrariwise) the variety of preverbs found with it, but ‘tug, yank’ and similar abrupt movements fit the contexts. The preverb *ā* ‘here’ makes the action goal-directed, and ‘haul’ may capture a certain arduous quality. As Re points out, the verb is also playing off (*ví*) *tanvāthe* to \sqrt{tan} in b.

X.106.2: This vs. is full of uncertain words, several of which appear to concern agriculture. I will not pursue the desperate and dubious etymologies and meanings suggested for them – here consult Old, Ge, Re (EVP XVI.74), and EWA s.vv.

Needless to say, I make no claims of certainty about the translation – save for pāda c, which seems surprisingly straightforward. It is probably not an accident that c also has a semi-parallel in II.39.1 *dūtēva hávyā jānyā purutrā* “like messengers serving the people, you are to be called upon in many places” (cf. our *dūtēva ... jāneṣu*). As with vs. 1 and its parallel in II.39.1, one word is postponed: *purutrā* appears in 3c.

X.106.3: Lacking opaque words, this vs. is clearer than the last.

In b we should expect dual **paśū*, as in the YAvs. dual dvandva *pasu. vīra*. We can’t put too much faith in the morphology of this hymn anyway, and I would suggest that the *paśvā* that underlies *paśvéva* simply shows an assimilation to the numerous duals in *-ā* characterizing the Áśvins in this hymn, particularly *pakṣā*, which immediately precedes it across the pāda break — as well as matching the *-ā-iva* → *-eva* pāda-opening similes that abound in the hymn (1d, 2a, 2b, 2c, 3d, 4b, 4c [2x], 4d, etc.).

For ‘bright’ (*citrā-*) livestock, see the passages cited by Ge (n. 3b).

The goal *yájuḥ* in b may play off (*sākaṃ*) *yújā* in pāda a.

As Re points out, the Áśvins are earth-circlers themselves (*párijman-* I.46.14), so it’s somewhat pleonastic to compare them to the same.

X.106.4: The publ. tr. follows Ge, Re (and implicitly Old) in supplying a verb of address (“I call upon you ...”), with the Áśvins and their trailing similes now in the acc. This is partly because of the apparent enclitic *vah*, which needs some structure to attach to, and partly because of the father/son configuration: one of the things sons do to fathers is call on them (e.g., VII.32.3 *putró ná pitāraṃ huve*). But with regard to the latter, it is puzzling why both fathers and sons are in the dual (see Ge’s equally puzzled n. 4a). And the *vah* is even more troubling: it’s plural, and if there’s anything the poet of this hymn knows how to do it’s produce duals! Despite Old’s ultimate rejection of this idea (after toying with it for quite awhile), I accept Henry’s suggestion that the sequence *āpī vo asmé* conceals the simile particle *iva*; Old (in his toying phase) suggests the reading **āpīva asmé*; since *vo* would have been read *va* in this sandhi situation, the real underlying *-va* was wrongly restored to *vo* once *āpī* was separated from *iva*. This eliminates the problematic plural and its need for structure. Since the Áśvins are relentlessly nominative throughout this hymn (even apparently in the untranslatable parts) as well as in the similar II.39, and since “I call upon” is made up out of whole cloth (the *hávam* in d, adduced by Re, is irrelevant: *hávam ā gamiṣtam* there is just a variant on *yájur ā gamiṣtam* in 3b), I would simply eliminate “(I call upon you,) who are” and tr. the first three pādas as a string of nominal similes:

“like friends to us, like fathers, (like) sons, like ...” Although *putrā* lacks a simile marker and it might seem slightly strange to compare the Aśvins to our sons, this first pāda proposes a series of close relationships we might share with those gods.

In the simile *ugréva rucā* I supply Heaven and Earth as the referents of *ugrā*. They are called *ugrā* in X.121.5 and appear with *rucā* in IV.56.1.

On *ūrya*- see comm. ad V.58.4. Since it twice appears with *gopā*- ‘herdsman’ (VII.13.3, VIII.41.4), both times in similes, I have supplied ‘herdsmen’ here as well, esp. since there is an agriculture strain in this hymn.

On the likely meaning of du. *kirāṇā* (presumably separate from *kirāṇa*- ‘dust’) as labia (or at least something “obscene,” so Old), see Old, Ge n. 4c, Re; EWA does not treat it separately as far as I can tell.

X.106.5–8: Although these vss. contain a number of (apparently) interpretable words and phrases (e.g., 5b *mitréva rtā*, 7d *kṣayad rayīṇām*), they glitter like fool’s gold in the mass of material that seems frustratingly always just on the other side of intelligibility. What is most salient about the passage – as others have also remarked – is the phonological and morphological patterning. For example, forms with intensive-type reduplication or near reduplication: 6ab ... *jarbhārī turphārītū* ... *turphārī parpharīkā*, 7a *cārcaram*, 7b *tartarītha(h)*, 7d *parpharat*, 8c *turphārī phārivāram*; adjacent deformations like 7c *kharamajrā kharājṛur*; runs of slightly variant syllables like 7a *cārcaram jāram marāyu*, 6c (*udanya*)*jéva jémanā maderū*, 6d *jarāyṽ ajāram marāyu*. The rare-ish phonemes *ph* and *kh* are especially highlighted (starting actually with *phārvareṣu* in 2a).

X.106.9: As noted in the publ. intro., the exit from the gibberish of the middle omphalos vss. to the relative intelligibility of the outer ones is teasingly accompanied by a promise of “firm standing in the depths.”

In pāda a I again supply “Heaven and Earth” as referents for *bṛhāntā* ‘lofty’. The fem. dual *bṛhatī* regularly modifies *ródasī* the ‘two world halves’, as well as *dyāvāpṛthivī* (IV.56.1, VII.53.1), and a reference to H+E here in the first of the post-omphalos vss. would form a ring with the reference in 4b, the last of the pre-omphalos vss.

śāsuh in c matches the same word in 2b, helping to provide the ring around the omphalos (though not situated in the directly corresponding vs.).

In d, flg. Ludwig (see Old), I take *āmśā* as an elliptical dual referring to two minor Ādityas, *Amśa* ‘share’ and *Bhaga* ‘portion, fortune’ (on the close association between *Amśa* and *Bhaga* see Brereton, Ādityas, 307–8). *Bhaga* is indirectly present in the verb *bhajatam* of this pāda, as well as (perhaps) in *bhāgevitā* in the preceding vs., 8b. Note in passing that the poet of this hymn is named *Bhūtāmśa* (named in 11d and assigned the hymn by the Anukr.).

X.106.10: The agricultural cast of the second vs. of this hymn returns in this, the penultimate vs.

Gr and Re suggest that the hapax *āraṅgarā*- is a word for bee, but this seems unlikely; instead it seems a phonological play on the actual word for bee, *sāraghā*-, that begins the next pāda. Best, with Ge, to leave it untr.; in context it ought to refer to a husbandman or someone/thing responsible for producing milk in cows (assuming *gāvi* refers to an actual cow).

In the publ. tr. I supply parenthetical “(milk)” as the obj. of *érayethe* in the frame, with *mādhu* the corresponding object in the simile. I now think it is more likely that *mādhu* is used metaphorically for milk as well as literally to (bees’) honey and is shared by simile and frame. For the structure of the frame, cf. VIII.89.7 *āmāsu pakvām aīraya(h)* “you raised/produced the

cooked (milk) in the raw (cows).” Note also the final vs. of this hymn, 11c *pakvām mādhu gōṣv antāḥ* “the cooked ‘honey’ within the cows.” I would now slightly emend the tr. to “... you produce the ‘honey’ in the cow ... as bees produce honey.”

On *-bāra-* in *nicīna-bāra-* see comm. ad VIII.40.5. The explanation of this form (also in *jihmā-bāra-* ‘with sloping banks’) as showing a Middle-Indic-type intervocalic voicing of *pārā-* ‘opposite shore, edge’ is very plausible and would fit the register of this hymn.

I attach pāda c to ab, because like them it concerns the production of a liquid substance.

On the hapax *kīnāra-* and its relation to *kīnāśa-* (RV 1x, but common later), both of obscure etymology, see EWA s.vv. It is very likely that our hapax owes its *-āra-* to the phonological deformation that characterizes this hymn.

Ge renders *kṣāmeva* as “wie zwei magere (Tiere),” flg. Sāy. *kṣāmā* = *kṣīnā gauḥ* (see also, tentatively, Scar p. 38 and n. 47); I’m not sure what etymon he is thinking of. But it surely belongs to *kṣām-* ‘earth’, with Old and Re. It should be an elliptical dual, (Heaven and) Earth, as it is in II.39.7. But here the analysis is complicated by the fact that the associated adjective *sūyavasāt* ‘feeding on good pasture’ (*sūyavasa-ad-*) is sg. (and the Pp reads *kṣāma*). I think that the poet created a nonce singular (aided by the vowel-quantity-obliterating sandhi in *kṣāmeva*) and that only the earth, conceived of as a cow (as often), is at issue.

Note that *sacethe* is also found in II.39, vs. 2, though in a slightly different usage.

X.106.11: As noted in the publ. intro., the last vs. of this hymn resembles the last one of II.39 (vs. 8). The praises for the Aśvins are proffered -- *bráhma stómam* in II.39.9, *stómam ... mántram* here – and the poet urges the Aśvins to drive near: *úpa yātam* in both. In both the poet or poets proclaim their achievement with their own name: II.39.8b *bráhma stómam gr̥tsamadāso akran* “The Gr̥tsamādas have made the formulation and praise song”; X.106.11d *ā bhūtāmśo aśvinóḥ kāmam aprāḥ* “Bhūtāmśa has fulfilled the desire of the Aśvins.”

X.107 Dakṣiṇā

This hymn has certain points of contact with the second section of Kakṣīvant’s Prātaritvan hymn, I.125, vss. 4–7, which describe the cosmic rewards for the generous sacrificer.

X.107.1: As Ge points out, dakṣiṇās were distributed at the dawn sacrifice in RVic times, in contrast to the midday distribution in classical śrauta ritual. The emphasis on the coming of light in this vs. fits this ritual fact.

X.107.2: See I.125.5–6, esp. for our second hemistich.

X.107.3: It is quite possible that *kavārībhyah* in b is abl., not dat., as it is usually taken: “It is not *from* the stingy” (so Maurer, p. 299). I think it is likely meant to be both: the dakṣiṇā doesn’t come *from* the stingy, and the great rewards of giving it don’t come *to* the stingy. I would now allow the alt. tr.

X.107.4: Similar cosmic fertility is described in I.124.4–7, though there is little or no overlap in phraseology.

X.107.6: As Ge points out (n. 6ab), the five figures named are the poet and the four principal priests (Brahman, Adhvaryu, Udgātar, and Hotar) of the classical śrauta ritual.

I do not follow Ge (n. 6c, fld by Maurer, p. 299) in seeing the “three bodies of the blazing one” (*śukráśya tanvāḥ ... tisráḥ*) as the three Vedas, but rather as the three ritual fires.

X.107.7: Note the “X and which Y” construction in b.

As Ge points out (n. 7c), there is gender attraction in the nominal pseudo-izafe clause *yó na ātmā*, which qualifies neut. *ánnam*.

X.107.8: Although it is tempting (a temptation that Ge and Maurer gave in to) to tr. the pf. *mamruḥ* as presential, “they do not die,” the parallel pf. *īyuh* has preterital value, and as Kū demonstrates (370–71), in older Vedic the pf. of *√mr̥* had past-related usage.

Note the appearance of both *víśva-* and *sárva-*, overlapping here in the late RV. Here the older form *víśva-* appears in the very common fixed phrase (*idám*) *víśvam bhúvanam* “(this) whole world (here)” (I.73.8, 102.8, etc. etc.), while its replacement *sárva-* is found in freer usage.

X.107.9: Another izafe-type construction, ... *vadhvām yā suvāsāḥ*. There are a surprising number of such nominal relatives in this hymn.

The exact sense of *antaḥpéyam sūrāyāḥ* “the right to the inner drinking of liquor” is unclear to me (and others); it seems odd to grant to the pious and generous sacrificer access to the generally forbidden, or at least disdained, *surā*. For speculations see Old, Ge, Re.

In d the obj. **tān*, referent of the rel. *yé*, has been gapped (so already Sāy.; see Ge n. 9d). The defeated uninvited (*áhūtāḥ*) contrast with the invited (*hūtāḥ*) dakṣinā-bestower in 5a.

X.107.11: The first hemistich contains two elementary etymological figures: *-vāho vahanti* (a) and *-vṛt ... vartate* (b), both involving root noun cmpds.

[X.108 Saramā JPB]

X.109 All Gods [Brahman’s Wife]

On my interpr. of the hymn see not only the publ. intro. but the detailed treatment of it in my 2016 article “R̥gveda X.109: The ‘Brahman’s Wife’ and the Ritual Patnī,” in *The Vedas in Indian Culture and History: Proceedings of the Fourth International Vedic Conference (Austin, Texas 2007)* (ed. Joel P. Brereton), pp. 207–20, which also discusses the tangled history of its interpr. To sketch my views briefly, the hymn is one of several in the late RV that concern the fraught introduction of the ritual Patnī into solemn sacrifice. The hymn both proclaims the great benefits that the Patnī brings to the sacrifice and also discounts the possible risk of placing her on the ritual ground in contact with the gods. The implausible interpr. that held sway previously, that this is a very early version of a tale in the Viṣṇu Purāṇa about King Soma’s abduction and return of Bṛhaspati’s wife, can now fortunately be discarded.

My treatment of the hymn assumes an omphalos structure: the initial and final vss. (1, 7) present the “offense” (*kilbiṣā-*) and its expiation; the outer ring (2, 6) the giving back of the wife; the inner, omphalos vss. (3–5) the wife’s activities on the ritual ground.

As noted in the cited article, there are two not-entirely-parallel versions of the hymn in the AV: Ś V.17, P IX.15, whose interrelations I discuss in n. 54 of the article. Jeong-Soo Kim’s edition and tr. of AVP VIII and IX (2014) appeared long after I wrote the article and while it was still languishing in press, but the Kim treatment does not add much relevant.

The hymn is too short for its position in the text; we should expect 11 vss. I discuss this question in connection with the two AV versions in n. 54 of the art. cit.

I would now add a few things to the interpr. found in the article, inspired by the difficult vs. 5 (for more on which see below), which I did not treat in that article. Although I still believe that the hymn primarily concerns the ritual Patnī, I think it also has connections to the Brahmacārin, the Vedic student, whose designation appears in vs. 5 for the only time in the RV. Like the Patnī the Brahmacārin is an innovation in the religious structure: he is well established in the AV – the word *brahmacārín-* appears dozens of times, along with a fair representation of the abstract *brahmacārya-* – but neither the word (save for our vs. 5) nor the concept is Rigvedic. The pioneering reformers responsible for the introduction of the ritual Patnī were no doubt also implicated in the development of celibate studentship, and they must have been aware of the conceptual polarization that the Patnī and the Brahmacārin represented – one embodying sexuality and fertility, the other chastity and fervent austerity. Our hymn has some phraseological and conceptual connections with the AV hymn “extolling the Vedic student (brahmacārín)” (Whitney’s title): AVŚ XI.5 ≅ AVP XVI.153–55. In addition to the word *brahmacārín-* itself, also *tāpas-* (vss. 1, 4), a word that appears in practically every vs. of the AV Brahmacārin hymn. Other connections will be noted ad the individual vss.

X.109.1: As noted in the art. cit., the speakers in this vs. are mostly natural forces, esp. the waters both in their own form and as the boundless ocean (*ākūpārah salilāḥ*). I suggest there that since in later Vedic waters are prescribed for the removal of a *kilbiṣā-*, esp. at the final bath (*avabhṛtha*) of the Sacrificer and his Wife in śrauta ritual, the waters may owe their prominence in this vs. to that function. I cannot so readily account for the other players. However, note that Mātariśvan is found in the AV Brahmacārin hymn along with the waters (*mātariśvan ... apsú*: Ś XI.5.13≅P XVI.154.4) and *salilā-* in the same hymn (Ś vs. 26 = P XVI.155.6).

Both *salilā-* and *tāpas-* are ordinarily neut., but appear to be masc. in this vs. (so Old), perhaps as animatized forces? Re (EVP XVI.162) suggests that *vīlūharās tāpa(h)* is the “resolution” of an avoided three-member compd **vīluharastapas* (no accent given), an explanation I am somewhat sympathetic to, though it would help if he had indicated what he thought it meant and what its structure would be. Perhaps a 2nd member dvandva *-haras-tapas-* in a bahuvrīhi: *“(possessing) staunch rage and fervor”? But we must deal with the ill-assorted elements we have in the text.

As also disc. in the art., the *brahma-kilbiṣā-* could be either an offense committed against a brahman or by him. I opt for the former (as do most interpr.). The precise offense, in my view, is the separation of the Wife from her husband when she performs her duties on the ritual ground and interacts with the gods there, in what could be interpr. as sexual contact. Even though the brahman probably initiated the ritual, the separation could technically be considered a *kilbiṣā-* committed against him.

X.109.2: This is the first mention of the “giving back” of the Brahman’s wife. The list of gods involved in her return remind us of the gods who serve as husbands to the bride before she is married to her human spouse in the wedding hymn (X.85.40–41) – as I am not the first to notice. The first and last gods there are Soma and Agni, matching the endpoints of our list here. However, the middle figure in the wedding hymn is a Gandharva – not a good functional match for Varuṇa, or Varuṇa and Mitra, here. As I suggest in the art. cit., the Third Pressing, in which the Wife has a major role, with simulated sexual contact with the gods, is dedicated to the

Ādityas, whose two principal gods are Varuṇa and Mitra – this ritual episode may be alluded to here, but see also below.

There is much discussion about the derivation of the agent noun *anvartitā*: to *ānu √ṛ(t)* (the Pp. interpr.) or *ānu √vṛt* with simplification of **anuvart-* (see Old, Ge n. 2c, etc.)? Old favors *√ṛ(t)* and is fld. by Ge, Tichy (Nom. ag. 126, flg. I. Eichner-Kühn), with the sense ‘demand-er back’ (Zurückforderer). But since the few passages adduced for this lexeme are late and seem divergent in sense, I favor the connection with *√vṛt* (as does Re, but he thinks it means “consentant”). The lexeme *ānu √vṛt* is reasonably well attested in both RV and AV and means ‘follow after, escort’, which fits the context well. The AV has a future *ānvartīsyē* in a wedding context (Ś XIV.1.56=P XVIII.6.4). The form is phonologically ambiguous in the same way as ours, but Wh (AV ad loc.) and Kim (Index verborum s.v. *vart*) both interpret as **ānu vartīsyē*. AVŚ XIV.1.56 *idāṃ tād rūpāṃ yād āvasta yōṣā, jāyāṃ jijñāse mānasā cārantīm / tām ānvartīsyē sākhibhir nāvagvaiḥ, kā imān vidvān ví cacarta pāsān* Wh “This [is] that form in which the young woman dressed herself; I desire to know with [my] mind the wife moving about; I will go after her [/escort her? swj] with nine-fold comrades: who, knowing, unloosened these fetters?” The “fetters” in d are “the fetters of Varuṇa” (mentioned explicitly in the two flg. vss., XIV.1.57–58), with which the bride is briefly bound at the beginning of the wedding ceremony, before being released to marriage. That Varuṇa is the *anvartitā* in our vs. seems significant.

I render *mitrāḥ* here as ‘ally’, an appositive to *vāruṇaḥ*, rather than as the god Mitra (contra the standard tr.), primarily for this reason: i.e., that the idiom *ānu √(v)ṛt* is also found in a passage that links Varuṇa (alone) with the wife (*jāyā*). It is also the case that there’s a singular verb and agent noun, though that is not so strong an argument, since singular nouns in series can take singular verbs.

X.109.3: This vs. has received a number of (over-)elaborate interpr., bending it to fit the purāṇic story (or whatever scenario the interpr. favors). I cannot engage with these in detail; see the extensive disc. of, e.g., Old, Ge, and Doniger (275–77). Suffice it to say that the supposed plot the interpr. see does some violence to what is actually in the text.

In my interpr. the vs. concerns the Patnī’s activity on the ritual ground. Her presence there is announced in b. In pāda a the standard interpr. assume that the hand belongs to someone else, but I take it to be hers (see pāda-final *asyā(h)*). Only she can touch and transfer the ritual substance from the earthly to the divine realm. Her exclusive role in this transfer is further treated in pāda c: she does not allow a proxy or messenger to be sent; she must do it herself. As I say in the art. cit., the mid. perfect *tasthe* with dat. inf. may go too easily into idiomatic Engl. (“stand for” = “allow, permit”), though Ge’s “gestattete” is sim. (Kü doesn’t treat this passage.) Note the double dative infinitival phrase *dūtāya prahyē*.

I do not have a particularly good explanation for pāda d. I do not think it has to do with tension and hostility between the two varṇas, brahmins and kṣatriyas, although I think this vs. probably contributed to the reorientation of this expanded hymn in the AV to just this issue. (See n. 54 in my 2016 art. for disc.) Varṇa-consciousness barely exists in the RV, though it does begin to surface in the later parts of the text. But even there the relation between king and priest is generally one of cooperation and complementarity. I think such a situation may be depicted here: she is the wife of the Brahman, quite possibly a/the priestly sacrificer, but the correct performance of the sacrifice ensures the continued successful function of the overarching social and political structures – the kingdom and its ruler. Note also that the AV Brahmacārin hymn contains a very similar statement: AVŚ XI.5.17=AVP XVI.54.7 *brahmacāryeṇa tāpasā rājā*

rāṣṭrām ví rakṣati “By brahmacarya and by fervor the king protects his kingdom.” In both cases kingship is supported by the characteristic activity of priestly personnel.

X.109.4: This vs. continues the celebration of the Patnī’s critical role in the sacrifice. It is a canny move on the part of the ritual innovators who recently introduced the Wife into the sacrifice to ascribe these praises of the Wife to “the ancient gods and Seven Seers” (*devāḥ ... pūrve, saptaṛṣāyaḥ*), thus providing this innovation with a supposedly primordial pedigree.

My interpr. of what they say is quite different from the standard, turning on a different understanding of the hapax *durdhā-* (besides the standard tr. and comm., see also Scar 252). It is generally taken to mean ‘disorder’; by contrast I interpr. it as ‘difficult to place’. It is not that she causes trouble in heaven, but that she performs difficult and dangerous tasks in the sacrifice – particularly the preparation of the sacrificial animal – and transfers the perilous material to the divine world.

The standard interpr. also must take *úpanītā* as ‘led away’ (Wh [AVŚ V.17.6] ‘led away’, Don ‘taken away’), referring to her supposed abduction. But *úpa* doesn’t mean ‘away’, but its opposite ‘up to, near’; moreover *úpa √ nī* has a technical idiomatic meaning: ‘initiate’. Given the presence of *brahmacārín-* in the next vs. (5a), it is difficult to believe that this technical meaning wasn’t in the poet’s and audience’s minds, since already in the AV the Brahmacārín undergoes Upanayana; see, e.g., AVŚ XI.5.3. Here I think both the additive meaning ‘led near’ and the technical ‘initiated’ are meant: the Wife is led into intimate association with the personnel and activities of the sacrifice, and she is also initiated as a performer in her own right. (In śrauta ritual the Patnī undergoes Dīkṣā along with her husband.)

X.109.5: For another take on this vs., which I find no more plausible than the others, see HPS (B+I 120–22).

This vs. contains the only occurrence of *brahmacārín-* (or *brahmacārya-*) in the RV. As noted above, I think the poet who lobbies so effectively for the new ritual Patnī in this hymn also infuses the hymn with hints of the Brahmacārín. I also think the poet was well aware of the literal sense of the compound ‘practicing *brāhman*’, in addition to its newly developed technical sense. This is immediately evident in the double etymological figure that opens the vs.: *brahmacārī carati véviṣad víṣaḥ*. Here I think that *carati* functions as an auxiliary, reinforcing the iterative value of the participle *véviṣat* (“keeps constantly laboring”). If *brahmacārī* is interpr. in its literal sense, this would mean that the priest/poet, who produces formulations, just keeps doing what he’s always been doing in the ritual, while the newly introduced Patnī, the “wife of the formulation” (*brahmajāyā-*), a possible interpr. of that cmpd. (see 2016 art.), brings novelty to the ritual. If *brahmacārī* is interpr. in its new idiomatic sense, the student keeps accomplishing the many types of cosmic deeds attributed to him in the AV Brahmacārín hymn.

The second pāda is difficult, in part because *ékam* can be interpr. in diametrically opposed ways: does he become *one* limb of the gods, of which there are potentially more, or the *single* limb of the gods, of which there are no more? As is often my technique, I think it can be interpreted as both. On the one hand, if *brahmacārī* refers here to the standard ritual formulator, the priest-poet, pāda b may be pointing out that he is now (just) one limb of the gods; the new Patnī is another, and together they will form a more effective team. This could also be true if *brahmacārī* refers to the student (forming a polarized pair with the Patnī), but I think “the single/only limb” interpr. fits the student better – if we’re allowed a more expansive interpr. of *āṅga-* ‘limb’. In the wedding hymn X.85.30 sg. *āṅgam* clearly refers to the bridegroom’s penis;

the designation “one/single limb” would make that referent even clearer here. Of course, it’s a shocking paradox to call the chaste student “the penis of the gods” – but the kind of shock a RVic audience would enjoy. Moreover, the Brahmacārin is credited with an astounding and unambiguous sexual act in the AV Brahmacārin hymn: Ś XI.5.12 = P XVI.154.2 *bṛhác chépo ’nu bhūmau jabhāra / brahmacārī siñcati sñau rétaḥ pṛthivyām* “He “bore down” his lofty penis on the earth; the Brahmacārin pours semen on the back, on the earth.” (On the sexual idiom *ānu √ bhr̥* see my 1981 ‘A Vedic sexual pun: *ástobhayat*, *anubhartrī*, and RV I.88.6” [*Acta Orientalia* 42 (1981[82]) 55-63].) It seems that the very fervor of his chastity makes him prodigiously sexual.

I don’t quite know what to do with pāda c, which has provided (weak) support for the abduction narrative – though I now have a few new ideas.

The first problem is *tēna*: this is ordinarily (incl. in the publ. tr.) taken as an instrument instrumental: “by/with him,” referring to the Brahmacārin; it could alternatively be an instr. of accompaniment: “... discovered the wife along with him” or “along with him, Bṛhaspati discovered ...” Or it could be an adverbial “in this way ...” None of these possibilities is particularly compelling, though I now weakly favor the last.

The subject *bṛhaspātīḥ* is, not surprisingly, generally taken as the god, but I now wonder. I think it is a multifaceted pun: in the RV this well-attested compound is doubled by the less common, but more transparent *brāhmaṇas-pāti-*, and the genitive 1st members of these compounds could easily be replaced by the stem form *brahma-*, which we find in *brahma-jāyā-*. In other words *bṛhaspāti-* here can count as the husband of the pair, a putative **brahma-pāti-* – and he also can be taken as a different realization of *brahma-cārīn-* ‘practicing formulations’, which begins the vs. In other words, I now think that *bṛhaspātīḥ* here designates not a god, but the husband of the *brahmajāyā-*, from whom he has been separated during her activity on the ritual ground. He now finds her: this is the beginning of the “return” of the Brahman’s wife, which will occupy the next vs. And just as Soma was the first to give her back in 2a, here she is led to her husband by Soma.

The simile in d is interpretable if *juhū-* ‘ladle / tongue’ is taken as standing for Agni (see VI.66.10 for “tongues of fire”). It is a glancing allusion to the myth of Agni’s flight from his ritual role and rediscovery by the gods.

X.109.6: The vs. corresponding to vs. 2 in the outer ring of this omphalos hymn; see publ. intro. and art. cit.

As disc. in the cited article, “kings” in the plural is almost never used of mortal kings in the RV, but only of the Ādityas. As the deities of the Third Pressing, their particular participation here is understandable. Once again, the scenario of the supposed hostility between the kṣatriya and brāhmaṇa varnas is subverted by closer attention to the actual text.

On *adaduḥ* (a), *daduḥ* (d), and the gapped verb of b, see the art. cit. There is no justification for the modal interpr. of b and d in the standard tr., and I take them all as preterital. Everyone involved in the ritual, gods and mortals alike, have restored the wife to her husband after her ritual activities.

X.109.7: This vs. forms a ring with the first, particularly in their shared *-kilbiṣā-* – an esp. nice example of a ring, because the second example cancels out the first: the offense has been expiated. On the possible ref. to the avabhṛtha or “final bath,” taken by the Sacrificer and his Wife in śrauta ritual, see art. cit.

The standard tr. have some trouble with the instr. *devaīḥ*; they must assume that the mortals make expiation with the help of the gods. But in my interpr. the gods are equally guilty of the offense of separating the wife from her husband and participate in the expiation.

The last hemistich of the hymn seems only loosely connected to it, expressing the good results that the participants in the sacrifice, both gods and men, share (c). I see no reason to bring Viṣṇu into d (like Ge, e.g.). Although *urugāyá-* does elsewhere modify Viṣṇu, he is not the only typical referent. Instead the form often refers to the wide space so prized by Vedic people – see VI.28.4, where cows wander *urugāyám ābhayam* “(space) that is wide-ranging and free of fear,” and the repeated passage VII.35.15=X.65–66.15, where the gods are asked to grant *urugāyám* to us. In neither case is Viṣṇu appropriate.

Note the non-standard gerund suffixes on *kṛtvī* and *bhaktvāya*.

X.110 Āprī

A fairly unremarkable Āprī hymn: an 11-verse version with Tanūnapāt in vs. 2 (like I.188, III.4, VII.2, IX.5) instead of Narāśaṃsa (like II.3, V.5, X.70). I.13 and I.142 have both, with Tanūnapāt in vs. 2 and Narāśaṃsa in vs. 3.

X.110.1: On the phrase *mānuṣo duroṇé*, see comm. ad X.104.4, also (for *duroṇé* X.11.2).

On the accent on *vāha* in *ā ca vāha*, see comm. ad I.74.6. At least functionally we do not seem to be dealing with subordinating *ca*, *pace* JSK (DGRV I.243–44) and others.

X.110.2: On the phrase *pathá ṛtasya yānān*, see Re’s extensive disc. (EVP XIV.119). To my mind we are dealing with the crossing of two expressions: on the one hand, *ṛtasya pānthā-* “path(s) of truth” is a common expression (I.46.11, 136.2, etc. etc.); on the other, the phrase *ṛtām yaté* “to the one going to / following the truth” (though with the part. of \sqrt{i} , not $\sqrt{yā}$) is a fairly common pāda-ending, incl. in the Tanūnapāt vs. in the Āprī hymn I.188.2. I think they’re combined here, with “truth” as goal supplanted by the genitive. This seems easier than assuming a decomposed **ṛta-yāna-* [no accent given] as Re does.

Pāda d contains a *ca* whose coordinating role is not immed. clear. JSK (DGRV I.223) plausibly explains it as connecting the *kṛṇuhi* clause of cd with the *svadayā* clause of ab, but preceded by the heavy participial phrase that occupies all of c. That phrase itself contains an *utá* conjoining the acc. objs. *mānmāni* and *yajñām*.

X.110.5: Pāda c consists of a single voc. phrase, with a single accent, on the initial syllable of *dévīḥ*.

X.110.6: On *suṣvāyantīḥ* see comm. ad the other RVic occurrence of this stem in VII.36.6, as well as my *-āya-* book (pp. 52–53), where I argue that our form is based directly on VII.36.6.

X.110.7: I take *yājadhyaī* as a purpose inf. with *mīmānā*, with the two Hotars as subjects of both (so also Re). Ge (fld. by Keydana, Inf. 61) instead construes it as a predicated inf. with “I” as supplied subj. (“... will ich verehren”). But in other Divine Hotar vss. in Āprī hymns, it’s the Hotars who sacrifice; they aren’t sacrificed to. Cf. I.13.8=I.142.8=I.188.7 *yajñām no yakṣatām imám* and II.3.7 *yakṣataḥ ... / devān yājantau*. Acdg. to his n. 7b, he bases his tr. on VII.2.7 *mānye vām ... yājadhyaī*, but that is better interpr. as “I think you are to perform the sacrifice, rather than his “... euch gedenke ich zu verehren.” In neither interpr. is there a finite verb in this

vs. In this type of “mentioning” context a finite verb does not seem necessary, but the vs. does contain three pres. participles that could be taken as predicated: *mímānā* (b), *pracodáyantā* (c), and *diśántā* (d).

The “dwelling of Manu” (1a) has now been further specified as the “sacrifice of Manu.”

A more significant piece of chaining is *prācīnam ... pradísā* (d), which picks up the same phrase in 4a. In 4 the “east-facing” substance was the barhis; here it is the light (*jyótiḥ*), which is presumably the ritual fire (so Ge n. 7d, referring to “all commentaries”). The root noun cmpd *pradís-* occurs three times in this hymn, twice as instr. (4a, 7d), once as loc. (11c). This stem also has several different senses, rather like its English counterpart ‘direction’ – either as a geographical term, leading ultimately to its use for quarters or regions, or as an instruction, order, or command (see Scar 222–23). In our 4a it is clearly the former, in our 11c clearly the latter. In my opinion the one in our vs. is a modulation from one to the other and can be interpr. in both senses. Ge seems to ignore the strong phraseological agreement between 4a and 7d and interpr. *pradísā* only in the ‘instruction’ sense (“mit ihrer Weisung,” versus 4a “in der Richtung der Erde”). My tr. is meant to capture both: the Hotars direct the fire towards the earth’s eastern direction, just as the barhis was arranged in 4a, but they also do so at their own direction.

X.110.8: On Iḍā’s instruction of Manu, see I.31.11 *īlām akṛṇvan mānuṣasya śāsanīm* “They made I. the instructor of M.”

Barhis as *syonā-* for gods to sit on returns from 4a, d.

X.110.9: The verb *āpiṃśat* picks up *sukra-pís-* in 6d.

The 2nd hemistich echoes and scrambles 3cd: *hótā ... yakṣi iṣitó yājīyān* matched by our ... *hotar iṣitó yājīyān ... yakṣi*.

X.110.10: I take the Lord of the Forest, the Butcher, and Agni as three different entities because of the pl. verb *svadantu*. In II.3.10 the three figures appear in different pādas and have different associated verbs. Ge merges the Butcher and Agni, but doesn’t mention the number of the verb.

The phrase in 2b *mādhvā samañjān svadayā* is picked up and parceled out here: *samañjān* (a) ... *svádantu mādhunā* (d). In b *pāthaḥ* echoes *pathāḥ* of 2a, though they are entirely different words.

X.110.11: More echoes: *vy āmimīta yajñām* recalls 7b *mímānā yajñām*. On *pradísī* see comm. ad vs. 7. And *adantu* (d) plays on *svádantu* 10d.

X.111 Indra

On the hymn’s reflections on the connection between poetry and deeds, esp. in vss. 1–4, see the publ. intro.

The hymn is overstuffed with *hī*’s, esp. at the beginning, often without clear function: 1d, 2a. 3b, also 6a. The publ. tr.’s attempt to render them all as causal may be misguided.

X.111.1: The interpr. of pāda b is somewhat open-ended: does *yáthā-yathā* mean “exactly as ...” (so, e.g., JSK, “Āmreḍitas ... [JAOS 123 (2003): 785]) or, its opposite, “in whatever way” (which Klein also allows as possible for this passage)? I favor the latter, in part because it seems a loose paraphrase of the poet’s patronymic Vairūpa ‘having many/different forms’, in part because the beginning of the hymn seems to celebrate the range of poetic possibilities.

There are several different ways to take *satyañ ... kṛtébhiḥ*; Ge's anodyne "durch seine wahrhaften Taten" is perhaps the most obvious, with *satya-* modifying nominalized *kṛtá-*; Lü (508–9) flips the grammatical values, with *kṛtá-* modifying nominalized *satya-*: "gemachten Wahrheiten," which he further specifies as Satyakriyas (truth-formulations). This seems to me to go too far, esp. as it's *ṛtá-* that participates in RVic truth-formulations. My interpr. reads *kṛtá-* twice, both as nominalized 'deed' and as an adj. predicating *satya-* ("made real"). As indic. in the publ. intro., I think the point is that poets by celebrating Indra's deeds give them reality – this is a minor variant on the IE "imperishable fame" theme that pervades archaic IE poetry: it is not enough to *do* something heroic; it needs to be enshrined in words, words artful enough to last. That Indra, the hero (*vīráḥ*), realizes this is shown by pāda d.

X.111.2: HPS (B+I 229–30) takes this vs. as a depiction of the Vala myth, with the "cows" (*góbhiḥ*) being the cows trapped in the cave, not (with Ge n. 2b) hymns. Interpr. the vs. in this way helps account for its place in the hymn and esp. the first pāda (with *hī*). Since in the Vala myth Indra functions as poet, opening the cave by his true and well-formulated speech, he understands the power of the ritual speech produced by human poets. I now take pāda a as further explaining 1d. In 1cd it is said that the poets make Indra's deeds real (in poetry) *because* (*hī*) "he is known to long for song." Pāda 2a explains Indra's particular penchant for songs: *because* (*hī*) his own hymnic vision (*dhītīḥ*) "flashed out" effectively when he was positioned at the Vala cave, just as the same type vision flashes out from the human poets on the ritual ground with the same efficacy.

In pāda b I would now replace "the cows [=Dawns/hymns]" with "the cows (from the Vala cave)."

Indra's mother is identified as a *gr̥ṣṭī-* in IV.18.10, the only occurrence of this word in the RV, just as the metronymic *gār̥ṣṭeyá-* only appears here. The tr. "heifer" is a bit misleading, since the usual def. of the English word is "a young cow, esp. one that has not given birth to a calf." But "young cow" is flat, and "heifer" conveys the tone better, I think.

Pāda c is a clearer version of pāda a; that is, it depicts Indra's action at the Vala cave. The presence of *rāveṇa* is a tipoff, because this word is almost always used in a Vala context for the roar that breaks open the cave (e.g., *valāṃ ruroja ... rāveṇa*).

I interpr. *mahānti cīd ...* as a concessive nominal clause, in great part because *purūṇi cīd* in 4c invites the same treatment; both modify *rājāṃsi*. See also *mahīm cīd* in 5c.

Acđg. to Kü (503), the indic. pf. of *√vyac* is only stative presential, and he so tr. this passage. But in this mythological context a presential interp. seems strained; see HPS's preterital "... hat er ganz umspannt."

X.111.3: My interpr. of the first pāda differs considerably from the standard. In my view (see publ. intro.) it asserts the crucial role of poetry in Indra's self-fashioning: he knows about his deeds and powers from hearing about them in praise poetry. Contra the Pp (and all standard interpr.) I take the Saṃhitā form *śrútyā* as standing for abl. *śrútyās*, not dat. *śrútyai*. (For abl.-gen. in *-yās* to fem. short *i*-stem, see, e.g., *yuvatyās* to *yuvatí-*).

The referent of *asyá* 'of this' is, broadly, the Indra mythology related in the first vss. as well as what is to come.

It's a good thing that *he* knows it, because the rest of the vs. is deeply puzzling to the rest of us. HPS (229 n. 106) claims that it also concerns the Vala myth. Although this would be both convenient and make sense, since 2 and 4ab are Vala vss., I see no points of contact – although

there's a cow, it's singular, and the Vala cows are plural. As Old and Ge (n. 3c) point out, pāda c, with *mēnā-* and a cow, is reminiscent of the likewise deeply puzzling I.121.2, and I have interpr. our passage in light of my own interpr. of that vs. (see comm. ad loc.). Here I think the context is (the time of) dawn, and the *mēnā* and the cow are both Dawn, who becomes Indra's consort. The dawn context is set in pāda b, where Indra becomes the "path-maker" for the sun, implying a time before the sun rises and begins its journey across heaven.

The second hemistich must continue pāda b, both thematically and syntactically, because the accent on *bhúvat* in c can best be explained if it's still under the domain of *hí* in b -- so Old, implicitly contra Ge; alternatively Scar (147) makes the first part of c an unmarked subord. cl ("Wenn ..."). In this hemistich I read both *góḥ* and *pátīḥ* twice. I first take *góḥ* as abl., in the phrase "making a wife from a cow," and then as gen. with *pátīḥ*: "husband of the cow." In both cases the cow is Dawn. *pátīḥ* is positioned between two adjacent genitives and can also be read with flg. *diváh* as "lord of heaven" (for Indra as "lord of heaven" see VIII.13.8, 98.4–6). This is a bit tricky, but the overall interpr. makes at least a bit more sense than the others.

X.111.4: The first hemistich returns to the Vala myth, signaled most clearly by the presence of the Aṅgirasas. Although there are no other unambiguous exx. of *arṇavá-* 'flood' referring to Vala (pace Ge n. 4a and HPS [Vedisch *Vrata* 47 n. 84], the occurrence in VIII.40.5 is not at all clear), but several occurrences of *udadhí-* 'water-holder, reservoir' probably do refer to Vala (X.67.5, possibly VII.94.12), and it is not difficult to think of Vala as a reservoir of cows/dawns/waters, and by some semantic fiddling as a flood: "flood" – i.e., the contained (cows/dawns/waters) -- can be used to name their container, the Vala cave.

The statement "Indra by his greatness confounded the commandments of the great Flood [=Vala]" (*índro mahnā mahatō arṇavāsya vratāmināt*) is quite extraordinary in a RVic context. *vratās* are otherwise almost the exclusive province of gods, esp Varuṇa. (On *vratā-* in general see HPS, Vedisch *Vrata*, and for important adjustments to HPS's views, Brereton, Ādityas, 69–81.) When construed with $\sqrt{mī}$ (+/- *ā* or *prā*), the syntagm is almost always negated: "he/they [generally mortals] do/did *not* confound the *vratā(s)*"; in the few positive occurrences the subjects who do confound the *vratas* [again mortals] are inviting divine punishment, though often hoping for mercy. Acdg to HPS, who discusses this vs. at length (Vedisch *Vrata* 46–47), this is the only place in which a "widergöttlich" being has *vratas*. He reasonably asks what Vala's *vratas* might be and concludes, also reasonably, that it is the lie (*drúh-*), untruth (*ánṛta-*). The ascription of *vratas* to Vala is a remarkable index of his power, almost an indication that his power is equivalent to that of the gods, a sense encouraged by assigning greatness to both Indra and Vala in this vs. (*mahnā mahatāḥ*). If this power is linked to Untruth as the gods' is to Truth, the picture is almost like that of the uneasy Avestan balance between those two forces – a hint of Zoroastrian dualism that does not get further developed in Vedic. Here, happily, Indra's own greatness is sufficient to overcome great Vala's *vratas*, but the fact that the verb is *amināt* (per Pp, or possibly *ā-amināt*), whose subjects in this formula are otherwise disobedient mortals, is unsettling; it casts Indra in the role of a less powerful being challenging the implicitly legitimate commandments of an implicitly legitimate and powerful authority.

The lexeme $ní\sqrt{tan}$ does not otherwise occur in the RV, but in the AV and early Saṃhitās there are various plant names based on it, presumably meaning 'stretch(ing) down' of roots. See Griffiths's disc. ad AVP VII.5.6. I take c to concern the fixation of the earthly realms. On *purūṇi cid* see comm. ad 2d, also 5c.

The final word of d, *satyātātā*, may form a ring with *satyañ* in 1c, bringing to a close the section of the hymn concerned with the intertwining of divine deeds and poetry. The form is universally taken (incl. by the publ. tr.) as an instr. to *satyātāt-*. Acdg. to the publ. tr., Indra performed these deeds by means of the realization provided by their poetic encapsulation, by the Aṅgirasas (as in the publ. tr.) or in general. An alternative analysis could start with the stem **satyātāti-* (attested 1x in the RV, but as an unaccented voc.), which would then be in the loc. (as often with *-tāti-* stems; e.g., *devātātā*, *sarvātātā*). In this case it would mean “buttressed their buttress in reality / in poetic realization.” The two are equally likely (or unlikely). We should also consider *satyātātā* in conjunction with the unexpressed, but implied, linkage of Vala and his *vratas* to Untruth, discussed immed. above. Under this interpr. Indra did his various deeds *by means of truth/reality* or rooted the realms and buttressed their buttress *in truth/reality* (depending on whether the *-tāt-* or *-tāti-* stem is selected).

X.111.5: This vs. is a bit of a mythological grabbag; one of its points, esp. in the first pāda, may be to reestablish the superior power of Indra after the destabilization in the previous vs., 4ab. The first hemistich echoes III.31.8. Bl (RV Reps, ad III.31.8) dismisses our vs. with characteristic acidity: “[III.31.8] has furnished material for a hackneyed, commonplace stanza, in which the repeated pāda is varied insipidly, to wit X.111.5. ... the overshrewd thought of an epigonal poet ...” It is always bracing to read Bl at his most censorious, but his judgments need not be accepted.

Pāda d is marked by the heavy etym. figure *cāskambha ... kāmghanena skābhīyān*, where, cleverly, each word begins with a different consonant.

X.111.6: Another etym. fig.: *vṛtrahā vṛtrām*.

The verb *ástar* can be either 2nd or 3rd sg.; Ge opts for the latter, while I do the former. It doesn’t really matter: it’s a modulation form between the 3rd sgs. of vs. 5 (ending with *cāskambha*) and the 2nd sgs. of 6cd (*jagantha .. abhavaḥ*).

Pāda b lacks a verb and can be construed either with pāda a (so publ. tr.) or c (Ge). Again it doesn’t really matter.

X.111.7: The first hemistich is relatively straightforward, the second bristling with difficulties.

The only real question in ab is whose *ketús* are at issue – the sun’s or the dawns’? Though Ge (see also JS, Root nouns 41) takes the beacons to be the sun’s (with *asya* dependent on *ketávaḥ*), I think they are actually the dawns’. Although *ketú-* can be associated with both the sun (e.g., X.37.1 ... *ketáve ... sūryāya* ...) and the dawns (e.g., VIII.43.5, X.78.7, 91.5 *uśásām iva / ná ketávaḥ*), it is my impression that the connection with dawns is more common. I therefore take *asya* as limiting *citrām ... rām* “glittering gift,” referring to the sun’s light or even to the sun itself.

My real departure from the Ge and Old interpr. comes with c. They take c and d as antithetical clauses concerning the not-yet-risen sun (c) and the unknowable goal of the sun once set (d). Flg. Ludwig, they both take *yāt* in c as a neut. pres. part. to *√i* (construed with *ā* “coming here”), complementary to (*púnar*) *yatāḥ* “going away again.” The *yāt* in c is therefore not (or not primarily) the subordinating conj.; eliminating an overt subordinator requires the accent on *dadrśé* to be explained: Old suggests antithetical accent; Ge (n. 7cd) adds the possibility of haplology **yád yád*. All of this seems plausible and I am almost convinced. The resulting tr. would be “(When) the heavenly body coming here from heaven [or, “the day’s heavenly body,”

with Ge's "Tagesgestirn," construing *divāḥ* with *nákṣatram* in the meaning 'day'] is not (yet) seen, no one knows about its going (away) again." I now consider this a possible alt., though I don't see how pāda c furnishes the logical basis for d, and the position of *ná* creates difficulties (see below).

The publ. tr. reflects a different construal of pāda c – as a rel. cl. appositive to the "glittering gift" of b, with the rel. prn. attracted to the neut. gender of the internal referent *nákṣatram* (from the fem. of *citrām ... rām* in b). Pāda d is then a separate clause. By this interpr. *dadṛśe* has its accent because it is in a subord. cl. I would now, however, tr. the verb as "appears," rather than preterital "appeared," given the usual presential use of the middle pf. of $\sqrt{dṛś}$ (Kū 233).

This interpr. leaves pāda-final *ná* out of the rest of c and is the most problematic part of my interpr.: I take it as an emphatic expletive, anticipating the next pāda with its own neg. (*nákiḥ*) and its own emphatic (*addhā*). I recognize the ad hoc nature of this interpr., but pāda-final *ná* is problematic for everyone. Ge (7cd) weighs both "wie" and "nicht" (both to be construed within pāda c) and decides for the latter – on apparently reasonable grounds, because simile-marking *ná* seems essentially excluded from final position (see comm. ad VIII.76.1, X.21.1), as he himself noted elsewhere. But as it turns out, pāda-final negative *ná* is also on shaky ground; see immed. flg. disc.

To aid our interpr. we need to make a detour to a general consideration of pāda-final *ná* in the RV. I have made a complete (so I hope) collection of pāda-final *ná*, which is extremely rare, especially if *caná* passages are excluded. For reference I patch in the repertoire of *caná* passages: pāda-final *caná* (12x): II.23.5 *ná ... ná ... kútaś caná*; V.34.5 *ná ... caná*; VI.54.9 *ná ... kádā caná*; VII.82.7 *...ná ... kútaś caná*; VIII.19.6 *ná ... kútaś caná*; VIII.23.15 *ná ... caná*; IX.69.6 *ná ... kím caná*; X.39.11 *ná ... kútaś caná*; X.48.5 *ná ... kádā caná*; X.62.9 *ná ... kás caná*; X.85.3 *ná ... kás caná*; X.152.1 *ná ... kádā caná*.

We can now consider possible examples of simile-marking *ná* and negative *ná* in that position. There is one, seemingly secure, ex. of pāda-final *ná* in a conventional simile (VII.68.8). X.95.3 also has a pāda-final 'like', but it occurs in a truncated simile and, more importantly, in Purūravas's disordered speech and can serve as an index of how his mania has affected his syntax (see comm. ad loc.). The pāda formatting in Lub in the metrically complex hymn X.105.3 appears to provide another ex.: *āpa yór índraḥ pāpaja ā márto ná*, but the hemistich continues *śásramāṇó bibhīvān*, and the correct pāda configuration is clearly *āpa yór índraḥ pāpaja, ā márto ná śásramāṇó bibhīvān*, with 8 12 (so HvN), with *ná* safely inside the pāda.

There are even fewer secure pāda-final *nás* in negative than in simile-marking usage, and they all have, as it were, extenuating circumstances. In IV.13.5 [=14.5] *ánāyato ánibaddhaḥ kathāyām nyànni uttāno 'va padyate ná* "Not held firm, not tied down -- how does this one not fall down, head over heels?" the *ná* echoes the two negated adjectives that open the hemistich, creating a chiasmic *#án ... án ... ná*, and it also poses a negative question, which may have affected its position. In X.49.10 *ahám tád āsu dhārayam yád āsu ná, devás caná tváṣṭādhārayad rúṣat* "I held fast in them that which the god Tvaṣṭar never held fast in them: the gleaming ...," the pāda-final *ná* (if so it is) is clause-internal in a rel. cl. that straddles the pāda break, with *caná* doubling it in the following pāda. Moreover, pāda b is metrically problematic (see comm. ad loc.), and it is highly probable that *ná* opens that pāda (*#ná devás caná ...*) rather than ending pāda a, and so this ex. can be scrapped. X.129.7 contains the famous final phrase *yádi vā dadhé yádi vā ná*, which is both syntactically and metrically incomplete: the unusual final *ná* draws attention to this principled lack of closure.

In short, save for IV.13.5 there are no examples of a pāda-final negative *ná* that *ends* a complete clause and is construed within it – the function that the Ge interpr. of our pāda c requires. Since there is no body of such usage to set against my (admittedly unique) interpr. of *ná* here as an emphatic anticipation of the next, negative clause, I cautiously favor my interpr. in the publ. tr.

With Ge and Old, however, I do consider pāda d to concern the unknowable whereabouts of the sun after setting.

X.111.8: As noted in the publ. intro., this vs. serves as a sort of semantic pivot, with the unidentified females of most of the first hemistich (gen. pl. *āsām* [a], *yāḥ* [b]) seeming to continue the subject of the Dawns in vs. 7, but identified instead as waters by the last word of the hemistich (*āpaḥ*), an identity hinted at by the immed. preceding verb *sasrúḥ* ‘flowed’. This transitions us to the Vṛtra myth, which is overt in vs. 9. Since the action in pāda a is characteristic of Dawns – the daily passage of one after the other – the introduction of waters in b is even more unexpected.

The first pāda of this vs. also responds indirectly to the end of the preceding vs.: we do not know about the sun’s going away, but the subjects of 8a “have gone into the distance” (*dūrām ... jagmuḥ*). The certainty of our knowledge of their trajectory seems signaled by *kīla* (see the same particle in 2a), in contrast to the radical *uncertainty* of 7d (*nákir addhā nú veda*). Uncertainty returns in the second hemistich of this vs., however.

A slight adjustment to the tr. to “the first ones ...” would avoid the apparent number mismatch of “the first ... have gone.”

The second hemistich shows a different transition, from 3rd ps. (fem. gen. pl. *āsām*, like 8a) in c to 2nd ps. in d (*vaḥ*), by way of *āpaḥ*, which must be voc. here, but was nom. in 8b.

X.111.10: With Ge I take *āritāḥ* with *jārāḥ* (“acknowledged as their lover”). Although it is tempting on the basis VIII.33.5 *yāḥ pūrbhíd āritāḥ* “who is acknowledged as the stronghold-splitter” to construe *āritāḥ* with flg. *pūrbhíd*, the context favors the first alternative.

X.112 Indra

The poet’s name in the heading to the publ. tr. contains a typo: his name is Prabhedana, not Prebhedana. The hymn is fairly elementary and trouble-free.

X.112.1: *vīryā prā bravāma* echoes the famous opening of I.32; for an even closer echo see vs. 8 below.

X.112.3: Ge (n. 3ab) suggests that ab really refers to soma, under the guise of the sun. Possible but not necessary.

X.112.5: This vs. is formally a riddle, though hardly a challenging one. The referent of both the relative (*yāsya* [a]) and the two *sá-s* (c, d) is withheld till the final word: *sómah*.

śátrūn is the problem here, since there is nothing that clearly governs this acc. Ge simply supplies a plausible verb (erschlugest); making use of a trick of English, I’ve given *cakārtha* two different senses – “do in” and “do” – for the two different accs., *śátrūn* and *anānukṛtyā ráṇyā*. But I doubt that *√kṛ* has the “do in” sense, and I should probably simply follow the Ge path by supplying ‘conquered’, ‘smote’, vel sim. There is another, trickier, possibility, which I think is

unlikely in a hymn on this rudimentary rhetorical level, though I would certainly consider it in a more sophisticated hymn. It would be possible to read *anānukṛtyā* with both the following acc. *raṇyā* (as is already done) and the preceding one, *śātrūn*, in two different senses. The whole phrase would mean “made your rivals not to be emulated and did inimitable martial (deeds).” Of course, *anānukṛtyā* is not acc. pl. masc. like *śātrūn*, but since the two objects differ in gender, it can agree with only one. I would not hesitate to suggest this interpr. in another type of hymn, but its trickiness is out of place in the plain-vanilla context of this one. For *anānukṛtyām* + √*kṛ*; see X.68.10, where it has the “inimitable (deed)” sense.

The primary sense of *raṇyā*- is ‘joyous’, but it also shares the martial sense of its base noun *raṇa*- ‘joy’ / ‘battle’; the noun is found in 10c, probably in both senses as well.

X.112.8: Like vs. 1, this vs. echoes I.32.1 *īndrasya nū vīryāṇi prā vocam, yāni cakāra prathamāni vajrī*. Our vs. has a counterpart for everything but *vajrī* and the rel. prn., and indeed elaborates on some elements. The enclitic + voc. *te indra* matches *īndrasya*; *nūnām* matches *nū*, which occurs in an expanded phrase *pūrvyāni ... nūnām; vīryā ... prathamā* as a single NP matches *vīryāṇi* in the main cl. of I.32.1 and *prathamā* in the rel. cl.; *prā ... prā ... vocam* with tmesis and doubled preverb corresponds to simple *prā vocam*; *kṛtāni* takes the place of the finite *cakāra* in the rel. cl. in I.32.1. It is hard not to conclude that our poet modeled this hemistich on I.32.1, or at least that both poets were working from the same template, given the various other versions, like V.29.13, 31.6.

Interestingly, given the fairly slavish imitation of I.32.1, what follows is not the Vṛtra myth, but Vala. (Perhaps I’m underestimating the skill of this poet – or at least his awareness of the poetic tradition.)

X.112.9: Indra now takes on his role as Bṛhaspati, singing open the Vala cave. See esp. pādas b and d.

Note that the superlative + genitive phrase *vīpratamaṃ kavīnām* “the best *vīpra* of *kavīs*” shows the virtual synonymy of the two terms, or at least their fungibility.

X.112.10: In b the impv. *bodhī* can belong either to √*bhū* or √*budh*. Gr, Old, and I opt for the former, with *sākhe* a predicative voc.; Ge and Scar (99) for the latter (though Ge [n. 10b] offers the former as an alternative).

I take the double etym. figure *raṇaṃ kṛdhi raṇakṛt* as a pun, with *raṇa*- meaning both ‘joy’ and ‘battle’; see *raṇyā*- in 5b and disc. there. Certainly the bahuvr. *satya-śuṣma* ‘whose impetuous powers are real’ suggests a martial context, since *śuṣma*- and its deriv. are common in them (e.g., VI.68.7 *yēśāṃ śuṣmaḥ pṛtanāsu sāhvān* “whose impetuous force, victorious in battles ...”). Note that *satya-śuṣma* is a variant on *satīnā-manyu*- ‘whose battle fury is real’ (8c).

On first glance *ābhakte ... rāyē* appear to belong together morphologically as they do semantically. But of course they don’t, despite the surface agreement in endings (-e): *rāyē* is a dat., *ābhakte* a loc. The lexeme *ā√bhaj* ordinarily takes a loc.; it is difficult to find a function for dat. *rāyē* in this cl. If we take the dat. seriously, we might tr. it as a purpose dat.: “Give us a share even in unapportioned (goods/wealth/booty), for wealth.” But it may be better to follow Ge’s suggestion (n. 10d) that dat. *rāyē* can substitute for the unattested loc. to this stem, here encouraged by the superficial agreement of the endings.

X.113 Indra

X.113.1: In the publ. tr. I construe *sācetasā* with the instr. *vīśvebhīr devāḥ* “of one mind with all the gods,” but since *sācetas-* doesn’t otherwise appear with the instr., it might be better to take the instr. as an independent instr. of accompaniment: “H+E, of one mind, along with all the gods ...” The difference in sense is fairly minor, though it emphasizes the agreement between H+E.

The preverb *ānu* is fairly rare with *√av* (though see VIII.7.24, with the same obj. *śúṣmam*). My “assist” is meant to convey that they gave auxiliary aid, since Indra’s *śúṣma-* is not likely to need a lot of help. As noted in the publ. intro., the model of auxiliary help continues through the hymn.

It’s possible that *āt* is a sort of aux. with *kṛṇvānāḥ* “as he went on creating ...,” though I prefer the publ. tr.

X.113.2: A verb needs to be supplied in pāda a; since this pāda has the same general structure as 1ab: *tām asya* GOD(S) INSTR. ACC [POWER], I supply “assisted” (*ānu ... *āvaṭ*) based on 1b *ānu ... āvatām*. Ge (n. 2ab; sim. Kü 255–56) instead supplies **avardhat*, anticipating *āvardhan* in 3d (and [not noted by Ge] serving as the corresponding transitive to *avardhata* in 1d). Either will work, but anticipating a verb almost two vss. in the future seems less likely than basing the passage on a preceding one with the same structure.

In b *dadhanvān* is universally interpr. as transitive (e.g., Ge “der den (Soma)stengel fliessen liess”; sim. Kü 255–56). But as disc. ad VIII.19.1, the secondary root *√dhanv* as well as the pf. part. *dadhanvān* (which can belong to *√dhan* [so Kü], but has been assimilated to *√dhanv*) is otherwise intrans., and the two other occurrences of *dadhanvān* (IX.67.2, 107.1) are definitely intrans., with soma as subject. Clearly the trans. interpr. of our passage assumes a flip of soma from subj. to obj., but I find such syntactic malleability implausible. I think it more likely that Viṣṇu runs to the plant, to prepare it for Indra. On Viṣṇu’s participation in soma preparation, see, e.g., I.85.7, II.22.1, VI.17.11.

Acddg. to Ge (n. 2b), the subj. of *vī rapśate* is Indra, but since the same expression in IV.45.1 *mādhuno vī rapśate* has as its subj. a leather bag (*ḍṛtīḥ*), the plant, as a container of soma like the bag, seems more likely.

X.113.3: The infinitival phrase *śāmsam āvīde* “to acquire a laud” may be a semi-technical expressing for earning a *prāśasti*, the formal praise that a king would receive for a heroic deed.

The obj. in d, *mahimānam indriyām*, is repeated from 1c, and *mahimānam* is also found in the same metrical position in 2a.

X.113.4: In contrast to the first 3 vss., in this catalogue of deeds Indra apparently operates alone.

X.113.5: Likewise in this vs.; Mitra and Varuṇa do appear in the vs., but not as helpers but as beneficiaries of Indra’s actions.

In c (*d*)*hṛṣitāḥ* is a pun facilitated by the sandhi: the form can belong either to *√dhṛṣ* ‘dare’ or *√hṛṣ* ‘be excited’. Old tots up passages that favor the one or the other, but surely the point is that it represents both. (The Pp. reads *dhṛṣitāḥ*, and this analysis is followed by Gr and Ge.)

In d Ge tentatively takes *dāśūṣe* as a third party, the mortal worshiper, in addition to M+V. Although it is true that the stem *dāśvāms-* is overwhelmingly used of mortal worshipers, there are a limited no. of passages where it modifies a god; see disc. ad X.104.6. Since our exact

phrase, *vāruṇāya dāśúṣe*, is found in X.65.5, 6, separating these two datives is not indicated here. See comm. ad X.65.5.

X.113.6: My interpr. of the first hemistich diverges significantly from the standard, starting with the subject. Sāy. and Ge supply the waters, for which I see no evidence; in fact at the time the vs. takes place they are held captive by Vṛtra (pāda d) and in no position to be hastening anywhere. I favor the Maruts (as does Gr [s.v. *raṁh*]). Their presence here is signaled by *virapśīnaḥ* ‘teeming’. Gr and Ge take this adj. as gen. sg. modifying Indra, and admittedly the stem regularly modifies him (which must be why Ge takes Indra as subj. of *vīrapśate* in 2b). However it is also used 3x in the plural of the Maruts, each time adjacent to a form of *tāvas-* vel sim.: I.64.10 *tāviṣībhir virapśīnaḥ* #, I.87.1 *prātavaso virapśīnaḥ* #, I.166.8 *tavaso virapśīnaḥ* # -- just like our *tāviṣībhyo virapśīnaḥ* #. By my interpr. the Maruts hasten to the site of the Vṛtra battle to give their support to Indra and his powers and battle fury, hence the datives. It is well known that in some versions of the Vṛtra myth the Maruts provide such support to Indra. It is appropriate that they are characterized as “teeming,” given their identity as the thunderstorm.

In c *vy āvr̥ṣcat* echoes *āvṛṣcat* in 4c; nicely, the use of this verb connects the Vala myth of 4a with the Vṛtra myth here. Another echo: the redupl. pres. participle acc. *bībhratam* modifying Vṛtra and the same stem in the nom. *bībhrat* modifying Indra in 3a.

X.113.7: As Ge points out (n. 7), this vs. presents the Indra–Vṛtra battle as a dual between two, nearly equally matched, rivals, rather than the usual one-sided slaughter of Vṛtra by all-powerful Indra. See the duals *yátamānau samīyātuḥ*, and esp. the preverb *sám*. This balanced account is reminiscent of the depiction of the same battle in the later part of the most famous account of it, in I.32, esp. vss. 12–13 (see comm. ad I.32.12).

The vs. begins ambiguously, and indeed misleadingly: since the initial rel. prn. *yā* immediately precedes a neut. pl. expression, *vīryāṇi prathamāni kártvā*, it is natural to read it as a neut. pl. “which heroic deeds ...” But this leads to a deadend, as there is no correspondent in the main cl. in cd. Only when we reach the second part of b do we encounter the duals that are the real referents of *yā*, which can also be du. masc. “which two ...” The main cl. of cd does not have a resumptive pronoun (*tā* vel sim.), but does have an implicit “the one ... the other” construction, with c devoted to Vṛtra and d to Indra. The interpr. of *yā* as dual is Ge’s (n. 7a), though he in fact suggests reading *yā* twice, as dual masc. and neut. pl.; Old rejects Ge’s dual interpr., but this leaves us with an unresolved rel. cl.

Note that *vīryāṇi prathamāni kártvā* is quite similar to *vīryā ... prathamā kṛtāṇi* in the previous hymn (112.8), attributed to same or related poet. See comm. there.

Note also the return of *patyate* (cf. 5a). Ge interpr. d as referring to Indra’s right to the first drink of soma: “ein Anrecht auf die erste Einladung (zum Soma).” I think that this is correct and my tr. is somewhat opaque. I’d now slightly alter to “over the Early Call (to soma).”

X.113.8: The “causative” *āvardhayan* opening b is in the same position as semantically and functionally identical *āvardhan* opening 3d, and the two verbs have nearly identical subjects: 3a *vísve ... marútaḥ*, 8a *vísve devāsaḥ*.

The content of the 2nd hemistich is startling and syntactically skewed – these two features are probably connected. It is stated that someone/something *ate* (*āvayat*) Vṛtra, with the subject unexpressed. Indra is in an oblique case, the gen. dependent on *hánmanā*, which might almost seem to exclude him as subject of “ate.” But what other candidate is there? Certainly Ge

(n. 8d) thinks Indra is the subject and cites the epithet *vṛtra-khādā* ‘gnawer of Vṛtra’ used of Indra in III.45.2, 51.9 and of Indra’s alter ego Bṛhaspati in X.65.10. However, this semi-cannibalism is not a standard part of the Indra–Vṛtra myth and seems rather shocking – though eating a snake isn’t as bad as eating a being more human in form. I suggest that Indra is not specified as subj., but shunted into an oblique case, to lessen the shock. On the verb *āvayat* see my *-aya*-book, p. 71. The other occurrence of the verb in the RV, in VIII.45.38, is in a slangy context (see comm. ad loc.).

X.113.9: As disc. in the publ. intro., this vs. spells out the reciprocal partnership agreement between Indra and his mortal worshipers (ab) and then provides an example of it from the semi-mythic past (cd). The mutual aid between Indra and various gods (esp. the Maruts) earlier in the hymn provides the model for the agreement in ab. As I say in the publ. intro., the language is “labored,” esp. in ab, presumably to approach legalese as closely as possible. Esp. important are the balanced forms of *sakhyā*- ‘(act of) comradeship / partnership’.

As for the illustrative example in cd, elsewhere in the RV it is clear that Indra eliminated Dhuni and Cumuri for Dabhīti because Dabhīti performed ritual service for Indra. See esp. VI.20.13 “Dabhīti who presses for you with the soma juices, who brings the firewood and the cooked food, along with the chants” (... *túbhyaṃ sómebhiḥ sunván, dabhītir idhmábhṛtiḥ pakthy àrkāḥ*); in a nearby hymn (VI.26.6) these actions of Dabhīti’s are summarized as *śraddhā*- (pl.) ‘hospitality offerings’. For detailed disc. of *śraddhā*- as ‘trust in hospitality relations’, with hospitality often embodied in the ritual, see my *Sacrificed Wife*, 176–84. Here *śraddhā-manasyā*- refers to Dabhīti’s ‘mind/thought on/of hospitality’; it is rather like the epithet of Manu in the Manu’s Cups story (see SW/SW disc. just referred to), *śraddhā-deva*- ‘whose deity is hospitality’. In the cases of both Manu and Dabhīti, the hospitality is specifically that of the ritual.

X.113.10: In this, the final vs. of the hymn, the poet turns his attention to a different reciprocal relation: not between god and gods, nor god and humans, but human and human – viz., that between the poet and his patron, who is, however, not overtly referred to. The poet asks Indra for material goods (horses in this case) in exchange for the poet’s praise – but the goods are not for the poet himself. Instead, they should make the poet considered to be an effective wordsmith (*máṃsai nivācanāni śáṃsan*). In other words, the unmentioned patron will receive an abundance of horses and conclude that his poet has effectively praised Indra, which roused Indra’s generosity.

X.114 All Gods

On the manifold difficulties of this hymn, see publ. intro.; I have little to contribute to understanding the content, though I can tinker with phraseology and form. Re treats it (insofar as he does) in EVP XVI, not in the Viśve Devās fascicles. Old’s treatment is scanty. (I have the feeling he had the same unenthusiastic reaction I have to the numerological extravagances of the hymn.) Köhler translates and discusses the whole hymn at length in his 2011 Kavi *im Ṛgveda* (110ff.). For attempts to decode the referents and especially the numerological referents, consult these standard treatments.

X.114.1: The lexeme *ví√āp* is found only here in the RV, but is already tolerably well attested in the AV, including in the strikingly similar passage AVŚ VIII.9.20 *kathám gāyatrī trivṛtaṃ vyāpa*

“How did *gāyatrī* permeate the triple [*stóma*]?” (Wh)(no AVP corr.), which, however, is just as obscure.

The root affiliation of *aveṣan* is disputed. Gr assigns it to a root $\sqrt{viṣ}$ ‘sich ergiessen’, separate from $\sqrt{viṣ}$ ‘toil’, and he is followed by Narten (Sig.Aor. 245) and Gotō (1st Kl. 249). On this supposed root, see comm. ad I.178.2; I see no need for it. Ge instead takes it to $\sqrt{vī}$ and tr. “sie für sich beanspruchend” (whose relationship to the standard meanings of $\sqrt{vī}$ is opaque to me). Köhler (110–11) also takes it to $\sqrt{vī}$ but with a sense in line with the usage of that root: “haben ... aufgespürt”; unlike other tr. he takes *divás páyaḥ* as the obj. of *aveṣan*, not *dīdhiṣānāḥ*. But the existence of an *s*-aor. to $\sqrt{vī}$ is questionable, and I see nothing against assigning this form to $\sqrt{viṣ}$ ‘toil’ – at least without a clearer sense of what this vs. is about.

Assuming that *aveṣan* is an impf., it should not have the recent past sense “have toiled.” I am inclined to recast the tenses of the first three pādas to “pervaded ... came ... toiled.”

X.114.2: I have no idea what *nīṛtīḥ* refers to. The only other pl. to this stem in the RV (VIII.24.24) is no help.

Although I would prefer the root-noun cmpd *dīrgha-śrūt-* to have active meaning, ‘hearing long / afar / for a long time’, in all clear cases it has the passive sense ‘heard of / famed for a long time’ (either from the distant past or for the foreseeable future or both), as Scar (555) interpr. it, flg. the standard view. It is therefore essentially equivalent to the bahuvr. *dīrghá-śravas-*. In this passage (far from clear!) in the publ. tr. I rendered it with my preferred tr. “who hear afar,” which makes sense in context: the conveyers recognize the *nīṛtīḥ* because of their keen hearing. But I doubt that the cmpd has active sense in just this passage, and so I might emend to “the conveyers of far fame ...” Alternatively (and now, to me, preferably), *dīrghaśrútaḥ* could be nom. pl. fem. and modify *nīṛtīḥ* in the previous pāda: “Three (Goddesses of?) Dissolution, of long fame ...” The logical connection between the clauses would then be stronger: the conveyers recognize the *nīṛtīḥ* because they are famous. Taking the adj. with what precedes also makes sense of the displaced *vī hí* in b, which should begin a clause. I would now substitute “Three (Goddesses of?) Dissolution of long fame reverently approach to be pointed out, for the conveyers (of songs?) recognize them.”

Although this doesn’t help much, it’s worth noting that the same conjunction of lexical items – *nīdāna-*, *vāhni-*, and multiple occurrences of *kaví-* -- is found in VI.32.2–3. For *nī cikyuḥ kaváyāḥ*, see the identical phrase in X.124.9.

X.114.3: The referent(s) in this vs. and its general purport are completely opaque to me, and I have nothing to contribute to the multiple identifications suggested by others (see esp. Ge, Re, and Th. Unders. 16, 60–63). Th favors the night sky as the overall referent and downplays (or denies) any ritual associations, but as in the rest of the hymn, it is likely that both types of referents are in play. The general view (Ge, Ober [RdR II.133]; see also the reff. in Th, p. 61 n. 3) that in the ritual realm the female referred to is the *vedī* seems hard to dismiss, though Th tries mightily.

X.114.4–5: As indicated in the publ. intro., I take these two vss. as contrastive treatments of the poetic enterprise. In 4 the 1st ps. speaker, with his simple mind (*pākena mānasā*), saw a single eagle as a unity, while the inspired kavis (*vīprāḥ kaváyāḥ*) in 5 configure this single eagle in many ways (*bahudhā*) with their words (*vācobhiḥ*). The power of poetry to create and represent the multiple manifestations of the world could hardly be more clearly expressed.

As for the identity of the eagle (*suparṇā-*), it is generally taken as the sun or the sun identified with the ritual fire (Ge, Lü 299f., Köhler 112), though Th (62) opts for the moon, and other referents have been suggested (see Köhler’s detailed disc.). In my opinion, the emphasis on identifying the referents (and defending the identification against others) has distracted interpr. from the more interesting depiction of how poets operate and what they provide.

X.114.6: The consideration of the poets’ contribution, esp. in creating the sacrifice and making it effective, continues in this vs. The role of meter, mentioned in 5c, is elaborated on in 6b, and the focus narrows to the specifically ritual. Again, there is much disc. of what exactly is going on, with a deep dive into the numerology. Although obviously to a contemporary audience the referents of the exact numbers were interpretable, I still think that too much attention has been lavished on decoding the numbers and too little on the celebration of the role of poets.

X.114.7: By my rules, *anyé* should be definite in this position: “the others ...,” not with most interpr. indefinite “others ...” If Ge (n. 7a) is correct that this is a reference to the variants of the model ritual, a definite reference makes sense: the first, unnumbered one would be the model itself.

On a *tīrthā* associated with drink, see *tīrthām suprapāṇām* in X.40.13 and comm. thereon; see also the “famous *tīrthā*” in IX.97.53. In the comm. there I suggest that it may refer to the place or time in the sacrifice when the dakṣiṇās are distributed. If the hapax *āpnāna-* is related (however sketchily) to *āpnas-* ‘property, wealth’ (see AiG II.2.275–76), as is reflected in my tr. ‘opulent’, the same situation may be referred to here.

X.114.8: The lexeme *prāti√pad* occurs in the RV only here. The standard tr. are contextual (e.g., Ge “hat ... erkannt”). Re points out that the later ritual sense of the idiom is “entamer le répons,” which he hesitates to employ here, but I don’t know why ‘undertake, begin’ would be excluded.

X.114.9: Pādas a and b seem to me contrastive, with the unidentified some / ones making an extended journey to the end of the earth, despite being stably yoked to the chariot poles. With Köhler (114) I’m inclined to see the subject as the poets, or particularly skillful poets. As for the rest, it’s just as baffling as the rest of the hymn.

X.115 Agni

On the curious structure of this hymn, see publ. intro.

X.115.1: The “two mothers” in b are of course the kindling sticks.

In c I take *yādi* as standing for **yād ī*, even though it does not precede a cons. cluster that would have encouraged redactional shortening. The form occurs right before the caesura in an opening of 5, and it seems unlikely that both syllables would be light in that position.

In the standard renderings (incl. the publ. tr.), we find a non-conjoining *ca* in c, apparently marking the beginning of the main cl. of cd after the subord. cl. that begins c. (See JSK, DGRV I.211–13, II.106 for attempts to account for its use here.) However, it is possible to assign it its usual conjoining function if we take the *ādhā ca nū* clause as parallel to what precedes, with both under the domain of *yādi*: “when the udderless one has begotten him and then he has waxed strong ...” This double *yādi* cl. would depend on the main cl. in ab. The

vavákṣa would be accented in either reading – either as a subordinated verb or one first in its pāda.

Note the distant etymological figure: *vakṣáthaḥ* (a), *vavákṣa* (d).

X.115.2: The vs. has a number of teasing word plays, initiated by the sequence *nāma dhāyi*, which appears to contain the idiom *nāma √ dhā* ‘give a name’ (*nāma-dhā-* 1x, *nāma-dhéya-* 1x), but in fact the two words should be separately construed.

In context *dán* can hardly be anything but an endingless loc. to *dám-* ‘house’: as Ge (n. 2a) points out, ‘establish the ritual fire in the house’ is a widespread locution. The question is how we arrive at this form. A gen. sg. *dán* to this stem is widely accepted (e.g., AiG III.243–44, EWA s.v. *dám-*), but this is from a preform **dám-s*, with the nasal assimilating to the dental ending. It is possible that in ambiguous passages (like I.120.6) gen. *dán* was misinterpreted as a loc. and spread to unambiguous loc. contexts. (In fact JPB tr. as a loc. there, though I would substitute the gen. “you two house-masters of beauty,” flg. Ge.) (That *dán* here is on the model of gen. *dán* elsewhere is essentially Old’s view – though he also considers the possibility that it’s really a gen. here. I’m not sure how that would work contextually. And he also floats the possibility that *dán* is a redactional change for **dám*.) Given the instr. *datā* ‘with his tooth’ in b, one should factor in a word play with *dánt-* ‘tooth’ (so also Re). In any case the form is not directly comparable to the Old Aves. vṛddhied endingless loc. *dqm*.

On *abhipramúrā* see Scar 390–91.

X.115.2–3: The mid. part. *próthamāna-* in d is the only mid. form attested to this (not very well attested) root; it is followed immed. by the act. *próthantam* in the next vs. (3b), whose voice is confirmed by other occurrences of this stem. The middle form here also occupies metrical positions 4–7, making a caesura after 4 or 5 impossible. Given that the opening of 2d *inó ná* is somewhat echoed by 3b *índum* and that immed. following act. *próthantam* allows a caesura after 5, 3b seems to repair 2d, where the irregularities call attention to the form. I have no explan. for the contrastive voice of *próthamāna-*; I very much doubt that semantics is involved.

X.115.3: This vs. is couched entirely in the acc. and has no syntactic connection with either the preceding or the flg. vs. With Ge and Re I supply a harmless 1st ps. verb of calling/praising to govern both the acc.s and the *vah*.

As Ge (n. 3ab) points out, the vs. is dense with imagery, and as I point out in the publ. intro., the words can do double or even triple duty: *dru-śád-* is appropriate for the frame (the fire sitting on the firewood) and for two associated similes (the latter unmarked as a simile): a bird sitting in a tree and the soma drop sitting in the wooden cup. (The applicability to the drop is not noted by Ge/Re, but is by Scar [566–67]; also more or less by Old.)

Agni is several times directly identified as *váhnir āsā* “conveyor by mouth” (I.76.4, 129.5 [in opposite order], VI.11.2, 16.9=VII.16.9), not in a simile – so *ná* here seems at first pleonastic. However, I think it contributes to the density of imagery noted above: *váhniḥ* should be read twice, with Agni explicitly compared to a draught-horse.

virapśín- and its associated forms are not usually construed with the instr., but see IV.20.5, cited by Ge.

The hapax pres. part. *sarájantam* is anomalously formed (apparent disyllabic root syl *saráj*). It must be construed with *ádhvanaḥ* (prob. acc. pl., but possibly gen.-abl. sg.). The form has been ascribed to numerous different roots: *√ sr*, *√ srj*, *√ raj*; for details consult KEWA s.v.

(EWA simply refers to the earlier work). As far as I know, no one has tried *srāj-* ‘garland’ or *sarā(g)h-* ‘bee’ (though I was sorely tempted by the latter: “buzzing along the ways”?). I see no grounds for decision, but I think it’s possible that it’s a portmanteau (/mash-up) of $\sqrt{s_r}$ ‘flow, run’ and $\sqrt{s_rj}$ ‘(be) released’, both of which appear with *ādhvanaḥ*: X.22.4 *srjānāḥ ... ādhvanaḥ* [acc.] and VIII.59.2 *sīsratū rājasah pāre ādhvanaḥ* [gen.]. Such a tricky form would be at home in this tricky hymns.

X.115.4: As disc. in the publ. intro., this and vs. 6 are the two most complex vss. in the hymn, and in each vs. I think the topic is Agni (sg.) and his flames (pl.). My interpr. differs in many details from Old, Ge, and Re, though is closer to Old. In particular, with Old but contra Ge/Re, I take *nā* in b as simile-marking rather than negative (though unfortunately it precedes the simile proper). I will not otherwise register agreements and disagreements.

In my interpr. the trick in the first hemistich is that the two nom. pl. masc. forms *vātāḥ* and *ācyutāḥ*, which, cutely, iconically encircle the verb *pāri sānti* ‘encircle’, are *not* to be construed together in an inherently self-contradictory phrase “immovable winds.” Rather they belong to two different similes, the second unmarked (as in 3b). Thus Agni’s flames are compared to two conceptually opposite natural elements, the ever-volatile winds and the never-moving mountains. For the encircling of winds, see IV.24.4 *pārijman ... vātāḥ*. For *ācyuta-* with mountain / rock, see I52.2 *pārvataḥ ... ācyutaḥ*, VI.17.5 *ādrim ... ācyutam*. In the latter passage, the rock surrounds (*pāri ... sāntam*) the cows (see also IV.1.15 and [with pl. *ādrayaḥ*] III.32.16).

On *jrayasānā-* and its type see comm. ad IV.3.6.

In the 2nd hemistich I take Trita as identical to Agni, though he could also (with Ge, etc.) be the one sent to search for Agni. See comm. ad X.46.6, 3.

X.115.5: As indicated in the publ. intro., this vs. has the feel of a final vs. – the first of several. It has some associations with vs. 7. The cadences of a and c are disturbed.

For the connection with the Kaṇvas, see Ge (n. 5a).

X.115.6: As indicated in the publ. intro., this vs. appears to belong with vs. 4, with vs. 5, the pseudo-final vs., an intrusion. As in vs. 4, I think the vs. concerns Agni and his flames. In vs. 4 the flames surround him and urge him on to battle; in this vs. they concede to his superior power. In vs. 4 they are in the pl., in this vs. the sg. That Agni is the referent of the dative phrase that dominates all 4 pādas is clear, but Ge/Re identify the sg. nom. as the wind, against my ‘flame’.

The hapax voc. *supitrya* is taken by most as ‘good for the Pitars’ – possible, but at least in my opinion the base adj. *pītrya-* generally means ‘ancestral’. In any case, the voc. does not seem to have much connection with the rest of the vs. thematically.

In b the phrase *tṛṣū cyāvānaḥ* reminds us of the cmpds *tṛṣu-cyāvas-* (VI.66.10) and *tṛṣy-cyūt-* (I.140.3). The latter qualifies Agni, but the former is used of Agni’s tongues, i.e., his flames – and this is the exact usage I see here. Note that *cyāvānaḥ* picks up *ācyutāḥ* in 4b.

There is no finite verb in this vs., but as Ge (n. 6b, fld. by Re) suggests, *ānu* in b invites a verb to be supplied; the best choice is *ānu* $\sqrt{dā}$ ‘concede’, which regularly takes a dative.

The dat. phrase of ab is continued by ... *saté* in c and *mahīntamāya ... avīṣyate* in d. The syntax of c is otherwise problematic, however: the problem is the rel. prn. *yāḥ*, which interrupts the dative phrase as (if?) an embedded rel. cl., but what the rest of that rel. cl. might be is unclear. Re essentially ignores the *yāḥ*; Ge (n. 6cd) says that a verb needs to be supplied with *yāḥ*, similar to what was supplied in ab, but I don’t quite see how he puts the pāda together and

in particular what he does with dat. *saté*. I now think that the phrase consists of *yó* + adverbial instr. *dhṛṣatā* and that it is a nominal izafe, embedded in the dative phrase. As argued in my 2022 Fs. Hale paper, nominal rel. clauses (i.e., izafe-like structures) can be embedded in the RV, contrary to be-verbed rel. clauses. Our cl. would mean, literally, “who [is] with daring.” It is very similar to VIII.21.2 *ugrás cakrāma yó dhṛṣát* with the adverbial neut. NA *dhṛṣát* to the same stem. I now think that supplying a verb (“acts”) in the publ. tr. was wrong, and I would emend the tr. to “to him in his daring when ...”

As for the rest of the pāda, with Gr I construe *anudré cid* with *saté* despite their distance. Note that *anudré* echoes *ānu* in b, and the *d* might even hint at the $\sqrt{dā}$ to be supplied in b. Moreover *anudré cid* corresponds to *dhānvanéd* “even through a wasteland” in d (so also Ge n. 6cd), both indicating the unpromising locations in which fire seeks its food.

Now as for *vāram* – in adverbial usage, this form is usually construed with *ā*, and in fact this is easily extracted from immed. preceding *dhṛṣatā* (i.e., as *dhṛṣatā-ā*). But I don’t quite understand what “by choice / acdg. to wish” adds semantically to this pāda.

Pace Gr, *dhānvanā* must belong to ‘wasteland’, not ‘bow’.

X.115.7–9: As indicated in the publ. tr., each of the last three vss. of the hymn presents itself as a final summary vs., each in a different meter. Vs. 7 is the last Jagatī vs. of this otherwise Jagatī hymn and may have been the original final vs.; vs. 8 is in Triṣṭubh, 8 Śakvarī. These last two vss. explicitly name the poet – or at least provide a name for the Anukramaṇī to affix to the hymn: Upastuta (8b), the sons of Vṛṣṭihavya, the Upastutas (9ab).

X.115.7: This vs. seems to pick up vs. 5, with its mention of *sūri*-s (5c, 7a). These patrons (in the instr.) receive praise along with Agni, while the instr. in b (*nṛbhiḥ*) must, in my view, refer to the poet/singers (contra Ge, who thinks they’re still the patrons). The plural subjects of cd are unidentified, but I think they are likely the patrons again.

In b *sāhasaḥ sūnāraḥ* “the spirited (son) of strength” obviously plays on *sāhasaḥ sūnū-* ‘son of strength’, defeating expectations in the second syllable of the second word. Note also that (*sū*)*nāro* plays on immed. following *nṛbhiḥ*. I don’t think we’re dealing with haplology (per Ge n, 7b) but with deliberate misdirection. As Re points out *sūnāra*- and its relatives are never elsewhere used of Agni.

Pāda d is almost identical to IV.16.19, as Ge (n. 7d) points out.

X.115.8: This vs. responds in a way to vs. 2, where Agni’s name was at issue (*agnīr ha nāma*). Here he is explicitly given another name or epithet: “child of nourishment” (voc. *ūrjo napāt*). This name can also be seen as a substitute for the name “son of strength” gestured to, but avoided, in the preceding vs., 7b – and note that *sahasāvan* in this address picks up the *sāhasaḥ* in the name in 7b. Unfortunately this connection cannot be seen in the publ. tr., because I translate *sāhasaḥ* and *sahasāvan* differently. I would now alter the publ. tr. in 8a to ‘possessing strength’ from ‘mighty one’.

X.115.9: Pāda c *tāmś ca pāhī grṇatās ca sūrīn* is a reprise of 5c *agnīḥ pātu grṇatō agnīḥ sūrīn*, which may account both for the metrical lapse (10-syl. pāda for 11) and the wrong placement of the 2nd *ca* (on which see JSK DGRV I.135). As for the meter, Old suggests distracting *tān*, but the parallel in 5c speaks against this: the 4-syllable openings match (*agnīḥ pātu* and *tāmś ca*

pāhī), and what follows the caesura should match too – but *ca* does not match the syllable count of *agnīḥ*.

X.116 Indra

For the structure of paired vss. see publ. intro.

X.116.1–2: Each of the four pādas of vs. 1 begins *pībā*, non-initial unaccented *piba* in 2a provides continuity.

X.116.3: As in vs. 1, each pāda of this vs. begins with a repeated impv., *mamātu*. In the bcd pādas everything after that impv. is in a rel. cl. whose antecedent is the unexpressed subj. of *mamātu*. To bring out the parallelism, b might be better tr. “let that exhilarate (you) which is pressed among earth-dwellers.” In any case the “you” of b should be parenthetical.

X.116.4: This is the only really challenging vs. in the hymn, the challenge lying in the second hemistich, esp. d, and what to do with *khédām*. Scar (683) takes it as a unit of measure, used adverbially, on no clear grounds. Ge (and implicitly Old) take it as obj. to *ā vṛṣasva*, but this doesn’t work either syntactically or semantically. The lexeme *ā vṛṣ* takes gen. objects almost exclusively (the only exception is III.60.5 *sutām sómam ā vṛṣasva*). Moreover, the obj. of the lexeme is always soma. This pattern is found in the 1st vs. of the hymn, 1b *pībā mádhvas tṛpád indrā vṛṣasva* and matched in our vs. by *sutásya ... mádhvah ... ā vṛṣasva*. As for the semantics: *khédā-* in its two other appearances (VIII.72.8, 77.3) is a concrete object capable of being threefold or triply turned (*trivṛt-* VIII.72.8); I take it as ‘hammer’ in VIII.77.3, where it is used to fix spokes into a wheelrim. On both counts it seems best to detach *khédām* from the verb *ā vṛṣasva*, which should be construed with the long gen. phrase that occupies all of pāda c.

What then to do with *khédām*? I start with the observation that forms of *√khid* (verbal and nominal) are regularly found in conjunction with *√han* forms (IV.25.7 *khidāti hānti*, VIII.77.3 *sám ... vṛtrahákhidat, khé ... khédayā*, VI.22.4 *khidvah ... asuraghnāḥ*). Here it immed. precedes *aruśahā*. I suggest taking it as a detached 1st cmpd member, assuming **khedā-hán-* “smashing the hammer,” parallel to *aruśahán-* -- or else as an external argument to *aruśa-hán-* “smashing the hammer on the *aruśa-*.”

As for *aruśa-*, Old and Scar (683–84) take it as a PN, but the interpr. of Gr and Ge (seemingly accepted by EWA s.v. *rúśant-*) as a negation of *rúśant-* ‘shining, white’ is appealing, given Indra’s penchant for slaying dark beings. Scar, who discusses the proposal at length, is understandably concerned about the formation. We might expect *ruśat-* as 1st cmpd member (as in *rúśad-vatsa-*) -- though this would produce a difficult-to-parse **ruśad-dhán-*. But I think it likely that *aruśa-hán-* was produced and perceived as a near-anagram of *asura-hán-* (RV 3x).

X.116.5: On *ní* reversing the fundamental meaning of the verb *bhrāśáya-*, see Ge (n. 5ab) and my *āya*-Formations (p. 86).

The hapax *vigadā-* is most likely derived from the much-later-attested root *√gad* ‘speak’. See comm. ad X.97.2 on *agadā-*. Although Ge tr. “im Streit,” in his n. 5d he specifies this as “Wortstreit”; cf. Old’s tentative “unter verwirrten Reden (der Feinde).”

X.116.6: This vs. takes the verbal lexemes used in vs. 5 with concrete objects and applies them to abstract qualities and to an animate being (Indra). In 5b *āva √tan* ‘loosen’ was used of

bowstrings; in 6ab *ví√tan* takes as object ‘fame’ (pl. *śrávāṃsi*, so lit. ‘fames, reports of fame’ – unfortunately not an English idiom), ‘might’ (*ójaḥ*), and ‘hostilities’ (*abhímātīḥ*) – with the bowstrings kept, but in a simile. The switch from *áva* to *ví* is potentially problematic, because *ví√tan* ordinarily means ‘stretch out, stretch through’, not ‘loosen’, so it should have essentially positive value here and mean the opposite of *áva√tan*. This is argued at length by Old, similarly by Th (Fremd. 72–73). Although I see their point, the attempt to impose a positive value on the verbal lexeme requires Th to produce a highly unnatural interpr. of the hemistich. I think in just this passage we must reckon with the essential equivalence of *áva√tan* and *ví√tan*, in line with Ge’s interpr. This is not hard to motivate: *ví* has a number of different senses: ‘apart, widely’, ‘through’, and – crucial here -- ‘without’ (generally in nominal forms, admittedly). The negating value of this last usage can be transferred to this nonce verbal form.

In 5a *ní√bhr̥ś* was used of arrow points made blunt; in 6d Indra himself is ‘unblunted’ (*ánibhr̥ṣṭaḥ*).

X.116.7: The past participles in c, *sutáḥ ... pakváḥ*, are in a chiasmic relationship with the impvs. in d: *addhí ... píba*. That is, Indra is urged to eat what is cooked and drink what is pressed.

The impvs. in d, *addhí ... píba ca*, are both accented; *addhí* owes its accent to its pāda-initial position, *píba* owes its perhaps to the fact that it’s explicitly conjoined with *addhí* but more likely because it’s perceived as opening a new clause, even though *prásthitasya* must be construed with both verbs, as 8a *addhí ... prásthitemā havīṃsi* shows.

The final phrase, *píba ... prásthitasya*, picks up the same in 2a, forming a weak ring.

X.116.8: Pāda b provides yet another pairing of food and drinking (see 7cd), here with concrete nominals, *pacatā ... sómam*.

X.116.9: This final vs. opens out first to Agni in addition to Indra (in a dual dvandva) and then to the gods in general. As indicated in the publ. intro., the final image of the gods as dice whirling around, giving and withholding luck, is a surprising one. On *udbhíd-* see comm. ad VIII.79.1.

X.117 Generosity

On the unusual nature of this hymn in a RVic context, see publ. intro. Although the hymn is made up of bromides, it makes some artful use of word order.

X.117.1: I would now prefer to tr. *vadhá-* here and in vs. 6 as ‘bane’ or ‘deadly bane’.

As Ge (n. 1b) points out, the AV reckons the “forms of death” to be 100.

X.117.2: This vs. alternates nominatives referring to the miserly rich man and datives referring to his hungry (ex-)friend, as if to intertwine them even as the subj. refuses the importuning beggar.

The hapax *raphitá-* has no obvious etymology (see EWA s.v. *rāpas-*) or meaning, though it obviously refers to some sort of miserable state. I have interpr. it as semantically adjacent to *rāpas-* ‘defect, malady’, rather than *√rap* ‘jammern’ (per Th., Ged. 78), though neither of these works phonologically.

X.117.3: On *grhú-* see EWA s.v.

I take *yāma-* in the cmpd *yāma-hūti-* to *√yā* ‘beg’, rather than with the usual *yāma(n)-* ‘journey’; see comm. ad X.64.1.

X.117.4: The play on the root \sqrt{sac} in ab can hardly go unnoticed: *sákhā ... sákhye, sacābhúve sácāmānāya*. The isolation of nom. *sákhā* (the stingy non-companion) from the rest of the \sqrt{sac} forms and the distance between the verb *dádāti* and its (partitive) obj. *pitvāḥ* seem to be iconic for the separation between the non-companion and his would-be companion and between a potential act of charity and the actual gift. This separation contrasts with the intertwining of the same two figures in vs. 2.

In d *anyām* should, by my rules, be definite since it is non-initial, but I can see no way to interpret it as anything but indefinite “another”; the āmreḍita *anyām-anyam* in the next vs. (5d) is properly positioned for an indefinite. For another anomalous positioning of *anyā-* (though in the opposite direction) see nearby X.119.7. This syntactic rule may be eroding in the late RV.

X.117.5: I’m not sure what to do with *íd* – it’s perhaps displaced, and the pāda should be interpr. “it’s just the stronger man who should give ...”

I take the phrase in b to be the equivalent of English “take the long view.”

X.117.6: As noted ad vs. 1, I’d now change the tr. of *vádha-* to ‘bane’ or ‘deadly bane’ for fluency.

X.117.7: In later Skt., forms of *apa* \sqrt{vrj} , lit. ‘twist away’, mean ‘complete, finish’. This appears to develop from an idiom specialized for weaving. See AVŚ X.7.42 *nāpa vrñjāte ná gamāto ántam* concerning two weavers: “They wrest not off; they go not to an end” (Wh). The the first verb, *ápa vrñjāte*, must express the somewhat delicate manoeuvre (see YouTube videos on this procedure) of removing the woof (=vertical) threads from the loom when the cloth is finished. I use the less specific English idiom “wrap up,” which also signifies closure. I’m not sure what idiom English uses for the removal from the loom (if there is one), but the equivalent in knitting is to “bind off.”

X.117.8: The solution of this numerical riddle provided by Ge (n. 8) seems quite convincing and bears some resemblance to the Greek riddle of the sphinx, as Don points out. It is somewhat curious that herd animals come in groups of five (*pañktīḥ*), but see Old and Ge (n. 8d). The use of *pañktī-* here is surely in part because ‘five’ is the next number in the series of riddles, but the fivefold classification of *paśu*-s found across Vedic prose is probably also at issue. On this classification see B. Sojkova, *Animals in Vedic Prose* (DPhil. diss., Oxford Univ., 2022). The larger question is what is the riddle meant to be conveying here: it doesn’t seem entirely on message. Presumably that having more feet doesn’t make you better off, but instead worse. If there’s relevance to this hymn it may be that giving away what you have (and thereby having less) will be a good move for you.

X.117.9: The examples given in this vs. seem even less relevant to the generosity theme than vs. 8, since they are concerned with the differential performance of two apparently identical items. Pāda d forces the topic back to “giving” but not very convincingly. It almost seems as if, in vss. 8–9, the poet went off on a riddle track, started by vs. 7, and lost sight of his main theme. I suppose the whole vs. could be interpr. as counseling generosity to the less fortunate because of the inherent inequality in the world – but this seems somewhat counter to the standard Vedic worldview.

On the non-**o*-grade in kinship terms as 2nd compound members (apropos *sammātārā* here), see J. Lundquist, “Does *tvátpitārah* = εὐπάτωρ?” *IEL* 9 (2021), esp. 133–36.

X.118 Agni Rakṣohan

This hymn is banal in the extreme; its salient feature is the inter-verse chaining.

X.118.1: As noted in the publ. intro., despite the Anukramaṇī ascription, “demon-smiting” Agni is barely visible in this hymn, though the first pāda of this initial vs. does establish such a theme.

X.118.1–2: There is no explicit chaining between these two vss., but *út* opening 2a may respond to *ní* in 1a.

X.118.2–3: (*s^uv*)*āhutaḥ* (2a): (*sá*) *āhutaḥ* 3a.

X.118.4: This vs. consists of almost nothing but links to preceding vss. In pāda a *ajyate* responds to the same form in 3c; both are construed with instr., though with slightly different functions: *srucā* in 3c identifying the instrument performing the anointing and *ghṛtēna* the substance. The latter also picks up *ghṛtāni* in 2b. In b (*mádhu-*)*pratīka(h)* echoes *prátikam* in 3c, and *āhutaḥ* the same forms in 2a and 3a. In c *rócamānaḥ* matches *ví rocate* in 3a; the preverb *ví* there is teasingly replicated in the sequence *rócamāno vi(bhāvasuḥ)*, though the *ví* in 4c is not construed with the preceding participle.

X.118.5: After the frenzy of linkage in vs. 4, this one marks a new start: the only link is the preverb *sám*, with *sám idhyase* (a) echoing *sám ajyate* (4a).

The pāda *devébhyo havyavāhana* occurs in this form 3x (III.9.6, X.150.1, as well as here) and once as the minimally different *devébhyo havyavāhanaḥ* in the next hymn, X.119.13. The formula presupposes that nominative, rather than the voc. found here and in the other two occurrences, since *devébhyaḥ* must belong to the phrase and an initially accented **dévebhyaḥ* would be expected in a voc. phrase (even though *devébhyaḥ* is of course not a voc. itself).

X.118.6: Despite the transmitted *martā(h)*, it seems best, with Old, to restore **martíyā(h)*, both for the meter and for the chaining with *mártíyāḥ* in 5c.

X.118.7: *ádābhíya-* is the link between 6 and 7. This is also the first vs. since 1 with a *rakṣohan* theme, and it also has echoes of that vs.: the voc. *ágne, śociśā* picking up *śuci(-vrata)* (1c), *dīdihi* picking up *dīdyat* (1b).

X.118.8: The immediate link between 7 and 8 is *dīdyat* (c) with *dīdihi* (7c), but this of course also matches *dīdyat* in 1b. Another link to vs. 1 is (*uru-*)*kṣāyeṣu* with (*s^uvé*) *kṣāye* (1c), and note also *prātīkena* (a) echoing *prátikam* (3c) and (*mádhu-*)*pratīka* (4b).

Ge and Re (see also Mayr., PN s.v.) take *urukṣāya-* (also in 9a) as the PN of a poet or his family, which seems unnec. to me. Although the Anukramaṇī ascribes this hymn to one Urukṣaya, this can have been plucked from the hymn, as elsewhere, esp. in X. In I.2.9 the stem modifies Mitra and Varuṇa and means ‘having wide dwelling’, and the *tī*-stem abstract *urukṣití-* also means simply ‘wide dwelling’ (VII.100.4, IX.84.1). The fact that *urukṣāya-* here seems to respond to *kṣāya-* in 1c seems to me an argument against a PN.

X.118.9: On *urukṣāya*- see ad vs. 8.

The first two pādas are made entirely of recycled materials: *tām tvā* (also 5c), *gīrbhīḥ* (*girā* 3b), *urukṣāyāḥ* (*urukṣāyeṣu* 8c), *havyavāham* (*havyavāhana* 5b), *sām īdhire* (*sām idhyase* 5a). The last pāda breaks new, if similarly hackneyed, ground.

X.119 Labasūkta

A number of pairs of vss. pattern together: 2–3 share a pāda (2b=3a); 4–5 concern the *matí*-; 6–7 have the identical phrase *#nahí me ... caná* and both concern the insignificance to the poet in his current state of major components of the world; 9–10 both have *prthivīm* as obj. and share the phrase *ihá vehá vā* at the end of the b pāda.

X.119.1: The opening of the hymn, with *ítí vā ítí*, is unusual, to say the least. The repeated *ítí* cannot be taken as a standard use of the quotative particle – nor can the *ítí* that marks the end of the refrain. The various tr. render it as “such” or “thus,” which to my mind dampens the rhetorical exuberance of the 1st-person assertions. (A particularly stilted version is Maurer’s “My inclination is thus.”) I therefore render it as a strong affirmation, flg. Thompson 2003 (*EJVS* 9).

X.119.2: The standard tr. (Ge, Re, Mau) supply “trees” as obj. in the simile in pāda a, either modified by an acc. pl. *dódhataḥ* (Ge, Mau) or not, interpr. *dódhataḥ* as nom. pl. Like Don and Thompson I consider the added trees unnec.

X.119.2–3: I now think that *pītā(h)* should be tr. more literally; I’d substitute “(the soma-drinks) when drunk” in both vss. (2b, 3a).

X.119.4: The use of *putrá-* for a calf, a bovine “son,” seems a bit unusual to me, but I have not checked all the RVic exx. of this stem.

X.119.5: The chariot-fashioning imagery applied to a “thought” (*matí-*) is a strong indication that the speaker is the poet, since this is a common trope.

X.119.6–7: I take both these vss. as implicitly subordinated (by *nahí*) to vs. 8. Having established the insignificance of the principal features of the cosmos in comparison to himself, the speaker asserts his complete dominance in 8.

X.119.6: The point here seems to be that the poet in his soaring flight looks down on the earth and the whole Ārya population is visually reduced to a tiny speck.

X.119.7: In the companion vs. to 6, the two world halves are reduced to the size of just one wing of the speaker (poet=bird). The predicate of this vs. is *práti* ‘(be) the counterpart (to)’.

Pāda-initial *anyám* should be indefinite, but it is difficult to make the expression mean “not equal to *another* wing of mine.” The phrase “the one wing ... the other (wing)” is found in 11ab, where the two definite forms of *anyá-* are correctly positioned in non-initial position. For another wrongly positioned form of *anyá-* in the vicinity, see X.117.4 and comm. thereon.

X.119.10: On the hapax *oṣām* see EWA s.v., where it is plausibly derived from $\sqrt{uṣ}$ ‘burn’. I have rendered it slangily as “to blazes.”

X.119.11: The *anyá-pakṣá-* phrase picks up 7b.

X.119.12: As Re points out, *mahāmahá-* is otherwise used of Indra.

X.119.13: For my take on this final, disconcerting vs., which has complicated (and I think skewed) other interpr. of the hymn as a whole, see publ. intro. As I say there, vs. 12 seems to me the climax of the hymn with Indra’s assertion of supreme power. Vs. 13 I take as Agni’s rather weak counterassertion; the vs. certainly should not impose Agni as the speaker of the entire hymn, contra Re, etc.

Pāda b is identical to 5b in the immed. preceding hymn (X.118.5), except that it’s in the nom., not the voc.

X.120 Indra

This is mostly AVŚ V.2, AVP VI.1, which latter is treated at length in Griffiths’s (2009) edition of AVP VI and VII, pp. 3–18, which is well worth consulting. Griffiths (henceforth AG) also draws attention to the comm. on vss. 1–3 in JBr II.144, cited in his disc. (pp. 3–4). On my interpr. of the knotty problem of the identity of Bṛhaddiva, see publ. intro. Unlike AG, who follows Bergaigne in identifying him as Indra, I think he is actually Bṛhaspati, the alloform of Indra.

X.120.1: The identity of the neut. “foremost among beings/existences” (*bhūvaneṣu jyēṣṭham*) from which/whom Indra was born is unclear to me. Given this uncertainty, I would at least delete “living” from the tr. “living beings” – better: substitute “among beings / existing things.” At this late stage of the RV we may be dealing with an undefined principle. AG tr. “the chief in the worlds.”

On the ambiguous (and likely multiple) identities of the helpers (*ūmāḥ*), see publ. intro.

X.120.2: This vs. is a loose paraphrase of vs. 1, with ab corresponding roughly to 1bc and d to 1d; c lacks a parallel.

The preverb \sqrt{v} is found with \sqrt{an} only here in the RV, though it becomes quite common later, starting in the AV.

The neut. sg. *sāsni* is problematic. Gr and Old (partially) want to emend to masc. nom. **sāsniś*, and the following *s* (*sām*) might help (though for real degemination we should have a cluster *-s sC-*). Old also considers the transmitted form possible, but he wants to make it part of a neut. NP in c serving as another obj. to *dadhātī* in b: “Indra stellt Atmendes und Nichtatmendes als *sāsni* hin,” which seems an anacoluthon too far. It is probably better to take it as an “adverbial” or “infinitival” usage of this transitive redupl. stem. AG takes c as a nominal sentence, flg. the JBr interpr.: “Both the one which does not breathe, and the one which does breathe, is winning.” This works syntactically, but what would be its relevance to this vs.?

As subj. in d, best to supply *ūmāḥ* from 1d, flg. Ge (n. 2d); that it recurs in 3b supports this.

X.120.3: On *āpi* \sqrt{vrj} see comm. ad VI.36.2.

The point of b must be that the *ūmāḥ* subordinate their wills to Indra's, even though there are many more of helpers than of Indra. I do not understand Ge's n. 3b, where he contrasts the number of helpers with the number of gods. AG takes the numerical expressions in b quite differently.

I take cd as the direct speech of the helpers, addressed to Indra; the *īti* that opens the next vs. suggests this interpr., though Ge does not follow it.

Note the insistent alliteration in c, not to mention the etymological figure binding the first three words.

Ge's suggestion (n. 3d) that "yonder honey" (*adāḥ ... mādhu*) is the rain seems reasonable.

X.120.4: On *īti* see comm. on 3cd. The direct speech of the *vīprāḥ* may continue in 4cd, merging with the speech of the poet of this hymn. For the presumed identity of that poet, see publ. intro.

Pāda b is a variant on 1d *ānu vīśve mādanti ūmāḥ* : 4b ... *anumādanti vīprāḥ*. This near repetition suggests that the *ūmāḥ* and the *vīprāḥ* are the same, *pace* Ge, and also sketches a small ring.

X.120.5: On the meaning and etym. of $\sqrt{śad}$ see EWA s.v. *śAD²* and Schaef., Intens. 30–32. The use of this verb of young women and their bodies (I.123.10, 124.6) favors the sense 'exult, flaunt' (so already Gr), against 'sich stark fühlen' favored by Th and Re and fld. by Kü and AG, on which see Kü 512–14 and n. 1032, AG (AVP VI+VII: 11), who also cites Pinault on this root.

X.120.6: The acc. phrase of ab characterizing Indra requires a verb to govern it; I supply "I praise," picking up the 1st ps. poet's discourse in 5cd. Alternatively – but this is a long shot – the hapax "Doppelstamm" gerundive *stuṣé'yam* that opens the pāda may conceal a 1st ps. verb. This is a tempting possibility (though a similar suggestion by Roth is dismissively rejected by Old). Among other things the supposed gerundive begins *stuṣé-*, with its first two syllables coinciding with the well-attested 1st sg. -*sé* form *stuṣé* "I (shall) praise," which occurs 13x at the beginning of a pāda. I am now inclined to assume that that's what we started with here – but what about the rest (-*yam*)? Is it a separate acc. that has been mangled in some way, or, more likely (insofar as "likely" enters into it), has *stuṣé* been extended as a nonce 1st sg. optative? (This sugg. is similar to Roth's ill-fated idea.) Such a form would be tantalizingly similar, but unfortunately not similar enough, to the *dheyām* opt. type, over which so much ink has been spilled (also by me: see my 1999 Ged Schindler article). Although I do not see a way to work out the details, I would now favor an alt. tr. "I would praise the craftsman possessing many forms ..." AG (citing Kü 1996) assumes a haplology **stuṣé stuṣéyyam*.

X.120.7: The referent of *ávaram páram ca* is unclear, though it might be neut., given the *tád* (though that could be adverbial). Ge, flg. Sāy., supplies *dhānam* 'prize, stake, wealth' (Ge "Schatz"). This seems harmless enough, though nothing particularly favors it, save for *dhānā* in 4a. Moreover, *dhāna-* is not usually simply 'treasure', but is rather a prize (vel sim.) to be won (as in fact in 4a). It *is* frequently construed with $\sqrt{dhā}$, as it would be here, but in the sense "set a prize," esp. in the common loc. absol. *dhāne hité* "when a/the prize is set." If *dhāna-* is the correct referent here (which I very much doubt), the clause should mean "you set (the prize), both the lower and the higher" – with no role for *ní* and no obvious contextual sense. AG (p. 14)

suggests rather *rátanam*, in the same semantic sphere, which is also construed elsewhere with $\sqrt{dhā}$, but again there is no compelling reason to supply this word.

The oppositional pair *ávāra- pára-* is fairly common, with a variety of meanings (see comm. ad X.55.4) and no fixed pair of referents. Probably the closest parallel to our passage is I.155.3 *dádhāti putró 'varam páram pitúr, nāma tṛtīyam ādhi rocané diváh* “The son sets in place the lower and the higher names of the father and the third name in the luminous realm of heaven,” with “name” as the immediate referent, although the contextual referent is the three strides of Viṣṇu. But this is of no help here. If I were to speculate, I would suggest that Agni is the referent (and *tád* an adverbial red herring) because of the appearance of *ní√dhā*, a lexeme often used of the establishment of the ritual fire, and of *duroṇé*, which is almost always used of the house in which the ritual fire is kindled. If this is correct, the “nearer/lower” would be the ritual fire and the “further/higher” would be the sun. This would fit with the cosmic reference in c as well as Indra’s (or Bṛhaddivī’s) winning of the sun in 8b. However, it has nothing to do with either the Vala or the Vṛtra myth. I tentatively suggest an alt. tr. “Then you established the nearer (fire) and the further one, in the house ...,” with no confidence in its correctness.

X.120.8: I take the praise of Indra as beginning in the middle of b, contra Ge and HPS (B+I 208). Among other things, *svarṣā-* is never used of human, but does modify Indra in III.34.4 and his vajra in I.110.13. On the other hand, if (as I suggest in the publ. intro.) Bṛhaddivī is actually Bṛhaspati, or a proxy for him, *svarṣā-* would be appropriate, since the adj. modifies him in VII.97.7. An alt. tr. would be “Bṛhaddivī, the first to win the sun, speaks these sacred formulations fortissimo to Indra: ‘he has dominion ...’ ”

With HPS I take *svarāj-* as referring to Indra, despite the slight awkwardness of the apparent double ref. to Indra in the clause (both subj. and gen.). Ge’s identification of the sovereign king as Vala is unlikely on conceptual grounds; see HPS’s remarks. AG (p. 16) takes Bṛhaddivī as subj. here, with Indra the referent of *svarāj-*.

The referent of *svāḥ* ‘own’ is not clear – are these Indra’s own doors or the own doors of the cowpen (*gotrá-*)? This pāda is identical to III.31.21, where it is harder to find any referent but Indra. The adj. may be applied proleptically: the cowpen is about to be his and so are the doors. The prominent position of *svāḥ* as the final word of the vs. is probably the result of phonological play with the finals of b and c: *s^uvarṣāḥ* and *svarājāḥ*.

X.120.9: On my assumption that Bṛhaddivī is really Bṛhaspati and is therefore addressing his alloform Indra, see the publ. intro. It is pretty much impossible to escape the interpr. that he is addressing “his own self (*svām tanvām*), namely Indra (*índram evá*). RVic discourse is seldom so straightforward. See, however, Ge’s attempt to evade this interp. (n. 9b).

On the hapax *mātarībhvarīḥ* (to a putative stem *mātarībhvan-*), see Old ad loc. and AiG II.2.177 (neither v. satisfactory). If it does mean ‘staying by their mother’, this would correlate semantically with *ariprá-* ‘flawless, stainless’: both would refer to virginal girls (so Ge n. 9cd). The further referent is probably to hymns. As is regularly noted, *mātarībhvan-* recalls *mātaríśvan-*, incl. the anomalous accent on *mātarí*. But Old is surely correct that the form should not be emended to a form of *mātaríśvan-*. AG (in collab. with W. Knobl) suggests a novel interpr. of this hapax (pp. 17–18), which I am afraid I find farfetched: that it is a haplogitized form of **mātarī-ribhvarīḥ* “singing on Mother (Earth).” Among other problems, as I have discussed at length (see reff. in Comm. lexicon), \sqrt{ribh} does not mean ‘sing’, but ‘rasp, croak’;

moreover, the meaning suggested seems reverse-engineered from the constructed pre-haplogologized form and doesn't, to me, ring true.

[X.121 JPB]

X.122 Agni

As indicated in the publ. intro., the hymn is attributed to a Vasiṣṭhid and ends with the Vasiṣṭha refrain (8d). The given name of the poet acdg. to the Anukramaṇī, Citramahas, has been extracted from the first pāda of the hymn, where Agni is called *citrāmahas-* 'having brilliant might'.

The meter of the hymn vacillates between the dominant Jagatī and occasional Triṣṭubhs. Although acdg. to the Anukr. vss. 1 and 5 are Triṣṭubh, vs. 1 has only one unambig. Triṣṭubh pāda (a); c is clearly Jagatī and b and d end with *-Cyam* sequences that are almost surely to be distracted: *advīṣeṇīyām* and *suṇīyam*. As for 5, pāda a ends with another word that invites distraction, *vāreṇīyah*. The pāda then has only 11 syllables, but a Jagatī cadence. Pāda b is Triṣṭubh, but c and d are Jagatī. On the other hand, 3d is a clear Triṣṭubh (and 3b has a Triṣṭubh cadence but 12 syllables), and the Vasiṣṭha refrain (8d) is a Triṣṭubh pāda and limited to the Triṣṭubh hymns of VII. In this late hymn the fungibility of the two trimeter types is manifesting itself.

X.122.1: Note the caesura at the cmpd seam of a non-dvandva: *citrā-/mahasam*.

On *śurūdh-* see comm. ad IX.71.5.

X.122.2: Pāda d requires an object to be supplied; there are two candidates: *bráhma* (from c), so Ge, Re, and the publ. tr.; *vrátam* (from d), so Th (Unters. 21 and n. 1), HPS (Vrata 66). Both are paralleled: VII.22.9 *bráhmāṇi janáyanta* (cf. also VII.31.11); VII.75.3 *janáyanto daívyāni vrátāni*. Although I think either is possible, I am now somewhat inclined towards the Th/HPS suggestion, since I think it would be unusual for gods to create *bráhma-*; in the two passages just cited, the subjects are poets. I would therefore now suggest an alt. tr. "Following your commandment, the gods begot (their commandment(s))."

X.122.3: As Ge and Re point out, the "seven domains" are the domains of the sacrifice (cf. IX.102.2, IV.75, as well as nearby X.124.3 *ṛtásya dhāma ví mime purūṇi* with vs. 1 *yajñám ... saptátantum*).

Unlike Ge/Re but with Kü (354), I take dat. *sukṛte* with *māmahasva*, not as parallel to *dāsūṣe* with *dāśat*. There are no implications, but it's attractive to supply *māmahasva* with a compliment. (For dat. with *√maṇh* see, e.g., VIII.1.32.)

Note *suṇīra-* here, between *suṇīrya-* in 1d and 4d.

X.122.4: Ge (n. 4b) appositely adduces the seven Hotars in VIII.60.16, etc.; the "seven domains" of 3a is of course also relevant.

X.122.5: The referent of *amṛtāya* is unclear. Ge considers it a reference to "die Götterwelt"; Re tr. "pour le (principe) immortel." Because of the associated impv. *matsva* 'become exhilarated', I take it as a reference to soma (so also Gr), though I realize that Agni is not a standard drinker of soma.

I don't know what the Maruts are doing here, though see Ge (n. 5c).

In d *rurucuḥ* would be better read **rūrucuḥ*, as also in the almost identical IV.7.1. For this possibility see comm. ad IV.7.1, 16.4.

X.122.6: I interpr. *duhán* as taking a double acc. construction, “milk the cow (for) milk,” with Ge (tr., though he considers alt. in n. 6a), contra Re, who thinks all the acc. refer to the milk substitute. The pāda-final adj. *viśvādhāyasam*, repeated from 1c, could in principle modify either the refreshment or the cow. I take it with the former, since in 1c it modifies “riches,” a desirable product, not a producer.

Although Gr, Ge, and Re agree in interpr. the hapax *yajña-prī-* as ‘loving the sacrifice’, transitive forms of $\sqrt{prī}$ don't mean ‘love’ but ‘please’. The rendering ‘pleasing to the sacrifice’ in the publ. tr. uses this sense, but I now think it should be refined. In the similar cmpd *brahma-prī-* (2x) I take *prī-* with this transitive sense, but the first member *brahma-* as instr. in function: “pleasing [X] with the formulation” (see comm. ad I.83.2). A parallel sense “pleasing [X] with the sacrifice” works well here, conforming to the other descriptions of the ritually active sacrificer in this hymn (3b *dāśúse sukṛtāya*, 4b *yás ta ānaṣ samídhā*, 4d *prṇaté*). I would now emend the tr. to “... for the sacrificer who pleases with the sacrifice” – the object of “please” presumably being the gods.

In b the voc. *sukrato* returns from 2b, and in d this nominal stem is made into a denom.: *sukratūyase*.

In c *ghṛtasnú-* recalls 2c *ghṛtanirṇik*.

The distribution of elements in cd is uncertain. Both Ge and Re (in his tr.) take *ṛtāni* as obj. of *ḍḍyat* (e.g., Re “en éclairant trois fois les (domaines de) l'Ordre”). But as Re points out in his n., “*ḍī-* n'est factitif qu'avec des régimes internes” – or, better, $\sqrt{ḍī}$, esp. in the participle, is almost always in absolute usage: “shining,” not “shining on X” or “making X shine.” I therefore take this pāda-final participle in purely adjectival usage, interrupting the acc. phrase that continues in d. As Ge (n. 6cd) points out, *trīḥ* in c should be construed with *vartīḥ ... pariyán*, referring to the triple fire-circuit. I take *ṛtāni* as parallel to *yajñām*. This is essentially identical to Re's emended tr. in his n.: “toi qui, en brillant, parcourt le circuit autour des *ṛtā*, (autour du) sacrifice,” though he leaves out the *trīḥ* (probably by mistake).

pariyán returns from 3a.

X.122.7: The idiom *ní√mrj* is rare and fairly idiosyncratic in its usage, usually meaning ‘drag down, clasp to oneself’ sometimes with loc. *tanvī* (hence my “(on your body)” here; see, e.g., comm. ad II.38.2, VII.26.3, X.39.14). Even without the preverb, \sqrt{mrj} does not take as object the substance to be wiped (here *ājya-* ‘melted butter’) but the animal figure to be wiped upon. I wonder if *ājyam* is meant to evoke *átyam* ‘steed’, which is an occasional obj. of \sqrt{mrj} (e.g., VII.3.5 *agním átyam ná marjayanta*). In any case the usage here seems at best a mixed construction, and it is possible that the *ní* simply anticipates the *ní* that opens the following vs. Both Ge and Re render this pāda rather vaguely.

X.123 Vena

On the difficulties of this hymn and its connections with other hymns, see publ. intro. As I say there, I consider the *vená-* ‘seeker’ to be both Soma and the Sun. The treatments of this hymn are too manifold and often too fanciful to engage with in detail. I will just set out my barebones interpr. Ge's notes are useful to consult and stay sensible.

X.123.1: Note that the first word of the hymn, *ayám*, situates the subject in the ritual here and now, which positioning is reinforced by *ímám* beginning the 2nd hemistich.

Whatever the exact referents, this vs. depicts a conceptual birth, with the two RVic hapaxes *pṛśni-garbha-* (fem. pl., ‘whose embryo is dappled/the dappled one’) and *jyótirjarāyu-* (masc. nom. sg., ‘whose afterbirth is light’) (sim., for both, Ge nn. 1ab and 1b) as well as the licking of the infant in d, an action performed by a mother cow just after a calf is born (also Ge n. 1d). The females in question can be both the waters, whose embryo is soma, and the dawns, whose embryo is the sun. The afterbirth of light could be, for Vena=soma, the spreading of the golden liquid across the filter; for Vena=sun the radiance after sunrise. Pāda d treats the importance of poets and their hymns in the production of both soma and sunrise.

X.123.2: On this vs., see comm. ad VIII.100.5, which is similar in phraseology. As disc. there, the Vena is regularly associated with heights (also in IX.85.9–12). Here the first three pādas seem to depict the first sighting of the soma emerging from the pressed plant on the top of the filter and the first sighting of the sun rising through the clouds.

Against Ge’s attempt (n. 2b) to make *nabhojāḥ* modify *pr̥sthám*, it seems better to take the two as independent nom. sg. So, more or less, Scar (140), though he tries to accommodate Ge’s views.

On *vr̥ā-*, see comm. ad VIII.2.6 and my treatment of this word in the 2003 HPS Fs. Here it probably refers to the hymns eagerly seeking the Seeker; thus, like 1d and 3d it keeps the theme of the importance of the praise hymns in the forefront.

X.123.3: This vs. recycles vocab.: *samānām* (a =2d); *ṛtasya s̥nāv ādhi* (c =2c); *rihānti* (d = *rihanti* 1d). In pāda a I supply *yónim* with *samānām* on the basis of the immediately preceding pāda, 2d *samānām yónim*; all standard treatments supply instead “child” (Ge: “Kind,” Don) or “calf” (Gr, Lü 605). This is certainly possible, and the phrase *samānām vatsám* is found elsewhere (I.146.3), but in the absence of any compelling reason to switch referents I weakly prefer my solution, esp. since *samānām yónim* is also found in III.33.3 and X.17.11.

The part. *vāvasānāḥ* in pāda a is most likely a pun, belonging to both √ *vās* ‘bellow’ and √ *vas* ‘desire’.

With Ge (n. 3d) I take *mādhvo amṛtasya* as the gen. obj. of *rihānti*, though not very happily: I don’t really think that ‘lick’ should take a partitive genitive. Gr (s.v. *rih*) seems to suggest that *vāñih* is the object, but identifies the same form as a nom. pl. s.v. 2. *vāñī*.

X.123.4: On the possible connection of this vs. with “name-and-form” see publ. intro.

Ge connects b with a, while I connect it with c because there movement is depicted in both b and c.

X.123.5: The introduction of the Apsaras responds to the mention of the Gandharva in 4d. Beyond that I make no effort to interpr. this vs., though see Ge’s nn. for more or less plausible possibilities.

X.123.5–6: Because I consider vs. 6 to be dependent on 5cd, I take the injunctives *cárat* (5c) and *sīdat* (5d) as preterital, because of augmented *abhy ácakṣata* in 6b. Ge (and Don) keep vs. 6 independent – it’s not clear to me how Ge deals with the subordination of 6: he tr. *yád* as “als”

but the attachment to 7 is vague. If vs. 6 is independent, then presential “wanders” and “sits” would be appropriate for 5cd, but thematically 6 seems to fit better with 5, with the wing (5d, 6c) – though the presence of *nāke* in both 6a and 7b does give me pause.

X.123.8: On the downplayed “climax” in this vs., embodying name-and-form, see publ. intro.

This vs. forms a slight ring with vss. 1–2: *rājasi* (d): 1b *rājasah*; *vidharman* (b) recalls *vimāne* (1d); *samudrām* (a): *samudrāt* (2a).

Ge (fld. by Don) construes the instr. *śukrēṇa śocīṣa* with the pf. part. *cakānāḥ* (“mit ihre hellen Glut begehrt”), but the Vena vs. IX.85.12 *bhānūḥ śukrēṇa śocīṣā* without part. makes this unlikely. Kü (142 n. 132) is in agreement with me.

X.124 Various divinities

On this famous and much discussed hymn, see publ. intro. and, especially, my detailed treatment of it in my 2016 “The Divine Revolution of Ṛgveda X.124: A New Interpretation. Beyond Asuras and Devas” (Ged. F. Staal: *On Meaning and Mantras: Essays in Honor of Frits Staal*, ed. George Thompson and Richard Payne, 289–306), which challenges the entrenched view of the hymn as depicting the conflict between the Devas and the Asuras so ubiquitous in Middle Vedic literature. I will not here repeat the arguments found in that article in detail, but make global reference to it.

The sec. lit. on this hymn is immense; I will just note two fairly recent treatments: Theodore Proferes (2007), *Vedic Ideals of Sovereignty and the Poetics of Power* (New Haven: American Oriental Society), 106–13, and Joel Brereton (2016), “Reconstructing Ṛgvedic Religion: *Devas*, *Asuras*, and Rites of Kingship” in *Vedic Investigations* (Proceedings of the 12th World Sanskrit Conference, Helsinki, Finland, July 2003), ed. Asko Parpola and Petteri Koskikallio, 35–58 – neither of which I am in complete agreement with, though it is important to note that both scholars free themselves from the dominant Asura/Deva model. Again I will not engage with the multiple other interpr. of the hymn.

The hymn is in dialogue for the first 6 vss., though there is no agreement on who all the speakers are. 1st and 2nd person references abound. The last three vss. (7–9) are in the 3rd ps. and spoken, presumably, by the poet.

X.124.1: As Ge points out (n. 1b) there are a number of ways to “solve” the numerological references here. The exact referents matter less than the fact that Indra is offering Agni participation in an elaborate, already worked-out ritual system; he’s not just improvising, even though, as I argue in the art. cit., we are watching the primal instantiation of the sacrifice.

The “long darkness” in which Agni has been trapped in d is, by my interpr., the pre-yajña stage in which the ritual fire was not kindled.

X.124.2: In my interpr. the being that Agni is leaving behind is Father Heaven (Dyaus Pitar). Although identifying him as a “non-god” (*ádeva-*) might seem paradoxical, I argue at length in the art. cit. that though Heaven is the *father* of the gods, he is not a god himself.

Both words in the phrase describing Agni’s goal, “an alien lineage” (*áranīm nābhim*), need unpacking. With regard to *áranī-*, I argue in my 2016 art. that the word “seems generally to refer to ‘foreign’ or ‘alien’ places and people primarily in terms of physical distance and separation from familiar surroundings, not kinship or natural affinity.” I also suggest that it participates in word play here: the differently accented *aránī-* is the word for the kindling sticks

used to produce the ritual fire. As for *nābhi-*, lit. ‘navel’, it is used both for kinship affiliation and, more often, to refer to the ritual ground, indeed the ritual fire itself, as the conceptual navel or center of the universe. So, under the ritual interpr. of those two words, Agni is going from a pre-sacrificial to a sacrificial state.

X.124.3: Against many interpr., I take the speaker of this vs. not as Agni (e.g., Ge, Re), but Varuṇa (so also Don, Proferes). The “guest of the other branch” (*anyāsya átithim vayāyāḥ*) is Agni, whose journey (in vs. 2) Varuṇa has just witnessed. Recall that Agni is frequently called the guest (of men, etc.), since he is a god, whose original domain should have been heaven, installed in a mortal setting.

Varuṇa’s claim to “measure out the many domains of truth” refers, in my view, to his measuring out the ritual ground for the instituting of the sacrifice. See the parallels adduced in the Staal Ged.

“Father Asura,” again in my view, is Dyaus Pitar. See the art. cit. for instances where he is called an asura. “Father” is of course part of his title.

X.124.4: Again, rather than Agni, I think Soma is the speaker here (with Don, Proferes). His defection means that the crucial ritual materials – fire and soma – are now available for yajña. The assemblage of the four principal gods, Indra, Agni, Varuṇa, and Soma, signals that the conceptual revolution is complete.

The speaker’s curious expression “I have ‘done’ many years within him” refers to Soma’s confinement and inactivity, deprived of any ritual role.

X.124.5: On this vs. as expressing the twin kingship of Indra and Varuṇa with their complementary functions, see the art. cit.

Pāda b contains subordinating *ca*, as shown by the accent on *kāmáyāse*.

X.124.6: I argue in the art. cit. that the first hemistich depicts the passing of the old heaven/sun-centered religion to one based in the midspace, closer to the mortal world.

“Come forth” (*niréhi*) in c, addressed to Soma, implicitly responds to Soma’s statement about doing many years “within” the father (4a), while pāda d expresses his desired transformation into a ritual substance, an oblation. On the purport of this pāda see disc. in art. cit.

X.124.7–9: These three final vss. contrast sharply with the first six, esp. in leaving dialogue behind in favor of strict 3rd person. For my view that these vss. effect the transition from the closed loop of gods sacrificing to themselves to the divine–human partnership that prevails now, see art. cit. As I argue there, vss. 7–9 are delimited by a ring, and it is through the shifting referents of that ring that the movement from divine to human sacrificers comes about, what I call there “an indirect transfer of sacrificial responsibility.” Vs. 7 begins *kavíh kavítvā* “the poet with his poetic craft”; the referent is Indra. Vs. 9 (and the hymn) ends *kaváyo manīṣā* “the poets with their inspired thought”; the poets are human, with Indra (acc. *índram*) their object.

To sum up these verses I say in the art. cit.

Without calling attention to it, the composer of X.124 has modulated from the gods-worshipping-gods model, with Indra as a kavi, to one in which other, presumably human, kavis offer praise and sacrifice *to* the

god(s). The closed circle is broken and the human/divine dynamic established, but the verbal identification of Indra and the human kavis implies that the current model of sacrifice derives from the older one depicted earlier in the hymn and that the human officiants are occupying formerly divine roles.

X.124.7: Although there is a sharp stylistic break between vss. 6 and 7 and although, as I just argued, vss. 7–9 form a unit, there is, nonetheless, conceptual continuity between 6 and 7. In 6c Indra and Soma prepare to smite Vṛtra; throughout the RV it is the killing of Vṛtra that allows the waters to flow, starting in 7b.

The poet-agent (*kavīḥ*) in pāda a is not identified, though the agent of pāda b is: Varuṇa. It would be possible to take Varuṇa as the referent in pāda a as well. In fact, though Indra is sometimes called a *kavī-* (e.g., I.11.4, VI.32.3), Varuṇa is a more poet-like figure than Indra. See, e.g., from a hymn dedicated to Varuṇa, VIII.41.5 *sá kavīḥ kāvyaṁ purú, rūpām dyaúr iva puṣyati* “he is a poet who fosters the many poetic arts, as heaven does its (concrete) form [=sun],” which also contains the *rūpā-* in heaven found here. Nonetheless I think Ge (n. 7a) and Re are correct that Indra is the subject. He is the focus of these three vss., and, moreover, it is the peaceful royal partnership that Indra invited Varuṇa to join (see vs. 5) that is celebrated in the rest of the hymn.

Placing the sun in heaven is one of Indra’s standard cosmogonic actions (e.g., I.7.3 *ā sūryam rohayad diví* “he made the sun mount in heaven,” etc. etc.); I therefore take *rūpām* here as a reference to the sun (so also Re: “la forme (solaire)”), rather than “his [=Indra’s?] form” (Don, Proferes) or “die Farbe” (Ge). See VIII.41.5 cited immed. above, where *rūpām* also appears to be a ref. to the sun.

The releasing of the waters in b is also prototypically Indra’s deed – here presumably credited to Varuṇa because of the power-sharing arrangements of the two gods, aided by Varuṇa’s growing association with water.

Note the phonological and morphological similarity of the two parallel, pāda-final verbs: *sajat* and *srjat*.

As I point out in the Staal art., co-wives are notoriously *unpeaceful* towards each other (see RV X.145, 159); the peace achieved here is thus esp. noteworthy – or else the pāda slyly hints that the rivers are not all that peaceful. This pāda is variously interpr. – see, e.g., Re’s over-elaborate “Les rivières ... ont fait (d’elles-mêmes) une possession-pacifique (à l’usage d’Indra)” – but my interpr. seems to conform best to the Skt. phrase.

I do not know what “bear his color” refers to. First, what is the referent of *asya*? Ge (n. 7d) opts for Varuṇa, but his parallels are not strong – though the echo *váruṇo* (b) / *várṇam* (d) is suggestive. Indra seems more likely, esp. since he is surely the referent of *asya* in 8a. But I am uncertain about what exactly his *várṇa-* is. I am toying with the possibility that it is the physical manifestation of Indra’s impurity, the blood guilt, incurred by slaying Vṛtra: Indra distributes the impurity arising from killing to various natural elements in Vedic prose accounts (e.g., TS II.5.1). Since waters are well known as removers of impurity (see, e.g., I.23.22), this could make sense.

X.124.8: The phrase *svadháya mādantīḥ* is also used of waters in VII.47.3. In both cases I think the *svadhā-* belongs to the waters, even though in this case the previous pāda states that they follow Indra’s power. But in the next pāda they exert their *svadhā-* by choosing him as king.

The depiction in c of the chosing of a king by the the clans (*viśāh*) is striking and has been much discussed (e.g., Proferes 94, 110–11, Ober. Relig. I.352, Jamison art. cit.).

X.124.9: I forebear from speculating myself on the mystical image of the roving goose, but see Proferes’s discussion (110–13, 127–28) of the goose as royal symbol and symbol of the sun, associated with unction waters.

X.125 Speech

On this famous hymn and the carelessness its fame has induced in its many translators, see publ. intro. Re (HymSpec) points out that the word *vāc*- does not occur in the hymn, which is, therefore, an extended riddle. I am not at all certain that I would have solved it, but we don’t need to: *Vāc* is identified by the Anukramanī as both the poet and the dedicand of the hymn. The hymn also belongs to the genre of *ātmastuti* “self-praise,” with forms of *ahám* extremely prominent, esp. at the beginning: the first 7 pādas all begin with *ahám*, with an extra one in 1d.

X.125.1–2: The speaker’s association with divinities progresses from groups of undifferentiated gods (1ab), to dual divinities (1cd), to single gods (2ab).

The pres. *bibharmi* (1c, 2a) is a good candidate for a habitual reading of the redupl. pres.

X.125.1: In all clear cases (uncertain: VI.51.7, VII.25.11), the cmpd *viśvādeva*- is a bahuvrīhi meaning ‘possessing / belonging to all the gods / the All Gods’, as its accent indicates. In this passage it is universally interpr. (incl. in the publ. tr.) as a nominal designation ‘All Gods / all the gods’. However, it could in fact be a bahuvrīhi and modify the three previous instr.: “with the Rs, Vs, and Ās, comprising all the gods.” In favor of this interpr. is the fact that the Rudras, Vasua, and Ādityas are sometimes mentioned together, implicitly as the totality of the divinities (see, e.g., nearby X.128.9 and Macd., Vedic Myth., 130). However, the position of *utá* speaks against this interpr. — which, however, I consider a strong alternative.

The three paired entities in cd are progressively less differentiated: the dual dvandva *mitrāvāruṇā* has two accents and two inflectional endings and is split across the caesura; the dual dvandva *indrāgnī* has a single accent, a single inflectional ending, is not read distracted (as it sometimes is), and precedes the caesura (though it occupies the same metrical slot as *mitrāvāruṇā*, immediately after pāda-initial *ahám*); *asvínā* is not a compound of two divine names but refers to a pair without individual names.

X.125.2: The Anukr. identifies this vs. as Jagatī, but the first pāda is a Triṣṭubh.

On the difficult word *āhanās*- see comm. ad V.42.13.

Bhaga is universally taken as a separate god here, though it would be possible to take *bhāgam* as an epithet of *pūśanam*, “Pūśan the distributor,” an interpr. weakly favored by the position of *utá* (though JSK [DGRV I.340] considers this an X *uta* Y Z construction).

After the divinities in the first verse and a half, we arrive at the human ritualist in cd.

X.125.3: It is only in this vs. that the gender – feminine – of the 1st ps. speaker is established – by a flood of fem. nouns and adjectives in ab and d, *rāṣṭrī saṃgāmanī ... cikitúṣī prathamā ... bhūriṣṭhātrām ... āveśāyantīm*, and by the demonstrative *tām* reinforcing the (genderless) 1st ps. enclitic prn. *mā*. The gender is of course an important clue for the solution of the riddle, esp. since female divinities are scarce. The content of this vs. also provides a few clues to further

narrow the already narrow field of female gods. The fem. agent noun *rāṣṭrī* ‘ruler’ (a) is found once elsewhere (VIII.100.10), where it clearly refers to Vāc. (On the single form of anomalous masc. *rāṣṭrī* see comm. ad VI.4.5.) In c the statement that the gods distributed her in many places would remind any Vedic hearer of the divisions of speech that are a staple topic of Vedic enigmas (see, e.g., my Hyenas, 251–60).

The two characterizations of Vāc in d *bhūriṣṭhātrām* and *bhūry āveśāyantīm* are clearly meant to complement each other. The morphology of the second term is also very clear, namely a transitive-causative participle to *ā√viś* ‘enter’, which should have the sense ‘cause to enter’; cf. I.176.2 *tāsmīnn ā veśaya gīraḥ* ‘cause the hymns to enter into him.’ The poet must have meant the causative morphology to be taken seriously, because in the corresponding vs. 6 (forming the ring around the omphalos vss. 4–5) we encounter the non-causative pf. *ā viveśa* (6d). Despite all this clear signaling, translators have tended to ignore the morphology and make the phrase mean what they think it ought to: e.g., Re “j’entre en beaucoup (de formes)” (HymSpec, but see EVP XVI.166, where he is more sensitive to the morphology); Don “I ... enter into many forms”; Mau “entering upon many a form”; Ge slightly better “viele (Formen) annehme” (though this still doesn’t accurately represent the morphology). If we take the morphology seriously – and I think we must – the phrase has to mean “causing many things to enter (me).” This provides a striking contrast to *bhūriṣṭhātrām* “having many stations.” On the one hand, she has been infinitely subdivided and is found in many different places, but on the other she encompasses everything – the multiplicity of things enters into the single entity that is Speech, which can express them all. As often, if we hold ourselves to taking the grammar literally, it leads to a more interesting result than just going by what we think it ought to mean: by the standard interpr. *bhūry āveśāyantīm* is simply a paraphrase of *bhūriṣṭhātrām*, but taking the causative seriously produces a sharp contrast and sketches a totalizing project.

X.125.4–5: On these vss. as the omphalos, see publ. intro. Note, inter alia, the repetition of *vadāmi* (4d, 5a).

X.125.4: On the interpr. of this vs., see publ. intro. The first hemistich provides another clue to the identity of the speaker, but once again it is oblique. She asserts her power over a bodily function – but, surprisingly, it is not speaking, but rather eating. This at first appears to be a nonsensical statement: how does Speech enable eating? The connection is the location: the mouth is the locus of both speaking and eating, and so, by a bit of slippery logic, Speech claims control over eating. She also makes another assertion, which is subtly conveyed by the syntactic structure: the primacy of eating over any other sensory activity – seeing, hearing, breathing. These last three are conveyed in relative clauses (“who sees ...,” etc.), which are dependent on the main cl “he eats.” Since food is essential to life, sensory activity is dependent on eating. (The hierarchy between eating and the other senses is elided by tr. like Don’s “the one who eats food, who truly sees ... (etc.),” which ignore the *sá ... yāḥ* structure.) See the publ. intro. for a second possible message, directly relevant to the poet, in this same passage.

The final pāda of the vs. is justly famous for its phonological and etymological patterns: *śrudhī śruta śraddhivām te vadāmi*. Watkins (Dragon 111) argues that it contains “an exhaustive classification of the speech sounds of the Vedic language, with one example of each class: the vowels *a*, *i*, *u* and a single icon each of the oppositions of quantity (*a* : *ā*) and nasalization (*a* : *aṁ*); a single sibilant *ś*; a single liquid *r*; a single semi-vowel (glide) *v*; a single nasal *m*; and a

single order of stops, *t d dh* as tokens of the oppositions of voicing (*t: d*) and aspiration or murmur (*d: dh*)."

The pāda is also at almost the exact center of the hymn, where the "message" is often located. It contains the only imperative in the hymn, which must be addressed to the poet, and the only 2nd ps. prn. (*te*). Once again, the familiarity of the pāda has led to some lack of focus in tr. The tendency has been to take *śruta* in its common usage as 'famed, famous'; see Ge "Höre, du Berühmter"; Watkins (Dragon 111) "Listen, o famous one." Even further afield, Re (HSpec) "Écoute, toi qui sais," which is either a major extension of 'hear' to 'know' or a lapse on his part. The trick to (which I think) is the correct interpr. is to take *śruta* as 'heard' → 'listened to', not 'heard of' → 'famous'. Speech is addressing the poet as the conduit of her message; others listen to him, and he can therefore convey what she says to a wider audience as long as he himself listens to her.

X.125.5: The first hemistich seems to echo the content of *bhūry āveśāyantīm* in 3c in other terms. Although she acts on her own (*ahām evā svayām* "just I myself ..."), what she says is applicable to and favorably received by both the divine and the human realms – that is, to all beings.

The anomalously accented old past participle to *√juṣ* 'enjoy', *júṣta-*, ordinarily takes a dat. complement (presumably conditioned by its accent retraction). This is the only place in the RV where it is found with the instr. expected with a ppl. It is probably no accident that this involves the phrase "by gods and men" (*devébhīr utá mānuṣebhiḥ*); cf. the three instantiations in Old Avestan of the similar phrase *daēuuaišcā* (...) *mašiiāišcā* (Y. 29.4, 34.5, 48.1), though with the Avestan semantic shift of *daēuua-* to the negative side.

The second hemistich concerns the choosing and creating of a poet by Speech. It is reminiscent of Vasiṣṭha's happy memory of the day when the god Varuṇa made him a poet: VII.88.4 *ṛṣīm cakāra svāpā mähobhiḥ, stotāraṃ vípraḥ* ... He [=Varuṇa], himself skillful in his work, made him [=Vasiṣṭha] a seer through his great powers. / The inspired one [=Varuṇa] (made him [=Vasiṣṭha]) a praise singer."

X.125.6: I do not know why this vs. is so aggressive in tone. Perhaps the mention of the "formulator" (*brahmán-*) in 5d brings to mind the enemy of the formulation (*brahma-dvīṣ-*) and reminds Speech that true speech must always be defended.

dyāvā-prthivī brings us back to the dual dvandvas of 1cd; like *mitrā-varuṇā* there the dvandva here is split by the caesura and also has all the furbelows of a true dual dvandva: double accent and double inflectional ending.

Re (HSpec.) suggests that *samādam* is a verbal contest (p. 253 n. 11 "la joute oratoire"), an idea taken up by both Don and Mau. This is not impossible, esp. given the identity of the speaker (Speech). However, it is far from necessary: well-attested *samād-* isn't otherwise specialized for verbal contests, and Speech can be implicated in regular battles ("fighting words"). On *samād-* see Scar 381–83.

The pf. *ā viveśa* contrasts with *āveśāyantīm* in 3c, as discussed there. In vs. 3 many things enter her; here she herself enters.

Her entering Heaven and Earth here picks up the gods and men of 5b: both phrases are merisms of a sort, referring to the totality of beings / realms by their two most conspicuous and contrastive members. She will further develop this in the next vs.

X.125.7: This vs. expresses Speech’s total pervasion of Heaven and Earth, announced in 6d. It does so by using two deep-structure formulas, with gapped members – a demonstration of her own virtuosity. I do not think this vs. has been understood correctly by previous interpr. We start with the apparent paradox, “I give birth to the father on his head.” In my view, the father (*pitár-*) is Father Heaven, Dyaus Pitar (of whom we heard so much in the immed. preceding hymn, X.124). The paradox of his place of birth, “on his [own] head” (*ahám suve pitáram asya mūrdhán-*), can be resolved by reference to a different formulaic phrase, “the head of Heaven” (*mūrdhán- diváh-*): this phrase is regularly used of Agni (e.g. I.59.2, III.2.14, VI.7.1, VIII.44.16 -- cf. also X.8.6 *diví mūrdhānam dadhiṣe* also of Agni). To expand this: “I give birth to Father Heaven on the head of Heaven [(i.e., Agni). In other words, we are dealing with two formulae: *dyaus pitā* and *mūrdhán- diváh-*. They intersect in this pāda, and in both formulae one of the words in the formula is gapped – but the *same* word, namely “Heaven.” What this means is that by being present and officiating on the ritual ground, beside the ritual fire, Speech creates and sustains the cosmos – from the restricted space on earth to the very top of heaven. From this space she spreads through all realms and across all beings and touches heaven.

As sometimes elsewhere (see comm. ad I.57.5, VIII.40.4), ‘heaven’ is modified by a fem., in this case the pronominal adj. *amūm* ‘yonder’, which may seem esp. disturbing because (at least in my interpr.) Heaven is the father in pāda a. But this can be interpr. as part of Speech’s totalizing project: she has contact with both aspects of a putatively androgynous Heaven. (At least *amūm* has the right deixis; sometimes the fem. demonstr. with heaven is *iyám* ‘this here’; see comm. cit.)

varṣmán- (and apparently synonymous *várṣman-*) is regularly construed with *diváh* (VI.47.4, X.63.4), so, *pace* Re (HSpec), Don, and Mau, Speech does not touch heaven with *her* *varṣmán-*.

X.125.8: In the final vs. Speech claims a larger territory than even heaven and earth – in c she asserts that she goes beyond them both. She also manifests as the wind, which is of course suitable for speech, which is carried by breath.

Strictly speaking, *enā* cannot modify *pr̥thivyā*, despite the standard tr., because *pr̥thivī-* is fem., and instr. *enā* in masc.-neut. Unlike ‘heaven’ (see ad 7d above), ‘earth’ does not switch genders. Hence my “this earth here” is misleading, but I can’t come up with a suitable adverbial rendering.

X.126 All Gods

On the elementary structure of this hymn and on its meter, see publ. intro.

X.126.1: As often, a pattern in a hymn takes a while to settle down: although in vss. 2–7 pāda b is occupied entirely by the same trio of gods in the same order, Varuṇa, Mitra, Aryaman (in nom., except voc. 2b), in this initial vs. the three are scattered across cd.

X.126.2: The lexeme *nīh* √*pā* is found only here and seems to have been confectioned in order to find some way to repeat *ámhas-* from 1a.

X.126.3: The construction *té ... (a)yám*, with pl. nom. *té* seemingly doubled by sg. nom. *ayám*, in pāda a gives Old fits and he spins increasingly complex scenarios to explain it. Re (EVP XVI.167) claims that ‘*yám*’ was borrowed from 1c, which seems quite dubious to me. I think that,

given the individual listing of gods in b, it's conveying that each one is both separately and jointly here.

On the dependence of splv. *pārṣiṣṭha-* on *parṣāni* see Re ad loc.

X.126.5: A verb needs to be supplied in ab; "lead" seems the obvious choice, given its prominence in the rest of the hymn (1c, 2d, 3c, 4d, 6a) (so also Ge).

A surprising intrusion of other divinities in cd.

X.126.7: Ge and Re take *śunām* as adverbial or (Re) "semi-interjektiv." I don't see why it can't be another object to *yachantu* in c. The word order in this vs. is tortured enough.

X.126.8: This vs. is identical to IV.12.8 in an Agni hymn. Why it has been added here, in a metrically variant hymn that contains only one glancing mention of Agni (5d), is unclear to me. Perhaps because of the *āṃhas-* in c, recalling the occurrences in 1a and 2c. Bloomfield makes no comment (and in fact doesn't register the repetition ad IV.12.8). The alternative poet's name given by the Anukr., *Amhomuc Vāmadevya*, bases the first name on *muñcata vy āṃhaḥ* in 8c and the patronymic on the original site of this vs. in the Vāmadeva maṇḍala. The full name is found only here in the Anukr., though there are several other poets with the Vāmadevya patronymic in X.

X.127 Night

X.127.1–3: Nom. *devī* appears in the same place in all three vss.: in pāda b in the 4th and 5th syllables. My attempt to render this parallelism was impossibly stilted, so I abandoned it.

X.127.1: Night's "eyes" are presumably the stars. For stars see also vs. 7.

X.127.2: The actions ascribed to Night here are otherwise associated with Dawn and the sun. See, for ab, e.g., IV.52.5 *ōṣā aprā urū jráyaḥ* "Dawn has filled the broad expanse," and for c X.37.4 *yéna sūrya jyótiṣā bādhase támaḥ* "by which, o Sūrya, you repel the darkness with (your) light." With *urū* I supply *antárikṣam*, since this phrase is extremely common. See, e.g., nearby X.124.6 *urv antárikṣam*. However, *jráyaḥ*, as in IV.52.5 just quoted, would also do.

X.127.3: The part. *āyatī* returns from 1a.

The root aor. *askṛta* is the only such form in the RV. In fact the Pp. reads *akṛta*, which, however, would produce a bad cadence. The preservation (if that's what it is) of *s*-mobile here must have been fostered by real or imagined degemination of the idiom *nīṣ-(s)kr*; ; cf. I.92.1 *nīṣkr̥ṇvānā* — though of course here the preverb is in tmesis and the augment would have intervened in any case.

X.127.4: The initial *sā* must be coreferential with the 2nd ps. relative expression *yásyāḥ ... te*. As I demonstrated in my 1992 "Vedic 'sá figé': An Inherited Sentence Connective," 2nd ps. reference for nom. forms of the *sá/ tām* pronoun is only found in impv. clauses, and so I supply an impv. in the *sā no adyá* main clause – a form of (*ā*) *√bhū* or (*ā*) *√as* (with the *ā* possibly concealed in *sā*). As Ge (n. 4ab) points out, the same pāda opening *sā no adyá* is found in the Dawn hymn, V.79.3; there it occurs with an overt 2nd ps. impv. *vy ūchā*. I am not alone in

supplying an impv here: it goes back to Sāy., though he takes the reference as 3rd ps. (*prasīdatu*), and as far as I can see simply ignores the *te*. Ge's imperative "(Steh) du" more accurately captures the usage of 2nd ps. *sā*. Re supplies a pres. indic. ("tu es"); other tr. -- Macdonell (VRS), Don, Mau – also recognize the 2nd ps. ref. but supply a past-tense verb (e.g., Macd. "So to us to-day thou [hast approached]") – though in *Hymns from the Rigveda* Macd tr. "So, goddess, come to-day to us," with an impv. but an invented voc.

X.27.5: This passage provides good evidence for Rau's contention that *grāma*- means 'roving band, horde' in the RV, not 'village'; though see comm. ad X.27.19 for a more nuanced assessment.

The parallel forms *padvánt*- and *pakṣín*- 'footed' and 'winged' respectively are a good argument against the view that there's a consistent functional difference between the *-vant*- and *-in*- possessive suffixes.

There is a range of possible tr. for *arthín*- lit. 'having a goal', e.g., 'busy' (as in the publ. tr.; cf. Ge's "geschäftigen"), but I think 'hungry' (Macd. *Hymns*), 'greedy' (Macd., VRS; Mau) go too far. However, a rendering more focused on the goal might be better; AR suggests "intent (on their prey)."

X.27.6: The transmitted Saṃhitā contrast between the two pāda-initial impvs. *yāváyā* (a) and *yaváya* (b) is surprising. (The Pp. reads them both with short root syllable, *yaváya*.) As was established in my *-áya*- monograph (174–75), both stems are almost equally well attested in the RV, but their distributions don't overlap except in X: *yāváyā*- is well established in the Family Books, from which *yaváya*- is missing. The short-vowel form is clearly a replacement for the long-vowel stem. For further on the distribution see the disc. just cited. Why the poet chose to use both here in identical metrical and syntactic situations I have no idea.

X.127.7: The act. intens. part. *pépiśat*, the only intens. form in the RV (though see comm. ad V.57.6), appears to be intrans., despite its diathesis. C. Melchert has point out, however, that there are no transitive neuter participles in the RV (save for *várdhat* V.62.5). On this intens. and its problematic intransitivity, see Schaef. (152–53); after the RV the stem appears as middle *pépiśāna*-, whose middle form better fits its usage. The ornaments in question are clearly stars; cf. I.68.10 *pipéśa nākaṃ stṛbhiḥ* and VI.49.3 *stṛbhiḥ anyā* [=night] *pipíśé*.

The simile in c is curiously hybrid. Although as Ge (n. 7c) points out, *ṛṇám √yat* is a later expression for 'settle a debt', in the RV the idiom is *ṛṇa-yā*- (on which see the thorough disc. of Scar. 407–9). This *√yā* does not have any verbal forms (see tentative disc. in EWA s.v. the bracketed *YĀ³*); if it did, we should expect **yāpaya* here. The poet seems to be frustrating expectations with the odd, but phonologically similar expression *ṛṇā √yat*, which may also have been encouraged by *yāváyā* ... *yaváya* in the previous vs. The obj. in the frame must be darkness, with the point being that Dawn on her arrival should put it down or aside.

X.127.8: The poet is once again playing games with us. The voc. in the previous vs. was *úṣaḥ* 'o Dawn', and the first voc. in this vs. *duhitar divaḥ* (b) "o Daughter of Heaven" is regularly addressed to Dawn (or to Sūryā). But it is immed. followed (c) with the voc. *rātri* 'o Night'. Are both females present in this vs. or are we to assume that Night is also the daughter of heaven (as she rightly should be)? Note also that the middle impv. *ṛṇīṣva* 'choose' is the svayavara verb,

esp. appropriate to Sūryā (see my 2001 Fs. Parpola “The Rigvedic svayamvara? Formulaic evidence”).

On the complex simile and the verb therein see Ge (n. 8b). The full expression, as he points out, is “make [=drive] cows homeward.” Cf. X.169.4 *śivāḥ satīr ūpa no goṣṭhām ākaḥ* “(Prajāpati) has sent (the cows) here, being well-disposed, to our stable.” This simile participates in the uneasy ambiguity between Night and Dawn just noted. In real-life terms cows are driven home at the beginning of the night, not (as apparently here) at its end with the advent of dawn.

Perhaps the most obvious problem with the simile is that it seems to have no object in the frame, but two in the simile: *gā iva* (a) and *stómam ná* (c). Moreover, *stómam* is exactly the object we would want in the frame (hence my supplied parenthetical “hymn”). The various tr. attempt to have it both ways, understandably. I now think that the simile marker *ná* is displaced, and the simile in c consists only of *jigyúṣe *ná*. As disc. elsewhere (see comm. ad VIII.76.1, X.21.1), simile-marking *ná* cannot appear pāda-final and is flipped with its target under those circumstances. I would now therefore slightly emend the tr. to “Like cows (to their pen) I have driven a praise song up to you, as if to a victor.” Unfortunately pāda b has to be parenthetically inserted, which makes the parsing all the harder.

Note the faint sign of ring composition: *rātri* opens the hymn and opens its final pāda.

X.128 All Gods

On the theme of competing sacrifices, see publ. intro. The hymn is also (more or less) AVŚ V.3 and AVP V.4 (ed. and tr. Lubotsky).

X.128.1–4: These first vss. are dominated by (usually) fronted 1st sg. pronouns: *māma* (1a), *māhyam* (1c), *māma* (2a), *māma* (2c), *māhyam* (3d), *māyi* (3a, 3b [2x]), *māhyam* (4a), *māma* (4a), *me* (4b). But these pronouns abruptly cease at this point – though one might consider the regular repetition of *mā* ‘don’t’ (4c, 5c [2x], 5d, 8d [2x]) a continuation by other means.

X.128.1: In addition to the forms of the 1st sg. pronoun, note 1st pl. *vayām* (1b) and 2nd sg. *tvā* (2b) and *tvāyā* (1d).

In b I take acc. *tanvām* as referring to both the subject (“we”) and the obj. of the part. *īndhānāḥ* (“you” = Agni). Forms of √*pus* ‘thrive’ regularly take the acc. Scholarly opinion is divided on the referent – Agni: Ge; us: Proferes (*Sovereignty*, 44), Wh (AVŚ), Lub (AVP); Re (EVP XVI) sits on the fence. I see no reason why it can’t be both. In favor of “us” are 3d, 5c.

X.128.2: Note *devāḥ ... sārve* versus *vísve devāsaḥ* in 4d, 5b.

The hapax *urú-loka-* must be a bahuvrīhi, as it is standardly taken – even though bahuvrīhis with *urú-* often have 2nd member accent (e.g., *uru-cakrá-*). There are, however, exceptions – e.g., *urú-yuga-*. The corresponding nominal expression is the truncated *u loka-*. It’s also worth noting that the noun this cmpd modifies and which it immediately follows is *antárikṣam*, which is regularly modified by *urú*, as was noted above ad X.127.2 – usually, but not invariably, in the order *urv antárikṣam* (I.91.22, etc.; but III.22.2, IV.52.7 *antárikṣam urú*).

The publ. tr. does not render *asmín*; it could be modified to “for me, at this (my) desire,” but it hardly seems worth it.

X.128.3: Ge renders *vanuṣanta* as a modal, “sollen Partei nehmen.” On the one hand, the modals that surround this form – impvs. *ā yajantām* (a), *astu* (b), opt *syāma* (d) – might support a modal

reading. On the other, *pūrve* ‘ancient, previous, earlier’ suggests that the divine Hotars in question performed an action in the past that can serve as a model. Since the verb stem *vanuṣ(a)-* is only attested here (though cf. *vanuṣyá-*), the morphology is not clear: is it an injunctive or a subjunctive? The AV versions (AVŚ V.3.5, AVP V.4.5) substitute *sanīṣan*, an *-iṣ*-aor. subj., but this substitution for the morphologically isolated RVic form is of little evidential value for the interpr. of the RVic form, since the AV often replaces forms it clearly finds puzzling.

X.128.4: The construction of pāda a is unclear. Ge simply takes the two parts *māhyaṃ yajantu* and *māma yāni havyā* as separate parallel clauses: “Für mich sollen sie opfern, mein sind alle Opferspenden,” ignoring the rel. prn. Wh (AVŚ V.3.4, which has *yānīṣṭā* [i.e., *yāni iṣṭā*]) ingeniously takes the nom. rel. as subj. of *yajantu*: “Let what sacrifices I make make sacrifice for me,” but I doubt that either *iṣṭā-* or *havyā-* can be subj. of act. *√yaj*; I certainly know of no such passages. (Lub’s tr. of AVP V.4.4 seems to follow Wh’s, though it is not unambig.: “For me let them sacrifice, whichever sacrifices are mine.”) Like Wh and Lub, I want to take account of the rel. prn., but I also think the construction should follow a more conventional model. When the means of sacrifice, the oblation, is construed with *√yaj*, it is in the instr.; cf., e.g., V.3.8 *tvām ... ayajanta havyaiḥ* “They sacrificed to you [Agni] with oblations.” I therefore assume a gapped instr. in the first part of the pāda, which is coreferential with the nominal izafe-like expression that follows.

X.128.5: On *dévīḥ śaḥ urvīḥ* see comm. ad X.14.16. I now see that the standard view, found already in Gr (def. 14 s.v. *urū*), that this is a ref. to the three heavens and the three earths (or some other sixfold division of the cosmos) is most likely correct – or at least provides a plausible solution. Why fem.? perhaps as a pluralization of sg. *urvī* modifying *bhūmi-* / *prthivī-* ‘earth’ or of du. *urvī* modifying *ródasī* ‘two world-halves’ (common) or *dyāvā-prthivī*. I would now alter the tr. to “you six divine broad (world-spaces),” however awkward the English.

On the passive value of the *s*-aor. injunc. *hāsmahi* see Narten, Sig. Aor. 285.

X.128.6: On *nigút-* see comm. ad IX.97.53.

On *neśat* see comm. ad IV.1.17.

X.128.8: Old, flg. Ludwig, suggests that *uruvyācā(h)* can be a neut. modifying *śárma*, but there seems no need to take it as anything but the masc. nom. sg. it appears to be. This adj. regularly modifies Indra (e.g., VII.31.11).

X.128.9: A touch of ring composition: *adhirājām* (d) recalls *ádhyakṣa-* in 1d.

[X.129–130 JPB]

X.131 Indra

On the contents and later use of the hymn see publ. intro.

X.131.1: The pattern of the repeated preverb in tmesis *āpa* followed by acc. pl. directional adj. creates a nice phonological effect, esp. in the first two pādas: #*āpa prācaḥ* ... #*āpāpācaḥ*.

X.131.2: On the interpr. of the inagery in this vs., see publ. intro. As I say there, the most obvious initial interpr. has to be set aside as the vs. continues.

X.131.3: For the interpr. of this vs., see publ. intro. I have rendered pāda a rather loosely, to capture its slightly slangy tone. As I indicate in the publ. intro., a more literal tr. would be “there is nothing which, when drawn by a single animal, has travelled in the right way” or, per JSK DGRV I.375, “For it is not driven in the proper manner by means of a single horse.” The periphrasis *yātām āsti* is somewhat puzzling: I don’t see the need for an overt copula. Since the overt 3rd sg. pres. of *√as* is usually existential, not copular, I have so tr. it in my literal rendering just given. But wonder if it’s there instead to make it clear that *yātām* is not the common dual impv. to *√yā* so frequently used of the Aśvins. Moreover, as I disc. in my 1990 “Tense of the Past Part.” article, surface copulas are more likely to be found in subord. clauses, as here. See comm. ad VII.22.2.

On *sthūri* see Bl’s comments (RReps ad IV.17.16); he also favors “one-horse” as an Eng. rendering.

Note that though *utā* suggests that pādas a and b are conjoined, *vivide* (b) is not accented, unlike *āsti* (a), and so cannot be in the domain of *hi* in a. JSK (loc. cit.) does not note the differential verb accentuation and seems to think that *utā* is conjoining clauses that are at least loosely parallel. I assume that *utā* in this somewhat vernacular style is simply introducing a new clause.

Ge supplies a subj. “ein solcher” for *vivide*, but I follow Gr in taking it as passive with *śrávaḥ* as subj.; this would match the passive expression in pāda a. For other pass. usages of this med. pf., see Kü 493.

The 2nd hemistich is identical to IV.17.16ab, but the sentence continues there in cd. In both places Ge supplies a main verb “call on.” This is possible, but in the pub. tr. I supply “seek” semantically extracted from the *-yā-* denominatives. In IV.17.16, by contrast, I read *vājāyantaḥ* as a pun: not only ‘seeking prizes’, but also (as often) ‘rousing’. See comm. ad loc. This is possible here as well; I now suggest an alt. tr. “inspired ones, seeking cows, seeking horses, seeking prizes / [are] rousing the bull Indra for partnership.” In this case, *vājāyantaḥ* would also be a predicated pres. part.

X.131.4–5: As discussed in the publ. intro., these two vss. make brief mention of the Aśvins’ healing of Indra, who got sick from drinking the liquor *surā*. This myth is treated extensively in Vedic prose, esp. in connection with the Sautrāmaṇī ritual, which seems already alluded to here, and there is abundant sec. lit. on it (see reff. in the publ. intro., also Ge’s n. 4a).

The word *surāma-* is found only in these two vss., and its meaning and formation are much disputed (see Gr, Ge n. 4a, Old, EWA s.v. *sūrā-*, etc.). I favor the suggestion of Brune (cited by Old) that it is a blend, or portmanteau, of *sūrā-* and *sóma-* (of the “brunch” type). It is, after all, the obj. of *ví√pā* ‘separate in drinking’ in 4c. The word also, obviously, plays off *sutrāman-*, the epithet of Indra in vss. 6 and 7 and the base for the name of the Sautrāmaṇī ritual.

On *ví√pā* ‘separate in drinking’ see esp. comm. ad VII.22.4, I.191.10.

X.131.5: The publ. tr. conceals a grammatical problem in the first hemistich, though not a very interesting one. The Aśvins are nom. (or acc.) in pāda a, with suffixal accent *aśvínā*. But the du. verb in b is 2nd ps. *āváthuh*. Moreover, there is a voc. *índra*, so an extra 2nd ps. ref. The simplest

solution, reflected in the tr., is Old's: read 3rd du *āvātuḥ* for *āváthuḥ*; he suggests 2nd ps. form was influenced by *āvatam* in 5d.

X.131.6–7: These vss. are identical to VI.47.12–13, where they do not seem to have any connection to the Sautrāmaṇī ritual, unlike here.. As noted above, both vss. contain the epithet *śutrāman-*.

X.132 Mitra and Varuṇa

On the problematic nature of this hymn, see publ. intro. I will not engage deeply with the various other interpr. and in fact will not spend much time trying to justify my own -- taking as my guide Old's introductory remark: "Nur teilweise verständlich." On the hymn and esp. vs. 4, see Ingrid Eichner-Kühn, "Ein Eidbrück im Ṛgveda," MSS 41 (1982) 23–31. Her solution for the problematic hapax in 4d is brilliant and puts a very different complexion on the interpretation of the difficult vss. 4–5, but I cannot follow her in her interpr. of the whole hymn (27) as an oath-breaker's attempt, through an expiatory sacrifice to Agni, to avert Varuṇa's retribution for this offense – however ingenious this interpr. is.

X.132.1: As noted in the publ. intro., the repeated pf. mid. part. *ījānā-* seems to be identifying the role later called the "Sacrificer" (Yajamāna).

The first hemistich lacks a finite verb; something needs to be supplied to govern the loc. inf. *prabhūṣāṇi*. Pace Gr, Wh (Rts), AiG II.2.624, it seems better to take *prabhūṣāṇi* to *√bhūṣ* 'attend on', than to *√bhū*, since *prá√bhū* ordinarily means 'project, dominate', not 'help' vel sim. Old is uncertain which root to choose.

X.132.2: As noted in the publ. intro., act. *yajāmasi* seems a deliberate contrast to the three exx. of the mid. part. *ījānā-* I vs. 1 and may identify the 1st pl. subjects here as the working priests. This vs. reprises some of vs. 1: in addition to the contrastive forms of *√yaj* we have *suṣumnā* echoing *sumnaiḥ* (1d), mid. *krānāya*, which I take as synonymous with *ījānā-*, and *abhí√as* in d may pick up *abhí prabhūṣāṇi* in 1b (though I confess I'm not sure how).

īṣitatvātā is a remarkable piece of morphology: a double abstract (*-tva+ tā-*) built to a ppl. (Somewhat similar, though built to a noun, is *puruṣatvātā*- RV 2x.) I think *īṣita-* refers to the ritual prompt to sacrifice; see, e.g., X.110.3 *sá enān yakṣīṣitāḥ* (i.e., *yakṣi īṣitāḥ*) "sacrifice to them when prompted" (cf. X.110.9, III.4.3, VI.11.1, VII.39.1).

For c, cf. VI.19.13.

X.132.3: On the interpr. of this vs., see publ. intro., where I claim that the vs. continues the opposition between the sacrificing priests and the Sacrificer. The publ. tr. would be easier to understand if parenthetical identifications were inserted: "And even now, when we [=priests] seek to establish you two [M+V] here, while coming into possession of our own dear legacy, / or when the giver [=Sacrificer/Patron] prospers with regard to his legacy, no one shall bring his [=Sac./Patron] bounties (for us) into collision [=destroy them]."

As I say in the publ. intro. (see also comm. on X.61.11), the word *rēkna-*, used twice here (b, c), is several times (I.121.5 [=X.61.11], VI.20.7, VII.40.2, possibly I.31.14 [note typo in publ. intro.], VI.16.26) used of what the gods "leave behind" (*√ric*) for the mortals at the sacrifice. Here both the sacrificing priests ("we" ab) and the Sacrificer/Patron (c) should receive

part of this “legacy.” In addition the Sacrificer/Patron should be distributing “bounties” (*māghāni*) to the priests (d).

On the pf. part. *dadvāms-* see Kü (238), who claims that it never takes an obj. in the RV. I think he is correct in this case, and although it is tempting to construe *réknaḥ* with *dadvān* (like VIII.46.15 *dadī réknaḥ*, which must mean ‘giving a legacy’; cf. also VI.20.7), it is better to take *réknaḥ* as an acc. of respect with *púṣyati* (sim. Kü: “oder wenn ein Spender das Erbteil mehrt”).

The verb in d poses two problems. On the one hand, its sandhi is ambiguous: it may represent 3rd pl. *āran* (so Pp., fld. by Lub, Re, implicitly Kü) or sg. *ārat* (Gr, Ge [n. 3d], Heenen [163], publ. tr.). (Old is uncertain.) By the former analysis *maghāni* is the subject, by the latter *nākih*. Then there is the question of the morphological identity of either form. Whether *ārat* or *āran*, it is generally taken as an augmented thematic aorist, which would require a preterital interpr. Since I consider d to be the main clause for the parallel *yád* clauses in ab and c, which are presential (marked even further as such by the opening *ádhā cin nú* “and even now”), a preterital interpr. poses problems (see Re’s attempt to wriggle out of this by emending to *āran* with preverb *ā*, allowing him an underlying injunctive *aran*; EVP VII.64). However, nothing prevents us from taking it as a pf. subjunctive (indic. *āra* etc.), and that is the analysis I strongly favor on the basis of the structure of the vs.

I am less certain about what the pāda means, and the numerous other renderings do not help. The publ. tr. starts from the fact that in the middle *sám √ṛ* means ‘clash together’; in the act. it could therefore mean ‘cause to clash together, bring into collision’ – hence destroy. I do not see a better route to interpr., but I confess I find my own solution weak.

X.132.4–5: As noted in the publ. intro., the interpr. of these two vss. is highly uncertain. (Please also note another typo in the intro.: “The first half of vs. 5 ...” should read “vs. 4.”)

X.132.4: The first half of this vs. is structured by a twist on the classic *anyá- ... anyá-* “the one ... the other” construction: the second *anyá-* is replaced by a 2nd ps. Although the apparent assignment of kingship to both Heaven (pāda a) and Varuṇa (b) is at first puzzling, in fact it can easily be interpr. within the context of the famous hymn X.124 (in my interpr.), on which see the comm. ad loc. and my 2016 “The Divine Revolution of R̥gveda X.124: A New Interpretation. Beyond Asuras and Devas” (Ged. Staal), as well as the publ. tr. of that hymn. I argue that the “divine revolution” in X.124 involves the peaceful passing of the kingship from Father Heaven (Dyaus Pitar) to a complementary duo, Indra and Varuṇa (see esp. X.124.5). Our hemistich here can be interpr. within the same framework, with a chronological gap between the two pādas: *previously* Heaven was consecrated (*sūyata*) as king, but *now* Varuṇa is king. Esp. telling is the placement of the voc. *asura*: it is found in pāda a between *asaú* and *dyaúh*, which add up to the standard designation “yonder heaven,” but it must be construed with the voc. *varuṇa* in b. But Heaven is called “Father Asura” in X.124.3 and elsewhere, while Varuṇa also frequently is so called. It is as if our poet wants to associate the word with both figures: Heaven by word order and Varuṇa by grammar.

The second hemistich is harder. In pāda c both the referent of the nom. *mūrdhā* and the morphological identity of the verb *cākan* are up for grabs. I take *mūrdhā* as continuing the reference to Varuṇa, from the previous pāda. This suggests that *cākan* is 2nd sg., rather than 3rd (per Gr, etc.). For both identifications, see Re’s tr. (EVP V). What chariot does he take pleasure in? Obvious answers are the chariot of sacrifice or the war chariot (both have been suggested – e.g., sacrifice Scar 245, war chariot Re) – or both. If it is the latter (or partly the latter), this might

help in interpr. the baffling pāda d. In the power-sharing arrangement between Indra and Varuṇa, Indra is the Kriegskönig, while Varuṇa presides over peacetime. Suggesting that he gets pleasure from war might suggest that he is violating his nature and perhaps committing a transgression (*énaś-*).

As noted above, Eichner-Kühn provides an inspired solution to the problematic hapax in pāda d. The second word of the sandhified sequence *énaśāntakadrūk* is read as *antakadrūk* by the Pp, and all subsequent treatments of the word have started with that reading. But E-K suggest reading instead *āntakadrūk* (which requires no emendation to the Saṃhitā text), with *ānta(ka)-* the expected ppl. to the set root *√am* ‘swear’. The cmpd then means ‘deceiving (/breaking) an oath, a sworn agreement’, and it is essentially synonymous with *mitra-drūh-*, a cmpd not found in the RV (though see *drógha-mitra-*) but attested in the MS and later and the direct correspondent to well-attested YAvestan *miθrō.drug-*. That *āntaka-drūh-* here is meant as a substitute for the resonant and inherited Indo-Iranian technical term *mitradrūh-* is shown by the presence of *hité mitré* “when an alliance is/was concluded” in the complementary contrastive passage in the next vs, 5b.

E-K thinks this pāda means that the oath-breaker is (no longer) burdened with sin because he has performed his sacrifice to Agni, who, acdg. to her, is the subject of the preceding pāda c. But I think this requires too much backstory to be supplied – though I admit my own interpr. is pretty shaky. As hinted at above, I suggest that Varuṇa’s penchant for the war chariot might have been – but is not – considered a transgression worthy of the description ‘oath-breaking’ – in this case breaking his power-sharing agreement with Indra. What really counts as oath-breaking is described in the first hemistich of the next vs.

X.132.5: One thing all interpreters can agree on is that 5ab must be read with 4cd, with contrastive treatments of *énaś-* ‘transgression’, which is lodged in someone called, or described as, *śākapūta* lit. ‘shit-purified’ or ‘durch Mist gereinigen’. E-K (28) thinks that this personage is really Agni, and the *énaś-* of the oath-breaker has been deposited (harmlessly) in this god to whom the original offender made expiatory sacrifice – i.e., it has been offered into the fire. Agni is then the subject of b, punishing others who have committed the same offense. With others I take *śākapūta* as a derogatory personal name, the negative sense of which identifies him as an enemy or someone who operates outside Ārya norms. He is the one who deserves the appellation “oath-breaker,” and pāda b describes what his offense consists of: killing men who have already fallen (or have surrendered by prostrating themselves) after a peace agreement has been reached.

Note that the sandhi form *chāka(pūta)* echoes *cākan* in 4c.

As I indicate in the publ. intro., I think the 2nd half of vs. 5 belongs with vs. 6 and concerns the current ritual, where Mitra and Varuṇa are present. The description of this ritual unfolds in a series of disjointed clauses.

For *avór vā yád* I read (with Gr, Old AiG III.350, and JSK [DGRV II.209]) **vām*. Both of the other occurrences of *avóḥ* are fld. by *vām* (VI.67.11, VII.67.4), and *vām* could have been redactionally changed to *vā* here to match 3c *#dadvām vā yád*. The specification with *vām* would help clarify the unusual pron. form *avóḥ*, which is, per Lub (121), probably an assimilation from *ayóḥ*. For a similar doubling see 2a *tā vām*. (This emendation is explicitly rejected by E-K [n. 13] and is ignored by Ge and Re, who both tr. the *vā*.)

With most (Old, Ge, Re, E-K), I take *arvā* as a ref. to Agni as ritual fire.

X.132.5–6: Note the play: 5c *#avór ...*, 5d *#ávaḥ ... arvā#*, 6a *#yuvór ...*, 6c *áva ...*

X.132.6: The first hemistich is highly reminiscent of 1ab, which provides at least limited help in interpr. this obscure mess (as both Old and Re point out). Both passages contain *dyaúh ... bhūmih* + LOC. INF. The first help vs. 1 provides is in interpr. 6b *dyaúh ná bhūmih*. Although Ge takes *bhūmih* as the frame corresponding to *dyaúh* in the simile (“die Erde ... wie der Himmel”), vs. 1 suggests that they should be read as parallel and essentially conjoined “Heaven (and) Earth,” with both in the simile (so also Old and Re). Placing *ná* between the two nom.s is rather like breaking up a dual dvandva with a particle.

On the loc. inf. *pupūtāni* see also Keydana (Inf. 182). Exactly who or what is being purified is unclear to me – or even whether the inf. is to be interpr. as act. or pass. In the publ. tr. I opt for an act. interpr., which would parallel *prabhūṣāni* in vs. 1, and assume that Aditi as a maternal figure is purifying with mother’s milk, as H+E purify with rain. But I am by no means certain of any of this. Re suggests that soma is the obj. of Aditi’s purification – this seems reasonable, insofar as “reasonable” is applicable to this hymn.

The identify of the 2nd pl. subjects of the verbs in cd (*áva ... didiṣṭana, ninikta*) is again unclear. I assume M+V plus Aditi – and whatever other gods are hanging around the sacrifice. We have finally come to the point of making our demands.

What it means to “wash with the sun’s rays” is unclear to me, but it seems to be parallel to “purify with milk” in b.

X.132.7: I have nothing to contribute to the interpr. of this vs. See publ. intro.

On *apna-rāj-* and the discrepancy between the 1st member *apna-* and putative base *ápnas-*, see Scar 446; on *dhūr-śád-* and *vanar-śád-*, Scar 567. See also Kü (223), who tr. the whole vs.

X.133 Indra

On the hymn and its connections to others in the RV, see publ. intro. It is also quite similar to the next hymn, X.134, although the Anukr. attributes them to different poets.

X.133.1: The bahuvrīhi *purorátha-* occurs once elsewhere (X.39.11), where it refers, semi-metaphorically, to a man “whose chariot is in front”—that is, who is dominant and/or victorious. Here the metaphor has been extend to describe a hymn that will prevail over the hymns of our competitors (so Ge, plausibly). My “leading chariot (of a hymn)” is meant to avoid the awkward and barely intelligible “(a hymn) whose chariot is in front.”

On *sūṣá-* see esp. comm. ad X.31.3.

As noted in the publ. intro., the refrain is an elaboration on the Nābhāka Kāṇva refrain of VIII.39–42, with further use of the deprecatory low-register *-ka*-suffix.

X.133.2: Despite the pāda boundary, *adharācaḥ* must be construed with the previous pāda, as shown by the accent on immed. flg. *áhan*, which must begin a new cl. in the middle of b.

X.133.3: The first two pādas of this vs. are illuminated by the more expansive parallel in IX.79.1 (on which see comm. ad loc.) *ví ca náśan na iṣó árātayo, aryó naśanta sániṣanta no dhíyaḥ* “If hostilities will reach our refreshments, those of the stranger will go to destruction. Our insightful thoughts will prevail.” Acdg. to the clever interpr. of Old (who also discusses our passage ad IX.79.1), in IX.79.1 the two verbs *náśan* and *naśanta* can belong to different √*naś* roots – ‘reach, attain’ and ‘disappear, go to destruction’. I adopt – but modify in details – this insight both for

IX.79.1 and here. The same double sense can be seen here, but embodied in the single verb form *naśsanta*, which should be interpr. as ‘go to destruction’ in pāda a and ‘reach beyond’ in b. The gen. *aryáh* that opens b can be read with both pādas. This interpr. is also reflected in Ge’s tr.

X.133.5: The phrase *mahīva dyaúh* appears to mean “like great Heaven” and, due to fem. *mahī*, shows a fem. *dyaúh*, a gender assignment that is rare but not non-existent for this stem. This interpr. is reflected in the publ. tr. However, there are other possibilities. *mahī* might by itself mean ‘great (Earth)’, since *mahī* regularly refers to the earth. In this case we would have a simile exactly like that in the immed. preceding hymn X.132.6 *dyaúh ná bhūmih* “like Heaven (and) Earth” (see comm. ad loc.), but in reversed order: “like great (Earth) (and) Heaven.” Or *mahī* might be an elliptical dual, modifying gapped *rōdasī* ‘the two world-halves’, and specified here only by *dyaúh*: “the two great ones, Heaven (and Earth).” Although this might seem like a long shot, see I.22.13 *mahī dyaúh prthivī ca* with (possibly) the full expression: “the two great ones, Heaven and Earth.” See comm. ad loc. I don’t have a particularly strong feeling about any of the three possibilities, but given that the final vs. of this hymn (7) wishes “a great cow” to swell and give us milk, and this great cow might be the earth (though she is more likely an insightful thought [*dhī*]), perhaps the alt. taking *mahī* as standing for the earth should be adopted.

X.133.5: See above ad vs. 5 on the identity of the “great cow.” It is possible that this is a metaphor for the earth, but in IV.41.5cd=X.101.9cd, whose pāda d is identical to our d, the reference appears to be to a *dhī* ‘insightful thought’; see comm. ad X.74.4.

X.134 Indra

As noted above, these two hymns, X.133 and X.134, both dedicated to Indra, are quite similar, though attributed to two different poets by the Anukr. For their similarities, see the publ. intro. to each.

X.134.1: The first 6 vss. have the same refrain, but only in this vs. is it clearly syntactically integrated into the rest of the vs.: pādas cd serve as the obj. of *ajījanat* in the refrain. (In the other vss. the obj. of the verb in the refrain must be supplied, and abcd are independent -- though see comm. on vs. 4 below.)

X.134.2–5: All four of these vss. begin with *áva*, each in tmesis with a different verb; vss. 3–4 both contain a form of *dhūnu* ‘shake down’ (though in different tense/mood and voice), while 2 and 5 have verbs belonging to other roots.

X.134.2: This vs. shows esp. close connections to X.133.4 *yó nah ... ādideśati / adhaspadām tám im kṛdhi*, which, slightly abbreviated, is our *adhaspadām tám im kṛdhi, yó asmā ādideśati*. The generalizing rel. cl. (“who(ever) will ...”) appears before the main cl. in 133.4 and after it in 134.2, which speaks against a fixed position for this type of clause, as some Vedic syntacticians have argued.

X.134.3–4: Given the close similarity between these two vss., act. *áva ... dhūnuhi* and med. *áva ... dhūnuṣé* seem functionally identical, and in fact the act. and mid. forms of this stem in general (as well as the other, less well-attested stems to this root) are both transitive and show no obvious functional differentiation. The essential identity of the two vss. is shown also by the near

repetitions *viśvá(ścandrāḥ)* (3b) / *viśvāni* (4b) and *viśvābhir ūtibhiḥ* (3d) / *sahasrīṇibhir ūtibhiḥ* (4d).

X.134.4: Note that *viśvāni* can't directly refer to the obj. in 3 because of the change of gender, though the neut. pl. "all (things)" can be a generalized reference to it.

The obvious way to read the simile in cd is as a comparison to *viśvāni* in b – that is, as the material that Indra shakes down (all things being compared to wealth). So Ge. However, it would be possible to take it as a comparison with the implicit *tvām*=Indra that serves as obj. of *ajījanat* in the refrain, with Indra being compared to wealth. In this case the structure of vs. 4 would be like that of vs. 1, with cd serving as obj. to the verb in the refrain. I weakly favor this interpr., because a simile "all (things) like wealth" seems weak. The publ. tr. deliberately allows both interpr., though tipping towards the latter.

X.134.5: It is not clear whether pāda c goes with d (so Ge) or ab (publ. tr.). Ge gives no explan. for why he thinks the blades of *dūrva* grass would be compared to 'malevolence' (*durmatīḥ*); perhaps the near coincidence of their initial syllables (*dūr-* / *dur-*) is sufficient. I connect b with what precedes, because the multiple blades of grass could be compared (at least in number) to beads of sweat and missiles. Macdonell and Keith (s.v. *Dūrvā*) make the baffling comment about our passage: "A simile occurring in the Rigveda seems to indicate that the ears lay horizontal with the stem," which deduction seems to suit neither ab nor d.

X.134.6: On the *anikuśā-* in general and this image in particular, see the extensive disc. ad X.44.9. Anyone familiar with goats will recognize this scene: the goat, standing on its hind legs, uses its forefeet to pull down a branch so it can graze on the leaves (see images on internet). The question is what is the obj. in the frame that would correspond to the branch (*vayām*) in the simile? I think that the branch should be read in both simile and frame, since, as Ge points out, this vs. picks up the "shake down" imagery of vss. 3–4. Indra is obviously using the hook on the *anikuśā-* (see X.44.9) to shake a fruit-laden branch. See Ge's n. 6ab, though he doesn't seem to recognize the relationship of the goat to the branch.

It is quite possible that *śākti-* is a pun, meaning both 'ability' and 'spear'; Ge (n. 6ab) suggests this as an alternate. Although the 'spear' meaning is generally confined to later texts (though see II.39.7), this kind of passage with its homely pastoral image is a context in which words in use in a lower register are likely to show up. I would now slightly alter the tr. to "Because you carry your ability/spear ..."

Note also that *śāktim* (b) picks up *śācībhiḥ śakra* in 3c.

X.134.7: This final vs. is in a different meter and lacks the refrain of the rest of the hymn. It also expands from Indra to the gods in general.

The obj(s). to *minīmasi* and *ā yopayāmasi* must be supplied. The former verb takes a wide variety of objects, but esp. *vratāni* 'commandments'. *√yup* is of course far less common; of the objects with which it is found, *dhārma* (VII.89.5) 'foundations, ordinances' is closest to *vratā-* and the apparent purport of our passage. With Gr, therefore, it makes sense to extract *māntra-* from *mantra-śrútyam*, which serves as the obj. of the third 1st pl. verb *carāmasi* and supply *māntrān* 'solemn utterances' as the obj. of the 1st two verbs.

The 2nd member of *mantra-śrútyam* found only here seems to be independent of the fairly well-attested, formally identical gerundival *śrútya-* 'worthy to be heard, worthy of fame'.

AiG II.2.284, 288 points to a number of pairs of root noun and associated *-ya-* form, and that seems the best way to account for this compound, which must then mean ‘the hearing of (→ obedience to) mantras’.

The final verb of the hymn *abhí sám rabhāmahe* recalls *ā rabhāmahe* in the previous hymn (X.133.6) and is another index of their connection. Ge (n. 7cd) thinks that the reference here is to horseback riding, with the subject grabbing onto the horse (=Indra by his interpr.) with his thighs. The introduction of the horse and rider seems abrupt and unnecessary to me; I merely thought that we were grabbing the gods (pāda a; note that Indra is absent from the vs.) by *their* sides and shoulders. On *apikakṣá-* as ‘region of the armpit, shoulderblade’ (against Ge’s “Gurt”), see my 1987 Vedic Body Parts (Ged. Cowgill), p. 84.

X.135 Yama

Another famous hymn with a plethora of competing interpr. Since I have treated the hymn at length myself (“The Earliest Evidence for the Inborn Debts of the Brahmin: A New Interpretation of R̥gveda X.135” – *Journal asiatique* 302 [2014]: 245–57), I will not discuss the hymn in detail here but refer interested readers to the art. cit.

X.135.1–2: In my view, these two vss. are spoken by a boy whose dead father has made the journey to Yama’s world, where he now lives pleasantly, drinking with the gods in the shade of a tree. The boy, missing his father and longing to see him again, decides to follow the same path – but he is also apprehensive and reluctant to undertake the journey – a plausible psychological portrait of a bereft child.

The pairing of the vss. is underscored by the near repetition in the first pāda of 2 of the last pāda of 1: 1d *purāṇāṁ ānu venati* / 2a *purāṇāṁ anuvénantam*.

X.135.2: I take the intens. *acākaśam* in the same way as *vicākaśat* in VIII.91.2 (Apāla), as a frequentative ‘keep looking’.

X.135.3–4: These vss. concerning the (metaphorical) chariot are likely to be spoken by the father, since the speaker addresses the previous speaker familiarly with the voc. ‘lad’ (*kumāra* 3a, 4a).

Again the pairing is signalled verbally: 3a *#yám kumāra ... rátham* / 4a *#yám kumāra ... rátham*.

X.135.4: In the last pāda of these paired vss., a boat makes a sudden surprising appearance: the chariot is set on it (*nāvy āhitam*), as if on a car ferry. Although the RVic funeral hymns (X.14–18) give no sign that there’s a River Styx-like barrier between this world and the next, there’s at least a hint of this in X.56, a hymn focusing on the afterlife. The last vs. (X.56.7) begins *nāvā ná kṣódaḥ pradísah pṛthivyāḥ, svastíbhīr áti durgāṇi víśvā* “As if with a boat across the swell through all the earth’s directions, (having gone) beyond the difficult places with blessings,” apparently describing the journey to the next world -- though the boat there is in a simile.

X.135.5–6: These vss. are paired both by the difficult and much discussed word *anudéyī* and by the crucial structural fact that vs. 5 poses questions and vs. 6 begins by answering one in almost the same words (though see below for a crucial interpretational shift): 5d *anudéyī yáthābhavat*, 6a *yáthābhavat anudéyī*.

As I have disc. *anudéyī* at length in the 2014 art. (esp. 247–50), I will not repeat the details here. The gist is that I interpr. the word in the context of an AV passage (and its Vedic prose parallels), which contains an idiom *ṛṇám ánu √ dā* ‘forgive a debt’ in the context of Yama’s world. The gerundive here is part of an underlying phrase “(debt) to be forgiven”; its fem. gender (versus the neut. of *ṛṇám*) is due to the metaphor found in the AV (etc.) passages: the “rope (of debt)” (with fem. *rájju-* ‘rope’). The debt in our passage is in reference to what later become the trio of debts a brahmin owes on birth, one of which is to produce a son. In the RV, I suggest, there was only a two-debt system: beget a son and perform sacrifice, since the system of studentship was only just developing in this period. In our vs. Yama asks the father, who has arrived at Yama’s world, about the two debts and whether they have been discharged. The father answers affirmatively.

X.135.6: The result of this positive answer is that the father is reborn in Yama’s world, a birth depicted, with technical terminology, in 6bcd. The trick to interpr. the two vss. is to see that although 5d *anudéyī yáthābhavat* and 6a *yáthābhavat anudéyī* are identical except for word order, *yáthā* is being used in two different senses: “how” in 5d, “as” in 6a.

X.135.7: This final vs. pairs with vs. 1, describing the delights of Yama’s world, into which the father has been reborn.

X.136 Muni

On the subject of this hymn and its similarity to the Laba-sūkta (X.119), see publ. intro. As with the next hymn (X.137), the Anukr. assigns each of its vss. to a different poet – in this case the seven (unsung) sons of the muni Vātaraśana, a name plucked from the bahuvrīhi ‘wind-girt’ (lit. ‘whose halter is the wind’) in vs. 2.

X.136.1: Pāda c lacks a verb. The most obvious way to construe the pāda is to supply ‘bears’ from pāda b, though there’s a wide variety of other interpr.

X.136.2: The expression “when the gods have entered (them)” is striking. In this context it presumably means they have been en-theos-ed – possessed -- as it were.

X.136.5: All consulted tr. interpr. the first member of *devéṣita-* as pl. (“impelled by the gods”). But given the focus on the wind in pāda a (also 2a, c), I take it as a sg. ref. to Vāyu.

Pāda d contains a novel twist on the izafe-like nominal rel. cl.: the sg. nom. *yáḥ* has a dual as its antecedent, *ubhaú samudraú*, and the rel. cl. contains two conjoined sg. adjectives, corresponding to the dual antecedent. The clause also begins (*yás ca*) as if it were going to belong to an “X and which Y” construction, in which the X would belong to the main cl. and have the appropriate case for that cl. (acc. in this instance). However, both X and Y are found in the *yás ca* clause, both nom.

X.136.6: Since the muni is flying in the midspace, I take *mṛgá-* here as ‘wild bird’, not the more general sense ‘wild animal’ (which of course is narrowed in a different direction to ‘deer’ in later Skt.). The Avestan cognate *mərəya-* means ‘bird’, and other RVic passages seem to call for that sense. Cf. esp. I.182.7 *parṇā mṛgásya patáruḥ* “the feathers of a wild bird in flight”; IX.32.4

mṛgó ná taktáḥ “like a wild bird launched in flight” (comparable to IX.67.15 *śyenó ná taktáḥ* “like a falcon launched in flight”). See also comm. ad IX.32.4.

Apropos *kétasya vidvān* Ge appositely adduces *kéta-vedas*- I.104.3.

The adjectives *svādúr madíntamaḥ*, modifying the muni, seem meant to evoke soma, just before (vs. 7) the poison drink reappears.

X.136.7: The preparation of the poison drink in ab mimics that of soma.

This vs. rouses great excitement in scholars of the history of Indian religion as the (possible) “oldest reference to the Rudra-Śiva cult of traditional Indian civilization” (Maurer, comm. on vs. 7). Since this topic has been (more than) sufficiently treated by others, I reserve comment.

X.137 All Gods

As with the immed. preceding hymn X.136, the Anukr. attributes each vs. of this hymn to a different poet, but unlike the unrenowned poets of X.136, these are the celebrated Seven Seers (Saptarṣi). However, as noted in the publ. intro., the elementary contents of the hymn do not justify the exalted ascriptions.

X.137.1: This vs. seems to be overstuffed with pointless repetitions: four (!) voc. “o gods,” one in each 8-syllable pāda, an *utá* opening each hemistich, and *púnaḥ* ending each one. This leaves each pāda with just four syllables to convey content.

X.137.2: The two occurrences of *ā* + ABL in b might appear to express parallel senses (“from X, from Y”) (so Lub, for AVP V.18.3), but because of the contrastive directions of the winds in cd, I follow the standard interpr. (Ge, Re, Wh [AVŚ IV.13.2]), which takes the first *ā* as ‘from’ and the second as ‘to’.

X.137.5: Both AV versions read *imám* for *ihá*, which makes more sense: an absolute use of $\sqrt{trā}$ ‘rescue’ is awk.

X.138 Indra

On the contents of this hymn and some of its difficulties, see publ. intro.

X.138.1: The first hemistich is quite straightforward: the conveyors (*váhnayah*) are conveyors of songs, the Aṅgirasas (as in VI.32.3) of the Vala myth, who also stand in for the present-day priests. The opening of the Vala cave by the Aṅgirasas in conjunction with Indra is of course standard fare.

The second hemistich is more problematic, in great part because of its syntactic ambiguity. The two verbal forms in c, *daśasyán* and *riṇán*, can be either nom. sg. masc. pres. participles or 3rd pl. act. injunctives (accented because in a *yátrā* cl.). In the former case, the part. modify the 2nd sg. subj. of *daṃśayaḥ* in d, namely Indra; in the latter, the subj. continues to be the *váhnayah*. Ge, Old, and the publ. tr. take them as part.; Gr, Lü (534–35), and HPS (B+I 145–46) as 3rd pl. There is no way to tell for certain, I just wonder if so much credit would be given to the Aṅgirasas and so little to Indra in this vs. Note that the next vs. (2abc) contains 5 2nd sg. verbs with Indra as subject. Moreover, in my interpr., having cd a single cl. simplifies the interpr. of *ca* in d (see below).

Ge (fld. by JSK [DGRV I.127]) supplies a verb in d: “(be)standest)” to construe with *kútsāya mánman*; this is presumably a form of \sqrt{av} ‘help’, but he doesn’t say (and rather obfuscates in n. 1d; though JSK explicitly supplies *ávīh*) – but \sqrt{av} doesn’t ordinarily take the dat. (or the loc.). He (also JSK) assumes (n. 1d) that *ca* connects this ghost clause with *ahyàś ca dāṃsāyaḥ*. But I see no reason to manufacture a verb that doesn’t fit the very elements it’s meant to go with.

The interpr. of this pāda is not helped by the fact that the verb *dāṃsāyaḥ* is a hapax, though it very probably belongs with *dāṃsiṣṭha-* ‘most wondrous’, *-dāṃsa-* ‘wondrous power,’ *dāṃsas-* ‘id.’, etc.; a form of *dāṃsas-* is found in the next vs. (2c). See my *-āya-* monograph (p. 83). Here it clearly governs *ahyàḥ* ‘fertile cows’ in its immediate vicinity; I suggest that it can also be taken with the fem. acc. pl.s in c, *apāḥ* and quite possibly *uśāsaḥ*, and that the *ca* in d signals this conjoining. All three are multiforms, as it were, of the females released from the Vala cave; see 2a. What then does *dāṃsāya-* mean (assuming its connection to the ‘wondrous power’ words)? In the publ. tr. I render it “exerted your wondrous power”; in the *-āya-* book “made capable (of bearing).” I see no way to decide, but I would now allow the second interpr. as an alternative.

As for *kútsāya mánman*, we should start by pointing out (with HPS 146) that Kutsa is out of place here, since he has no part in the Vala myth ordinarily. In the publ. intro. I suggest (or hint) that he’s being kept in reserve, as it were, for vs. 3, the theft of the wheel of the Sun, in which myth Kutsa regularly figures. Lü (/HPS) think that the thought is Indra’s, on behalf of Kutsa (Lü: “im Gedenken für Kutsa”; HPS same except “an Kutsa”), but Old asserts that *mánman-* is almost always that of a human and so it should not be Indra’s thought. Here I think the *mánman-* is Kutsa’s product, a hymn or sim. for Indra, and in response Indra then acts on his behalf.

X.138.2: This vs. continues the account of the Vala myth, here with Indra the dominant actor.

Note that of the five parallel verbs in abc, only one, *śvañcāyaḥ* (a), is unaugmented.

The “fecund females” (*prasvāḥ*) in pāda a are, in my opinion, all three feminines from 1c, the dawns, the waters, the fertile cows – different designations for the beings imprisoned in the Vala cave.

The sticking point in this sequence of 2nd sg. actions is the referent of *asya* in c. One expects the wondrous power to be Indra’s, esp. after reciting his series of wondrous deeds, but I know of no instances where *asya* (vel sim.) has 2nd ps. reference. Since *asya* is unaccented, it should refer to something already in the discourse. Ge (n. 2c) suggests either soma (b) or the sun (d); Lü (519) opts for the sun. I’d prefer not to have a referent that follows, even as closely as pāda d, and think soma is much likelier on other grounds as well. The publ. tr. reflects what I now think is an over-complex and artificial interpr., that *vanín-* ‘wooden’ refers to the wooden cups Indra drinks soma from, and by soma’s power he strengthened them. I now see that there’s a simpler and more satisfying solution, found already in my *-āya-* book (p. 83 n. 10), that Indra did all these deeds (not only the one in c, but those in the first hemistich) through (soma’s) wondrous power: that is, as usual, drinking soma gave Indra the strength and skill to perform his great deeds. I would now substitute the tr. “you released the fecund females (etc.) ... you made the trees grow – by its (=soma’s) wondrous power.”

X.138.3: The last three pādas belong together, as an account of Indra's defeat of Pipru for R̥jīśvan, but the relevance of pāda a is unclear. However, the stealing of the sun's wheel and the defeat of Pipru are found together elsewhere (see, e.g., IV.16.12–13).

The Ārya is R̥jīśvan, the Dāsa Pipru, and it is Indra who's the "match" (*pratimānam*).

X.138.4: The problem in this vs. is localized at the beginning of c, *māsēva sūryaḥ*. What the sun and moon are doing here is unclear, made harder to interpr. by the lack of scholarly agreement on the form of 'moon'. See Old's disc. As it stands, it must be *māsā* and an instr., but Ge (n. 4c) wants to see it as irreg. sandhi for gen. **māsās iva* "wie die Sonne (den Glanz) des Mondes," which requires too much machinery and doesn't match any known myth. Better to accept the sandhi form we have and take the instr. moon as parallel to the likewise instr. "flashing (weapon)" (*virūmatā*) at the end of the pāda. Although a myth in which the sun uses the moon as a weapon is also unknown, it doesn't require altering the text.

X.138.5: Like *daśasyān* and *riṇān* in 1c, *dāśat* in c could be either a 3rd sg. injunc. (accented because it opens the pāda) or a nom. sg. m. pres. part., although there is less riding on the decision than in 1c, since Indra is the subj. in either case. I opt for the part. (so Old) – Gr and Ge for the finite verb.

X.138.6: On the obscure contents of this vs. and their possible relationship to vss. 3–4, see publ. intro.

X.139 Sūrya

On the links between this hymn and the immed. preceding one (X.138) see publ. intro. I do not understand the contents of the hymn and will not try to explain its larger purpose.

X.139.1: The tr. of the bahuvrīhis *sūryaraśmiḥ* and *hārikeśaḥ* by "with" make them sound like instr.; to clarify, better "Savitar, having the rays of the sun and golden hair ..."

X.139.2–4: Note the emphasis on sight and visual survey: 2a, 3b *nṛcākṣāḥ*, 2c *abhī caṣṭe*, 4b *dadṛśúṣīḥ*, 4d *pāri ... apaśyat*.

X.139.2: The referents of the two fem. pl.s in c, *viśvācīḥ* and *ghṛtācīḥ*, is unclear and disputed. Since the latter, 'facing towards ghee', is obviously the more semantically limited, it seems best to determine its referent and go from there. The first alternative in the publ. tr., "mares," is based on VII.60.3 *harītaḥ ... ghṛtācīḥ*, in a hymn to Sūrya and Mitra-Varuṇa, in a vs. also concerning visually surveying the world. Re supplies "sacrificial ladles" (my 2nd alt.) on the grounds of VIII.44.5 *juhvaḥ ... ghṛtācīḥ*, see also VII.43.2–3, where 'ladles' is obviously to be supplied and they are characterized as *ghṛtācīḥ* (2b) and (sg.) *viśvācī* (3c). In the sg. *ghṛtācī-* regularly refers to the ladle (see Gr's def. 3). There are other possibilities: Lü (539) supplies "quarters, directions" (*dīśaḥ*, already Sāy., Gr), which better fits the cosmic context here, but requires a metaphorical stretch (which, as always, Lü is ready to make). Unfortunately there are no parallels. Ge (see n. 2c) weakly prefers *dhīyaḥ* 'thoughts'; see I.2.7 *dhīyaṃ ghṛtācīm* and, with a synonym, VII.5.5 *gīraḥ ... ghṛtācīḥ*. The presence of *dhīyaḥ* in 5d (twice) might support his choice. I do not find any of these suggestions particularly compelling, though I would now downgrade 'mares' and add 'quarters' as the preferred alt.

X.139.3: On *samará-* see comm. ad VI.9.2.

X.139.4: I have no idea what is going on in this vs. For an elaborate account see Lü (539–41), who thinks it deals with Indra finding the sun, aided by the Gandharva. See also Ge’s extensive notes.

X.139.5: On the precative *avyās* see comm. ad II.38.10.

X.139.6: This vs. presents a reassuringly recognizable account of the opening of the Vala cave (at least in b) and has echoes of the first vss. of the previous hymn, X.138.

X.140 Agni

On the varied meter of the hymn, see publ. intro.

X.140.2: The first pāda is striking with its three bahuvrīhis with *-varcas-*. It is also two syllables too long; I wonder if this an iconic overkill reflection of the 1st member of the final compd, *ánūna-* ‘without lack/deficiency’.

Although act. *íyarti* is usually transitive, there are some intrans. exx., like IV.45.1 adduced by Ge (n. 2b). Two close parallels with transitive forms give me pause: X.37.4 *jágac ca víśvam udiyārṣi bhānúnā*, X.75.3 *śúśmám úd iyarti bhānúnā*. However, in the absence of any obvious thing to supply, best to accept intrans. sense.

The “two mothers” in c are most likely Heaven and Earth, given the cosmic contents of the flg. pāda. But in an Agni context the two kindling sticks are always a possibility, esp. with Agni identified as *putráḥ*. (And both, of course, could be meant.)

In d *prṇákṣi* would be better rendered ‘pervade’ or ‘permeate’, to distinguish it from a form of *√prā*. However, the matching form in 4d cannot be interpr. that way.

X.140.3: In b *hitáh* is ambiguous; it can be the ppl. of both *√dhā* and *√hi* and in this case is surely meant to be read as both.

In cd the distribution of nominals is unclear. Although *íśaḥ* could be the nom. subj., it is much more likely to be the acc. obj., with “gods” as subj., on the basis of Ge’s parallels (n. 3cd) I.80.15, VII.82.2. *citrótaḥ* must be nom. pl. and therefore modify the gods (if they are indeed the subj.), but *bhūri-varpaḥ* and *vāmájātāḥ* can be either nom. pl. (masc.) or acc. pl. fem. I take both as modifying *íśaḥ*. III.53.1 *vāmîr íśaḥ* “precious nourishments” supports a connection of *vāmá-* and *íś-*, and the *vāmá-* / *íś-* nexus in 5c is even stronger evidence. The fact that *bhūri vāmám* is a fixed phrase (I.33.3, etc.) may attract *bhūri-varpas-* into the orbit. Others distribute them differently: Gr takes both as nom. pl. m. as does Re; in his tr. Ge takes *bhūri-varpas-* with *íśaḥ*, but *vāmájātāḥ* with the subj. (though see his uncertainty in n. 3c). In fact, the distribution matters little.

X.140.4: Note *iraj-* (a) : *ví rāj-* (c).

I interpr. *prathayasva* as a real medial causative, with reflexive sense: “cause yourself to be extended.”

Note *prṇákṣi*, which matches the same form in 2d; see comm. there on the difference in meaning.

X.140.5: Most of this vs. is couched in the acc., but the acc. phrases in ab and cd have distinct referents: while cd describes the various good things Agni establishes, the accusatives in ab must refer to Agni himself. This hemistich is syntactically untethered: there is no verb to govern the acc.s in ab. Old suggests that the phrase anticipates 6b *agním ... dadhire purāḥ*, and I have adopted this solution.

On *īṣ* √ *kṛ*, see comm. ad VII.76.2. As I say there, though *īṣ* behaves like a pseudo-preverb in this lexeme, its source is probably the noun *īṣ*- ‘refreshment, nourishment’, and here that sense still (or again) seems to be present. Note *īṣam* in c as well as *īṣaḥ* prominent in 3c.

X.140.6: *sapráthastama*- echoes 4a *prathayasva*.

X.141 All Gods

X.141.1–2: The opening of 1c, *prá no yacha*, is picked up by 2a *prá no yachatu*, and the four repeated *prá*-s in b and c prolong the idiom with a series of different gods. But 2d introduces a new verb, *dadātu*, which responds to 1d (*dhana*-)*dāḥ*.

X.141.3–4: These two vss. are likewise structured by a shared verb, *havāmahe* (3b, 4b) here with a series of objects.

X.141.5–6: Here the shared verbal expression is *dānāya codaya* (5b, 6d). Its construction varies, however: in 5 the obj.s of *codaya*/ subj.s of the infinitive are in the acc. (*aryamāṇam* ...), but in 6 the obj./subj. has been attracted into the dat. (*devātātaye*) to match the infinitive (as often). So also Old and Ge.

X.142 Agni

On the structure of the hymn, see publ. intro. Since it is found in a group of six-vs. hymns, it is two vss. too long. But the last two vss., in dimeter meter, appear to be an appended charm.

Preverbs/nominal prefixes are esp. prominent and effectively deployed in this hymn. The sharp contrast between aggressively active *úd* ‘up’ and gently settling *ní* ‘down’ is found several times (4a, 5d [extra *ní* in b], 6c [extra *úd*-s in 6ab]), with the calming charm having further *ní*-s in 7ab. See also the *prá*-s in 2a, c, 4b, d, and the *ānu*-s of 4c, 5cd (supplied in 5b), as well as the contrastive *ā*- and *parā*- in 8a.

X.142.1: This vs. contains two forms of accented *ásti* (b, c). The first is existential, as overt forms of the 3rd sg. pres. to √ *as* generally are, since it is ordinarily gapped in copular usage. However, the form in c does appear to be the copula; an existential interpr. – “for there exists auspicious shelter of [=from] you ...” – can be constructed but seems artificial. Here accent is the crucial factor; as I demonstrated in my 1990 “Tense of the Predicated Past Participle in Vedic” (IJ 33), pp. 4–5, accented 3rd sg. pres. copulas are optionally allowed.

Re points out the phonological play in the final words of a and b: *āpī*#, *āpīyam*#,

X.142.2: There is no agreement about the etymology, morphology, meaning, or even the length of final vowel of *sācī*. See KEWA and EWA, both s.v. *sākām*, Gr, Old, Re (EVP XIV.99), and

the use of the simile particle (*sācīva*) may signal a certain vagueness on the part of the composer. For want of a clear alternative, I follow the (K)EWA line and connect it with *sākām* ‘at once, all together’, though I have no particular confidence in this interpr.

X.142.3: The sense of *utá ... utá* is not clear. Ge “bald ... bald”; Re “tantôt ... tantôt”; JSK (DGRV I.456) “sometimes ... at other times.” But JSK gives no other exx. of this usage, and I do not see why it’s not merely additive “and ... and” – as if in a somewhat breathless play-by-play.

The lexeme *pāri √ vrj* usually has the idiomatic sense ‘avoid’, a development of its literal sense ‘twist/bend around’. Although the other tr. (Ge, Old, Re, Th [Gedichte], JSK [DGRV I.456]) take the verb in its idiomatic sense here (‘spare, avoid’), I think the literal one works better: the forest fire takes a twisting and unpredictable course putting all vegetation at risk – rather than sometimes sparing trees and bushes, sometimes not.

X.142.4: More phonological, morphological, and etymological echoes: *udvát-*, *nivát-* flg. *pravát* in 2a; then b *pṛthag pragardh-*, c *vāto ... -vāti*, d *vápṭeva ... vapasi*.

X.142.5: The other tr. (Ge, Re, Th) take b as containing two parallel phrases in the nom.: “one downward course, many chariots” – presumably referring to the single fire with its many flames. I prefer to take *ékam niyānam* as an acc. of extent, supplying *ānu* found in c and d (and 4c), but I would certainly allow the alternative.

Another echo: b *bahávo ... c bāhū*. It seems a bit strange that a raging forest fire would have only two arms (i.e., branching divisions), but the bodily metaphor may have overridden the physical image.

X.142.6: As indicated in the publ. tr., this vs. abruptly returns us from the forest fire to the ritual fire, which, however, shows the same type of intense movement as the forest fire.

There are several different ways to interpr. b, particularly the referent of *śāśamānāsya*. Because of the *úd* that opens the pāda, repeating the two *úd*-s of pāda a, the skeletal structure of b seems clear (to me): the verb *jihatām* should be supplied from pāda a, and the nom. *vājāḥ* is grammatically parallel to *súṣmāḥ* and *arcīḥ* in pāda a, though it does not belong to the same semantic realm as the other two, which describe Agni’s physical characteristics. These assumptions about the structure of b are not shared by all other tr. Ignoring the repeated *úd*, Ge simply supplies a different verb “(sollen) ... (kommen),” presumably in tacit recognition of the different semantics of *vājāḥ* (“Belohnungen” for him). Th replicates the structure, but alters the sense of *vājāḥ* to “Kräfte” to accord better with the nominatives in pāda a. Only Re keeps both the structure and the usual sense of *vāja*:- “Que tes crépitements éclatent haut, haute la flamme, hauts tes prix-de-victoire ...” All (incl. Gr) take *śāśamānāsya* to be coreferent with *te*, referring to Agni, who is performing his ritual labors. This is certainly possible. But in contrast I think it refers to the human officiant. Although *śāśamānā-* can modify Agni (e.g., X.11.5), more often it qualifies the human laboring *for* Agni. See, e.g., I.141.10 *tvám agne śāśamānāya sunvaté, rátnam ... invasi* “You, o Agni, impel treasure ... to the man who labors and presses soma,” where Agni rewards the human ritualist. I think the same situation is depicted here: the prizes are for the *śāśamānā-*, and the *te* is a dat. to be construed with that part. The attendance of the Vasus in d provides a parallel set of officiants from the divine world.

X.142.7–8: In both these vss. *samudrā-* should be tr. ‘gathered waters’ vel sim., rather than ‘sea’, since in both cases (but esp. 8) the scene is a lushly watered landscape, not the boundary between land and a large body of water. I’d now substitute “here the settling down of the gathered waters” and “these are the homes of the gathered waters.”

X.142.7: Here the wild fire is deflected away from the peaceful place of waters.

Init. *anyám* is a good example of my rule of placement for *anyá-*: indefinite forms take initial position.

X.143 Aśvins

See publ. intro. on the contents of the hymn and the identity of its poet.

X.143.1: Old is esp. insightful on this vs., often flg. Baunack.

The first hemistich is couched in the acc. but lacks a verb to govern the acc. phrase. Various verbs have been suggested, but the most likely semantically, and the easiest to implement, is to borrow the verb from cd ($\sqrt{kṛ}$) or indeed the whole verb phrase (*návam* $\sqrt{kṛ}$) (so, more or less, Old, alt. for Re). “Make new” → “make young” fits nicely with *ṛtajúram*, which probably means ‘grown old in/by truth’ (see Scar 164) and may well refer to growing old in ritual labor, as we find, for ex., in the Agastya-Lopāmudrā hymn, I.179 (sugg. by Old). Although it would be possible just to supply a form of $\sqrt{kṛ}$ to govern the inf., as a periphrastic caus., “make Atri to drive ...,” context favors the fuller VP.

I take *yádī* in c not as ‘if’, with final-vowel lengthening, but as yet another ex. of my **yádī* “when him ...” (“Rigvedic *sīm* and *īm*,” Fs. Cardona, 2002).

This allusion to “making Kaksīvant [the well-known poet of I.116–26] new” is supposedly supported by I.51.13 (so Ge, n. 1cd, flg. Baunack), though that passage is not all that supportive: it simply states that Indra gave K. a little female named Vṛcayā. As Ge also points out, however, the real comparandum is with Cyavāna, whom the Aśvins definitely rejuvenate in V.74.5, X.39.4 (etc.).

X.143.2: This vs. is quite problematic both in syntax and in contents, and a number of different solutions have been suggested; my interpr. differs from all of them. What we have to hold onto is the fact that vss. 1 and 2 begin the same way, 1ab *tyám cid átrim ... áśvam ná ...*, 2a *tyám cid áśvam ná ...*, both with an acc. phrase with no verb to govern it and a comparison to a horse. I therefore avail myself of the same strategy I used in vs. 1, to supply the verb for ab from cd – in this case *vī syatam* ‘untie, unloose’.

The referent of *areṇávaḥ* ‘dustless’ is unclear; Gr, Old, Ge, and Re opt for ‘gods’, which seems to me to create more problems than it solves. (Moreover, though the Maruts are once so identified, the gods themselves are not.) Of the eight occurrences of *areṇú-*, two modify ‘paths’ (I.35.11, 163.6) and one (VI.62.6, an Aśvin hymn) a measure of distance, *yójana-*. In all three passages the adj. ‘dustless’ signifies the ease of travel: note the presence of *sugá-* ‘easy to go (on)’ in I.35.11 and I.163.6. I supply paths here as well: the dustless paths stretching towards the unloosed horse are an image of the open road, promising a journey without obstacles or discomforts.

In d I supply ‘stretch’ as well, to govern *rājaḥ* (so, more or less, Ge’s 2d, though not reflected in his tr.), though now I think a more neutral verb like ‘travel, drive’ (from *yāṭave* in 1b) might be better.

X.143.3: The expression *átraye ... sísāsataṃ dhíyaḥ* has given interpr. fits, because (they think) the Aśvins should not be winning insights for Atri; rather *his* insights should themselves win, as in the immed. preceding hymn, X.142.2 *prá saniṣanta no dhíyaḥ* and (if *dhíyam* is to be supplied there) in our 5d. This has led to some over-complex and awkward tr., like Scar’s (531) “... wünscht dem Atri, dass seine Dichtungen den Sieg davon tragen,” where the desiderative feature of *sísāsataṃ* is attributed to the Aśvins, but the “winning” feature to the insights, a functional split that I don’t think is grammatically legitimate. I think we can take the syntax at face value: the Aśvins are trying to jumpstart Atri’s poetic powers by supplying him with some insights to work with. The gods regularly give *dhî-* to their praisers; see, e.g., VIII.86.2, where the Aśvins *dhíyaṃ dadathuḥ*; X.64.12, where an array of gods ... *me dhíyam ... ádadāta*.

In c although *divó narā* doesn’t have the expected (lack of) accent for a voc. phrase, it surely should be taken as such. See Ge (n. 3c); Old disc. at length and favors splitting *diváḥ* off from the voc. and construing with the rest of the hemistich, though without figuring out exactly how.

The dat. inf. *viśāse* is universally taken to *ví√śams*, a lexeme that barely exists (despite the many many occurrences of the root *√śams*). Of the two occurrences identified by Gr., only VIII.1.1 *ví śamsata* is a certain example (though with an uncertain sense and a likely nonce creation; see comm. ad loc.); III.39.2 #*ví ... śasyámānā*# would show tmesis in a participle, which is not common, and the *ví* seems to add nothing and is ignored by tr. I suggest our infinitive actually belongs to *ví√śas* ‘carve up’, attested in *viśāsana-*, (*a-*)*viśastár-*, and the finite form *ví śasta*. (This root affiliation is explicitly rejected by Old, but with no grounds given.) The sense here is that if the Aśvins help Atri gain poetic insights, the praise-song (*stóma-*) he produces for them will not have to be carved up and parcelled out.

X.143.4: Ge considers *sádane* and *sámāne* to be contrastive, with the first referring to the seat of the sacrifice and the second to contest or battle. However, *sámana-* is often an assembly or festive gathering, and I take this rhyming pair here as referring to parts of the sacrifice to which the Aśvins are bringing the poet and his colleagues.

X.143.5: On the basis of VII.67.5 Ge (fld. by Re) supplies *dhíyam* with the periphr. caus. *sātáye kṛtam*. The expression here would contrast with the one in 3ab; see above.

X.143.6: Though Ge follows Sāy. in supply “kings” as the referent of the simile *śamyū íva*, I prefer the suggestion he floats in his n. 6ab, that it should rather be “parents” as in IV.41.7 *mámhiṣṭhā pitāreva śambhū*.

X.144 Indra

A metrically varied hymn, which, *pace* the Anukr., mostly focuses on soma, not Indra. Indra’s name appears only once in the hymn, a nom. in 6a, and he is otherwise represented by two occurrences of the oblique enclitic *te* (1a, 5a) (and possibly the voc. *sukrato* in 6c), about as uninsistent a presence as it is possible to have. The two occurrences of *indu-* ‘drop’ (1a, 6a) also evoke Indra phonologically but of course refer to soma.

Some patterns: hemistich-init. *ayám* 1a, 2a, 2c, picked up by vs-init. *yám* 4a, 5a; pāda-init. *enā* 5c, d, *evā* 6a. Also, *viśvāyuh* 1c is answered by *ví tāry āyu(h)* in 5c, 6c.

X.144.1–2: I take vs. 1 as implicitly subordinated to vs. 2ab, because of the *hí*(1a).

X.144.2: For ab Ge appositely cites as parallel IX.87.3 *ṛbhúr dhîra uśānā kāvyaena* “an insightful craftsman [Ṛbhu], Uśānā by (his) poetic skill.” This passage in fact helps solve an (unacknowledged) problem in our vs. The Pp. reads *kāvyaḥ* here, thus a nom. sg. masc. adjectival form of initially accented *kāvya-*, rendered by Ge as “dieser Seherische.” The problem is that *kāvya-* is otherwise only a neut. noun, “poetic skill/art”; the adjectival form is suffix-accented *kāvya-*. Note that in IX.87.3 the root-accented neut. is in the instr. I suggest that here we should read loc. *kāvye*, against the Pp., and, like the instr. in IX.87.3, it is specifying the realm in which the craftsman operates.

There are numerous, sometimes fanciful, interpr. of the bahuvrīhi *ūrdhvā-kṛśana-*, which also furnishes the Anukr. with an alternate name of the poet of the hymn. I am partial to my own: that the “pearls” are the bubbles on the surface of and above the exhilarating drink.

X.144.3–5: These vss. relate, in allusive fashion, the theft of soma from heaven by the falcon. The vss. are difficult to interpr. in places but contain striking images. Needless to say, in various places I go my own interpretational way.

X.144.3: The vs. depicts Soma amid the heavenly fortresses awaiting the falcon to carry him away and looking down from heaven towards earth, the goal of the journey.

The unidentified fem. pl. *āsú svāsu* “among his own (females)” has no clear referent. The default is, as usual for fem. plurals, “cows,” and this would make sense, given that Soma is called a *vāmsaga-* (on which word, see comm. ad X.102.7). But the scenario just sketched suggests another, narratively appropriate, interpr., already raised by Ge (n. 3b): “fortresses” (*pūrṣú*). The stem *pūr-* is of course feminine, and in IV.27, with IV.26 the locus classicus for the RVic Somaraub myth, Soma announces in the first vs. that “a hundred metal fortresses guarded me” (*śatām mā pūra āyasīḥ arakṣann*). Thus the image in b sets up a conceptual tension: Soma is depicted both as a virile bull situated in the middle of his cow-harem, as it were, but also as a helpless hostage surrounded by fortifications. These same fortresses are, in my view, also represented in the next vs., 4c, in the bahuvrīhi *śatā-cakram* ‘hundred-wheeled’.

On *ahī-sū-* see comm. ad VIII.32.2 and Scar 538–39. Contra the standard tr., who take the stem as the name of demon(s), I give it a full lexical tr. ‘swelling like X’. (Scar splits the difference: the name of a demon, derived from a lexical reading.) The question is whether the first member is based on *āhi-* ‘snake’ with final lengthening or *ahī-* ‘fertile cow’. For the three passages in VIII (32.2, 26; 77.2) I favor the former; here I think both may be available. The question is – what is Soma looking down (*áva dīdhet*) upon? A possible answer immed. arises from the scenario sketched above: Soma is in heaven looking downward in hopes of spotting the falcon on its journey upward; what he will see is clouds – which can be imagined as “puffing up like snakes: (specifically cobras with their hoods) and/or “swelling like fertile cows” – either/both displaying the puffy curvy contours of clouds seen from above.

X.144.4: The final pāda (c) of this vs. is very difficult; in fact Ge does not tr. it after the first word. It is also metrically problematic: as transmitted it has 9 syllables. This could be raised to 12, with a fine Jagatī cadence by reading *ahīyo avartanīḥ*, that is, restoring the *a-* elided by the Saṃhitā text and distracting the *-hy-* cluster of *’hyò* and assuming an initial **a-* on *vartanīḥ*,

elided without marking in the Saṃhitā text (a solution favored by Old). Whether these manipulations are worth it – esp. the last one – is unclear.

In any case I take acc. *śatācakram* as continuing the acc. phrase of ab, referring to Soma. As noted in the immed. preceding vs., I think “having a hundred wheels” is another reference to the fortresses surrounding Soma in heaven. Recall that acdg. to IV.27.1 there are a hundred metal fortresses guarding Soma. I take the ‘wheels’ are referring to the roughly circular shape of the fortifications.

The rest of c, *yò ‘hyò vartanīh* I take as a nominal *izafe*-like cl., also referring to Soma. Whether to read *vartanīh* or **avartanīh* (see above) is hard to determine, because neither reading yields a lot of sense. The publ. tr. follows the Saṃhitā text. Cows regularly follow *vartanī-* (III.7.2, X.65.6, X.172.1, 4); identifying Soma as a *vartanī-* for a fertile cow might be an allusion to the mixing of milk with soma in the ritual, which is often depicted as cows racing to join the bull Soma. A negated **avartanīh*, though metrically better, is initially harder to interpr. Perhaps, with ref. to *ahīśvāh* in the previous vs., if that means “(clouds) swelling like fertile cows,” it indicates that, while still confined in the 100 fortresses, Soma “had no track through the fertile cows [=clouds]” (with *ahyāh* acc. pl., not gen. sg.). I suggest this as an alt. tr., for which I now have a mild preference.

X.144.5: On *ándhas-* as ‘soma stalk’ (not the “Saft” as Ge tr. here), see comm. ad IV.1.19. Here I take *ándhasah* as a subjective gen.: “the stalk (*ándhas*) houses (the juice),” not “X houses the *ándhas*.”

On the final pāda, see publ. intro.: I think the “family tie” is that between men and gods, kept in working order by the sacrifice.

X.144.6: Ge (n. 6ab) considers the *māhi tyājah* as a reference to the enmity between the young Indra and the other gods at the time of the soma theft or the enmity with Tvaṣṭṛ because of Viśvarūpa, translating “So mag ... Indra diese grosse Feindschaft selbst unter dem Göttern auf sich nehmen.” But this doesn’t make sense in an otherwise upbeat ending, and the backstory to enable such an allusion is nowhere to be seen. Moreover, *tyājas-* doesn’t mean “Feindschaft,” but “surrender, abandonment; legacy.” I take it instead as one of the first instances of the later notion of sacrifice as *tyāga*, the “surrender” to the gods of men’s offerings. The sentiment seems to follow directly on 5d, and point out that Indra is taking the oblation, which is the symbol for the family connection between gods and men, and fixing it up among the gods – for his sake as well, since *dhārayāte* is middle.

I do not understand the abl. *asmāt*, though perhaps it hints at the “surrender” just noted: the oblation produced by us is separated from us by Indra’s appropriation of it.

X.145 Against co-wives

This hymn is found, more or less identically, in AVŚ III.18 and, in part but also much expanded, in AVP VII.12. See Griffiths’s full treatment of the latter.

X.145.2: On *kuru* see comm. ad X.51.7.

X.145.4: Ge (flg. Sāy. and fld. by Don) takes the husband as the subj. of b and the co-wife the ref. of *asmín ... jāne*: “und nicht hängt er an dieser Person,” for reasons that are not clear to me.

Old is of my opinion, and see AVŚ III.18.3 *nó asmín ramase pátau* “you do not rest by this husband,” addressed to the co-wife.

I do not know who the 1st pl. subj. of *gamayāmasi* is; it obviously includes the wife-speaker and possibly the plant, but in the next vs. (5c) the first dual is used for wife+plant: *sahāvahai*.

X.145.6: On *abhí√dhā* as ‘harness’, see *abhíhita-* V.50.4, X.85.11.

X.146 Lady of the Wilderness (*Aranyānī*)

On the contents and tone of the hymn, see publ. intro. There are numerous tr. (inter alia, Macd (VRS and Hymns from the RV), Re (Hymnes spec.), Don, Mau, Th (Fs. Kuiper), van Buitenen (Intro. to transl. of MBh 3), Gerow (Lits. of India). I cannot engage with the details of them all.

The hymn contains a number of apparently pleonastic *iva*-s (1b, d, 2c, 3a, b, d), some of which show the aphoresis found also in Middle Indic. The pluti in 1d is another sign of informal register.

X.146.1: On *grāma-* see comm. ad X.27.19. Certainly in this passage it is used as the complete opposite of the *āraṇya-* and whether it refers to a permanent settlement in the RV or (per Rau) not, the implication here is that it offers the safety and domestic stability of a village, in contrast to the wilderness.

X.146.2: The identities of the *ṛṣṣāravā-* and the *ciccikā-*, beyond probably being animals that make noise, is up for grabs, and many possibilities have been floated. The point, however, is clear: the wilderness is full of alarming noises that serve as a sort of intimidating accompaniment to the progress of the Lady of the Wilderness herself.

X.146.3: I follow Th (who is fld by Don) in taking c as parenthetical. The speaker has reconfigured (or is trying to) the alarming noises and sights of vs. 2 to domestic ones, appropriate to the village. But in c the *Aranyānī* still looms. The other course, taken by most tr., is to assume that the *Aranyānī* herself “creaks like a cart,” which I find unlikely.

X.146.4: The speaker’s attempt to domestic the noises around him continues here, until the stark announcement “(something) has shrieked!”

X.146.5: Macd, Th, and Don take *Aranyānī* as the subj. of cd. This is poss., but I find it psychologically more compelling to assume that the nervous speaker has finally made his peace with the wilderness and gives himself over to its pleasures.

X.146.6: A formal *praśasti* (*prā ... aśamsiṣam*) ends the hymn.

X.147–148

Although these two hymns to Indra are attributed to two different poets and are stylistically varied, they share some themes and some lexicon, in particular a fondness for the root *√kan* ‘take pleasure’: 147.3a, 4a; 148.1c, 3b, 4c.

X.147 Indra

X.147.1: I take bcd all as *yád* clauses detailing examples of Indra's effective *manyú-*. Ge parcels them out into a series of subord. and main clauses, but this seems inelegant.

We should expect **āpaḥ* in b, rather than *apāḥ*, which should be the acc. pl. of 'waters'; see the same problem in X.76.3 and the comm. thereon. In our passage the association of Vṛtra with (the release of) the waters might have led to a redactional misunderstanding and accent shift.

X.147.2: Ge (n. 2d) believes that *viśvāsu hávyāsv iṣṭiṣu* stands for *viśvāsu *hávyam iṣṭiṣu* and should be tr. "to be called upon at all sacrifices," with *hávyā-* belonging to *√hū* 'call', not *√hu* 'pour, libate'. Although *hávyā-* (so accented) does ordinarily mean 'to be called', as opposed to *havyā-* 'oblation', there are other exx. of *hávyā-* that can or do belong to *√hu* and ambiguity is inherent in this stem. And in any case I believe we should tr. the text we have, not the one we wish we had. In fact, it seems quite likely that in this passage the poet is playing off less common homonyms of common lexical items. Our root-accented *iṣṭi-* belongs to *√yaj* 'sacrifice', but this form is quite rare (and may be found with suffix accent in II.1.9; see comm. there), esp. in contrast to *iṣṭi-* 'desire, quest', which is found in the immediately preceding pāda in the same pāda-final position in *gāviṣṭiṣu* 'quests for cattle'. The poet surely meant the contrast, esp. given a third rhyming pāda-final form in 3c *pāriṣṭiṣu* 'in encirclements' (to a different lexeme, *pāri* *√as*). In this playful context, *hávyā-* to *√hu* rather than the usual *√hū* would simply add to the joke – amplified by calling Indra *puruhūta* 'much invoked' in the next pāda (3a).

X.147.4: I take this vs. as spelling out the reciprocal policy between Indra and mortals: a man who realizes that Indra has to be sacrificed to and, esp., provided with soma will acquire the bounty that Indra has to distribute (as described in 3b). The reciprocity is signalled lexically by the complementary forms *cākandhi* (subj. = Indra, 3a) and *cākanat* (subj. = mortal, 4a).

In b I see *mādam ... asya rāṁhyam* as a type of indirect discourse with *cīkatati* "will realize (that ...)," with the gerundive *rāṁhya-* predicated of *mādam* and *asya* referring to Indra: "his exhilaration is to be hastened" – i.e., soma should be offered forthwith. Ge's interpr. is quite diff.: "der sich auf seinen eiligen Rausch versteht." As far as I can tell, Ge thinks that *asya* refers to the mortal subject (though his tr. is ambig.), but in an Indra context the default would be Indra's *māda-*.

X.147.5: This vs. seems to situate Indra among other gods, mostly by indirection. In pāda a *śārdhāya* may refer to the "troop" of us mortals, esp. the patrons in vs. 3, but since *śārdha-* and *śārdhas-* often refer specifically to the Maruts, they would be available to the audience by association. Mitra and Varuṇa are present in c, though the former is also used as the common noun 'ally', and the latter is in a simile. In d *vibhaktā* evokes Bhaga (see V.46.6).

X.148 Indra

Old sees a special relationship between this hymn and II.11, esp. the penchant for a trisyllabic reading of *īndra-*. And vs. 2 contains two pādas (b, c) identical to II.11.4d, 5a.

X.148.1: The accent on *stumási* is surprising, since it appears to be a main clause verb. Old (ZDMG 60.726 [=KlSch. 201]) explains it by taking ab as the Grundlage of the *ā no bhara* clause

in c, but this seems ad hoc. I think rather that the accent is indirectly generated by the two perfect participles, *suṣvāṇāśaḥ ... sasavāṁsaś ca*, which bracket the finite verb. The two participles depict two different occasions for praising Indra: at the sacrifice and after victory in a battle/contest. A fuller expression would be “After having pressed soma we praise you, and also after having won the prize, (we praise you).” Therefore *stumāsi* is effectively doubled and the accent is contrastive (with its gapped self).

The construction in c is more complex than it appears, at least in my view. In the rel. cl. *yāsya* would seem to have a straightforward antecedent, *suvitām* – hence “bring us well-being in which you take pleasure” (so essentially Ge). But this is somewhat incoherent as a wish: why would Indra bring *us* something *he* particularly enjoys? It also doesn’t conform with the usage of \sqrt{kan} in these two hymns. When Indra is subject of \sqrt{kan} (X.147.3, 148.4), what he takes pleasure in is mortal worshipers: e.g., 147.3 *aīṣu cākandhī ... sūrīṣu* “take pleasure in these patron” – though in both instances the complement is in the loc. I therefore think *yāsya* must refer to a ritualist favored by Indra, one among our (*naḥ*) number. As for the gen., this may be a mixed construction: a gen. would work for the recipient of the main cl. (“bring X for him [gen.]” and has been carried over into the rel. cl., where a loc. would be better.

X.148.2: As noted above, bc = II.11.4d, 5a. The pāda II.11.5a refers to Vṛtra, as is clear from the rest of the vs. But most tr. (see Bl’s [RR] comments ad II.11.4–5 in addition to Ge, JSK [DGRV II.189]) take our c pāda with d and assume that “the one placed in hiding” is soma. (The pāda is also found in III.39.6, with unclear referent – maybe sun/light; see comm. ad loc.) In contrast I link pāda c with b, not d, which allows the acc. phrase in c to be a second obj. of *sahyāḥ* (though I supply a past indicative form of \sqrt{sah} for c), with the referent Vṛtra as in II.11.5. Bl splits the difference: he takes c with d, but considers it a ref. to Vṛtra (or a demon) – tr. “we hold (the demon) who is hidden in the waters like soma in a prasrávaṇa (pitcher?).” This doesn’t have much to recommend it. It is also possible that c has double reference – both looking backwards to b, with Vṛtra as reference, and forwards to d, with soma as referent. The soma “hidden in water” would then be the soma plant as it is swelled with water before pressing. There are also a couple of other possibilities for c. It could be a reference to the well-known myth (see esp. X.51–53) in which Agni runs away from his ritual duties and hides in the waters, before being found by the gods. If Agni is the referent, “we” would be bringing the two crucial requisites for the sacrifice: fire and soma. It is also worth considering X.72.7 *átrā samudrá ā gūḍhám, ā sūryam ajabhartana* “then you brought here the sun, which was hidden in the sea,” where it’s the sun, hidden in a type of water, that is brought – although I find it hard to fit the sun into our context. If either of the last two alternates is selected, the tr. of *bibhṛmāsi* should be changed from ‘offer’ to ‘bring/bear’.

X.148.3: The syntax of this vs. is a little loose – beginning with the *vā*, which is not in a clear disjunctive structure. JSK (DGRV II.188–89) suggests apropos 2–3ab that *vā* “conjoins nearly parallel interstanzaic modal clauses interrupted by an intervening indicative clause.” The “nearly parallel ... modal[s]” are 2b opt. *sahyāḥ* and 3a impv. *arca*, which don’t seem all that parallel to me; the intervening indicative clause is 2cd. I think rather that the disjunction signalled by *vā* is conceptual: the difference between Indra as martial hero (vs. 2), as esp. exemplified by the Vṛtra battle (2c by my interpr.), and Indra as the priestly hero of the Vala myth (3ab). This conceptual division corresponds to the one in 1ab, between the ritual and martial circumstances for praising Indra.

The *aryāḥ* opening pāda a is most likely a gen. dependent on *gírah*; cf. I.112.14 *aryó gírah*. The question is the identity of the *arí-*. Ge (n. 3a) suggests *Prthī* (see 5a), the Opferherr, who would be a subjective gen. (i.e., he is the singer); Th (Fremdl. 31; see also HPS B+I 155) suggests (rather hazily) that it's Indra himself, or perhaps rather, whatever (divine) stranger is being invited to the ritual: an objective gen. (someone sings to him). Although this non-reflexive doubling of referents in a single clause seems, at best, tricky, the fact that Indra serves as priest and leader of the *Āṅgirasas* in ab (so explicitly Th) as well as recipient of offerings in d makes this trick at least thinkable.

In b it is unclear what *śīṇām* should be construed with. I take it with *vípraḥ* as a variant of the “king of kings” construction; most take it with *sumatīm* “the good thinking of the seers.” This is perfectly possible, and not much rides on it.

The gist of the second hemistich is that we hope to be the ultimate beneficiaries of our offerings to Indra; that is, we hope and expect compensation from him as reciprocity for our ritual service – it is in this way that we derive (indirect) pleasure from the soma drinks. The *áya-* formation *raṇáyanta* is intransitive (or in my old terms “I/T”) with the meaning “find pleasure” in most of its occurrences; a transitive (/double I/T”) *raṇáyati* is found in only two places in the RV, under special circumstances (see my *-áya-* monograph, pp. 75, 143). Ge (with Sāy.) wants it to be transitive here, meaning “cause (you) to enjoy,” but frets about the medial form (n. 3c). This is the wrong thing to worry about: it's simply an *-anta* replacement of my usual type. The real reason that it isn't transitive is that that stem is usually not. But the poet may have enjoyed hinting at a transitive formation on the basis of the *-áya-* (“please [you] with soma drinks”), but opting for a somewhat paradoxical “be pleased by soma drinks (offered to you).”

What puzzles me is the *enā*; it would have been easy enough to conjoin *sómaiḥ* and *bhakṣaṇī* with *utá*. I assume *enā* is summarizing the whole rest of the ritual hoopla, including the soma drinks.

In the publ. tr. the voc. *ratholha* is not tr. as a voc., since “o chariot-conveyed one” sounded impossibly stilted.

X.148.4: In pāda a *imā bráhmā ... śamsi* is one of the relatively rare exx. in the RV of the inherited syntagm of a neut. pl. as subj. of a sg. verb – here a bit complicated by the fact that the verb itself is a pass. aor. (This morphological analysis, with Sāy. and Ge [n. 4a], more appealing than 1st sg. mid., with Gr.)

X.149 Savitar

X.149.1: Old points out the sequence of cosmic spaces: *prthivīm* (a), *dyām* (b), *antárikṣam* (c), *samudrām*.

There are several different ways to interpr. the second hemistich. In c the question is what is the shared element between the frame and the simile. I take it to be the verb: “milked the midspace like a (male) horse.” This is of course absurd on the surface, but would conform to the kind of gender-bending paradox that is often found in RVic cosmic discourse. Ge, who considers the possibility of this interpr. in n. 1c, suggests that it refers to a horse urinating. A less striking interpr. which goes back to Sāy. and is represented in Ge's and Re's tr., takes *dhúnim* as the shared quality: “... the midspace boisterous like a horse.” This is certainly possible, but I prefer the more conceptually challenging interpr.

Re (flg. Lü 124) further considers *adhukṣat* to have a double acc., with the 2nd obj. *samudrām* in d: “milked the midspace for the sea” / “milked the sea out of the midspace,” though he himself thinks that √ *duh* with double acc. is generally middle. Ge seems to take *samudrām* as an appositive to *antārikṣam*. I take *antārikṣam* and *samudrām* as separate objects of *adhukṣat*, one corresponding to the animal being milked, the other to the substance yielded. This is akin to the Lü/Re double acc. interpr., but does not require them to be in a single larger syntagm.

X.149.2: From the sea milked out in 1d the rest of the cosmos arises. This cosmogony flatly contradicts the one in 1ab, where the various parts of the cosmos exist already independently and are set in their places by Savitar.

Pāda c contains one of the rare exx. of the unextended 3rd sg. impf. of √ *as*, namely *ās*. On the artificiality of this archaic-looking form, see comm. ad X.85.6–12. Here it forms a phrasal verb with the ppl. *útthitam*.

X.149.3: The cosmogony gets even murkier here, and interpr. diverge. Ge and Re seems to take *idám* and *anyád* as coreferential, but since the rest of the hemistich seems to define the *anyád* (‘other’) as the heavenly/godly world, the near-deictic *idám* would be out of place. I think the two are contrastive, and – somewhat paradoxically – the point is that this earth was created before the heavenly world.

I would prefer to render *ánu dhárma* “according to his ordinance / principles,” but the phrase *dhartā diváh* in the next vs. (4d) constrained me. Still, I think the point is that the sun was born acdg. to Savitar’s overall plan, and so I would favor one of the alternative tr. just given.

X.149.4: Ge pulls *sumánā(h)* out of the simile to modify Savitar (“freundlich wie die ... (Kuh)”). Since the form is ambig. between masc. and fem. nom. sg., this is possible, but it breaks up the sequence of similes in series.

X.149.5: The Anukr. clearly interpr. *árcan* in c as a PN and attributed the hymn to Arcant Hairanyastūpa. Ge takes it both as a PN and as the pres. part. it appears to be (see n. 5c), but this seems unnec., esp. given the attestation of verbal forms to this pres. stem in this stratum of hymns (X.147.3, 148.3).

X.150 Agni

For the structure of this hymn, see publ. intro. As noted there, the final pāda of each vs. begins with a form of *mṛīkā-*; in vss. 1–3 and 5 it’s the dat. *mṛīkāya*, but in 4 the acc. *mṛīkām*. The refrain in vs. 4 also deviates from the other vss. in another way: 1–3, 5 repeat the last four syllables of pāda c after *mṛīkāya*, but vs. 4, which needs five syllables after *mṛīkām*, innovates with the dat. *dhānasātaye*, based on, but not identical to, *dhānasātau* in the middle of c.

X.150.1: On the accentuation in the voc. phrase, see comm. ad X.118.5.

X.150.2: On the interpr. of the first hemistich, see comm. ad I.91.10, which contains the identical hemistich. An alt. tr. with both acc. phrases construed with the part. *jujuṣānāh*, is also possible.

X.150.4: Pāda a has two extra syllables; III.2.8d is identical save for lacking *devó*, so it is tempting to delete it. Old gives his cautious imprimatur, so also Arnold.

X.150.4–5: On the use of *puróhita*- here, see publ. intro.

X.151 Śraddhā

X.151.3: That the gods make themselves trusted / trustworthy among *ásureṣu ... ugréṣu* “powerful lords/Asuras” shows that even at this very late stage of the RV *ásura*- does not (have to) have a negative sense and designate the eternal enemies of the Devas. Here the “powerful lords” are the equivalent for the gods of “benefactors who offer sacrifice” (*bhojéṣu yájvasu*, 2c, 3c) for men – in other words, positively viewed authority figures.

X.151.4: It is notable that the gods are depicted as performing sacrifice, as in the more famous passages X.90.16 and X.124.6.

X.152 Indra

Found also in AVŚ I.20.4, I.21; AVP II.88.

X.152.2: Starting with Sāy., *vimṛdhāḥ* has regularly been interpr. as the nom. sg. of a them. bahuvrīhi *vimṛdhá-* meaning ‘die Verächter abwehrend’; so Old, Ge (n. 2b), AiG II.1.281, Scar 212 n. 289, as well as the tr. of the AV repetitions of this vs., Wh (AVŚ I.21.1) and Zehnder (AVP II.88.4). The only significant holdout being Gr, who takes it as a gen. to a hapax root noun cmpd *vimṛdh-*, “mit unregelmässiger Fortrückung des Tons.” I am quite dubious about the dominant interpr. for several reasons. For one thing, the importation of the verbal notion “abwehrend” seems unjustified, borrowed from the formulae (to be disc. below) in which the root noun *mṛdh-* participates; only Zehnder’s “der keine Beleidiger hat” confines itself to the elements actually found in the cmpd. Scar justifies the addition of the verbal notion by explaining *vimṛdhá-* as “Hypostase aus *ví mṛdhas* + \sqrt{HAN} -, \sqrt{NOD} , etc.,” but this is simply a description of the interpretational process. I instead think it must have been generated from the formulaic phrases found in this very hymn, involving *mṛdh-* *ví√han*, occurring twice in tmesis: *ví mṛdho jahi* “smash away the scornful” (3a, 4a; see also VI.53.4, VIII.61.13). Here, given the rt noun cmpd *vitra-hán-* immediately preceding, I think we can “borrow” that *-hán-*. Since a cmpd **vi-mṛdh(o)-hán* or **mṛdh(o)-vi-hán-* is impossible, the *hán-* was gapped, and the gen. sg. *mṛdhaḥ* depends upon this gapped head. I do recognize the accentual problem (the sticking point for both Wh and Old), but consider it less serious than the creation of a thematic stem of dubious meaning. In any case I think the poet is playing with formulaics throughout this hymn, esp. involving *ví*. See comm. on 3b..

X.152.3: Since *rákṣaḥ* is entirely parallel to *mṛdhaḥ* in the syntagm in pāda a, and *rákṣaḥ* must be a neut. sg. *-as-* stem, we might expect *mṛdhaḥ* to have the same grammatical identity – and indeed an *s*-stem *mṛdhas-* does exist, albeit marginally. However, Gr and Ge take *mṛdhaḥ* here as acc. pl. The repetition of the formula in 4a is followed by a cl. with a parallel acc. pl. *pṛtanyatāḥ*, which would favor the interpr. of *mṛdhaḥ* there as the acc. pl. of the root noun *mṛdh-*. So the evidence pulls both ways, but given the marginality of the *-as*-stem, best perhaps to interpr. both as belonging to the root noun.

Note the clever misdirection in b: *ví vṛtrásya hán(ū)*. Though *hánū* is of course a noun, “(two) jaws,” and the obj. of *ví ... ruja*, the presence of *vṛtrahā* in 2b and *ví ... vṛtrahan* in the next pāda (3c) invite the audience to assume another instance of *vṛtrahán-*.

X.153 Indra

X.153.1: The identity of these tender female attendants on the new-born Indra is not clear, but perhaps their exact identity is less important than their maternal solicitude.

The med. pf. to \sqrt{bhaj} means ‘receive as share’ (see Kü 334–35). Again, I am not sure why they receive this share of good heroism.

X.153.5: The 2nd ps. ref. of *sá* here does not conform to its ordinary usage (as disc. in my “Sa figé” art.); we should expect an impv. here. But I assume in this late hymn the rules for this distribution are breaking down.

X.154: The dead

X.154.1: As pointed out by Ge (n. 1) *inter alia*, the various foodstuffs are appropriate to gods and pitars in the afterlife. It is to them that the dead man should go in d. The use of the “future imperative” *gachatāt* is a little surprising, since what prior action it should follow isn’t specified. It could possibly refer to the various present tense verbs in abc, but, more likely in my view, it presupposes the subject’s death before his journey to the afterlife.

X.155 Against a witch

On the contents of the hymn see publ. intro. As noted there, the Sadānvās are quite prominent in the AV.

X.155.2: *Pace* Gr, *cattó* represents *cattā + u*.

X.155.4: The verb *ājaganta* appears to be a plupf. to \sqrt{gam} and is so taken by the standard tr. (as also Kü 159). However, it doesn’t make a lot of sense in context (“when you went at/to the breast ...”). I suggest emending the form to **ajaghanta*, a plupf. to \sqrt{han} . The witches are beating their breasts in mourning at the slaying of Indra’s enemies (=their friends and allies). Although I strongly resist emending the RVic text, in this Atharvan hymn with numerous unusual forms, I have fewer scruples.

On *dhāṇikī-* as a term for female genitalia, see already Edgerton, *-ka-*suffixes, 56, citing also TS VII.4.19.3, AV XX.136.3 = RVKh V.22.8. He derives it from *dhāna-* ‘receptacle’. Sim. EWA s.v. *dhāṇikā-*. See also EWA s.v. *maṇḍūra-*, where it is suggested that the “rust” is menstrual blood.

On *-yāśu-* see comm. ad I.126.6. On *budbudā-*, with its unusual phonology (plain *b*) and morphology (exact redupl.), see EWA s.v. *budbudā-yāśu-*

X.155.5: On the leading around of the cow, see X.165.5.

X.156 Agni

X.156.2: *sénā-* could alternatively be ‘army’, as Ge and Re take it, but ‘weapon’ works just as well. Both senses seem to be necessary in the RV and are often difficult to distinguish, though the cmpd *sena-nī-* must contain ‘army’.

X.156.3: On the SV reading *pavīm* ‘wheelrim’ for *paṇīm*, see Old and Ge (n. 3c). Neither seems to produce the best argument for retaining the RV form – that it is semantically the more difficult – and more interesting – reading, while the SV form is a trivial correction.

X.156.4: Making the sun mount in heaven is ordinarily Indra’s deed.

X.156.5: Gonda (Vedic Lit. 225) points out the rhyming splvs. *préṣṭhaḥ śréṣṭhaḥ*, which in this late hymn are undistracted.

X.157 All Gods

As indicated in the publ. intro., vss. 4–5 in this hymn have one of the few depictions of the Asuras as a corporate group, counterpoised against the Devas (see also X.53.4). See also X.124 and my 2016 “The Divine Revolution of Ṛgveda X.124: A New Interpretation. Beyond Asuras and Devas” (Ged. F. Staal: *On Meaning and Mantras: Essays in Honor of Frits Staal*, ed. George Thompson and Richard Payne, 289–306).

X.157.4: Ge takes all of vs. 4 as a subord. cl.: “when the gods had smashed the Asuras and ...,” but this requires him to take *āyan* as an auxiliary in periphrastic construction with the gerund *hatvāya* (“geschlagen hatten”; see n. 4a). But this would be an unprecedented periphrasis, as far as I know, and the *yád* subordinator would be too deep in the cl. I take pāda a as a somewhat abortive sentence, with *hatvāya devāḥ āsurān* as the beginning of a main cl., and *yád āyan* a subord. cl. having the Asuras as subject. The sentence then begins again in the next pāda, repeating the subj. *devāḥ*, with the main cl. flg. in 5.

X.158 Sūrya

X.158.1: As indicated in the publ. intro., the ablatives in this vs. are conceptually ambig.: do they name the places from which the god exercises his protective function or the inimical forces from which the god is asked to protect us? Opinions differ; see Ge n. 1. Ge opts for the latter interpr., Re for the former. Pāda c of the next vs. (2) favors the Ge solution, but I am still uncertain.

X.158.2: This vs. is a metrical mess.

The morphological identity of *jōṣā* (Pp. *jōṣa*) is disputed. Most (Gr, Ge, Old, Re, Lub, Baums) take it as a 2nd sg. impv., but it would have to be derived from a full-grade thematic stem with root accent, which does not exist. Lub tries to deal with this problem by pronouncing it an imperative to a subjunctive stem, which seems to me a bit of a morphological monstrosity. I prefer to take it as a 1st sg. subjunctive; this does not have to belong to a root aor. as Wh (Rts) takes it – though it could. It might simply be the subj. to the extremely well-attested thematic stem *jūṣā-*, with the full grade characteristic of the subj.; in the 1st sg. the expected them. vowel + subj. marker → *-ā-* would be neutralized. However, a major problem is the root accent, and so perhaps Wh’s root aor. subj. interpr. is better, esp. since it can also account for the 3rd ps. *jōṣat(i)*

(see comm. ad X.105.8). Old's objection to a 1st sg. interpr. is the impv. *pāhí* in c, which he thinks should be parallel. But mixing 1st and 2nd ps. in a RVic vs. is hardly unprecedented.

By my interpr. the main cl., consisting only of *jóṣā* (plus the voc.) lacks an antecedent to the rel. phrase *yásya te*; the *te* has been, as it were, demoted to the subord. cl. Those who interpr *jóṣā* as an impv. take it in absol. usage ("enjoy!"), with the rel. cl. dependent on the voc. ("o Savitar, whose ...")

On *háras*- see comm. ad X.16.7.

I see a pun in *savān* in b. When this stem appears with a numeral (as here), it refers to soma-pressings. See, e.g., IV.26.7 ... *abharat sómaṃ, sahásraṃ savān̐ ayútaṃ ca sākām* "(the falcon) brought the soma, a thousand pressings and ten thousand all at once." But in a Savitar context (as here) it generally belongs to the stem cognate with that god, meaning 'impulsion, stimulus'.

X.158.3: I don't understand what the mountain is doing here. Ge (n. 3ab) adduces several passages containing both Savitar and Parvata, but they're just that -- passages with both, but no obvious reason why.

X.158.5: I take *nṛcákṣasaḥ* as a pun, with two essentially opposite meanings: 1) "having the eyes of men," that is, merely human, not divine, sight; 2) "having 'the eye of men' [=sun]," which enables sight.

X.159 Against Cowives

On the style of this hymn, see publ. intro. The hymn is dense with 1st sg. pronouns and presents itself as an *ātmastuti* cum victory paean.

X.159.1: In addition to the striking 1st ps. pronominal adj. *māmaká-*, whose low register status is mentioned in the publ. intro., the *-l*-suffixed form *vid-valá-* also gives the impression of the demotic, against the usual *-r*-form of the suffix (*-vara-*); see AiG II.2.906–9 on these suffixes. There are very few *-vala-* stems.

X.159.5: On cd see Narten, MSS 14: 43 [=KlSch 5–6], with disc. of previous lit. The root affiliation of the verb *āvrkṣam* has been much disputed, with $\sqrt{vraśc}$, \sqrt{vrj} , and \sqrt{vrh} to choose among (see Old, Ge n. 5cd). Narten makes a good case for \sqrt{vrh} 'tear, rip' on syntactic grounds.

On the negated primary comp. *ástheyas-* see AiG II.2.450, Ge's n. 5cd, and Narten's disc. Its positive is *sthirá-* 'steadfast'

X.159.6: Note the phonological future *vīrásya virājani*.

X.160 Indra

X.160.4: The vs. begins and ends with lexemes with the preverb *ānu* (a: *ānu* $\sqrt{(s)paś}$, d *ānu* $\sqrt{diś}$).

The sense of the idiom in c, *aratnaú nīḥ* $\sqrt{dhā}$ "hold/put out/off at/on/by the elbow" can only be guessed at, though it's clear that it's a hostile act. See Old and Ge (n. 4c). Ge suggests it's a boxer's trick; the publ. tr. substitutes the Engl. idiom "at arm's length" (i.e., keeps him at a distance), though I'm not sure what role the elbow would play.

The sense of *ānānudiśta-* isn't clear. There are no other exx. of *ānu* $\sqrt{diś}$ in the RV, but the lexeme is fairly common in Sāṃhitā prose, meaning 'point out, specify'. Gr and Ge take it as

‘unaufgefordert’ (unsolicited, unasked), presumably from ‘unpointed-out / unappointed’(?). My ‘unprecedented’ is based on the later use of *anudeśa* in the sense of a rule referring back to another rule. but perhaps the Gr/Ge route is preferable.

X.160.5: On the last two words, *śunām huvema* and their connection to the earlier Viśvāmitra oeuvre, see publ. intro.

X.161 Contra disease

X.161.1: I failed to render the *utā*; the tr. should read “and from the kingly disease.”
Also, in c “truly” should be deleted.

X.161.2: Pāda b might read more elegantly as “if he has gone down to the very face of death.”

X.161.3: I don’t know what the oblation is doing “with a thousand eyes,” esp. when the parallel adjectives refer to time periods. But I see no reason to emend or re-semanticize it.

X.162 Contra miscarriage

X.162.1: The morphological identity of *āmīvā* here and in 2a is disputed. Ge and Old consider it an instr. to the fem. *āmīvā-*, but I wonder whether such an under-marked instr. would be freely formed at this late date. I prefer to take it as a nom. sg., but this does cause problems with the masc. rel. *yāh*. Re suggests that a *-van*-stem *āmīvan-* was secondarily formed after the cmpds *āmīva-cātana-/hān-*. My solution would be similar, but simpler: because there are masc. stems ending in *-ā*, the gender clash was not overly worrisome to the poet; I don’t think we need to manufacture an intermediate masc. *-an*-stem. Or, with Ge’s alternative adapted from Sāy. (n. 1c), it’s possible that the fem. stem was appositional to *yāh ... durṇāmā*, “als Krankheit.”

X.162.3: On this vs. as depicting successive stages of pregnancy, see Ge (n. 3ab) and the publ. intro.

X.162.5–6: The lexeme *nī√pad* here seems to have a sexual sense, like *nī√gam* in X.10.12 (q.v.).

X.163 Contra disease

X.163.5: Flg. a very tentative alternative suggestion of Old’s that *vanam* might be derived from *√van* ‘love’, I take *vanamkāraṇa-* as ‘love-maker’, a euphemistic designation of the penis. Alternatively, if *vanam* belongs with *vāna-* ‘wood’, it could mean ‘wood-maker’ and refer specifically to the erect penis; cf. American slang “woody” for an erection. The problem with either of these interpr. is that the penis would be referred to twice, by adjacent words, contrary to the practice of the rest of the hymn. But perhaps the fact that both words are euphemistic substitutes and also designate different functions of the same body part would allow this duplication. The other body parts here, hair and nails, do not form a natural class with what precedes, so they are of no help.

X.164 Contra bad thought

For the unifying theme of this hymn, see publ. intro.

X.164.3: The three instr. in pāda a, *āsāsā*, *niḥśāsā*, and *abhiśāsā* are unified by their derivation from the root $\sqrt{\text{śams}}$ ‘pronounce, proclaim’ plus a directional preverb, but they also all have developed idiomatic meanings. Both the first and last of these lexemes are reasonably well attested: *āsās-* generally means ‘hope, wish’, presumably via a more literal ‘bring/attract by proclaiming’ (like $\sqrt{\text{ā}} \sqrt{\text{kr}}$, $\sqrt{\text{ā}} \sqrt{\text{pū}}$, $\sqrt{\text{ā}} \sqrt{\text{yaj}}$ ‘bring/attract, ... by purification, ... by sacrifice’). *ābhi* $\sqrt{\text{śams}}$ - means ‘curse’, via ‘pronounce against’; though *abhiśās-* is found only here, the *-ti*-stem abstract *abhiśasti-* is well represented. The middle term, however, is very limited. The root-noun compd is found only here, and the only other RVic occurrence of this lexeme is *āniḥśasta-* in IV.34.11, whose meaning is underdetermined. The literal sense of the lexeme must be ‘proclaim away/out’ and because of the oppositional preverbs $\sqrt{\text{ā}}$ ‘(towards) here’ ... *nīḥ* ‘away, out’ it should be the opposite of *āsās-*, perhaps ‘ban, banishment’ (see *nīṣkṛtim* ‘exclusion’ in the next hymn, X.165.1) – but this doesn’t work well in the passage. Although ‘blame’ is not a true antonym for ‘wish, hope’, it fits better in the trio – and the result of “proclaiming out” may be ‘blame’. On all three words, see Scar 528–30.

The position of *āpa* is unusual for a preverb in tmesis.

X.165 All Gods (Bird of Ill Omen)

As noted in the publ. intro., the hymn is devoted to averting the potential danger produced by the arrival of a dove. Despite Western associations of the dove with peace and love, it has negative associations in Vedic. The grhya sūtras consider a dove coming into the house a bad omen; see, e.g., ŚGS V.5.1, ĀśvGS III.7.7, etc., which prescribe the recitation of this hymn.

X.165.1: Ge (also Wh AVŚ VI.27.1) takes *yād* as goal of *ichán*; the *tásmai* in c should then pick up *yād*: “what(ever) the dove is seeking, to that we will chant.” But this seems unduly restrictive. I think *ichán* in absolute usage is more sinister: we don’t know what the dove is after, but it’s surely nothing good. And *tásmai* ought to refer to the dove, at least in my opinion.

X.165.2: The imperatival *hí* clause in c gives the grounds for the further imperative d, as often. In other words, because we hope/expect that Agni will enjoy our oblation, we hope/expect that he will arrange for the bird to avoid us.

X.165.3: The fem. loc. *āṣṭryām* is difficult and its interpr. depends entirely on context. Because of the parallel loc. *agnidhāne* it’s generally rendered as ‘fireplace, hearth, stove’ vel sim. (Gr, Wh AVŚ VI.27.3, EWA s.v.), with a bit of a twist in Ge’s ‘kitchen’ (Küche). Re suggests the more general ‘maison’ on the basis of *grhēṣu* in 2b. My longshot ‘corner’ presupposes a connection with *ásri-* (fem.) ‘corner, edge’ (RV *cátur-ásri-* 2x). Its form here would represent either a morphological regularization (substituting a well-known suffix *-trī-* for the rare *-ri-*) or a blend with *āṣṭrā-* ‘goad’ (I’d favor the former).

X.165.5: The leading around of the cow in b is reminiscent of a similar ritual act in X.155.5, as Ge points out. Effacing all difficulties in c is like the effacing of the traces/footprints of death on returning from the funeral, using the same verb. See X.18.2 *mṛtyóḥ padām yopáyanto yád aíta* “Effacing the footprint of death when you have gone.” Here it must refer to the footprints the dove has left in the house (see 3b, 4b).

X.166 Against rivals

The aggressively triumphant tone of this hymn is reminiscent of X.159, the first-person victory paean of a wife having conquered her rival wives (*sapátnī-*), as here the first-person speaker proclaims his triumph over his *sapátna-* (1b, 2a, c). This masc. stem is, of course, a backformation from the fem. *sapátnī-*; see EWA s.v. *pátnī-*, and this hymn may be modeled on the cowife hymn just cited.

X.166.1: The Engl. tr. obscures the difference between the two words for ‘rival’: *sapátna-* (b) and *śátru-* (c). Given the derivation of the former (see just above), it may refer to a more intimate rival than the *śátru-*.

X.166.4: *viśvákarmeṇa* in b is the only thematic form to what is usually an *n*-stem *viśvákarma-*. This thematic stem may have been extracted from a compound like **viśvakarma-dhāman-*, as suggested by Ge (n. 4b), or it may simply be that at this late stage thematization is in the air. Note, however, that the correct *n*-stem instr. sg. *viśvákarmaṇā* is found nearby in X.170.4.

On the arguably trifunctional array in cd, see publ. intro.

X.166.5: JL points out the nice phonetic figure of *maṇḍūkā (...)* *udakān*.

X.167 Indra

pári seems to be the Lieblingwort in the first few vss.: 1a, 1d, 2a.
In the last sentence of the intro., subst. vs. 3 for vs. 4.

X.167.1: I take *sutásya* as dependent on *kalásasya*, not coreferent with it like Ge.

puruvîra- is a standard epithet of *rayí-*; see comm. ad VI.32.4. In most of these occurrences the adj. is masc., but here it is fem. Although it is generally said that *rayí-* can be either masc. or fem., in fact most of the supposed fem. occurrences can be otherwise explained (see comm. ad VI.8.5). However, the fem. occurrences cannot be reduced to zero, and this is one of the stubborn ones. Old thinks the fem. *puruvîrām* here is metrically conditioned.

X.167.3: As Ge points out (n. 3a), *râjñah* belongs with both Soma and Varuṇa and is positioned between them.

X.167.4: With Ge (n. 3d) I think *bhakṣam akaram* (“I did consuming”) is an analytic version of *abhakṣayam* (“I consumed,” 3d). The reason is obvious: Indra wants to use an aorist and the secondary root √*bhaks* does not have one.

In this vs. Indra explicitly recognizes the reciprocal bargain of the sacrifice: he gets the soma and the praise hymn *if* he arrives with something to give.

X.168 Vāyu

This hymn has attracted numerous tr., which is somewhat surprising for a fairly inconsequential – if pleasingly constructed – hymn. In addition to Ge and Re (EVP XV), see Macd. (VRS), Th (Gedichte), Don.

As noted in the publ. intro. (in addition to most of those just cited), although Anukr. names Vāyu as the deity of the hymn, he doesn’t appear in it – only his less divinized, more

physical alloform Vāta. It's worth noting that *vāta-* is also found in the next two hymns: X.169.1 and, in the compd. *vātajūta-*, X.170.1.

X.168.1: The first pāda consists merely of an acc. NP, but, as noted in the publ. intro., the template GEN [god's name] *nū* ACC [greatness/deeds, etc.] reminds us of openings like the famous beginning of I.32: *īndrasya nū vīryāṇi prā vocam*, and I (like Ge, Macd, Re, Th, but not Don) supply "I proclaim."

Various suggestions have been offered for the real-world equivalent of the "making (things) red" phrase; consult the tr. referenced above. In addition to those, I wonder if it describes the dawn, a frequent referent of *aruṇā-*, as Re points out. Although only *vāta-* appears in this hymn, the Anukr. considers Vāyu, the wind god, to be the dedicand, and Vāyu of course is the first recipient of soma at the dawn sacrifice.

X.168.2: Again, there is a wide range of views on the meaning and referents of *viṣṭhāḥ*, for which consult the other tr. The lexeme *vī* √ *sthā* generally means 'spread out, be dispersed'; here I think it refers to the eddies and countergusts that are part of a strong wind – in my experience, such a wind does not seem to be a single unified movement of air, but varies in speed and direction and therefore seems to consist of numerous parts.

X.168.3: "Companion of the waters" – presumably, as Th suggests, because wind often accompanies rain. But as he also suggests, perhaps because a strong wind sets bodies of water in motion, raising ripples and then waves, thus appearing to play with them.

X.168.4: The expression "his sounds are heard, not his form" is an obvious zeugma. Most tr. add "is not seen" to accommodate the "form," but the Skt. does not – and I think the expression is more striking in its truncated form.

X.169 Cows

The Anukr. ascribes this hymn to a descendent of Kakṣīvant (Śabara Kākṣīvata), but it lacks the flair of his eponymous ancestor.

X.169.1: *jīvādhanya-* elsewhere explicitly modifies waters (e.g., I.80.4).

X.169.2: On the use of the names of the cows in ritual, see Old and V.3.3, adduced by Ge.

The mention of the Aṅgirasas of course refers to the Vala myth.

X.170 Sūrya

Gonda (Ved.Lit. 212) considers this hymn to be banal, mediocre, and devoid of deeper meaning; it hardly seems fair to single out this brief hymn for such scorn, esp. because in fact it has some nice rhetorical flourishes and some tricky gender switches.

Forms of (*vī*) √ *bhrāj* 'blaze (forth)' open hemistichs in all four vss.: 1a / 2a *vibhrāḍ bṛhāt*, 3c *viśvabhrāḍ bhrājāḥ*, 4a *vibhrājan*.

X.170.1: The gender of the subj. changes from neut. in ab (on the basis of *bṛhāt* and part. *dādhat*) to masc. in cd (on the basis of *vātojūto yāḥ*), with the masc. rel. technically not in gender agreement with its antecedent. Old gets rather exercised by this, but it seems simple enough to

supply the neut. subj. ‘light’ (*jyótis-* found in 2d, 3a, 4a) in the first half-vs. and allow the rel. to agree in sense if not in gender. See Ge (n. 1a) and Re. By contrast Scar. prefers to supply “Wesen” = Sūrya, but the insistent presence of *jyótis-* in the other vss. of the hymn favors the former solution.

I don’t know why the sunlight should “drink the somyan honey,” but I suspect that the phrase here refers to water, perhaps “drunk” by evaporation. Alternatively, and in fact simultaneously, like the other gods at the ritual, principally Indra, Sūrya should partake of the soma at the soma sacrifice and offer good things to the sacrificer in return, as pāda b indicates.

The final phrase of the vs., *ví rājati*, nicely echoes initial *vibhrāj-*.

X.170.2: The gender of the subj. remains neut. throughout this vs., though the beginning of the 2nd hemistich flirts with a switch to masc., like 1c: *amitrahā vṛtrahā* appear to be masc., and usually are. However, with AiG III.239 I take *-hā* as serving for the neut. as well (though see comm. ad VI.48.21). If this is considered morphological apostasy, the cmpds can be taken as secondary predication: “As a smasher of foes, as a smasher of obstacles, the best smasher of Dasyus ...” (likewise the two *-hā* cmpds at the end of d). Neut. *dasyuhántamam* puts a stop to this flirtation.

The phonetic figure of 1a *vibhrāḍ bṛhāt* is amplified in 2a with a third term, *súbhṛtam*.

X.170.3: The pattern of vs. 1, with neut. in ab and masc. in cd, returns here. This time the gender flirtation in c is in the opposite direction: since *-bhrāt* in 1a and 2a was neut. and it opens pāda c here, we expect the neut. to continue, but masc. *bhrājāḥ ... sūryaḥ* immediately follows.

Contra Ge (and the publ. tr.), Re takes the neuters of d as appositive nominatives, and *paprathe* as intrans/refl. But it can surely just be self-involved.

X.170.4: Gender trouble continues. The vs. begins with a clear masc. part. *vibhrājan*, which is followed by neut. *svār*, which I take as an appositive to the (unidentified) 2nd sg. subj. The first half-vs. is found also as VIII.98.3, where the 2nd sg. subj. is Indra and *svāḥ* is an unmarked simile.

Ge takes *rocanām divāḥ* as another appositive in the nominative, not as acc. goal as I do (with Re).

Indra is called *viśvákarmā viśvādevāḥ* in VIII.98.2c, the pāda immediately preceding the repeated hemistich just noted.

X.171 Indra

X.171.2: Don tr. *makhāsya dódhataḥ* as “of the rebellious Sacrifice,” presumably on the basis of PB VII.5.6 (also elsewhere in the Br), where the story of Makha and the gods is briefly told and Makha is identified with the sacrifice. Nothing in this vs. encourages that identification. Note that *-makha-* is found in a cmpd in the next hymn (X.172.2).

On *áva √ bhr* see comm. ad VIII.93.23. As I say there, the lexeme can take an acc. of a body part, depicting bringing down an enemy by a downstroke that removes the body part – here severing the head clean from its body.

X.172 Dawn

On the structure of this hymn and its relation to early morning – though less so to Dawn proper – see publ. intro.

X.172.1: The *s*-stem *vānas-* is found independently only here (though in cmpds like *gír-vanas-* ‘having a longing for songs’. It is completely unclear what it is meant to convey here, a lack of clarity made worse by the fact that the identify of the subject is unknown (Dawn? Sūrya?).

The end of b *yád ūdhabhiḥ* must be construed apart from the rest of the pāda, since the verb *sacanta* is unaccented (so also Old). Something needs to be supplied, since “... the cows, when with udders” or “... cows, that is, with udders” doesn’t make sense as an independent unit. The instr. pl. *ūdhabhiḥ* occurs 3x in the RV; once (VIII.9.19) it is construed with *duhré* “they give milk with their udders.” I therefore supply a preterital version of that verb here: the cows have been milked and are now going to pasture. Old rather “strotzen” and Ge “kommen.”

X.172.3: The cmpd. *jārayán-makha-* tr. by Ge “der die Freigebigen weckt,” sim. Old (Gr takes it as a PN, an interpr. firmly rejected by Mayr PN). The problem is that *makhá-* doesn’t usually mean ‘bounteous’, and in fact is used of a hostilely treated being in the immediately preceding hymn (X.171.2). On its dominant meaning ‘battling’ and its acquisition of the secondary ‘bounteous’ sense (via *maghá-*), see comm. ad I.18.9. Here I take the cmpd as a pun: Dawn is well known as one who both awakens and ages mortals, expressed by the homophonous *jārayati* ‘awakens/ages’ (see my *-āya*-Formations 126–27, 154). Though Dawn herself can’t be the subj. here (because of masc. *mámhiṣṭhaḥ*), the subj. is clearly a dawn-related being, who could perform the same dual actions. I suggest both parts of the cmpd are homonyms: *jārayán-* ‘awakening/aging’ and *makhá-* ‘bounteous/battler’. The splv. *mámhiṣṭha-* ‘most bounteous’ helps attract the ‘bounteous’ sense of *makhá-* despite its primary meaning. (I would now modify my statement in *-āya*-formations (127 n. 4) that the cmpd (only) has the ‘awaken’ sense.)

X.172.4: The verb *vartayati* is construed with two preverbs in two different senses, at least in my interpr. (and basically Ge’s, though he toys with supplying a different verb in pāda a [n. 4ab]): *āpa* √ *vṛt* ‘roll away’ / *sám* √ *vṛt* ‘roll up together’.

vartaním returns from 1b.

X.173 Royal consecration

This hymn has been much treated: e.g., Don, Schlerath (*Königtum* 117–18), Ober (Relig. RV I.352). It is found in the AV (Ś VI.87–88, P XIX.6) and elsewhere. On *dhruvā-* ‘firm’ as its signature word, see publ. intro.

X.173.2: Note the insistent repetition of *ihá* (a, c, d).

X.173.6: Pāda a repeats 3b and reinforces the ritual aspects of the royal installation.

X.174 Praise of king

A companion piece to the preceding hymn – found in AVŚ I.29, AVP I.11. On the signature lexeme *abhí* √ *vṛt* ‘roll over’, see publ. intro. Vss. 1–3 contain 10 pāda-initial occurrences of *abhí*, vs. 4 lacks this word, but the first word of b, *ābhavad*, mimics it (and vs. 4 is a borrowed vs. anyway). The final vs., 5, has *abhí* opening b.

X.174.1: Both AV versions substitute an amulet (*maṇí-*) for the oblation (*havíṣ-*) here – a nice illustration of the different effective means valued by the two textual traditions.

X.174.2: Both ab and cd are structured as “X and which Y” constructions, though with the “and” missing. In other words, in the second clause of each hemistich the acc. in the main clause has been gapped – although the pub. tr. has inserted it (“those” and “the one” respectively). A more literal tr. would be “over who are hostile ...” / “over who is envious ...”

X.174.3: This vs. is rather cunningly constructed: each of the first three pādas parcels out a bit of the syntax of the whole: pāda a has the preverb *abhí*, b the preverb plus the verb (*abhí ... avīṛtaṭ*), and c adds the obj., *viśvā bhūtāni*. Taking this last phrase as the obj. (with Ge and Zehnder et al. [AVP I online]) is preferable to taking it as subj. (so Wh, AVŚ).

X.174.4: This vs. is identical to X.159.4, a cowife hymn, with masc. *asapatnāḥ* instead of *asapatnā*, spoken by the triumphant wife in 159.4. This is the only verse in our hymn lacking *abhí* (see above), and it surely has been borrowed into this hymn from X.159 – a conclusion supported by the fact that this hymn has too many vss. (5) for its place in the collection and that this vs. is not found in the corresponding AV versions.

X.175 Pressing stones

X.175.2: The “ruddy ones” (*usrāḥ*) are probably the soma plants; cf. “the red tree” (*vrkṣāsya ... aruṇāsya*) that the pressing stones eat in X.94.3. See also Ge n. 2c.

X.175.4: This vs. is a near repetition of vs. 1, providing a ring.

X.176 Agni

Despite my characterization of this as “a simple hymn” in the publ. intro., it reads more like a real RVic hymn, with unclear referents, metaphorical language, and bold imagery, than the straightforward, repetitive Athavan hymns among which it’s found.

X.176.1: The identity of the “sons of the Ṛbhus” is not entirely clear. Ge, Re, and the publ. tr. take them as the offering fires or their flames; see esp. Ge’s n. 1a, where he argues that the Ṛbhus are priests, here associated with the kindling of the ritual fire (though this is not their usual ambit). Old is dubious, in part because of the verb *navanta* ‘bellow’ – but this isn’t much of an argument, since flames are always making roaring noises in the RV.

With most, I take *vrjāṇā* as a nom. pl. appositive to the sons of the Ṛbhus, but what aspect of this multifaceted word (on which see comm. ad X.28.2) is being referred to here is unclear. In its physical manifestation as ‘enclosure, circle’, it could refer to the fireplaces themselves or to the circle of flames; in its metaphorical meaning, to the community of fires or flames. Interpr. vary – see Old, Ge, and Re.

kṣāmā with long final vowel is found twice elsewhere in the RV: IV.2.16 and X.45.4. Although in all three cases the Pp. reads short-vowel *kṣāma*, I think all three are elliptical duals, for *dyāvākṣāmā* ‘heaven and earth’ (see comm. ad locc. for the first two), though here (as in the other passages) the standard tr. take it as sg. In our passage the flames feed (*ásnan*) on heaven

and earth: since flames reach towards heaven while being grounded on earth, a dual source of food makes sense.

It is in this context that I interpr. *viśvādhāyasaḥ*. The interpr. of *-dhāyas-* cmpds is tricky; see comm. ad III.44.3, X.67.7. They can mean ‘having nourishment for X’, with the first member the beneficiary/consumer of the nourishment, but can also have an adj. first member, e.g., *hāri-dhāyas-* ‘having golden nourishment’. Ge and Re both interpr. it in the former sense: ‘all-nourishing’, i.e., ‘having nourishment for all’. But this seems to contradict the verb phrase “they feed on H+E.” Although I render almost all of the 11 occurrences of this cmpd as “all-nourishing,” all of them could also be interpr. as having an adjectival first member “having all nourishment(s)” – it is difficult to identify a diagnostic context that would distinguish between the two. Such *bahuvrīhi*s can be further interpr. not only as ‘providing XY’ but as ‘deriving/acquiring XY’, and here the latter sense seems in play – as they feed on H+E they derive universal nourishment.

X.176.3: In I.35.4, adduced by Ge, *abhīṣṛta-* is used of an extravagantly decorated chariot

X.176.4: As indicated in the publ. tr., the sense of the first hemistich is obscure, though the syntax is not complex. The verb *uruṣyā-* lit. ‘make wide (space)’, fig. ‘deliver/release’ takes an abl. Here the VP can be construed either as “delivers (himself) from his immortal birth, as it were” (so the publ. tr.) or “... from his birth as if from the immortal.” It is also possible that the abl. *jánmanaḥ* can have a temporal sense as well. I think there may be a play on the ablatives in b: Agni delivers himself from his immortal birth (as a god) after his birth (on the ritual ground), reading *jánmanaḥ* twice. And this may further suggest that Agni inhabits the domain *between* birth and death/immortality, that is, the human realm, where people live – not the divine realm of non-death. This idea may be reinforced by “he was made for living” in d.

X.177 Patamga

On this hymn, see now also Köhler (*Kavi*, 123–25). I will not speculate on the mystical import of the hymn – there’s quite enough of that by others. The grammar is fairly straightforward.

X.177.2: In c *svaryām* poses two problems. Since it’s modifying *tām ... manīṣām*, it should be fem. and therefore belong to a *vrkī-*stem *svarī-* (so, sort of, Gr, who sneaks it into the lemma for *svaryā-*). Also, the various tr. take it as ‘sunlike’, ‘sonnenhaft’ – understandably, given the visual context -- but *svaryā-* always refers to noise, and so I tr. it.

X.177.3: Various referents have been suggested for the fem. plurals in c (e.g., Ge ‘waters’). Given the return of “see” from vs. 1: 1b *paśyanti*, 3a *āpaśyam*, I’m in favor of bringing back the light rays (*mārīcī-*) of 1d.

Note also a potential reverse phonetic figure: *patam-gá-* (1a) and *go-pā-* (3a), esp. since the most obvious referent for *gopām* is the bird, who is the object of “see” in 1ab as well.

X.178 Tārksya

On the subj. of this hymn, see publ. intro.

X.178.1: For the collocation of \sqrt{sah} and \sqrt{tr} in connection with a horse, see III.49.3 *sahāvā prtsú tarānir nārvā* “victorious in battles like an overtaking steed.”

Since Tārksya is obviously a horse, *āriṣṭanemi-* modifying him obviously doesn’t ascribe a wheel felly to the body of the horse itself, but rather to the associated chariot. Still Scar’s tr. (15) “der macht, dass der Radkranz unversehrt bleibt” seems a little overfussy.

X.178.1–2: As Old already noted, pādas 1d and 2b play off each other: 1d *svāstaye ... ihā huvema* / 2b *svāstaye ... ivā ruhema*, with *ihā* and *ivā* differing from each other only in the interior consonant and the two 1st pl. optatives having near-mirror-image root syllables.

X.178.2: The referent of the dual in cd is unclear to me. Ge takes it as Heaven and Earth, but this requires ignoring, or rather aggressively reinterpreting, the simile particle *nā*, which seems to me unequivocally to mark (unnamed) H+E, identified by their standard descriptions, as the comparandum. Old decides H+E are a second comparandum serving as obj. to *ā ruhema* “we board T. like a boat, like you two, H+E,” but this doesn’t help. First, that second simile doesn’t make sense: how are H+E like a racehorse to mount? And the discord between 2nd ps. *vām* and the duals in the simile is disturbing. I don’t have a solution to the identity problem, but I suspect that it’s some dual entity connected with horse tackle or chariot parts.

X.178.3: A satisfyingly constructed simile with three parts (nom., instr., acc.), with all three expressed in both simile and frame.

Acdg. to Ge (n. 3d), a “youthful arrow” is one that still has its feathers and so on.

X.179 Indra

On the ritual context of this hymn, see publ. intro.

X.179.1: The context strongly favors Ge’s rendering of *mamattāna* as “so wartet noch,” fld. by publ. tr. “wait!” This should belong with \sqrt{man}^2 ‘wait’, on which see comm. ad X.27.20. The problem is that the other forms belonging to this root have clear *man* forms, but this appears to belong to \sqrt{mad} (so assigned by Gr). There is a complex way to get this form by analogy, however. The impv. in X.27.20 *mamandhi* ‘wait!’ is properly analyzed as *maman-dhi*, but could instead be **mamand-dhi*, as if to a root \sqrt{mand} ‘wait’ (distinct from the secondary root \sqrt{mand} ‘be exhilarated’ derived from \sqrt{mad} ‘id.’), with simplification of the geminate in a cluster. From such a putative underlying form, a zero-grade stem *mamad-* could be derived; with the 2nd pl. ending *-tāna* the result will be our *mamat-tāna*. This is perhaps over-clever, but the contextual meaning ‘wait’ is so clear that fiddling around with a “become/make exhilarated” meaning here would be senseless.

X.179.2: On *kulapā* see Ge (n. 2d) and, somewhat less illuminating, Scar (302). As Ge points out, the other early attestation of this stem (AVŚ I.14.3) specifically identifies the referent as feminine.

On *vrājāpati-* as ‘Einpferchungsmeister’ see KH (Aufs. 572 n. 22).

X.180 Indra

X.180.3: In the voc. phrase *vṛṣabha carṣaṇīnām* the gen. has its ordinary accent. See Old.

X.181 All Gods

On the ritual context of this hymn see publ. intro.

X.181.3: I would now slightly alter the tr. to “did they carry ...,” since impfs. should not have immed. past sense (per IH).

X.182 Bṛhaspati

X.183 Birth of a son

For the structure of this hymn, see publ. intro.

X.183.1–2: In pāda a of both vss., I take *mānasā* both with the preceding *āpaśyam* and the following participle (*cékitānam* / *đđhyānām*).

X.183.2: On *tanū* see AiG III.188. It belongs to the category of endless locatives discussed by TY (WECIEC Proceedings 2022).

X.184 Birth charm

X.185 Aditi

X.185.2: Old follows Benfey in emending *vāraṇeṣu* to *vāraṇeṣu* < *vā āraṇeṣu* “or on alien ways”: clever, but as Ge (n. 2b) points out, not nec.

X.185.2–3: Ge (n. 2a) convincingly takes *tēṣām* (2a) as the antecedent of *yásmai* (3a), with change of number – rather than referring to the gods in vs. 1. This fits the Weltbild much better.

X.186 Vāyu

X.187 Agni

X.188 Agni

X.188.2: On *vípravīra*- see comm. ad IX.44.5.

X.189 Sārparājñī or Sūrya

On the dedicand of the hymn, see publ. intro. I will not contribute to the abundant speculation on the identities and activities of the actors in the hymn, for which see Old., Ge, and Re (ÉVP XV) inter alia.

X.189.1: This vs. contains a rare ex. of splitting an NP across a hemistich boundary: *mātāram ... / pitāram ca*. Of course in Gāyatrī the boundary between pādas b and c is less rigid than in meters with hemistichs of equal numbers of pādas.

In c it is possible (with Re and as an alt. of Ge’s [n. 1c]) to take *svàḥ* as an appositive to the subj.; “going forth as the sun.”

X.189.2: This vs. seems to have induced a certain amount of grammatical confusion in our usually reliable tr. + comm.

Ge, Old (with a great deal of verbiage), and Re (in comm. but not in tr.) take *rocanā* as fem. nom. sg. -- but *rocanā-* is not an adj., but a neut. noun. The other supposed fem. nom. sg. of this stem in III.61.5 (adduced by Ge and Old) should not be so interpr.; see comm. ad loc.

Re also tr. *rocanā* as “les deux domaines-lumineux,” though the dual of this neut. -a-stem would be *rocané* – and despite the fact that in his comm. he assumes “une haplogogie **rocanā* (nt. pl.) + *rocanā* (fem. sg.)” (my bolding). Re’s invented dual must result from the fact that *antár* √*car* ‘wander between’ can take a dual, as in I.173.3 *antár dūtó ná ródasī carad vāk* “Speech wanders between the two worlds like a messenger.” But the pl. is also possible; cf. I.95.10 *antár nāvāsu carati prasūsu* “he roams within the new, fruitful (plants).” The form *rocanā* then is a neut. pl., and only a neut. pl.

As Re points out, this vs. contains the first trace of the opposition of breaths: *prā* √*an* (*prānā-*) and *āpa* √*an* (*apānā-*), already very prominent in the AV

X.190 Cosmogonic

X.190.3: There are three matched pairs serving as obj. of *akalpayat*; as JSK (DGRV II.85–86) points out, they show three different patterns of conjunction: dual dvandva: *sūryācandramāsau* (though with only one accent); double *ca*: *dīvaṃ ca pṛthivīm ca*; and the rather loose *ātha* + *u*: *antārikṣam ātho svāḥ*. As he also points out, these correspond to different degrees of semantic cohesion between the two members of the pair.

X.191 Unity

On the purpose of the hymn and its placement in the Saṃhitā, see publ. intro. The preverb *sām* ‘together’ and the adj. *samānā-* ‘common’ dominate the hymn: there are 6 occurrences of *sām* in the 1st two vss. (incl. the doubled *sām-sam* that opens the hymn) and 8 occurrences of *samānā-* in the last two vss., as well as one of *sāmiti-* ‘assembly’ and two of *sahā* / *sūsaha* ‘together (with)’.

X.191.2: The use of *pūrve* ‘earlier, of long ago’ with the pres. *upāsate* is a bit jarring, but I think the point is that the gods’ agreement made earlier had long-lasting effects into the present, just as ours presumably will.
